- In addition to the above, EYMBSLLP has also obtained such other information and explanations from the Management as were considered relevant for the purpose of the valuation.

It may be mentioned that the Client has been provided an opportunity to review factual information in our draft report as part of our standard practice to make sure that factual inaccuracies/omissions/etc. are avoided in our final report.

Shape the future with confidence

IV. Statement of Limiting Conditions

- Provision of valuation opinions and consideration of the issues described herein are areas of our regular valuation practice. The services do not represent accounting, assurance, accounting / tax due diligence, consulting or tax related services that may otherwise be provided by us or our affiliates.
- The estimate of value contained herein are not intended to represent value of the respective InvIT Assets at any time other than the Valuation Date, as per the agreed scope of our engagement and as required under the SEBI InvIT Regulations. Changes in market/industry conditions could result in opinions of value substantially different than those presented.
- The valuation report was prepared for the purpose of internal management analysis, disclosure to unitholders, any corporate action and/or regulatory filings as required under Regulation 21(5A) of the SEBI InvIT Regulations. Its suitability and applicability of any other use has not been checked by us.
- The user to which this valuation is addressed should read the basis upon which the valuation has been done and be aware of the potential for later variations in value due to factors that are unforeseen at the valuation date. Due to possible changes in market forces and circumstances, this valuation report can only be regarded as relevant as at the Valuation Date.
- This Report has been prepared for the purposes stated herein and should not be relied upon for any other purpose. Our Client is the only authorized user of this report and is restricted for the purpose indicated in the engagement letter. This restriction does not preclude the Client from providing a copy of the report to third-party advisors whose review would be consistent with the intended use. We do not take any responsibility for the unauthorized use of this report.
- While our work has involved an analysis of financial information and accounting records, our engagement does not include an audit in accordance with generally accepted auditing standards of the client existing business records. Accordingly, we express no audit opinion or any other form of assurance on this information.
- The valuation has been performed based on the provisional financial statements provided by Management for the year ended 31 March 2026 and audited financials for earlier years.
- In no event shall we be liable for any loss, damages, cost or expenses arising in any way from fraudulent acts, misrepresentations or wilful default on part of the client or companies, their directors, employees or agents.
- The Client and its Management/representatives warranted to us that the information they supplied was complete, accurate, true and correct to the best of their knowledge. We have relied upon the representations of the clients, their Management and other third parties, if any, concerning the financial data, operational data and other information, except as specifically stated to the contrary in the report. We shall not be liable for any loss, damages, cost or expenses arising from fraudulent acts, misrepresentations, or wilful default on part of the companies, their directors, employee or agents.
- EYMBSLLP is not aware of any contingency, commitment or material issue which could materially affect the economic environment and future performance of the InvIT Assets and therefore, the fair value of the InvIT Assets.
- In the course of the valuation, we were provided with both written and verbal information. We have however, evaluated the information provided to us by the Management through broad inquiry, analysis and review but have not carried out a due diligence or audit of the information provided for the purpose of this engagement. Our conclusions are based on the assumptions, forecasts and other information given by the Management.
- We do not provide assurance on the achievability of the results forecast by the Management as events and circumstances do not occur as expected; differences between actual and expected results may be material. We express no opinion as to how closely the actual results will

correspond to those projected/forecast as the achievement of the forecast results is dependent on actions, plans and assumptions of Management. However, the information provided, and assumptions used by the Management in developing projections have been appropriately reviewed, enquiries have been made regarding basis of key assumptions in context of business being valued and the industry/economy.

- The Report assumes that the InvIT Assets complies fully with relevant laws and regulations applicable in its area of operations and usage unless otherwise stated, and that the InvIT Assets will be managed in a competent and responsible manner. Further, as specifically stated to the contrary, this report has given no consideration to matters of a legal nature, including issues of legal title and compliance with local laws, and litigations and other contingent liabilities that are not recorded/reflected in the balance sheet/fixed assets register provided to us.
- The valuation analysis and result are governed by concept of materiality.
- It has been assumed that the required and relevant policies and practices have been adopted by Company and would be continued in the future.
- The fee for the Report is not contingent upon the results reported.
- The figures in the tables in this report may not sum or cross cast, due to rounding differences.
- We owe responsibility to only to the Client that has appointed us under the terms of the Engagement Agreement. We will not be liable for any losses, claims, damages or liabilities arising out of the actions taken, omissions or advice given by any other person.
- The actual transacted value achieved may be higher or lower than our estimate of value (or value range of value) depending upon the circumstances of the transaction (for example the competitive bidding environment), the nature of the business (for example the purchaser's perception of potential synergies). The knowledge, negotiating ability and motivation of the buyers and sellers will also affect the transaction value achieved.
- We have also relied on data from external sources to conclude the valuation. These sources are believed to be reliable and therefore, we assume no liability for the truth or accuracy of any data, opinions or estimates furnished by others that have been used in this analysis. Where we have relied on data, opinions or estimates from external sources, reasonable care has been taken to ensure that such data has been correctly extracted from those sources and /or reproduced in its proper form and context.
- This Report is subject to the laws of India.
- Any person/ party intending to provide finance/ invest in the units/ businesses of the Trust/ their holding companies/ SPVs, if any, shall do so after seeking their own professional advice and after carrying out their own due diligence procedures to ensure that they are making an informed decision. If any person/ party (other than the Client) chooses to place reliance upon any matters included in the Report, they shall do so at their own risk and without recourse to us.

V. Industry Overview

1. Road Network in India

The road network plays a pivotal role in India's infrastructure as it facilitates the transportation of 70% of all goods within the country, while 85% of India's total passenger traffic relies on roads for commuting.

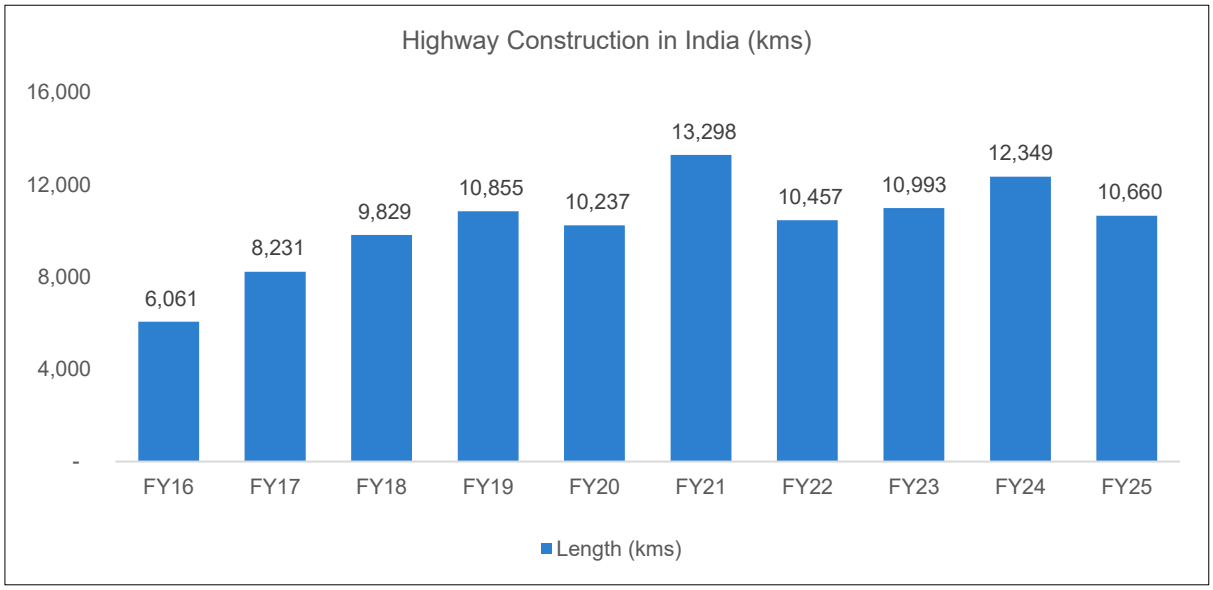
(Source: IBEF Roads Report - November 2025)

India has the world's second-largest road network, with:

I. National Highways spanning 146,560 km as of December 2025.
II. Operational access-controlled High-Speed Corridors/Expressways spanning 3,052 km as of December 2025.
III. 4-lane and above National Highways, including access-controlled corridors spanning 43,512 km as of December 2025

(Source: Year End Review 2025 – Ministry of Road Transport & Highways, Government of India)

Annual highway construction in India has increased at a CAGR of 6.5% over the period FY16-FY25 as depicted below:



Source: IBEF Roads Report, November 2025

2. Growth Drivers

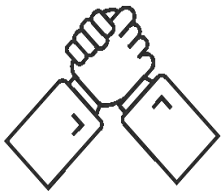
Growing Vehicular Demand

Growing domestic trade flows have led to rise in commercial vehicles and freight movement; supported by rise in production of commercial vehicles. This increase in commercial and freight vehicles will lead to strong tourist and trade flows between states, increasing the traffic and revenue.

Government Initiatives

Pradhan Mantri Gram Sadak Yojana (PMGSY): The PMGSY has significantly enhanced rural road connectivity. Under this scheme, 825,114 km of road length was sanctioned, out of which 787,520 km (95%) has been constructed as of December 2025.

For the financial year 2025–26, the programme received INR 1.9 Bn, underscoring sustained support to improve rural infrastructure, ensure all-weather road connectivity, and boost economic opportunities in villages.
(Source: Report on Transforming Rural Connectivity in India by Research unit of Press Information Bureau, Government of India)



Bharatmala Pariyojana: Under the Bharatmala Pariyojana, projects are executed in categories such as Economic Corridors Development, Inter-corridor and Feeder Routes Development, National Corridors Efficiency Improvement, Border and International Connectivity Roads, Coastal and Port Connectivity Roads, and Expressways.

Under Phase-I of Bharatmala Pariyojana, the Ministry has sanctioned the development of 34,800 km of national highways over a period of 5 years, with a budget allocation of INR 5.4 Tn (US$ 76.55 Bn).

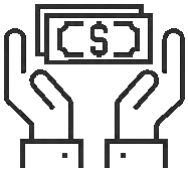
Since its launch in October 2017, this programme has awarded projects for 26,425 km, of which 21,597 km of roads were constructed until November 2025.
(Source: Year End Review 2025 – Ministry of Road Transport & Highways, Government of India, Sansad*)*

Central Road Infrastructure Fund (CRIF): The Ministry of Road Transport and Highways allocates CRIF to State Governments and Union Territories for the development and maintenance of State Roads.

Currently, 1,209 State Road projects, spanning approximately 14,369 km with total budget of INR 371 Bn are underway, with expected completion in phases by FY 2027.
(Source: Maintenance of Roads under CRIF – Ministry of Road Transport & Highways, Government of India)

Budget allocation under Union Budget 2025-26: The Government of India has allocated INR 2.9 Tn (USD 33.1 Bn) to the Ministry of Road Transport and Highways, highlighting the prioritization of infrastructure development.
(Source: Union Budget 2025-26)

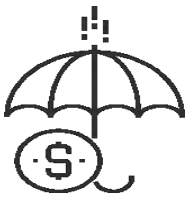
Growth in Private Participation
The government has successfully rolled out more than 400 road projects in India since 2016, worth over USD 10 Bn based on the Hybrid Annuity Model (HAM). As per the Union Budget 2025-26, MoRTH has identified a PPP project pipeline of 13,400 km, with an estimated cost of INR 8.3 Tn, to be developed over the next three years.
(Source: Year End Review 2025 – Ministry of Road Transport & Highways, Government of India, NHAI)



Further, 100% Foreign Direct Investment (FDI) is allowed under the automatic route in the road and highways sector, subject to applicable laws and regulation.

Accordingly, the private sector participation has shown high growth during the recent years. As of November 2025, there were 826 roads projects under the PPP model out of 1,883 total road projects in India.
(Source: IBEF Roads Report, November 2025)

Lower tax burdens
Companies enjoy 100% tax exemption in road projects for the first 10 consecutive years within the first 20 years from the year of commencement of operations.



From FY24 onwards, Interest payment on external commercial borrowings for infrastructure are now subject to a lower withholding tax of 5% vis-a-vis 20% earlier.

Further, from FY26 onwards, GST on construction equipment has been reduced to 18% from 28%. Additionally, GST on two-wheelers under 350cc was reduced from 28% to 18%, small cars from 28% to 18%, large cars from 28% (plus cess of 15-20%) to a flat 40%, tractors from 12% to 5%, and buses with more than 10 seats from 28% to 18%. These reductions provide cost relief, boost demand, support fleet expansion, and lower freight costs, benefiting companies and MSMEs in the road and automobile sectors.
(Source: Union Budget 2025-2026)

3. E-Initiatives

a. Land Acquisition

The primary hurdle facing the sector involves land acquisition issues, prompting MoRTH to introduce the Bhoomi Raashi initiative to address this concern. The Bhoomi Rashi portal is an online platform launched by the Ministry of Road Transport and Highways (MoRTH) in India. It serves as a centralized database for land acquisition-related information for highway projects across the country.

The portal provides various functionalities related to land acquisition, including land records, ownership details, compensation disbursement, and project status updates. It aims to streamline the land acquisition process, enhance transparency, and facilitate efficient decision-making for highway development projects. The Bhoomi Rashi portal plays a crucial role in ensuring smooth implementation of infrastructure projects while addressing land acquisition-related challenges and avoid parking of public funds with the Competent Authority for Land Acquisition (CALA).

Currently, the Bhoomi Rashi Portal has incorporated 3,725 projects of the National Highways Authority of India (NHAI). Further, ~155,326 hectare of land has been acquired through Bhoomi Rashi Portal from April 2018 to December 2025.
(Source: BhoomiRashi, Year End Review 2025 – Ministry of Road Transport & Highways, Government of India)

b. Toll collection and Revenue Leakages

Before the introduction of FASTag, toll collection processes typically involved manual cash payments at toll booths, which often resulted in long queues, delays, and traffic congestion, especially during peak hours and busy travel periods.

To ensure seamless movement of traffic through fee plazas and increase transparency in collection of user fee using FASTag, the National Electronic Toll Collection (NETC) programme, the flagship initiative of Ministry of Road Transport and Highways, has been implemented on pan-India basis.

With FASTag, vehicles are equipped with a prepaid RFID tag that is linked to the vehicle's registration and a prepaid account. As vehicles approach the toll plaza, the RFID tag is automatically scanned, and the toll amount is deducted from the prepaid account, allowing for seamless and hassle-free passage through toll booths.

Fastag collections on national highways during FY26 (up to November 2025) reached at ~ INR 442 Bn as compared to FY25 collections of INR 614.1 Bn. This growth was driven by increased traffic volumes, a modest annual hike in toll rates, and the expansion of tollable highway lengths.
(Source: Year End Review 2025 – Ministry of Road Transport & Highways, Government of India)

The constant growth and adoption of FASTag by highway users is very encouraging and has helped increase efficiency in toll operations as it not only addresses the challenge of long queues and delays but also promotes digital payments, transparency, and accountability in toll collection operations.

Further, the industry offers abundant prospects for expansion and advancement, especially with the advent of technologies such as smart transportation systems, intelligent traffic management,

and sustainable construction methods. Efforts are also underway to tackle environmental and safety issues, with a heightened emphasis on enhancing road safety protocols, mitigating traffic congestion, and advocating for the adoption of eco-friendly materials in road infrastructure development.

4. Future Outlook

The Roads sector in India is continually expanding, driven by numerous factors including urbanization, population growth, and the escalating demand for efficient transportation infrastructure. The surge in domestic trade flows has led to an increase in commercial vehicles and freight movement, further bolstering the sector's prospects.

The government's unwavering support, coupled with strategic investments and the adoption of advanced technologies, is expected to propel the sector forward, contributing to India's economic development and global competitiveness.

- Ministry of Road Transport and Highways has been allocated INR 2.9 Tn (USD 33.07 Bn) during FY 2025-26 Budget. *(Source: Union Budget 2025-26)*
- As of November 2025, the National Highways Authority of India (NHAI) has awarded 510 Wayside Amenities (WSAs) along national highways and expressways, with 110 of these WSAs already operational. The government plans to develop over 700 WSAs by FY 2029. *(Source: Year End Review 2025 – Ministry of Road Transport & Highways, Government of India)*
- NHAI has made significant progress in developing Digital Highways with Optic Fibre Cable (OFC) infrastructure. Two pilot projects along the Delhi-Mumbai Expressway (1,367 km) and Hyderabad-Bangalore corridor (512 km) have been awarded, and the laying of OFC is underway. This infrastructure supports internet connectivity expansion in remote areas and enables next generation telecom technologies like 5G and 6G. *(Source: IBEF Roads Report, November 2025)*
- Additionally, in a significant step towards supporting electric mobility, a total of 5,293 Electric Vehicle (EV) charging stations have been established along National Highways. This includes 4,729 stations set up by the Ministry of Petroleum and Natural Gas at an investment of INR 1.8 Bn. Additionally, the Ministry of Heavy Industries has targeted the establishment of 5,833 EV charging stations as part of a broader plan to deploy 7,432 stations. *(Source: Report on Electric Vehicle Charging Stations on National Highways – Ministry of Road Transport & Highways, Government of India)*
- PM Gati Shakti has evolved into a nationwide, GIS-based digital backbone integrating 44 Central Ministries and all States/UTs with 1,600+ data layers, enabling coordinated appraisal of 200+ large projects (Rs. 15+ lakh crore), faster clearances, and integrated planning across transport, logistics, utilities, and social infrastructure. *(Source: Report on Transforming India's Infrastructure and Connectivity by Research unit of Press Information Bureau, Government of India)*
- The plan will also bring together departments such as railways, roads & highways and others and implementation will be done with the help of geo-satellite imaging and Big Data, land and logistics. *(Source: Report on Transforming India's Infrastructure and Connectivity by Research unit of Press Information Bureau, Government of India)*
- The Government has engaged a consultant to provide guidance on the integration of innovative technologies such as GNSS for toll collection without barriers. A pilot program for GNSS-based Electronic Toll Collection will be conducted in conjunction with FASTag on specific National Highways. *(Source: IBEF Roads Report, November 2025)*
- The Ministry of Environment, Forests, and Climate Change (MoEF & CC) has directed the National Highways Authority of India (NHAI) and other relevant agencies to utilize fly ash in road construction projects located within a 300-kilometer radius of coal or lignite-based thermal power plants. This

directive aims to encourage sustainable practices in road construction. *(Source: Report on implementation of action plan to achieve 100% fly ash utilisation by the Thermal Power Plants by National Green Tribunal)*

With ongoing projects and initiatives aimed at transforming the infrastructure landscape, the future outlook for the roads sector in India appears promising, poised to meet the evolving needs of the nation's growing economy and population.

VI. Background of the SPVs

1. Jaipur-Mahua Tollway Private Limited ("JMTPL")

JMTPL is situated in the state of Rajasthan, connecting Jaipur to Mahua on the east, near the edge of the south-western Uttar Pradesh. It is a 109.09 km toll road which forms a part of the NH 21 in Rajasthan. This is a four-lane road with two toll plazas, namely, Sikandra (TP1) at Km 156.6 (closer to Mahua) and Rajadhok (TP2) at Km 204.7 (closer to Jaipur).

It caters to following types of strategic movements:

- **Short-distance trips** including tourism and leisure trips between some of the most attractive tourist destinations in India. Such trips are mostly comprising of CJVs which are either local or run between key tourist locations of Agra and Bharatpur at one end and Jaipur on the other.
- **Medium-distance trips** between Rajasthan and Uttar Pradesh connect marble-processing sites of Rajasthan to its consumption sites in Uttar Pradesh. It also transports significant number of manufactured products across the states of UP and Rajasthan.
- **Long-distance trips** between Gujarat and southern Rajasthan, and UP/East India connects ports and industries of western India to major consumption and production centres in North India.

The toll plazas have been operational since May 2008 (TP1) and September (TP2) 2009. The following table presents a summary of the concession:

Particulars	Details
State	Rajasthan
Employer	NHAI
Project type	Design, Build, Finance, Operate and Transfer ("DBFOT")
Purchase price for the InvIT at an EV level	INR 8,717 Mn
InvIT Holding in the SPV	100%
Highway and lane configuration	NH 21 four lane
Toll Plazas	TP1: Sikandra TP2: Rajadhok
Length of the asset	TP1: 54.73 km TP2: 54.36 km
Commencement of operations	TP1: May 2008 TP2: September 2009
Concession period	25 years
Concession end	FY32

The pictures of the Asset are shown below:

Note: Site visit conducted by EYMBSLLP personnel on 26 February 2026

2. Mahua Bharatpur Expressways Limited ("MBEL")

MBEL is situated in the state of Rajasthan, connecting Mahua to Bharatpur on the east, near the edge of the south-western Uttar Pradesh. It is a 57.3 km toll road which forms a part of the NH 21 in Rajasthan. This is a four-lane road with two toll plazas, namely, Amoli (TP1) at Km 98.5 (closer to Mahua) and Ludhawai (TP2) at Km 64.5 (closer to Bharatpur).

MBEL caters to following types of strategic movements:

- **Short-distance trips** including tourism and leisure trips between some of the most attractive tourist destinations in India. Such trips are mostly comprising of CJVs which are either local or run between key tourist locations of Agra and Bharatpur at one end and Jaipur on the other.
- **Medium-distance trips** between Rajasthan and Uttar Pradesh connect marble-processing sites of Rajasthan to its consumption sites in Uttar Pradesh. It also transports significant number of manufactured products across the states of UP and Rajasthan.
- **Long-distance trips** between Gujarat and southern Rajasthan, and UP/East India connects ports and industries of western India to major consumption and production centres in North India.

The toll plazas have been operational since May 2009. The following table presents a summary of the concession:

Particulars	Details
State	Rajasthan
Employer	NHAI
Project type	Design, Build, Finance, Operate and Transfer ("DBFOT")
Purchase price for the InvIT at an EV level	INR 3,241 Mn
InvIT Holding in the SPV	99.97%
Highway and lane configuration	NH 21 four lane
Toll Plazas	TP1: Amoli TP2: Ludhawai
Length of the asset	TP1: 38.65 Km TP2: 18.65 Km
Commencement of operations	May 2009
Concession period	25 years
Concession end	FY32

The pictures of the Asset are shown below:

Note: Site visit conducted by EYMBSLLP personnel on 26 February 2026

3. Western UP Tollway Private Limited ("WUPTPL")

WUPTPL is situated in western Uttar Pradesh (UP), connecting the cities of Meerut and Muzaffarnagar. It is a 78.1-Km four-lane tolled road which forms a part of the NH 334 in Uttar Pradesh. It has one toll plaza, namely, Siwaya (TP1) at Km 76.0, which lies close to Meerut (approximately 10 km from the city).

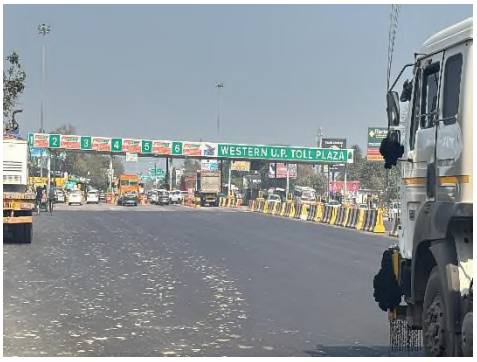
WUPTPL primarily caters to two different types of strategic movements:

- **Short-distance trips** by locals travelling within the National Capital Region (NCR) for work, leisure or short trips. This region is made up of contiguous urban settlements which are largely co-dependent on each other for exchanging goods and services.
- **Medium-distance trips** on WUPTPL which mostly have one end of their trip in Uttarakhand. This is because it is the primary route connecting Delhi NCR to the popular tourist destinations of Uttarakhand. Increased traffic volumes can be observed closer to weekends, as people from Delhi and nearby areas travel to Uttarakhand for leisure, tourism and business purposes.

The toll plaza on WUPTPL has been operational since April 2011. The following table presents a summary of the concession:

Particulars	Details
State	Uttar Pradesh
Employer	NHAI
Project type	Design, Build, Finance, Operate and Transfer ("DBFOT")
Purchase price for the InvIT at an EV level	INR 1,728 Mn
InvIT Holding in the SPV	100%
Highway and lane configuration	NH 334 four lane
Toll Plazas	TP1: Siwaya
Length of the asset	78.1 Km
Commencement of operations	TP1: April 2011
Concession period	20 years
Concession end	FY27

The pictures of the Asset are shown below:



Note: Site visit conducted by EYMBSLLP personnel on 20 February 2026

4. Nelamangala Devihalli Expressway Private Limited ("NDEPL")

NDEPL is situated in the southern state of Karnataka, connecting the city of Bangalore to Mangalore via NH75. It is one of the three sections making the corridor, the other two being Devihalli-Hassan Tollway Limited (DHTPL) and Hassan-Mangalore highway. This project is an 80.26-km toll road which forms a part of NH75 in Karnataka. This is a four-lane road with two toll plazas, namely, Doddakarenahalli/Nelamangala (TP1 closer to Bangalore) and Karbylu (TP2 closer to Devihalli).

NDEPL primarily caters to the following different types of movements, by virtue of its strategic location on various corridors:

- **Medium-distance** movements between Bangalore and Mangalore primarily for leisure and tourism. The CJVs contribute around 70% to the total traffic on the project. This is driven by the large number of tourist destinations along the Asset and close to the Asset which drives the car growth.
- **Work and leisure trips** between local cities, towns and villages like Nelamangala, Hassan, tourist spots, and Bangalore city.
- **Petroleum-related traffic**:
  - Between ports and refineries in Mangalore and Kochi, and bottling plants lying on the project, viz HPCL plant at Yediyur and BPCL plant at Solur.
  - Between bottling plants and neighbouring consumption centres like Bangalore.

The toll plazas have been operational since June 2012. The following table presents a summary of the concession:

Particulars	Details
State	Karnataka
Employer	NHAI
Project type	Design, Build, Finance, Operate and Transfer ("DBFOT")
Purchase price for the InvIT at an EV level	INR 5,936 Mn
InvIT Holding in the SPV	100%
Highway and lane configuration	NH 75 4-lane
Toll Plazas	TP1: Doddakarenahalli TP2: Karbylu
Length of the asset	TP1: 40.13 km TP2: 40.13 km
Commencement of operations	TP1: June 2012 TP2: June 2012
Concession period	25 years
Concession end	FY33

The pictures of the Asset are shown below:

Note: Site visit conducted by EYMBSLLP personnel on 24 February 2026

5. Farakka-Raiganj Highways Private Limited ("FRHPL")

FRHPL is situated in the state of West Bengal, connecting the cities of Farakka and Raiganj where it also passes through another city – Malda - and is located very close to the international border with Bangladesh. It is a 100.1 km toll road which forms a part of NH 12 in West Bengal. It is a four-lane road with two toll plazas, namely, Lakshmipur (TP1) at Km 297.9 (closer to Farakka in the south) and Gazole (TP2) at Km 351.4 (closer to Malda).

FRHPL primarily caters to three different types of strategic movements:

- **Short-distance trips** between Malda and other towns in Malda and Murshidabad districts.
- **Medium-distance trips** between southern and northern parts of West Bengal, including movements between Pakur region, Malda and Bangladesh.
- **Long-distance trips** between South and East India including Kolkata, and Northeast India. Kolkata is the largest urban agglomeration and one of the four older metropolitan cities of India and is both a large attractor and generator of consumption-linked commodities in East and Northeast India.

The toll plazas on Farakka Raiganj Highway Private Limited Road have been operational since October 2016. The following table presents a summary of the concession:

Particulars	Details
State	West Bengal
Employer	NHAI
Project type	Design, Build, Finance, Operate and Transfer ("DBFOT")
Purchase price for the InvIT at an EV level	INR 29,204 Mn
InvIT Holding in the SPV	100%
Highway and lane configuration	NH12 four-lane
Toll Plazas	TP1: Lakshmipur TP2: Gazole
Length of the asset	TP1: 47.67 km TP2: 43.38 km Malda Bypass: 9.05 km
Commencement of operations	October 2016
Concession period	30 years
Concession end*	FY42

** The average actual traffic volumes were higher than the target traffic volumes during the period FY20 – FY22. Accordingly, as per the Concession Agreement, the Concessionaire may elect to either reduce the concession period or pay an additional premium of 25% of the Realisable Fee (i.e. toll revenue) for the period of reduction in concession period, in lieu of the reduction in the concession period*

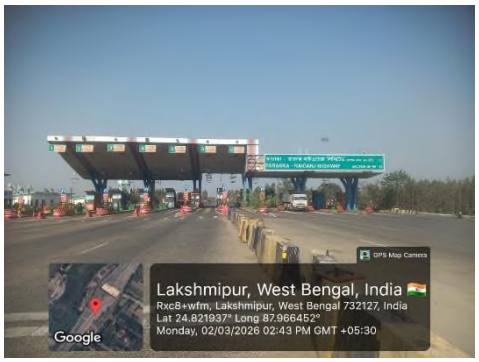
FRHPL has made its estimates based on contractual terms and third-party traffic studies. However, NHAI and the Independent Engineer (IE) have applied different methodologies, resulting in varying outcomes. As per the information provided by the Management, litigation on this matter will be initiated soon.

Based on the FRHPL's computation of PCUs, the concession period is proposed to be reduced by 671 days, whereas NHAI's computation indicates a reduction of 1,095 days.

FRHPL has opted to pay the additional premium instead of reducing the concession period. Hence, the concession end date has been considered to remain unchanged. However, an additional premium of 25% of the Realisable Fee (i.e. toll revenue) has been considered for the last 671 days of concession period.

Based on independent legal and accounting opinions obtained by the SPV, it believes that the estimates used are reasonable, evidence-based, and compliant with applicable accounting standards. We have relied on the same for our valuation exercise.

The pictures of the Asset are shown below:



Note: Virtual site visit conducted by EYMBSLLP personnel on 2 March 2026

6. Walayar Vadakkencherry Expressways Private Limited ("WVEPL")

WVEPL is situated in the state of Kerala, connecting Walayar, a town located on the Tamil Nadu-Kerala border and Vadakkencherry, a town in the Palakkad district of Kerala. It is a section of the strategic NH 47 which serves as a key entry point to the State from its eastern end. It is a 53.5 km toll road which forms a part of the NH 47, a key highway connecting the city Salem in Tamil Nadu to Kochi in Kerala. It is a four-lane road with one toll plaza, namely, Chullimada Hamlet (Pampampallam) at km 189.4 (closer to Walayar).

WVEPL primarily caters to three different types of strategic movements:

- **Short-distance trips** undertaken largely by passenger vehicles for work/business trips wherein the movement is predominantly local between Walayar and other areas in the Palakkad district.
- **Medium-distance trips** made by both passenger and goods vehicles covering places such as Ernakulam and Kochi in Kerala, to Erode and Salem in Tamil Nadu.
- **Long-distance trips** predominantly by MAVs catering to Kerala's high demand for consumption goods and cement, from areas lying outside the state such as Chennai, Bangalore, Vijaywada etc.

The toll plaza has been operational since May 2015. The following table presents a summary of the concession:

Particulars	Details
State	Kerela
Employer	NHAI
Project type	Design, Build, Finance, Operate and Transfer ("DBFOT")
Purchase price for the InvIT at an EV level	INR 8,792 Mn
InvIT Holding in the SPV	100%
Highway and lane configuration	NH 544 four lane
Toll Plazas	TP1: Pampampallam
Length of the asset	TP1: 53.5 km
Commencement of operations	May 2015
Concession period	20 years
Concession end	FY34
Revised concession end (due to variation in traffic) *	FY38

**The Concessionaire is in arbitration with NHAI over adjustments to the concession period due to discrepancies between actual and target traffic volumes as per the Concession Agreement.*

The Concession Agreement allows for changes in the concession period based on actual traffic compared to target benchmarks, with specific multipliers for adjustments. WVEPL has made its estimates based on contracts and third-party traffic studies, but NHAI and the Independent Engineer (IE) have used different methodologies, leading to varied results. The issue is currently under arbitration.

Based on independent legal and accounting opinions obtained by WVEPL, it believes that the estimates used are reasonable, evidence-based, and compliant with applicable accounting standards. However, the matter remains under arbitration currently.

The pictures of the Asset are shown below:

Note: Virtual site visit conducted by EYMBSLLP personnel on 2 March 2026

7. DA Toll Road Private Limited ("DATRPL")

DATRPL is situated in the state of Haryana and Uttar Pradesh connecting the Central National Capital Region (NCR; comprising Delhi state) to Agra in the south, via Palwal and Mathura. It is a 179.5-km toll road which forms a part of the NH 19 in Haryana and Uttar Pradesh. This was a four-lane road with two toll plazas - TP1 Srinagar (km74 closer to Delhi) and Mahuvan (km164 closer to Agra). DATRPL achieved provisional commercial operations date (PCOD) in May 2022 and the toll plaza at km74 (Srinagar) split into two toll plazas TP1 Prithala (km46) and Kotwan (km94) which became operational in July'22.

DATRPL primarily caters to three different types of strategic movements:

- **East-West long-distance movement** from Kashmir in North India to the India-Bangladesh border. This route originally connected Kabul in Afghanistan to Chittagong in Bangladesh.
- **North-south long-distance movement** connecting the Srinagar in Kashmir (northernmost state) to Kanyakumari in Tamil Nadu (southernmost state in mainland India).
- **Medium-distance movement** as part of being located one of the primary corridors connecting Delhi and Lucknow via Agra.
- **Short-distance inter-urban movement** between towns and cities in and around Delhi, Palwal, Mathura and Agra.

The following table presents a summary of the concession:

Particulars	Details
State	Haryana and Uttar Pradesh
Employer	NHAI
Project type	Design, Build, Finance, Operate and Transfer ("DBFOT")
Purchase price for the InvIT at an EV level	INR 68,172 Mn
InvIT Holding in the SPV	100%
Highway and lane configuration	NH 19 / NH 44 Six-lane divided
Toll Plazas	KM46: Gadpuri KM94: Karman KM196: Mahuvan
Length of the asset	KM46: 45.88 KM KM94: 63.22 KM KM164: 69.00 KM
Commencement of operations	Mahuvan: October 2012 Gadpuri: July 2022 Karman: July 2022
Concession period	26 years
Concession end	FY39
Revised concession end (due to variation in traffic) *	FY44

**The Concession Agreement allows for changes in the concession period based on actual traffic volumes compared to target benchmarks, with specific multipliers for adjustments. DATRPL has made estimates based on contracts and third-party traffic studies.*

While the Management has submitted its proposal for extension in the concession period based upon its computation of the PCUs achieved during FY22-FY24, a response from NHAI is awaited.

Management has also considered extension of concession period on account of suspension or less toll collection fee at toll plazas due to lockdowns imposed by Government of India as remedial measure to Covid-19. While the extension letters are yet to be received from the Concessioning Authority, based

upon the extension letters received for the other SPVs, the Management is confident of receiving these extension letters as well.

Based on independent legal and accounting opinions obtained by DATRPL, it believes that the estimates used are reasonable, evidence-based, and compliant with applicable accounting standards. We have relied on the same for our valuation exercise.

The pictures of the Asset are shown below:

8. Ghaziabad Aligarh Expressway Private Limited ("GAEPL")

GAEPL is situated in western Uttar Pradesh (UP), connecting the cities of Ghaziabad and Aligarh via Khurja and Bulandshahr. It is a 125.3-km toll road which forms a part of NH 91 in Uttar Pradesh. This is a six-lane road with two toll plazas, namely, Luharli (TP1 closer to Ghaziabad) and Somna (TP2 closer to Aligarh).

GAEPL primarily caters to three different types of strategic movements:

- Local traffic between cities in western UP, Delhi Central NCR (consisting of Delhi state) and Ghaziabad.
- Trips to the industrial area of Sikandrabad which is located on the Asset and serves as a major attractor/generator of traffic.
- Heavy vehicle traffic originating from the states of Haryana, Punjab and Jammu and Kashmir in the north travelling to states in the east of India including West Bengal, Orissa and the north-eastern states. The asset is part of strategic north – east movement and majority of this traffic appears on Somna toll plaza

The toll plazas on the Asset have been operational since June 2015. The following table presents a summary of the concession:

Particulars	Details
State	Uttar Pradesh
Employer	NHAI
Project type	Design, Build, Finance, Operate and Transfer ("DBFOT")
Purchase price for the InvIT at an EV level	INR 24,606 Mn
InvIT Holding in the SPV	100%
Highway and lane configuration	NH 91 six lane
Toll Plazas	TP1: Luharli TP2: Somna
Length of the asset	TP1: 63.15 Km TP2: 63.15 Km
Commencement of operations	June 2015
Concession period	24 years
Concession end	FY35
Revised concession end (due to variation in traffic)*	FY40

**As per the settlement agreement dated 08th April 2022 an extension of 4.32 years has been granted and agreed upon by National highways Authority of India (NHAI) based on the concession agreement. Hence, the Management has considered the revised concession end to be FY40.*

The pictures of the Asset are shown below:

Note: Site visit conducted by EYMBSLLP personnel on 21 February 2026

Shape the future with confidence

9. N. A. M. Expressway Private Limited ("NAMEPL")

N.A.M. Expressway Private Limited ("NAMEPL") is a company limited by shares, domiciled in India and was incorporated under the provisions of the erstwhile companies Act 1956 on June 15, 2010 as a Special Purpose Vehicle. It is an interstate route connecting southeastern Telangana with northern Andhra Pradesh. It connects the towns of Narketpally (Nalagonda district, Telangana) and Medarametla (Bapatla district, Andhra Pradesh). It is a 212.9-km four-lane toll road which forms a part of the state highway SH-2 (New SH36 in Andhra Pradesh (AP)). There are three toll plazas, namely, Madgulapally (TP1), Tummalacheruvu (TP2), and Elchuru (TP3) in the increasing order of their distance from Hyderabad.

The toll plazas on the Asset have been operational since June 2015. The following table presents a summary of the concession:

Particulars	Details
State	Telangana & Andhra Pradesh
Concessioning authority	Government of Andhra Pradesh
Project type	Design, Build, Finance, Operate and Transfer (DBFOT)
Purchase price for the InvIT at an EV level	INR 24,013 Mn
InvIT Holding in the SPV	100%
Highway and lane configuration	SH-2 (New SH36) four lane
Toll plazas	TP1: Madgulapally TP2: Tummalacheruvu TP3: Elchuru
Length (km)	TP1: 71.62 Km TP2: 70.62 Km TP3: 70.62 Km
Commencement of operations	January 2011
Concession period	24 years
Concession end	FY35
Revised Concession end (due to variation in traffic) *	FY40

**The Concession Agreement allows for changes in the concession period based on actual traffic/ revenue compared to target benchmarks, with specific multipliers for adjustments.*

As per the concession agreement, the target date for traffic for modification in concession period for NAMEPL is 01 Oct 2025. The actual traffic computation as on the target date shall be derived by computing average of the traffic, as on the date that falls one year prior to the target date, on the target date and the first anniversary of the target date (i.e. "Measurement Period").

NAMEPL has made estimates based on contracts and third-party traffic studies. Accordingly, an extension of 1,775 days has been considered in the model. Since the Measurement Period is in the projected period, there has been no discussions initiated by the Management with the concessioning authority on the same.

Based on independent legal and accounting opinions obtained by NAMEPL, it believes that the estimates used are reasonable, evidence-based, and compliant with applicable accounting standards. We have relied on the same for our valuation exercise.

The pictures of the Asset are shown below:

Note: Virtual site visit conducted by EYMBSLLP personnel on 14 July 2025

10. Hazaribagh Tollway Private Limited ("HTPL")

HTPL is situated in the state of Jharkhand connecting the Ranchi, the capital of Jharkhand, and Hazaribagh, on the NH20. It is a 73.5 km long toll road which forms a part of the NH 20 in Jharkhand. This is a four-lane road with one toll plazas, namely, Pundag (TP1) at Km 100.4.

HTPL primarily caters to three different types of strategic movements:

- **Short-distance trips** including tourism and leisure travel trips between some of the key tourist destinations in Jharkhand. Many CJV users are either local or travel between Ramgarh and Patratu at one end and Ranchi at the other.
- **Medium-distance trips** between Bihar/rest of Jharkhand connecting the mines situated close to the Asset, to industries in Jharkhand. The Asset also transports a significant number of minerals, steel, and related products across the states of Bihar, West Bengal, and Odisha.
- **Long-distance trips** between Bihar/southern West Bengal and southern as well as central states of India.

The following table presents a summary of the concession:

Particulars	Details
State	Jharkhand
Employer	NHAI
Project type	Toll, Operate and Transfer ("TOT")
Purchase price for the InvIT at an EV level	INR 13,247 Mn
InvIT Holding in the SPV	100%
Highway and lane configuration	NH 33, 4-lane divided
Toll Plazas	TP1: Pundag
Length of the asset	TP1: 73.5 km
Commencement of operations	October 2020
Concession period	30 years
Concession end	FY51

The pictures of the Asset are shown below:

Note: Site visit conducted by EYMBSLLP personnel on 27 January 2026

11. Jhansi-Lalitpur Tollway Private Limited ("JLTPL")

JLTPL is situated in the state of Uttar Pradesh, connecting Jhansi and Lalitpur, on the NH 44. NH44 caters to the North South movement between Jammu and Kashmir, and Kanyakumari, connecting major centres of economic activity such as Delhi, Nagpur, Hyderabad, Bangalore and Chennai.

JLTPL primarily caters to three different types of strategic movements:

- **Short-distance trips** including leisure and business travel trips between some of the key tourist towns/cities around the Asset. Many CJV trips are either local or run between Jhansi, Orchha, Talbehat, and Lalitpur.
- **Medium-distance trips and long distance trips** connecting Gwalior, Delhi-NCR as well as northern regions with Nagpur, Hyderabad, Bangalore, and further southern regions.

JLTPL and JVTPL form a 100.0 Km long toll road which is a part of NH 44 in Uttar Pradesh. It is a four-lane divided road with two toll plazas. Babina (JLTPL) is at km 49.7. JLTPL is near Jhansi end of the Asset. The following table presents a summary of the concession:

Particulars	Details
State	Uttar Pradesh
Employer	NHAI
Project type	Toll, Operate and Transfer ("TOT")
Purchase price for the InvIT at an EV level	INR 7,723 Mn
InvIT Holding in the SPV	100%
Highway and lane configuration	NH 44, 4-lane divided
Toll Plazas	Babina
Length of the asset	49.70 km
Commencement of operations	October 2020
Concession period	30 years
Concession end	FY51
Revised concession end (due to variation in traffic) *	FY46

**The Concession Agreement allows for changes in the concession period based on actual revenue compared to target benchmarks.*

As per the concession agreement, the target date for toll collection for modification in concession period for JLTPL is 31 March 2030 and 31 March 2040. The actual toll collection computation as on the target date shall be derived from the average of the toll collection as determined using traffic sampling in the month that falls one year prior to the target points 1 or 2, during the month of the target points 1 or 2, and on the first anniversary of the target points 1 or 2 (i.e. "Measurement Periods").

JLTPL has made its estimates based on contracts and third-party traffic studies. Accordingly, a reduction of 1,826 days has been considered in the model. Since the Measurement Periods is in the projected period, there has been no discussions initiated by the Management with the concessioning authority on the same.

Based on independent legal and accounting opinions obtained by JLTPL, it believes that the estimates used are reasonable, evidence-based, and compliant with applicable accounting standards.

The pictures of the Asset are shown below:

Note: Site visit conducted by EYMBSLLP personnel on 13 February 2026

12. Jhansi-Vigakhet Tollway Private Limited ("JVTPL")

JVTPL is situated in the state of Uttar Pradesh, connecting Jhansi and Lalitpur, on the NH 44. NH44 caters to the North South movement between Jammu and Kashmir, and Kanyakumari, connecting major centres of economic activity such as Delhi, Nagpur, Hyderabad, Bangalore and Chennai.

JVTPL primarily caters to three different types of strategic movements:

- **Short-distance trips** including leisure and business travel trips between some of the key tourist towns/cities around the Asset. Many CJV trips are either local or run between Jhansi, Orchha, Talbehat, and Lalitpur.
- **Medium-distance trips and Long distance trips** connecting Gwalior, Delhi-NCR as well as northern regions with Nagpur, Hyderabad, Bangalore, and further southern regions.

JLTPL and JVTPL form a 100.0 Km long toll road which is a part of NH 44 in Uttar Pradesh. It is a four-lane divided road with two toll plazas. Vigakhet (JVTPL) at km 49.3. JVTPL is near Lalitpur end of the asset.

The following table presents a summary of the concession:

Particulars	Details
State	Uttar Pradesh
Employer	NHAI
Project type	Toll, Operate and Transfer ("TOT")
Purchase price for the InvIT at an EV level	INR 4,735 Mn
InvIT Holding in the SPV	100%
Highway and lane configuration	NH 44, 4-lane divided
Toll Plazas	Vigakhet
Length of the asset	49.3 km
Commencement of operations	October 2020
Concession period	30 years
Concession end	FY51
Revised concession end (due to variation in traffic) *	FY46

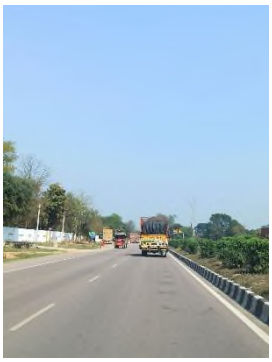
**The Concession Agreement allows for changes in the concession period based on actual revenue compared to target benchmarks.*

As per the concession agreement, the target date for toll collection for modification in concession period for JVTPL is 31 March 2030 and 31 March 2040. The actual toll collection computation as on the target date shall be derived from the average of the toll collection as determined using traffic sampling in the month that falls one year prior to the target points 1 or 2, during the month of the target points 1 or 2, and on the first anniversary of the target points 1 or 2 (i.e. "Measurement Periods").

JLTPL has made estimates based on contracts and third-party traffic studies. Accordingly, a reduction of 1,826 days has been considered in the model. Since the Measurement Periods is in the projected period, there has been no discussions initiated by the Management with the concessioning authority on the same.

Based on independent legal and accounting opinions obtained by JVTPL, it believes that the estimates used are reasonable, evidence-based, and compliant with applicable accounting standards.

The pictures of the Asset are shown below:



Note: Site visit conducted by EYMBSLLP personnel on 13 February 2026

13. Kotwa-Muzaffarpur Tollway Private Limited ("KMTPL")

KMTPL is situated in the state of Bihar, connecting the two cities of Muzaffarpur and Kotwa in the northwestern part of Bihar. This Asset is an 80 km toll road which forms part of the NH 27 in Bihar. It is a four-lane road with one toll plaza, namely, Parsoni Khem (TP1) at Km 467+700 (closer to Kotwa).

KMTPL primarily caters to three different types of strategic movements:

- **Short-distance trips** made by cars for local movement between places such as Motihari, Chakia, Motipur and other local destinations mostly for work related purpose.
- **Medium-distance trips** made by light and heavy goods vehicles covering places such as Patna in the southern part of the state and Raxaul near the India-Nepal border thereby catering to the heavy movement of trucks between the two countries for trade purpose.
- **Long-distance trips** made by heavy goods vehicles to provide the east-west connectivity between states such as Uttar Pradesh, Uttarakhand and Delhi, and West Bengal and North-eastern states. The Asset also caters to movement of trucks to countries such as Bangladesh and Bhutan.

The following table presents a summary of the concession:

Particulars	Details
State	Bihar
Employer	NHAI
Project type	Toll, Operate and Transfer ("TOT")
Purchase price for the InvIT at an EV level	INR 11,142 Mn
InvIT Holding in the SPV	100%
Highway and lane configuration	NH 27 four-lane
Toll Plazas	Parsoni Khem
Length of the asset	80 km
Commencement of operations	October 2020
Concession period	30 years
Concession end	FY51
Revised concession end (due to variation in traffic) *	FY46

**The Concession Agreement allows for changes in the concession period based on actual revenue compared to target benchmarks.*

As per the concession agreement, the target date for toll collection for modification in concession period for KMTPL is 31 March 2030 and 31 March 2040. The actual toll collection computation as on the target date shall be derived from the average of the toll collection as determined using traffic sampling in the month that falls one year prior to the target points 1 or 2, during the month of the target points 1 or 2, and on the first anniversary of the target points 1 or 2 (i.e. "Measurement Periods").

KMTPL has made estimates based on contracts and third-party traffic studies. Accordingly, a reduction of 1,826 days has been considered in the model. Since the Measurement Periods is in the projected period, there has been no discussions initiated by the Management with the concessioning authority on the same.

Based on independent legal and accounting opinions obtained by KMTPL, it believes that the estimates used are reasonable, evidence-based, and compliant with applicable accounting standards.

The pictures of the Asset are shown below:

Note: Site visit conducted by EYMBSLLP personnel on 21 November 2025

14. Lucknow-Raebareli Tollway Private Limited ("LRTPL")

LRTPL is situated in the state of Uttar Pradesh, connecting the state capital Lucknow to Raebareli in the southern-central part of Lucknow. This Asset is a 70 km toll road which forms part of the NH 30 in Uttar Pradesh. It is a four-lane road with one toll plaza, namely, Dakhina Sekhpur (TP1) at Km 42.65 (closer to Lucknow).

LRTPL primarily caters to two different types of strategic movements:

- **Short-distance trips** undertaken majorly by passenger vehicles such as cars for work/business and tourism purpose wherein the movement is predominantly local between Lucknow, Raebareli, Prayagraj, Varanasi and Mirzapur. Further, LCVs cater to the local demand generated by two large consumption centres – Lucknow and Raebareli. Short distance trips made by MAVs feeds into the local consumption demand and also carries significant amount of Cement due to the presence of cement factories (Birla Cement, Dalla Cement) in the vicinity.
- **Long-distance trips** undertaken by heavy trucks between Punjab, Haryana, Uttar Pradesh, West Bengal, and Jharkhand carrying a mix of commodities such as agriculture/grocery items, metal, cement, petroleum and manufacturing items.

The following table presents a summary of the concession:

Particulars	Details
State	Uttar Pradesh
Employer	NHAI
Project type	Toll, Operate and Transfer ("TOT")
Purchase price for the InvIT at an EV level	INR 7,678 Mn
InvIT Holding in the SPV	100%
Highway and lane configuration	NH 30 four-lane
Toll Plazas	Dakhina Sekhpur
Length of the asset	70.0 km
Commencement of operations	October 2020
Concession period	30 years
Concession end	FY51

The pictures of the Asset are shown below:

Note: Site visit conducted by EYMBSLLP personnel on 17 November 2025

15. Madurai-Kanyakumari Tollway Private Limited ("MKTPL")

MKTPL is situated in the state of Tamil Nadu, connecting Madurai, northern Tamil Nadu and states north of Tamil Nadu with cities and towns in southern Tamil Nadu and Thiruvananthapuram in Kerala. The Asset is a 52.3-km toll road which lies on NH 44 in Tamil Nadu. It is a four-lane road with one toll plaza.

MKTPL primarily caters to three different types of strategic movements:

- **Short-distance trips** between cities and towns in southern Tamil Nadu including Madurai, Thirumangalam, Virudhunagar, Sivakasi, Kovilpatti, Tirunelveli and Thiruvananthapuram.
- **Medium-distance trips** between northern Tamil Nadu including Chennai and southern Karnataka including Bangalore at one end and southern parts of Tamil Nadu and Thiruvananthapuram.
- **Long-distance trips** between North India and Southern states like Andhra Pradesh, Telangana and Karnataka at one end and southern Tamil Nadu and Thiruvananthapuram at the other end.

The following table presents a summary of the concession:

Particulars	Details
State	Tamil Nadu
Employer	NHAI
Project type	Toll, Operate and Transfer ("TOT")
Purchase price for the InvIT at an EV level	INR 11,113 Mn
InvIT Holding in the SPV	100%
Highway and lane configuration	NH 44 four-lane
Toll Plazas	Kappalur
Length of the asset	52.3 km
Commencement of operations	October 2020
Concession period	30 years
Concession end	FY51
Revised concession end (due to variation in traffic) *	FY46

**The Concession Agreement allows for changes in the concession period based on actual traffic/ revenue compared to target benchmarks.*

As per the concession agreement, the target date for toll collection for modification in concession period for MKTPL is 31 March 2030 and 31 March 2040. The actual toll collection computation as on the target date shall be derived from the average of the toll collection as determined using traffic sampling in the month that falls one year prior to the target points 1 or 2, during the month of the target points 1 or 2, and on the first anniversary of the target points 1 or 2 (i.e., "Measurement Periods")

MKTPL has made estimates based on contracts and third-party traffic studies. Accordingly, a reduction of 1,826 days has been considered in the model. Since the Measurement Periods is in the projected period, there has been no discussions initiated by the Management with the concessioning authority on the same.

Based on independent legal and accounting opinions obtained by MKTPL, it believes that the estimates used are reasonable, evidence-based, and compliant with applicable accounting standards.

The pictures of the Asset are shown below:

Note: Site visit conducted by EYMBSLLP personnel on 5 February 2026

16. Kanyakumari-Etturavattam Tollway Private Limited ("KETPL")

KETPL is situated in the state of Tamil Nadu, connecting Madurai, northern Tamil Nadu and states north of Tamil Nadu with cities and towns in southern Tamil Nadu and Thiruvananthapuram in Kerala. The Asset is a 64.2-km toll road which lies on NH 44 in Tamil Nadu. It is a four-lane road with one toll plaza.

KETPL primarily caters to three different types of strategic movements:

- **Short-distance trips** between cities and towns in southern Tamil Nadu including Madurai, Thirumangalam, Virudhunagar, Sivakasi, Kovilpatti, Tirunelveli and Thiruvananthapuram.
- **Medium-distance trips** between northern Tamil Nadu including Chennai and southern Karnataka including Bangalore at one end and southern parts of Tamil Nadu and Thiruvananthapuram.
- **Long-distance trips** between North India and Southern states like Andhra Pradesh, Telangana and Karnataka at one end and southern Tamil Nadu and Thiruvananthapuram at the other end.

The following table presents a summary of the concession:

Particulars	Details
State	Tamil Nadu
Employer	NHAI
Project type	Toll, Operate and Transfer ("TOT")
Purchase price for the InvIT at an EV level	INR 6,611 Mn
InvIT Holding in the SPV	100%
Highway and lane configuration	NH 44 four-lane
Toll Plazas	Etturvattam
Length of the asset	64.2 km
Commencement of operations	October 2020
Concession period	30 years
Concession end	FY51

The pictures of the Asset are shown below:

Note: Site visit conducted by EYMBSLLP personnel on 5 February 2026

17. Salaipudhpur-Madurai Tollway Private Limited ("SMTPL")

SMTPL is situated in the state of Tamil Nadu, connecting Madurai, northern Tamil Nadu and states north of Tamil Nadu with cities and towns in southern Tamil Nadu and Thiruvananthapuram in Kerala. The Asset is a 63.5-km toll road which lies on NH 44 in Tamil Nadu. It is a four-lane road with one toll plaza.

SMTPL primarily caters to three different types of strategic movements:

- **Short-distance trips** between cities and towns in southern Tamil Nadu including Madurai, Thirumangalam, Virudhunagar, Sivakasi, Kovilpatti, Tirunelveli and Thiruvananthapuram.
- **Medium-distance trips** between northern Tamil Nadu including Chennai and southern Karnataka including Bangalore at one end and southern parts of Tamil Nadu and Thiruvananthapuram.
- **Long-distance trips** between North India and Southern states like Andhra Pradesh, Telangana and Karnataka at one end and southern Tamil Nadu and Thiruvananthapuram at the other end.

The following table presents a summary of the concession:

Particulars	Details
State	Tamil Nadu
Employer	NHAI
Project type	Toll, Operate and Transfer ("TOT")
Purchase price for the InvIT at an EV level	INR 7,480 Mn
InvIT Holding in the SPV	100%
Highway and lane configuration	NH 44 four-lane
Toll Plazas	Salaipudhur
Length of the asset	63.5 km
Commencement of operations	October 2020
Concession period	30 years
Concession end	FY51

The pictures of the Asset are shown below:

Note: Site visit conducted by EYMBSLLP personnel on 6 February 2026

18. Nanguneri-Kanyakumari Tollway Private Limited ("NKTPL")

NKTPL is situated in the state of Tamil Nadu, connecting Madurai, northern Tamil Nadu and states north of Tamil Nadu with cities and towns in southern Tamil Nadu and Thiruvananthapuram in Kerala. The Asset is a 63.47-km toll road which lies on NH 44 in Tamil Nadu. It is a four-lane road with one toll plaza.

NKTPL primarily caters to three different types of strategic movements:

- **Short-distance trips** between cities and towns in southern Tamil Nadu including Madurai, Thirumangalam, Virudhunagar, Sivakasi, Kovilpatti, Tirunelveli and Thiruvananthapuram.
- **Medium-distance trips** between northern Tamil Nadu including Chennai and southern Karnataka including Bangalore at one end and southern parts of Tamil Nadu and Thiruvananthapuram.
- **Long-distance trips** between North India and Southern states like Andhra Pradesh, Telangana and Karnataka at one end and southern Tamil Nadu and Thiruvananthapuram at the other end.

The following table presents a summary of the concession:

Particulars	Details
State	Tamil Nadu
Employer	NHAI
Project type	Toll, Operate and Transfer ("TOT")
Purchase price for the InvIT at an EV level	INR 8,156 Mn
InvIT Holding in the SPV	100%
Highway and lane configuration	NH 44 four-lane
Toll Plazas	Nanguneri
Length of the asset	63.47 km
Commencement of operations	October 2020
Concession period	30 years
Concession end	FY51

The pictures of the Asset are shown below:

Note: Site visit conducted by EYMBSLLP personnel on 6 February 2026

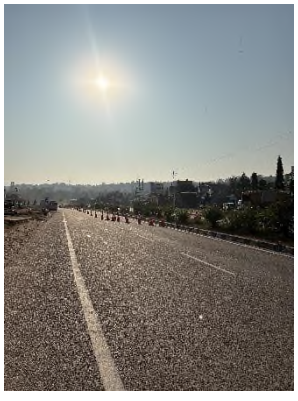
19. Jammu Udhampur Highway Private Limited ("JU" or "JUHPL")

JU was acquired by CHT from National Investment and Infrastructure Fund Limited (NIIF) on 12 June 2025. The Enterprise Value INR of JU was reported at INR13,335 Mn.

JU has entered into a Concession Agreement on 19 July 2010 with the National Highways Authority of India ('NHAI') for the development, maintenance and management for a stretch of National Highway from Jammu to Udhampur section (from 15.000 km to 67.000 km) of NH1A in the Union Territory of Jammu & Kashmir by Four-Laning on design, build, finance, operate and transfer on Annuity ("BOT Annuity") basis. Summary of details of JU are as follows:

Particulars	Details
State	Jammu and Kashmir
Employer	NHAI
Project type	BOT (Annuity)
Purchase price for the InvIT at an EV level	INR 13,335 Mn
InvIT Holding in the SPV	100%
Highway and lane configuration	NH-1A (four lane)
Length of the asset	48 km
Commencement of operations	31 May 2018
Concession period	20 years
Concession end	FY32
Annuity Payment Schedule	Semi-annual in June and December

The pictures of the Asset are shown below:



Note: Site visit conducted by EYMBSLLP personnel on 18 November 2025

20. Quazigund Expressway Private Limited (“QB” or “QEPL”)

QB was acquired by CHT from National Investment and Infrastructure Fund Limited (NIIF) on 12 June 2025. The Enterprise Value INR of QB was reported at INR19,693 Mn.

QB has entered into a Concession Agreement on May 10, 2018 with the National Highways Authority of India ('NHAI') for the development, maintenance and management for a stretch of National Highway from Quazigund to Banihal section (from km 189.350 to km 204.700 including two tunnels of 0.69 kms and 8.45 kms) of NH1A in the Union Territory of Jammu & Kashmir by Two/Four-Laning on design, build, finance, operate and transfer on Annuity (“DBFOT Annuity”) basis.

Summary of details of QB are as follows:

Particulars	Details
State	Jammu and Kashmir
Employer	NHAI
Project type	BOT (Annuity)
Purchase price for the InvIT at an EV level	INR 19,693 Mn
InvIT Holding in the SPV	100%
Highway and lane configuration	NH-1A (four lane)
Length of the asset	16 km
Commencement of operations	15 December 2022
Concession period	20 years
Concession end	FY32
Annuity Payment Schedule	Semi-annual in January and July

The pictures of the Asset are shown below:

Note: Site visit conducted by EYMBSLLP personnel on 17 November 2025

21. Andhra Pradesh Expressway Private Limited ("APEPL")

Andhra Pradesh Expressway Private Limited is situated in Telangana and Andhra Pradesh and is a four lane highway on NH44 and connects Kothakota to Kurnool Section (from km. 136+077 to km. 210+699). APEPL operates as a BOT annuity model.

Summary of details of APEPL are as follows:

Particulars	Details
State	Telangana and Andhra Pradesh
Employer	NHAI and MoRTH
Project type	BOT (Annuity)
Purchase price for the InvIT at an EV level	INR 2,079 Mn
InvIT Holding in the SPV	100%
Highway and lane configuration	NH 44 four lane
Toll Plazas	TP1: Pullur
Length of the asset	74.6 km
Commencement of operations	TP1: September 2009
Concession period	20 years
Concession end	FY27

The pictures of the Asset are shown below:

Note: Virtual site visit conducted by EYMBSLLP personnel on 27 February 2026

22. Borgaon Watambare Highways Private Limited ("BWHPL")

Borgaon Watambare Highways Private Limited ("BWHPL") was incorporated under the provisions of the Companies Act, 2013 in India. The SPV has entered into a Concession Agreement on May 10, 2018 with the National Highways Authority of India ('NHAI') for the development, maintenance and management for a stretch of National Highway from Sangli to Solapur (Package-II: Borgaon to Watambare) section (from existing Ch. km. 219.956 to Ch. 272.394/Design Ch. km. 224.000 to km. 276.000) of NH166 in the State of Maharashtra on Hybrid Annuity Mode (HAM).

The following table presents a summary of the concession:

Particulars	Details
State	Maharashtra
Concessioning authority	NHAI
Highway and lane configuration	NH-166 four lane
Project type	HAM
Purchase price for the InvIT at an EV level (100% stake)	INR 3,868 Mn
InvIT Holding in the SPV	100%
Length (km)	52.0 Km
PCOD	September 2021
Construction Period	730 days
Concession Period (Operation period)	15 years
Concession end	FY37

The pictures of the Asset are shown below:

Note: Site visit conducted by EYMBSLLP personnel on 12 December 2025

23. Mangalwedha Solapur Highways Private Limited ("MSHPL")

Mangalwedha Solapur Highways Private Limited ("MSHPL") was incorporated under the provisions of the Companies Act, 2013 in India. The SPV has entered into a Concession Agreement on May 10, 2018 with the National Highways Authority of India ('NHAI') for the development, maintenance and management for a stretch of National Highway from Sangli to Solapur (Package-IV: Mangalwedha to Solapur) section (from existing Ch. km. 314.969 to Ch. 370.452/Design Ch. km. 321.600 to km. 378.100) of NH166 in the State of Maharashtra on Hybrid Annuity Mode (HAM).

The following table presents a summary of the concession:

Particulars	Details
State	Maharashtra
Concessioning authority	NHAI
Highway and lane configuration	NH166 four lane
Project type	HAM
Purchase price for the InvIT at an EV level (100% stake)	INR 4,255 Mn
InvIT Holding in the SPV	100%
Length (km)	55.8 Km
PCOD	December 2021
Construction period	730 days
Concession period (operation period)	15 years
Concession end	FY37

The pictures of the Asset are shown below:

Note: Site visit conducted by EYMBSLLP personnel on 12 December 2025

24. Mangloor Highways Private Limited (“MHPL”)

Mangloor Highways Private Limited (“MHPL”) was incorporated under the provisions of the Companies Act, 2013 in India. The SPV has entered into a Concession Agreement on May 9, 2018 with the National Highways Authority of India ('NHAI') for the development, maintenance and management for a stretch of National Highway from Mangloor to Telangana/Maharashtra border section (Existing km. 91.350 to 140.873/Design km. 86.788 to km. 135.751) of NH161 in the State of Telangana under Bharatmala Pariyojana on Hybrid Annuity Mode (HAM).

The following table presents a summary of the concession:

Particulars	Details
State	Telangana
Concessioning authority	NHAI
Highway and lane configuration	NH161 four lane
Project type	HAM
Purchase price for the InvIT at an EV level (100% stake)	INR 3,160 Mn
InvIT Holding in the SPV	100%
Length (km)	48.963 Km
PCOD	December 2021
Construction period	730 days
Concession period (operation period)	15 years
Concession end	FY37

The pictures of the Asset are shown below:

Note: Virtual site visit conducted by EYMBSLLP personnel on 27 February 2026

25. Tirumala Highways Private Limited ("THPL")

Tirumala Highways Private Limited ("THPL") was incorporated under the provisions of the Companies Act, 2013 in India. The SPV has entered into a Concession Agreement on May 9, 2018 with the National Highways Authority of India ('NHAI') for the development, maintenance and management for a stretch of National Highway from Chittor to Mallavaram section (from existing km. 158.000 to km. 41.800/Design km. 0.000 to km. 61.128) of NH140 in the State of Andhra Pradesh under Bharatmala Pariyojana on Hybrid Annuity Mode (HAM).

The following table presents a summary of the concession:

Particulars	Details
State	Andhra Pradesh
Concessioning authority	NHAI
Highway and lane configuration	NH140 six lane
Project type	HAM
Purchase price for the InvIT at an EV level (100% stake)	INR 5,129 Mn
InvIT Holding in the SPV	100%
Length (km)	61.128 Km
PCOD	May 2021
Construction period	910 days
Concession period (operation period)	15 years
Concession end	FY37

The pictures of the Asset are shown below:

Note: Site visit conducted by EYMBSLLP personnel on 27 February 2026

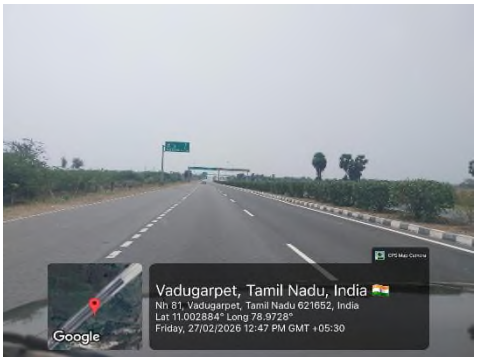
26. Srirangam Infra Private Limited ("SIPL")

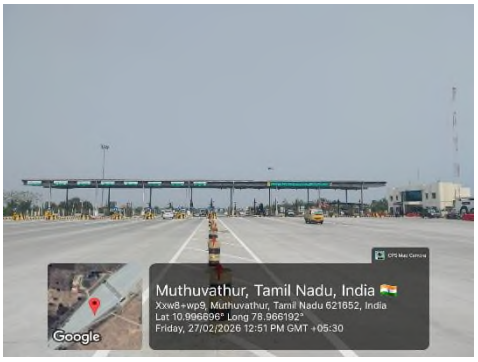
Srirangam Infra Private Limited ("SIPL") was incorporated under the provisions of the Companies Act, 2013 in India. The SPV has entered into a Concession Agreement on April 11, 2018 with the National Highways Authority of India ('NHAI') for the development, maintenance and management for a stretch of National Highway from Trichy to Kallagam section (from km. 0.000 to km. 38.700) of NH227 in the State of Tamil Nadu under Bharatmala Pariyojana on Hybrid Annuity Mode (HAM).

The following table presents a summary of the concession:

Particulars	Details
State	Tamil Nadu
Concessioning authority	NHAI
Highway and lane configuration	NH227 four lane
Project type	HAM
Purchase price for the InvIT at an EV level (100% stake)	INR 4,439 Mn
InvIT Holding in the SPV	100%
Length (km)	38.70 Km
PCOD	May 2021
Construction period	730 days
Concession period (operation period)	15 years
Concession end	FY37

The pictures of the Asset are shown below:





Note: Virtual site visit conducted by EYMBSLLP personnel on 27 February 2026

27. Shankarampet Projects Private Limited ("SPPL")

Shankarampet Projects Private Limited ("SPPL") was incorporated under the provisions of the Companies Act, 2013 in India. The SPV has entered into a Concession Agreement on May 9, 2018 with the National Highways Authority of India ('NHAI') for the development, maintenance and management for a stretch of National Highway from Ramsanpalle village to Mangloor village section (from existing km. 44.757 to km. 91.350/Design km. 39.980 to km. 86.788) of NH 61 in the State of Telangana under Bharatmala Pariyoana on Hybrid Annuity Mode (HAM).

The following table presents a summary of the concession:

Particulars	Details
State	Telangana
Concessioning authority	NHAI
Highway and lane configuration	NH161 four lane
Project type	HAM
Purchase price for the InvIT at an EV level (100% stake)	INR 4,447 Mn
InvIT Holding in the SPV	100%
Length (km)	46.808 Km
PCOD	October 2021
Construction period	730 days
Concession period (operation period)	15 years
Concession end	FY37

The pictures of the Asset are shown below:

Note: Virtual site visit conducted by EYMBSLLP personnel on 3 March 2026

VII. Procedures Adopted

We have carried out the Enterprise Valuation of the InvIT Assets, in accordance with valuation standards as specified / applicable as per SEBI InvIT Regulations, to the extent applicable.

In connection with this analysis, we have adopted the following procedures to carry out the valuation analysis:

- Requested and received financial and qualitative information relating to the InvIT Assets
- Considered the key terms of Concession Agreements;
- Analysis of the Management Projections;
- Considered the Traffic Study Reports and Draft Technical Reports;
- Considered the latest annuity letters for annuity received up to the valuation date;
- Discussed with the Investment Manager on: Background of the SPVs– business and fundamental factors that affect its earning-generating capacity and historical and expected financial performance
- Analysis of the key economic and industry factors which may affect the valuation of the SPV; Analysis of the information available in public domain/ subscribed databases in respect of the comparable companies/ comparable transactions, as considered relevant by us;
- Conducted site visits to assess the operating condition of the InvIT Assets as per the requirements of SEBI (InvIT Regulations) 2014 (as amended)
- Selection of valuation approach and valuation methodology/(ies), in accordance with SEBI (InvIT Regulations), as considered appropriate and relevant by us;
- Analysis of other publicly available information, as considered relevant by us; and
- Determination of Enterprise Value of the InvIT Assets as on the Valuation date.

VIII. Valuation Methodology

To determine the value of enterprises, three traditional approaches can be considered:

A. Market approach

The market approach measures value based on what other purchasers in the market have paid for assets that can be considered reasonably similar to those being valued.

B. Income approach

The income approach determines the value of a business based on its ability to generate desired economic benefit for the owners. The key objective of the income-based methods is to determine the business value as a function of the economic benefit.

C. Asset approach

The asset approach seeks to determine the business value based on the value of its assets.

Summary of various methods used / not used in this engagement is as given below:

Valuation Methodology	Used	Remarks
Income Approach		
Cash Flows method	Yes	DCF method is considered to be one of the most scientific methods of valuation. The individual InvIT Assets have definite concession periods and estimable cash flows for the entire length of the concession. We have therefore relied on the DCF method, using the financial projections provided to us.
Market Approach		
Market Price method	No	Not applicable as none of the SPVs are publicly listed
Comparable Companies' multiples method		
Quoted multiples	No	There are no listed companies comparable to the individual SPVs in terms of concession period, type or region
Transaction multiples	No	There were no recent transactions in comparable assets where sufficient information is available in the public domain.
Cost approach		
Net Asset Value method	No	Does not capture the earning capacity of the business and hence NAV would not be representative of fair value

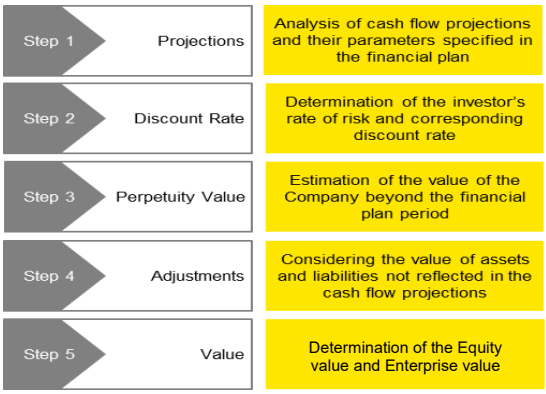
In the case of these SPVs, the Discounted Cash Flow method was considered the most appropriate method for valuation based on the characteristics of the assets being valued (as mentioned above).

Discounted Cash Flow method

Income Based Approach

- Taking into consideration the specifics of the InvIT Assets and the business environment, we have used the discounted cash flow (DCF) method (specifically, the Free Cash Flow to Firm approach) to determine the Enterprise value of the InvIT Assets.
- The profit and loss account forecast covers the remaining concession period of individual InvIT Assets.

DCF Methodology



Calculation of Weighted Average Cost of Capital ("WACC")

Purpose of a discount rate

The application of the income approach requires the determination of an appropriate discount rate at which future cash flows are discounted to their present value as of valuation date.

The discount rate reflects the time value of money and the risk associated with projected future cash flows. It is derived on the basis of the expected return on capital and the price of the best alternative investment. Therefore, the discount rate indicates the minimum required return from the asset being valued if the investor is not to be worse off than he would be if he had invested his money in the next best alternative. The return on this alternative investment must be comparable in terms of dimensions, timing and certainty, with the net cash flows expected to be derived from the subject asset.

To derive the discount rate, the weighted average cost of capital (WACC), which refers to the total capital invested (equity and debt), is used and adjusted for risk premiums or discounts, depending on the asset's specific risk compared to the risk of the overall enterprise. To determine the appropriate WACC it is adequate to consider cost of equity and cost of debt separately.

The derivation of the WACC is based on a group of guideline companies (peer group) which are operating in the same industry/sector as the InvIT Assets (so called "potential acquirers"). To calculate the WACC, cost of equity, cost of debt and the capital structure have to be determined based on market data of the group of "potential acquirers".

Formula for WACC Computation

$$WACC = \frac{E}{E+D} * r_E + \frac{D}{E+D} * r_D * (1 - s)$$

$WACC$	=	Weighted Average Cost of Capital
r_E	=	Cost of Equity
r_D	=	Cost of Debt
E	=	Market Value of Equity
D	=	Market value of interest bearing debt
$E+D$	=	Enterprise Value
s	=	Corporate Tax Rate

Calculation of Cost of equity

For the estimation of the cost of equity for BOT Assets and TOT Assets, the capital asset pricing model ("CAPM") is applied. According to the CAPM, cost of equity consists of a risk-free interest rate and a risk premium. The risk premium is calculated by multiplying the market risk premium by the beta-factor, a company-specific measure of the systematic risk of an equity investment in a company.

To determine cost of equity, its components risk-free rate and risk premium have to be analysed.

1. Risk-free rate

The starting point for the calculation of an appropriate equity rate of return is the calculation of the risk-free rate, which corresponds to the minimum return that an investor can expect from an investment "without" risk. This risk-free rate of return is therefore generally derived from the rate of return on a high-quality long-term government bond. The risk-free rate is based on prevailing YTMs of Gilt Bonds with 10-year residual maturity (rounded) as on 31 March 2026.

2. Risk Premium

i. Market risk premium

Equity Market Risk Premium ('MRP') is the excess return earned by an investor over a risk free rate, when they invest in the stock market. This return compensates investors for taking on the higher risk of equity investing.

According to the CAPM, long-term capital market studies have shown that historically investments in shares have yielded higher returns than investments in low-risk bonds. Further, based upon the EYMBSLLP internal study, the MRP for India post-1990 is estimated in the range of 6.5% - 6.7% for the BSE Sensex and BSE 100 indices. Considering the improved reliability of post-liberalization data and the preference for a broader market index, we have considered an MRP of 7.0% for the purpose of the valuation.

ii. Beta coefficient

According to the CAPM in arriving at the appropriate risk premium, non-systematic risk, which attaches to the specific enterprise and can therefore generally be eliminated by diversifying, is distinguished from systematic risk. A risk premium will only be required to compensate for systematic risk, which cannot be eliminated by diversification. In practice, systematic risk is measured in terms of the beta coefficient and the market risk premium. The market risk premium is defined as the difference between the expected return on a market portfolio and the risk-free rate. The beta coefficient indicates the risk of the equity of the enterprise that is being valued relative to the average market risk (for stocks), which is represented by the market risk premium. A beta higher than one implies that the systematic risk of the company's stock is higher than the market risk. The risk premium is calculated by multiplying the market risk premium by the enterprise's beta coefficient.

Betas reported in public sources are "leveraged", which means that the additional risk to a stockholder due to the debt financing of the company is incorporated in the corresponding beta coefficient.

We have used the relevered beta (based on a three-year data considering Daily returns) of listed Indian companies that are engaged primarily in construction and operation of road assets in India.

In order to arrive at the comparable companies, we have carried out screening on S&P Capital IQ while applying the following selection criteria:

a. Indian companies listed on either Bombay Stock Exchange or National Stock Exchange (provides a set of 9,442 companies).
b. Industry classification as mentioned below (provides a set of 90 companies):
    i. Sector: Industrial; Sub-sector: Construction and Engineering; and Sub-sub-sector: Highways and Street Construction
    ii. Sector: Industrial; Sub-sector: Transportation Infrastructure; and Sub-sub-sector: Highways and Rail Tracks
c. The set of 90 companies were further shortlisted on the basis of the availability of their market capitalization (provides a set of 86 companies)
d. Basis the above list of 86 companies, we have further filtered the companies by applying a filter on the business description of the companies using the keywords “Road” or “Highway” or “Develop” (provides a set of 46 companies)
e. From the list of 46 companies, we have considered only those companies which do not have any qualified auditor’s opinion on the Going Concern assumptions of the entity and for which majority revenue contribution is from road assets and construction activities (provides a set of 31 companies)
f. On the set of 31 companies, we separately applied a filter on the business segment of the companies using the following keywords:
    i. “BOT” or “Road” to arrive at a set of 7 companies.
    ii. “Engineering” and “Construction” to arrive at set of additional 5 companies.
g. From these 11 companies, we analysed the segment reporting basis the information available in the annual report and ruled out 5 companies who were majorly engaged in EPC and/or revenue contribution from BOT/TOT was minimal

Accordingly, we arrived at a set of 6 companies. Further, we have also added four listed InvITs to account for typical investor expectations from an InvIT.

Based on above screening criteria, we shortlisted a total of 10 companies. Please refer Appendix 2 for the list of comparable companies used for computation of beta.

iii. Additional Risk Premium

Concessioning authority specific risk premium: Additional risk premium of 0.5% has been considered to arrive at the cost of equity for NAMEPL basis operational and regulatory risk factors, considering it is a state highway concession agreement.

Alpha Adjustment: Risk free rate is based on prevailing YTMs of Gilt Bonds with 10-year residual maturity (rounded) as on the Valuation Date. The increase in the GILT Bond Rate from ~6.5% to nearly 7% over the last 3 months is majorly due to the ongoing stressed geopolitical situation and consequent liquidity positions. This increase may not be sustainable in the long term and as the geopolitical tensions ease out, these rates may soften again. Further, the overall portfolio has diversified significantly in last few years based on new acquisitions. Despite the geopolitical tensions, the traffic in the portfolio during FY26 has been better as compared to the projections made in the last traffic studies. Hence, we have considered alpha adjustment of -0.25% for BOT Assets and TOT Assets, to account for the above factors in current valuation.

Formula for Cost of Equity Computation for BOT Assets and TOT Assets

$r_e = r_f + b * MRP + AA + CARP$

r_e	=	Cost of equity
r_f	=	Risk-free rate of return
b	=	Beta, a measure of the level of non-diversifiable (i.e., systematic) risk associated with company returns
MRP	=	Market Equity Risk Premium
AA	=	Alpha Adjustment
CARP	=	Concessioning authority specific risk premium

Annuity projects (BOT Annuity Assets and HAM Assets) have a relatively stable cash flow structure as compared to toll projects and do not have traditional risk factors such as traffic risk, tolling risk, etc. There are currently no major listed companies which could be considered comparable to such annuity projects. Hence, we have used the built-up approach to arrive at the cost of equity for such assets.

Formula for Cost of Equity Computation for BOT Annuity Assets and HAM Assets

$r_e = k_d + ARP$

r_e	=	Cost of equity
k_d	=	Pre-tax cost of debt
ARP	=	Additional Risk Premium

Given the risk profile for HAM Assets is majorly influenced by the movement in bank rates, we have applied a risk premium of 5.0% on the cost of debt for HAM Assets, to adequately account for the risk associated with the cash flows. The annuity payments for BOT Annuity Assets are fixed pre-determined semi-annual payments, and hence they have a lower risk profile than the HAM Assets. Accordingly, we have used a 2.0% lower risk premium to compute the cost of equity for BOT Annuity Assets.

Calculation of Cost of Debt

To determine the cost of debt, its components, that is, pre-tax cost of debt and tax rate have to be analysed.

i. Pre-tax cost of debt

The pre-tax cost of debt is the effective interest rate or the total amount of interest that a company or individual owes on any liabilities, such as bonds and loans. Pre-tax cost of debt of SPVs has been considered basis discussions with the Management regarding the effective interest rate.

ii. Tax Rate

Tax rate to be considered for computation of post-tax cost of debt should be the effective tax rate of the company. The effective tax rate represents the present value of the percentage of taxable income paid in taxes as at the Valuation Date. Tax rate of SPVs has been considered basis the effective tax rate of the respective SPVs.

Shape the future with confidence

Calculation of Weighted Average Cost of Capital

The Summary of WACC computed for each of the InvIT Assets is presented below:

Particulars	Weights	JMTPL	MBEL	WUPTPL	NDEPL	FRHL	WVEPL	DATRPL	GAEPL	NAMEPL
Cost of debt (%)	50.0	3.07	3.45	3.77	3.11	3.07	2.95	2.82	3.04	3.02
Cost of equity capital (%)	50.0	6.85	6.86	7.20	6.87	6.85	6.79	6.72	6.83	7.07
WACC		**9.92**	**10.31**	**10.97**	**9.98**	**9.91**	**9.74**	**9.55**	**9.86**	**10.10**

Particulars	Weights	HTPL	JLTPL	JVTPL	LRTPL	KMTPL	MKTPL	KETPL	SMTPL	NKTPL
Cost of debt (%)	50.0	3.06	2.93	2.93	3.09	3.12	3.03	3.11	3.09	3.16
Cost of equity capital (%)	50.0	6.84	6.78	6.77	6.86	6.87	6.83	6.87	6.86	6.89
WACC		**9.90**	**9.71**	**9.70**	**9.95**	**9.99**	**9.86**	**9.98**	**9.95**	**10.05**

Particulars	Weights	APEPL	BWHPL	MSHPL	MHPL	THPL	SIPL	SPPL	JU	QB
Cost of debt (%)	70.0	5.27	3.99	3.98	4.13	4.00	3.94	4.11	4.30	5.27
Cost of equity capital (%)	30.0	3.16	3.76	3.76	3.76	3.76	3.76	3.76	3.16	3.16
WACC		**8.43**	**7.75**	**7.74**	**7.89**	**7.76**	**7.70**	**7.87**	**7.46**	**8.43**

The computed WACC for the BOT Assets and TOT Assets ranges from 9.55% to 10.97%. For the annuity assets, the computed WACC ranges from 7.70% to 7.89% for HAM Assets and 7.46% to 8.43% for BOT Annuity Assets.

Detailed WACC Calculation has been provided in Appendix 2

IX. Valuation Assumptions

Key underlying assumptions as provided by the Management are as follows:

- **Operating Revenue:**
  BOT Assets and TOT Assets: Operating revenue is projected based on the Traffic Study Reports of independent consultants appointed by Management and the estimated toll rates.
  The traffic study reports dated April 2026 have been provided to us by the Management. These reports presented an update of the traffic and revenue forecasts and other macro-economic assumptions. (Refer Appendix 4 for the base traffic for FY 2026 and growth in traffic in the subsequent years as estimated by the independent consultant).
  Further, the toll rates for each of these assets have been estimated based on annual base rate increase (if applicable) and forecast of macro-economic factors such as Wholesale Price Index (WPI).

  BOT Annuity Assets: BOT Annuity Assets are annuity projects with agreed periodical annuities to be received from NHAI and the operating revenue has been projected by the Management accordingly.

  HAM Assets: Operating revenue comprises of construction income; annuity receipts; finance income on Balance Completion Cost; and operation and maintenance income from NHAI. These income receipts have been adjusted by the Management for applicable GST rates; and any claims/ reimbursements pertaining to change in law (i.e., any change in applicable GST rates). The income from these sources has been estimated as per the following:
  1. Construction income: As per the respective Concession Agreements, each SPV is entitled to receive 40% of the Bid Project Cost ("BPC") of the asset adjusted for the price index multiple as on date of achievement of the construction milestone as construction income. The said income has already been received as on Valuation Date by each of the SPVs from NHAI as agreed upon in the Concession Agreements in 5 equal instalments upon achievement of the construction milestones.
  2. Annuity receipts: The remaining 60% portion of the BPC (hereinafter referred to as Balance Completion Cost "BCC") is to be received by the SPVs in biannual instalments commencing from the Commercial Operations Date ("COD") over the remaining life of the Concession period as per the annuity schedules laid out in the respective Concession Agreements.
  3. Finance income: In addition to the above, the SPVs are also entitled to receive interest on the BCC along with the Annuity receipts. The interest would be calculated on reducing balance method at a rate equivalent to 3.0% plus the prevailing Bank Rate. The Management's projections indicate that the long-term Bank Rate is anticipated to be 5.50% over the concession period.
  4. Operation and maintenance income: All O&M expenses over the Concession period will be borne by the SPVs, and they shall receive biannual O&M payments from NHAI along with the annuity receipts. The payments shall be received as per the amounts specified in the respective Concession Agreements adjusted for the price index multiple.

- **Operational Expenditure:** Operational expenditure includes base operating expenditure, admin expenses, Project Manager fee, insurance costs, one-time expenses and other miscellaneous expenses. These expenses are estimated by the Management over the Concession Period.

- **Routine Repair and Maintenance Expenses:** Routine repair and maintenance expenses are estimated by the Management over the projected period.

- **Major Maintenance Expenses (MMR / Periodic maintenance):** Periodic maintenance expenses are incurred to bring the road asset back to an earlier condition or to keep the road asset operating at its present condition. MMR expenditures have been estimated by the Management, based on Draft Technical Due Diligence ("TDD") reports, dated between 17 March 2026 - 30 April 2026, shared by independent technical consultants appointed by the Trust and internal estimates by the Management over the Concession Period.

- **Depreciation and Amortization:**
  BOT Assets: The total project cost has been capitalized in the books of the respective SPVs as an intangible asset.

  TOT Assets: The concession fee paid to NHAI has been capitalized in the books of the respective SPVs as an intangible asset.

  BOT Annuity Assets and HAM Assets: The concessions agreement has been capitalized in the books of the respective SPVs as an intangible asset.

  The said intangible assets have been amortized basis applicable depreciation method (SLM / WDV / Revenue Adjusted) over the respective period of concession. Since depreciation and amortization is a non-cash expenditure, it has been added back to arrive at the net cash flows.

- **Taxes:** Income taxes are estimated considering, as appropriate, brought forward losses, unabsorbed depreciation, MAT credit, tax depreciation/ amortisation policy proposed to be followed by the InvIT Assets and applicable corporate income tax rate.

- **Working Capital:**
  Working capital movement has been considered basis discussions with Management.

  BOT Assets and TOT Assets: Considering the nature of the business of operating road projects, incremental working capital requirement is expected to be Nil for the projected period. Release of working capital has been considered at the end of the respective concession period as the project life comes to an end.
  As per the Supplementary Agreement with NHAI for the Annual Pass Scheme, compensation is to be centrally disbursed by NHAI Headquarters on a weekly basis; however, compensation for the month of March 2026 remains outstanding as on the Valuation Date (except GAEPL, where compensation remains outstanding for the period January 2026 to March 2026). The Management expects to receive the outstanding amount during Q1 FY2027. However, given that there would be around 7 days of recurring receivable cycle against the revenue under the Annual Pass Scheme, based upon the terms of the Supplementary Agreement, 7 days receivables are estimated to be released at the end of the Concession Period.

  BOT Annuity Assets and HAM Assets: Balance with government authorities and current tax assets are assumed to be utilised during FY27 and FY28, while the release of remaining working capital has been considered at the end of the respective concession period as the project life comes to an end.

Shape the future with confidence

X. Basis and Premise of Valuation

1. Basis of Valuation

Valuation Base means the indication of the type of value being used in an engagement. In the present case, we have determined the fair value of the SPVs at the Enterprise level. Fair Value Bases defined as under:

Fair Value

For this valuation, we have considered the International Valuation Standards ("IVS") and have adopted a definition of Market Value as given in IVS 102, "Market Value is the estimated amount for which an asset or liability should exchange on the Valuation Date between a willing buyer and a willing seller in an arm's length transaction, after proper marketing and where the parties had each acted knowledgeably, prudently and without compulsion". The Fair Value referred elsewhere in the Report is same as Market Value as defined above

2. Valuation Date

Valuation Date is the specific date at which the value of the assets to be valued gets estimated or measured. Valuation is time specific and can change with the passage of time inter-alia due to changes in the condition of the asset to be valued and market parameters. Accordingly, valuation of an asset as at a particular date can be different from other date(s).

The Valuation Date considered for the Enterprise Valuation of the InvIT Assets is 31 March 2026. Our Report does not take account of events or circumstances arising after Valuation Date and we have no responsibility to update the Report for such events or circumstances.

Premise of Value

Premise of Value refers to the conditions and circumstances how an asset is deployed. In the present case, we have determined the Fair Enterprise Value of the SPV on a Going Concern Value defined as under:

Going concern value is the value of a business enterprise that is expected to continue to operate in the future. The intangible elements of going concern value result from factors such as having a trained workforce, an operational plant, the necessary licenses, systems, procedures in place, etc.

Shape the future with confidence

XI. Valuation Conclusion

The fair valuation of InvIT Assets as on 31 March 2026 has been carried out basis the Discounted Cash Flow (DCF) method of valuation. We have considered the financial projections of each of the InvIT Assets provided to us by the Management. Free Cash Flow to Firm approach under DCF method has been considered to determine the Enterprise Value of InvIT Assets. The Enterprise Value has been computed by discounting the free cash flows to the firm (InvIT Assets) from 1 April 2026 until the end of the concession period, using an appropriate Weighted Average Cost of Capital ("WACC").

The Management has appointed independent consultants to carry out traffic study and estimation of toll revenue and technical study for estimation of operating and maintenance expenses and major maintenance expenses, for each of the InvIT Assets over the concession period. We have relied upon Financial Projections, traffic study reports, technical reports provided by independent consultants and other information provided to us for carrying out the valuation of each of the InvIT Assets.

The valuation is based on various assumptions with respect to the InvIT Assets, including their respective present and future financial condition, business strategies and the environment in which they will operate in the future. These assumptions are based on the information that we have been provided with and our discussions with the Management, and reflect current expectations and views regarding future events, and therefore necessarily involve known and unknown risks and uncertainties.

The summary of valuation of each of the InvIT Assets as on 31 March 2026 is presented below:

SPV (Currency: INR mn)	Enterprise Value (excluding other financial assets)	Other financial assets[(1)]	Enterprise Value (including other financial assets)
JMTPL	6,895	446	7,341
MBEL	3,295	824	4,119
WUPTPL	(88)	1,065	977
NDEPL	4,597	70	4,667
FRHPL	26,471	-	26,471
WVEPL	9,101	-	9,101
DATRPL	77,737	49	77,786
GAEPL	38,273	566	38,839
NAMEPL	27,666	-	27,666
HTPL	19,929	227	20,156
JLTPL	12,820	131	12,951
JVTPL	8,014	-	8,014
LRTPL	7,756	790	8,546
KMTPL	13,992	-	13,992
MKTPL	16,583	25	16,608
KETPL	10,671	114	10,785
SMTPL	11,755	23	11,778
NKTPL	11,293	2,962	14,255
JU	11,934	306	12,240
QB	18,735	516	19,251
APEPL	341	475	816
BWHPL	3,180	36	3,216
MSHPL	3,626	108	3,733
MHPL	2,641	105	2,747
SIPL	3,413	53	3,466
SPPL	4,118	78	4,197
THPL	4,625	76	4,701
Total	**3,59,372**	**9,046**	**3,68,418**

Table above represents the 100% enterprise value for all SPVs including MBEL (0.03% of the equity shares of MBEL are held by Madhucon Infra Limited).

Notes:

1. According to IND AS 7, cash & cash equivalents are held for the purpose of meeting short term cash commitments rather than for investments or other purposes. Accordingly, cash & cash equivalents held by the respective SPVs, having maturity of more than 3 months have been considered as other financial assets.

2. WUPTPL reflects a negative Enterprise Value primarily due to projected negative cash flows arising from outstanding maintenance expenditure associated with the asset nearing the end of its useful life. Notwithstanding this, the Management has represented to us that WUPTPL maintains sufficient cash and liquid resources to fund its operating requirements and the outstanding maintenance expenditure.

Our views are based on the current economic, market, industry, regulatory, monetary and other conditions and on the information made available to us, as of the date of this Report. Such conditions may change significantly over a relatively short period of time, and we assume no responsibility and are not required to update, revise or reaffirm our conclusion set out in this Report to reflect events or developments subsequent to the date of the Report.

Shape the future with confidence

Appendices

1. Discounted Cash flow workings for InvIT Assets as at 31 March 2026

Notes:

a. Based on prevailing YTMs of Gilt Bonds with 10-year residual maturity (rounded) as on 31 March 2026.

b. Please refer the table for Beta working below

c. Based on EYMBSLLP internal study on the prevailing market risk premium in India

d. We have applied 5.0% risk premium on the cost of debt for the InvIT, to arrive at the cost of equity for HAM Assets, to adequately account for the risk associated with the cash flows, such as fluctuations in the bank rates etc. Further, we have used a 2.0% lower risk premium to arrive at the cost of equity for BOT Annuity Assets, since they are fixed annuity projects (wherein the annuity payments are predetermined and are not dependent on any external parameters such as bank rates etc).

Concessioning authority specific risk premium: Additional risk premium of 0.5% has been considered for NAMEPL to account for operational and regulatory risk factors, considering it is a state highway concession agreement.

Alpha adjustment: Risk free rate is based on prevailing YTMs of Gilt Bonds with 10-year residual maturity (rounded) as on the Valuation Date. The increase in the GILT Bond Rate from 6.5% to nearly 7% is majorly due to the ongoing stressed geopolitical situation and consequent liquidity positions. This increase may not be sustainable in the long term and as the geopolitical tensions ease out, these rates may soften again. Further, the overall portfolio has diversified significantly in last few years based on new acquisitions. Despite the geopolitical tensions, the traffic in the portfolio during FY26 has been better as compared to the projections made in the last traffic study. Hence, we have considered alpha adjustment of -0.25% for BOT Assets and TOT Assets to account for the above factors in current valuation.

e. Of all the SPVs held by the Trust, MBEL has external debt and all other SPVs have the borrowings via the Trust. Hence the cost of debt for MBEL is based upon the borrowing cost of MBEL itself and the cost of borrowings for all other SPVs are based upon the borrowing cost of the Trust.

f. Based on effective tax rate of respective SPV's

Calculation of Beta

Calculation of WACC

BOT Assets and TOT Assets: Considering the finite life of the asset, the cashflows being prone to Traffic and inflation risk and the current & expected debt to equity structure of the SPVs, we have conservatively considered a long-term debt-to-equity ratio of 50:50

BOT Annuity Assets and HAM Assets: The leverage risk in the assets with fixed, stable cashflow schedules and subdued risk, is relatively lower. Hence, a higher debt-to-equity ratio of 70:30 is considered after considering the nature of income from HAM Assets and BOT Annuity Assets.

The net debt to enterprise value ratio of the InvIT as at 31 March 2026 is ~46.8%.

Based upon the credit rating profile the Trust can increase their leverage to 70% net debt to enterprise ratio, in accordance with the InvIT Regulations. However, as per their existing Debt covenants, the Trust can increase their leverage to 60% net debt to enterprise ratio.

Our assumption for debt-to-equity ratio of 50:50 for BOT Assets & TOT Assets and 70:30 for HAM Assets & BOT Annuity Assets, respectively results in an overall debt-to-equity ratio of 53:47. This is broadly in line with the existing debt to equity structure of the InvIT as on 31 March 2026.

Particulars	Weights	JMTPL	MBEL	WUPTPL	NDEPL	FRHL	WVEPL	DATRPL	GAEPL	NAMEPL

The computed WACC for the BOT Assets and TOT Assets ranges from 9.55% to 10.97%. For the annuity assets, the computed WACC ranges from 7.70% to 7.89% for HAM Assets and 7.46% to 8.43% for BOT Annuity Assets.

Shape the future with confidence

3. Change in assumptions from previous annual valuation:

A comparison of assumptions used to carry out the current and previous annual valuation exercise has been present below:

A. Change in assumptions for WPI

The Management has considered the applicable WPI growth rate of 0.96% (i.e. actual WPI growth as of 31 December 2025, as reported by RBI) for FY 2027, for the SPVs having increase in toll rates being computed based upon increase in WPI derived from actual WPI growth as of 31 December of the previous year. Applicable WPI growth rates from FY 2028 onwards have been kept unchanged.

B. Change in assumptions for WACC Computation

a. BOT & TOT Assets

WACC Input	BOT & TOT Assets		Remarks
	Mar-25	Mar-26	
Debt/Equity	45:55	50:50	Post acquisition of JU and QB, the existing and expected debt to equity ratio at the InvIT level has increased. Thus, the weight to debt has been increased to bring the same broadly in line with the existing debt to equity structure of the InvIT as on 31 March 2026.
Cost of equity calculation			
Risk-free rate	6.5%	7.0%	The risk-free rate is based on prevailing YTMs of Gilt Bonds with 10-year residual maturity (rounded) as on 31 March 2026..
Unlevered beta	0.62	0.55	1. Bharat Road Network Limited has been removed as comparable as the company has a qualified opinion on its going concern assumptions and has limited trading volumes. 2. Indus Infrastructure Trust, Indigrid Trust and Powergrid Trust have additionally been considered as comparables for beta computation to account for typical investor expectations from an InvIT. 3. Given that Indus Infrastructure Trust was listed on 12 March 2024, beta parameters for Indus Infrastructure trust have been considered based upon 2 year returns. 4. Further, given the limited datapoints of monthly returns for Indus Infrastructure Trust, we have considered daily returns for all the comparable companies (in order to maintain consistency of data) as against the monthly returns considered during the previous valuations.
Relevered beta	0.99 - 1.12	0.96-1.09	
Market equity risk premium (ERP)	7.0%	7.0%	
Concessioning authority specific risk premium (%)	0.5%	0.5%	
Alpha adjustment (%)		(0.25%)	Risk free rate is based on prevailing YTMs of Gilt Bonds with 10-year residual maturity (rounded) as on the Valuation Date. The increase in the GILT Bond Rate from 6.5% to nearly 7% is majorly due to the ongoing stressed geopolitical situation and consequent liquidity positions. This increase may not be sustainable in the long term and as the geopolitical tensions ease out, these rates may soften again. Further, the overall portfolio has diversified significantly in last few years based on new acquisitions. Despite the geopolitical tensions, the traffic in the portfolio during FY26 has been better as compared to the projections made in the last traffic study. Hence, we have considered alpha adjustment of -0.25% to account for the above factors in current valuation for BOT Assets and TOT Assets.
Cost of equity	**13.4% - 14.3%**	**13.4% - 14.4%**	
Cost of debt calculation			
Debt borrowing rate	8.19% / 8.4%	7.53% / 8.4%	As indicated earlier, MBEL has external borrowings and hence the cost of borrowings for MBEL is based upon the borrowing cost of the SPV itself. However, the borrowings for other BOT Assets and TOT Assets within the trust are via the Trust, hence the cost of borrowings for these SPVs are based upon the borrowing cost of the Trust. The borrowing cost for the Trust has been reduced from 8.19% to 7.53%. Accordingly the debt borrowing rate has been adjusted for respective SPVs.
Effective income tax rate	0.0% - 26.4%	0.0% - 25.00%	
After-tax cost of debt	**6.0% - 8.2%**	**5.65% - 7.53%**	
WACC	**10.1% - 11.6%**	**9.55% - 10.97%**	

b. BOT Annuity Assets and HAM Assets

WACC Input	HAM Assets		BOT Annuity Assets		Remarks
	Mar-25	Mar-26	Mar-25	Mar-26	
Debt/Equity	70:30	70:30	70:30	70:30	
Cost of equity calculation					
Debt borrowing rate	8.19%	7.53%	8.19%	7.53%	As indicated earlier, the HAM Assets and BOT Annuity Assets have the borrowings via the Trust. Hence the cost of debt for all the HAM Assets and BOT Annuity Assets are based upon the borrowing cost of the Trust. the borrowing cost for the Trust has been reduced from 8.19% to 7.53%. Accordingly the debt borrowing rate has been adjusted for respective SPVs.
Additional Risk Premium	5.0%	5.0%	3.0%	3.0%	
Cost of equity	**13.2%**	**12.5%**	**11.2%**	**10.5%**	
Cost of debt calculation					
Debt borrowing rate	8.19%	7.53%	8.19%	7.53%	
Effective income tax rate	20.9% - 24.3%	21.67% - 25.17%	0%	0.0% - 18.44%	JU and QB assets were acquired during Q1 FY26, hence the range includes JU & QB assets in March 2026, but are not included in March 2025.
After-tax cost of debt	**6.2% - 6.5%**	**5.6% - 5.9%**	**8.2%**	**6.1% - 7.5%**	
WACC	**8.3% to 8.5%**	**7.7% to 7.9%**	**9.1%**	**7.5% to 8.4%**	

C. Change in Traffic Estimates

Based upon the recent traffic study conducted, the Management has considered the revised traffic estimates provided by M/s Steer Davies Gleave India Private Limited dated April 2026. The traffic update included

i. Updates to the traffic estimates for FY 2027, based upon the actual traffic achieved during FY 2026. Further the growth rates considered to estimate traffic in subsequent years were also updated based upon revised assessment of the impact such as traffic diversions, revised projected capacity augmentation dates etc.

ii. Impact from the adoption of annual passes by passenger vehicles has been considered while computing estimated revenue from revised traffic estimates. The impact varies across the portfolio depending upon the proportion of passenger vehicles to the total traffic at each toll plaza.

D. Change in Operating expenses

i. The Management has estimated an additional fee of 0.413% (i.e. 0.35% + 18% GST) of the toll/annuity revenues is to be paid to Cube Highways Technologies Private Limited (“CHTPL”) for expert service agreement.

E. Change in Major maintenance expenses

i. The Management has projected an increase in major maintenance expenses based on the TDD report, majorly due to changes in the base for non-bitumen costs and rise in bitumen prices.

F. Change in deferred consideration for HAM Assets

i. As part of the acquisition of HAM Assets by the InvIT, we understand that there were certain deferred consideration amounts which were to be paid by the InvIT to CH-III, when they are received from NHAI (to be paid within a period not exceeding eighteen months from the date of the transfer agreement, subject to receipt of such amounts from

NHAI), as agreed between CH-III and the InvIT as per the terms and conditions of the relevant share purchase agreements and in compliance with the applicable law. These amounts include pending GST claims, receivables due to Change in Law ("CIL"), withheld annuities and descoping related receivables. However, since the period of eighteen months is completed, hence these amounts are no longer payable to CH-III. Hence the adjustment to Enterprise Value of the HAM Assets is no longer computed.

5. Operating Revenue

A. BOT Assets and TOT Assets

The break-up of FY 2026 Revenue for BOT Assets and TOT Assets are presented below:

Particulars	JMTPL	MBEL	WUPTPL	NDEPL	FRHPL	WVEPL
Revenue from Toll Operations	2,431	1,218	1,816	1,253	2,711	1,164

Particulars	DATRPL	GAEPL	NAMEPL	HTPL	JLTPL	JVTPL
Revenue from Toll Operations	7,006	4,467	3,467	1,506	1,090	759

Particulars	LRTPL	KMTPL	MKTPL	KETPL	SMTPL	NKTPL
Revenue from Toll Operations	711	1,249	1,333	793	862	802

The revenue for BOT Assets and TOT Assets are estimated to grow at a CAGR of 7.1% to 10.0% (from FY 2026 till the last full financial year of the concession period of respective SPVs). The revenue growth is driven by 2 factors:

1. Traffic estimates – The traffic estimates are considered based upon a traffic study conducted by independent consultant appointed by the Investment Manager. Kindly refer to Section 5 for detailed traffic projections by the independent consultant for each SPV.
2. Toll rates - The year-on-year growth in the toll rates for the projected period is considered as per the following computation, based upon the respective concession agreements.

SPV	Growth in toll rates as per the respective concession agreements (%)
JMTPL	Base fees escalated as 100% of WPI (based on the estimated WPI growth as of March 31, 2026)
MBEL	Base fees escalated as 100% of WPI (based on the estimated WPI growth as of March 31, 2026)
WUPTPL	Base fees escalated as 100% of WPI (based on the estimated WPI growth as of March 31, 2026)
NDEPL	Base fees escalated as 100% of WPI (based on average WPI growth during FY 2026)
FRHPL^	Annual base increase 3% + 40% increase in WPI (derived from the actual WPI growth as of December 31, 2025)
WVEPL^	Annual base increase 3% + 40% increase in WPI (derived from the actual WPI growth as of December 31, 2025)
DATRPL^	Annual base increase 3% + 40% increase in WPI (derived from the actual WPI growth as of December 31, 2025)
GAEPL^	Annual base increase 3% + 40% increase in WPI (derived from the actual WPI growth as of December 31, 2025)
NAMEPL^	Base fees escalated as 100% of WPI (derived from the actual WPI growth as of December 31, 2025)
HTPL^	Annual base increase 3% + 40% increase in WPI (derived from the actual WPI growth as of December 31, 2025)
JLTPL^	Annual base increase 3% + 40% increase in WPI (derived from the actual WPI growth as of December 31, 2025)
JVTPL^	Annual base increase 3% + 40% increase in WPI (derived from the actual WPI growth as of December 31, 2025)
LRTPL^	Annual base increase 3% + 40% increase in WPI (derived from the actual WPI growth as of December 31, 2025)
KMTPL^	Annual base increase 3% + 40% increase in WPI (derived from the actual WPI growth as of December 31, 2025)
MKTPL^	Annual base increase 3% + 40% increase in WPI (derived from the actual WPI growth as of December 31, 2025)
KETPL^	Annual base increase 3% + 40% increase in WPI (derived from the actual WPI growth as of December 31, 2025)
SMTPL^	Annual base increase 3% + 40% increase in WPI (derived from the actual WPI growth as of December 31, 2025)
NKTPL^	Annual base increase 3% + 40% increase in WPI (derived from the actual WPI growth as of December 31, 2025)

^ SPVs with WPI-linked escalation based on the actual WPI growth as of December of the previous year

WPI growth rate of 0.96% (derived from the actual WPI growth as of December 31, 2025), 2.4% (based on the Management's expectations / their internal estimates regarding WPI growth as of March 31, 2026) and 2.4% (based on Management's expectations / their internal estimates regarding average WPI growth during FY 2026) has been taken into account for FY26, reflecting the applicable WPI rates for each SPV, for FY27, as specified in their respective concession agreements. Additionally, WPI for FY28-FY31 is projected to fall within the range of 4.4% to 5.1%. It is also anticipated that WPI will eventually align with the long-term rate of 4.1% starting in FY32. These WPI projections are based on Management's expectations / their internal estimates regarding WPI trends.

FY	Applicable WPI growth rate	
	SPVs with WPI-linked escalation based on the actual WPI growth as of December of the previous year	For other SPVs
FY27	0.96%	2.4%
FY28	5.0%	5.0%
FY29	5.1%	5.1%
FY30	4.9%	4.9%
FY31	4.4%	4.4%
FY32 onwards	4.1%	4.1%

B. BOT Annuity Assets

The Annuity income as of FY 2026 for BOT Annuity Assets are presented below:

Particulars	JU	QB	APEPL
Annuity Income	4,038	4,900	1,130

Since the annuity income for BOT Annuity Assets is based upon the fixed annuity schedules as per the Concession Agreement, there is no year-on-year growth considered.

C. HAM Assets

The break-up of revenue of HAM Assets for FY 2026 are presented below:

Particulars	BWHPL	MSHPL	MHPL	THPL	SPPL	SIPL
Annuity Income	405	404	320	558	454	533
Finance Income	595	674	571	944	702	633
O&M Income	46	44	43	30	43	50

Finance Income - The year-on-year growth in the finance income is based upon the bank rate. The Management's projections indicate that the long-term Bank Rate is anticipated to be 5.50% over the concession period.

Annuity Income - Since the annuity income is based upon the annuity schedules, as per the Concession Agreement, the annuity income has been projected accordingly.

O&M Income - The year-on-year growth in the O&M income is based upon the price index multiple (i.e. summation of 70% of WPI and 30% of CPI), in line with the Concession Agreement. CPI growth rate has been considered in the range of 4.0% to 5.20% over the projection period. The CPI projections are based on Management's expectations / their internal estimates regarding CPI trends.

6. Operating Expenses

The break-up of operating expenses for the InvIT Assets as of FY 2026 are presented below:

Particulars	JMTPL	MBEL	WUPTPL	NDEPL	FRHL	WVEPL	DATRPL	GAEPL	NAMEPL
Project Management Fees	51	27	37	25	53	25	158	85	74
Operation and maintenance expenses	276	205	196	215	280	153	634	341	373
Routine Maintenance expenses	75	42	62	53	106	95	474	120	105

Particulars	HTPL	JLTPL	JVTPL	LRTPL	KMTPL	MKTPL	KETPL	SMTPL	NKTPL
Project Management Fees	30	23	17	18	26	34	19	20	21
Operation and maintenance expenses	94	82	76	92	153	165	120	131	140
Routine Maintenance expenses	-	-	-	-	93	58	40	53	43

Particulars	BWHPL	MSHPL	MHPL	THPL	SPPL	SIPL	JU	QB	APEPL
Project Management Fees	17	18	15	22	18	18	37	89	26
Operation and maintenance expenses	94	103	108	97	108	89	179	283	121
Routine Maintenance expenses	32	38	44	26	33	74	115	67	60

Note: Operating and Maintenance Expenses include majorly include Employee Benefit Expense, One-time expenses etc.

Operation and maintenance expenses - The year-on-year growth in the operation and maintenance expenses (excluding insurance) has been considered at 1.4 times WPI growth estimates. Further, year-on-year growth in insurance costs has been considered to be based on WPI growth. WPI growth rates are estimated to be in the range of 0.96% to 5.1% during the projected period as described earlier.

Routine Maintenance – The year-on-year growth in routine maintenance costs has been considered to be based on WPI growth, with certain adjustments pertaining to the Management's estimate of the cost mix between the Bitumen related costs and Non-Bitumen related costs. The years during which major maintenance expenses are being incurred, these expenses are estimated to be at 50% of the normalized level.

Project Management Fees (PM fees) – The Management has estimated the PM fees as higher of 1.829% (i.e. 1.55% + 18% GST) of the total revenue in the respective financial year and a base fee (post considering an annual inflation of 7%).

Additional technical service fees –The Management has estimated an additional fee of 0.413% (i.e. 0.35% + 18% GST) of the toll/annuity revenues will be paid to Cube Highways Technologies Private Limited ("CHTPL") for expert service agreement.

Employee Benefit Expenses – The Client has assessed the implications of the four Labour Codes notified by the Government of India, namely the Code on Wages, 2019, the Industrial Relations Code, 2020, the Code on Social Security, 2020 and the Occupational Safety, Health and Working Conditions Code, 2020, which came into effect on November 21, 2025. Based on the Client's current understanding of the applicable provisions, the rules notified by the Government of India on 8 May 2026, FAQs issued by the Ministry of Labour and Employment, legal opinions obtained, contractual arrangements with service providers and Management's assessment of potential exposures relating to contract labour engaged through third-party contractors, the Client has estimated the financial implications thereof and made an additional provisions towards contractual obligations and related exposures.

Further, considering the evolving regulatory framework, judicial developments and the possibility of future obligations arising under the labour laws, the Client will continue to monitor such developments and appropriately reassess the accounting impact, if any, in future periods.

12. India Equity Market Risk Premium: EY Study

Equity Market Risk Premium (EMRP or MRP) is the excess return earned by an investor over a risk free rate, when they invest in the stock market. This return compensates investors for taking on the higher risk of equity investing.

There are various approaches to estimating MRP like surveying investors or calculating MRP implied in stock prices via forward forecasts. One of the most objective approach is to calculate MRP by analysing historical MRP earned over a long period of time. EY has used this approach. This has involved the following steps

Time period to be considered:

A relatively long time period is selected, as in the short-term markets can be volatile leading to under/over-estimation of MRP depending upon near term market performance. stock market data is available from 1979 onwards. Further a period commencing from 1990 onwards is also suitable as it coincides with India's economic liberalization.

Rm: Market Return

Returns on BSE Sensex/BSE100 Index or NSE Nifty may be considered as a proxy for the market returns. Since data for NSE Nifty is available only from 1994, returns on BSE Sensex and BSE 100 have been considered for analysis of a longer period of data.

Rf: Risk Free Rate

Hypothetically, risk free rate is the return on security or portfolio securities that has no default risk and is completely uncorrelated with returns on anything else in the economy. In India, the yield on 10-year residual maturity government bond is considered as a reasonable proxy for the risk-free rate.

Adjustment for dividend yields

Return on equities is derived from a combination of dividend receipts and increase in share prices/ index. Since BSE Sensex and BSE100 Index are price return indices, the dividend yields for them are added to the average MRP to arrive at total return on equities.

Choice between Arithmetic and Geometric Mean

Geometric mean is preferred on the grounds that it takes compounding into account over the sample period.

Since the dividends are paid out in cash, it is assumed they are not re-invested, hence arithmetic mean of the dividend yield is added to the MRP.

Conclusion

Rf calculated for each of the year is deducted from Rm, which includes both returns on the stock index and the dividend yield of the index. The difference Rm- Rf is averaged over the period by using Geometric Mean.

The calculations of the study show that Market Risk Premium, while varying as per period and choice of index, converges around 7% (rounded). This is then considered a reasonable benchmark for India's Market Risk Premium.

13. Disclosures regarding list of one-time sanctions/approvals which are obtained or pending and Disclosures regarding list of up to date/overdue periodic clearances

The disclosures regarding list of one-time sanctions/approvals which are obtained or pending and list of up to date/overdue periodic clearances for the InvIT Assets are shown in the below table.

13.1 JMTPL

Sr. No.	Description of permit	Issuing Authority	Current Status
1	Certificate of completion - Dated 09-03-2015	Independent consultant	Active
2	Environmental clearance dated August 1,2006	MOEFCC	Active
3	No-objection certificate for obtaining an environmental clearance dated May 6, 2006	RSPCB	Active
4	Consent to establish	RSPCB	Active
5	No Objection certificates for ground water abstraction from borewells located at 3 locations along the stretch.	CGWA	Active
6	Renewal of No Objection certificates for ground water abstraction from borewells located at 4 locations along the stretch	CGWA	Active (3 Borewells) However, NOC renewal for 1 borewell is still in process with department due to some previous payment issue which was not updated on portal. Multiple reminders have been sent to department for which department is checking and will update for further submission of renewal application.
7	Renewed license under the Contract Labour (R&A) Act, 1970	Licensing Officer and Assistant Labour Commissioner GOI	Active

13.2 MBEL

Sr. No.	Description of permit	Issuing Authority	Current Status
1	Certificate of completion Dated-13-09-2009	Independent Consultant	Active
2	Consent to Operate (Green Category) under the Section 25 and Section 26 of the Water	RSPCB	Four new DG sets, CPCB IV norms (two at each plaza – 2 x 58.5kVA and 2x 125 kVA) procured and installed due to trigger of Central Air Quality

	(Prevention and Control of Pollution) Act, 1974 and Section 21(4) of the Air (Prevention and Control of Pollution) Act, 1981		Management directive in NCR region. The renewed consent issued for Amoli Toll Plaza. SPV is still following up with RSPCB to re-submit the rejected application for Ludhawai Toll Plaza as discussed with officials. No further update received from department as of now due to implication of supreme court order in the region considering project falls in Taj Trapezium Zone.
3	No Objection certificates for ground water abstraction from borewells located at 5 locations along the stretch	CGWA	Active (4 Borewell) Out of 5 borewells, one borewell is presently not operational. Thus, renewal application for the same is not submitted for now and will be submitted once borewell is operational.
4	Renewed certificate of registration under the Contract Labour (Regulation and Abolition) Act, 1970 dated 13.09.2022	Licensing Officer and Assistant Labour Commissioner GOI	Active

13.3 WUPTPL

Sr. No.	Description of permit	Issuing Authority	Current Status
1	Certificate of completion UNI/D-06/O&M-IC/NH-58/2016-17/1075 -Dated- 02-06-2016	Independent Consultant	Active
2	Authorisation under the Hazardous and Other Wastes	UPPCB	Authorisation under Hazardous Waste Management Rules, 2016 is not applicable as per notification issued dated 01 March 2019. Per the notification, an occupier shall not be required to obtain an authorisation under this rule, from the State Pollution Control Board, in case the consent to establish or consent to operate, is not required from the State Pollution Control Board or Pollution Control Committee under the Water (Prevention and Control of Pollution) Act, 1974 (25 of 1974) and Air (Prevention and Control of Pollution) Act, 1981 (21 of 1981); Refer Point no. 3 for clarity on non-applicability of consent for WUPTPL. Though, used oil (HW) generated from DG sets is being managed as per the said rules and disposed of to authorised vendor timely.
3	Consent dated February 3, 2019 under Sections 25 and 26 of the Water (Prevention and Control of Pollution) Act, 1974 for the	UPPCB	WUPTPL submitted letter with detailed rationale to RO, UPPCB, Meerut justifying exemption of plaza operations under the Water and Air Acts.

	disposal of its industrial effluents through the effluence treatment plant for irrigation/ or to the river through drains, and discharge of domestic effluents through septic tanks		Active
4	Consent dated February 3, 2019 under Sections 21 and Section 22 of the Air (Prevention and Control of Pollution) Act, 1981, for the emission of air pollutants from the diesel generator installed at the Toll Plazas by the Company	UPPCB	
5	No Objection certificates for ground water abstraction from borewells located at 4 locations along the stretch dated 19.03.2023	Ground Water Department, Government of Uttar Pradesh	Active
6	Draft No Objection certificates for ground water abstraction from borewells located at 3 locations along the stretch dated 06.03.2023		Active
7	Renewed certificate of Registration under the Contract Labour (Regulation and Abolition) Act, 1970 dated 13.06.2022	Regional Labour Commissioner, GOI	Active

13.4 NDEPL

Sr. No.	Description of permit	Issuing Authority	Current Status
1	Environment Clearance for upgradation of existing 2 lane road from Nelamangala to Bommanhalli dated March 13, 2007.	MoEFCC	Active
2	Provisional certificate of completion dated June 23, 2012	IE	Active
3	Permission for utilization of borewell for drinking purposes at toll plaza 1	District Groundwater Directorate, Bengaluru Rural District	Active

13.6 WVEPL

Sr. No.	Description of permit	Issuing Authority	Current Status
1	Completion certificate APL/W-V/NS-2/02/2015-16/47 Dated- 31-10-2015	Independent Consultant	Active
2	Environment Clearance dated September 15, 2008 for widening and strengthening of 4/6 laning	Ministry of Environment and Forests	Active
3	Application dated July 16, 2021 submitted by WVEPL for obtaining NOC to extract ground water from an operational borewell. Application specifying the revised extraction quantity (based on actual consumption as per electromagnetic flow meter) was submitted by SPV for same location dated February 6, 2023 as advised by GW official. SPV obtained yield test certificate from Ground water department on February 22, 2023, for the existing borewell.	District Office, Ground Water Department, Palakkad	Active (1 Borewell) NOC Application for 2 borewells is approved based on verbal confirmation by department official but NOC letter is yet to receive from Department.
4	Three fresh applications (each dated March 24, 2023) submitted by WVEPL for obtaining NOC to extract ground water from proposed/new borewell at Chandranagar, Erattakulam and Kannanur, along the road to manage water requirement for the median and avenue plants maintenance. There is a correction on point (4) : As per department's process for digging new borewell, three applications submitted by WVEPL (each dated March 24, 2023) to extract ground water from proposed borewells at Chandranagar, Erattakulam and Kannanur, along the road to manage water requirement for the median and avenue plants maintenance. After conduct of survey by department and SPV, two locations were finalised and borewells digged by SPV at Erattakulam and Kannaur.		
5	Renewed license under the Contract Labour (R&A) Act, 1970	Licensing Officer and Assistant Labour Commissioner GOI	Active
6	Registration under Shop and Establishment Act	Labor Department	Active

13.7 DATRPL

Ground Water Department, Government of Uttar Pradesh	This is the newly constructed borewell for which pre-requisite actions (Procurement and installation of flowmeter) is under process as there is some delay at vendor's end for the supply of flowmeter. The drafting of application is under process and will be submitted post establishment of average daily consumption from the borewell (based on

			data from flowmeter to be installed) The whole process will be completed by May end.

13.8 APEPL

Sr. No.	Description of permit	Issuing Authority	Current Status
1	Final Completion Certificate AA/APEL/504/09-10/1491Dated- 04-01-2010	Independent Consultant	Active
2	Environment clearance dated May 19, 2006 for upgrading existing 2 lane to 4 lane	Ministry of Environment and Forest	Active
3	Letter seeking permission for extraction of ground water was submitted to respective Mandal Revenue Officer (MRO), Kurnool District dated 15.04.2018 and Reminder Letter was submitted dated 22.01.2021.	Mandal Revenue Officer, Government of Andhra Pradesh	Pending with Department
4	Total 5 Nos. of operational borewells for ground water abstraction along the stretch across Andhra Pradesh and Telangana State No objection certificate for ground water extraction from existing operational borewells (3 Nos.) located in Telangana State at below mentioned locations. • Office Area (1no.) • Base camp (1no.) • Truck Laybye Public Toilet Block (1 no.)	Ground Water Department, Government of Telangana	Active (3 borewells) The penalties were waived off by the department based on the last bill received for ground water extraction from the respective borewells. SPV has paid all the dues and all compliances are in place..
5	Certificate of registration of establishment dated June 4, 2019 issued by Labour Department	Government of National Capital Territory of Delhi	Active

13.9 GAEPL

Sr. No.	Description of permit	Issuing Authority	Current Status
1	Environmental clearance dated March 3, 2009	Ministry of Environment and Forest	Active
2	Completion certificate dated April 23, 2022	IE	Active

3	Forest clearance dated March 30, 2012	Ministry of Environment and Forest	Active
4	No objection certificate for ground water extraction from the operational borewells (5 locations)	Ground Water Department, Government of Uttar Pradesh	Active (NOC obtained for 3 locations) Draft NOC obtained for 2 borewells. The ground water abstraction charges have been paid post issuance of draft NOC. Final NOC is awaited from department.
5	No objection certificate for ground water extraction from the additional operational borewells recently installed at 5 locations.	Ground Water Department, Government of Uttar Pradesh	Pre-requisite actions (procurement and installation of flowmeters) have been completed. It was observed during submission of NOC application for 5 borewells that ground water abstraction is not permitted in Critical and Over exploited areas based UPGWD guidelines. Out of 5 locations, 2 falls under critical zone and 3 falls under over exploited zone. Therefore, NOC submission is also not allowed for these borewells. The matter was intimated to Legal team dated 06.08.2025 post which legal team has recommended to stop the usage of borewell and close the borewells immediately as required by law. Following this, SPV was informed through email dated 19.08.2025 to stop the borewell operations (along with its removal from site) and identify the alternative suitable source of water (third party tanker/municipal supply) to cater the water requirement at the respective locations.

			The closure of one borewell located at SPV office was already completed and SPV is in process of signing the agreement with third party for 2 borewells post which these borewells will also be closed Further, SPV identifying the alternative source of water for the remaining two locations.
6	Application dated November 16, 2022 for issuance of license under the Contract Labour (Regulation and Abolition) Act, 1970.	Ministry of Labour and Employment, Office of the Assistant Labour Commissioner (Central), Jhansi,	Pending with department

14. Details of on-going litigations

14.1 Litigation and Regulatory Actions against the Trust and its Associates

As at the date of this Placement Memorandum, there are no outstanding criminal litigation, non-ordinary course regulatory actions or material civil litigation against the Trust and its Associates, except as disclosed in this section.

14.2 Litigation involving the Initial Portfolio Assets

Material civil proceedings filed against the Initial Portfolio Assets

DATRPL

(i) VKR Projects Private Limited ("**Plaintiff**") has filed a commercial suit against DATRPL ("**Defendant**") before the High Court of Judicature at Bombay ("**Bombay High Court**") in relation to a letter of intent issued by the Defendant wherein the Defendant sought the services of the Plaintiff in the laying and shifting of electricity cables in a specific section of the Defendant's project highway ("**Service**"). Due to a delay in the completion of the Service, the Defendant refused to pay an amount of ₹ 4,193.32 million. The Plaintiff has claimed that the aforesaid delay was due to the delay in handing over of the complete project site by the Defendant and accordingly, the Plaintiff has filed the present suit before the Bombay High Court. The Plaintiff has prayed for, amongst other things, the Bombay High Court to (i) direct the Defendant to pay an amount of ₹ 4,193.32 million to the Plaintiff, along with statutory taxes and an interest at the rate of 18% per annum up to the date of realization of such amount, (ii) order the specific performance of the terms of letter of intent, and (iii) direct the Defendant to deposit a sum of ₹ 277.28 million with the Bombay High Court. The matter is currently pending.

Others

(i). Certain persons ("**Petitioners**") have filed separate cases against some of the Initial Portfolio Assets before various civil and consumer courts, amongst other things, (i) alleging excess collection of toll; (ii) challenging acquisition of land used for the Initial Portfolio Assets; and (iii) challenging certain encroachment notices served upon the Petitioners. These matters are currently pending.

(ii). Certain persons have filed separate labour cases against some of the Initial Portfolio Assets before various civil and labour courts in relation to, amongst other things, wrongful termination of employment, increase in salaries and demands of bonus. These matters are currently pending.

Material civil proceedings filed by the Initial Portfolio Assets

WUPTL

(i). WUPTL ("**Claimant"**) has initiated arbitration proceedings against NHAI ("**Respondent**") before the Indian Council of Arbitration, New Delhi ("**ICA**"). The Claimant had entered into a concession agreement dated September 9, 2005 with the Respondent ("**Concession**

Agreement"). Due to change in law by way of an order of Supreme Court dated October 9, 2015 and the notification issued by National Green Tribunal dated February 18, 2016, (i) environmental compensation charges were to be levied on all light and heavy duty commercial vehicles entering New Delhi; (ii) commercial vehicles were prohibited from entering into New Delhi if not destined to New Delhi; and (iii) transportation of mining materials in Yamunanagar and Saharanpur districts was prohibited. The Claimant has alleged that these events led to substantial reduction in the commercial traffic on the project highway causing toll revenue losses to the Claimant. In accordance with the terms of the Concession Agreement, the Claimant sought compensation from the Respondent for the losses incurred due to 'change in law' event which was refused by the Respondent. Accordingly, the Claimant had initiated arbitration proceedings, and sought compensation of ₹ 666.00 million along with interest. However, the arbitration proceedings were kept in abeyance in order to pursue amicable settlement before the Conciliation Committee of Independent Experts. The matter is currently pending.

Criminal Proceedings involving the Initial Portfolio Assets

DATRPL

(i). The State of Haryana has initiated criminal proceedings against the project manager of DATRPL before the Chief Judicial Magistrate, Faridabad ("**CJM Court**"). A first information report was filed against DATRPL under sections 279, 337, 338 and 304A of the Indian Penal Code, 1860, as amended, in relation to the death of the son of Manoj Kumar Wadhwa in a road accident allegedly due to potholes on the road forming part of DATRPL's project. The matter is currently pending before the CJM Court.

(ii). Giriraj Kishore ("**Complainant**") has initiated criminal proceedings against Rajesh Madan and the Team Leader of U.R.S. Scale Wilson Pvt. Ltd. ("**Respondents**") before the Court of Judicial Magistrate, Chhata, Mathura ("**CJM Court**"). A First Information Report ("**FIR**") was filed by the Complainant under Section 430 of the Indian Penal Code, 1860 ("**IPC**"), as amended, against the Respondents in relation to the project assets of DATRPL for intentionally not constructing a drain near Complainant's land despite multiple reminders which has led to the collapse of Complainant's boundary wall and has also destroyed the crops planted in Complainant's land. The CJM took cognizance of the complaint on April 6, 2022 under Section 432 of the IPC. The matter is currently pending.

MBEL

(i). The Labour Enforcement Officer ("**Plaintiff**") has filed two separate cases against MBEL (erstwhile Madhucon Agra Jaipur Expressway Limited) before the Civil Court, Bair District, Bharatpur ("**Civil Court**") alleging non-compliance under Sections 23 and 24 of the Contract Labour (Regulation and Abolition) Act, 1970. The Plaintiff has also filed another case before Civil Court under Section 22 of the Minimum Wages Act, 1948 for non-payment of minimum wage to a worker as stipulated under the aforesaid Act. The matters are currently pending.

(ii). Uttam Sharma ("**Complainant**") has filed a criminal complaint against the erstwhile directors and certain employees of MBEL ("**Accused Persons**") before the court of Additional Chief Judicial Magistrate, Bharatpur ("**ACJM Court**"). The complaint was filed under section 418 and 420 of the Indian Penal Code, 1860 for charging excess toll fees from the commuters using the project highway. The ACJM Court took cognizance of the complaint on October 29, 2014 and issued a bailable warrant of arrest against the Accused Persons

("**Warrant**"). Aggrieved by the Warrant, the erstwhile directors of MBEL have filed a revision petition before the sessions court. The matter is currently pending.

(iii). Certain persons ("**Complainants**") have filed claims before certain courts and tribunals including the Motor Accident Claim Tribunal and the Lok Adalat claiming compensation due to accidents that occurred on the Project assets. These matters are currently pending.

Regulatory Proceedings involving Initial Portfolio Assets

(i). The office of the Registration and Stamps Department, Government of Telangana has issued notices to APEL and KMC Constructions Limited ("**KMC**") in relation to the inadequate stamping of the EPC contract entered into between APEL and KMC. APEL is contesting the aforesaid notices.

(ii). 2 of our Initial Portfolio Assets (being, GAEPL and WUPTL) have received notices from the office of the Collector, Aligarh and the office of the Additional District Magistrate (Finance Revenue), Meerut, respectively, in relation to the stamping of the concession agreements entered into by such Initial Portfolio Assets. The Collector, Aligarh has also passed an order in this regard. The relevant Initial Portfolio Assets are contesting the aforesaid notices and the order before various authorities and while these matters are currently pending, in accordance with the share purchase agreement through which the Cube Group acquired these Initial Portfolio Assets, the erstwhile sellers are obligated to indemnify, defend and hold harmless the Initial Portfolio Assets in relation to any payment of deficient stamp duty on the concession agreements.

Claims against Initial Portfolio Assets

TOT SPVs

(i). NHAI had, by way of its letter dated October 19, 2020 to the TOT SPVs, notified October 20, 2020 as the 'Appointed Date' under respective concession agreements and also noted that there was a delay by the TOT SPVs in the completion of the conditions precedent set out in their respective concession agreements, thereby entitling NHAI to levy liquidated damages on the Project SPVs. Subsequently, by way of its letter dated November 18, 2020, NHAI levied a claim of net liquidated damages of ₹ 83.70 million on the TOT SPVs rejecting their contentions of delay due to a force majeure event. The TOT SPVs had intimated NHAI of the occurrence of 'force majeure' events and sought deferment of the 'Appointed Date' pursuant to correspondences dated March 28, 2020, July 9, 2020 and August 10, 2020 and contested the claims on liquidated damages pursuant to its letters dated October 28, 2020 and November 27, 2020. NHAI has, by way of its letter dated November 18, 2020, agreed to grant the benefit of 'Force Majeure' for the period between March 24, 2020 to April 19, 2020 and declined to extend the benefit for any period thereafter. NHAI imposed liquidated damages on the TOT SPVs for delay in completion of its conditions precedent and also conceded delay on its part in publication of the fee notification. NHAI has sent three reminders by way of letters dated January 15, 2021, February 5, 2021 and February 26, 2021 to the TOT SPVs to pay the damages for an amount of ₹ 83.70 million to NHAI. NHAI has also stated in the aforementioned letter that the Project SPVs are required to pay interest at a rate equal to 5% above the bank rate and interest as per the relevant concession agreements. The TOT SPVs vide a letter dated July 19, 2021 agreed, under protest, that they are liable to pay a penalty of only ₹ 41.60 million in light of the delay being only for the

period of 135 days as opposed to different period of delays for each TOT SPV. The letter also stated that in light of the Atma Nirbhar guidelines dated June 3, 2020, the TOT SPVs is eligible for a grace period of six months for completion of all its obligations. The TOT SPVs vide letters dated April 12, 2022, have requested NHAI for revised calculation of damages and being penalized only for an amount of ₹ 39.80 million as the full and final amount payable as such damages. Further, the TOT SPVs, vide letters dated June 27, 2022, have stated that since NHAI never invoked force majeure provisions in terms of the relevant concession agreements and the outbreak of Covid-19 did not affect its obligations in relation to other projects, it is not entitled to take any action against the TOT SPVs in this regard.

APEL

(i). The regional office of NHAI, Hyderabad *vide* its letter dated May 12, 2022, has raised a claim of ₹ 77.20 million in relation to a negative change of scope proposal by APEL. Additionally, it has requested the General Manager, NHAI (Telangana) to execute a settlement agreement between NHAI and APEL so that that both the parties do not raise any claims against each other in respect of positive or negative change of scope in future. The claim is currently pending.

(ii). The regional office of NHAI, Hyderabad *vide* its letter dated September 9, 2022 has raised a claim of approximately ₹7.97 million in relation to a default in rectifying certain defects in the APEL Project Highway as recommended by the independent engineer, *vide* letter dated September 2, 2022. APEL has, *vide* letters dated September 6, 2022 and September 10, 2022, disputed such claim and has requested NHAI to hold the same and provide it time to submit a detailed justification. The claim is currently pending.

JMTL

(i). The independent engineer has issued a notice dated August 26, 2021 providing an opportunity to cure the defects and deficiencies in terms of operation and maintenance obligations under the JMTL Concession Agreement. JMTL, in its response dated September 4, 2021, has stated that it has taken efforts to restrict the unauthorized median cut by way of closure or by providing alternate viable solutions to the relevant authorities and has requested for withdrawal of the notice.

(ii). The independent engineer has issued a notice dated October 7, 2021, providing an opportunity to cure the defects and deficiencies in relation to failure to replace a metal beam crash barrier in terms of operation and maintenance obligations under the JMTL Concession Agreement. JMTL, in its response dated October 13, 2021, has submitted a compliance report for rectification of MBCB.

(iii). The independent engineer has imposed a penalty of ₹ 1.07 million vide letter dated October 22, 2021 for delay in painting of median kerb. JMTL, in its response dated October 26, 2021, stated that work was delayed due to consistent rains which severely affected the work progress and quality of work and has requested or extension for the completion of the work. Further, vide its letter dated November 17, 2021, JMTL stated that the work has been completed in totality and requested for withdrawal of notice and waiver of penalty.

(iv). The independent engineer has issued a notice dated October 27, 2021, providing an opportunity to cure the defects and deficiencies in relation to rectifying the service road in terms of operation and maintenance obligations under the JMTL Concession Agreement. JMTL, in its response dated November 1, 2021, has submitted that the rectifications has been carried out.

(v). The independent engineer has issued a notice dated March 9, 2022, providing an opportunity to cure the defects and deficiencies in relation to dumping encroachment bolder waste material dump in right of way of the project highway in terms of operation and maintenance obligations under the JMTL Concession Agreement. JMTL, in its response dated March 14, 2022, has stated that the observations have been complied with and has requested for withdrawal of notice.

LRTL

(i). The NHAI, through a letter dated August 19, 2021, has issued notice to LRTL for submission of negative change of scope for de-scoping of a proposed vehicle underpass. The independent engineer, *vide* letter dated August 24, 2021, issued notice to LRTL for submission of the relevant proposal. LRTL, in its response dated December 7, 2021 has submitted detailed proposal of estimate for negative change of scope. The independent engineer has provided certain observations in relation to the responses submitted by LRTL which has been complied with by LRTL as stated in the letter dated February 9, 2022. The independent engineer *vide* letter dated August 18, 2022 has submitted, for perusal and approval by the NHAI, a negative change of scope proposal, as submitted by LRTL, of a proposed vehicle underpass of approximately ₹ 536.17 million. In this regard, LRTL is required to pay 80% of the descoped amount, amounting to ₹ 428.93 million to NHAI. The claim is currently pending.

MBEL

(i). The independent engineer has imposed a penalty of ₹ 0.98 million *vide* letter dated May 1, 2019 for failure to take necessary steps to remove encroachment at the site. MBEL has objected to the claim *vide l*etter dated October 22, 2020 stating that the norms and guidelines were followed and executed and continuous efforts are being taken to clear the encroachments in the affected area.

(ii). The independent engineer has issued notice dated January 5, 2022 providing an opportunity to cure the defects and deficiencies in terms of operation and maintenance obligations under the MBEL Concession Agreement. MBEL, in its response dated January 6, 2022 has stated that the pavement defect rectification is under process and therefore, it is not in non-compliance of the relevant obligations under the MBEL Concession Agreement.

DATRPL

(i). NHAI *vide* letter dated September 1, 2022 has imposed a sum of ₹ 16.7 million on DATRPL on account of non-illumination of street lights on Project Highway on the recommendation of the independent engineer. The claim is currently pending.

GAEPL

(i). NHAI *vide* letter dated September 1, 2022 has notified GAEPL to deposit an amount of approximately ₹17.44 million as damages for breach of maintenance obligation under the Concession Agreement. GAEPL has submitted its response to NHAI, *vide*, letter dated September 10, 2022, delineating the remedial measures undertaken by GAEPL to fulfil its operation and maintenance obligations. GAEPL has submitted that there was no breach of maintenance obligation and accordingly there is no default as alleged by the independent engineer. The claim is currently pending.

NDEPL

(i). The independent engineer has imposed a penalty of ₹ 2.43 million vide letter dated November 5, 2021 for failure in conducting the required test at the major bridges in terms of the provision of the NDEPL Concession Agreement.

(ii). The independent engineer has imposed a penalty of ₹ 1.15 million vide letter dated November 5, 2021 for not rectifying the defects as notified by the independent engineer for the month of April 2021, within the stipulated time period in terms of the NDEPL Concession Agreement.

(iii). The independent engineer has imposed a penalty of ₹ 41.19 million vide letter dated July 5, 2022 for not carrying out periodical maintenance work (for instance, repair of shoulder, studs, road marking and BC overlay) for the period of January 2021 to May 2022. NDEPL has objected to the claim and has requested NHAI to direct the independent engineer to recalculate the penalty amount. The claim is currently pending with NHAI.

WVEPL

(i). The independent engineer has imposed a penalty of ₹ 3.82 million *vide* letter dated February 24, 2022 for delay in rectification of defects and deficiencies of road and bridge operations in operations and maintenance in terms of the WVEPL Concession Agreement. WVEPL has objected to the claim *vide* letter dated March 4, 2022 stating that all defects and deficiencies were rectified within the stipulated time period and has requested the independent engineer to waive off the damages. The claim is currently pending.

15. Litigation involving the Sponsors and their associates (including common associates of the Sponsors, the Project Manager and the Investment Manager)

i. ICICI Bank Limited (**"Plaintiff"**) filed a commercial suit before High Court of Bombay (**"High Court"**) against State Bank of India and Dena Bank (**"Original Defendants"**) seeking an injunction against them from exercising the right of substitution of Lanco Devihalli Highways Limited (**"LDHL"**) with any selectee. Since CH-I (**"Defendant"**) was shortlisted as the selectee for substituting LDHL with an SPV held by it or its associate, it was impleaded as a defendant in the said commercial suit by an order dated February 11, 2019. The High Court by way of its order dated February 18, 2019 stated that CH-I was required to pay transaction consideration after the Original Defendants have granted no objection. Pursuant to the aforesaid order, the transaction was closed and supplementary concession agreement was executed by NDEPL. While CH-I continues to be a party to the said suit, the outstanding issue is with reference to the distribution of consideration. Thus, CH-I has filed

an application for removal of its name as a defendant to the suit. The matter is currently pending.

ii. CH-II (**"Plaintiff"**) has filed a commercial suit before the High Court of Bombay (**"High Court"**) against IL&FS Transportation Networks Limited (**"ITNL"**), Infrastructure Leasing and financial Services Limited (**"IL&FS"**) and Chenani Nashri Tunnelway Limited (**"CNTL"**) (collectively, referred to as **"Defendants"**) seeking, inter alia, (a) specific performance of the share purchase agreement (**"SPA"**) executed between the Plaintiff and the Defendants in relation to transfer of 100% shareholding of ITNL in CNTL to the Plaintiff; (b) mandatory injunction against the Defendants to extend the long stop date (as defined in the SPA) up to ninety days after receipt of all approvals and fulfilment of all conditions. The Hon'ble Bombay High Court passed an interim order dated September 14, 2021 directing the Plaintiff to file an application before the National Company Law Tribunal, Mumbai (**"NCLT"**). Subsequently, the Plaintiff filed an application before the NCLT. The Plaintiff also approached the Bombay High Court seeking injunction to restrain the Defendants from divesting, disposing of, transferring, alienating, or creating any other interests in the shares of CNTL otherwise than under the SPA. The High Court in its order dated November 25, 2021 recorded that any decision at the behest of IL&FS and ITNL cannot prejudice any rights and contentions of Plaintiff. The matter is currently pending before the NCLT.

iii. N. Vijaya Kumar (**"Petitioner"**) has filed a writ petition against KNR Tirumala Infra Private Limited (**"Respondent"**) before the High Court of Andhra Pradesh at Amaravathi (**"High Court"**) seeking a writ of mandamus. The Petitioner prays for declaration of the act of permanently covering up Mungilipattu Kaluva water channel a natural spring stream channel by the Respondent as illegal, improper and unconstitutional. The Petitioner also seeks relief to direct the Respondent to restore Mungilipattu Kaluva water channel by constructing proper drainage systems to ensure the free flow of the water channel. The petition is currently pending and is at the stage of admission

SPV	Type	Brief of facts
APEPL	Writ Petition	The case was brought by P Naganna and K Lakshmi individually against each other along with other governmental authorities for their inaction on the illegal construction done by one another. The land in question is disputed and supposedly falls within the purview of NHAI.
APEPL	Writ Petition	The case was brought by P Naganna and K Lakshmi individually against each other along with other Governmental Authorities for their inaction on the illegal construction done by one another. The land in question is disputed and supposedly falls within the purview of NHAI. The Court is presently accepting show case in regard to admissibility of this matter. (APEL is R-6 in the matter)
APEPL	Civil	Andhra Pradesh Expressway Private Limited had been issued with notices dated July 16, 2019, August 21, 2019 and September 09, 2019 from Registration and Stamp Department, Government of Telangana levying stamp duty amounting to INR 22,50,00,000 (Indian Rupees Two Hundred And Twenty Five Million) on an agreement dated April 20, 2006 executed between APEPL and M/s KMC Constructions Limited . The agreement between APEPL and KMC is in the form of an engineering procurement and construction contract whereby APEPL had engaged M/s KMC Constructions Limited for carrying out construction work at a total consideration of INR 4500,000,000 (Indian Rupees our Thousand Five Hundred Million). It is alleged by the authority that the stamp duty has not been paid by APEPL as per the rate of 5% applicable for construction of any immovable property.
APEPL	Civil	The respondents issued a directive to the claimant - asking them to provide 40 mm BC overlay during the second and the third period maintenance which was in violation of the concession agreement and the applicable industry and government standards and the industry practice and lacked the authority of law to do so. Aggrieved by the same, the claimant filed for an arbitration claiming for the losses and interest for the costs incurred as a result of carrying out the directions passed by the respondent.
DATRPL	Writ Petition	The petitioner has filed the case against the NHAI for illegal acquisition of land of the petitioner without paying any compensation for the widening of the NH-2. As per the demarcation report, the land has been absorbed by the NHAI without compensation. The petitioners have moved to the court to either be paid the compensation as per section 3G of the National Highways Amendment Act, 1997 or the land be returned to them.
DATRPL	Criminal	A first information report under sections 279,337,338 and 304A of the Indian Penal Code, 1860, as amended, has been filed against DATRPL in the police station at sector 7, Faridabad in relation to the death of the son of Mr. Manoj Kumar Wadhwa in a road accident on February 10, 2014, alleged to have taken place due to potholes on the project road

DATRPL	Civil	After the NHAI took a portion of parcel of land belonging to the plaintiff, the remainder of the land was used by him for opening a shop. the only access to the shop is through the National Highway but the same is alleged to have been hindered by NHAI by putting up guard rails and iron rods. the plaintiff has moved this suit for permanent injunction against NHAI as the guard rails/ iron roads blocks his only way of passage. This has been alleged to be an illegal encroachment of land of the plaintiff for which he has already filed a case with the district collector for enhancement of compensation. A suit has been filed by one Mr. Sukhdev seeking a permanent injunction restraining DATRPL sfrom encroaching the only way of his land. As per the contentions of the plaintiff, it has been alleged that DATRPL is constructing a railing in front of the land of the defendant that is going to obstruct the right of way of the defendant and thus has sought a permanent injunction against NHAI and toll plaza.
DATRPL	Appeal	The suit had been instituted by residents of village Gadpuri alleging that the land on which Gadpuri Toll Plaza is made belongs to the Gram Panchayat of Gadpuri village and NHAI or DATRPL have no interest in the property. It is alleged that the defendants are colluding with the state authority who are allowing defendants 2 to 4 to illegally encroach onto the property in question. It is further alleged that the defendants wish to construct toll way booths and their offices on the disputed property illegally. Therefore, the plaintiff sought mandatory and permanent injunction restraining the defendants from illegally occupying the suit property and not to perform any construction on the disputed property. The suit has been dismissed by the Civil Judge (junior division) vide order dated 21.05.2022 and therefore residents of Gram Panchayat have preferred an appeal against the order dated 21.05.2022.
DATRPL	Writ Petition	The Petitioner has filed the Writ Petition alleging that the Notice dated 18.05.2023 issued by DATR to the Petitioner for removal of encroachment near Palwal Bus Stand is illegal and shall be quashed.
DATRPL	Civil	A civil suit for injunction has been filed by Mr. Sunil Kumar and others seeking injunction against NHAI and DATRPL for doing any construction on the disputed land. The plaintiff has alleged that certain portion of land on the row of Delhi-Agra toll belong to him, and the said land has never been acquired by NHAI. The plaintiff has also filed a case for contempt of court against some of the NHAI and DATRPL's officials alleging that the respondents had demolished certain portion of their property and constructed a boundary wall in violation of the Allahabad High Court’s order for maintaining status quo dated 23.01.2023.

DATRPL	Writ Petition	This is in relation to a civil writ petition that has been filed before High Court of Punjab & Haryana, by one Mr. Karan Singh Dalal against NHAI, DATRPL, Cube Highways and Reliance Constructions This petition, inter alia, alleges that DATRPL has been issued Provisional Certificate on the pretext of having completed the six-laning work while the six laning work remains incomplete and thus, seeking the following prayer from the court: a) Quashing of provisional certificate. b) Shifting of Gadpuri toll plaza to an appropriate place, away from Arohi Model School, Gadpuri
DATRPL	Writ Petition	The petitioner is aggrieved by the fact that there is no drainage system for storm waters along with the highway alongside NH2 from escorts corporate office 155, Mathura Road, Faridabad to near metro pillar number 630, Faridabad which leads to rain water entering residential houses in Huda residential area at sector 28. The petitioner is aggrieved by the fact despite various complaints in this behalf no action has been taken by respondent no.1 till date following are the parties to suit:- 1) R-1, NHAI 2) R-2, Municipal Corporation of Faridabad 3) R-3, Haryana Urban Development authority complex 4) R-4, UOI
DATRPL	Civil	This case has been filed alleging that the Gadpuri Toll Plaza has been constructed on land belonging to Gram Panchayat Gadpuri. They have sought the removal of encroachment from the said lands.
DATRPL	Civil	The plaintiffs are co-owners and in joint possession of two shops (area 35 sq. yards) situated in Village Baghola, Tehsil & District Palwal, duly shown in the site plan and forming part of Khewat/Khatoni No. 780/925, Khasra No. 112. Out of the plaintiffs' original 105 sq. yards land, 70 sq. yards had earlier been acquired by Defendant No.2 for road widening, for which compensation was duly received, leaving 35 sq. yards where the plaintiffs' shops are constructed. However, in the report "Babat Kabja Tasdik Karne Bare Moja Baghola" issued by Defendant No.1, the area was recorded as 89 sq. yards instead of 105 sq. yards. Further, Defendants No.1 and 3, acting in collusion, issued a notice dated 01.03.2024 for demolition of the plaintiffs' shops for road widening. The plaintiffs' requests on 14.03.2024 for correction of the report and withdrawal of the notice were refused, giving rise to the present cause of action
DATRPL	Civil	The complainant has filed a case alleging that the pipeline and related chamber near Goverdhan Chauraha, Chatta Kasba has not been constructed and maintained properly by NHAI and related parties. Complainant has alleged that the water from the pipeline overflows and has led the complainant to suffer various damages such as seepage/ cracks in his constructed school, bad smell in the vicinity etc. the complainant has sought compensation for compensation for such damages

DATRPL	Appeal	The District Consumer Disputes Redressal Commission, Dholpur has passed an order dated 18.12.2024 against DATRPL. The Commission ordered that the SPV had not correctly scanned the Fastag of the complainant because of which, despite having sufficient balance in Fastag, the complainant was made to pay penalty over and above the User Fee wrongfully. As a result, the Commission has ordered the following to be paid by the SPV: - 1. INR 110 to be refunded along with interest @ 9%. 2. Cost towards legal fee - INR 3000. 3. Compensation towards mental sufferage - INR 5000. 4. Penalty on account of inconvenience suffered by general public - 25000. The SPV has filed an appeal challenging the said order
DATRPL	Criminal	The complainant filed a criminal case against Rajesh Madaan and the i.e. for mischief due to non-completion of the drainage works. The complainant states that Mr Rajesh is the NHAI contractor and is awarded the work for construction and maintenance of Delhi Mathura Road. He has alleged that during the construction of a bridge and service road near barsana chauraha, the drainage works was knowingly left incomplete. He alleges that the drainage works were not completed despite several requests. He alleges that he was asked to pay Rs. 2,000 to the JE for resuming the works and on his refusal to pay such amount, the works were never started. He further contends that the respondents intentionally diverted the water of the drainage in the direction of the complainant's farm which has not only destroyed a boundary wall but also crops. He alleges this as a mischief. Court prima facie found malfeasance and mischief and subsequently issued summons.
JMTPL	Civil	It is alleged by the Petitioner that the Respondents are wrongfully (without paying any compensation) proceeding to demolish structures on the land held by the Petitioner through PATTA near NH 21. The Petitioner has challenged the notice for removal of encroachments issued by JMTL dated 03.09.2022.
JMTPL	Civil	It is alleged by the Petitioner that the Respondents are wrongfully (without paying any compensation) proceeding to demolish structures on the land held by the Petitioner through PATTA No. 24 (dated 22.01.1980) near NH 21. The Petitioner has challenged the notice for removal of encroachments issued by JMTL dated 03.09.2022.
JMTPL	Civil	This case has been filed by the father and mother of the deceased who died due to electrocution at the Project Highway alleging that the deceased died due to negligence of the PNC Infratech Ltd, during the construction of highways. JMTL is also party in this case

JMTPL	Civil	This case has been filed by Ms Manjudevi, the wife of the deceased who died on the national highway due to sudden rush of the cattle at the highway which hit the two-wheeler of the deceased. The Petitioner alleges that the said accident occurred due to negligence on part of NHAI and JMTL as it was their responsibility to make arrangements for preventing such animals from coming onto the roads. The case was earlier filed in the Motor Accident Claim Tribunal however, the said case was considered as a fatal accident and therefore was disposed with the instructions to file the same in appropriate court vide order dated 22.03.2022 (pronounced on 23.03.2022).
JMTPL	Civil	Case has been filed by Mr. Raj Kumar alleging excess collection of Rs. 130 (which was the FasTag penalty collected by JMTL as his FasTag could not be detected by the system as it was registered via chasis number) seeking (a) Refund of Rs 130. (b) Damages of Rs 2,21,000
JMTPL	Civil	Mr. Ram Singh had filed multiple cases against JMTL seeking an injunction against JMTL from installing Static Weigh Bridge. However, the revenue board rejected all such cases and allowed JMTL to install SWB. The Order passed in favour of JMTL by revenue board has been challenged by Ram Singh.
JMTPL	Civil	The Petitioner alleges that Mr. Sanjay Kumar Meena has died on NH-21 due to a dead bull lying on the road. It is alleged that the cleaning and maintenance of the road has been done negligently which has resulted in the death of Mr. Sanjay Kumar.
JMTPL	Writ Petition	Mr Raghuveer Singh was employed as security supervisor with IJM from August 2006, Subsequently, he was transferred to JMTL wherein his employment was terminated without notice. The Labour Court held vide its order dated 02.05.2018 that the termination of Mr. Raguveer Singh without notice as unlawful and ordered IJM to pay Rs. 40,000 to him. Mr Raghuveer Singh has challenged the order of the Labour Court before the High Court of Rajasthan and sought reinstatement in the employment of JMTL.
JMTPL	Civil	It is alleged by the Petitioner that the Respondents are wrongfully (without paying any compensation) proceeding to demolish structures on the land held by the Petitioner through PATTA NO. 8 (dated 26.03.1984) near NH 21. The Petitioner has challenged the notice for removal of encroachments issued by JMTL dated 03.09.2022
JMTPL	Civil	Mrs. Reena has filed this case claiming compensation amounting to INR 36,50,000/-(@interest and cost of 50,000 and 25000 towards litigation) for death of her husband caused due to an accident on the road maintained by JMTPL. She alleges that when her husband (deceased) was passing through the JMTPL land, his motorcycle collided with a bull on the road which resulted in his death. It is alleged that the accident occurred due to the SPV's negligence in not putting any indicator/signage and any fencing for prevention of such accidents.

JMTPL	Civil	Mr. Rameshwar Prasad has filed this case claiming compensation amounting to INR 36,50,000/- (@interest and cost of 50,000 and 25000 towards litigation) for death of his son caused due to an accident on the road maintained by JMTPL. It is alleged that when his son (deceased) was passing through the JMTPL land, his scooty collided with a bull on the road which resulted in his death. It is alleged that the accident occurred due to the SPV's negligence in not putting any indicator/signage/lights and any fencing for prevention of such accidents
JMTPL	Civil	The complaint has alleged that the complainant has been made to pay penalty despite there being sufficient balance in the Fastag.
JMTPL	Civil	"The complaint has alleged that the complainant has been made to pay penalty despite their being sufficient balance in the fastag at Amoli toll plaza"
JMTPL	Civil	The case concerns a fatal accident that occurred on 08.02.2020 at about 7:30 PM on NH-21, where cement blocks were left in the middle of the road without any warning signs, lighting, or radium strips, leading to the accident. In its judgment dated 29.09.2025, the Hon'ble Court held that the responsibility for construction, operation, and maintenance of the concerned highway stretch rested with Defendant Nos. 1 and 2 under contractual arrangements with the National Highway Authority of India, and that the accident occurred due to their negligence in failing to ensure proper safety measures. The Court relied upon witness testimony and statutory provisions under the Fatal Accidents Act, 1855, and observed that despite being informed by residents, no corrective action was taken. While deciding Issue No. 3, the Court noted that Defendant No. 2 failed to discharge the burden of proving that he was not a necessary party. Consequently, the suit was partly decreed in favour of the plaintiffs, holding Defendant Nos. 1 to 3 jointly and severally liable. However, National Insurance Company Limited (Defendant No. 3), in its review petition, contends that this finding is erroneous, as its liability arises only under a voluntary insurance policy (Exhibit NA-3/1) taken by Defendant No. 1, M/s PNC Infratech Limited, covering only acts carried out by the insured at the construction site during the policy period, and not under any compulsory statutory insurance such as the Motor Vehicles Act. The insurer asserts that it neither insured Defendant No. 2 nor covered any act attributable to him, and therefore, fastening joint and several liability on National Insurance Company Limited is a clerical and legal error warranting reconsideration of the operative portion of the judgment.

JMTPL	Civil	This case has been filed by the plaintiffs, who are residents of village Gurjar Simla, Tehsil Sikrai, District Dausa, asserting their ownership, possession, and khatedari rights over land bearing Arazi Khasra No. 187 measuring 0.1000 hectares, along with a residential house, shop, and cattle shed constructed thereon by their ancestors about 40 years ago. The dispute arises due to alleged wrong revenue entries and amendments during settlement proceedings, pursuant to which Defendant No. 1 (the highway authority/operator) and Defendant No. 2 (Public Works Department) have claimed that the plaintiffs' land falls within Khasra No. 199 and have forcibly attempted to evict the plaintiffs without paying compensation. The plaintiffs contend that 7 biswa of their land from old Khasra No. 132/2 was acquired by Defendant No. 2 without payment of compensation, and that despite clear revenue records showing Khasra No. 187 as their land, the defendants, along with Defendant No. 3, illegally entered the land on 06.12.2022 and attempted demolition using machinery. The plaintiffs therefore seek protection of their possession and ownership rights.
MBEL	Civil	The Complainant has filed the case alleging that despite having a pass for concessional rates to be charged at the Toll Ludhawai, the Complainant was charged an excess toll amount. The complainant alleges that as per the concessional rate, he was to be charged toll @ Rs. 5 however, he was charged at Rs. 25. He alleges excess collection of tolls of Rs. 40 and states that despite repeated complaints, his concern was not addressed. He now claims the refund of the excess amount along with charges towards mental agony and court expenses.
MBEL	Writ Petition	The petitioner has challenged the notice issued by MBEL for the removal of encroachment done by the petitioners. The Petitioner has challenged the notice on the ground that it has already challenged the acquisition of the relevant land by NHAI and the proceedings in that regard are still pending.
MBEL	Criminal	The complainant Mr. Suresh Kumar alleges that Mr. Anoop Singh along with the toll staff beat the complainant and also spoke bad words to him on his caste. He has filed a complaint under the Scheduled Castes and the Scheduled Tribes (Prevention of Atrocities) Act, 1989 and IPC against Mr. Anoop Singh. The matter pertains to removal of encroachment near NH-21.
MBEL	Writ Petition	The petitioners challenged the land acquisition notification wherein the old and the new *khata* numbers mentioned different owners. When the objections were entertained by the district collector, the presence of some pertinent documents revealed that the petitioners are the actual owners of the land, but the respondent while the case of determination of ownership is going on, asked the petitioners to vacate the land premises. even though the authorities have indicated the demolition of the property without even paying the compensation or deciding over the ownership dispute or even proceedings to acquire the said property.

MBEL	Civil	The plaintiffs have claimed that they have been allotted land on patta near nh-21 and that they have complied with the requirement of leaving 75feet distance from the national highway in doing the construction on the land. It is alleged that the defendants have sent illegal notice to the plaintiffs for removal of encroachment on the said land despite the fact that the said land belongs to the plaintiffs and no compensations has ever been paid to them. The plaintiff has filed this case seeking a temporary and permanent injunction against mbel/defendant from removing any of the alleged encroachment.
MBEL	Civil	The case has been filed by Amar Singh (resident of nearby locality) alleging that there is a *kacha* land (belonging to NHAI) adjacent to the carriageway wherein some individuals have made encroachments. As a result of such encroachment on the said land, the passage to his house is blocked. He seeks relief of removal of such encroachments from all the encroachers, administration, NHAI and Project Manager.
MBEL	Civil	The Plaintiff is claiming that the compensation paid by NHAI for acquiring his land is very less and seeks to get additional compensation for the said land. The plaintiff has to submit affidavit.
MBEL	Civil	Mr. Vinod Kumar has obtained a stay on the encroachment proceedings with respect to his property in the vicinity of MBEL stretch without making MBEL a party to the case. Since MBEL was not aware of the said proceedings, it issued a routine notice for removal of encroachment to the plaintiff. Now the plaintiff has filed a contempt petition alleging breach of court's order adding MBEL also as a party. Arguements has been filed. Waiting for order
MBEL	Civil	The matter relates to land acquisition compensation not being received by the Plaintiff.
MBEL	Civil	This is a land acquisition related case. The Plaintiff alleges that it has not received the compensation for acquisition of Land. He alleges that NHAI, through its agency (MBEL), is wrongly asking the plaintiff to vacate the land without payment of compensation for the land.
MBEL	Criminal	The petitioner has alleged that the accused Mr. Brijendra Singh has illegally constructed some tanks in front of her land which is resulting in blocking her way. It is alleged by the petitioner that the officials of MBEL did not accept her request for removal of Mr. Brijendra's encroachment and that MBEL officials are acting in connivance with Mr. Brijendra. In the present petition, the petitioner has challenged the order dated 10.03.2025 of lower court wherein the lower court has rejected to take cognizance of the matter.
MBEL	Criminal	Mr. Rajendra had filed an FIR alleging a scuffle and bad behaviour by the employees of MBEL. Since the police closed the FIR, the petitioner filed a protest petition against the closure of the FIR for taking cognizance of the matter. Thereafter, the court has taken cognizance in the matter.

MBEL	Civil	The complainant has filed a complaint stating that his toll fee was deducted twice, once at the toll plaza and again through Paytm. Accordingly, he has sought a refund of the excess amount along with compensation of Rs. 2,50,000/- for alleged mental harassment.
MKTPL	Appeal	Three writ petitions have been filed by Madurai district bus owners' association (2) and Virudhnagar district bus owners' association challenging the judgment passed by the madras high court in the W.P. nos. 5121, 5118 and 6527 of 2021 and batch matters. The petitioners in all the writ petitions have challenged the notification no. 2606 dated 26.06.2013 (pertaining to Madurai-Kanyakumari section) which provides for discounted rates of daily and monthly pass on various legal grounds. The notification no. 2606 stipulates daily pass and monthly passes to be provided at the rate of (a) daily pass- @1.5 times of the fees for one-way journey with a capping of maximum of 2 single journeys per day (b) monthly pass- @ 2/3rd of the fee payable for 50 single journeys with capping on the maximum of 50 single journeys per month. The main contention of the petitioners in all the 3 writs is that such a capping of 2 journeys per day or 50 single journeys per months prescribed in the notification is illegal.
MKTPL	Writ Petition	The petitioner is running a bakery and tea shop in Lakshmi nagar virudhnagar which is abutting the service road of national highway. The respondent cleared the encroachment in the highway on the complaint given by Sundarrajan. On 20.6.2024 the respondent came at 2.45 am with bulldozer and erased the structure. The petitioner who came to spot being informed by his employees. He tried to prevent the respondent and their men from demolishing the structure. During the scuffle the bulldozer hit the shoulder of the petitioner. The petitioner sustained nerve injury in shoulder and admitted in the hospital. The petitioner gave complaint to the complaint who didn't receive the same. The petitioner sought Information under RTI. The action of the respondent cause monetary loss and permanent damage to the health to the petitioner. Hence the present petition filed claiming compensation.
MKTPL	Writ Petition	The petitioner is the absolute owner of lands in Kappalur Village, Madurai District. In 2007, a portion of the land was acquired for NH-7 widening, but compensation remains unpaid. The grievance now is that the respondents have begun constructing a toll plaza office building, as claimed by the petitioner, it blocks ingress and egress to the petitioner's property. The petitioner therefore seeks a Writ of Mandamus to rectify survey sketch errors and to consider his representation for protecting access to the property.

NDEPL	Criminal	An over speeding car hit the pedestrian resulting in his death on the NDEPL stretch. His wife has filed a FIR against driver of the car, NDEPL's employee Mr. Hari Babu (toll supervisor) and the NHAI inspector before Kudur police station. She alleges that the toll supervisor had failed to maintain the road which was the reason of accident. Being aggrieved by such frivolous complaint and considering the pendency of criminal case in the FIR and further investigation in crime no. 0275/2023, Mr. Haribabu is approaching the high court for quashing of the complaint filed by the wife of the deceased
NKTPL	Civil	The complaint has alleged that the complainant has been made to pay penalty despite there being sufficient balance in the fastag.
SMTPL	Writ Petition	Mr. Maharajan, has filed a writ petition in the High Court stating all false statements alleging proper road maintenance and repair works are not being undertaken at the road stretch between Madurai - Kanyakumari. He prays that the toll collection shall be suspended at Salaidupur (Kayathar) and Nanguneri Toll Plaza till repair and maintenance of the road stretch between Madurai-Kanyakumari is completed. He has made several other frivolous allegation stating that the road is filled with potholes and cracks resulting in accidents, the amenities at toll plaza are bad, use of handheld scanners due to non-functioning of scanner, no plantation work being undertaken etc. He has made allegation that the bridges at Ponnakudi-Sengulam and Moondraippu have remained pending for more than 3 years causing dilapidated condition of the nearby road resulting in heavy jam.
WUPTPL	Writ Petition	The Writ Petition has been filed by a group of individuals, i.e., the Petitioners, under Article 226 of the Constitution of India, allegedly claiming to be acting in bonafide public interest to protect certain fundamental rights of the local commuters and, inter alia, challenging the grant of concession by the NHAI for the project highway to WUPTL. WUPTL and Cube Highways and Transportation Assets Advisors Private Limited have been impleaded as respondents in the proceedings.
WUPTPL	Civil	We had received notices from the ADM, stamp department Uttar Pradesh levying stamp duty amounting to Rs. 25.13 crores on the concession agreement executed between WUPTL and NHAI and asking the authorized representatives to show cause on why such duty shall not be levied. We had duly filed our reply to this letter from ADM and made our representation in this regard

WUPTPL	Writ Petition	The case was filed before Lok Adalat by the wife of the deceased claiming a compensation of Rs. 1 crore alleging that the deceased met with the accident that caused his death due to negligence of WUPTL and non-maintenance of railing at the Sakoti over bridge. Lok Adalat (Permanent/Temporary) is a pre-litigation mechanism for conciliation and settlement of cases relating to public utility services like transport, postal, telegraph etc. and has no authority to pass any order/direction. It is a forum that allows parties to settle the dispute and in case of failure of settlement, the matter is referred to court. Disregarding the same, the Permanent Lok Adalat has passed an order dated 09.02.2022 in the above-mentioned case directing WUPTL to pay 77 Lakhs to the petitioner within 2 (two) months from the date of the Order. Therefore, WUPTL has filed a Writ Petition before Allahabad High Court challenging the order of Lok Adalat.
WUPTPL	Civil	One Mr. Gyan Kumar has filed this case seeking compensation amounting to INR 34,85,000 (along with 12% interest) for injuries sustained by him due to an accident on the WUPTL Land stretch. He alleges that the reason for the accident was the bad condition of the road which is attributable to the negligence of NHAI and WUPTL.
WUPTPL	Civil	The complainant has alleged incorrect deduction of Fastag amount at Siwaya toll on 25.01.2024 despite the fact that his car was parked at his house.
WUPTPL	Criminal	The Applicant is Manager of Shivaya Toll Plaza, Meerut, which is operated by Western U.P. Tollways Pvt. Ltd. (WUPTL). As per prosecution version informant has suffered road accident due to falling in ditch near toll bridge and sustained injuries. It was submitted that applicant is merely operating the said toll plaza on a contract basis and he has absolutely no duty or role in maintenance of road. Referring to facts of the matter, it was submitted that no prima-facie case is made out against applicant.
LRTPL	Civil	The notice dated 30.10.2025 has been issued alleging a stamp duty deficiency of INR 99,90,96,000 on the Concession Agreement dated 27.12.2019 executed between LRTPL and NHAI. Subsequently, the stamp authorities issued a show cause notice dated 08.12.2022 regarding the appropriate stamp duty to be paid on the Concession Agreement, to which LRTPL submitted its detailed reply on 08.02.2023. No action was taken by the authorities after LRTPL's reply. Thereafter, the present Notice was issued and LRTPL duly appeared before the authority on 20.11.2025, wherein the proceedings were adjourned, and time was given to submit a reply to the Notice.
LRTPL	Civil	Assistant Commissioner of Stamps (First) vide notice dated 30.10.2025 initiated proceeding against LRTPL for paying insufficient stamp duty in the Concession Agreement entered with NHAI. The Office of Assistant Commissioner of Stamps is asking for amount of 99,90,96,000 as stamp duty.

WVEPL	Civil	This case has been filed by the wife of the deceased who died due to electrocution at the project highway alleging that the deceased died due to negligence of the SPV in maintaining the project highway. WVEPL is respondent no. 3 in the suit
WVEPL	Civil	The Concessionaire had claimed for an extension in Concession Period for 1460 days on account of the Actual Average Traffic falling short of the Target Traffic, in accordance with Article 29 of the Concession Agreement. The IE has however, recommended for only 328 days EOT. Thereafter, NHAI had reduced the concession period for 1.5 years on account of the target traffic issue. The SPV has therefore raised a claim against NHAI.
WVEPL	Writ Petition	The petitioners have challenged NHAI's encroachment removal notices. NHAI vide the notices had alleged that there is an illegal encroachment of Government land at km 197+507 LHS in Pudussery Village of Palakkad District within the Right of Way of the National Highway section of NH-544 between Walayar to Vadakkencerry and similarly in the case of 2nd petitioner there is an illegal encroachment at 197 + 157 LHS. Therefore, the petitioners were called upon to remove such unauthorized occupation within 7 days from the date of the said notice.
THPL	Writ Petition	The petitioner has filed the writ petition seeking an order or direction more particularly one in the nature of a writ of mandamus declaring the action of the respondent 1 to 4 in permanently covering up Mungilipattu Kaluva water channel a natural spring stream channel situate in SY NOS 142 to 707 of Kongaravaripalli Village Chandragiri Mandal Chittoor district as illegal improper and unconstitutional and consequently direct the respondents to restore Mungilipattu Kaluva water channel by constructing proper drainage systems to ensure the free flow of the water channel. The case is being handled by the sellers.
THPL	Writ Petition	KTIPL has filed a writ petition before the High Court of Andhra Pradesh seeking quashing of DRC-07 proceedings dated 17.03.2022 (issued for the year 2018-19, 2019-20, 2020-21) and assessment order dated 16.03.2022 imposing tax to an extent of Rs. 113.44 Crores. Such tax has been imposed on the SPV on the ground that the future annuities to be received from NHAI is not exempted from GST in view of the circular no. 150/06/2021-GST dated 17.06.2021 ("the Impugned Circular"). SPV has challenged the Impugned Circular issued by ministry of finance vide which it was clarified that construction of road services falling under heading 9954 is not covered by entry 23-A and thus is not exempted. The SPV has taken grounds that the exemption under entry 23-A is still applicable as annuities are to be paid in lieu of toll collection and therefore the demand for GST on future annuities is illegal. The Court vide order dated 25.07.2022 directed for stay of all further proceedings pursuant to the impugned DRC-07 notices for the years 2018-19, 2019-20 & 2020-21.

MSHPL	Criminal	In discharge of its financial liabilities, MSHPL had initiated an electronic funds transfer on 02.05.2022 in favor of one M/s Vishwayog Buildcon for an amount of Rs.12,18,544/- on its bank account bearing number 5870011000002731, maintained in the Solapur Janata Sahakari Bank Limited. However, due to wrong entry of the bank account number, the funds were inadvertently credited to the account of M/s Rajdeep Enterprises (Proprietorship of Rohit Sharma) bearing bank account number 5870011000002730 resulting in wrongful credit of Rs. 12,18,544/- to M/s Rajdeep Enterprises account vide UTR Ref-PUNBH22122048515. The Company, upon noticing the aforesaid oversight, contacted M/s Rajdeep Enterprises and requested for the reversal of the aforesaid amount wrongfully credited to him. While M/s Rajdeep Enterprises returned the amount of Rs. 9,00,000/- during the months of July to December 2022, balance amount of Rs. 3,18,544/- remained outstanding to the Company. Further, a post-dated cheque bearing number 364529 dated 25.03.2023 for the payment of remaining amount of Rs. 3,18,544/- was issued by M/s Rajdeep Enterprises in favour of the Company. However, the same was dishonoured on presentation due to insufficiency of funds. As M/s Rajdeep Enterprises has failed to pay the Outstanding Amount within the prescribed time, the Company has initiated legal proceedings against Mr. Rohit Sharma (Proprietor of M/s Rajdeep Enterprises) under Section 138 of the Negotiable Instruments Act, 1881.
BWHPL, MSHPL and MHPL	Civil	The 3 SPVs i.e. BWHPL, MSHPL, and MHPL and CH III have raised various claims against Dilip Buildcon Limited (The Erstwhile Sellers of the SPVs) originating from the Share Purchase Agreements (“SPA”) and EPC Agreements executed between the SPV and DBL before the Singapore International Arbitration Centre (SIAC). The following Claims are claimed :- 1.BWHPL – INR 26.49 Crores 2. MHPL – INR 192.63 Crores 3. MSHPL – INR 65.33 Crores 4. CH III - 32.9 Crores. DBL has filed counterclaims against the SPVs as under:- i. Payment due from MHPL: INR 8,02,52,000 and compensation for loss of purchase valuation ii. Payment due from MSHPL: INR 11,88,70,000 and compensation for loss of purchase valuation iii. Compensation from BWHPL for loss of purchase valuation

MHPL	Criminal	Mr. Rajinder Bhati (Cube Highways) has received a notice from Madnoor Police station based on an FIR filed by Mr. Ismail Shaik. He has alleged death of his father due to the High Mud Mounds kept near the vicinity of NH-161 to be attributable to NHAI officials. It is alleged that his father had went on the mud mount to collect some beer bottles but due to the height of mud mount running closer to electricity lines, he caught electric shock leading to his death. He has alleged negligence on part of Road maintaining authorities in non-removal of such mud mounds by maintenance authorities.
MHPL	Civil	There are 2 issues for which the SPV is contesting against NHAI in arbitration: - 1. NHAI Project Director recommendation dated 28.12.2023 to the Regional Officer of NHAI to recover alleged excess monies paid under the Milestone Payments (during construction phase) to the Petitioner to the tune of INR 27,92,30,507/- (Rupees Twenty Seven Crore Ninety Two Lakh Thirty Thousand Five Hundred and Seven only) from the crystalized Annuity and Operations & Maintenance payment of MHPL on account of alleged wrongful adoption of CPI. 2. NHAI proposed recovery for alleged damages to the tune of Rs. 134.784 Crores imposed on MHPL for not carrying out repair and rectification works. Further NHAI in their Counter Claims have raised a claim against the SPV amounting to INR 524 Crores alleging delay in rectification works. In this 524 Crore Rs Counter Claim, NHAI has claimed Rs 376 Crores alleging improper functioning of TMS works, Rs. 5.32 Lacs for non-completion of punch list items, Rs. 123 Crores towards remaining from the 134 Crore penalty already imposed, along with interest amounting to INR 25 Crores
HTPL	Civil	The complainant Mr. Ram Nath has filed the case because he was charged double the amount of toll tax and alleged that the toll plaza employee misbehaved with him. A show cause was issued to the toll plaza and its employee which was duly responded. It is HTPL's position that the complainant did not have a valid fastag and therefore he was charged double the amount which he refused to pay and started arguing. Mr. Ram Nath has claimed an amount of Rs. 5,00,000

GAEPL	Writ Petition	On 15-02-2016, the Collector, Aligarh issued a show cause notice under Sections 33/47 A of the Indian Stamp Act, 1899 (Stamp Act) to GAEPL stating that the Deputy Commissioner Stamps, Aligarh Division, Aligarh has been informed that the National Highways Authority of India has given the right to collect toll tax for 24 years to GAEPL in consideration of Rs.1.00 per annum and Rs.57.5 Crores security (5% of prima facie total cost of the project Rs.1,114 Crores). Thus, the Concession Agreement so executed in this regard is in nature of a lease deed as defined under Section 2(16)(c) of the Stamp Act. The show cause notice further stated that in addition to Rs.1.00 annual rent, GAEPL has also paid premium, thus the instrument will be covered by Article 35 of Schedule I B of the Stamp Act and stamp duty amounting to Rs 45,63,99,940/- is payable by GAEPL on the Concession Agreement. According, GAEPL was asked to show cause as to why an amount of Rs.45,63,99,940/- towards stamp duty deficiency and penalty thereon shall not be recovered from GAEPL. That on 25-02-2020, the Collector, Aligarh passed an ex parte order of recovery of Rs. 45,63,99,940 from GAEPL towards payment of stamp duty on the Concession Agreement along with simple interest at the rate of 1.5% per month. GAEPL got this ex parte order recalled and filed its detailed objections. However, the Collector Aligarh passed an order dated 13.10.2020 (reaffirming the ex parte order) holding that the Concession Agreement is a Lease Deed under Section 2 (16) (c) of the Stamp Act and is chargeable with stamp duty under Article 35 (c) (1) of Schedule 1B appended to the Stamp Act with an amount equivalent to Rs.45,64,00,040/-. The Collector, Aligarh further imposed a penalty of Rs.45,63,994/- on the petitioner and ordered the amount to be recovered along with simple interest at the rate of 1.5% per month. The amount of stamp duty has been calculated taking 20 times of the performance security of Rs.57.05 crores i.e. Rs.1141 crores to be the premium amount and Rs.1.00 per annum to be the rent. GAEPL challenged the order of the Collector, Aligarh dated 13.10.2020 before the Hon'ble High Court of Allahabad and the Hon'ble High Court of Allahabad vide its order dated 18.12.2020 stayed any coercive action against GAEPL during the pendency of the case.
GAEPL	Writ Petition	The main allegation of the Petitioner is that the base of the Drainage/Nalah at NH-91 (which is under the purview of NHAI) near Gata No. 343 and 433 Chanderu Village (Sikandrabad), Bulandshahr is very high as compared to the pond. Resultantly due to high base of the Nalah, water from the pond does not drain and overflow from the pond resulting issues like (i) damage to the crops of the Petitioner (ii) risk of disease to nearby schools, (iii) causing flood like situation etc. GAEPL is not a party to the writ petition. However, remedy of lowering down the base of the Nalah has been sought from NHAI.

JLTPL	Civil	Amit Yadav an ex-employee of Aegis Ltd. was terminated on 16.08.2023 by Aegis (the previous contractor at JLTPL site). Mr. Amit is now seeking reinstatement of services from SKM (the current contractor) and JLTPL. He also demands for salary from the date of his termination i.e. 16.08.2023
JVTPL	Civil	A Notice dated 21.02.2024 (Impugned Notice) was issued by the Assistant Inspector General (Registration), Lalitpur, Uttar Pradesh issued under Section 47A of the Indian Stamps Act, 1899 and Section 7(3) of the UP Stamp (Valuation of Property) Rules, 1997. Vide the said notice, the Authority asked JVTPL to provide the original copy of the Concession Agreement executed between JVTPL and the National Highways Authority of India (NHAI) dated 27.12.2019 for assessing the stamp duty payable. Apprehending levy of stamp duty, the SPV had refused to provide such signed copy and challenged the notice dated 21.02.2024 before the High Court of Allahabad. The High Court vide order dated 15.03.2024 has granted stay in favour of JVTPL restricting the Authority from taking any coercive actions against the SPV.
SIPL	Criminal	A complaint has been received from Smt. Benittameri, who was employed as a Paramedic with the concessionaire for the SIPL project, alleging sexual harassment by the Manager Ramesh Vadivel.
JLTPL	Civil	The user was traveling without FASTag and initially claimed exemption by showing an ID card as a Forest Department official. Our Toll Collector denied the exemption since the official was traveling in a personal vehicle. The user refused to pay double charges. The Toll Collector informed that if payment was made via UPI, only 1.25 times the toll would apply. The user made an incorrect UPI payment of ₹90 instead of ₹112.50. The Toll Collector requested a second transaction and assured the first would be refunded. The user demanded an immediate refund. To avoid delay, the Plaza Supervisor refunded ₹90 from his personal UPI account. Due to the initial stage of static/dynamic UPI implementation, the slip for ₹112.50 was not generated through TMS. On user's demand, the Plaza Supervisor generated a slip of ₹180 (including double charges) and handed it over. The user now claims three payments: two UPI transactions (₹90 and ₹112.50) and one cash payment (₹180)

AJUHPL	Civil	The industrial dispute has been referred to the Tribunal-cum-Labour Court under Section 10(2A) of the ID Act, 1947. Summons issued for appearance on 24.11.2025 at 10:30 A.M. with relevant documents, failing which the matter may proceed ex parte. Multiple plaintiffs in this Case- 1. Rajinder Kumar 2. Sikander Singh 3. Bharat Bhushan 4. Radhey Sham 5. Ajay Kumar 6. Kuldeep Kumar 7. Bhishav Kumar 8. Amarjeet Singh 9. Neeraj Sharma 10. Vinod Kumar 11. Rakesh Kumar 12. Avneet Singh 13. Lakhan Mashi 14. Balvinder Kumar 15. Sunil Sharma 16. Vivek Kumar 17. Babu Singh 18. Kalyan Singh 19. Rakesh Verma 20. Bansi Lal 21. Raspal Singh 22. Satish Kumar 23. Shamsher Singh 24. Kuldeep Singh 25. Jagdev Singh 26. Shadi Lal 27. Sanjeev Kumar 28. Kamal Dev 29. Balbinder Singh 30. Mangal Singh 31. Sunil Kumar 32. Sh. Rakesh Singh 33. Sh. Sunil Kumar 34. Sh. Rohit Dutt

Note- The Management do not expect any liabilities to arise out of these litigations, and hence we have not factored any impact of these in our valuation.

Shape the future with confidence

16. Ongoing Litigations for Direct Tax

1 INTRODUCTION

1.1 Background

Cube Highways Fund Advisors Pvt. Ltd. (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InvIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an Infrastructure Investment Trust under the SEBI InVIT Regulations. Cube Highways Fund Advisors Pvt. Ltd. has appointed **M/s. FP Project Management Consultancy Services Private Limited** (hereinafter referred as "Technical Consultant" or "FPPM") to carry out Technical Due Diligence of National Highway No. 166 including the section from Borgaon to Watambare (km. 224+000 to km. 276+000) on Hybrid Annuity Mode in the State of Maharashtra (approx. 52.000 kms) (hereinafter referred as "Project Road").

M/s. DBL Borgaon Watambare Highway Private Limited (DBWHPL) (hereinafter referred as "Concessionaire") is a special purpose vehicle (SPV) for development, maintenance and management of National Highway No. 166 including the section from Borgaon to Watambare (Sangli Solapur Pkg-II) on Hybrid Annuity Mode.

The Date of Concession Agreement is 10th May 2018. The concession period of the project is 17 years commencing from the Appointed Date including implementation period. The Appointed Date of the project is 22nd April 2019. The Provisional Completion Certificate was issued on 24th September 2021 for the length of 50.146 kms out of the project length of 52.000 kms. The project has also received Final Completion Certificate for the length of 51.802 km with effective from 01st March 2023.

Sr. No.	Description	Date
1	Date of Signing the Concession Agreement	10th May 2018
2	Appointed Date	22nd April 2019
3	Scheduled Project Completion Date	21st April 2021
4	Revised Scheduled Project Completion Date	19th October 2021
5	Scheduled End of Concession	17th April 2036
6	Date of issue of Provisional Completion Certificate	24th September 2021
7	Date of Commencement of Commercial Operation	24th September 2021
8	Date of Issue of Completion Certificate	1st March 2023

Presently, the project is under operation and maintenance and the Technical Consultant has undertaken the work of assessment of operation and maintenance (O&M) cost based on site inspections and field investigations. The same is presented in this report.

1.2 Scope of Work

The detailed scope of work for conducting the technical due diligence of Project Road is presented as below:

- A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets.
- Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, As-built drawings, O&M manual, COD / PCOD certificate, punch list, previous major maintenance etc.
- Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, axle load, material investigations etc.
- Formulation of future major maintenance strategy

- Estimation of any initial expenses to be incurred due to deficiencies observed in diligence.
- Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period
- Estimation of Annual Operation expenses along with Systems cost (TMS / HTMS) till the end of concession period.

1.3 Our Approach Philosophy

1.3.1 Composition of Team

Our team consists of well-qualified Engineers and other professionals, whose experience covers all the skills and specializations required for undertaking such assignments. All the team personnel proposed are our regular employees and have a long and stable working relationship with our firm.

The Team Leader coordinates the activities between all the key staff who work closely together. The key staff is assisted by various support staff, who report to the respective key staff in their field of expertise. The Team Leader is the point of contact for Client on Technical Study.

The technical study includes review of all the available documents namely:

a) Concession Agreement including Technical Schedules
b) O&M Contract, work order and their provisions
c) Quality of construction based on available data, design and drawings.
d) Documents on historical expenditure on operation and maintenance
e) O&M cost schedule for the concession period
f) Review of Completion / Provisional Completion along with punch list items
g) Review of recent pavement surveys conducted.
h) Correspondence regarding scope of works and during O&M
i) Recent O&M Report submitted to Authority.
j) Toll operation manual / ATMS related documents

The review of above documents is the first step towards accomplishment of the task. This gives a complete idea of the project and is used as input data for preparation of report after necessary analysis.

1.3.2 Site Visit and Data Collection

A team of experts from various streams has carried out the preliminary site visit to understand the assessment of project assets, mainly condition of the pavement and structures.

- The site visit is undertaken for detailed reconnaissance and visual pavement condition assessment.
- The condition assessment of major structures by visual inspection
- The information like material sources and the probable cost is collected for the purpose of cost estimates.

The detailed design / drawings viz. Plan & L-sections, drainage design, structure design, layout drawings for project facilities like toll plaza, bus bay, truck lay-byes, highway lighting facilities etc. are studied. Also, design / drawing and provision pertaining to road furniture are studied.

The information on availability of material in the vicinity is gathered. It has direct impact on cost of maintenance work and balance work.

The basic approach for preparation of cost estimates for operation and maintenance is as per the practice of State PWD / MORT&H in respect of highways and structures.

1.3.3 Data Analysis

Based on the study of the available information and preliminary site visits, the consultants share their preliminary observations with the Client based on the evaluation of the technical data and reports provided by the Client.

1.4 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Client. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyses the same as per the best engineering / industry practices.

The site visit and inspection of the project site was carried out during the period from **9th March 2026 to 10th March 2026**.

The report is organized with the following chapters for easy understanding of various issues.

Chapter 1 **Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for technical due diligence study**.**

Chapter 2 **Project Description:** The chapter describes existing project features, overview of project development etc.

Chapter 3 **Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on the site visit**.**

Chapter 4 **Pavement Investigation and Assessment:** This chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance

Chapter 5 **Cost Estimates:** This chapter summarizes the forecast for O&M and major maintenance costs over the remaining concession period

2 PROJECT DESCRIPTION

2.1 Introduction

National Highways Authority of India signed the Concession Agreement with **M/s. DBL Borgaon to Watambare Highway Private Limited (DBWHPL),** is a company promoted by Cube Highways or company a Special Purpose Vehicle (SPV) formed for implementing this project on 22nd April 2019.

2.2 Location

The Site of the Four-Lane divided Project Road comprises the section of National Highway 166 commencing from Design km. 224+000 at Borgaon to Design km. 276+000 (Approx length is 52.00 kms) at Watambare in the State of Maharashtra.

The Location Map of the Project Road is presented below:

Figure 2-1 Location Map

The photographs taken during the site visit are presented below.

Figure 2-2 Start of the Project Road

Start of Project at km. 224+000 (RHS)

Start of Project at km. 224+000 (LHS)

Figure 2-3 End of Project Road

End of Project at km. 276+000 (RHS)

End of Project at km. 276+000 (LHS)

2.3 Climate

The project location has three distinct seasons. Summer takes place from the middle of February to the middle of June, characterised by largely dry conditions towards the start, with rainfall tending to increase as the season progresses. Temperatures in summer are largely characterised by hot days and mild nights. Monsoon takes place from the middle of June to late October. Rainfall is most common in this season than at any other time of year. Temperatures in the monsoon season are characterised by warm, humid days and mild, humid nights. Winter takes place from early November to early February. This season is largely dry, with rain mostly concentrated in November. Temperatures in winter are characterised by warm days and cool nights. The total rainfall is around 22 inches (580 mm).

2.4 Terrain

The Project Road traverses through plain / rolling terrain.

2.5 Abutting Land Use

The Project Road passes through residential and agricultural zones.

2.6 Right of Way

Right of Way is 60 m for the entire length except for Wayside Amenities and Toll Plaza.

2.7 Existing Utilities

During widening of the Project Road, various affected utility services located along the Project Road were shifted out / at the edge of the ROW. The different types of utilities found along the road includes electrical poles, telephone poles, hand pumps, permanent structures, temples etc.

2.8 Service Road

The total length of service road on both sides is 12.908 kms.

2.9 Development as per Schedule-B

The Project Road from Design km. 224.00 at Borgaon to Design km. 276.000 at Watambare (Approx Length is 52.000 kms) has been developed as a four-lane paved carriageway 18.0m wide excluding median. The Project Road passes through rural as well as built-up sections.

As per Article 2 of Concession Agreement, the scope of project defined in Schedule-A and Schedule-B, (the **"Scope of the Project"**) shall mean and include, during the Concession Period:

a) Construction of the project on the Site set forth in Schedule-A and as specified in Schedule-B together with provision of project facilities as specified in Schedule-C and in conformity with the Specification and Standards set forth in Schedule-D.
b) Operation and maintenance of the Project in accordance with the provisions of this Agreement.
c) performance and fulfilment of all other obligations of the Concessionaire in accordance with the provisions of the Concession Agreement and matters incidental thereto or necessary for the performance of any or all the obligations of the Concessionaire under the Concession Agreement.

Following is the Scope of Work as per Schedule-B of Concession Agreement.

Table 2-1 Details of Scope of Work

Sr. No.	Particulars	Unit	Scope as per Schedule-B	Constructed as per site
1	O&M of Main Carriageway	km	52.000	51.802*
2	Rail Over Bridge (ROB)	Nos.	00	00
3	Major Bridge	Nos.	04	04
4	Minor Bridge	Nos.	14	14
5	Vehicular Underpass	Nos.	04	04
6	Light Vehicular Underpass	Nos.	16+1 (COS)	17
7	Box Culverts	Nos.	14	14
8	Hume Pipe Culverts	Nos.	115	115

**Project has received Completion Certificate for the length of 51.802 km.*

3 CONDITION ASSESSMENT OF PROJECT ROAD

3.1 Pavement

The paved carriageway is 18.0 m wide excluding the median. The project is widened to a four lane-carriageway with a width of 18.0 m as per standard cross section including paved shoulders. Service / Slip Road of 7.5 m width has been provided on one side or both sides wherever required in built up area to cater for the local traffic.

The entire stretch of Project Road, Service / Slip Road & Toll Plaza are constructed with rigid pavement. Rigid pavements for Main Carriage way and Service / Slip Roads are designed for a design life of 30 years.

3.1.1 Pavement Condition Survey

A pavement condition survey was carried out from **9th March 2026 to 10th March 2026** through visual inspection for the entire project length. From the visual inspection, the pavement condition of the project road is found to be Good. The total project length of 51.802 kms. is in good condition. During site visits at some location cracks are observed on the pavement, however rectification work is in progress at such locations of the Project Road.

Some of the photographs taken during the site visit are presented as below.

Figure 3-1 Photographs of Pavement Condition (Main Carriageway)

Pavement Condition at km. 275+090 (LHS)

Pavement Condition at km. 272+500 (RHS)

Pavement Condition at km. 269+000 (LHS)

Pavement Condition at km. 257+600 (RHS)

Pavement condition at km. 256+710 (RHS)

Pavement Condition at km. 257+700 (LHS)

Pavement Condition at km. 253+990 (RHS)

Pavement Condition at km. 252+700 (LHS)

3.2 Service Road / Slip Road

The service / slip road of width 7.5 m is constructed in built-up areas and adjoining underpass locations. The Project Road has total service / slip road length of 12.908 kms. At some locations, service / slip road construction work is balanced and at some place concrete panels are damaged and need to be repaired or replaced.

The photographs taken during the site visit are presented below.

Figure 3-2 Photographs of Service Road

Pavement Condition at km. 274+200 (RHS)

Pavement Condition at km. 270+900 (LHS)

Pavement Condition km. 267+400 (RHS)

Pavement Condition at km. 262+100

Pavement Condition at km. 258+300 (RHS)

Pavement Condition at km. 254+900 (RHS)

3.3 Major / Minor Intersection

There are 01 No. of Major junctions and 49 Nos. of Minor junctions along Project Road.

The photographs taken during site visit are presented as below.

Figure 3-3 Photographs of Major Junction

Major Junction at km. 245+926

Junction at km. 254+210 LHS

Junction at km. 249+300 RHS

3.4 Inventory and Condition Survey of Structures and Bridges

The inventory of structures including major bridges, minor bridges, underpasses and culverts is presented in table as below:

Table 3-1 Details of Summary for Structures

Sr. No.	Particulars	Unit	Total Number of Structures As per Concession Agreement	Total Number of Structures as per site
1	Rail Over Bridge (ROB)	Nos.	00	00
2	Major Bridge	Nos.	04	04
3	Minor Bridge	Nos.	14	14
4	Vehicular Underpass	Nos.	04	04
5	Light Vehicular Underpass	Nos.	16 + 1 (COS)	17
6	Box Culverts	Nos.	14	14
7	Hume Pipe Culverts	Nos.	115	115

All major structures and CD works were visually inspected. The structures are generally sufficient for storm water drainage. The waterway needs regular cleaning. All the old bridges are 2-lane and widened to 2 additional lanes. The type of foundation for these structures is open foundation. In case of some bridges, settlement in approaches and cracks in the pavement has been observed. New bridges are constructed in 2-lane with footpath keeping a provision of converting into 3-lane in future. The wearing course and expansion joints are found okay. The crash barriers are RCC type and are in sound condition. Return wall are RCC type and pitching has been provided in almost all bridges. RE walls are provided for the approaches of the structures.

The detailed condition survey of major bridges, minor bridges, flyovers and culverts was carried out by visual inspection. The observations and findings are presented below.

3.4.1 Cross Drainage Structures (Culverts)

Box culverts are visually inspected. The quality of concrete of abutment, slab and wing wall / return wall, parapet wall is satisfactory. Minor settlement on approach is observed in few culverts. The slope protection was done at major locations. The slopes are stable. Generally, all the box culverts are found in sound condition. The waterway needs to be

cleaned on both sides of the culverts. The structure number is painted on the parapet wall or crash barrier in most of the culverts. The waterway is clear in most of the culverts and needs to be cleared for a few culverts, particularly in urban areas.

Pipe culverts are visually inspected. The pipe culverts are either newly constructed or reconstructed. Some of the pipe culverts are retained and widened. The widening is either concentric or eccentric. In most of the culverts, the ends are blocked by debris, garbage or vegetation especially in urban areas or buried under the ground. These require regular cleaning of the waterway to avoid damage to the pavement.

The following photographs were taken during the inspection of culverts.

Figure 3-5 Photographs of Culverts

Box culvert at km. 266+530 (RHS)

Pipe culvert at km. 273+090 (RHS)

Box culvert at km. 264+350

3.4.3 Major Bridge (length > 60 m)

There are 04 Nos. of Major Bridges on Project Road. All the Major Bridges are visually inspected. The structures are generally sufficient for the crossing of river water. The waterway needs regular cleaning. The sub-structures are constructed with RCC piers. Expansion joints on both the bridges need to be cleaned. Minor settlement in approaches and damage on pavement has been observed. New bridges are constructed in 2-lane with footpath. The wearing course and expansion joints are found to be in good condition. W-beam and RCC type crash barriers are in sound condition. Drainage spouts and expansion joints need to be cleaned regularly. Further, vegetation and silt need to be removed from the waterway for smooth flow of water.

Table 3-3 Details of Major Bridges

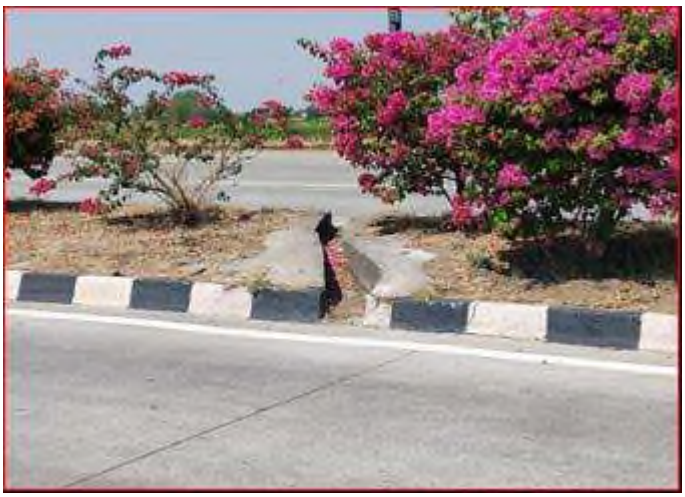
3.5 Drainage

Drains are to be constructed at the Project Road to have good drainage. Covered Lined drains are provided at sides of the service. Median cut drains are provided at superelevation locations. The drainage condition of Project Road is in order. Silt deposits need to be removed during routine maintenance. Earther drains are also provided in rural areas. The condition of the same is good to fair.

Figure 3-10 Photographs of Drainage

RCC Covered Drain at Service Road km. 273+980 (RHS) & 267+400 (RHS)



Median Drain at km.269+010

Chute Drain at km.265+050 (RHS)

3.6 Slope Protection

Slope protection is found on Project Road at some locations. Some of the photographs of slope protection work are presented below.

Figure 3-11 Photographs of Slope Protection

Slope Protection at km.265+050 (RHS)

Slope Protection at km.264+830 (RHS)

Slope Protection at km246+850.

3.7 Road Furniture

3.7.1 Pavement Marking

Pavement marking for the Project Road is done as per the design standard. Pavement marking is faded at some locations which need to be repainted by the Concessionaire. Some of the photographs of road marking are presented below.

Figure 3-12 Photographs of Road Marking

Pavement marking at km. 264+800 RHS

Pavement marking at km. 260+250 RHS

Pavement Marking at km. 258+500

Pavement Marking at km.253+200 RHS

3.7.2 Traffic Signage

Traffic signs include roadside signs, overhead signs, kerb mounted signs and median signs along the Project Road. The design for the traffic signs along the Project Road is done as per the design standards.

Figure 3-13 Photographs of Traffic Signage

Informatory Sign Board at km.265+050 (RHS)

Pedestrian crossing Ahead Sign Board at km. 264+640 (RHS)

3.7.3 Highway Lighting

Highway Lighting is provided in urban and semi-urban areas of the Project Road. Lighting is provided at the locations of truck lay-bye, rest areas, toll plazas, underpasses, service road stretches and at intersections / interchanges. IS:1944 (Part I and II) is followed for lighting installations. High mast lighting systems are provided at toll plaza.

Figure 3-14 Photographs of Highway Lighting

Highway Lighting at km.264+350

High Mast at Toll Plaza

Highway Lighting at km.257+600

Highway Lighting at km. 255+400 RHS

3.7.4 Road Studs / Cat's Eye

The Concessionaire has provided cat's eye / studs as per Schedule-D on the curves, road junctions, zebra crossings, in municipal area and village settlement and ramps etc. to provide the proper visibility to the road users.

Figure 3-15 Photographs of Road studs / Cat Eyes

Road Studs on Junction at km.270+950 (LHS)

Road Studs on MCW at km.256+710 LHS

3.7.5 Avenue Plantation and Median Plantation

Avenue plantations and median plantations are done along the project length as per IRC specification except at built-up locations. Median plantation too needs proper regular maintenance. Avenue plantation work is in progress at required location as per CA.

Figure 3-16 Photographs of Avenue and Median Plantation

Avenue Plantation at km.266+000 (RHS)

Median Plantation at km.272+500

3.7.6 Traffic Signage / Median kerb painting / KM Stone

Traffic signs include roadside signs, overhead signs, kerb mounted signs and median signs along the Project Road. The design for the traffic signs along the Project Road is done as per the design standards indicated in section 11 of Schedule-D.

The height, lateral clearance, location and installation are as per relevant clauses of Schedule 'D'. Overhead sign has been installed ahead of major intersections, toll plazas, start / end of Project Road and urban areas as per detailed design requirements.

Median kerb paint is faded at few locations which will be rectified by the Concessionaire.

Some of the photographs of sign boards are presented below.

Figure 3-17 Photographs of Road Signages

Solar blinker at Median opening at km.260+100

Junction ahead sign board at km. 256+710 (LHS)

Kilometre stone at km. 269+000 (LHS)

VMS at km. 269+000 (Median)

Overhead gantry at km. 254+400 LHS

Road Boundary Stone (RBS) on Project Road km.273+090 RHS

3.7.7 Crash Barriers

Metal beam crash barriers are provided at bridge approaches, locations of high embankment and at sharp curves. All the crash barriers provided by the Concessionaire are maintained at site.

Some of the photographs of metal beam crash barriers are presented below.

Figure 3-18 Photographs of MBCB / Crash Barrier

MBCB on Project Road at km.265+050 (RHS)

RCC Crash Barrier at km. 237+300 RHS structure locations

3.7.8 Delineators

The traffic delineators are provided by the Concessionaire on the Project Road for road users. The same are maintained by the Concessionaire.

Some of the photographs of delineators are presented below.

Figure 3-19 Photographs of Delineator

Delineators along the Project Road

3.8 Toll Plaza

As per the Concession Agreement, there is one toll plaza on the Project Road at km.274+800. Details of the Toll Plaza are as follows.

Table 3-6 Details of Summary for Toll Plaza Items

Sr. No.	Particulars	Details		Remarks
		LHS	RHS	
1	Number of Tolling Lanes	8	8	
2	Weigh in Motion Facility (Number of Lanes)	8	8	
3	No. of ETC lanes	8	8	
4	No of Toll booths	15		
5	Canopy	Present		
6	Administrative building	Present		
7	Parking cum Toilet box	Present		
8	Availability of Tunnel or Elevated walkaway for movement between Toll lanes and administrative building	Tunnel / Yes		
9	Availability of static weigh bridge	No		Descoped
10	Availability of Loading/Unloading Facility for Overloading vehicles	No		
11	Storage facility for Overloaded material	No		
12	High mast light	Yes		
13	Streetlight	Yes		
14	Low mast light	No		
15	User fee boards	Yes		
16	Cantilever/Gantry boards	Yes		
17	Automatic boom barrier	Yes

Cube Office and Ambulance on Project Road at km.257+050

3.9 Bus Bays and Passenger Shelters

There are 38 Nos. of bus bays / passenger shelters along the Project Road. Some of the photographs of the bus bays are presented below.

Figure 3-21 Photographs of Bus Bays / Passenger Shelter

Bus shelter at km. 267+740 (RHS)

Bus shelter at km. 257+900 (RHS)

3.10 Truck Lay Bye

There are 02 Nos. of Truck Lay Bye along the Project Road. Some of the photographs of the Truck Lay Bye are presented below.

Figure 3-22 Photographs of Truck lay bye

Truck Lay Bye and Toilet Block at km. 273+025

3.11 Advanced Traffic Management System (ATMS)

Advanced Traffic Management System (ATMS) installed for the Project Road is controlled by the ATMS centre at toll plaza location (km. 274+800). The ATMS is provided and being maintained as per the requirement of the Concession Agreement. The ATMS provided are listed below.

- Automatic Traffic Counter cum Classifier (ATCC)
- Emergency Call Box
- Variable message Signs System (Fixed/Portable)
- Mobile communication System
- Mobile Radio Communication System
- Integrated ATMS Software and System Architecture

- ATMS Control Center integrated with above sub-components
- Weigh-in-motion (Portable)
- Vehicle actuated speed detection camera.

Status of these systems at site are described below:

3.11.1 Automatic Traffic Counter cum classifier (ATCC)

Automatic Traffic Counter cum Classifiers (ATCC) is installed at Toll Plaza (km. 278+800).

Figure 3-23 Photographs of ATCC

At Toll Plaza

3.11.2 Emergency Call Boxes (ECB)

ECB is installed on the Project Road. Some of the photographs of the ECB are presented below.

Figure 3-24 Photographs of ECB

ECB at km. 272+400 (RHS)

ECB at km. 263+300

3.11.3 CCTV Surveillance Cameras

Surveillance cameras are installed as per CA requirement along the Project Road. The HTMS control room has video wall to monitor these locations through the cameras installed.

Figure 3-25 Photographs of CCTV Surveillance Camera

On Project Road at km.263+550

At Toll Plaza location

3.12 Video Incident Detection System

CCTV cameras are installed as part of Video incident detection system.

3.13 Balance Work Status

Concessionaire has received Completion Certificate for the length of 51.802 kms with effective from 01st March 2023. Hence, there is no balance work on Project Road.

3.14 Operation and Maintenances

3.14.1 O&M Contract

As per Clause 17.1 of the Concession Agreement, the Concessionaire shall operate and maintain the Project Road by itself, or through O&M Contractors and if required, modify, repair, improve the Project Road to comply with Specifications and Standards, and other requirements set forth in the Agreement through Good Industry Practice, Applicable Laws and Applicable Permits and manufacturer's guidelines and instructions with respect to toll systems. The Operation and Maintenance activities shall conform to all the requirements laid down in MoRT&H, IRC Specifications and the Concession Agreement.

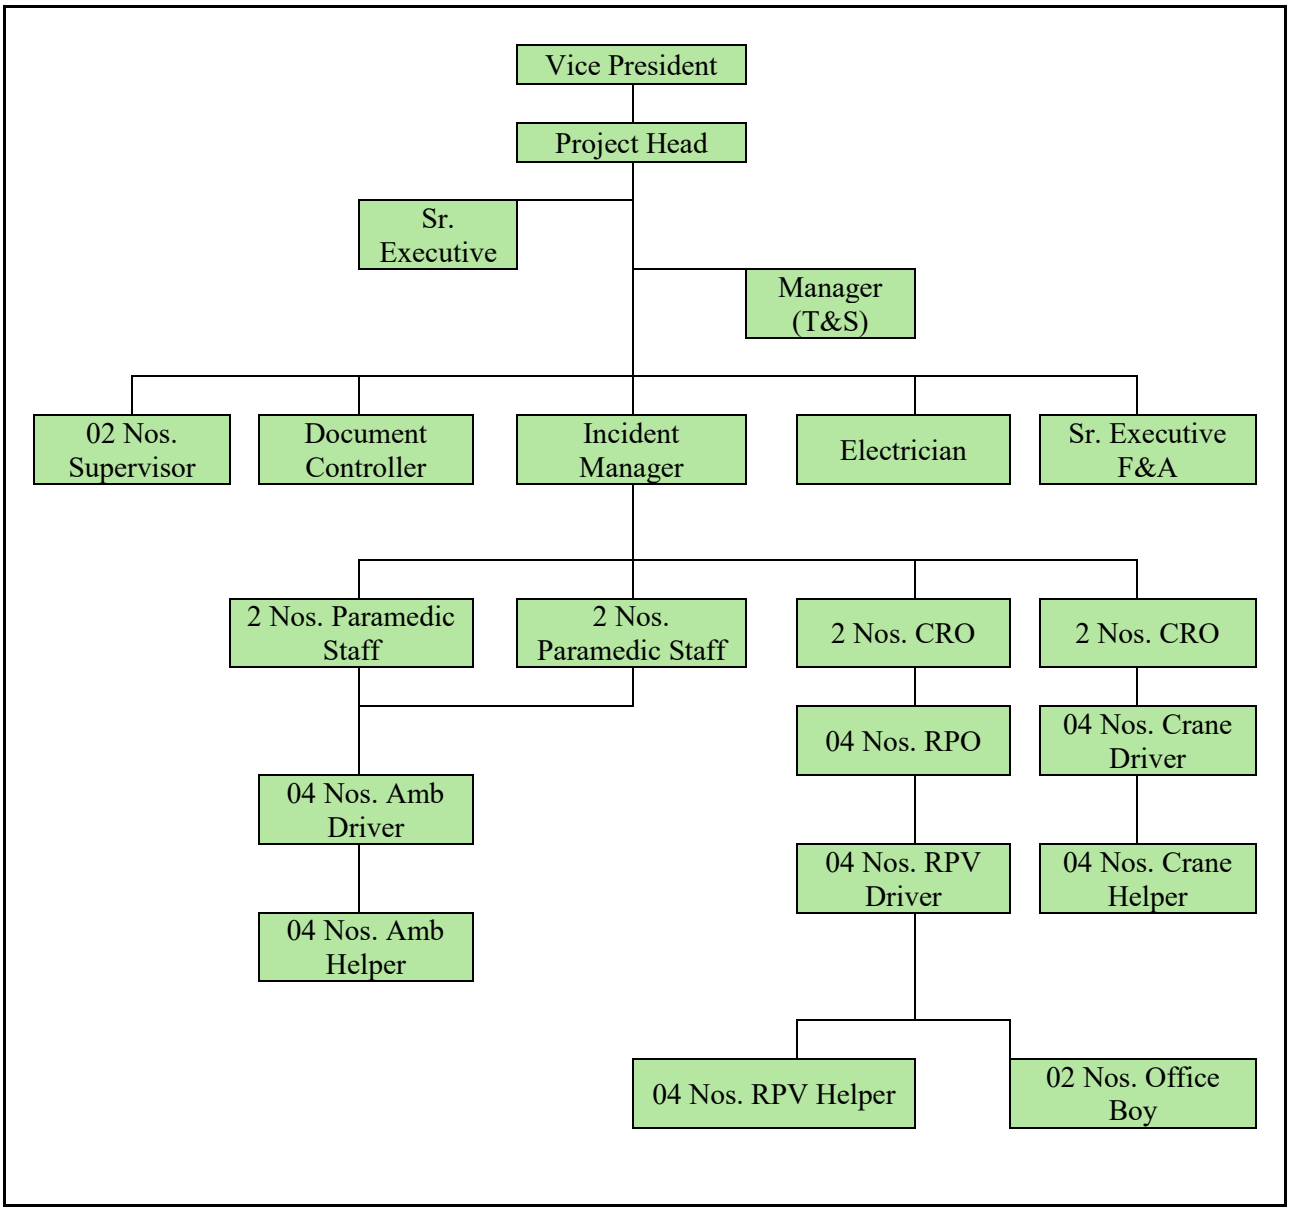
The Concessionaire has outsourced for carrying out activities related to operation and maintenance of the Project Road including security services, Incident management services.

3.14.2 Organization Chart

The Concessionaire has given the Organization Chart at site for Operation and maintenance. Accordingly, there is 01 Project Head, 01 Senior Executive- Maintenance, 02 Supervisor, 01 Electrician, 01 Incident Manager, 01 Document Controller to carry out

O&M activities. The team controls the maintenance activities. However, the maintenance work is undertaken and executed through competent subcontractors.

Organization Charts



3.14.3 Operation

Operation cost is comprised of manpower cost, Security cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses and other miscellaneous expenses. The Concessionaire has provided the expenses occurred towards operation expenses for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area.

The Operation Cost is presented in the subsequent chapter.

3.14.4 Routine Maintenance

The Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey.

Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Maintenance Cost is presented in the subsequent chapter.

4 PAVEMENT INVESTIGATION AND ASSESSMENT

4.1 General

Presently, the pavement of the Project Road is being maintained by the Concessionaire as per Scope of Work. The Concessionaire has received the Completion Certificate on 01st March 2023 for the length of 51.802 out of 52.000 kms.

The project is currently under the Operation and Maintenance stage. The concession period of the project is 17 years from the Appointed Date 22nd April 2019 including construction period of 2 years.

4.2 Surveys and Investigation

4.2.1 Pavement Condition Survey

Pavement condition survey was carried out by the Technical Consultant from **9th March 2026 to 10th March 2026** through visual inspection for the project road and for the entire project length.

The summary of pavement condition based on the visual inspection is tabulated below.

Table 4-1 Summary of Pavement Condition

Sr. No.	Chainage (km)		Length (km)	Visual Condition (As per IRC:115-2014)	
	From	To		Left Carriageway	Right Carriageway
1	224+000	276+000	52.000	Good	Good

Observation and Conclusion:

From the above table, it is observed that the overall pavement condition for the entire project stretch is found to be Good. The repair and rectification works are in progress wherever required on the Project Road.

4.2.2 Network Survey Vehicles (NSV) Survey

The Concessionaire has conducted pavement condition survey on each lane of each carriageway with NSV. The NSV survey was conducted on the project corridor on 16th December 2025.

4.2.3 Roughness Survey

Roughness Survey results were provided by the Concessionaire for analysis and to assess the riding quality on each direction (each lane) of the carriageway of Project Road.

The side-wise results of Roughness Survey are presented as below.

Table 4-2 Result of Roughness Survey as per CA

Table 1-3 Roughness summary for Rigid pavement as per Schedule

*Roughness Summary as per Schedule: NH-166: BWHPL: (1km Data)										
S.no	Condition	BI (mm/km)	LHS				RHS			
			Inner Lane		Outer Lane		Inner Lane		Outer Lane	
			Length (km)	Length (%)	Length (km)	Length (%)	Length (km)	Length (%)	Length (km)	Length (%)
1	Limiting value	<=2750	50.200	100.00	52.000	100.00	48.400	96.70	51.500	100.00
2		>2750	0.000	0.00	0.000	0.00	1.650	3.30	0.000	0.00
Total Surveyed length (km)			50.200	100.00	52.000	100.00	50.050	100.00	51.500	100.00

Sr. No.	Condition	BI (mm/Km)	LHS (Km)	LHS (Km)
1	Good & Fair	<=2750	51.100	50.000
2	Poor	>2750	0.000	1.000
		Total Length (Km)	**51.100**	**51.000**

Summary of Roughness on LHS

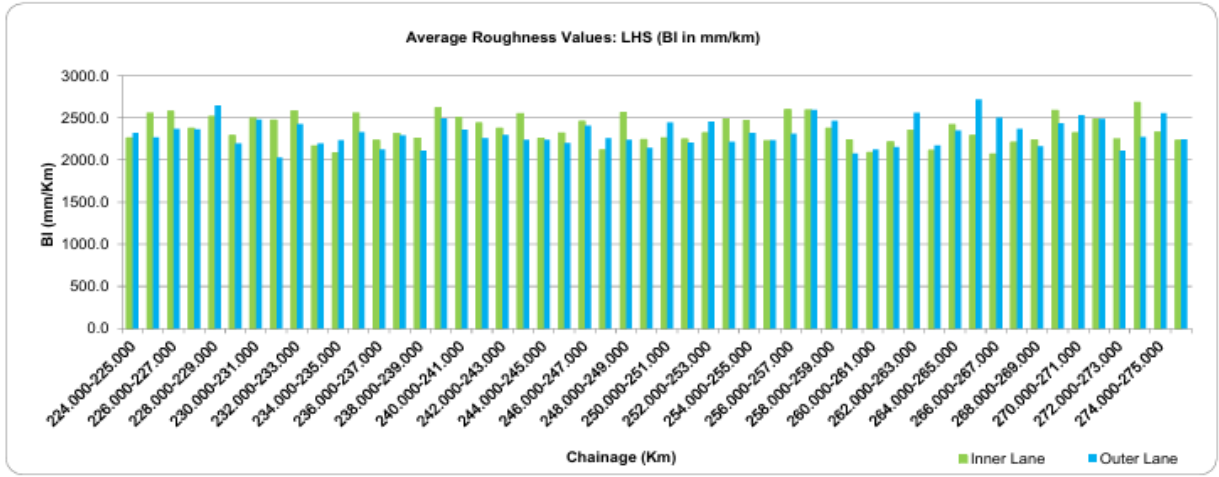


Figure 1-1 Illustrative summary of Roughness on LHS direction

Summary of Roughness on RHS

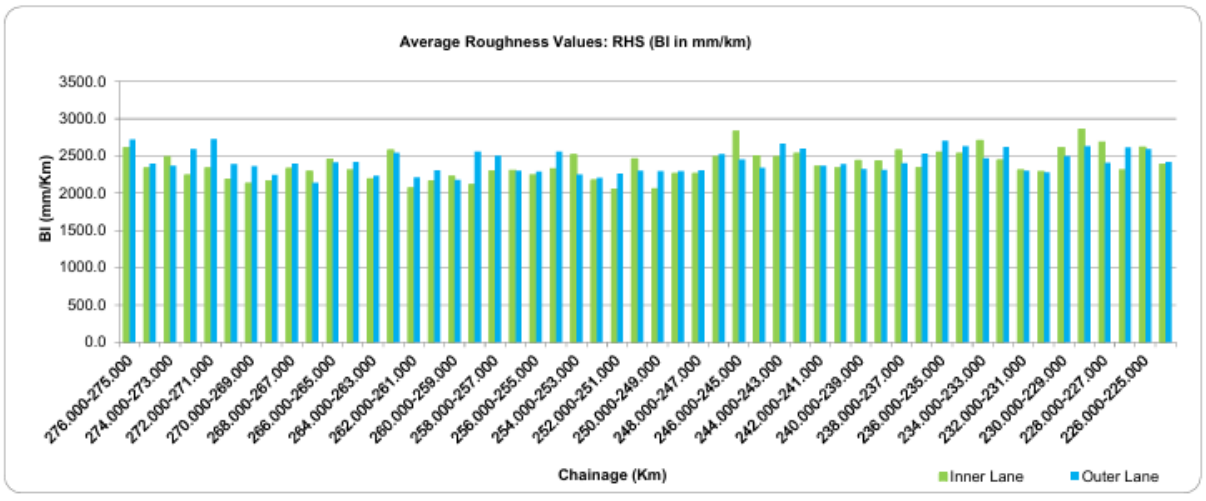

Figure 1-2 Illustrative summary of Roughness on RHS direction

Observation and Conclusion:

As per CA, the roughness value for the project pavement is 2750 mm/km, so that the overall pavement condition for the entire project stretch is found to be Good to Fair condition, except 1 km section of project Road where the Concessionaire has already started repair and rectification work of PQC panels. The cost of panel replacement is considered in routine maintenance cost.

4.2.4 Periodic Maintenance Strategy

As per Schedule-K of Concession Agreement, the riding quality of the pavement shall be ensured by satisfying the minimum requirements given herein under:

- Surface roughness of the Project Road on completion of construction shall not exceed 2750 mm/km as measured by a standard rough meter / bump integrator.

The table below shows the major / periodic maintenance cycle throughout the concession period for the Project Road.

Table 4-3 Major Maintenance Cycle

Sr. No.	Year	Main Carriageway	Service Road
1	FY 2023 to FY 2028	-	-
2	FY 2029	Major maintenance with Retexturing and Grinding with 40% + Replacement of PQC Panel 2%	Major maintenance with Retexturing and Grinding with 25% + Replacement of PQC Panel 1%
3	FY 2030 to FY 2035	-	-
4	FY 2036	Major maintenance with Retexturing and Grinding with 60% + Replacement of PQC Panel 2%	Major maintenance with Retexturing and Grinding with 25% + Replacement of PQC Panel 1%
5	FY 2037	-	-

The projected cost for periodic / major maintenance is presented in the subsequent chapter.

5 COST ESTIMATES

5.1 General

Based on the assessment carried out in previous chapters, various costs were worked out. The costs are divided into following categories.

I. Balance Work Cost (CAPEX)
II. Routine O&M Cost
III. Major Maintenance Cost
IV. Periodic Replacement of TMS / ATMS system

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and escalation.

5.2 Rate Assumption

Following assumptions are considered for unit rates of various items while estimating the cost:

Unit rates of different items (Concrete, PQC, DLC etc.) are calculated as per Govt. of Maharashtra P.W.D. SSR 2022-23. The input rates for SSR were adopted as below.

a. Manpower and Labour: As per applicable minimum wages published by State Schedule of Rates, Government of Maharashtra.

b. Sand and Aggregate: Market rates are considered from the quarry located nearest to the Project Road.

c. Cement: Rate of Cement is taken from MH SSR 2022-23.

d. Steel : Rate of steel is taken from MH SSR 2022-23.

e. Machinery Hire charges: Hire charges for the machinery are considered in accordance with applicable MH SSR 2022-23.

f. Rates of items as per Work Order: The rates of Milling, Road marking, road Stud etc. are considered as per the Work Order issued to Contractor at Site shared by the client.

g. Goods and Service Tax (GST) is considered as 18% as per the latest Government Guidelines**.**

Summary of Unit Rates worked out using Standard Data Book adopted for major items is given below.

Table 5-1 Summary of Unit Rates

Sr. No.	Description	Unit	Rates (Rs.)
1	Pavement Quality Concrete	Cum	7,381
2	Dry Lean Concrete	Cum	4,381
3	Retexturing and grinding	Sqm	120

Sr. No.	Description	Unit	Rates (Rs.)
4	Joint sealant	Sqm	86
5	Road Marking	Sqm	485
6	Road Studs	Nos.	193

5.3 Balance Work Cost (CAPEX)

As discussed in the previous chapter, there is no balance work on the Project Road.

5.4 Routine O&M Cost

Routine O&M cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have been made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area. Same has been divided into following major heads.

1. Salary and Welfare Expenses
2. Toll Security Services
3. Incident Management Services
4. Electricity
5. HTMS Expenses
6. Office Operating Expenses
7. Vehicle Running Expenses
8. Professional Fees Expense
9. Community Development
10. Communication Expenses
11. Conveyance Expenses
12. Insurance Expense
13. IE Fees
14. Horticulture & ROW Maintenance
15. Routine Maintenance Cost

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Operation Cost is presented as below. The detailed working of routine maintenance (Sr. No. 15 of below table) is presented in **Annexure-I**.

Table 5-2 Summary of Operation Cost

Sr. No.	Particulars	Amount (FY 2027-36)
1	Salary and Welfare Expenses	48,99,000
2	Security Expenses	15,84,579
3	Incident Management & Emergency Services	2,01,90,775
4	Electricity Charges	2,09,04,021
5	TMS/HTMS/System Expenses	1,07,14,132
6	Office Operating Expenses	32,89,000
7	Vehicle Running Expenses	25,53,000
8	Professional Fees Expense	1,49,50,000
9	Community Development	14,95,000
10	Communication Expenses	3,64,780
11	Conveyance Expenses	3,88,700
12	Insurance Expense	1,13,62,000
13	IE Fees	1,25,84,000
14	Routine Maintenance Cost (Project Highway)	2,04,88,601
15	Horticulture & ROW Maintenance	1,69,35,360
16	Miscellaneous including Contingency	42,11,159
	Total Cost (Rs)	**14,69,14,107**
	Total Cost (Cr)	14.69
	Per km Cost (Lakh)	**28.25**

5.5 Major Maintenance Cost

The summary of Major Maintenance Cost is provided as below. The detailed working of the same is presented in **Annexure-II**.

Sr. No.	Year	Major Maintenance Cost (Cr.)	Remarks
1	FY 2022 to FY 2028	-	
2	FY 2029	25.84	
3	FY 2030 to FY 2035	-	
4	FY 2036	30.33	
5	FY 2037	-	
Total Cost (Cr.)		**56.17**	

5.6 Periodic Replacement of TMS / ATMS System

Every 7 years, replacement cost of major TMS / ATMS system is considered. The same is provided as below:

Sr. No.	Year	HTMS O&M / Replacement Cost (Cr.)	Remarks
1	FY 2029	4.27	
2	FY 2036	4.27	
Total Cost (Cr.)		**8.55**	

5.7 Escalation Assumption

The following escalation is considered basis discussions with Client and our internal estimates.

Table 5-3 Escalation

Year	Escalation	Year	Escalation
2028	4.86%	**2041**	3.99%
2029	4.44%	**2042**	3.99%
2030	4.24%	**2043**	3.99%
2031	4.13%	**2044**	3.99%
2032	4.08%	**2045**	3.99%
2033	4.01%	**2046**	3.99%
2034	4.00%	**2047**	3.99%
2035	4.03%	**2048**	3.99%
2036	4.01%	**2049**	3.99%
2037	3.98%	**2050**	3.99%
2038	3.98%	**2051**	3.99%
2039	4.00%	**2052**	3.99%
2040	3.99%	**2053**	3.99%

5.8 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summarised yearly for remaining concession period along with escalation as mentioned in Clause 5.7.

Escalated O&M Cost (in INR Cr.)

	Year of expense	FY27	FY28	FY29	FY30	FY31	FY32	FY33	FY34	FY35	FY36	FY37
1	Routine O&M Cost											
1.01	Salary and Welfare Expense	0.49	0.51	0.54	0.56	0.58	0.61	0.63	0.66	0.68	0.71	0.74
1.02	Security Expenses	0.16	0.17	0.17	0.18	0.19	0.20	0.20	0.21	0.22	0.23	0.24

Ordinary Repair

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity** **More than 4500 CVD** **CC Surface**
1	**2**	**3**	**4**	**5**
1	**Maintenance of Carriageway & Paved Shoulders (1.5m wide); B.T. Surface**			
	i) Pot holes repair (50 mm deep)	100 % Pot hole free	As & when required	0.00%
	Volume (cum)			0.00
	Rs/m^3			15635
	Cost in Rupees			0
	ii) Patch repair	100 % Patch less	As & when required	0.00%
	Area (sqm)			10
	Rs/m^2			625
	Cost in Rupees			6,254
	iii) Sealing (Crack)			
	a) Wider than 3 mm	100 % Crack Less	As & when required	2.50%
	Area (sqm)			250
	Rs/m^2			107
	Cost in Rupees			26,845
	b) Width less than 3 mm	75 % Crack Less	As & when required	1.50%
	Area (sqm)			112.5
	Rs/m^2			81
	Cost in Rupees			9,160
	iv) Repair of ruts and undulations			
	a) Greater than 20 mm	75%	As & when required	0.00%
	Area (sqm)			10
	Rs/m^2			625
	Cost in Rupees			6,254
	v) Road marking	10%		13545

1 INTRODUCTION

1.1 Background

Cube Highways Fund Advisors Pvt. Ltd. (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InvIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an Infrastructure Investment Trust under the SEBI InVIT Regulations. Cube Highways Fund Advisors Pvt. Ltd. has appointed **M/s. FP Project Management Consultancy Services Private Limited** (hereinafter referred as "Technical Consultant" or "FPPM") to carry out Technical Due Diligence of The Government of India had entrusted to the Authority the development, maintenance and management of National Highway No. 2 including the section from (km. 20+500 to km. 200+000) on DBFOT (Toll) basis under NHDP Phase V in the State of Haryana and Uttar Pradesh.

DA Toll Road Private Limited (hereinafter referred as "Concessionaire") is a special purpose vehicle (SPV) for development, maintenance, and management of the section from Delhi to Agra of NH-2 from km. 20+500 to km. 200+000 (Length - 179.500 kms) in the state of Haryana / Uttar Pradesh under NHDP Phase-V as BOT (Toll) on DBFO Pattern.

The Date of Concession Agreement is 16th July 2010. The concession period of the project is 26 years commencing from the Appointed Date including implementation period. Appointed Date of the project is 16th October 2012. Provisional Completion Certificate was issued for the length of 179.500 km on 20th May 2022 and the Commercial Operation commenced from 20th May 2022.

Sr. No.	Description	Date
1	Date of Signing the Concession Agreement	16th July 2010
2	Appointed Date	16th October 2012
3	Scheduled Project completion	15th April 2015
4	Scheduled End of Concession	15th October 2038
5	Date of issue of Provisional Completion Certificate	20th May 2022
6	Date of Commencement of Commercial Operation	20th May 2022
7	Date of Issue of Completion Certificate	Not yet Achieved

Presently the project is under operation and maintenance, and the Technical Consultant has undertaken the work of assessment of operation and maintenance(O&M) cost based on site inspections and field investigations. The same is accordingly presented in this report.

1.2 Scope of Work

The detailed scope of work for conducting the technical due diligence of project road is presented as below:

- A reconnaissance of the project road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets
- Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, As-built drawings, O&M manual, COD / PCOD certificate, punch list, previous major maintenance etc.
- Review of recent pavement investigations and surveys conducted on project road like FWD, NSV, Axle load, material investigations etc.
- Formulation of future major maintenance strategy

- Estimation of any initial expenses to be incurred due to deficiencies observed in diligence
- Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period
- Estimation of Annual Operation expenses along with Systems cost (TMS / HTMS) till the end of concession period
- Review of balance work cost for project road including estimation of quantities and item rates

1.3 Our Approach Philosophy

1.3.1 Composition of Team

Our team consists of well-qualified engineers and other professionals, whose experience covers all the skills and specializations required for undertaking such assignments. All the team personnel proposed are our regular employees and have a long and stable working relationship with our firm.

The Team Leader coordinates the activities between all the key staff who work closely together. The key staff is assisted by various support staff, who report to the respective key staff in their field of expertise. The Team Leader is the point of contact for Client on Technical Study.

The technical study includes review of all the available documents namely:

a) Concession Agreement including Technical Schedules
b) O&M Contract, work order and their provisions
c) Quality of construction based on available data, design, and drawings.
d) Documents on historical expenditure on operation and maintenance
e) O&M cost schedule for the concession period
f) Review of Completion / Provisional Completion along with punch list items
g) Review of recent pavement surveys conducted.
h) Correspondence regarding scope of works and during O&M
i) Recent O&M Report submitted to Authority.
j) Toll operation manual / ATMS related documents

The review of above documents is the first step towards accomplishment of the task. This gives a complete idea of the project and is used as input data for preparation of report after necessary analysis.

1.3.2 Site Visit and Data Collection

A team of experts from various streams has carried out the preliminary site visit to understand the assessment of project assets mainly condition of the pavement and structures.

- The site visit is undertaken for detailed reconnaissance and visual pavement condition assessment.
- The condition assessment of major structures by visual inspection
- The information like material sources and the probable cost is collected for the purpose of cost estimate.

The detailed design / drawings viz. Plan & L-sections, drainage design, structure design, layout drawings for project facilities like toll plaza, bus bay, truck lay-byes, highway lighting facilities etc. are studied. Also, design / drawing and provision pertaining to road furniture are studied.

The information on availability of material in the vicinity is gathered. It has direct impact on cost of maintenance work and balance work.

The basic approach for preparation of cost estimates for operation and maintenance is as per the practice of State PWD / MORT&H in respect of highways and structures.

1.3.3 Data Analysis

Based on the study of the available information and preliminary site visits, the consultants share their preliminary observations with the Client based on the evaluation of the technical data and reports provided by the Client.

1.4 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Company. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyzing the same as per the best engineering / industry practices.

The site visit and inspection was carried out between the period from **9th March 2026 to 13th March 2026**.

The report is organized with the following chapters for easy understanding of various issues.

Chapter 1 **Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for due diligence studies.

Chapter 2 **Project Description:** The chapter describes existing project features, and overview of project development.

Chapter 3 **Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the project road based on site visit.

Chapter 4 **Pavement Investigation and Assessment:** The chapter describes the summary of pavement surveys and investigations carried out on project road along with the requirement of pavement maintenance.

Chapter 5 **Cost Estimates:** The chapter summarizes the forecast for O&M and major maintenance cost over the remaining concession period.

2 PROJECT DESCRIPTION

2.1 Introduction

National Highways Authority of India signed the Concession Agreement with **DA Toll Road Private Limited**, a company promoted by Cube Highways or company a Special Purpose Vehicle (SPV) formed for implementing this project on 16th July 2010. The Appointed Date for the project road is 16th October 2012.

2.2 Location

The site of the Six-Lane divided Project Road comprises the section of NH-2 commencing from km. 20+500 at Delhi to km. 200+000 (Approx Length is 179.500 kms) at Agra in the State of Haryana / Uttar Pradesh.

The Location Map of the project road is presented below:

Figure 2-1 Location Map

The photographs taken during the site visit are presented below.

Figure 2-2 Start of Project Road

Start of Project at km. 20+500

Start of Project at km. 20+500

Figure 2-3 End of Project Road

End of Project at km. 200+000

End of Project at km. 200+000

2.3 Terrain

The Project Road traverses through plain / rolling terrain.

2.4 Abutting Land Use

The Project Road passes through residential and agricultural zones.

2.5 Right of Way

The width of the existing Right of Way (ROW) for the Project Road is 60 m to 100 m except Toll Plaza area.

2.6 Existing Utilities

During widening of the Project Road, various affected utility services were shifted to proposed ROW. The different types of utilities found along the road include, electrical poles, telephone poles, OFC cables, etc.

2.7 Service Road

The total length of service road on both sides is 204.164 kms.

2.8 Development as per Schedule-B

The Project Road from Delhi to Agra Section (from km. 20+500 to km. 200+000) of NH-2 has been developed as a Six-lane divided carriageway, service road and other arrangements. The Project Road passes through rural (agricultural) as well as built-up sections.

As per Article 2 of Concession Agreement, the scope of project defined in Schedule-A and Schedule-B, (the **"Scope of the Project"**) shall mean and include, during the Concession Period:

a) Construction of the project on the Site set forth in Schedule-A and as specified in Schedule-B together with provision of project facilities as specified in Schedule-C and in conformity with the Specification and Standards set forth in Schedule-D.
b) Tolling, operation, management, maintenance, and transfer of the Project Highway subject to and in accordance with the provisions of this Agreement.
c) performance and fulfilment of all other obligations of the Concessionaire in accordance with the provisions of this Agreement and matters incidental thereto or necessary for the performance of any or all of the obligations of the Concessionaire under this Agreement.

Following is the Scope of Work as per Schedule-B of Concession Agreement.

Table 2-1 Details of Scope of Work

Sr. No.	Type of Structure	Total Number of Structures As per Concession Agreement	Remarks
1	O&M of Main Carriageway	179.500 km	
2	Rail Over Bridge (ROB)	08 Nos.	08 Nos. (Descope)
3	Flyover	17 Nos.	
4	Two Lane Over Pass	02 Nos.	
5	Viaduct	01 Nos.	
6	Vehicle Underpass	15 Nos.	
7	Cattle / Pedestrian Underpasses	11 Nos.	
8	Major Bridge	01 Nos.	
9	Minor Bridge	14 Nos.	
10	Culverts	203 Nos.	

3 CONDITION ASSESSMENT OF PROJECT ROAD

3.1 Pavement

The project is Six lane-carriageway of width of 17.50 m as per standard cross section including paved shoulder. Service road of 7.0 m / 5.5 m width has been provided on one side or both sides wherever required in built up area to cater for the local traffic.

The Project Road is constructed majorly with flexible pavement and partially rigid pavement. The service road is constructed with flexible pavement. The pavement type for the Toll Plaza including taper is of rigid pavement.

3.1.1 Pavement Condition Survey

The pavement condition survey was carried out during the period from **9th March 2026 to 13th March 2026** through visual inspection for the entire project length. From the visual inspection, it is found that the overall pavement condition of the Project Road is found to be Good to Fair, with certain stretches observed to be in Poor condition.

Some of the photographs taken during the site visit are presented as below.

Figure 3-1 Photographs of Pavement Condition (Main Carriageway)

Poor condition of BC at km. 34+200 (LHS)

Cracks & Sattlement at km. 84+350 (LHS)

Cracks & Rutting at km. 91+900 (LHS)

3.4 Condition Survey of Bridges and Major Structures

The inventory of structures including major bridges, minor bridges, ROB's, underpasses and culverts is presented in table as below:

Table 3-1 Details of Summary for Structures

Sr. No.	Type of Structure	Total Number of Structures as per CA
1	Rail Over Bridge (ROB)	08 Nos.
2	Flyover	17 Nos.
3	Two Lane Over Pass	02 Nos.
4	Viaduct	01 Nos.
5	Vehicle Underpass	15 Nos.
6	Cattle / Pedestrian Underpasses	11 Nos.
7	Major Bridge	01 Nos.
8	Minor Bridge	14 Nos.
9	Culverts	203 Nos.

The detailed condition survey of structures was carried out by visual inspection. The observations and findings are presented in table below:

3.4.1 Flyovers

Table 3-2 Details of Condition of Flyovers

Sr. No.	Location	Chainage (km)	Proposed structural configuration	Proposed Structure arrangement	Proposed span arrangement (m)	Total width of the structure (m)	Consultant Remarks
1	NHPC Chowk	21+750	6 - Lane Flyover (VC 5.5m)	PSC Box Girder for Central span and Precast PSC T-Girder with RCC desk Slab for end Spans with Circular Pier and Pile/Open Foundation	26+46+26	25.2	The structure was observed to be in good condition. Cleaning of drain is required.
2	Badhkal lake	25+650	6-lane Flyover (VC 5.5m)	PSC Box Girder for Central span and Precast PSC T- Girder with RCC deck Slab for end Spans with Circular Pier and Pile/Open Foundation	26+46+26	25.2	The structure was observed to be in good condition. Cleaning of drain is required
3	Old Faridabad Chowk	26+950	6 - Lane Flyover (VC S.5m)	PSC Box Girder for Central span and Precast PSC T- Girder with RCC deck Slab for end Spans with Circular Pier and Pile/Open Foundation	26+46+26	25.2	The structure was observed to be in good condition. Cleaning of drain is required
4	Ajronda Chowk	29+500	6 - Lane Flyover (VC 5.5m)	PSC Box Girder for Central span and Precast PSC T- Girder with RCC deck Slab for end Spans with Circular Pier and Pile/Open Foundation	26+46+26	25.2	The structure was observed to be in good condition. Cleaning of drain is required
5	Bata Chowk	31+100	6- Lane Flyover (VC 5.5m)	PSC Box Girder for Central span and Precast PSC T- Girder with RCC deck Slab for end Spans with Circular Pier and Pile/Open Foundation	26+46+26	25.2	The structure was observed to be in good condition. Cleaning of drain is required
6	Ballabgarh	35+050	6- Lane Flyover (VC 5.5m)	PSC Box Girder for Central span and Precast PSCT Girder with RCC deck Slab for end Spans with Circular Pier and Pile/Open	26+46+26	25.2	The structure was observed to be in good condition. Cleaning of drain is required
7	Amarpur - Palwal Intersection	58+070	6 - Lane Flyover (VC 5.5m)	PSC Box Girder for Central span and Precast PSCT-Girder with RCC deck Slab for end Spans with Circular Pier and Pile/Open Foundation	26+46+26	25.2	The structure was observed to be in good condition. Cleaning of drain is required
8	Sohna Chowk	60+165	6 - Lane Flyover (VC 5.5m)	PSC Box Girder for Central span and Precast PSC T- Girder with RCC deck Slab for end Spans with Circular Pier and Pile/Open Foundation	26+46+26	25.2	The structure was observed to be in good condition. Cleaning of drain is required
9	Hodal Chowk	88+825	6 - Lane Flyover (VC 5.5m)	PSC Box Girder for Central span and Precast PSC T- Girder with RCC deck Slab for end Spans with Circular Pier and Pile/Open	26+46+26	25.2	The structure was observed to be in good condition. Cleaning of drain is required
10	Kosi City	101+300	6 - Lane Flyover (VC 5.5m)	PSC Box Girder for Central span and Precast PSC T- Girder with RCC deck Slab for end Spans with Circular Pier and Pile/Open Foundation	26+46+26	25.2	The structure was observed to be in good condition. Cleaning of drain is required
11	Goverdhan Chowk	142+575	6 - Lane Flyover (VC 5.5m)	PSC Box Girder for Central span and Precast PSC T- Girder with RCC deck Slab for end Spans with Circular Pier and Pile/Open Foundation	26+46+26	25.2	The structure was observed to be in good condition. Cleaning of drain is required
12	Gokul Chowk	152+000	6 - Lane Flyover (VC 5.5m)	PSC Box Girder for Central span and Precast PSC T- Girder with RCC deck Slab for end Spans with Circular Pier and Pile/Open Foundation	26+46+26	25.2	The structure was observed to be in good condition. Cleaning of drain is required
13	Mathura Refinery	157+775	6 - Lane Flyover (VC 5.5m)	PSC Box Girder for Central span and Precast PSCT- Girder with RCC deck Slab for end Spans with Circular Pier and Pile/Open Foundation	26+46+26	25.2	The structure was observed to be in good condition. Cleaning of drain is required
14	Khandari Chowk (Central Hindi Institute)	195+680	6 - Lane Flyover (VC 5.5m)	PSC Box Girder for Central span and Precast PSC T Girder with RCC deck Slab for end Spans with Circular Pier and Pile/Open Foundation	26+46+26	25.2	The structure was observed to be in good condition. Cleaning of drain is required
15	Sultan Ganj Pulia	198+415	6 - Lane Flyover (VC 5.5m)	PSC Box Girder for Central span and Precast PSC T Girder with RCC deck Slab for end Spans with Circular Pier and Pile/Open Foundation	26+46+26	25.2	The structure was observed to be in good condition. Cleaning of drain is required
16	Water Works Chowk	199+800	4- Lane Flyover (VC 5.5m)	PSC Box Girder for Central span and Precast PSC T Girder with RCC deck Slab for end Spans with Circular Pier and Pile/Open Foundation	26+46+26	18.2	The structure was observed to be in good condition. Cleaning of drain is required

3.4.8 Condition Survey of Culverts

There are 203 cross-drainage structures which includes slab culverts, hume pipe culverts and box culverts at various locations along the Project Road. The height of culvert varies from 1.0 m to 3.0 m from bed level. During the condition survey of structure, these culverts were inspected on sample basis.

In most of culverts, the waterway is clear. However, in urban areas and at few rural locations it is found blocked due to debris, drainage water or bushes, tree growth, which need to be removed by the Concessionaire.

Figure 3-12 Photographs of Culverts

Box Culvert at km. 169+320

Box Culvert at km. 170+260

3.5 Drainage

There are of existing drain on both side of the project road as per Concession Agreement. However, RCC drains are additionally constructed in built-up areas and locations where service roads are provided.

The photographs taken during site visit is presented as below:

Figure 3-13 Photographs of Drainage

Cover Drain at km. 142+200

Cover Drain at km. 155+600

Median Drain at km. 156+000

Median Drain at km. 171+540

3.6 Slope Protection

The entire Project Road passes through the ground level. Hence, slope protection and chute drains are not found on Project Road. Few of the slope protection found at underpass approaches which are in fair condition. The photographs taken during site visit are presented as below:

Figure 3-14 Photographs of Slope Protection

Slope Protection at the Structure Approach

Slope Protection at the Structure Approach

3.7 Road Furniture

The Concessionaire has provided road furniture along the Project Road as per the standards and specifications mentioned in Schedule-C. Details of the items are provided below.

a) Highway Lighting along Project Road

Highway lighting is provided at Major Bridge, Underpasses, Flyovers, Toll Plaza, ROBs and built-up locations. High mast lighting is provided at Toll Plaza and Major Junction location. Highway lighting is also provided at approaches of Underpass and Flyovers. Some of the photographs of highway lighting are presented below.

Figure 3-15 Photographs of Highway Lighting

Highway Lighting at km. 107+540

Highway Lighting at km. 175+680

b) Pavement Marking

Pavement marking for the Project Road is done as per the design standard. Pavement marking is faded at some locations which need to be rectified by the Concessionaire.

Some of the photographs of road marking are presented below.

Figure 3-16 Photographs of Pavement Marking

Pavement Marking on Project Road

Pavement Marking on Project Road

c) Road Studs / Cat's eyes

Road studs / Cat's eyes for the Project Road are provided as per the design standards. Cat's eyes have been fixed at junction and zebra crossings. However, during site visit it has not been visually seen. Maybe it has damaged which will be rectified by the Concessionaire.

Some of the photographs of road studs are presented below.

Road Studs on Project Road

Road Studs on Project Road

d) Traffic Signages

Traffic signs include roadside signs, overhead signs, kerb mounted signs and median signs along the Project Road. The design for the traffic signs along the Project Road is done as per the design standard.

The height, lateral clearance, location and installation are as per design standard. Overhead sign has been installed ahead of major intersections, toll plazas, start / end of project highway and urban areas as per detailed design requirements.

Kilometre stones, vertical post of sign boards, chevron boards and median kerb found to be not in proper condition at few locations which need to be rectified by the Concessionaire.

Some of the photographs of sign boards are presented below.

Figure 3-17 Photographs of Traffic Signages

Overhead sign board

Chevron sign board

Kilometer Stone

5th Kilometer Stone

e) Crash Barriers

Metal beam crash barriers are provided at bridge approaches, locations of high embankment and sharp curves. All the crash barriers provided by the Concessionaire are maintained at site.

Some of the photographs of metal beam crash barriers are presented below.

Figure 3-18 Photographs of MBCB / Crash Barrier

Concrete Crash Barrier

Metal Beam Crash Barrier

f) Pedestrian Guard Rail

The pedestrian guard rails are provided in the median in the built-up sections. It is maintained by the Concessionaire.

Some of the photographs of pedestrian guard rails are presented below.

Figure 3-19 Photographs of Pedestrian Guard Rail

Pedestrian Guard Rails

Pedestrian Guard Rails

3.8 Avenue Plantation and Median Plantation

Avenue plantations and median plantations are done along the project length as per IRC specification except built-up locations. Some of the photographs of plantation are presented below.

Figure 3-20 Photographs of Avenue Plantation and Median Plantation

Median Plantation

Median Plantation

Avenue Plantation

Avenue Plantation

3.9 Toll Plaza

As per the Concession Agreement, on Project Road there are 3 nos. of toll plazas i.e. at km. 46+000, km. 94+000 and at km. 164+000 with the following infrastructure.

Table 3-10 Details of Summary for Toll Plaza Items at km. 46+000

Sr. No.	Particulars	Details
1	Toll Plaza Chainage	km. 46+000
2	Number of Tolling Lanes	24 lanes for toll operation for vehicles

3.10 Lane Equipment

Following are the lane hardware and equipment installed at toll plaza.

1. RFID ETC Transceiver
2. Lane Controller with Industrial PC
3. AVC Sensors
4. Automatic Lane Barrier (ALB)
5. Lane Traffic Light and user fare display
6. Incident Capture Camera
7. Overhead Lane Signals
8. Traffic Lights
9. Toll Booth Equipment

3.10.1 RFID ETC Transceiver

RFID ETC Transceiver reads tags installed on the windshield of vehicles and mounted on a pole at about 8 m height. Handheld RFID readers are provided (1 no. in each direction) in case a tag is not detected by the fixed reader.

RFID ETC Transceiver

3.10.2 Lane Controller with Industrial PC

Toll Lane Controller is located within the Electronic Enclosure placed inside each toll booth which are connected to the common server and are capable of independent storage of data.

3.10.3 Automatic Vehicle Classification (AVC) Sensors

The AVC equipment comprises of a pair of height sensor poles, axle sensors and inductive loops. The height detector has a high sensing resolution and detects height when object blocks the path. The presence of vehicle is detected by inductive loop. The loop sensors embedded on the pavement trigger the AVC height sensors located on parallel pillars.

AVCC at Toll Plaza

3.10.4 Automatic Lane Barrier

Boom barriers installed on all lanes are in working condition and have a working time of 0.6 - 0.9 s. Automatic Lane Barrier is used to allow only authorized vehicles to pass through the lane. The barrier is activated only on generation of user fee receipt or other relevant vehicle processing activity. A torque motor powers the barrier for raising and lowering the boom. The motor can be blocked at any position without causing any damage. In the event of power failure, the boom is automatically raised. The boom weight is exactly balanced by built-in springs.

ALB at Toll Plaza

3.10.5 Lane Traffic Light (LTL) and User Fare Display (UFD)

Lane Traffic Light (LTL) is used to instruct vehicles to stop or pass through the lane. The LTL is RED when the toll collector is expecting the vehicle at the booth. After the transaction is done; the LTL turns Green to instruct the vehicle to pass through the lane. The User Fare Display is a part of electronic toll collection equipment located at the toll booth. It is a mini variable message sign (VMS) made of Light Emitting Diodes (LED). The user fare display is used to display the toll fare that is due and that must be paid by the motorist and the classification of vehicle selected by the collector.

LTL at Toll Plaza

3.10.6 Incident Capture Camera (AVC Camera)

The incident capture camera is installed on the island of the booth to capture the image of the vehicle from the back side. The AVC triggers the Image capture system.

AVC Camara at Toll Plaza

3.10.7 License Plate Image Capture Camera (LPIC)

License Plate Image capture camera is installed on a 3 m pole facing incoming vehicle to capture the image of the vehicle number plate.

LPIC at Toll Plaza

3.10.8 Over Head Lane Signal (OHLS)

The **Overhead Lane Signal (OHLS)** for lane "Open" and "Close" sign consists of a pair of "GREEN" (arrow) and "RED" (cross) lights. The OHLS is located at the vehicle approaching side of the canopy to show the drivers whether the lane is open or closed.

OHLS at Toll Plaza

3.10.9 Toll Booth Equipment

Toll Booth Hardware / Equipment provided are:

- Toll Collector Display (Operator Monitor)
- Customized Industrial Keyboard
- Receipt Printer
- Intercom Slave unit
- Bar code reader
- Violation Light and alarm
- Manual Booth Control (MBC)
- Booth Camera

The operator monitor termed as Toll Collector Display (TCD) is located on the toll collector's desk. It is the system's interface to the toll collector, to display the status of transactions and status of the lane peripherals.

The keyboard on the toll terminal is a programmable keyboard for Registration of toll operations and is customized for different vehicle types and types of ticket.

Thermal printers are installed at the toll booths to print tickets. Intercom slave unit facilitates communication with the master unit located in the control room.

Violation system has an alarm switch which is triggered whenever there is a violation such as run-through happening on the lane. When there is an emergency, a foot switch pressed by the booth operator alerts the control room.

Booth Cameras is provided on the inside roof corner of the booth to provide surveillance through CCTV screen located in the control room. Manual Booth Controller is used to release exempt vehicles.

3.10.10 Medium Speed Weigh in Motion (MSWIM)

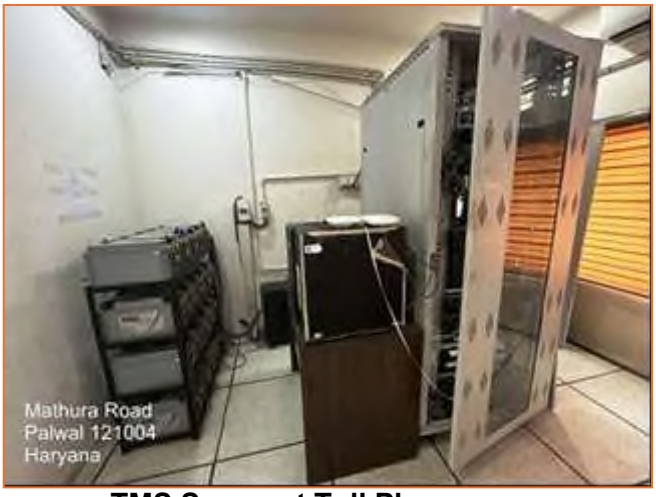
Medium Speed Weigh in Motion (MSWIM) is installed on entry lanes of Toll Plaza.

MSWIM at Toll Plaza

3.11 Plaza Equipment

3.11.1 TMS Server

Plaza Server is provided in a hot standby configuration and provided with port non-POE network switch and Port PoE switch. Internet connectivity is available through one lease line (Airtel) and Jio Wi-Fi module. Firewall with Sophos antivirus is provided.



TMS Server at Toll Plaza

3.11.2 55" LED screen for CCTV monitoring

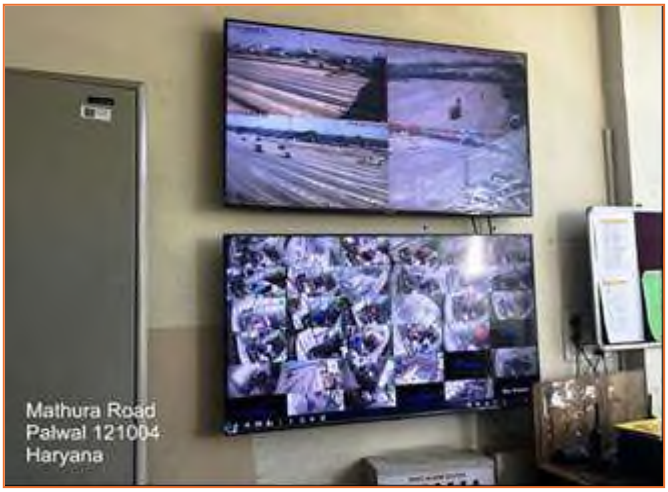
55" LED screen for CCTV monitoring installed at the toll plaza admin block provides view of all the toll booths, important zones within the plaza where cash transactions take place (server room, control room, cash up).

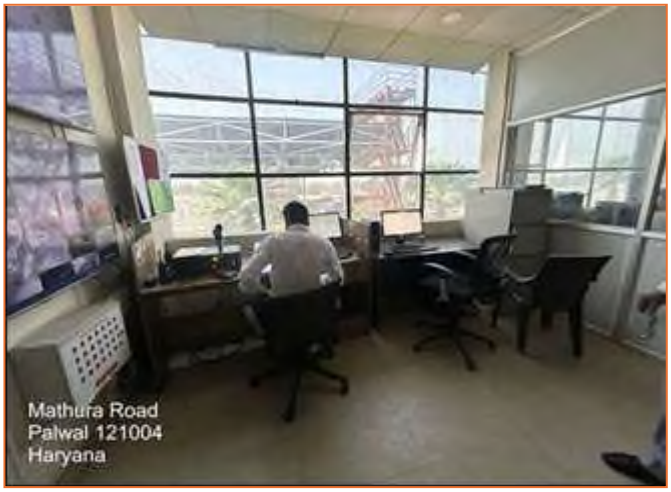
LED Screen at Toll Plaza

The Toll Plaza Manager is able to observe the activities at the toll lanes and toll booth. When the toll collector calls up on the intercom, the manager is able to comprehend the situation at the lane by a zoomed view of the particular lane.

3.11.3 Workstations in Control Room, POS room

Workstations are available in control room (lane monitoring, administration, and audit), cash room and PoS.





3.12 Truck Lay-Bye

There are 04 nos. of Truck lay along the Project Road. Some of the photographs of truck lay-bye are presented below.

Figure 3-24 Photographs of Truck lay-Bye

Truck Lay bye at km. 166+000

Truck Lay bye at km. 131+500

3.13 Bus Bays

There are 23 nos. bus bays along the project road. Some photographs taken during the site visit are presented below.

Figure 3-25 Photographs of Bus Bays

Passenger Shelter at km. 25+220

Passenger Shelter at km. 79+200

3.14 Traffic Aid Post and Medical Aid Post

Traffic Aid Post and Medical Aid Post have been constructed at the site and the same are maintained by the Concessionaire.

Traffic Aid & Medical Aid post at TP-1

Traffic Aid & Medical Aid post at TP-2

3.15 Toilet Block

There are two nos. of toilet blocks on the Project Road and the same are maintained by the Concessionaire.

Toilet Block at Toll Plaza-1

Toilet Block at Toll Plaza-2

3.16 Balance Work Status

As per review of the IE report for the month of February 2025 shared by the Concessionaire, and as observed during the site visit, about 99.95% of the balance works are completed at the site. About 0.05% of the work is balance, which are pending and perhaps not able to take up due to massive law and order issues and LA / utilities issues in that particular section.

The Cost of Balance Work is presented in the subsequent chapter.

3.17 Operation and Maintenance

3.17.1 O&M Contract

As per Clause 15.1 of the Concession Agreement, the Concessionaire shall operate and maintain the project road by itself, or through O&M Contractors and if required, modify, repair, improve the project road to comply with Specifications and Standards, and other requirements set forth in the Agreement through Good Industry Practice, Applicable Laws and Applicable Permits and manufacturer's guidelines and instructions with respect to toll systems. The Operation and Maintenance activities shall meet all the requirements laid down in MoRT&H, IRC Specifications and the Concession Agreement.

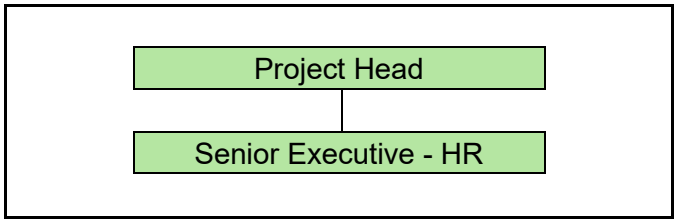
The Concessionaire has outsourced for carrying out activities related to operation and maintenance of the project road including toll operation services, security services, AMC for TMC and AMC for DG set.

3.17.2 Organization Chart

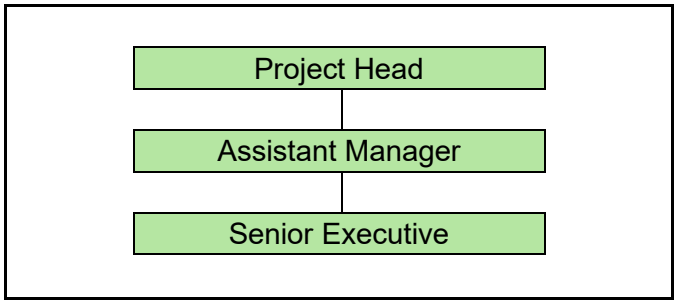
Organization Charts for operation and maintenance of the Project Road is given as follows. Accordingly, there is 01 Project Head, 01 Senior Executive (HR), 01 Assistance Executive (F&A), 01 Executive, 01 Manager Maintenance (Traffic), 01 Senior Executive (Traffic), 01 Assistant Manager (TMS / IT), 06 Executive (TMS / IT), 02 Manager (MM), 02 Electrical Engineer, 04 Electrician, 06 Executive, 10 Supervisor, 03 Plaza Manager, 03 Assistance Plaza Manager, 03 MIS Executive, 01 Document Controller, 09 Cashiers and 12 validators to carry out O&M activities. Maintenance work is undertaken and executed through competent subcontractors and the team controls all the maintenance activities.

Organization Chart

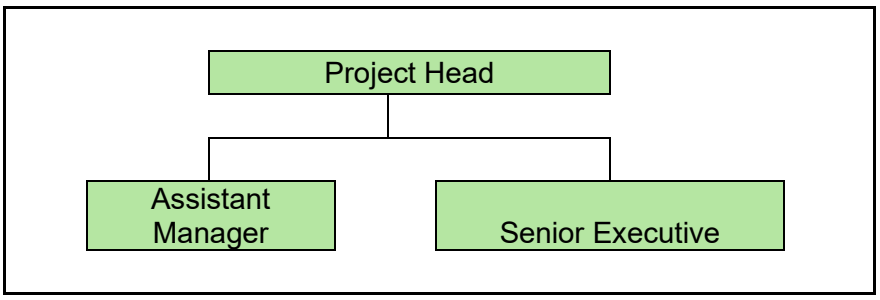
Human Resources - Site



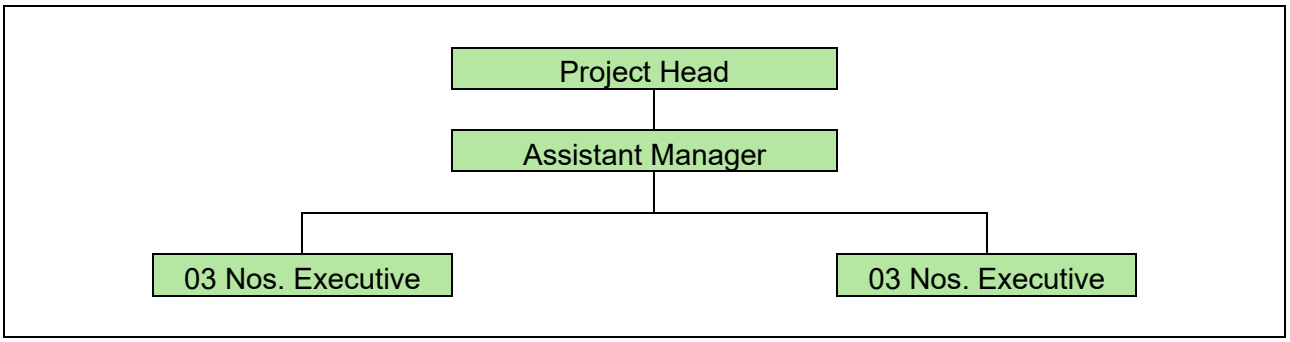
Finance & Accounts - Site



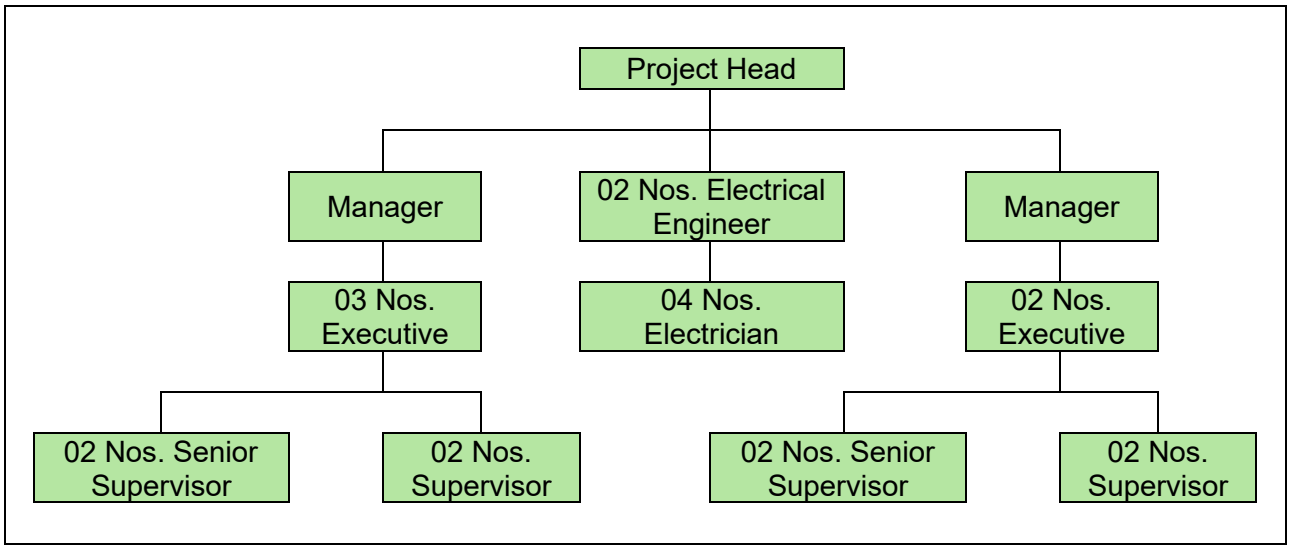
Traffic & Road Safety - Site



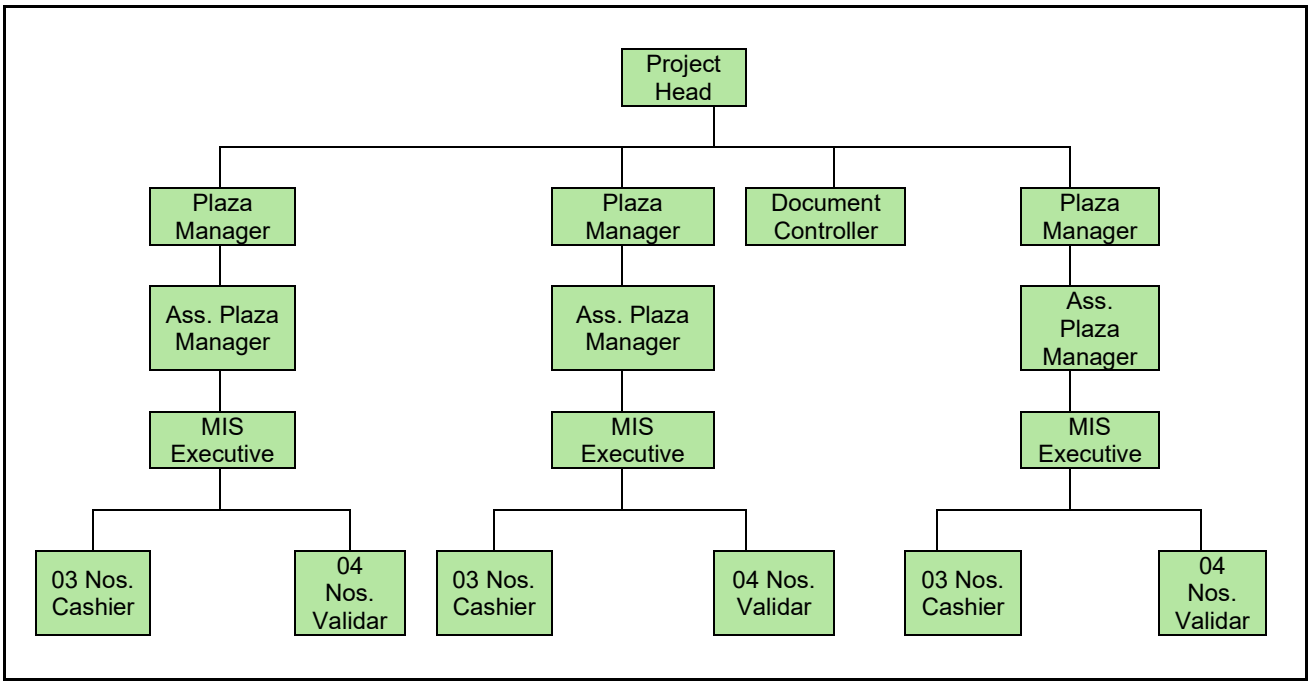
Operation System - Site



Maintenance - Site



Operation - Site



3.17.3 Operation

Operation cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses and other miscellaneous expenses. The Concessionaire has provided the expenses incurred towards the operation expenses for the past few years. Same has been reviewed and also necessary assumptions have been made about the expenses of similar types of projects to arrive the operation cost. The estimates are projected based on the best industry practices and are compared with the operating cost in the vicinity of the project area.

The Operation Cost is presented in the subsequent chapter.

3.17.4 Routine Maintenance

The Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey.

Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Maintenance Cost is presented in the subsequent chapter.

4 PAVEMENT INVESTIGATION AND ASSESSMENT

4.1 General

Presently, the pavement of the Project Road is being maintained by the Concessionaire as per scope of work. The Concessionaire has received a Provisional Completion Certificate for the length of 179.50 km on **20th May 2022**.

The project is currently under the Operation and Maintenance stage. The concession period of the project is 26 years i.e. up to 15th October 2038 from the Appointed Date of 16th October 2012 including construction period of 2.5 years. As informed by the Concessionaire, the concession period of the Project Road is likely to extend up to March 2044 on the basis of the traffic data.

4.2 Surveys and Investigation

4.2.1 Pavement Condition Survey

Pavement condition survey was carried out by the Technical Consultant during the period from **9th March 2026 to 13th March 2026** through visual inspection of the total Project Road. From the visual inspection, it is found that the overall pavement condition of the Project Road is found to be Good to Fair, with certain stretches observed to be in Poor condition.

The summary of pavement condition based on the visual inspection is tabulated below.

Table 4-1 Summary of Pavement Condition

Visual Condition (As per IRC:115-2014)			
Carriageway (LHS)		**Carriageway (RHS)**	
Length (km)	**Pavement Condition**	**Length (km)**	**Pavement Condition**
101.00	Good	97.00	Good
71.50	Fair	76.50	Fair
7.00	Poor	6.00	Poor
Summary			
Good		**99.00 kms**	
Fair		**74.00 kms**	
Poor		**6.500 kms**	

4.3 Axle Load and VDF

In order to estimate the vehicle-loading pattern in the project area, and to determine vehicle damage factor for the commercial vehicles, Axle Load Survey of the vehicles plying on the project road stretch was carried out at three different locations of project stretch.

The Axle Load Survey was conducted at three locations, first at Toll Plaza-1 (km. 46+000) and second at Toll Plaza-2 (km. 94+00) and Third at Toll Plaza-3 (km. 164+000) in the month of September 2021. The survey was carried out for both directions (LHS and RHS) simultaneously and for 24 hours using standard weigh pads. The survey was carried out using random sample method for goods vehicles i.e. LCV, Bus, Trucks and Multi-axle vehicles with special axle configuration count. Vehicle damage factors for various categories of vehicles were computed.

Summary of VDF calculation is shown in below table for TP-1, TP-2, TP-3 locations.

Table 4-2 Vehicle Damage Factor

Toll Plaza at km. 46+000				Toll Plaza at km. 94+000			Toll Plaza at km. 164+000		
Sr. No.	Vehicle Type	Direction		Vehicle Type	Direction		Vehicle Type	Direction

5	MAV	5.019	13.119	MAV	8.524	8.318	MAV	9.874	14.105

4.4 Design Traffic

Traffic in Million Standard Axles (MSA) for the homogeneous section based on the historical traffic data provided by the Concessionaire, FY 2023-24 traffic has been used for future projections and the estimated design MSA is computed and presented in subsequent table.

For the estimation of design MSA, Actual Traffic Growth Rates as provided by the Concessionaire were used.

Table 4-3 MSA Calculation

Toll Plaza-1 (km. 46+000)					
Year	LHS (Delhi to Agra)		RHS (Agra to Delhi)		Remarks
	MSA	Cumulative MSA	MSA	Cumulative MSA	
2026-27	1.75	**1.75**	3.23	**3.23**	
2027-28	1.79	**3.54**	3.33	**6.56**	
2028-29	1.87	**5.41**	3.49	**10.05**

4.5 Network Survey Vehicles (NSV) Survey

4.5.1 Roughness Survey

The Roughness Survey results were provided by the Concessionaire for analysis and to assess the riding quality in each direction (each lane) of the project road carriageway. The tests were carried out in September 2025.

The survey covered a project length of 156.370 km out of the total 165.484 km. Approximately 9.13 km of the stretch was not covered under the NSV test due to ongoing work / maintenance activities at the project site.

The Roughness Survey results (sidewise) are presented as below.

Table 4-4 Result of Roughness Survey for Pavement

Roughness Summary for Delhi to Agra Section								
Sr. No.	Condition	BI (mm/ km)	LHS			RHS		
			Outer	Middle	Inner lane	Outer	Middle	Inner lane
			Length (km)	Length (km)	Length (km)	Length (km)	Length (km)	Length (km)
1	Satisfactory	<2500	142.59	155.37	147.01	142.45	156.08	148.66
2	Unsatisfactory	>2500	2.05	1.00	5.45	2.00	0.00	3.00

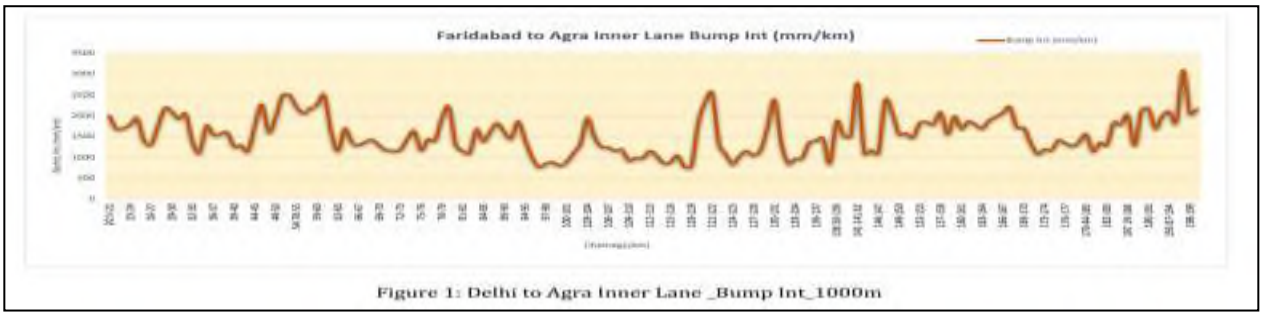

Figure 1: Delhi to Agra Inner Lane _Bump Int_1000m

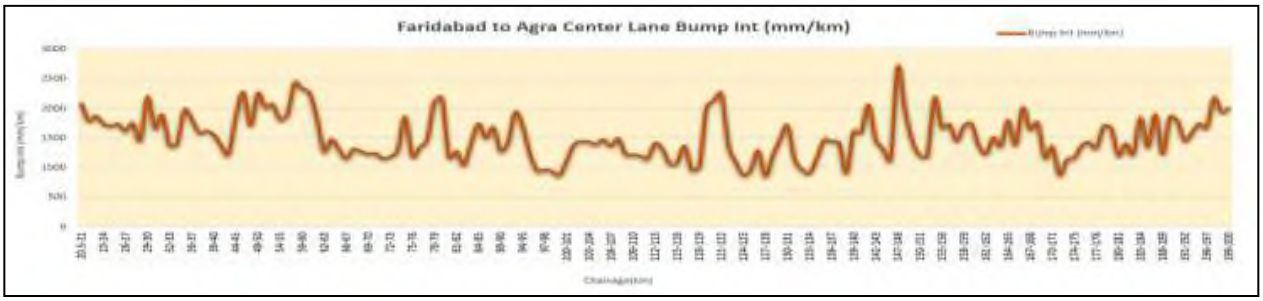
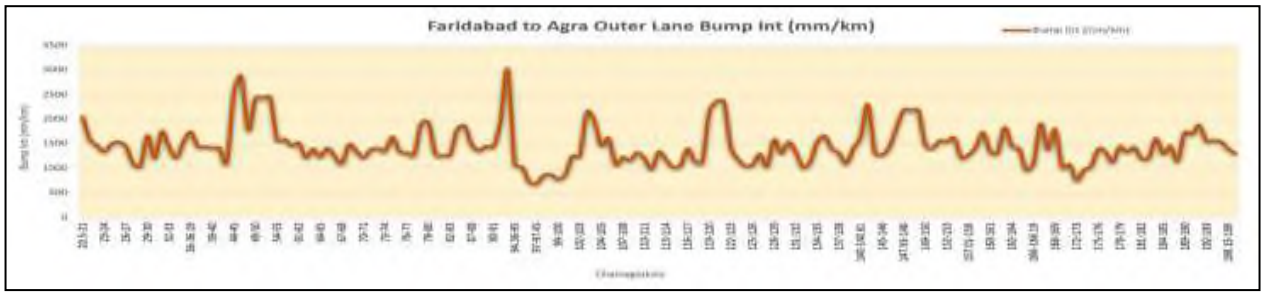
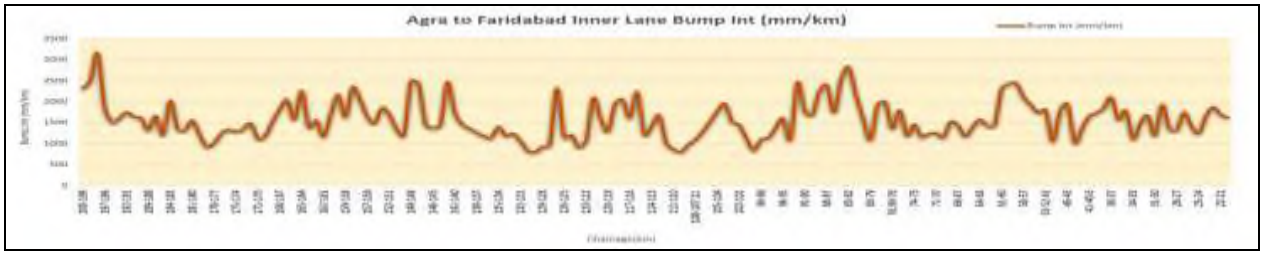
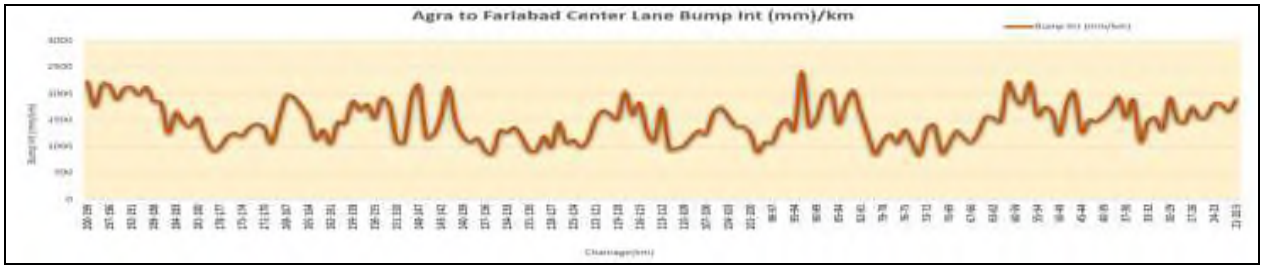
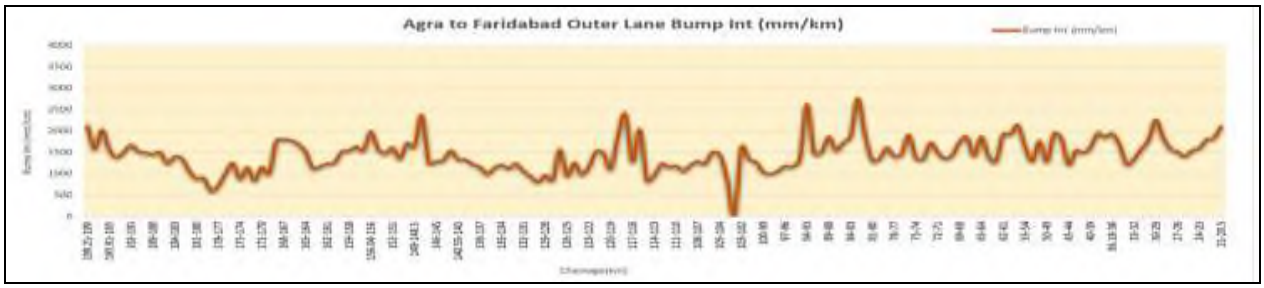










Observation and Conclusion:

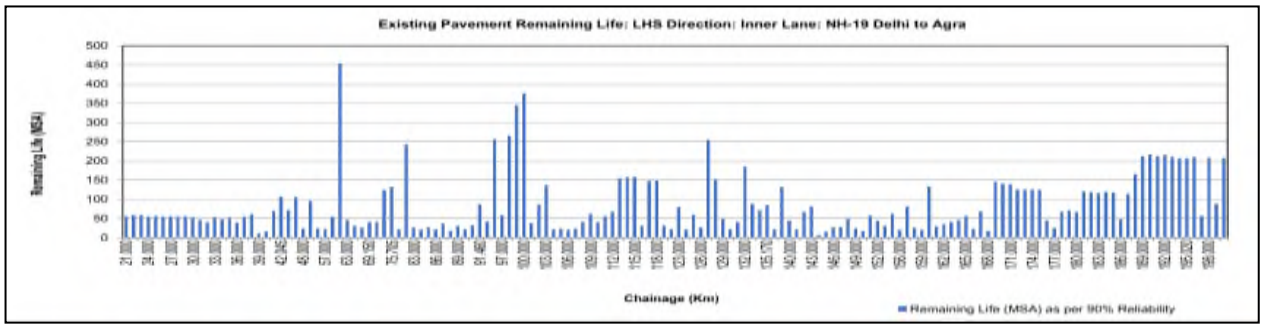
As per NSV test carried out in the month of September 2025 and the related Roughness Tests results provided by the Concessionaire, it is observed that the overall pavement condition for the Project Road is found to be Satisfactory for 148.69 Km, and Unsatisfactory for 2.25 Km. Accordingly, the Concessionaire is required to carry out repair and/or overlay works for the identified unsatisfactory stretch of 2.25 km.

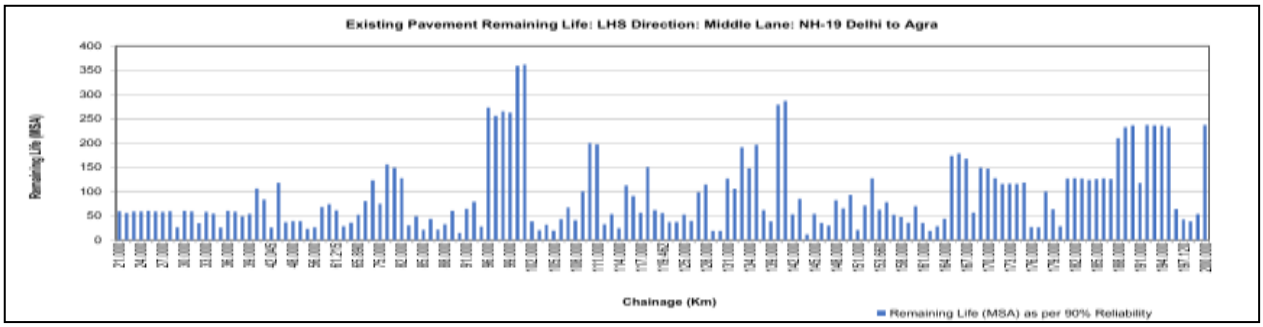
4.6 Falling Weight Deflectometer (FWD) Survey

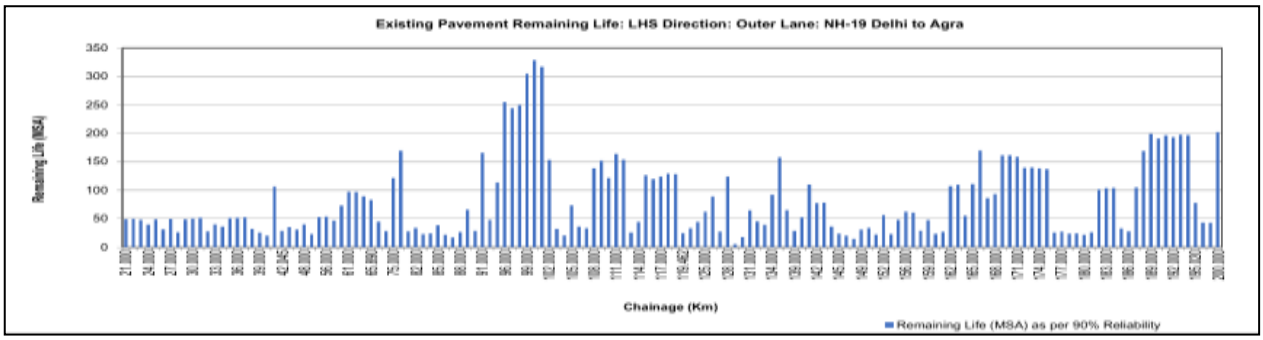
The structural evaluation and analysis of the remaining life of the Project was carried out in conformity with IRC:115-2014 "Guidelines for Structural Evaluation and Strengthening of Flexible Road Pavements Using Falling Weight Deflectometer (FWD) Technique".

The FWD survey was conducted on the Project Road on 16th May 2025 to 26th May 2025. The summary of the same is presented below.

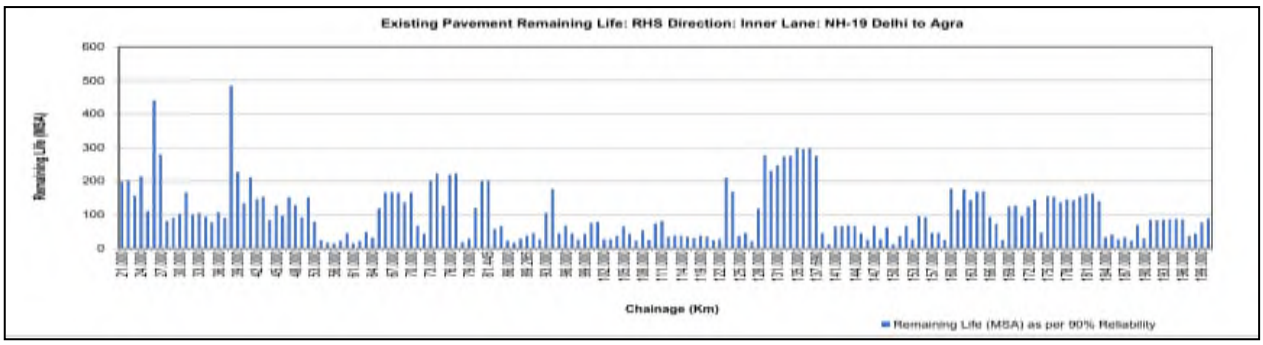
LHS side Remaining Life

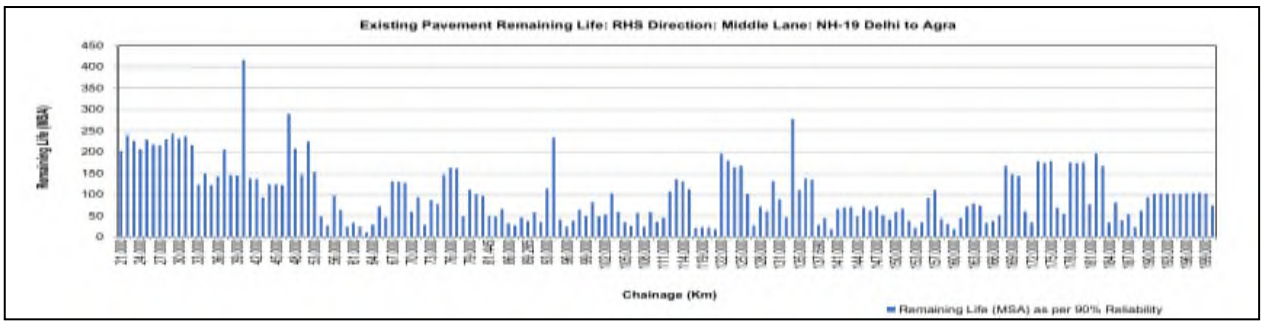


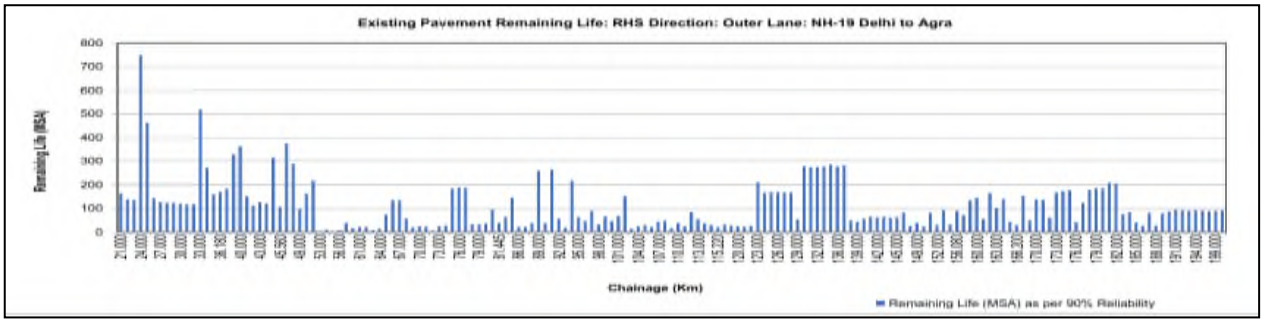




RHS side Remaining Life







After review of the test results, we found that as per the test results, MSA value is found to be low at some locations though at these locations the pavement is observed to be in fair to poor condition. Accordingly, the Concessionaire is required to carry out repair and/or overlay works for the low MSA location to increase the remaining life of the pavement.

However, the maintenance can be carried out on, as and when required basis, and to the compliance of Schedule-K requirement to maintain the road in serviceable condition. However, improvement in Riding Quality is expected if the roughness value exceeds 2500 mm/km.

4.7 Test pit and Subgrade Investigation

The Concessionaire has carried out a subgrade investigation for project road. The results of the same as provided by the Concessionaire are tabulated as below.

Table 4-5 Summary of Subgrade Test Results

4.8 Periodic Maintenance Strategy

The Project Road is taken over by the Concessionaire in FY 2022. After taking over, the Concessionaire has done overlay in FY 2022 with 30 mm / 40 mm BC, in the sections wherever the Roughness value is exceeding as mentioned in the Concession Agreement. The Concessionaire has also done overlay with 50 mm DBM and 30 mm / 40 mm BC in FY 2022 for the distressed portion. This portion of the Project Road constitutes 70% of the flexible pavement of the Project Road. Hence, major maintenance for this stretch is considered in FY 2029.

For the rest of the Project Road of about 30%, minor rectification works are carried out as there was no major distress found. The traffic volume and VDF are also found considerably less for this section. Hence, Major Maintenance for this stretch is considered in FY 2027.

As per the present condition of the rigid pavement, the surface roughness on the rigid pavement is required to be reduced. Hence, to achieve this, the Concessionaire has proposed to overlay a Bituminous Concrete (BC) layer over the existing rigid pavement, as complete panel replacement of the rigid pavement is not feasible due to heavy traffic movement on the corridor.

Furthermore, the National Highways Authority of India (NHAI) has awarded certain portion of the project stretch to various contractors, including Gawar Construction Limited, Chaudhary Construction Company Private Limited, and Atlas Construction Pvt. Ltd. Hence, the total length of this particular stretch, which is about **14.016 km**, has been descoped from the Concessionaire's scope. Consequently, this length is also excluded from the Concessionaire's maintenance obligations for the remaining Concession period.

Earlier on the service roads, a Bituminous Concrete (BC) overlay of 30 mm / 40 mm thickness was provided on both sides at distressed locations during FY 2022. However, during the recent site visit, it was observed that several portions of the service road are deteriorated due to waterlogging during the rains. The Concessionaire is responsible for maintaining the service roads in good condition and, therefore, will be required to carry out BC overlay over a length of **38.0 km**, out of the total **102.0 km** of service road, during **FY 2027**.

The maintenance can be carried out as and when required basis and to the compliance of Schedule-K requirement to maintain the road in serviceable condition. Only improvement in Riding Quality is expected if the roughness value exceeds 2500 mm/km.

The table below shows the Major / Periodic maintenance cycle throughout the concession period for the project road.

Table 4-8 Major Maintenance Cycle

Sr. No.	Year	Main Carriageway	Service Road
1	FY 2022	Major Maintenance completed at Site	
2	FY 2024 to FY 2026	-	-
3	FY 2027	Major maintenance with 30 mm PMB (100%) + Milling & 50 mm DBM (7%) (For section from km. 20.500 to km. 64.500)	Major maintenance with 30 mm BC (40%) + Micro-surfacing (60%) for 38.0 Km Length
4	FY 2028	-	-

Sr. No.	Year	Main Carriageway	Service Road
5	FY 2029	Major maintenance with 40 mm PMB (100%) + Milling & 50 mm DBM (5%) (For section from km. 64.500 to km. 200.000)	Major maintenance with 30 mm BC (50%) + Micro-surfacing (50%) for 64.0 Km Length
6	FY 2030 to FY 2033	-	-
7	FY 2034	Major maintenance with 30 mm PMB (100%) + Milling & 50 mm DBM (7%) (For section from km. 20.500 to km. 64.500)	-
7	FY 2035	-	-
8	FY 2036	Major maintenance with 40 mm PMB (86%) & 30 mm PMB (14%) + Milling & 50 mm DBM (5%) (For section from km. 64.500 to km. 200.000)	Major maintenance with 30 mm BC (45%) + Micro-surfacing (55%)
9	FY 2037 to FY 2040	-	-
10	FY 2041	Major maintenance with 30 mm PMB (100%) + Milling & 50 mm DBM (1%) (For section from km. 20.500 to km. 64.500)	-
11	FY 2042	-	-
12	FY 2043	Major maintenance with 30 mm BC (100%) (For section from km. 64.500 to km. 200.000)	Major maintenance with 30 mm BC (45%) + Micro-surfacing (55%)

**Actual end of concession period as per Concession Agreement is October 2038. As informed by Concessionaire, the revised concession period is up to March 2044*

**About 14.016 Km of the project length has been descoped from the total project length of 179.50 Km. Thus, 165.484 Km is the remaining length of project, considered under the Concessionaire's scope and under Tollable length.*

The projected cost for Periodic / Major Maintenance is presented in the subsequent chapter.

5 COST ESTIMATES

5.1 General

Based on the assessment carried out in previous chapters, various costs were worked out. The costs are divided into following categories.

I. Balance Works Cost
II. Routine Maintenance (O&M) Cost
III. Major Maintenance Cost
IV. Periodic Replacement of TMS / ATMS system

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and escalation.

5.2 Rate Assumption

Following assumptions are considered for unit rates of various items while estimating the cost:

1. Unit rates of different items (BC, DBM, Concrete etc.) are calculated as per the MoRTH Standard Data Book 2019. The input rates for MoRTH standard data book were adopted as below:

   a. **Manpower and labour:** As per applicable minimum wages published by Ministry of Labour & Employment, Government of India.

   b. **Bitumen:** Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. Same discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.

      Therefore, bitumen prices are considered as per the forecast of the Client. Current published rates of bitumen are considered for unit rate calculation for FY 2027. Average bitumen price for 10 years is considered for unit rate calculation for FY 2028 and onwards. Polymer and modification costs are provided by the Client to work out the BC rate with PMB.

      Following rates of bitumen are considered.

Table 5-1 Bitumen Rates - Ex-MI Supply excluding discount and GST.

Sr. No.	Supply Location	Applicability of Rates	Product	Rate for FY 2027 (Rs. / MT)	Rate for FY 2028 onwards (Rs. / MT)
1	Mathura	All States	VG-10	45,102	35,125
2			VG-30	46,402	36,137
3			VG-40	48,962	38,131

23			VG-30	45,402	33,395
24			VG-40	47,962	35,320
25	CPCL	Karnataka	VG-10	44,602	32,719
26			VG-30	45,402	33,395
27			VG-40	47,962	35,320

c. Sand and Aggregate: Market rates are considered from the quarry located nearest to Project road.

d. Cement: Market rates are considered from the nearest local market.

e. Steel : Market rates are considered from the nearest local market.

f. Machinery Hire charges: Hire charges for the machinery are considered in accordance with applicable PWD SOR.

g. Rates of items as per Work Order: The rates of items such as kerb raising, micro-surfacing, milling, road marking, road stud etc. are based on the actual rates at which the work to be executed and thus are considered as per the Work Orders shared by the Client which is issued to the Contractors executing these works at the site.

2. Goods and Service Tax (GST) is considered as 18% as per the latest Government Guidelines.

Summary of Unit Rates worked out using Standard Data Book adopted for major items is given below.

Table 5-2 Summary of Unit Rates

Sr. No.	Item Description	Unit	Rates (Rs.) for FY 2027	Rates (Rs.) for FY 2028
1	Dense Bituminous Macadam	Cum	10,734	9,396
2	Bituminous Concrete	Cum	12,363	10,723
3	Bituminous Concrete with PMC	Cum	14,471	12,968
4	Milling	Sqm	93	93
5	Micro-surfacing	Sqm	163	163
6	Kerb raisings	Rm	316	316
7	Road Marking	Sqm	485	485

Sr. No.	Item Description	Unit	Rates (Rs.) for FY 2027	Rates (Rs.) for FY 2028
8	Road Studs	Nos.	193	193

5.3 Balance Work Cost

As discussed in the previous chapter, an approximate cost of balance works is about **Rs. 3.97 Crores**. These works are mainly in the sections where there is LA / utility issue; and thus, these works are pending and not taken up due to massive law & order and LA / utilities issues. These works are expected to be taken up as & when the land is made available by NHAI to the Concessionaire. Concessionaire has already informed to NHAI for considering all the balance works under Punch list B.

5.4 Routine O&M Cost

Routine O&M cost is comprised of manpower cost, toll operation cost, power & electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area. Same has been divided into following major heads.

1. Salary and Welfare Expenses
2. Tolling Operations Services
3. Toll Security Services
4. Incident Management Services
5. Electricity and Diesel Charges
6. TMS / HTMS / System Expenses
7. Office Operating Expenses
8. Vehicle Running Expenses
9. Professional Fees Expense
10. Community Development
11. Communication Expenses
12. Conveyance Expenses
13. Insurance Expense
14. IE Fees
15. Horticulture & ROW Maintenance
16. Routine Maintenance Cost

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Operation Cost is presented as below. The detailed working of routine maintenance (Sr. No. 15 of below table) is presented in **Annexure-I**.

Table 5-3 Summary of O&M Cost

Sr. No.	Particulars	Amount (Rs.) (FY 2027-44)
1	Salary and Welfare Expenses	3,14,64,000
2	Tolling Operations Services	13,68,84,063
3	Toll Security Services	1,81,94,906
4	Incident Management & Emergency Services	5,36,04,360
5	Electricity and Diesel Charges	3,59,11,022
6	TMS/HTMS/System Expenses	1,27,95,221
7	Office Operating Expenses	81,63,971
8	Vehicle Running Expenses	61,41,000
9	Professional Fees Expense	1,29,20,319
10	Community Development	65,35,374
11	Communication Expenses	10,95,806
12	Conveyance Expenses	3,98,475
13	Insurance Expense	17,37,707
14	IE Fees	1,39,16,091
15	Routine Maintenance Cost (Project Road)	10,54,98,903
16	Horticulture & ROW Maintenance	6,52,58,990
17	Miscellaneous including Contingency	1,35,90,493
	Total Cost (Rs.)	**52,41,10,702**
	Total Cost (in Crores.)	**52.41**
	Per km Cost (in Lakhs)	29.20

5.5 Major Maintenance Cost

The Concessionaire has completed an overlay on both sides of the project MCW in about 70% of the flexible road part of the project length. As per the Concessionaire, 30mm / 40 mm BC overlay has been laid and at distress portion 50 mm DBM has been laid at the site in FY 2022.

The summary of Major Maintenance Cost is provided as below. The detailed working of the same is presented in **Annexure-II.**

Sr. No.	Year	Major Maintenance Cost (Cr.)	Remarks
1	FY 2024 to FY 2026	-	
2	FY 2027	81.39	
3	FY 2028	-	
4	FY 2029	277.42	
5	FY 2030 to FY 2033	-	
6	FY 2034	53.79	
7	FY 2035	-	
8	FY 2036	280.81	
9	FY 2037 to FY 2040	-	
10	FY 2041	54.48	
11	FY 2042	-	
12	FY 2043	206.41	
	Total Cost	**954.29**	

5.6 Periodic Replacement of TMS / ATMS System

Every 7 years, Replacement Cost of major TMS/ATMS system is considered. The same is provided as below.

Sr. No.	Year	HTMS O&M / Replacement Cost (Cr.)	Remarks
1	FY 2027	2.30	
2	FY 2034	2.30	
3	FY 2041	2.30	
Total Cost (Cr.)		**6.90**	

5.7 Escalation Assumption

Following escalation has been considered for the O&M cost as provided by Client.

Table 5-4 Escalation

Year	Escalation	Year	Escalation
2028	4.86%	**2041**	3.99%
2029	4.44%	**2042**	3.99%
2030	4.24%	**2043**	3.99%
2031	4.13%	**2044**	3.99%
2032	4.08%	**2045**	3.99%
2033	4.01%	**2046**	3.99%
2034	4.00%	**2047**	3.99%
2035	4.03%	**2048**	3.99%
2036	4.01%	**2049**	3.99%
2037	3.98%	**2050**	3.99%
2038	3.98%	**2051**	3.99%
2039	4.00%	**2052**	3.99%
2040	3.99%	**2053**	3.99%

5.8 Summary of Cost

Routine Maintenance (O&M) costs and the Periodic Maintenance costs have been worked out based on the investigations and assessment carried out for the Project Road. Cost for each of the category has already been discussed in previous sections. Since the forecasting has been carried out for the remaining Concession Period, the cost is summarised year wise in the following table for the remaining Concession Period along with the escalation as mentioned in Clause 5.7.

Escalated O&M Cost (Cr.)

	Year of expense	FY27	FY28	FY29	FY30	FY31	FY32	FY33	FY34	FY35	FY36	FY37	FY38	FY39	FY40	FY41	FY42	FY43	FY44
1	Routine O&M Cost																		
1.01	Salary and Welfare Expense	3.15	3.30	3.45	3.59	3.74	3.89	4.05	4.21	4.38	4.56	4.74	4.93	5.12	5.33	5.54	5.76	5.99	6.23
1.02	Tolling Operations Services	13.69	14.35	14.99	15.63	16.27	16.94	17.61	18.32	19.06	19.82	20.61	21.43	22.29	23.18	24.10	25.06	26.06	27.10

	i) Cleaning of culvert bed	100%	Once in a Year	2793
	ii) Repair of floors	100%	Once in a Year	5055
	iii) Repair of parapets	100%	As & when required	2106
	SUB TOTAL			**9,954**
4	**Maintenance of Minor & Major Bridges:**			
	i) Cleaning and removal of dirt & vegetation from pier caps, Bearings, Expansion Joints, Superstructure, Substructure and Retaining wall etc.	100%	As & when required	36,950
	ii) Spot painting & protective Coating required on Bearing and greasing of Bearings, railing, structural members, Expansion joints			
	iii) Repair of minor washouts, erosion scour and animal holes			
	iv) Sealing Cracks with Cement/ Epoxy Mortar			
	v) Replacement & Correction of safety barriers, Guard rails and damaged members			
	SUB TOTAL			**36,950**
5	**Miscellaneous Items:**			
	i) Turfing and Arboriculture		Once in a Year	2463
	ii) Maintenance of gang hut store, sheds, animal & debries removal		Once in a Year	3695

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity**
				More than 4500 CVD
				BT Surface
1	**2**	**3**	**4**	**5**
	iii) Lettering, Painting of Km stones, sign boards, hectometer stone etc.		Once in a Year	3695
	iv) Replacement and providing additional retro reflective signage	20%	Covering Total Network in 5 Years	7390
	v) Providing first aid kits, Umbrella, Safety Jackets, Vardi etc.		Once in a Year	1232
	vi) Traffic Census		Once in a Year	2464
	vii) Provision for roughness measurement		Twice in a Year	1478
	SUB TOTAL			**22,417**
	GRAND TOTAL (Normal)			**2,31,779**
6	**Additional Cost required for Urban Area**			
	i) Renewal of Center Line, Edge Marking, Kerb Marking/ Zebra crossing etc. in City Portion	33%	Once in three years with thermoplastic paint	1550
	ii)Repairs to footpath	100%	As & when required	4927
	iii) ROB/ Fly-over Railings & repair	100%	As & when required	4927
	iv) Street Lighting	100%	As & when required	12317
	v) Encroachment Removal Squad	100%	As & when required	7636
	vi) Repair of divider/ Railing in City portion	100%	As & when required	9853
	vii) Provision for maintenance of pedestrian underpass	100%	As & when required	2463
	SUB TOTAL			**43,673**
	GRAND TOTAL (Urban)			**2,75,452**

ANNEXURE II - MAJOR MAINTENANCE COST

1 INTRODUCTION

1.1 Background

Cube Highways Fund Advisors Pvt. Ltd. (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InvIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an Infrastructure Investment Trust under the SEBI InVIT Regulations. Cube Highways Fund Advisors Pvt. Ltd. has appointed **M/s. FP Project Management Consultancy Services Private Limited** (hereinafter referred as "Technical Consultant" or "FPPM") to carry out Technical Due Diligence of Farakka - Raiganj Section of NH-34 (New NH-12) from km. 294.800 to km. 394.980 in the State of West Bengal. The project is to be developed on Design, Build, Finance, Operate and Transfer (DBFOT) basis (the "Project") under NHDP Phase-III.

Farakka Raiganj Highways Limited (hereinafter referred as "Concessionaire") is a special purpose vehicle (SPV) for tolling, operation, maintenance and transfer of Farakka to Raiganj Section (from km. 294.800 to km. 394.975) of NH-34 (New NH-12). The project is to be developed on Design, Build, Finance, Operate and Transfer (DBFOT) basis (the "Project") under NHDP Phase-III. The project was awarded to Concessionaire on 3rd February 2011 with a concession period of 30 years by National Highway Authority of India (NHAI). The length of Project Road is 99.995 kms with two Toll Plazas at km. 297+867 and at km. 351+440.

The Date of Concession Agreement is 19th July 2010. The concession period of the project is 30 years commencing from the Appointed Date. Appointed Date of the project is 03rd February 2011. Provisional Completion Certificate for the project was issued on 17th October 2016 and the Commercial Operation commenced from 19th October 2016. Completion Certificate was issued on 03rd May 2021 for the project length of 99.995 kms.

Sr. No.	Description	Date
1	Date of Signing the Concession Agreement	19th July 2010
2	Appointed Date	03rd February 2011
3	Scheduled Project Completion Date	01st August 2013
4	Scheduled End of Concession	02nd February 2041
5	Date of Issue of Provisional Completion	17th October 2016
6	Date of Commencement of Commercial	19th October 2016
7	Date of Issue of Completion Certificate	03rd May 2021

Presently, the project is under operation and maintenance and the Technical Consultant has undertaken the work of assessment of operation and maintenance (O&M) cost based on site inspections and field investigations. The same is accordingly presented in this report.

1.2 Scope of Work

The detailed scope of work for conducting the technical due diligence of Project Road is presented as below:

- A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets
- Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, As-built drawings, O&M manual, COD / PCOD certificate, punch list, previous major maintenance etc.

- Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, axle load, material investigations etc.
- Formulation of future major maintenance strategy
- Estimation of any initial expenses to be incurred due to deficiencies observed in diligence
- Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period
- Estimation of Annual Operation expenses along with Systems cost (TMS / HTMS) till the end of concession period
- Review of balance work cost for Project Road including estimation of quantities and item rates.

1.3 Our Approach Philosophy

1.3.1 Composition of Team

Our team consists of well-qualified engineers and other professionals, whose experience covers all the skills and specializations required for undertaking such assignments. All the team personnel proposed are our regular employees and have a long and stable working relationship with our firm.

The Team Leader coordinates the activities between all the key staff who work closely together. The key staff is assisted by various support staff, who report to the respective key staff in their field of expertise. The Team Leader is the point of contact for Client on Technical Study.

The technical study includes review of all the available documents namely:

a) Concession Agreement including Technical Schedules
b) O&M Contract, work order and their provisions
c) Quality of construction based on available data, design and drawings
d) Documents on historical expenditure on operation and maintenance
e) O&M cost schedule for the concession period
f) Review of Completion / Provisional Completion along with punch list items
g) Review of recent pavement surveys conducted
h) Correspondence regarding scope of works and during O&M
i) Recent O&M Report submitted to Authority
j) Toll operation manual / ATMS related documents

The review of above documents is the first step towards accomplishment of the task. This gives a complete idea of the project and is used as input data for preparation of report after necessary analysis.

1.3.2 Site Visit and Data Collection

A team of experts from various streams has carried out the preliminary site visit to understand the assessment of project assets mainly condition of the pavement and structures.

- The site visit is undertaken for detailed reconnaissance and visual pavement condition assessment
- The condition assessment of major structures by visual inspection

- The information like material sources and the probable cost is collected for the purpose of cost estimate

The detailed design / drawings viz. Plan & L-sections, drainage design, structure design, layout drawings for project facilities like toll plaza, bus bay, truck lay-byes, highway lighting facilities etc. are studied. Also, design / drawing and provision pertaining to road furniture are studied.

The information on availability of material in the vicinity is gathered. It has direct impact on cost of maintenance work and balance work.

The basic approach for preparation of cost estimates for operation and maintenance is as per the practice of State PWD / MORT&H in respect of highways and structures.

1.3.3 Data Analysis

Based on the study of the available information and preliminary site visits, the consultants share their preliminary observations with the Client based on the evaluation of the technical data and reports provided by the Client.

1.4 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Company. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyzing the same as per the best engineering / industry practices.

The site visit of the project highway and inspection were carried out during the period from **19th February 2026 to 22nd February 2026**.

The report is organized with the following chapters for easy understanding of various issues.

Chapter 1 **Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for due diligence studies.

Chapter 2 **Project Description:** The chapter describes existing project features, and overview of project development.

Chapter 3 **Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on site visit.

Chapter 4 **Pavement Investigation and Assessment:** The chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance.

Chapter 5 **Cost Estimates:** The chapter summarizes the forecast for O&M and major maintenance cost over the remaining concession period.

2 PROJECT DESCRIPTION

2.1 Introduction

National Highways Authority of India signed the Concession Agreement with **Farakka Raiganj Highway Limited**, a company promoted by Cube Highways or company a Special Purpose Vehicle (SPV) formed for implementing this project on 19th July 2010. The Appointed Date for the Project Road is 03rd February 2011.

2.2 Location

The Project Road is part of National Highway No. 34 of Farakka - Raiganj section in the State of West Bengal. The total project length is 99.995 kms.

The Location Map of the Project Road is presented below:

Figure 2-1 Location Map

The photographs taken during the site visit are presented below.

Figure 2-2 Start of the Project Road

Start of the Project at km. 294+800 (LHS merging lane)

Start of the Project at km. 294+800 (RHS merging lane)

Figure 2-3 End of Project Road

End of the Project at km. 394+975 (LHS)

End of the Project at km. 394+975 (RHS)

2.3 Climate

There are mainly five seasons in the West Bengal region: spring, summer, rainy season, a short autumn, and winter. A short spring is expected in some parts of the state, especially in the northern parts of North Bengal. The summer season extends from the first week of March to June. The average temperature is 30 degrees Celsius. The rainy season stretches from July to the end of September. Most of the annual average rainfall of about 125cm to 175cm occurs during this period. Autumn season is experienced in West Bengal for a very short period, from beginning of October to the middle of November. Winter season is experienced in the state from mid-November to February, with January being the coldest month. Winter is cold to mild over the plains with average minimum temperatures of 9 to 16 °C.

2.4 Terrain

The Project Road traverses through plain / rolling terrain.

2.5 Abutting Land Use

Land use along the Project Road is mostly agricultural except some part of the road stretches which passes through Built up areas.

2.6 Right of Way

The width of the existing Right of Way (RoW) throughout the project stretch is 60.0 m.

2.7 Existing Utilities

During widening of the Project Road, various affected utility services were shifted to proposed ROW. The different types of utilities found along the road include, electrical poles, telephone poles, OFC Cables, hand pumps etc.

2.8 Development as per Schedule-B

The Project Road from Farakka to Raiganj Section (from km. 294.800 to km. 394.975) of NH-34 (New NH-12). has been developed as a four-lane divided carriageway with bypasses, service road and other arrangements. The Project Road passes through rural (agricultural) as well as built-up sections.

As per Article 2 of Concession Agreement, the scope of project defined in Schedule-A and Schedule-B, (the **"Scope of the Project"**) shall mean and include, during the Concession Period:

a) Construction of the project on the Site set forth in Schedule-A and as specified in Schedule-B together with provision of project facilities as specified in Schedule-C and in conformity with the Specification and Standards set forth in Schedule-D.
b) Tolling, operation, management, maintenance, and transfer of the Project Highway subject to and in accordance with the provisions of this Agreement.
c) performance and fulfilment of all other obligations of the Concessionaire in accordance with the provisions of the Concession Agreement and matters incidental thereto or necessary for the performance of any or all of the obligations of the Concessionaire under the Concession Agreement.

Following is the Scope of Work as per Schedule-B of Concession Agreement as per which the project highway has been developed.

Table 2-1 Scope of Work as per Schedule-B of CA

Sr. No.	Type of Structure	Unit	Scope	Remark
1	O&M of Main Carriageway	km.	99.995	
2	Construction of Service Road	km.	8.34	LHS+RHS
3	Rail Over Bridge	No	01	
5	Fly Over	No	03	
6	Vehicular Underpass	No	05	
7	Major Bridges	No	03	
8	Minor Bridges	No	22	
9	Culverts	No	92	

3 CONDITION ASSESSMENT OF PROJECT ROAD

3.1 Pavement

The Project Road is four lane divided carriageway and generally has paved carriageway of 8.75 m with earthen shoulder of 2.0 m on either side. The Project Road has suitable median width throughout its length. Service Road of 7.0 / 5.50 m width has been provided on one side or both sides wherever required in built up area to cater for the local traffic.

The entire stretch of Project Road including service road is constructed with flexible pavement. The pavement type for the toll plaza including taper is of rigid pavement.

3.1.1 Pavement Condition Survey

Pavement condition survey was carried out during the period from **19th February 2026 to 22nd February 2026** through visual inspection for the entire project length. From the visual inspection, it is found that the overall pavement condition of the Project Road is found to be Good to Fair.

Some of the photographs taken during the site visit are presented as below.

Figure 3-1 Photographs of Pavement Condition - Good (MCW)

Pavement Condition at km. 331+550 (LHS)

Pavement Condition at km. 318+270 (RHS)

Pavement Condition at km. 387+550 (LHS)

Pavement Condition at km. 316+000 (LHS)

Pavement Condition at km. 318+240 (LHS)

Pavement Condition at km. 366+760 (LHS)

Pavement Condition at km. 388+000 (RHS)

3.2 Service Road / Slip Road

The service road of width 7.0 m / 5.5 m is constructed in built-up areas and adjoining underpass locations. The project road has total service road length of 8.34 kms on both sides. The photographs taken during the site visit are presented below.

Figure 3-3 Photographs of Service / Slip Road

3.3 Major / Minor Junctions

There are 13 nos. of major junctions and 209 nos. of minor junctions along project road. The junction details are presented in the table below.

Table 3-1 Details of Major Intersections (Junctions / Intersections)

Sr. No.	Existing Chainage (km)	Design Chainage (km)	Category of Road	Type of Junction	Remarks
1	297.740	395.637	Township Road	4-legged	NTPC Township More

3.4 Condition Survey of Bridge & Major Structures

The inventory of Structures including major bridges, minor bridges, ROB's, flyover, underpasses and culverts is presented in table below.

Table 3-2 Details of Summary for Structures

Type of Structure	Total Number of Structures
Rail Over Bridge (ROB)	01
Fly Over	03
Vehicular Underpass	05
Major Bridges	03
Minor Bridges	22
Culverts	92
Total	**126**

The detailed condition survey of structures was carried out by visual inspection. The observations and findings are presented in table below:

Table 3-3 Condition Survey of Major Structure

Sr. No.	Chainage (km)	Type of Bridge / Spans	Features and Observation			General Comments
			Component	**LHS**	**RHS**	
1	**296.923**	**Minor Bridge**	**Age**	Old 2 lane Low level (1 x 6.10 m)	New (1 x 7.4 m)	The old and new bridges are in sound condition. Wearing course of the old bridge repairing completed.
			Foundation	Open foundation	Open foundation	
			Sub structure/ Abutment / Pier	RCC Wall	RCC Wall	
			Super Structure	RCC slab	RCC slab, Box type	
			Slope Protection	RCC wing wall is provided. Pitching is found	RCC return & pitching is found	
			Nalla Bed	Bushes is developed		
			Parapet / Railing	RCC railing is provided	RCC parapet is provided	
			Expansion Joints	No	No	
			Wearing Coat Surface	BC Surface is found crack. No joint is found. Cracks at approach joint repairing completed	BC is in good condition	
			Approach Slope	Stable condition	Stable condition	
			Drainage	No problem	No problem	
2	**302.251**	**Major Bridge (Pagala River)**	**Age**	New 2 lane + footpath Span - 4 x 40 m +2 x20m	Existing 2 lane + footpath Low level by 8' Span - 12 x 8m + 2 x 5m	The old and new bridges are in sound condition. Some settlements are noticed at approach road A1&A2 LHS.
			Foundation	Pile foundation	Open foundation	
			Sub structure / Abutment / Pier	Circular RCC pier	RCC wall	
			Super Structure	Segmental box girder Slab	RCC solid slab minor damage noticed P4-P5	
			Bearing	No problem	-

3.5 Condition Survey of Culverts

The cross-drainage structures include hume pipe culverts and box culverts at various locations. There is total 92 culverts along the Project Road. The height of culvert varies from 1.0 m to 3.0 m from bed level. During the condition survey of structure, these culverts were inspected on sample basis.

The project involves strengthening and widening of existing road to four lane divided carriageway. The culverts beneath existing alignment are either widened or reconstructed. The structural condition of culverts is generally found in sound condition. The quality of surface concrete of box culverts is satisfactory. The RCC parapet, crash barrier or RCC railing has been provided at culvert locations, which is maintained properly.

In most of culverts, the waterway is clear. However, near to urban area and at some locations found blocked due to debris, drainage water or bushes, tree growth, which will be removed by the Concessionaire. The cement concrete pitching or stone pitching has been provided for slope protection.

The culverts are maintained by the Concessionaire during O&M period. However, for some culverts, pitching, apron etc. are found to be damaged which is being rectified under routine repair work.

Median Longitudinal Drain at km. 319+000

New Median Drainage work in progress at km. 321+450 (LHS) & at km. 317+500 (LHS)

3.7 Slope Protection

Slope protection and chute drains are found on project roads at required locations. A few of the slope protection and chute drains are damaged which are being rectified by the Concessionaire. The photographs taken during site visit is presented as below.

Figure 3-10 Photographs of Slope Protection and Chute Drain

Slope Protection at A1 RHS Approach MJB km.302+251

Slope Protection at MJB km. 325+223 (A2-RHS)

3.8 Road Furniture

The Concessionaire has provided road furniture along the Project Road as per the standards and specifications mentioned in Schedule-C. Details of the items are provided below.

a) Highway Lighting Along the Project Road

Highway lighting is provided at major bridge, underpasses, flyovers, toll plaza, ROBs and built-up locations. High mast lighting is provided at toll plaza and at major junction locations. Highway lighting is also provided at approaches of underpass and flyovers. Some of the photographs of highway lighting are presented below.

Figure 3-11 Photographs of Street Lighting

Highway Lighting at km. 324+800

Highway Lighting at km. 326+150 (Median)

Highway Lighting at km. 340+400 (Median)

High Mast Lighting at km. 351+400

b) Pavement Marking

Pavement marking for the Project Road is done as per the design standards indicated in section 12 of Schedule-D. Pavement marking is faded at some locations which needs to be rectified by the Concessionaire. Some of the photographs of road marking are presented below.

Figure 3-12 Photographs of Pavement Marking

km. 296+923

km. 319+000

At km. 328+540 (LHS) and at km. 337+200 LHS - Merging lane Marking

c) Road Studs / Cat's eyes

Road studs / Cat's eyes for the Project Road are provided as per the design standards indicated in Section 12 of Schedule-D. Cat's eye have been fixed at junction and zebra crossings. However, at few locations some studs / cat's eye have damaged which will be rectified by the Concessionaire.

Some of the photographs of road studs are presented below.

Figure 3-13 Photographs of Road Studs

Studs at Major Junction Gajol at km. 352+782

Studs & Pedestrian crossing marking at Minor Junction at km. 302+850

d) Traffic Signages

Traffic signs include roadside signs, overhead signs, kerb mounted signs and median signs along the Project Road. The design for the traffic signs along the Project Road is done as per the design standards indicated in section 11 of Schedule-D.

The height, lateral clearance, location and installation are as per relevant clauses of Schedule 'D'. Overhead sign has been installed ahead of major intersections, toll plazas, start / end of Project Road and urban areas as per detailed design requirements.

Kilometre stones, vertical post of sign boards, chevron boards and median kerb paint are faded at few locations which will be rectified by the Concessionaire. Some of the photographs of sign boards are presented below.

Figure 3-14 Photographs of Road Signages

Overhead full gantry at km. 353+950

Overhead Half Gantry Sign at km. 286+875

U-Turn Prohibited Sign at km. 326+410 LHS

Hazard marker Sign at km. 379+963 MNB (LHS)

Kilometre Stone at km. 296+000 (LHS)

e) Crash Barriers

Metal beam crash barriers are provided at bridge approaches, locations of high embankment and sharp curves. All the crash barriers provided by the Concessionaire are maintained at site. Some of the photographs of metal beam crash barriers are presented below.

Figure 3-15 Photographs of MBCB / Crash Barrier

MBCB at km. 316+000 (LHS)

MBCB at km. 319+580 (LHS)

MBCB at km. 355+600 (RHS Shoulder)

MBCB at km. 328+650 (LHS Shoulder)

f) Pedestrian Guard Rail

The pedestrian guard rails are provided in the median in the built-up sections. It is maintained by the Concessionaire.

Some of the photographs of pedestrian guard rails are presented below.

Figure 3-16 Photographs of Pedestrian Guard Rail

Pedestrian Guard Rail at km. 302+690 to km. 302+840

Pedestrian Guard Rail at km. 331+500

Pedestrian Guard Rail at Median km. 348+450

g) Road Boundary stone

Road boundary stone not found / available along the Project Road.

3.9 Avenue Plantation and Median Plantation

Avenue plantations and median plantations are provided along the Project Road except at built-up locations as per IRC specification.

The photographs taken during site visit is presented as below.

Figure 3-17 Photographs of Avenue Plantation and Median Plantation

Median Plantation at km. 318+260

Avenue Plantation at km. 376+000

Median Plantation at km. 311+720

Avenue Plantation at km. 320+700 (LHS)

3.10 Toll Plaza

The Concession Agreement requires construction of Toll Plaza at 2 nos. of locations. Accordingly, the Concessionaire has constructed 2 nos. of Toll Plaza at the following locations.

1. Toll Plaza-1 at km. 297+867
2. Toll Plaza-2 at km. 351+440

Table 3-4 Details of Summary for Toll Plaza Items

Sr. No.	Particulars	Details
1	Toll Plaza Chainage	km. 297+867 & km. 351+440
2	Number of Tolling Lanes	12 lanes for toll operation plus 2 lanes for over dimensional vehicles at each toll plaza.
3	Weigh in Motion Facility (Number of Lanes)	Yes
4	No. of ETC Lanes	in each direction
5	Number of Toll Booths	9 singles
6	Canopy	Present
7	Administrative Building	Present

Sr. No.	Particulars	Details
8	Parking cum Toilet Block	Present
9	Availability of Tunnel or Elevated Walkway for Movement between Toll Lanes and Administrative Building	Tunnel / Yes
10	Availability of Static Weigh Bridge	Yes
11	Availability of Loading / Unloading Facility for Overloaded Vehicles	Yes
12	Storage facility for Overloaded Material	Yes
13	High mast Light	Yes
14	Streetlight	Yes
15	Low mast Light	No
16	User Fee Boards	Yes
17	Cantilever / Gantry Boards	Yes
18	Automatic boom barrier	Yes

Medical & Traffic Aid Post of Toll Plaza at km. 297+867

Nursery at Toll Plaza at km. 351+440

Admin building of Toll Plaza at km. 351+440

Staff Bus & Ambulance at Toll Plaza km. 297+867

3.10.1 Lane Equipment

Following are the lane hardware and equipment installed at toll plaza.

1. RFID ETC Transceiver
2. Lane Controller with Industrial PC
3. AVC Sensors
4. Automatic Lane Barrier (ALB)
5. Lane Traffic Light and user fare display
6. Incident Capture Camera
7. Overhead Lane Signals
8. Traffic Lights
9. Toll Booth Equipment

3.10.2 RFID ETC Transceiver

RFID ETC Transceiver reads tags installed on the windshield of vehicles and mounted on a pole at about 6 m height. Handheld RFID readers are provided (1 no. in each direction) in case a tag is not detected by the fixed reader.

RFID at Toll Plaza at km. 297+867

3.10.3 Lane Controller with Industrial PC

Toll Lane Controller is located within the Electronic Enclosure placed inside each toll booth which are connected to the common server and are capable of independent storage of data.

Lane Controller & WEM Controller in Tunnel at Toll Plaza at km. 297+867

3.10.4 Automatic Vehicle Classification (AVC) Sensors

The AVC equipment comprises of a pair of height sensor poles, axle sensors and inductive loops. The height detector has a high sensing resolution and detects height when object blocks the path. The presence of vehicle is detected by inductive loop. The loop sensors embedded on the pavement trigger the AVC height sensors located on parallel pillars.

Automatic Vehicle Classification & Counting (AVCC) at Toll Plaza at km. 297+867

3.10.5 Automatic Lane Barrier

Boom barriers installed on all lanes are in working condition and have a working time of 0.6 - 0.9 s. Automatic Lane Barrier is used to allow only authorized vehicles to pass through the lane. The barrier is activated only on generation of user fee receipt or other relevant vehicle processing activity.

Automatic Lane Barrier (ALB) at Toll Plaza at km. 297+867

3.10.6 Lane Traffic Light (LTL) & User Fare Display (UFD)

Lane Traffic Light (LTL) is used to instruct vehicles to stop or pass through the lane. The LTL is RED when the toll collector is expecting the vehicle at the booth. After the transaction is done; the LTL turns Green to instruct the vehicle to pass through the lane.

LTL & UFD at Toll Plaza at km. 297+867

3.10.7 Incident Capture Camera (AVC Camera)

The incident capturing camera is installed on island of the booth to capture the image of the vehicle from the back side. The AVC triggers the Image capture system.

3.10.8 License Plate Image Capture Camera (LPIC)

License Plate Image capture camera is installed on a 3 m pole facing incoming vehicle to capture the image of the vehicle number plate.

LPIC at Toll Plaza at km. 297+867

3.10.9 Over Head Lane Signal (OHLS)

The Overhead Lane Signal (OHLS) for lane “Open” and “Close” sign consists of a pair of “GREEN” (arrow) and “RED” (cross) lights. The OHLS is located at the vehicle approaching side of the canopy to show the drivers whether the lane is open or closed.

OHLS at Toll Plaza at km. 297+867

3.10.10 Medium Speed Weigh in Motion (MSWIM)

Medium Speed Weigh in Motion (MSWIM) is installed on entry lanes of Toll Plaza.

Medium Speed Weigh in Motion (MSWIM) at Toll Plaza at km. 297+867

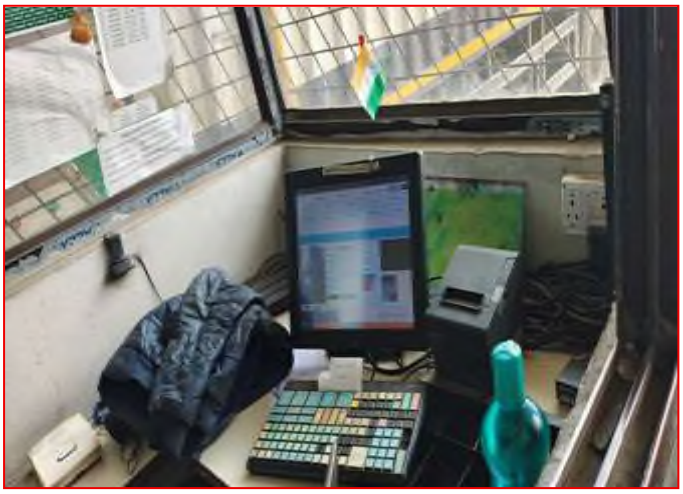
3.10.11 Toll Booth Equipment

Toll Booth Hardware / Equipment provided are:

- Toll Collector Display (Operator Monitor)
- Customized Industrial Keyboard
- Receipt Printer
- Intercom Slave unit
- Bar code reader
- Violation Light and alarm
- Manual Booth Control (MBC)
- Booth Camera

The operator monitor termed as Toll Collector Display (TCD) is located on the toll collector's desk. It is the system's interface to the toll collector, to display the status of transactions and status of the lane peripherals.

The keyboard on the toll terminal is a programmable keyboard for Registration of toll operations and is customized for different vehicle types and type of ticket.



Toll Booth & Tunnel at TP-1 km 297+867

Thermal printers are installed at the toll booths to print tickets. Intercom slave unit facilitates communication with the master unit located in the control room.

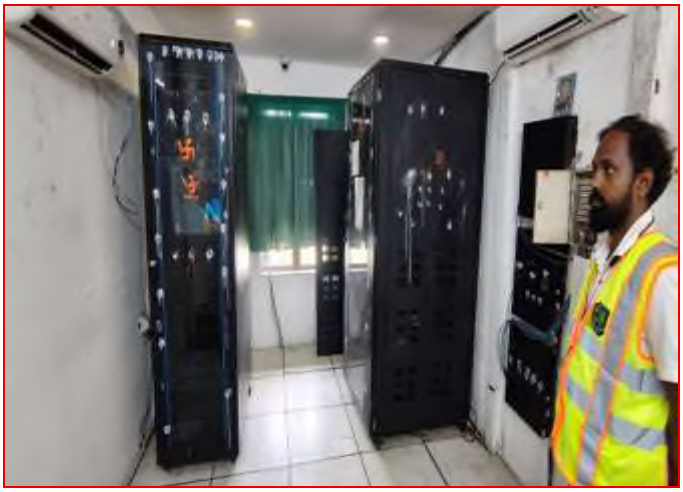
Violation system has an alarm switch which is triggered whenever there is a violation such as run-through happening on the lane. When there is an emergency, a foot switch pressed by the booth operator alerts the control room.

Booth Cameras are provided on the inside roof corner of the booth to provide surveillance through CCTV screen located in the control room. Manual Booth Controller is used to release exempt vehicles.

3.11 Toll Plaza Equipment

3.11.1 TMS Server

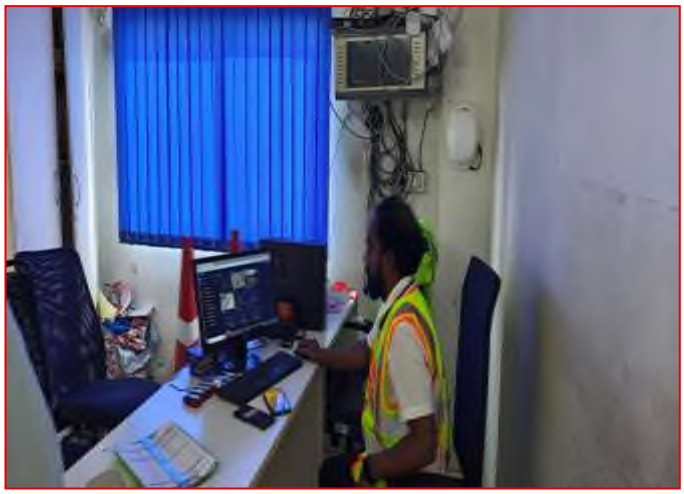
Plaza Server is provided in a hot standby configuration and provided with port non-POE network switch and Port PoE switch.



TMS Server at TP1 km. 297+867

3.11.2 LED screen for CCTV monitoring

LED screen for CCTV monitoring installed at the toll plaza admin block provides view of all the toll booths, important zones within the plaza where cash transactions take place (server room, control room, cash up).

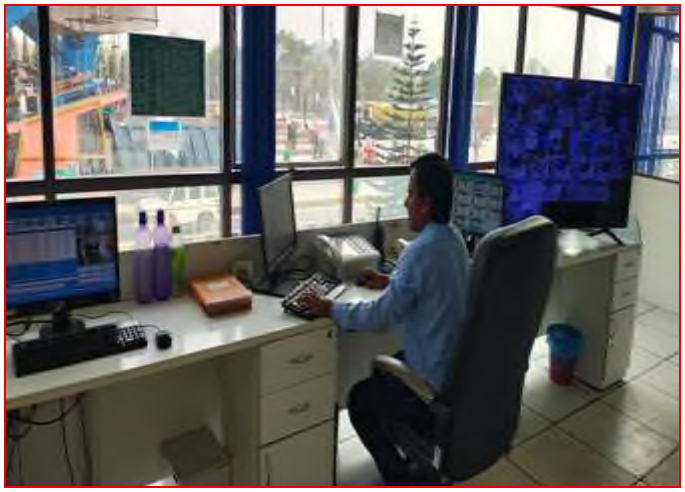


HTMS CCTV and TMS Monitoring at TP1 at km. 297+867

The Toll Plaza Manager is able to observe the activities at the toll lanes and toll booth. When the toll collector calls up on the intercom, the manager is able to comprehend the situation at the lane by a zoomed view of the particular lane.

3.11.3 Workstations in Control Room, POS room

Workstations are available in control room (lane monitoring, administration, and audit), cash room and POS room.



Control Room at TP-1 km. 297+867

3.12 Advanced Traffic Management System (ATMS)

Advanced Traffic Management System (ATMS) installed for the Project Road is controlled by the ATMS center at toll plaza location (km. 351+440). The ATMS is provided and being maintained as per the requirement of the Concession Agreement. The ATMS provided are listed below.

- Automatic Traffic Counter cum Classifier (ATCC)
- Emergency Call Box
- Meteorological Data system
- Variable Message Signboards (VMS)
- CCTV system

Status of these systems at site are described below:

3.12.1 Automatic Traffic Counter cum classifier (ATCC)

Automatic Traffic Counter cum Classifiers (ATCC) is installed at Toll Plaza (km 351+440).

3.12.2 Emergency Call Boxes (ECB)

ECB is installed on the Project highway at the locations as per the requirement.

ECB installed on the Project Highway at km. 319+000 (LHS)

3.12.3 MET System

Meteorological sensors comprise of sensors to measure the atmospheric temperature, humidity, pavement surface temperature, visibility and equipment for measuring wind speed and direction and installed at Toll Plaza km 351+440.

MET System at Toll Plaza km. 351+440

3.12.4 Variable Message Signboards (VMS)

Variable message sign boards are installed as per CA requirement. These display specific messages to the users based on the prevailing conditions on the highway. The message can be changed at any point of time from the HTMS centre. About 250 customised messages can be stored on the system.

Variable Message Signboards (VMS)

3.12.5 CCTV Surveillance Cameras

Surveillance cameras are installed as per CA requirement along the Project Road. The ATMS control room has video wall to monitor these locations through the cameras installed.

CCTV Surveillance Cameras Display at TP2

3.12.6 Video Incident Detection System

CCTV cameras are installed as part of Video incident detection system.

3.12.7 Adequacy of Toll Collection System and ATMS

- Adequacy - All lanes are hybrid ETC system as stipulated by NHAI in Technical Specifications of Hybrid ETC system. NHAI has approved maintenance costs for TMS. TMS shall be upgraded every 7 years at the cost of the Authority.

- The Advanced Traffic Management System (ATMS) installed is as per specifications required by the Authority and in working condition.

3.13 Truck Lay-Bye

The following are the truck lay-bye locations.

Table 3-5 Details of Truck Lay-bye

Sr. No.	Proposed Chainage (km)	Existing Chainage (km)	Village Name / Location
1	298+525	300+590	Both sides on Mainline NH-34 (NEW NH-12)
2	303+365	305+410	Both sides on Mainline NH-34 (NEW NH-12)
3	318+125	319+815	Both sides on Mainline NH-34 (NEW NH-12)
4	356+325	359+740	Both sides on Mainline NH-34 (NEW NH-12)
5	367+200	370+565	Both sides on Mainline NH-34 (NEW NH-12)
6	385+575	388+530	Both sides on Mainline NH-34 (NEW NH-12)

The photographs taken during the Site Visit are presented below.

Figure 3-19 Photographs of Truck Lay Bye

Truck Lay-bye at km. 320+040 (LHS)

Truck Lay-bye at km. 356+325 (LHS)

Truck Lay-bye at km. 367+200 (LHS)

3.14 Traffic Aid Post and Medical Aid Post

Traffic Aid Post and Medical Aid Post are constructed and being maintained by the Concessionaire.

3.15 Toilet Block

There are two nos. toilet blocks and maintenance of the same is being maintained by the Concessionaire.

Table 3-6 Details of Toilet Block

Sr. No.	Chainage (km)	Side		Remarks
		LHS	RHS	
1	298+525	-	Yes	
2	303+365	Yes	-	
3	318+125	-	Yes	
4	356+325	Yes	-	
5	367+200	Yes	-	
6	385+575	-	Yes	

The photographs taken during the Site Visit are presented below.

Figure 3-20 Photographs of Toilet Block

Toilet Block at km. 318+125 (RHS)

3.16 Bus Bays and Passenger Shelters

There are 19 Nos. of bus bays / passenger shelters along the Project Road. Some of the photographs of the bus bays are presented below.

The photographs taken during the site visit are presented below.

Figure 3-21 Photographs of Bus Bays and Passenger Shelters

Bus Bay at km. 311+550 (LHS)

Bus Bay at km. 380+380 (RHS)

3.17 Balance Work Status

The project has received Completion Certificate on **03rd May 2021** by completing all the works as mentioned in the Technical Schedules of Concession Agreement. Hence, there are no balance works to be executed as per CA.

3.18 Operation and Maintenance

3.18.1 O&M Contract

As per Clause 17.1 of the Concession Agreement, the Concessionaire shall operate and maintain the Project Road by itself, or through O&M Contractors and if required, modify, repair, improve the Project Road to comply with Specifications and Standards, and other requirements set forth in the Agreement through Good Industry Practice, Applicable Laws and Applicable Permits and manufacturer's guidelines and instructions with respect to toll systems. The Operation and Maintenance activities shall confirm to all the requirements laid down in MoRT&H, IRC Specifications and the Concession Agreement.

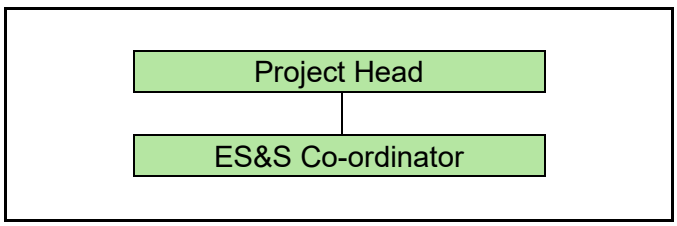
The Concessionaire has outsourced for carrying out the activities related to operation and maintenance of the Project Road including toll operation services, security services, AMC for TMC and AMC for DG set.

3.18.2 Organization Chart

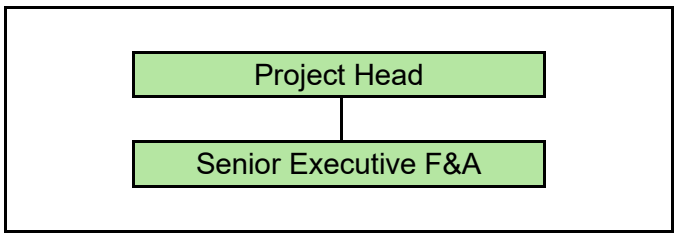
The Concessionaire has given the Organization Chart at site for Operation and maintenance. Accordingly, there is 01 Project Head, 01 Senior Executive- F&A, 01 ES&S Co-Ordinator, 01 Assistance Executive (HR), 01 Manager Maintenance 01 Assistant Manager (TMS / IT), 01 Executive (TMS / IT), 05 Supervisor, 02 Electrician, 01 Executive, 01 Sr. Executive, 02 Plaza Manager, 01 Document Controller, 07 Cashiers and 09 validators to carry out O&M activities. The team controls the maintenance activities. However, the maintenance work is undertaken and executed through competent subcontractors.

Organization Chart

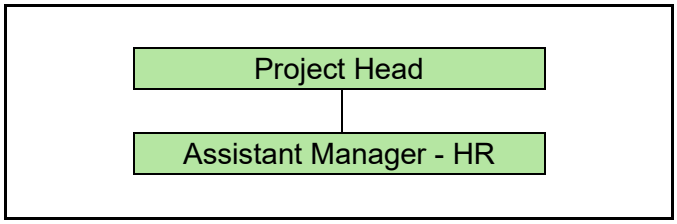
Site Administration



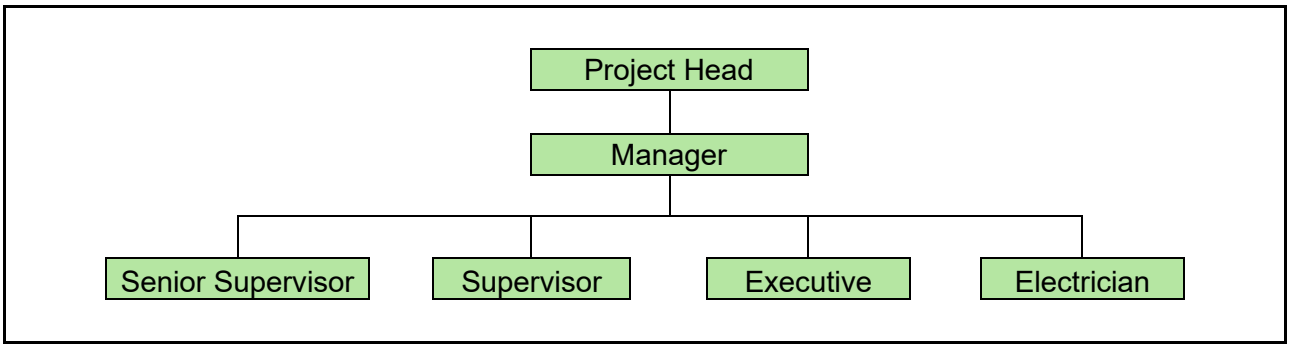
Finance & Account



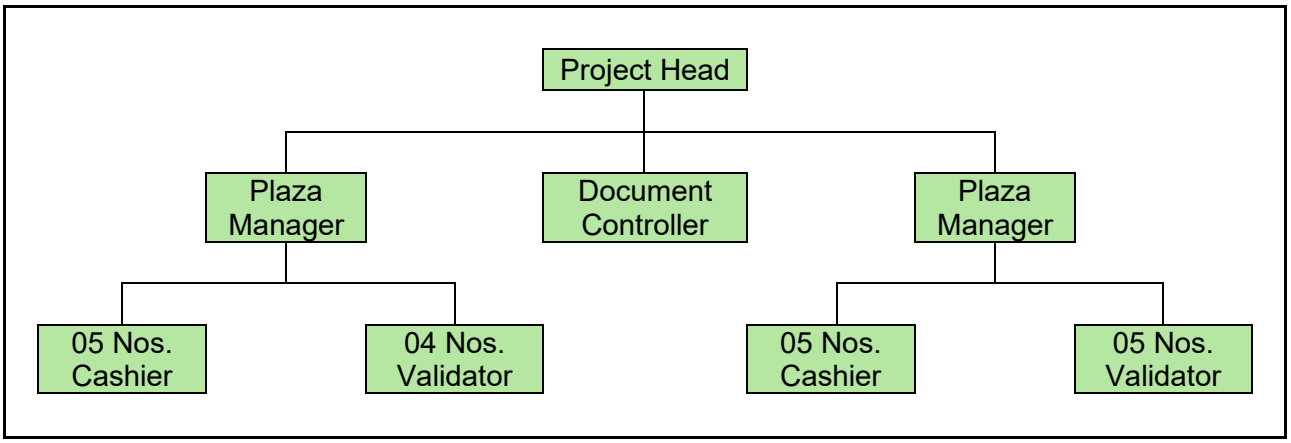
Human Resources



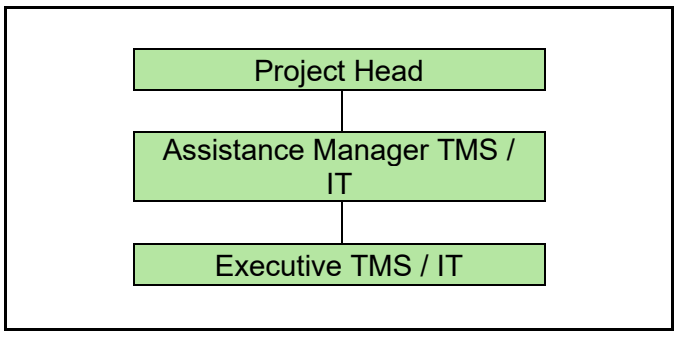
Site Maintenance



Site Operation



Operation System



3.18.3 Operation

Operation cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses and other miscellaneous expenses. The Concessionaire has provided the expenses occurred towards operation expenses for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area.

The Operation Cost is presented in the subsequent chapter.

3.18.4 Routine Maintenance

The Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey.

Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Maintenance Cost is presented in the subsequent chapter.

4 PAVEMENT INVESTIGATION AND ASSESSMENT

4.1 General

Presently, the pavement of the Project Road is being maintained by the Concessionaire as per Scope of Work. The Concessionaire initially received Provisional completion certificate for the length of 79.575 km on 19th October 2016 & further received Completion Certificate on 03rd May 2021 for the complete project stretch of 99.995 kms.

The project is currently under the Operation and Maintenance stage. The concession period of the project is 30 years from the Appointed Date 03rd February 2011 including construction period of 2.5 years.

4.2 Surveys and Investigation

4.2.1 Pavement Condition Survey

Pavement condition survey was carried out by the Technical Consultant from **19th February 2026 to 22nd February 2026** through visual inspection for the Project Road and for the entire length.

The summary of pavement condition based on the visual inspection is tabulated below.

Table 4-1 Summary of Pavement Condition

Chainage (km)		Length (km)	LHS Pavement Condition	Chainage (km)		Length (km)	RHS Pavement Condition
From	To			From (km)	To (km)		
294+800	299+000	4.200	Good	294.800	304.000	9.200	Good

4.2.2 Axle Load Survey

In order to estimate vehicle-loading pattern in the Project Area, and to determine vehicle damage factor for the commercial vehicles, axle load survey of the vehicles plying on the project road stretch was carried out at two different locations of project stretch.

Axle load survey was conducted at two locations, first at Toll Plaza-1 (km. 298.250) and second at Toll Plaza-2 (km. 351.400) from 29th June to 2nd July 2019. The survey was carried out for both directions (LHS and RHS) simultaneously and for 24 hours using standard weigh pads. The survey was carried out using random sample method for goods vehicles i.e. LCV, Bus, Trucks and Multi-axle vehicles with special axle configuration count. Vehicle damage factor for various categories of vehicles was computed.

Summary of VDF calculation is shown in below table for both TP-1 and TP-2 locations.

Table 4-2 Summary of VDF

Summary of VDF as per Axle Load Survey (June-2019)						
Type of Vehicle		**Bus**	**LCV**	**2 Axle**	**3 Axle**	**MAV**
TP - 01 (km. 298+967)	UP (F-R)	0.84	0.88	3.26	7.45	20.97
	DN (R-F)	1.04	0.98	1.71	3.92	3.86
TP - 02 (km. 351+440)	UP (F-R)	0.93	0.87	2.05	5.61	16.26

4.2.3 Design Traffic

Traffic in Million Standard Axles (MSA) for the homogeneous section based on the historical traffic data as provided by the Concessionaire, current traffic has been used for future projections and the estimated design MSA is computed and presented in subsequent table.

For the estimation of design MSA, Actual Traffic Growth Rates as provided by the Concessionaire were used.

4.2.4 Network Survey Vehicles (NSV) Survey

Roughness Survey

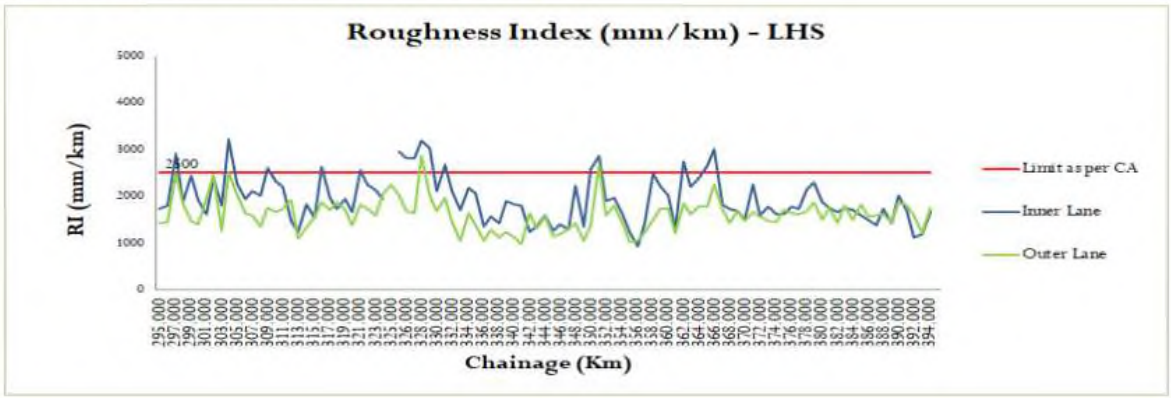
Roughness Survey results were provided by the Concessionaire for analysis and to assess the riding quality on each direction (each lane) of the carriageway of Project Road. The test is carried out on 16th October 2024.

The side-wise results of Roughness Survey are presented as below.

Table 4-4 Result of Roughness Survey

Roughness value (mm/km)	Length obtained based on roughness values (km)			
	LHS IL	LHS OL	RHS IL	RHS OL
0-1000	1.00	1.00	5.00	10.00
1000-2500	82.70	95.70	84.10	84.30
>2500	15.80	3.00	9.00	5.40

Figure 2-3: Roughness Summary for FRHL as per Schedule K of CA



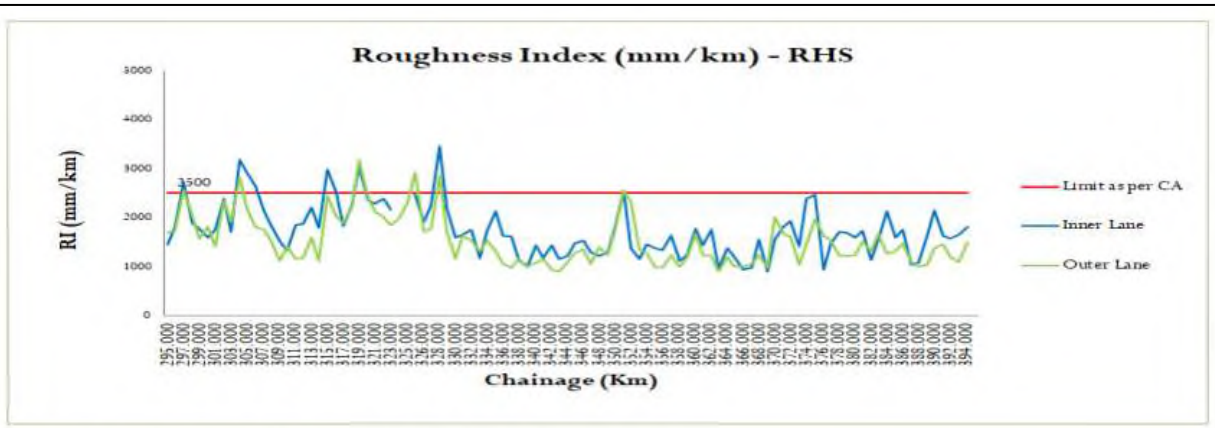


Figure 2-4: Roughness Index for FRHL as per Schedule K of CA

Observation and Conclusion:

As per the NSV test carried out in the month of October 2024 and the related Roughness results provided by the Concessionaire, it was observed that the overall pavement condition for the Project stretch is found to be Good & Fair for 90.95 kms and Poor for 8.30 kms (Survey was not conducted for the length of 0.745 km due to traffic diversion).

However, as on date, the road condition of the Project Road is better than NSV survey results for October 2024 shared by the Concessionaire. As per IE MPR for the month of January 2025 about 98.81 kms of Road is in satisfactory condition and 1.19 kms of the Road is in unsatisfactory condition.

As per observed by the Technical Consultant during site visit the pavement condition for the Project stretch is found to be Good to Fair for 99.99 kms.

4.2.5 Structural Evaluation

The structural evaluation and analysis of the remaining life of project was carried out in conformity with IRC:115-2014 “Guidelines for Structural Evaluation and Strengthening of Flexible Road Pavements Using Falling Weight Deflectometer (FWD) Technique”.

The FWD survey was conducted on the Project Road on 18th November 2024 to 25th November 2024. The summary of the same is presented below.

The remaining life for most of the project stretch is well above the design life. However, the maintenance can be carried out on as and when required basis and to the compliance of Schedule-K requirement to maintain the road in serviceable condition. However, improvement in Riding Quality is expected if the roughness value exceeds 2500 mm/km.

4.2.6 Test Pit and Subgrade Investigation

The Concessionaire has carried out the subgrade investigation for Project Road. The results of the same as provided by the Concessionaire are tabulated as below.

Table 4-5 Summary of Subgrade Test Results

4.2.8 Periodic Maintenance Strategy

The Concessionaire has completed an overlay on both sides of project MCW throughout the entire project length. In Service Road, BC overlay of 30 mm / 40 mm has been provided on both sides at distress locations in FY 2023.

The maintenance can be carried out as and when required basis and to the compliance of Schedule-K requirement to maintain the road in serviceable condition. Only improvement in Riding Quality is expected if the roughness value exceeds 2500 mm/km. The table below shows the major / periodic maintenance cycle throughout the concession period for the Project Road.

Table 4-7 Major Maintenance Cycle

Sr. No.	Year	Main Carriageway	Service Road
1	FY 2023	MM work is completed	MM work is completed
2	FY 2024 to FY 2028	-	-
3	FY 2029 & FY2030	Major maintenance with 30 mm BC (PMB) (74%) + 50 mm PMB (12%) + Micro-surfacing (14%) + Milling & 50 mm DBM (45%)	Major maintenance with 30 mm BC (100%)
4	FY 2031 to FY 2035	-	-
5	FY 2036 & FY 2037	Major maintenance with 40 mm BC (PMB) (100%) + Milling & 50 mm DBM (5%)	Major maintenance with 30 mm BC (100%)
6	FY 2038 to FY 2039	-	-
7	FY 2040 & FY 2041	Major maintenance with 30 mm BC (100%) + Milling & 50 mm DBM (5%)	Major maintenance with 30 mm BC (100%)

The projected cost for periodic / major maintenance is presented in the subsequent chapter.

5 COST ESTIMATES

5.1 General

Based on the assessment carried out in previous chapters, various costs were worked out. The costs are divided into following categories.

I. Balance Work Cost
II. Routine O&M Cost
III. Major Maintenance Cost
IV. Periodic Replacement of TMS / ATMS system

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and escalation.

5.2 Rate Assumption

Following assumptions are considered for unit rates of various items while estimating the cost:

1. Unit rates of different items (BC, DBM, Concrete etc.) are calculated as per the MoRTH Standard Data Book 2019. The input rates for MoRTH standard data book were adopted as below:

   a. **Manpower and Labour:** As per applicable minimum wages published by Ministry of Labour & Employment, Government of India.

   b. **Bitumen:** The Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. Same discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.

      Therefore, bitumen prices are considered as per the forecast of Client. Current publish of bitumen is considered for unit rate calculation for FY 2027. Average 10 years price of bitumen is considered for unit rate calculation for FY 2028 and onwards. Following rates of bitumen are considered.

      Polymer and modification costs are provided by the client to work out BC rate with PMB.

Table 5-1 Bitumen Rates - Ex-MI Supply excluding discount and GST

Sr. No.	Supply Location	Applicability of Rates	Product	Rate for FY 2027 (Rs. / MT)	Rate for FY 2028 onwards (Rs. / MT)
1	Mathura	All States	VG10	45,102	35,125
2			VG30	46,402	36,137
3			VG40	48,962	38,131
4	Panipat	All States	VG10	45,102	35,125
5			VG30	46,402	36,137
6			VG40	48,962	38,131
7	Koyali	All States	VG10	47,102	37,125
8			VG30	48,402	38,137

Sr. No.	Supply Location	Applicability of Rates	Product	Rate for FY 2027 (Rs. / MT)	Rate for FY 2028 onwards (Rs. / MT)
9			VG40	51,082	40,251
10	Haldia	All States	VG10	46,602	35,683
11			VG30	47,402	36,295
12			VG40	49,962	38,256
13	Barauni	All States	VG10	47,132	36,213
14			VG30	48,432	37,325
15			VG40	50,992	39,286
16	CPCL	Kerala	VG10	47,402	35,519
17			VG30	48,402	36,395
18			VG40	50,762	38,120
19	CPCL	Tamil Nadu	VG10	47,902	36,019
20			VG30	48,402	36,395
21			VG40	50,962	38,320
22	CPCL	Telangana and Andhra Pradesh	VG10	44,602	32,719
23			VG30	45,402	33,395
24			VG40	47,962	35,320
25	CPCL	Karnataka	VG10	44,602	32,719
26			VG30	45,402	33,395
27			VG40	47,962	35,320

c. **Sand and Aggregate:** Market rates are considered from the quarry located nearest to the Project Road.

d. **Cement:** Market rates are considered from the nearest local market.

e. **Steel :** Rate of steel is taken from SAIL

f. **Machinery Hire charges:** Hire charges for the machinery are considered in accordance with applicable PWD SOR.

g. **Rates of items as per Work Order:** The rates of road marking, road stud, kerb raising, micro-surfacing, milling, aggregate etc. are considered as per the Work Order issued to Contractor at Site shared by the client.

2. Goods and Service Tax (GST) is considered as 18% as per the latest Government Guidelines.

Summary of Unit Rates worked out using Standard Data Book / Work Order for major items is given below.

Table 5-2 Summary of Unit Rates

Sr. No.	Item Description	Unit	Rates (Rs.)
1	Dense Bituminous Macadam	Cum	10,806
2	Bituminous Concrete (VG-40)	Cum	12,262
3	Bituminous Concrete (VG-30)	Cum	11,329
4	Bituminous Concrete (PMB)	Cum	13,560
5	Milling	Sqm	93
6	Micro-surfacing	Sqm	163
7	Kerb Raising	Rmt	311

Sr. No.	Item Description	Unit	Rates (Rs.)
8	Road Marking on BC Surface	Sqm	485
9	Road Studs	Nos.	193
10	Road Marking on Micro-surface	Sqm	713

5.3 Balance Work Cost

As discussed in the previous chapter, there are no balance works to be executed as per CA. Hence, the balance work's cost is **NIL**.

5.4 Routine O&M Cost

Routine O&M cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area. Same has been divided into following major heads:

1. Salary and Welfare Expenses
2. Tolling Operations Services
3. Toll Security Services
4. Incident Management Services
5. Electricity and Diesel Charges
6. TMS / HTMS / System Expenses
7. Office Operating Expenses
8. Vehicle Running Expenses
9. Professional Fees Expense
10. Community Development
11. Communication Expenses
12. Conveyance Expenses
13. Insurance Expense
14. IE Fees
15. Horticulture & ROW Maintenance
16. Routine Maintenance Cost

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or "wear-and-tear". Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Operation Cost is presented as below. The detailed working of routine maintenance (Sr. No. 15 of below table) is presented in **Annexure-I.**

Table 5-3 Summary of Operation Cost

Sr. No.	Particulars	Amount (FY 2027-41)
1	Salary and Welfare Expenses	2,05,92,000
2	Tolling Operations Services	6,41,72,365
3	Toll Security Services	1,72,15,347
4	Incident Management & Emergency Services	4,00,71,419
5	Electricity and Diesel Charges	1,22,06,704
6	TMS/HTMS/System Expenses	74,62,995
7	Office Operating Expenses	32,73,998
8	Vehicle Running Expenses	40,84,800
9	Professional Fees Expense	1,50,94,897
10	Community Development	14,36,848
11	Communication Expenses	3,64,514
12	Conveyance Expenses	3,97,651
13	Insurance Expense	1,55,08,416
14	IE Fees	43,36,587
15	Routine Maintenance Cost (Project Highway)	3,90,92,413
16	Horticulture & ROW Maintenance	3,30,56,520
17	Miscellaneous including Contingency	82,48,742
	Total Cost (Rs.)	**28,66,16,216**
	Total Cost (Cr.)	**28.66**
	Per km Cost (Lakhs)	28.66

5.5 Major Maintenance Cost

As per the information provided by the Concessionaire, overlay has been completed at the project site with strengthening of project road in FY 2023. 40 mm BC overlay (81%) on LHS and 30 mm BC and micro-surfacing (81%) on RHS has been provided and at distress portion DBM of 50 / 95 mm has been laid.

The summary of Major Maintenance Cost is provided as below. The detailed working of the same is presented in **Annexure-II**.

The summary of Major Maintenance Cost is provided as below.

Sr. No.	Year	Major Maintenance Cost (Cr.)	Remarks
1	FY 2024 to FY 2028	-	
2	FY 2029 & FY 2030	155.98	
3	FY 2031 to FY 2035	-	
4	FY 2036 & FY 2037	151.20	
5	FY 2037 to FY 2039	-	
6	FY 2040 & FY 2041	103.48	
Total Cost (Cr.)		**410.66**	

5.6 Periodic Replacement of TMS / ATMS System

Every 7 years, replacement of cost of major TMS / ATMS system is considered. The same is provided as below.

Sr. No.	Year	HTMS O&M / Replacement Cost (Cr.)	Remarks
1	FY 2026	-	
2	FY 2033	2.46	

Sr. No.	Year	HTMS O&M / Replacement Cost (Cr.)	Remarks
3	FY 2040	2.46	
Total Cost (Cr.)		**4.92**	

5.7 Escalation Assumption

Following escalation has been considered for the O&M cost as provided by Client.

Table 5-4 Escalation

Year	Escalation	Year	Escalation
2028	4.86%	**2041**	3.99%
2029	4.44%	**2042**	3.99%
2030	4.24%	**2043**	3.99%
2031	4.13%	**2044**	3.99%
2032	4.08%	**2045**	3.99%
2033	4.01%	**2046**	3.99%
2034	4.00%	**2047**	3.99%
2035	4.03%	**2048**	3.99%
2036	4.01%	**2049**	3.99%
2037	3.98%	**2050**	3.99%
2038	3.98%	**2051**	3.99%
2039	4.00%	**2052**	3.99%
2040	3.99%	**2053**	3.99%

5.8 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summarised yearly for remaining concession period along with escalation as mentioned in clause 5.7.

Escalated O&M Cost (in INR Cr.)

	Year of expense	FY27	FY28	FY29	FY30	FY31	FY32	FY33	FY34	FY35	FY36	FY37	FY38	FY39	FY40	FY41
1	Routine O&M Cost															
1.01	Salary and Welfare Expense	2.06	2.16	2.26	2.35	2.45	2.55	2.65	2.76	2.87	2.98	3.10	3.22	3.35	3.49	3.63
1.02	Tolling Operations Services	6.42	6.73	7.03	7.33	7.63	7.94	8.26	8.59	8.93	9.29	9.66	10.05	10.45	10.87	11.30

ANNEXURES

ANNEXURE I - ROUTINE MAINTENANCE COST

Routine Maintenance Cost	
Ordinary Repair Cost for Flexible (with GST)	**3,90,92,413**
(Inclusive of GST)	**= 3.91 lakhs per km**

CONVERSION FACTORS									
National Highways / State Highways									
Reference cost taken for Two / four lane (7.0 or 14m or 21m) with 1.5m wide shoulders									
(Refer Chapter 6.17 of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 45)									
Sr. No.	**Description for Flexible Pavement**		**Factor**	**Normal** More than 4500 CVD **2,25,267**	**Urban** More than 4500 CVD **2,58,327**	**Project Length (km)**		**Per Year Project Maintenance Cost**	
						Normal	**Urban**	**Normal**	**Urban**
1	Four-lane with divided carriageway	Without paved shoulder	1.53	344658.00	395241.00	-	-	-	-
		Paved shoulder	1.70	382954.00	439156.00	95.69	-	3,66,42,954	-
2	Four-lane with divided carriageway and service lane on either side	Without paved shoulder	2.00	450534.00	516654.00	-	-	-	-
		Paved shoulder	2.20	495587.00	568320.00	-	4.31	-	24,49,459
TOTAL						**99.995**		**3,90,92,413**	

Ordinary Repairs

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity** **More than 4500 CVD** **BT Surface**
1	**2**	**3**	**4**	**5**
1	**Maintenance of Carriageway & Paved Shoulders (1.5m wide); B.T. Surface**			
	i) Pot holes repair (50 mm deep)	100 % Pot hole free	As & when required	0.50%
	Volume (cum)			2.50
	Rs/m^3			12980
	Cost in Rupees			32,450
	ii) Patch repair	100 % Patch less	As & when required	0.50%
	Area (sqm)			50
	Rs/m^2			519
	Cost in Rupees			25,960
	iii) Sealing (Crack)			
	a) Wider than 3 mm	100 % Crack Less	As & when required	2.50%
	Area (sqm)			250
	Rs/m^2			94
	Cost in Rupees			23,624
	b) Width less than 3 mm	75 % Crack Less	As & when required	2.00%
	Area (sqm)			150
	Rs/m^2			63
	Cost in Rupees			9,487
	iv) Repair of ruts and undulations			
	a) Greater than 20 mm	75%	As & when required	1.00%
	Area (sqm)			75
	Rs/m^2			519
	Cost in Rupees			38,940

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity**
				More than 4500 CVD
				BT Surface
1	**2**	**3**	**4**	**5**
	v) Road marking	14%	Once in 7th year & @ Repaired location	30963
	SUB TOTAL			**1,61,424**
2	**Maintenance of earthen Shoulders:**			
	i) Renewal of earthen shoulders	80%	Once in a Year	6306
	ii) Kuccha Drain Maintenance	100%	Twice in a Year	1108
	SUB TOTAL			**7,414**
3	**Maintenance of Cross Drainage works:**			
	i) Repair of floors	100%	Once in a Year	5055
	ii) Repair of parapets	100%	As & when required	2106
	SUB TOTAL			**7,161**
4	**Maintenance of Minor & Major Bridges:**			
	i) Spot painting & protective Coating required on Bearing and greasing of Bearings, railing, structural members, Expansion joints	100%	As & when required	36,950
	ii) Repair of minor washouts, erosion scour and animal holes			
	iii) Sealing Cracks with Cement/ Epoxy Mortar			
	iv) Replacement & Correction of safety barriers, Guard rails and damaged members			
	SUB TOTAL			**36,950**
5	**Miscellaneous Items:**			
	i) Lettering, Painting of Km stones & kerbs, sign boards, hectometer stone etc.		Once in a Year	3695
	ii) Replacement and providing additional retro reflective signage	20%	Covering Total Network in 4-5 Years	7390
	iii) Providing first aid kits, Umbrella, Safety Jackets, Vardi etc.		Once in a Year	1232
	iv) Traffic Census		Once in a Year	0

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity** **More than 4500 CVD** **BT Surface**
1	**2**	**3**	**4**	**5**
	v) Provision for roughness measurement		Twice in a Year	0
	SUB TOTAL			**12,317**
	GRAND TOTAL (Normal)			**2,25,267**
6	**Additional Cost required for Urban Area**			
	i) Renewal of Center Line, Edge Marking, Kerb Marking/ Zebra crossing etc. in City Portion	33%	Once in three years with thermoplastic paint	3254
	ii)Repairs to footpath	100%	As & when required	4927
	iii) ROB/ Fly-over Railings & repair	100%	As & when required	4927
	iv) Street Lighting	0%	As & when required	0
	v) Encroachment Removal Squad	100%	As & when required	7636
	vi) Repair of divider/ Railing in City portion	100%	As & when required	9853
	vii) Provision for maintenance of pedestrian underpass	100%	As & when required	2463
	SUB TOTAL			**33,060**
	GRAND TOTAL (Urban)			**2,58,327**

ANNEXURE II - MAJOR MAINTENANCE COST

Major Maintenance Cost (FY 2029 & FY 2030)										
Sr. No.	**Description**	**Unit**	**No.**	**Length (m)**	**Width (m)**	**Depth (m)**	**Quantity**	**Total Quantity**	**Rate (Rs.)**	**Amount (Rs.)**
Main Carriageway - Flexible Pavement

1. INTRODUCTION

1.1 Background

Cube Highways Fund Advisors Pvt. Ltd. (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InvIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an Infrastructure Investment Trust under the SEBI InVIT Regulations. Cube Highways Fund Advisors Pvt. Ltd. has appointed **M/s. FP Project Management Consultancy Services Private Limited** (hereinafter referred as "Technical Consultant" or "FPPM") to carry out Technical Due Diligence of Four Lane Highway of Ghaziabad - Aligarh Section of NH-91 from km. 23+600 at Lalkuan near Ghaziabad Town to km. 149+900 at Aligarh in the State of Uttar Pradesh. The project is developed on Design, Build, Finance, Operate and Transfer (BOT) basis under NHDP Phase-III.

M/s. Ghaziabad Aligarh Expressway Private Limited (hereinafter referred as "Concessionaire") is a special purpose vehicle (SPV) for tolling, operation, maintenance, and transfer of Improvement, Operation and Maintenance, widening to 4-lane of Ghaziabad - Aligarh Section of NH-91 from km. 23+600 at Lalkuan near Ghaziabad Town to km. 149+900 at Aligarh in the State of Uttar Pradesh on BOT Basis or Project Road. The project was awarded to Concessionaire on 25th February 2011 with a concession period of 24 years (including construction period) by National Highway Authority of India (NHAI). The length of Project Road is 126.300 kms with two toll plazas at km. 47+500 and at km. 113+300.

Accordingly, Technical Consultant has undertaken the work of assessment of operation and maintenance (O&M) cost based on site inspections and flied investigations. The same is presented in this report.

1.2 Scope of Work

The detailed scope of work for conducting the technical due diligence of Project Road is presented as below:

- A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets
- Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, As-built drawings, O&M manual, COD / PCOD certificate, punch list, previous major maintenance etc.
- Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, axle load, material investigations etc.
- Formulation of future major maintenance strategy
- Estimation of any initial expenses to be incurred due to deficiencies observed in diligence
- Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period
- Estimation of Annual Operation expenses along with Systems cost (TMS / HTMS) till the end of concession period
- Review of balance work cost for Project Road including estimation of quantities and item rates

1.3 Our Approach Philosophy

1.3.1 Composition of Team

Our proposed team consists of well-qualified engineers and other professionals, whose experience covers all the skills and specializations required for undertaking such assignments. All the team personnel proposed are our regular employees and have a long and stable working relationship with our firm.

The Team Leader will coordinate the activities between all the key staff who will work closely together. The key staff will be assisted by various support staff, who will report to the respective key staff in their field of expertise. The Team Leader will act as the point of contact for Client Technical Study.

The technical study includes review of all the available documents namely:

a) Concession Agreement including Technical Schedules
b) O&M Contract, work order and their provisions
c) Quality of construction based on available data, design and drawings
d) Documents on historical expenditure on operation and maintenance
e) O&M cost schedule for the concession period
f) Review of Completion / Provisional Completion along with punch list items
g) Review of recent pavement surveys conducted
h) Correspondence regarding scope of works and during O&M
i) Recent O&M Report submitted to Authority
j) Toll operation manual / ATMS related documents

The review of above documents is the first step towards accomplishment of the task. This gives a complete idea of the project and is used as input data for preparation of report after necessary analysis.

1.3.2 Site Visit and Data Collection

A team of experts from various streams has carried out the preliminary site visit to understand the assessment of project assets mainly condition of the pavement and structures.

- The site visit is undertaken for detailed reconnaissance and visual pavement condition assessment.
- The condition assessment of major structures by visual inspection
- The information like material sources and the probable cost is collected for the purpose of cost estimate.

The detailed design / drawings viz. Plan & L-sections, drainage design, structure design, layout drawings for project facilities like toll plaza, bus bay, truck lay-byes, highway lighting facilities etc. are studied. Also, design / drawing and provision pertaining to road furniture are studied.

The information on availability of material in the vicinity is gathered. It has direct impact on cost of maintenance work and balance work.

The basic approach for preparation of cost estimates for operation and maintenance is as per the practice of State PWD / MORT&H in respect of highways and structures.

1.3.3 Data Analysis

Based on the study of the available information and preliminary site visits, the consultants share their preliminary observations with the Client based on the evaluation of the technical data and reports provided by the Client.

1.4 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Company. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyze the same as per the best engineering / industry practices.

The site visit and inspection were carried out between the periods from **28th February 2026 to 04th March 2026**.

The report is organized with the following chapters for easy understanding of various issues.

Chapter 1 **Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for due diligence studies.

Chapter 2 **Project Description:** The chapter describes existing project features, and overview of project development.

Chapter 3 **Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on site visit.

Chapter 4 **Pavement Investigation and Assessment:** The chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance.

Chapter 5 **Cost Estimates:** The chapter summarizes the forecast for O&M and major maintenance costs over the remaining concession period.

2. PROJECT DESCRIPTION

2.1 Location

The Project Road is a section of NH-91 in the State of Uttar Pradesh which starts from km. 23+600 (at Lal Kuan near Ghaziabad town) with the junction of NH-24 and ends at the km. 149+900 near Aligarh. The length of the Project Road is 126.300 kms.

The existing Project Road is 4-lane carriageway excluding structures along with approaches which are of 6-lane configuration. From km. 23+600 to km. 27+000, km. 27+000 to km. 48+000, km. 48+000 to km. 108+000 and from km. 108+000 to km. 149+900 of the Project Road fall under the jurisdiction of the Districts of Ghaziabad, Gautam Buddha Nagar, Bulandshahr and Aligarh respectively. Most of the corridor traverses through rural areas. The major urban areas falling in the vicinity of the corridor are Ghaziabad, Dadri, Sikandrabad, Bulandshahr, Khurja, Gabbana and Aligarh.

Figure 2-1 Location Map

The photographs taken during the site visit are presented below.

Figure 2-2 Start of the Project Road

km. 23+600 (Ghaziabad side)

km. 23+600 (Aligarh side)

Figure 2-3 End of the Project Road

km. 149+900 (Kanpur side)

km. 149+900 (Ghaziabad side)

2.2 Climate

January is the coldest month with an average mean monthly temperature of 14°C and May is the hottest month with mean monthly temperature of 38°C in this area. The relative humidity is lowest during summers when it reaches as low as 24% and during monsoon it goes to as high as 80%.

2.3 Terrain

The Project Road runs mostly in plain terrain and passes through rich agricultural areas.

2.4 Abutting Land Use

Agriculture is the predominant land use along Project Road. However, there are some dense built-up areas and large-scale ribbon developments observed intermittently along the Project Road. At many places, large numbers of trees have been observed along Project Road.

2.5 Right of Way

The width of the existing Right of Way (ROW) for the Project Road is 60 m throughout its length.

2.6 Existing Utilities

During widening of the Project Road, various affected utility services were shifted to proposed ROW. The different types of utilities found along the road include, electrical poles, telephone poles, OFC Cables, etc.

2.7 Development as per Schedule-B

The Project Road from Ghaziabad (km. 23.600) to Aligarh (km. 149.900) has proposed to be developed as four lane and subsequent to six lane divided carriageway with median width varies from 1.20 m to 4.50 m, service roads and other arrangements.

As per Article 2 of Concession Agreement, the scope of project defined in Schedule-A and Schedule-B, (the **"Scope of the Project"**) shall mean and include, during the Concession Period:

a) Construction of the project on the Site set forth in Schedule-A and as specified in Schedule-B together with provision of project facilities as specified in Schedule-C and in conformity with the Specification and Standards set forth in Schedule-D.
b) Tolling, operation, management, maintenance, and transfer of the Project Road subject to and in accordance with the provisions of this Agreement.
c) performance and fulfilment of all other obligations of the Concessionaire in accordance with the provisions of this Agreement and matters incidental thereto or necessary for the performance of any or all of the obligations of the Concessionaire under this Agreement.

Following is the Scope of Work as per Schedule-B of Concession Agreement.

Table 2-1 Details of Scope of Work

Sr. No.	Type of Structure	Unit	Scope	Remark
1	O&M of Main Carriageway	km.	126.3	
2	Construction of Service Road	km.	54.6	LHS / RHS / BHS
3	Construction of slip road	Km.	9	LHS / RHS / BHS
4	Major Bridges	Nos.	Nil	
5	Minor Bridges	Nos.	10 (5+5)	
6	ROB	Nos.	4	
7	Grade Separator	Nos.	6	
8	Vehicular Underpass	Nos.	24	
9	Slab / Box Culverts	Nos.	70	
10	Pipe Culverts	Nos.	81	
11	Road marking by Thermoplastic Paint	km.	126.3	

As per Clause 12.5 of the Concession Agreement, the Concessionaire shall undertake construction of six-laning as specified in Schedule-B and Schedule-C, so that the Project Road shall have six lanes on or before the 12th anniversary of the Appointed Date.

3. CONDITION ASSESSMENT OF PROJECT ROAD

3.1 Pavement

Project Road is four lane divided carriageway with an earthen shoulder of 1.5 m on either side. The Project Road has a median width of 2.0 m throughout its length. Currently, the Project Road is being widened to six lane carriageways.

The entire stretch of Project Road including service road is constructed with flexible pavement. The pavement type for the Toll Plaza including taper is of rigid pavement.

3.1.1 Pavement Condition Survey

The pavement condition survey was carried out from **28th February 2026 to 04th March 2026** through visual inspection for the entire project length. The details of the visual condition survey are provided as below:

Table 3-1 Pavement Condition

Chainage (km)		Length (km)	Lane Carriageway	Pavement Condition		Remark
From	To			Left Carriageway	Right Carriageway	
23+600	34+000	10.400	4/6 Lane	Fair	Fair	4-Lane overlay is completed. 6-Lane widening and strengthening is completed except 3.495 kms.
34+000	129+900	95.900	6 Lane	Good / Fair	Good / Fair	
129+900	149+900	20.000	4 Lane	Good / Fair	Good / Fair	
Total Length (km)		**126.300**				

Some of the photographs taken during the site visit are presented as below.

Figure 3-1 Photographs of Pavement Condition (Main Carriageway)

Bleeding and settlement of road at km. 23+900 (LHS)

Bleeding and settlement of road at km. 24+800 (LHS)

4-Lane at km. 25+700 (LHS)

Cracks & reveling at km. 102+900 (RHS)

Pothole at km. 103+400 (RHS)

Settlement at km. 144+500 (RHS)

3.2 Service Road / Slip Road

The service road with a width of 8 m for total 54.60 km is constructed in built-up areas and adjoining underpass locations. As compared to the main carriageway, the pavement condition of service road is poor at many locations.

The photographs taken during the site visit are presented below.

Figure 3-2 Photographs of Service Road

Minor Junction at km. 99+200 (LHS)

Minor Junction at km. 112+600 (LHS)

3.4 Condition Survey of Bridge

The inventory of structures including major bridges, minor bridges, ROB's, underpasses and culverts is presented in table as below:

Table 3-2 Details of Summary for Structures

Sr. No.	Description	As per Concession Agreement	As per Site Condition
1	Major Bridges	Nil	Nil
2	Minor Bridges	10 Nos. (5+5)	13 Nos. (7+6)
3	ROB	4 Nos.	4 Nos.
4	Grade Separator	6 Nos.	6 Nos.
5	Vehicular Underpass	24 Nos.	19 Nos. (Six Lane) + 1 Nos. (Three Lane)
6	Slab / Box Culverts	70 Nos.	70 Nos.
7	Pipe Culverts	81 Nos.	81 Nos.

The detailed condition survey of structures was carried out by visual inspection. The observations and findings are presented in tables below:

Table 3-3 Condition Survey of Minor Bridges

Sr. No.	Location as per CA	Location as per Site	Type of Structure	Proposed Span Arrangement	Proposed Width (m)	Remark
1	25+956	25+947	Minor Bridge	2 x 5	1 x 45	The structure was observed to be in good condition. However, the vent was found to be filled with garbage and requires proper cleaning and removal of debris.
2	35+720	36+200	Minor Bridge	2 x 5	1 x 33.5	The structure was observed to be in good condition. However, the vent was found to be filled with garbage and requires proper cleaning and removal of debris.
3	36+840	37+300	Minor Bridge	2 x 5	1 x 33.5	The structure was found to be in good condition. However, one vent on the A2 side (LHS) was observed to be completely choked with soil and garbage, which requires immediate cleaning and removal of accumulated debris to ensure proper drainage.
4	40+501	41+100	Minor Bridge	1 x 21.6	2 x 14.25	The structure was found to be in good condition.
5	44+908	45+300	Minor Bridge	3 x 5	1 x 45	The structure was observed to be in good condition. However, the vent was found to be filled with garbage and requires proper cleaning and removal of debris.
6	46+805	47+500	Minor Bridge	103 m length	1 x 14.25	During the site inspection, the new bridge (RHS) was found to be in good condition, whereas the existing bridge (LHS) requires periodic maintenance to ensure its continued serviceability.
7		59+500	Minor Bridge	2 x 5	1 x 33.5	The structure was observed to be in good condition. However, the vent was found to be filled with garbage and requires proper cleaning and removal of debris.
9	61+900	62+100	Minor Bridge	3 x 5	1 x 33.5	The structure was observed to be in good condition. However, the vent was found to be filled with garbage and requires proper cleaning and removal of debris.
10	-	75+800	Minor Bridge	1-span	2 x 14.25	The structure was observed to be in good condition.
11		105+090	Minor Bridge	1-span	2 x 14.25	The structure was observed to be in good condition.
12	111+490	115+200	Minor Bridge		4 x 15	The new bridge structure was observed to be in good condition. The existing bridge was also found to be in good condition; however, the expansion joint was observed to be filled with bituminous concrete (BC) and requires proper cleaning.
13	140+000	144+500	Minor Bridge	3 x 5	1 x 33.5	The structure was observed to be in good condition.

3.5 Condition Survey of Culverts

The cross-drainage structure includes hume pipe culverts and box culverts at various locations. There are 81 Nos. of pipe culverts, 70 Nos. of box / slab culverts along the Project Road. The height of culvert varies from 1.0 m to 3.0 m from bed level. During the condition survey of structure, these culverts were inspected on sample basis.

The project involves strengthening and widening of existing road to four lane divided carriageway. The culverts beneath existing alignment are either widened or reconstructed. The structural condition of culverts is generally found in sound condition. The quality of surface concrete of box culverts is satisfactory. The RCC parapet, crash barrier or RCC railing has been provided at culvert locations, which is maintained properly, except some locations. Reconstruction / widening of many culverts has been done and some are being widened to 6-lane configuration.

In most of culverts, the waterway is clear. However, near to urban area and some location is found blocked due to debris, drainage water or bushes, tree growth, which will be removed by the Concessionaire. The cement concrete pitching or stone pitching has been provided for slope protection.

The culverts are maintained by the Concessionaire during O&M period. However, in case of some culverts, cement concrete pitching has been observed damaged which required to be repaired under routine repair work by the Concessionaire.

There is total 62 Nos. of culverts which are to be reconstructed and 89 Nos. of culverts which are to be additionally constructed during six laning of the Project Road. The same is being executed at site.

3.6 Drainage

There are of existing drain on both side of the Project Road as per Concession Agreement. However, RCC drain is constructed in built-up areas and locations where service roads are provided. At some of the places covers of RCC drains has broken / exposed and choked. The photograph taken during site visit is presented as below:

Figure 3-9 Photograph of Drainage

Median Drain

Median Drain

Side Drain

Side Drain

3.7 Slope Protection

Slope protection and chut drains are found on Project Road at required locations. The photographs taken during the site visit are presented below.

Figure 3-10 Photographs of Slope Protection and Chute Drain

Side slope at km. 87+800

Side Slope at km. 135+200

Chute Drain at km. 132+020 (LHS)

Chut Drain at km. 135+240 (RHS)

3.8 Road Furniture

The Concessionaire has provided road furniture along Project Road as per the standards and specifications mentioned in Schedule-C. The details of the items are provided below.

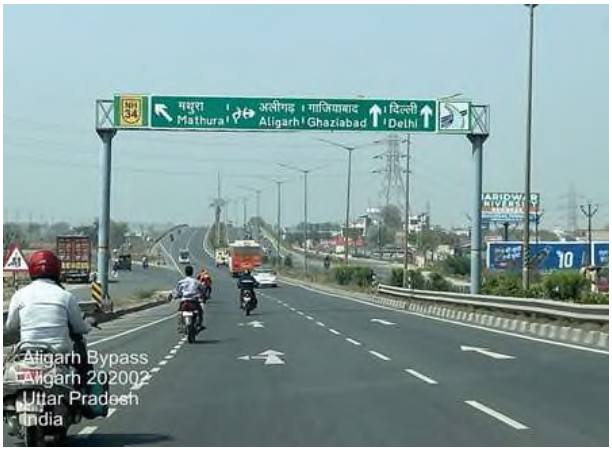
Pavement Marking and Road Studs

Pavement marking for the Project Road is done as per the design standards indicated in section 12 of Schedule-D. The pavement marking is faded at some locations which will be rectified by the Concessionaire.

Road studs / cat's eye for the project Road is done as per the design standards indicated in section 12 of Schedule-D. Road studs / cat's eye has been fixed at junction and zebra crossings. However, at few locations some cat eyes have damaged which will be rectified by the Concessionaire.

Some of the photographs of road marking & road studs are presented below.

Figure 3-11 Photographs of Pavement Marking & Road Studs



Road Marking at MCW

Road Marking at Service Road

Road Stud

Road Stud

Traffic Signage / Median Kerb painting / KM Stone

Traffic signs include roadside signs, overhead signs, kerb mounted signs and median signs along the Project Road. The design for the traffic signs along the Project Road is done as per the design standards indicated in section 11 of Schedule-D.

The height, lateral clearance, location and installation are as per relevant clauses of Schedule 'D'. Overhead sign has been installed ahead of major intersections, toll plazas, start / end of Project Road and urban areas as per detailed design requirements.

Kilometre stones, vertical post of sign boards, chevron boards and median kerb paint are faded at few locations which will be rectified by the Concessionaire.

Some of the photographs of sign boards are presented below:

Figure 3-12 Photographs of Road Signages / Kerb Painting

Kilometer Stone

5 Kilometer Stone

Road Marking

Overhead Sign board

Advanced Direction Sign Board

Kerb Painting at Median Opening

Highway Lighting / Crash Barriers

Highway lighting is provided at underpasses, flyovers, toll plaza, ROBs and built-up locations. High mast lighting is provided at toll plaza location. Highway lighting is also provided at approaches of underpass and flyovers.

Metal beam crash barriers are provided at bridge approaches, locations of high embankment and sharp curves. All the crash barriers provided by the Concessionaire are maintained at site.

Some of the photographs of highway lighting and metal beam crash barriers are presented below.

Figure 3-13 Photographs of Highway Lighting / Crash Barrier

Damage Metal Beam Crash Barrier at km. 25+600

Pedestrian Guard Rail at km. 44+900

Road Land Boundary

Road land boundary pillar is not found / available on Project Road.

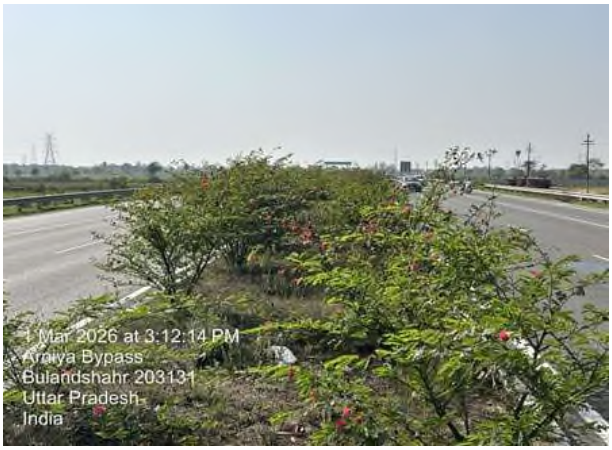
3.9 Median and Avenue Plantation

Avenue plantations are done only where ROW is available, and median plantation has been provided in the project length as per IRC specification.

The photographs taken during the site visit are presented below.

Figure 3-14 Photographs of Median and Avenue Plantation

Median Plantation at km. 54+600



Median Plantation at km. 78+050

Avenue Plantation at km. 70+200 (RHS)

3.10 Toll Plaza

As per the Concession Agreement, there are two existing toll plazas at km. 47+500 and at km. 113+300 with the following infrastructure.

Table 3-7 Details of Summary for Toll Plaza-1 at km. 47+500

Sr. No.	Particulars	Details
1	Toll Plaza Chainage	47+500
2	Number of Tolling Lanes	10 (lanes for toll operation for vehicles.
3	Weigh in Motion Facility (Number of Lanes)	Yes
4	No. of ETC Lanes	One in each direction
5	Number of Toll Booths	10
6	Canopy	Present
7	Administrative Building	Present (Temporary)
8	Parking cum Toilet Block	Present
9	Availability of Tunnel or Elevated Walkway for Movement between Toll Lanes and Administrative Building	No
10	Availability of Static Weigh Bridge	Yes
11	Availability of Loading/Unloading Facility for Overloaded Vehicles	No

Sr. No.	Particulars	Details
12	Storage facility for Overloaded Material	No
13	High mast Light	Yes 2 Nos
14	Streetlight	Yes
15	Low mast Light	No
16	User Fee Boards	Yes
17	Cantilever/Gantry Boards	Yes
18	Automatic boom barrier	Yes

This toll plaza is near Luharli village. The work of toll plaza is completed, and toll plaza is operational. 10 lanes have been constructed including lane for overhead dimension and all are under operation. Administrative building is yet to be constructed at site. The Concessionaire is managing toll operation from porta cabin due to unavailability of land. The following works could not be completed because of non-availability of land.

- Administration, Operation and maintenance base camp
- Weigh bridge

Figure 3-15 Photographs of Toll Plaza-1

Toll Plaza-1 (LHS)

Toll Plaza-1 (RHS)

Table 3-8 Details of Summary for Toll Plaza-2 at km. 113+300

Sr. No.	Particulars	Details
1	Toll Plaza Chainage	113+300
2	Number of Tolling Lanes	10(lanes for toll operation for vehicles.
3	Weigh in Motion Facility (Number of Lanes)	Yes

Figure 3-16 Photographs of Toll Plaza-2

Toll Plaza

Toll Lanes with Weight in Motion Senser

3.11 Lane Equipment

Following are the lane hardware and equipment installed at toll plaza.

1. RFID ETC Transceiver
2. Lane Controller with Industrial PC
3. AVC Sensors
4. Automatic Lane Barrier (ALB)
5. Lane Traffic Light and user fare display
6. Incident Capture Camera
7. Overhead Lane Signals
8. Traffic Lights
9. Toll Booth Equipment

3.11.1 RFID ETC Transceiver

RFID ETC Transceiver reads tags installed on the windshield of vehicles and mounted on a pole at about 8 m height. Handheld RFID readers are provided (1 no. in each direction) in case a tag is not detected by the fixed reader.

RFID

3.11.2 Lane Controller with Industrial PC

Toll Lane Controller is located within the Electronic Enclosure placed inside each toll booth which are connected to the common server and are capable of independent storage of data.

3.11.3 Automatic Vehicle Classification (AVC) Sensors

The AVC equipment comprises of a pair of height sensor poles, axle sensors and inductive loops. The height detector has a high sensing resolution and detects height when object blocks the path. The presence of vehicle is detected by inductive loop. The loop sensors embedded on the pavement trigger the AVC height sensors located on parallel pillars.

AVCC at TP

3.11.4 Automatic Lane Barrier

Boom barriers installed on all lanes are in working condition and have a working time of 0.6 - 0.9 s. Automatic Lane Barrier is used to allow only authorized vehicles to pass through the lane. The barrier is activated only on generation of user fee receipt or other relevant vehicle processing activity. A torque motor powers the barrier for raising and lowering the boom. The motor can be blocked at any position without causing any damage. In the event of power failure, the boom is automatically raised. The boom weight is exactly balanced by built-in springs.

ALB at TP

3.11.5 Lane Traffic Light (LTL) and User Fare Display (UFD)

Lane Traffic Light (LTL) is used to instruct vehicles to stop or pass through the lane. The LTL is RED when the toll collector is expecting the vehicle at the booth. After the transaction is done; the LTL turns Green to instruct the vehicle to pass through the lane. The User Fare Display is a part of electronic toll collection equipment located at the toll booth. It is a mini variable message sign (VMS) made of Light Emitting Diodes (LED). The user fare display is used to display the toll fare that is due and that must be paid by the motorist and the classification of vehicle selected by the collector.

LTL at TP

3.11.6 Incident Capture Camera (AVC Camera)

The incident capture camera is installed on island of the booth to capture the image of the vehicle from the back side. The AVC triggers the Image capture system.

AVC Camera at TP

3.11.7 License Plate Image Capture Camera (LPIC)

License Plate Image capture camera is installed on a 3 m pole facing incoming vehicle to capture the image of the vehicle number plate.

LPIC

3.11.8 Over Head Lane Signal (OHLS)

The **Overhead Lane Signal (OHLS)** for lane “Open” and “Close” sign consists of a pair of “GREEN” (arrow) and “RED” (cross) lights. The OHLS is located at the vehicle approaching side of the canopy to show the drivers whether the lane is open or closed.

OHLS at TP

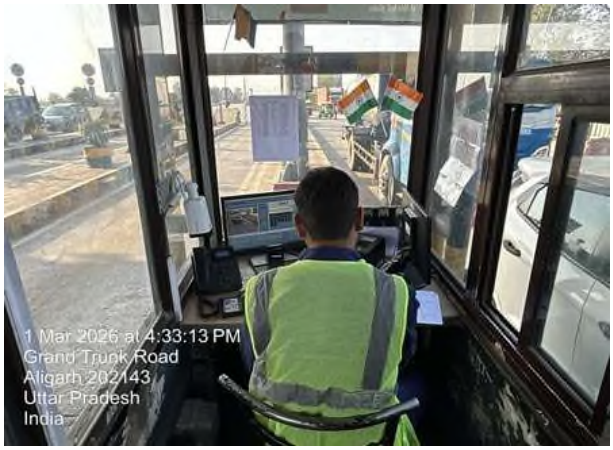
3.11.9 Toll Booth Equipment

Toll Booth Hardware / Equipment provided are:

- Toll Collector Display (Operator Monitor)
- Customized Industrial Keyboard
- Receipt Printer
- Intercom Slave unit
- Bar code reader
- Violation Light and alarm
- Manual Booth Control (MBC)
- Booth Camera

The operator monitor termed as Toll Collector Display (TCD) is located on the toll collector's desk. It is the system's interface to the toll collector, to display the status of transactions and status of the lane peripherals.

The keyboard on the toll terminal is a programmable keyboard for Registration of toll operations and is customized for different vehicle types and type of ticket.



Toll Booth

Thermal printers are installed at the toll booths to print tickets. Intercom slave unit facilitates communication with the master unit located in the control room.

Violation system has an alarm switch which is triggered whenever there is a violation such as run-through happening on the lane. When there is an emergency, a foot switch pressed by the booth operator alerts the control room.

Booth Cameras are provided on the inside roof corner of the booth to provide surveillance through CCTV screen located in the control room. Manual Booth Controller is used to release exempt vehicles.

3.11.10 Medium Speed Weigh in Motion (MSWIM)

Medium Speed Weigh in Motion (MSWIM) is not installed on entry lanes of Toll Plaza.

3.12 Plaza Equipment

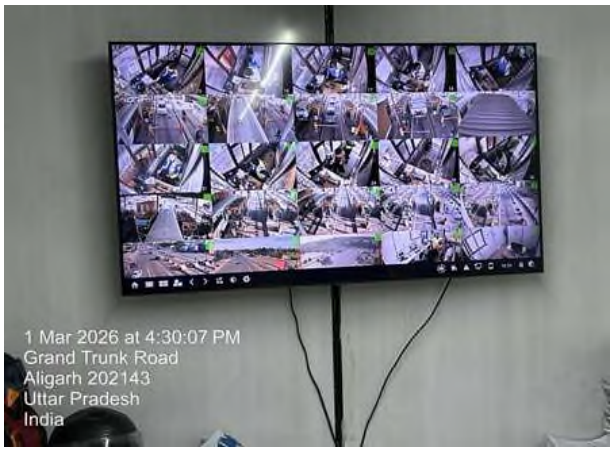
3.12.1 TMS Server

Plaza Server is provided in a hot standby configuration and provided with port non-POE network switch and Port PoE switch. Internet connectivity is available through one lease line (Airtel) and Jio WiFi module. Firewall with Sophos antivirus is provided.

TMS Server Room

3.12.2 55” LED screen for CCTV monitoring

55” LED screen for CCTV monitoring installed at the toll plaza admin block provides view of all the toll booths, important zones within the plaza where cash transactions take place (server room, control room, cash up).

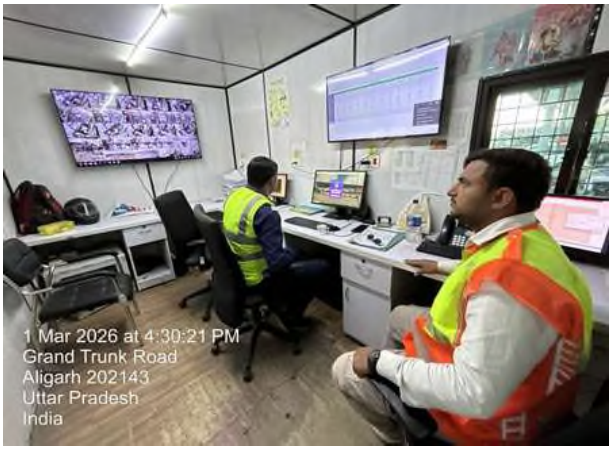


CCTV Monitor

The toll plaza manager is able to observe the activities at the toll lanes and toll booth. When the toll collector calls up on the intercom, the manager is able to comprehend the situation at the lane by a zoomed view of the particular lane.

3.12.3 Workstations in Control Room, POS room

Workstations are available in control room (lane monitoring, administration, and audit), cash room and PoS.



Control Room

3.13 Advanced Traffic Management System (ATMS)

Advanced Traffic Management System (ATMS) has been installed and maintained as per the requirement of the Concession Agreement. As informed by the Concessionaire, the ATMS Design Report is under progress and installation will be completed by FY 2027.

3.14 Bus Bays and Passenger Shelter

There are 38 Nos. of bus bays / shelter along Project Road. Some of the photographs taken during the site visit are presented below.

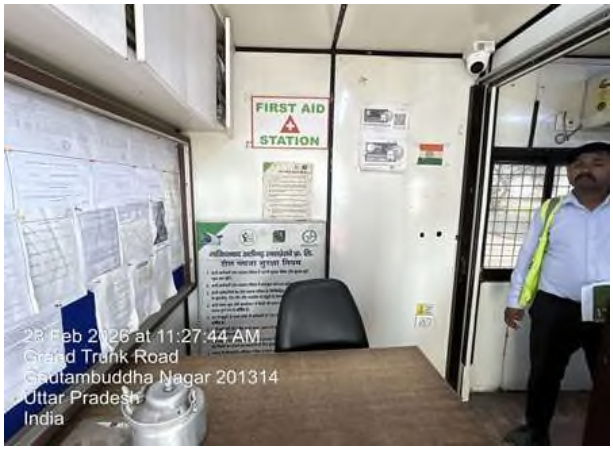
Figure 3-17 Photographs of Passenger Shelter

Passenger Shelter at km. 38+100 (LHS)

Passenger Shelter at km. 84+100 (RHS)

3.15 Traffic Aid Post and Medical Aid Post

Traffic Aid Post and Medical Aid Post are maintained by the Concessionaire.



Medical Aid at Toll Plaza-1

3.16 Toilet Block

There are two nos. toilet blocks and the same are maintained by the Concessionaire.

Table 3-9 Details of Toilet Blocks

Toll Plaza at km. 113+300 (LHS)

3.17 Balance Work Status (Capex Augmentation to 6-laning)

The Project Road is augmented to 6-lane configuration along with rehabilitation of existing 4-lane road. As per our observations during site visit and IE Letter no. Theme/IE/Gzb-Alg/NH-91/2023/9054 dated 16.01.2024, the Concessionaire has already completed the 6-laning work. Currently, the maintenance work is in progress. Hence, there are no balance works to be executed as per CA.

3.18 Operation and Maintenance

3.18.1 O&M Contract

As per Clause 17.1 of the Concession Agreement, the Concessionaire shall operate and maintain the Project Road either by itself, or through O&M Contractors and if required, modify, repair, improve the Project Road to comply with Specifications and Standards, and other requirements set forth in the Agreement through Good Industry Practice, Applicable Laws and Applicable Permits and manufacturer's guidelines and instructions with respect to toll systems. The Operation and Maintenance activities will confirm to all the requirements laid down in MoRT&H, IRC Specifications, and the Concession Agreement.

The Concessionaire has outsourced for carrying out the activities related to operation and maintenance of the Project Road including toll operation services, security services, AMC for TMC and AMC for DG set.

3.18.2 Organization Chart

The Concessionaire has given the Organization Chart at site for Operation and maintenance. Accordingly, there is 01 Project Head (Operations), 01 Project Manager (EPC), 01 CFO-CHFA, 01 Company Secretary, 01 Assistant Vice President (F&A), 02 Manager, 02 Assistant Manager, 03 Executive (F&A), 01 Executive (F&A), 01 Documentation Controller, 01 Senior Executive, 06 Executive, 02 Electrician, 02 Supervisor, 01 Sr. Supervisor, 02 Plaza Manager, 01 Assistant Plaza Manager, 01 MIS Executive, and 13 Cashier cum Validators to carry out O&M activities. The team controls the maintenance activities. However, the maintenance work is undertaken and executed through competent subcontractors.

3.18.3 Operation

Operation cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, and other miscellaneous expenses. The Concessionaire has provided the expenses occurred towards operation expenses for past years. Necessary assumptions have been made from the expense of similar types of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area.

The Operation Cost is presented in the subsequent chapter.

3.18.4 Routine Maintenance

The Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey.

Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Maintenance Cost is presented in the subsequent chapter.

4 PAVEMENT INVESTIGATION AND ASSESSMENT

4.1 General

The Concessionaire has received Completion Certificate for 125.175 kms on 23rd April 2022. Rest of the stretch of 1.125 kms is de-scoped by the Authority as a part of the Settlement Agreement executed on 8th April 2022 due to non-availability of land.

The project is currently under the Operation and Maintenance stage. The concession period of the project is 24 years from the Appointed Date including construction period. Original Appointed Date of the project was 25th February 2011. As per the Contract Agreement, the Concessionaire shall operate and maintain the Project Road till the end of the concession period.

4.2 Axle Load and VDF

The Concessionaire conducted the Axle Load Survey on Project Road at km. 42+850, km. 47+000 (near Luharli Toll Plaza), km. 80+870 and at km. 113+650 (near Gabhana Toll Plaza) in the month of July 2021. The summary of Vehicle Damage Factor (VDF) calculated as provided by the Concessionaire is tabulated below.

Table 4-1 Vehicle Damage Factor (VDF)

Sr. No.	Vehicle Type	Vehicle Damage Factor (VDF)							
		km. 42+850		km. 47+000		km. 80+870		km. 113+650	
		LHS	RHS	LHS	RHS	LHS	RHS	LHS	RHS
1	BUS	0.915	0.972	0.939	0.994	0.98	1.161	1.007	1.152
2	LCV	1.069	0.854	0.796	1.15	0.728	0.851	1.022	1.054
3	2-Axle	3.762	3.975	3.213	3.429	3.593	4.07	3.553	4.089
4	3-Axle	7.35	5.964	7.705	5.348	7.621	7.537	8.066	7.683
5	MAV	14.418	12.013	11.039	14.65	12.671	9.867	13.33	10.55

4.3 Design Traffic

Traffic in Million Standard Axles (MSA) for the homogeneous section based on the historical traffic data as provided by the Concessionaire, current traffic has been used for future projections and the estimated design MSA is computed and presented in subsequent table.

For the estimation of design MSA, Actual Traffic Growth Rates as provided by the Concessionaire were used.

MSA Calculations at Luharli Toll Plaza					
Year	MSA (LHS)	Cumulative MSA (LHS)	MSA (RHS)	Cumulative MSA (RHS)	Remarks
2024-25	4.39	**4.39**	5.28	**5.28**	
2025-26	4.79	**9.18**	5.75	**11.03**	
2026-27	4.62	**13.80**	5.54	**16.57**

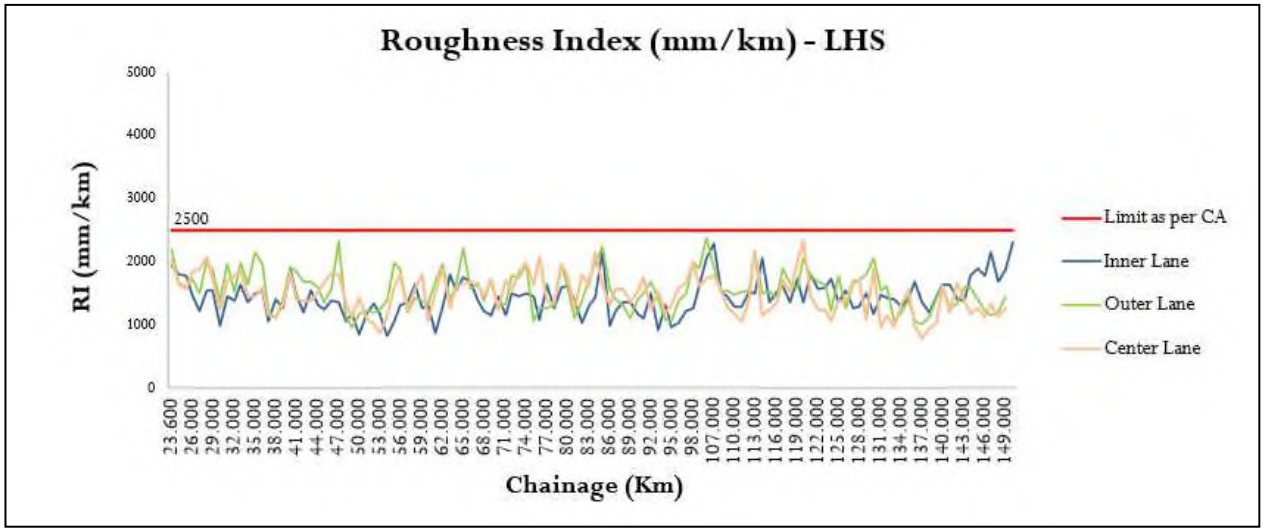
4.4 Network Survey Vehicles (NSV) Survey

The Concessionaire carried out Roughness Survey using NSV in September 2024. The Concessionaire has provided NSV survey data. The NSV data is used to assess the riding quality and pavement condition of Project Road. The summary Roughness Index and Rutting are given in the table below.

Table 4-2 Summary of Roughness Index

Sr. No.	Rating	Roughness Value (mm/km)	Length (km)					
			LHS			RHS		
			Inner Lane	Centre Lane	Outer Lane	Inner Lane	Centre Lane	Outer Lane
1	Good	<2000	113.70	113.70	109.10	112.50	109.50	104.80
2	Fair	2000-2500	5.10	6.40	10.40	5.40	9.00	13.00
3	Poor	>2500	0.00	0.00	0.00	1.60	1.00	1.00



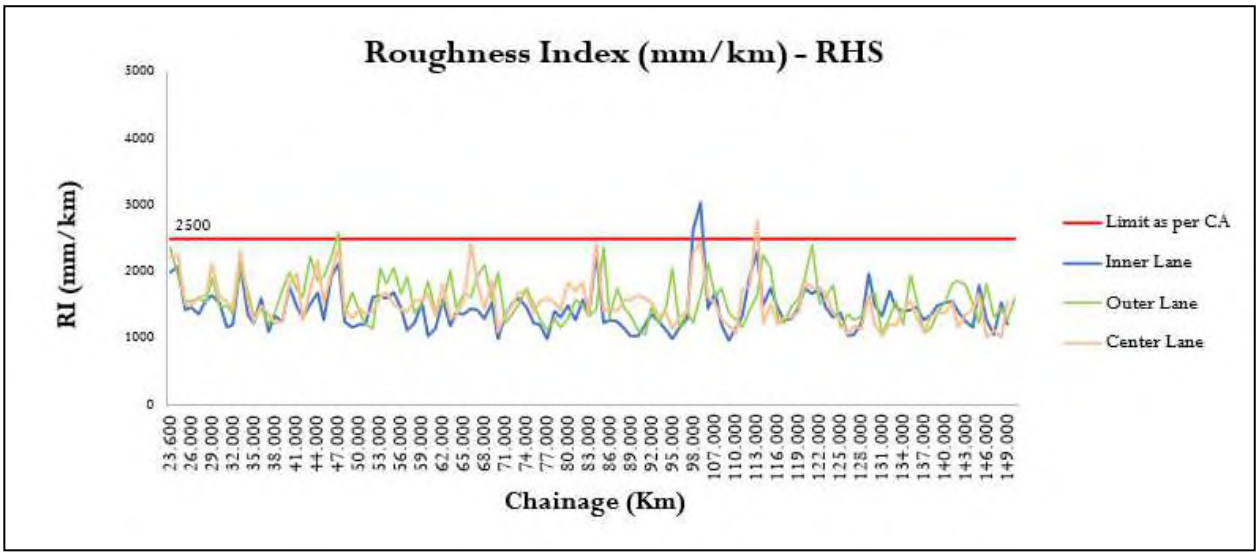


Table 4-3 Summary of Rutting

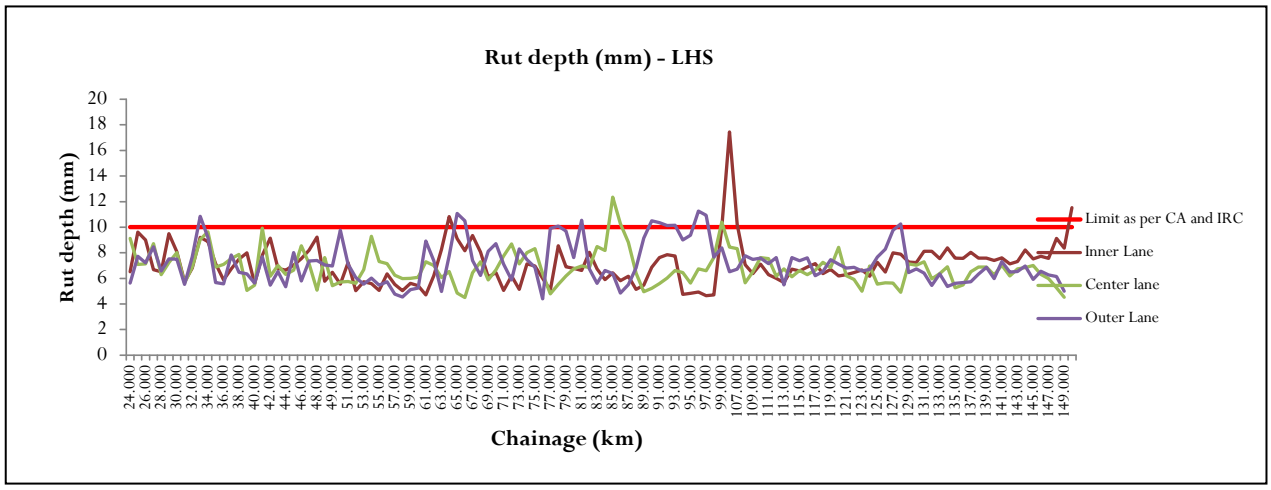
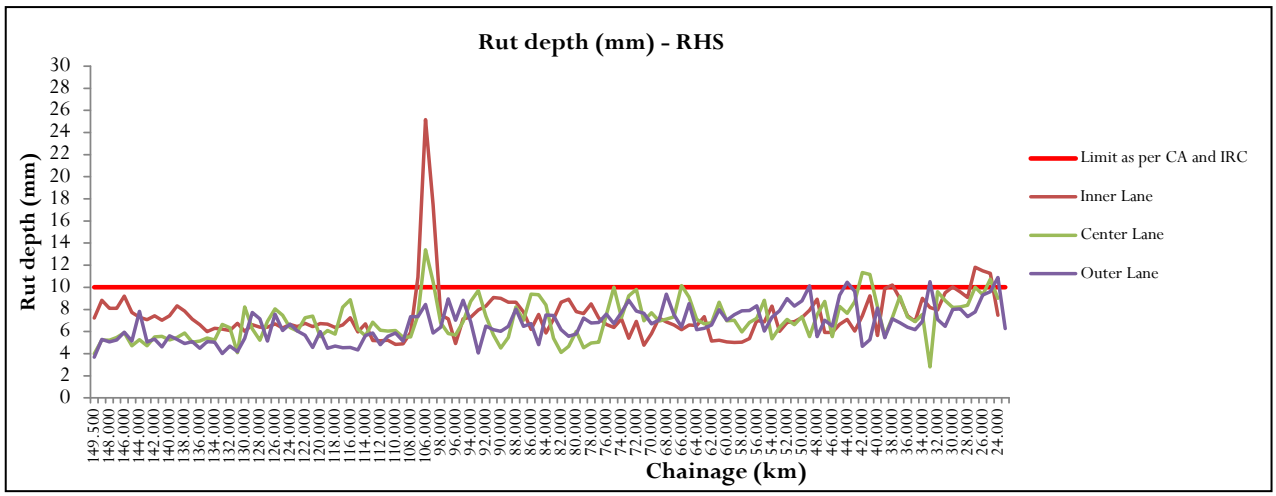
Rating	Rutting mm/km	Length (km)					
		LHS			RHS		
		Inner Lane	Centre Lane	Outer Lane	Inner Lane	Centre Lane	Outer Lane
Good	<5	115.70	116.90	107.50	111.90	111.90	115.60
Poor	>10	3.10	2.60	12.00	7.60	7.60	3.20





4.5 Structural Investigations

Falling Weight Deflectometer survey was conducted for flexible pavement by the Concessionaire in April 2024. The summary of the FWD survey report is presented in the table below.

Table 4-4 Summary of FWD Survey

Remaining Life (MSA)	Length (km)					
	LHS Inner	**LHS Middle**	**LHS Outer**	**RHS Inner**	**RHS Middle**	**RHS Outer**
<50	16.00	18.00	4.00	8.00	20.00	2.00
50-100	22.00	19.00	6.00	10.00	19.00	8.00
100-300	69.00	65.00	79.00	93.00	67.00	86.00

4.7 Periodic Maintenance Strategy

Unlike the old Concession Agreements where periodicity and threshold limits were clearly described for the major maintenance, the Concession Agreement of this project does not specify the periodicity or the threshold limits for carrying out the full-length periodic maintenance. Schedule-F of the Concession Agreement specifies the threshold limits and the timeline for carrying out repairs to the distresses during the operation period.

The maintenance thus can be carried out as and when required basis and to the compliance of Schedule-F requirement to maintain the road in serviceable condition. Only improvement to Riding Quality is expected if the roughness value exceeds 2500 mm/km.

The Project Road has undergone Capacity Augmentation. Currently, the 6-laning work is completed. Hence, the major maintenance cycle is adjusted accordingly.

The table below shows the major / periodic maintenance cycle throughout the concession period for the Project Road.

Table 4-7 Major Maintenance Cycle

Sr. No.	Year	Main Carriageway	Service Road
1	FY 2025 to FY 2029	-	-
2	FY 2030 & FY 2031	Major maintenance with 30 mm BC (PMB) (100%) + Milling & 50 mm DBM (8%)	Major maintenance with 30 mm BC (VG-30) (50%) + Micro-surfacing (50%)
3	FY 2032 to FY 2036	-	-
4	FY 2037 & FY 2038	Major maintenance with 30 mm BC (VG-40) (100%) + Milling & 50 mm DBM (8%)	Major maintenance with 30 mm BC (VG-30) (50%) + Micro-surfacing (50%)
5	FY 2039 to FY 2040	-	-

**Actual end of concession period as per Concession Agreement is February 2035. As informed by Cube Highways, the revised concession period is up to FY 2040.*

The projected cost for periodic / major maintenance is presented in the subsequent chapter.

5 COST ESTIMATES

5.1 General

Based on the assessment carried out in previous chapters, various costs were worked out. The costs are divided into following categories.

I. Balance Works Cost
II. Routine O&M Cost
III. Major Maintenance Cost
IV. Periodic Replacement of TMS / ATMS system

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and escalation.

5.2 Rate Assumption

Following assumptions are considered for unit rates of various items while estimating the cost:

1. Unit rates of different items (BC, DBM, Concrete, Road markings etc.) are calculated as per SoR of Uttar Pradesh PWD, Aligarh Division for the year 2020-21. The input rates for MoRTH standard data book were adopted as below:

   a. **Manpower and labour:** As per applicable minimum wages published by Schedule of Rates, Government of Uttar Pradesh.

   b. **Bitumen:** Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. Same discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.

   Therefore, bitumen prices are considered as per the forecast of Client. Current publish of bitumen are considered for unit rates calculation for FY 2027. Average 10 years of price of bitumen are considered for unit rates calculation for FY 2028 and onwards, since bitumen prices have been range bound over the last five-six years. Following rates of bitumen are considered.

   Polymer and modification costs are provided by the Client to work out BC rate with PMB.

Table 5-1 Bitumen Rates - Ex-MI Supply excluding discount and GST

Sr. No.	Supply Location	Applicability of Rates	Product	Rate for FY 2027 (Rs. / MT)	Rate for FY 2028 onwards (Rs. / MT)
1	Mathura	All States	VG-10	45,102	35,125
2			VG-30	46,402	36,137
3			VG-40	48,962	38,131
4	Panipat	All States	VG-10	45,102	35,125
5			VG-30	46,402	36,137
6			VG-40	48,962	38,131
7	Koyali	All States	VG-10	47,102	37,125
8			VG-30	48,402	38,137

Sr. No.	Supply Location	Applicability of Rates	Product	Rate for FY 2027 (Rs. / MT)	Rate for FY 2028 onwards (Rs. / MT)
9			VG-40	51,082	40,251
10	Haldia	All States	VG-10	46,602	35,683
11			VG-30	47,402	36,295
12			VG-40	49,962	38,256
13	Barauni	All States	VG-10	47,132	36,213
14			VG-30	48,432	37,325
15			VG-40	50,992	39,286
16	CPCL	Kerala	VG-10	47,402	35,519
17			VG-30	48,402	36,395
18			VG-40	50,762	38,120
19	CPCL	Tamil Nadu	VG-10	47,902	36,019
20			VG-30	48,402	36,395
21			VG-40	50,962	38,320
22	CPCL	Telangana and Andhra Pradesh	VG-10	44,602	32,719
23			VG-30	45,402	33,395
24			VG-40	47,962	35,320
25	CPCL	Karnataka	VG-10	44,602	32,719
26			VG-30	45,402	33,395
27			VG-40	47,962	35,320

c. **Sand and Aggregate:** Market rates are considered from the quarry located nearest to Project Road.

d. **Cement:** Market rates are considered from the nearest local market.

e. **Steel :** Rate of steel is taken from SAIL.

f. **Machinery Hire charges:** Hire charges for the machinery are considered in accordance with MoRTH standard data book.

g. **Actual Rates of items as per work order:** The rates of road marking, road stud, kerb raising, micro surfacing, milling rates etc. are considered as per the work order shared by the client.

2. Goods and Service Tax (GST) is considered as 18% as per the latest Government Guidelines.

Summary of Unit Rates worked out using Standard Data Book adopted for major items is given below.

Table 5-2 Summary of Unit Rates

Sr. No.	Item Description	Unit	Rates (Rs.)
1	Dense Bituminous Macadam (VG-40)	Cum	10,076
2	Bituminous Concrete (VG-30)	Cum	11,105
3	Bituminous Concrete (VG-40)	Cum	11,407
4	Bituminous Concrete (PMB)	Cum	13,073
5	Milling	Sqm	95
6	Micro-surfacing	Sqm	180
7	Kerb Relaying	Rmt	460
8	Road Marking	Sqm	592
9	Road Studs	Nos.	244

5.3 Balance Work Cost

As discussed in the previous chapter, the Concessionaire has completed the 6-laning work. Hence, the cost of balance work is **NIL**.

5.4 Routine O&M Cost

Routine O&M cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance, and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area. Same has been divided into following major heads.

1. Salary and Welfare Expenses
2. Tolling Operations Services
3. Incident Management Services
4. Electricity and Diesel Charges
5. TMS / HTMS / System Expenses
6. Office Operating Expenses
7. Vehicle Running Expenses
8. Professional Fees Expense
9. Insurance Expense
10. IE Fees
11. Horticulture & ROW Maintenance
12. Routine Maintenance Cost

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Operation and Maintenance cost (Routine O&M) is presented below. The detailed working of routine maintenance (Sr. No. 15 of below table) is presented in **Annexure-I**.

Table 5-3 Summary of Operation Cost

Sr. No.	Particulars	Amount (Rs.) (FY 2027 to FY 2040)
1	Salary and Welfare Expenses	1,13,85,000
2	Tolling Operations Services	4,76,39,916
3	Toll Security Services	2,57,65,098
4	Incident Management & Emergency Services	4,23,67,462
5	Electricity and Diesel Charges	2,50,07,749
6	TMS / HTMS / System Expenses	1,30,94,769

Sr. No.	Particulars	Amount (Rs.) (FY 2027 to FY 2040)
7	Office Operating Expenses	50,07,000
8	Vehicle Running Expenses	71,50,800
9	Professional Fees Expense	1,18,91,625
10	Community Development	65,71,688
11	Communication Expenses	7,51,050
12	Conveyance Expenses	5,00,700
13	Insurance Expense	1,62,72,750
14	IE Fees	2,06,53,875
15	Routine Maintenance Cost (Project Road)	7,26,56,178
16	Horticulture & ROW Maintenance	4,47,10,200
17	Contingency	93,62,379
	Total Cost (Rs.)	**36,07,88,239**
	Total Cost (Cr.)	**36.08**
	Per km Cost (Lakhs)	28.82

5.5 Major Maintenance Cost

The summary of Major Maintenance Cost is provided as below. The detailed working of the same is presented in **Annexure-II**.

Table 5-4 Summary of Major Maintenance Cost

Sr. No.	Year	Major Maintenance Cost (Cr.)	Remarks
1	FY 2025 to FY 2029	-	
2	FY 2030 to FY 2031	205.60	
3	FY 2032 to FY 2036	-	
4	FY 2037 to FY 2038	186.41	
5	FY 2039 to FY 2040	-	
Total Cost (Cr.)		**392.00**	

5.6 Periodic Replacement of TMS / ATMS System

Every 7 years, replacement of cost of major TMS / ATMS system is considered. The same is provided as below.

Sr. No.	Year	HTMS O&M / Replacement Cost (Cr.)	Remarks
1	FY 2030	14.80	
2	FY 2037	14.80	
Total Cost (Cr.)		**29.60**	

5.7 Escalation Assumption

Following escalation has been considered for the O&M cost as provided by Client.

Table 5-5 Escalation

Year	Escalation	Year	Escalation
2027	-	**2043**	3.99%
2028	5.25%	**2044**	3.99%
2029	4.86%	**2045**	3.99%

Year	Escalation	Year	Escalation
2030	4.44%	**2046**	3.99%
2031	4.24%	**2047**	3.99%
2032	4.13%	**2048**	3.99%
2033	4.08%	**2049**	3.99%
2034	4.01%	**2050**	3.99%
2035	4.00%	**2051**	3.99%
2036	4.03%	**2052**	3.99%
2037	4.01%	**2053**	3.99%
2038	3.98%	**2054**	3.99%
2039	3.98%	**2055**	3.99%
2040	4.00%	**2056**	3.99%
2041	3.99%	**2057**	3.99%
2042	3.99%	**-**	-

5.8 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summarised yearly for remaining concession period along with escalation as mentioned in clause 5.7.

Escalated O&M Cost (in INR Cr.)

Sr. No.	Year of expense	FY27	FY28	FY29	FY30	FY31	FY32	FY33	FY34	FY35	FY36	FY37	FY38	FY39	FY40

				More than 4500 CVD
				BT Surface
1	**2**	**3**	**4**	**5**
1	**Maintenance of Carriageway & Paved Shoulders (1.5m wide); B.T. Surface**			
	i) Pot holes repair (50 mm deep)	100 % Pot hole free	As & when required	0.50%
	Volume (cum)			2.50
	Rs/m^3			11594
	Cost in Rupees			28,984
	ii) Patch repair	100 % Patch less	As & when required	1.00%
	Area (sqm)			100
	Rs/m^2			464
	Cost in Rupees			46,374
	iii) Sealing (Crack)			
	a) Wider than 3 mm	100 % Crack Less	As & when required	2.50%
	Area (sqm)			250
	Rs/m^2			90
	Cost in Rupees			22,450
	b) Width less than 3 mm	75 % Crack Less	As & when required	2.00%
	Area (sqm)			150
	Rs/m^2			60
	Cost in Rupees			9,000
	iv) Repair of ruts and undulations			
	a) Greater than 20 mm	75%	As & when required	1.00%
	Area (sqm)			75
	Rs/m^2			464
	Cost in Rupees			34,781
	v) Road marking	14%	Once in 7th year & @	28653

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity**
				More than 4500 CVD
				BT Surface
1	**2**	**3**	**4**	**5**
			Repaired location	
	SUB TOTAL			**1,70,242**
2	**Maintenance of earthen Shoulders:**			
	i) Renewal of earthen shoulders	80%	Once in a Year	6306
	ii) Kuccha Drain Maintenance	100%	Twice in a Year	1108
	SUB TOTAL			**7,414**
3	**Maintenance of Cross Drainage works:**			
	i) Repair of floors	100%	Once in a Year	5055
	ii) Repair of parapets	100%	As & when required	2106
	SUB TOTAL			**7,161**
4	**Maintenance of Minor & Major Bridges:**			
	i) Spot painting & protective Coating required on Bearing and greasing of Bearings, railing, structural members, Expansion joints	100%	As & when required	36,950
	ii) Repair of minor washouts, erosion scour and animal holes			
	iii) Sealing Cracks with Cement/ Epoxy Mortar			
	iv) Replacement & Correction of safety barriers, Guard rails and damaged members			
	SUB TOTAL			**36,950**
5	**Miscellaneous Items:**			
	i) Lettering, Painting of Km stones & kerbs, sign boards, hectometer stone etc.		Once in a Year	3695
	ii) Replacement and providing additional retro reflective signage	20%	Covering Total Network in 4-5 Years	7390
	iii) Providing first aid kits, Umbrella, Safety Jackets, Vardi etc.		Once in a Year	1232
	iv) Traffic Census		Once in a Year	0

1 INTRODUCTION

1.1 Background

Cube Highways Fund Advisors Pvt. Ltd. (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InvIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an Infrastructure Investment Trust under the SEBI InVIT Regulations. Cube Highways Fund Advisors Pvt. Ltd. has appointed **M/s FP Project Management Consultancy Services Private Limited** (hereinafter referred as "Technical Consultant" or "FPPM") to carry out Technical Due Diligence of Hazaribagh - Ranchi section of NH-20 (Old NH-33) from km. 41+500 to km. 115+290 in the State of Jharkhand (hereinafter referred as "Project Road").

Hazaribagh Tollway Private Limited (hereinafter referred as "Concessionaire") is a special purpose vehicle (SPV) for tolling, operation, maintenance, and transfer of Hazaribagh to Ranchi Section (from km.41+500 to km.115+290) of NH-20 or Project Road under TOT Bundle-3. The project was awarded to Concessionaire on 27th December 2019 with a concession period of 30 years. The length of Project Road is 73.79 kms with one toll plaza at Pundag at km. 100+600.

Accordingly, the Technical Consultant has undertaken the work of assessment of operation and maintenance (O&M) cost based on site inspections and field investigations. The same is presented in this report.

1.2 Scope of Work

The detailed scope of work for conducting the technical due diligence of Project Road is presented as below:

- A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets.
- Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, As-built drawings, O&M manual, COD / PCOD certificate, punch list, previous major maintenance etc.
- Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, axle load, material investigations etc.
- Formulation of future major maintenance strategy.
- Estimation of any initial expenses to be incurred due to deficiencies observed in diligence.
- Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period.
- Estimation of Annual Operation expenses along with Systems cost (TMS / HTMS) till the end of concession period.
- Review of balance work cost for Project Road including estimation of quantities and item rates.

1.3 Our Approach Philosophy

1.3.1 Composition of Team

Our proposed team consists of well-qualified engineers and other professionals, whose experience covers all the skills and specializations required for undertaking such assignments. All the team personnel proposed are our regular employees and have a long and stable working relationship with our firm.

The Team Leader will coordinate the activities between all the key staff who will work closely together. The key is assisted by various support staff, who report to the respective key staff in their field of expertise. The Team Leader will act as the point of contact for Client Technical Study.

The technical study include review of all the available documents namely:

a) Concession Agreement including Technical Schedules
b) O&M Contract, work order and their provisions
c) Quality of construction based on available data, design and drawings
d) Documents on historical expenditure on operation and maintenance
e) O&M cost schedule for the concession period
f) Review of Completion / Provisional Completion along with punch list items
g) Review of recent pavement surveys conducted
h) Correspondence regarding scope of works and during O&M
i) Recent O&M Report submitted to Authority
j) Toll operation manual / ATMS related documents

The review of above documents is the first step towards accomplishment of the task. This gives a complete idea of the project and is used as input data for preparation of report after necessary analysis.

1.3.2 Site Visit and Data Collection

A team of experts from various streams has carried out the preliminary site visit to understand the assessment of project assets mainly condition of the pavement and structures.

- The site visit is undertaken for detailed reconnaissance and visual pavement condition assessment.
- The condition assessment of major structures by visual inspection
- The information like material sources and the probable cost is collected for the purpose of cost estimate.

The detailed design / drawings viz. Plan & L-sections, drainage design, structure design, layout drawings for project facilities like toll plaza, bus bay, truck lay-byes, highway lighting facilities etc. are studied. Also, design / drawing and provision pertaining to road furniture are studied.

The information on availability of material in the vicinity is gathered. It has direct impact on cost of maintenance work and balance work.

The basic approach for preparation of cost estimates for operation and maintenance is as per the practice of State PWD / MORT&H in respect of highways and structures.

1.3.3 Data Analysis

Based on the study of the available information and preliminary site visits, the Consultants share their preliminary observations with the Client based on the evaluation of the technical data and reports provided by the Client.

1.4 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Company. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyze the same as per the best engineering / industry practices.

The site visit and inspection were carried out between the periods from **25th March 2026** to **27th March 2026**.

The report is organized with the following chapters for easy understanding of various issues.

Chapter 1 **Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for due diligence studies.

Chapter 2 **Project Description:** The chapter describes existing project features, and an overview of project development.

Chapter 3 **Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on site visit.

Chapter 4 **Pavement Investigation and Assessment:** The chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance.

Chapter 5 **Cost Estimates**: The chapter summarizes the forecast for O&M and major maintenance costs over the remaining concession period.

2 PROJECT DESCRIPTION

2.1 Introduction

National Highways Authority of India signed the Concession Agreement with **Hazaribagh Tollway Private Limited**, is a company promoted by Cube Highways or company a Special Purpose Vehicle (SPV) formed for implementing this project on 27th December 2019. The Appointed Date for the Project Road is 20th October 2020.

Presently, there are two Concessionaires for Project Road. One is Cube Highways who maintains Toll Operation activities (TOT Concessionaire) and the other Concessionaire ELSAMAX a group of ILFS, (Annuity Concessionaire) who maintain the project length as per their original scope of work.

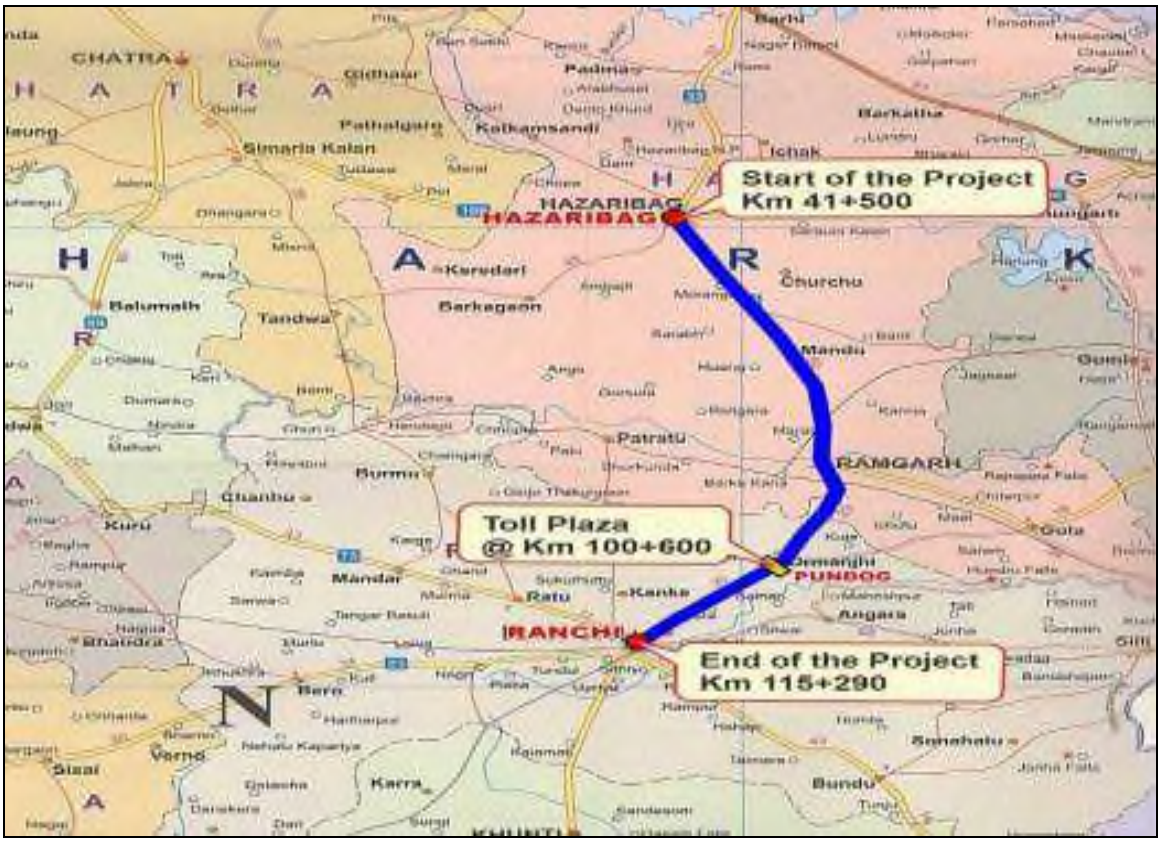
The project is being developed through Annuity BOT mode under TOT (Toll Operate Transfer) Bundle-III with a concession period of 30 years from the Appointed Date while O&M will start from March 2028 as per CA Clause 5.1.4 of Article 5.

2.2 Location

The Project Road is part of National Highway No. 20, NH-20 (Old NH-33) of Hazaribagh - Ranchi section in the state of Jharkhand. The total project length is 73.79 kms.

The Location Map of the Project Road is presented below.

Figure 2-1 Location Map



The photographs taken during the site visit are presented below.

Figure 2-2 Start and End of Project Road (LHS)

Figure 2-3 Start and End of Project Road (RHS)

2.3 Climate

Mainly there are three types of seasons observed. These are mainly Summer, Winter and monsoon. The summer in Hazaribagh begins from March to May. The normal temperature in these month ranges from 24 ºC to 32 ºC. Monsoon in Hazaribagh begins in June and ends in September and the average rainfall in this zone is 1234.5 mm. The average relative humidity of Hazaribagh is around 68% although it varies from 44% during summer to 89% during monsoon. The most humid month of the year is August with humidities varying from 65% to 98%.

2.4 Terrain

The Project Road passes through rolling to hilly terrain.

2.5 Abutting Land Use

The following are the various developments that are anticipated in the Four Laning of Hazaribagh Ranchi Section.

- This Project Road reduces the travel time for getting access to Dhanbad, Bokaro, Patna Kodarama and Bihar Sharif which results in better industrial growth and economy.

- A lot of development is anticipated in Hazaribagh Ranchi Section, which transits through NH-20 / NH-33 and hence the development / maintenance of this Project Road would accelerate the development as majority of traffic would use the highway for getting access to Varanasi and Patna.

- The tourism industry get a great booster as majority of people using this Project Road for going to places like Gaya, Kolkata and Jhariya etc.,

- A lot of commercial establishment along the Project Road in the form of hotels, Snack parlors may be developed in future as most of the road passing through dense forest and a local tourism may developed in the project length.

2.6 Right of Way

The width of the existing Right of Way (ROW) for the Project Road varies from 45.0 m to 60.0 m.

2.7 Existing Utilities

During widening of the Project Road, various affected utility services were shifted to proposed ROW. The different types of utilities found along the road include, electrical poles, telephone poles, OFC Cables, etc.

2.8 Development as per Schedule-B

The Project Road from Hazaribagh (km. 41+500) to Ranchi (km. 115+290) has been developed as a four-lane divided carriageway with median width varies from 1.5 m to 4.5 m, service road and other arrangements. The Project Road passes through rural as well as built-up sections.

As per Article 2 of Concession Agreement, the scope of project defined in Schedule-A and Schedule-B, (the **"Scope of the Project"**) shall mean and include, during the Concession Period:

a) Construction of the project on the Site set forth in Schedule-A and as specified in Schedule-B together with provision of project facilities as specified in Schedule-C and in conformity with the Specification and Standards set forth in Schedule-D.
b) Tolling, operation, management, maintenance, and transfer of the Project Highway subject to and in accordance with the provisions of this Agreement.
c) Performance and fulfilment of all other obligations of the Concessionaire in accordance with the provisions of this Agreement and matters incidental thereto or necessary for the performance of any or all of the obligations of the Concessionaire under this Agreement.

Following is the Scope of Work as per Schedule-B of Concession Agreement.

Sr. No.	Type of Structure	Unit	Scope	Remark
1	O&M of Main Carriageway	km	73.79	From March 2028
2	Construction of Service Road	km	7.105	14.21 kms (B/S)
3	Vehicular Underpasses	Nos.	01	
4	Widening of Existing Pipe Culvert	Nos.	05	
5	New Construction of Box Culvert	Nos.	0	
6	Reinforce Cement concrete cover Drain with footpath	km	7.105	14.21 kms (B/S)
7	Road marking by Thermoplastic Paint	km	14.20	
8	Rigid Concrete Barrier	km	1.460	
9	Pedestrian Guard Rail	km	11.400	
10	Additional cantilever Sign Boards	Nos.	06	
11	Bus Shelter	Nos.	02	

3 CONDITION ASSESSMENT OF PROJECT ROAD

3.1 Pavement

The Project Road is four lane divided carriageway and generally has paved carriageway of 8.5 m with earthen shoulder of 1.0 to 2.5 m on either side. The Project Road has median width varies from 1.5 m to 4.5 m.

The entire stretch of Project Road including service road is constructed with flexible pavement. The pavement type for the Toll Plaza including taper is of rigid pavement.

3.1.1 Pavement Condition Survey

Pavement condition survey was carried out from **25th March 2026** to **27th March 2026** through visual inspection for the entire project length. From the visual inspection, it is found that the average pavement condition of the Project Road is found to be Fair to Poor except few locations.

Some of the photographs taken during the site visit are presented as below.

3.2 Service Road

a) Construction of New Service Road

The width of service road is proposed 7.5 m and is proposed to be constructed in built-up area and adjoining underpass locations.

b) Existing Service Roads

The width of service road is found 4.0 m to 7.0 m partially and it is constructed in built-up area and adjoining Road Over Bridge (ROB) locations.

The photographs taken during the site visit are presented below.

3.5 Condition Survey of Culvert

The cross-drainage structure includes hume pipe culverts, box culverts and slab culverts at various locations. There are 88 Nos. of pipe culverts, 40 Nos. of box culverts along the Project Road. The height of culvert varies from 1.0 m to 3.0 m from bed level. During the condition survey of structure, these culverts were inspected on sample basis.

The project involves strengthening and widening of existing road to four lane divided carriageway. The culverts beneath existing alignment are either widened or reconstructed. The structural condition of culverts is generally found in sound condition. The quality of surface concrete of box culverts is satisfactory. The RCC railing has not been provided at culvert locations.

In most of culverts, the waterway is clear. However, near to urban area and some location, it is found blocked due to debris, drainage water or bushes, tree growth which must be removed and cleaned before and after monsoon to clear waterway. The wing wall has been provided for slope protection.

The culverts are maintained by the Annuity Concessionaire during O&M period. However, in case of some culverts, damaged wing walls have been observed at culverts, which need to be addressed under routine maintenance by Annuity Concessionaire.

3.8 Road Furniture

The Concessionaire has provided the following additional road furniture along the Project Road as per standards and specifications mentioned in Schedule-C. The details of the items are provided below.

a) Transverse / Thermoplastic Bar Marking Locations

Transverse / thermoplastic bar markings are provided on either side of carriageway on proposed service road / VUP / VUP approaches.

b) New Installation of Safety Barriers

The Concessionaire has installed new safety barriers at the following locations.

Table 3-3 Details of New Installation of Safety Barriers

Sr. No.	Chainage (km)		Length (m)	Location	Type of Barrier
	From	To			
1	109+650	110+380	730	BHS	Rigid Crash Barrier

c) Pedestrian Guard Rails

The Concessionaire has provided 5,700 linear meter of pedestrian guard rail along the Project Road.

d) Additional Gantry / Cantilever Sign Board

The Concessionaire has provided 2 nos. of cantilever overhead sign board at VUP locations along Project Road.

e) Summary of Quantity for Road Furniture Items

The following details show the summary of quantity for road furniture items provided by Annuity Concessionaire.

Table 3-4 Summary for Road Furniture Items

Sr. No.	Description	Unit	Quantity
1	Solar Blinkers	Nos.	Nil
2	Streetlights	m	Nil
3	High Mast Lights	Nos.	Nil
4	Transverse Bar Makings / Thermoplastic Bar Markings	km.	14.20
5	New installation of Safety Barriers		
	W-Beam Safety Barriers	m	Nil
	Concrete Median Barrier	m	Nil
	Rigid Concrete Barrier	m	1460.00
6	Guard Posts	m	Nil
7	Pedestrian Guard Rails	m	11400.00
8	Road Studs / Raised Pavement Markers	As per Section 9 of IRC:SP:84-2014

	Cantilever Sign Boards	Nos.	6
	Shoulder Mounted Dual Post Sign Boards	As per Section 9 of IRC:SP:84-2014	
	Shoulder Median Mounted Single Post Sign Boards		

3.9 Pavement Marking

The pavement marking for the Project Road is done as per the design standards indicated in section 12 of Schedule-D. Pavement marking is faded at some locations which will be rectified by the Annuity Concessionaire. Some of the photographs of road marking are presented below:

Traffic Signage / Median Kerb Painting / KM Stone

Traffic signs include roadside signs, overhead signs, kerb mounted signs and median signs along the Project Road. The traffic signs along the Project Road is provided as per the design standards indicated in section 11 of Schedule-D.

The height, lateral clearance, location and installation are as per relevant clauses of Schedule 'D'. Overhead sign has been installed ahead of major intersections, toll plazas, start / end of Project Road and at urban areas as per detailed design requirements.

Kilometre stones, vertical post of sign boards, chevron boards and median kerb paint are faded at few locations. The Annuity Concessionaire will rectify the same.

Some of the photographs of sign boards are presented below.

3.11 Toll Plaza

There is one existing toll plaza at km.100+600 near Pundag village in the Project Road with the following infrastructure.

Table 3-5 Details of Summary for Toll Plaza Items

Sr. No.	Particulars	Details
1	Toll Plaza Chainage	km. 100+600
2	Number of Tolling Lanes	14 lanes including 2 for over dimensional lanes
3	Weigh in Motion Facility (Number of Lanes)	Yes, in every lane
4	No. of ETC Lanes	12
5	Number of Toll Booths	14 Nos.
6	Canopy	Yes
7	Administrative Building	Yes
8	Parking cum Toilet Block	Yes (02 Nos.)
9	Availability of Tunnel or Elevated Walkway for Movement between Toll Lanes and Administrative Building	Yes
10	Availability of Static Weigh Bridge	Yes
11	Availability of Loading/Unloading Facility for Overloaded Vehicles	Not Available
12	Storage facility for Overloaded Material	Not Available
13	High mast Light	Yes
14	Streetlight	Yes
15	Low mast Light	Not Available
16	User Fee Boards	Yes
17	Cantilever / Gantry Boards	Available

Note:

- *Rehabilitation work of Toll Plaza is generally completed.*
- *TOT Concessionaires maintains only Toll Plaza activities as per scope of work.*
- *ATMS / HTMS is in the scope of Annuity concessionaire.*

Figure 3-22 Photographs of Toll Plaza

3.12 Lane Equipment

Following are the Lane hardware and equipment installed at toll plaza.

1. RFID ETC Transceiver
2. Lane Controller with Industrial PC
3. AVC Sensors
4. Automatic Lane Barrier (ALB)
5. Lane Traffic Light and user fare display
6. Incident Capture Camera
7. Overhead Lane Signals
8. Traffic Lights
9. Toll Booth Equipment

3.12.1 RFID ETC Transceiver

RFID ETC Transceiver reads tags installed on the windshield of vehicles and mounted on a pole at about 3 m height. Handheld RFID readers are provided (1 no. in each direction) in case a tag is not detected by the fixed reader.

RFID ETC Transceiver

3.12.2 Lane Controller with Industrial PC

Toll Lane Controller is located within the Electronic Enclosure placed inside the Tunnel. Each toll booth which are connected to the common server and are capable of independent storage of data.

Lane Controller in Toll Tunnel

3.12.3 Automatic Vehicle Classification (AVC) Sensors

The AVC equipment comprises of a pair of height sensor poles, axle sensors and inductive loops. The height detector has a high sensing resolution and detects height when object blocks the path. The presence of vehicle is detected by inductive loop. The loop sensors embedded on the pavement trigger the AVC height sensors located on parallel pillars.

AVCC at Toll Lane

3.12.4 Automatic Lane Barrier

Boom barriers installed on all lanes are in working condition and have a working time of 0.6-0.9 sec. Automatic Lane Barrier is used to allow only authorized vehicles to pass through the lane. The barrier is activated only on generation of user fee receipt or other relevant vehicle processing activity. A torque motor powers the barrier for raising and lowering the boom. The motor can be blocked at any position without causing any damage. In the event of power failure, the boom is automatically raised. The boom weight is exactly balanced by built-in springs.

ALB at Toll Lane

3.12.5 Lane Traffic Light (LTL) and User Fare Display (UFD)

Lane Traffic Light (LTL) is used to instruct vehicles to stop or pass through the lane. The LTL is RED when the toll collector is expecting the vehicle at the booth. After the transaction is done; the LTL turns Green to instruct the vehicle to pass through the lane. The User Fare Display is a part of electronic toll collection equipment located at the toll booth. It is a mini variable message sign (VMS) made of Light Emitting Diodes (LED). The user fare display is used to display the toll fare that is due and that must be paid by the motorist and the classification of vehicle selected by the collector.

Lane Traffic Light and User Fare Display

3.12.6 Incident Capture Camera (AVC Camera)

The incident capture camera is installed on the island of the booth to capture the image of the vehicle from the back side. The AVC triggers the image capture system.

AVC Camera

3.12.7 License Plate Image Capture Camera (LPIC)

License Plate Image capture camera is installed on a 3 m pole facing incoming vehicle to capture the image of the vehicle number plate.

LPIC

3.12.8 Over Head Lane Signal (OHLS)

The **Overhead Lane Signal (OHLS)** for lane “Open” and “Close” sign consists of a pair of “GREEN” (arrow) and “RED” (cross) lights. The OHLS is located at the vehicle approaching side of the canopy to show the drivers whether the lane is open or closed.

Overhead Lane Signal (OHLS)

3.12.9 Toll Booth Equipment

Toll Booth Hardware / Equipment provided are:

- Toll Collector Display (Operator Monitor)
- Customized Industrial Keyboard
- Receipt Printer
- Intercom Slave unit
- Bar code reader
- Violation Light and alarm
- Manual Booth Control (MBC)
- Booth Camera

The operator monitor termed as Toll Collector Display (TCD) is located on the toll collector's desk. It is the system's interface to the toll collector, to display the status of transactions and status of the lane peripherals.

The keyboard on the toll terminal is a programmable keyboard for registration of toll operations and is customized for different vehicle types and type of ticket.

Thermal Printers are installed at the toll booths to print tickets. Intercom slave unit facilitates communication with the master unit located in the control room.

Violation system has an alarm switch which is triggered whenever there is a violation such as run-through happening on the lane. When there is an emergency, a foot switch pressed by the booth operator alerts the control room.
Booth Cameras are provided on the inside roof corner of the booth to provide surveillance through CCTV screen located in the control room. Manual Booth Controller is used to release exempt vehicles.

3.12.10 Medium Speed Weigh in Motion (MSWIM)

Medium Speed Weigh in Motion (MSWIM) is installed on entry lanes of Toll Plaza.

MSWIM on entry lane

3.13 Plaza Equipment

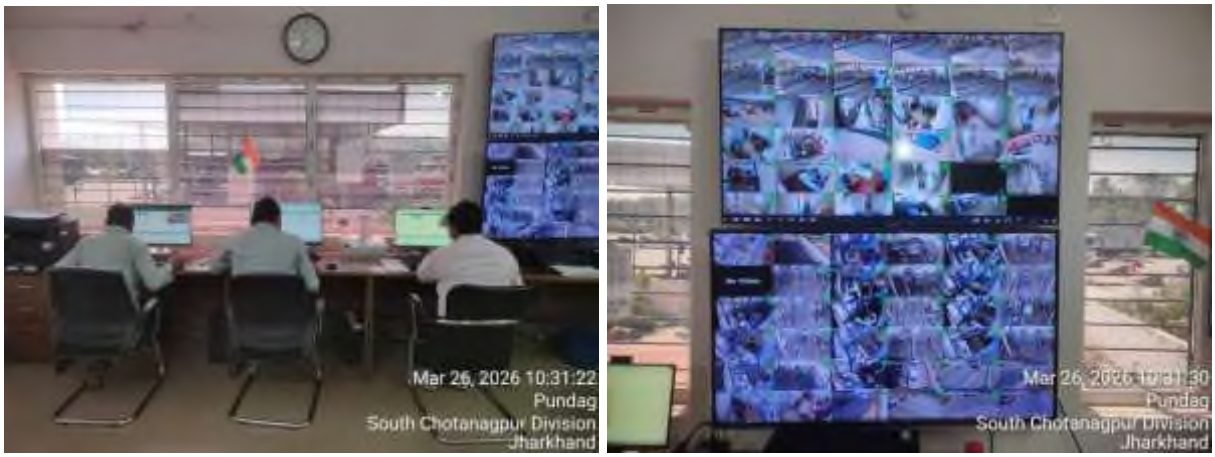
3.13.1 TMS Server

Plaza Server is provided in a hot standby configuration and provided with port non-POE network switch and Port PoE switch. Internet connectivity is available through one lease line (Airtel) and Jio Wi Fi module. Firewall with Sophos antivirus is provided.

Server

3.13.2 55” LED screen for CCTV monitoring

55” LED screen for CCTV monitoring installed at the toll plaza admin block provides view of all the toll booths, important zones within the plaza where cash transactions take place (server room, control room, cash up).



LED Screen

The Toll Plaza Manager is able to observe the activities at the toll lanes and toll booth. When the Toll Collector calls up on the intercom, the Manager is able to comprehend the situation at the lane by a zoomed view of the particular lane.

3.13.3 Workstations in Control Room, POS room

Workstations are available in control room (lane monitoring, administration, and audit), cash room and PoS.

POS Cabin

3.14 Truck Lay-byes

The following are the Truck Lay-bye cum Rest Room locations.

Figure 3-23 Details of Truck Lay-bye

Sr. No.	Chainage (km)	Side

3.18 Balance Work Status

During the site visit, it has been observed that TOT Concessionaire has expedited the work at site. However, due to some hindrance at two locations work is yet to start. The reasons for delay in work completion are due to unavailability of ROW and non-shifting the utility and encroachments and forest tree cutting permission. The status of work as on date is summarized in the table below.

Sr. No.	Chainage (km)		Length (m)	Scope / Status of Work	Remark
	From	To			
1	41+500	42+900	2800	Construction of Service Road & Drain works is in progress	Due to late permissions and approval from electrical and forest Dept. Work start late however presently utility works and Tree cutting works has completed and the work is in progress.
2	43+600	44+250	1300	Construction of Service Road & Drain works is in progress	Due to late permissions and approval from electrical and forest Dept. Work start late however presently utility works and Tree cutting works has completed and the work is in progress in the said chainage.
3	46+685	47+400	1430	Construction of Service Road & Drain works is in progress	Due to late permissions and approval from electrical and forest Dept. Work start late however presently utility works and Tree cutting works has completed and the work is in progress in the said chainage.
4	48+400	49+300	1800	Work is in progress	Due to late permissions and approval from electrical and forest Dept as well as encroachment, work start late & presently work is in progress.
5	56+850	57+100	500	Work is in progress	Due to late permissions and approval from electrical and forest Dept as well as encroachment, work start late & presently work is

Sr. No.	Chainage (km)		Length (m)	Scope / Status of Work	Remark
	From	To			
					in progress.
6	63+150	64+350	2400	• Drain – 2500 m Constructed • Service Road - 2000 m BC Completed.	Due to late permissions and approval from electrical and forest Dept. Work start late however presently utility works and Tree cutting works has completed and the work is in progress in the said chainage.
7	78+400	79+000	1200	• Retaining Wall - 800 m completed • Drain – 950 m completed • Service Road - Earthwork in Progress	Due to late permissions and approval from electrical and forest Dept. Work start late, however, presently utility works and Tree cutting works has completed and the work is in progress in the said chainage.
8	81+840	82+350	1020	• Retaining Wall - 620 m completed • Drain – 1000 m completed • Service Road - 620m BC completed. • GSB & WMM Work is in Progress.	Due to late permissions and approval from electrical and forest Dept. Work start late however presently utility works and Tree cutting works has completed and the work is in progress as well as there is no hindrance in the chainage.
9	109+650	110+380	1460	• Drain – 700 m Completed • Service Road - 800m BC Completed remaining 660 m is Hindered.	VUP construction is not started due to late decision from IE/NHAI. IE has recommended the COS to NHAI vide their letter no. UIC-SAICPL/O&M/HZB-RNC/NH-33/2025/5188 dated 13.01.2025. Further Part Utility Shifting (Electrical), is pending due to standing encroachments which is also pending at NHAI end.
10	110+450	110+600	300	• Drain – 300 m completed • Service Road - 150 m BC completed	
11				Rehabilitation work at Toll Plaza	Work Completed

3.19 Operation and Maintenance

3.19.1 O&M Contract

As per Clause 15.1 of the Concession Agreement, the Concessionaire shall operate and maintain the Project Road by itself, or through O&M Contractors and if required, modify, repair, improve the Project Road to comply with Specifications and Standards, and other requirements set forth in the Agreement through Good Industry Practice, Applicable Laws and Applicable Permits and manufacturer's guidelines and instructions with respect

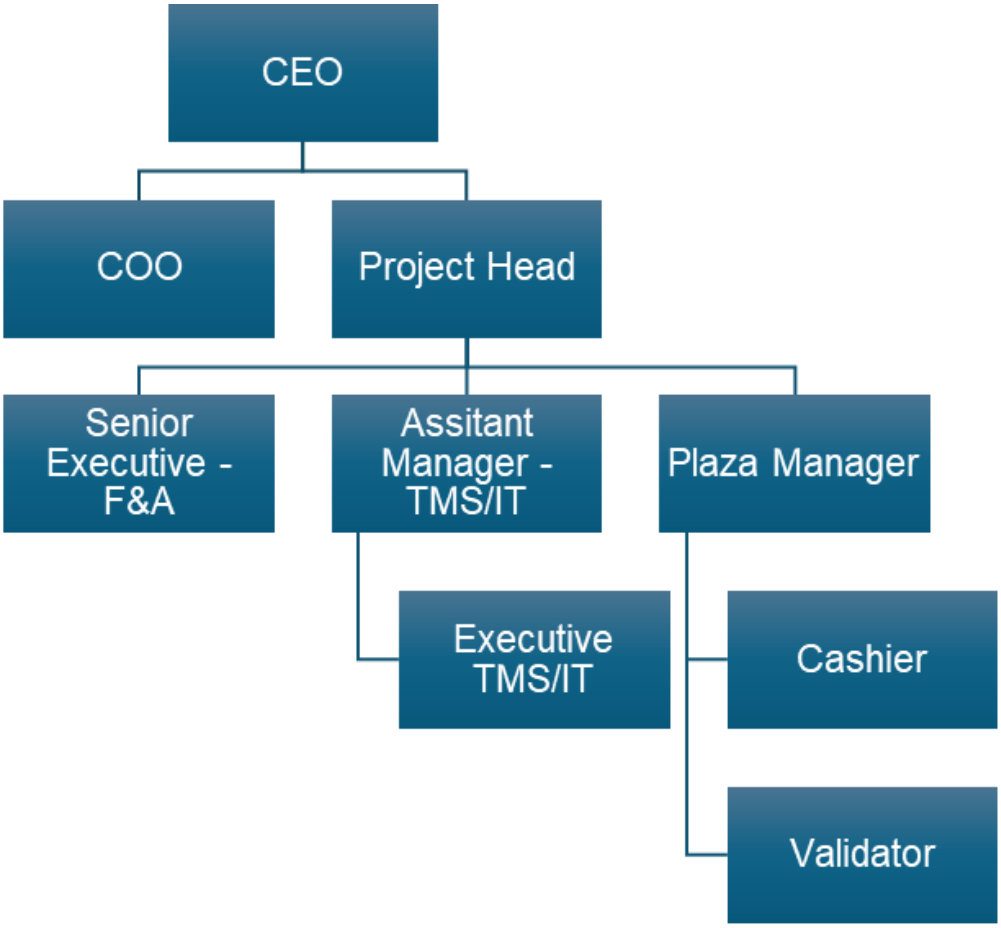
to toll systems. The Operation and Maintenance activities shall conform to all the requirements laid down in MoRT&H, IRC Specifications, and the Concession Agreement.

The Concessionaire has outsourced for carrying out the activities related to operation and maintenance of the Project Road including toll operation services, security services, AMC for TMC and AMC for DG set.

3.19.2 Organization Chart

The Concessionaire has given the Organization Chart at site for operation and maintenance. Accordingly, there is 01 Project Head, 01 Senior Executive (F&A), 01 Assistant Manager (TMS / IT), 01 Executive (TMS / IT), 01 Plaza Manager, 03 Cashiers and 04 validators to carry out O&M activities. The team controls the maintenance activities. However, the maintenance work is undertaken and executed through competent sub-contractors.

Organization Chart



3.19.3 Operation

The Operation cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, and other miscellaneous expenses. The Concessionaire has provided the expenses occurred towards operation expenses for past years. Necessary assumptions have been made from the expenses of similar types of projects to arrive at the operation

cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area.

The Operation Cost is presented in the subsequent chapter.

3.19.4 Routine Maintenance

The Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey.

Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

Currently, the Project Road is maintained by Annuity Concessionaire. The project will be handed over to TOT Concessionaire in March 2028. Hence, routine maintenance is considered from the year 2028 till end of concession period.

The Routine Maintenance Cost is presented in the subsequent chapter.

4 PAVEMENT INVESTIGATION AND ASSESSMENT

4.1 General

Presently, the pavement of the Project Road is being maintained by the Annuity Concessionaire as per the Scope of Work. The Annuity Concessionaire has received Completion Certificate on 13th April 2013.

The project is currently under the Operation and Maintenance stage. The concession period of the project is 30 years from the Appointed Date (as TOT Package i.e., 20th October 2020) including construction period. The project will be handed over to TOT Concessionaire in March 2028.

4.2 Axle Load and VDF

The Concessionaire has conducted the Axle Load Survey on Project Road at km. 100+600 (near Toll Plaza) on 28th May 2019. The summary of Vehicle Damage Factor (VDF) calculated as provided by the Concessionaire is tabulated below.

Table 4-1 Vehicle Damage Factor

Sr. No.	Vehicle Type	Direction	
		Hazaribagh - Ranchi	Ranchi - Hazaribagh
1	BUS	1.33	0.94
2	LCV	2.33	0.93
3	2-Axle	2.98	1.76
4	3-Axle	6.31	5.17
5	MAV	16.32	17.00

4.3 Design Traffic

Traffic in Million Standard Axles (MSA) for the homogeneous section based on the historical traffic data as provided by the Concessionaire, current traffic has been used for future projections and the estimated design MSA is computed and presented in subsequent table.

For the estimation of design MSA, Actual Traffic Growth Rates as provided by the Concessionaire were used.

Table 4-2 MSA Calculation

Year	MSA (LHS)	Cumulative MSA (LHS)	MSA (RHS)	Cumulative MSA (RHS)	Remarks
2026-27	7.39	**7.39**	7.28	**7.28**	
2027-28	7.01	**14.40**	6.91	**14.19**	
2028-29	6.99	**21.39**	6.90	**21.09**	
2029-30	7.36	**28.75**	7.28	**28.37**	
2030-31	7.72	**36.47**	7.64	**36.01**	
2031-32	8.11	**44.58**	8.03	**44.04**	
2032-33	8.52	**53.10**	8.45	**52.49**	
2033-34	8.96	**62.06**	8.89	**61.38**	
2034-35	9.41	**71.47**	9.34	**70.72**	PCU crossed 40000
2035-36	9.88	**81.35**	9.82	**80.54**	PCU crossed 40000
2036-37	10.37	**91.72**	10.32	**90.86**	PCU crossed 40000

Year	MSA (LHS)	Cumulative MSA (LHS)	MSA (RHS)	Cumulative MSA (RHS)	Remarks
2037-38	10.89	**102.61**	10.84	**101.70**	DPR Preparation
2038-39	11.42	**114.03**	11.38	**113.08**	DPR Preparation
2039-40	11.98	**126.01**	11.95	**125.03**	6Lane Construction
2040-41	12.56	**138.57**	12.53	**137.56**	6Lane Construction
2041-42	13.16	**151.73**	13.14	**150.70**	6Lane Construction
2042-43	11.19	**162.92**	11.19	**161.89**	
2043-44	11.72	**174.64**	11.72	**173.61**	
2044-45	12.26	**186.90**	12.27	**185.88**	
2045-46	12.83	**199.73**	12.85	**198.73**	
2046-47	13.42	**213.15**	13.44	**212.17**	
2047-48	14.02	**227.17**	14.06	**226.23**	
2048-49	14.65	**241.82**	14.70	**240.93**	
2049-50	15.30	**257.12**	15.36	**256.29**	
2050-51	15.95	**273.07**	16.02	**272.31**	End of concession period as per Appointed date & CA

4.4 Network Survey Vehicles (NSV) Survey

The O&M is not under the scope of Concessionaire / Client.

4.5 Structural Investigations

The O&M is not under the scope of Concessionaire / Client.

4.6 Test pit and Subgrade Investigation

The O&M is not under the scope of Concessionaire / Client.

4.7 Periodic Maintenance Strategy

Unlike the old Concession Agreements where periodicity and threshold limits were clearly described for the major maintenance, the Concession Agreement of this project does not specify the periodicity or the threshold limits for carrying out the full-length periodic maintenance. Schedule-F of the Concession Agreement specifies the threshold limits and the timeline for carrying out repairs to the distresses during the operation period.

The maintenance thus can be carried out as and when required basis and to the compliance of Schedule-F requirement to maintain the road in serviceable condition. Only improvement to Riding Quality is expected if the roughness value exceeds 3000 mm/km.

As per Article 14 of CA, the Authority shall carry out capacity augmentation under EPC contract if traffic exceeds 40,000 PCU for three consecutive accounting years. As per the traffic study report submitted by the Company it is observed that the project traffic crosses 40,000 PCU in FY 2035, FY 2036, FY 2037. Assumption has made that execution of 6-laning of project highway will start in the year 2040 or 2041. It is also assumed that during 6-laning of Project Road, overlay of existing four lane road will be the part of the capacity augmentation. Hence, the major maintenance cycle is adjusted accordingly.

The table below shows the major/ periodic maintenance cycle throughout the concession period for the Project Road.

Table 4-3 Major Maintenance Cycle

Sr. No.	Year	Main Carriageway	Service Road
1	FY 2027 to FY 2027	-	-
2	FY 2028	Handing over of Project Site from Annuity Concessionaire	
3	FY 2029 to FY 2030	-	-
4	FY 2031	Major Maintenance with 30 mm BC (PMB) (100%) + Milling & 50 mm DBM (VG-40) (100%)	Major Maintenance with 30 mm BC (VG-40) (50%) + Micro-surfacing (50%)
5	FY 2032 to FY 2037	-	-
6	FY 2038	Major Maintenance with 30 mm BC (PMB) (100%) + Milling & 50 mm DBM (VG-40) (5%)	Major Maintenance with 30 mm BC (VG-40) (50%) + Micro-surfacing (50%)
7	FY 2039 to FY 2041	-	-
6	FY 2042	Assumption of Capacity Augmentation to Six Lane Configuration	
7	FY 2043 to FY 2046	-	-
8	FY 2047	Major Maintenance with 30 mm BC (VG 40) (100%) + Milling & 50 mm DBM (VG-40) (5%)	Major maintenance with 30 mm BC (VG-40) (50%) + Micro-surfacing (50%)
9	FY 2048 to FY 2050	-	-
11	FY 2051	End of concession period	

The projected cost for periodic / major maintenance is presented in the subsequent chapter.

5 COST ESTIMATES

5.1 General

Based on the assessment carried out in previous chapters, various costs were worked out. The costs are divided into following categories.

I. Balance Works Cost
II. Routine O&M Cost
III. Major Maintenance Cost
IV. Periodic Replacement of TMS / ATMS system

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and escalation.

5.2 Rate Assumption

Following assumptions are considered for unit rates of various items while estimating the cost:

1 Unit rates of different items (BC, DBM, Concrete, Road markings etc.) are calculated as per Jharkhand SoR 2021-22. The input rates for MoRTH standard data book were adopted as below:

a. Manpower and labour: As per applicable minimum wages published by Schedule of Rates, Government of Bihar.

b. Bitumen: Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. Same discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.

Therefore, bitumen prices are considered as per the forecast of Client. Current published of bitumen are considered for unit rates calculation for FY 2027. Average 10 years of price of bitumen are considered for unit rates calculation for FY 2028 and onwards, since bitumen prices have been range bound over the last five-six years. Following rates of bitumen are considered.

Table 5-1 Bitumen Rates - Ex-MI Supply excluding discount and GST

Supply Location	Applicability of Rates	Product	Current Published Price (16th Feb 26)	Long term price (Avg last 10 years)
Mathura	All States	VG-10	45,102	35,125
		VG-30	46,402	36,137
		VG-40	48,962	38,131
Panipat	All States	VG-10	45,102	35,125
		VG-30	46,402	36,137
		VG-40	48,962	38,131
Koyali	All States	VG-10	47,102	37,125
		VG-30	48,402	38,137
		VG-40	51,082	40,251
Haldia	All States	VG-10	46,602	35,683

Supply Location	Applicability of Rates	Product	Current Published Price (16th Feb 26)	Long term price (Avg last 10 years)
		VG-30	47,402	36,295
		VG-40	49,962	38,256
Barauni	All States	VG-10	47,132	36,213
		VG-30	48,432	37,325
		VG-40	50,992	39,286
CPCL	Kerala	VG-10	47,402	35,519
		VG-30	48,402	36,395
		VG-40	50,762	38,120
CPCL	Tamil Nadu	VG-10	47,902	36,019
		VG-30	48,402	36,395
		VG-40	50,962	38,320
CPCL	Telangana and Andhra Pradesh	VG-10	44,602	32,719
		VG-30	45,402	33,395
		VG-40	47,962	35,320
CPCL	Karnataka	VG-10	44,602	32,719
		VG-30	45,402	33,395
		VG-40	47,962	35,320

c. Sand and Aggregate: Market rates are considered from the quarry located nearest to Project Road.

d. Cement: Market rates are considered from the nearest local market.

e. Steel : Rate of steel is taken from market rate.

f. Machinery Hire charges: Hire charges for the machinery are considered in accordance with MoRTH standard data book.

g. Actual Rates of items as per work order: The rates of road marking, road stud, kerb raising, micro surfacing, milling rates etc. are considered as per the work order shared by the client.

1. Goods and Service Tax (GST) is considered as 18% as per the latest Government Guidelines.

Summary of Unit Rates worked out using Standard Data Book adopted for major items is given below.

Table 5-2 Summary of Unit Rates

Sr. No.	Item Description	Unit	Rates (Rs.)
1	Dense Bituminous Macadam (VG-40)	Cum	8,833
2	Bituminous Concrete (VG-40)	Cum	10,249
3	Bituminous Concrete (VG-30)	Cum	9,952
4	Bituminous Concrete (PMB 70-10E)	Cum	12,491
5	Milling	Sqm	92
6	Micro-surfacing	Sqm	162
7	Kerb Re-laying	Rmt	311
8	Road Marking	Sqm	503
9	Road Studs	Nos.	179

5.3 Balance Work Cost

The Concessionaire has provided the details of balance work. The total cost of Balance Work is Rs. 89.56 Crores.

5.4 Routine O&M Cost

Routine O&M cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance, and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area. Same has been divided into following major heads.

1. Salary and Welfare Expenses
2. Tolling Operations Services
3. Incident Management Services
4. Electricity and Diesel Charges
5. TMS / HTMS / System Expenses
6. Office Operating Expenses
7. Vehicle Running Expenses
8. Professional Fees Expense
9. Insurance Expense
10. IE Fees
11. Horticulture & ROW Maintenance
12. Routine Maintenance Cost

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

Currently, the Project Road is maintained by existing Annuity Concessionaire. The project will be handed over to TOT Concessionaire in March 2028. Hence, the routine maintenance and horticulture maintenance is considered from year 2028 till end of concession period. The Routine Operation and Maintenance cost (Routine O&M) is presented below. The detailed working of routine maintenance (Sr. No. 15 of below table) is presented in **Annexure-I**.

Table 5-3 Summary of Operation Cost

Sr. No.	Particulars	Amount (FY 2027-28)	After Annuity Amount (FY 2029-42)	After Capacity Augmentation (FY 2043-51)
1	Salary and Welfare Expenses	1,11,27,600	1,11,27,600	1,11,27,600
2	Tolling Operations Services	4,09,35,032	4,09,35,032	4,09,35,032

Sr. No.	Particulars	Amount (FY 2027-28)	After Annuity Amount (FY 2029-42)	After Capacity Augmentation (FY 2043-51)
3	Toll Security Services	69,11,071	69,11,071	69,11,071
4	Incident Management & Emergency Services	-	2,51,42,257	2,51,42,257
5	Electricity and Diesel Charges	25,95,133	92,33,930	92,33,930
6	TMS / HTMS / System Expenses	20,69,760	92,50,498	77,38,617
7	Office Operating Expenses	32,53,663	32,53,663	32,53,663
8	Vehicle Running Expenses	36,00,000	36,00,000	36,00,000
9	Professional Fees Expense	1,01,97,570	1,25,17,585	1,36,77,593
10	Community Development	7,78,508	7,78,508	7,78,508
11	Communication Expenses	3,62,250	3,62,250	3,62,250
12	Conveyance Expenses	3,95,182	3,95,182	3,95,182
13	Insurance Expense	32,93,182	32,93,182	32,93,182
14	IE Fees	32,93,182	32,93,182	32,93,182
15	Routine Maintenance Cost (Project Road)	-	2,73,31,831	4,09,57,739
16	Horticulture & ROW Maintenance	-	2,07,87,617	2,07,87,617
17	Miscellaneous including Contingency	35,52,485	52,03,758	51,89,683
	Total Cost (Rs.)	**9,23,64,618**	**18,34,17,145**	**19,66,77,105**
	Total Cost (Cr.)	**9.24**	**18.34**	**19.67**
	Per km Cost (Lakhs)	12.52	24.86	26.65

5.5 Major Maintenance Cost

The summary of Major Maintenance Cost is provided as below. The detailed working of the same is presented in **Annexure-II**.

Table 5-4 Summary of Major Maintenance Cost

Sr. No.	Year	Major Maintenance Cost (Cr.)	Remarks
1	FY 2028	-	Handing over of Project Site
2	FY 2029 to FY 2030	-	
3	FY 2031	170.69	
4	FY 2032 to FY 2037	-	
5	FY 2038	90.28	
6	FY 2039 to FY 2046	-	
7	FY 2047	100.48	
8	FY 2048 to FY 2050	-	
9	FY 2051	-	End of Concession period
Total Cost (Cr.)		**361.45**	

5.6 Periodic Replacement of TMS / ATMS System

Every 7 years, replacement of cost of major TMS / ATMS system is considered. The same is provided as below.

Sr. No.	Year	HTMS O&M / Replacement Cost (Cr.)	Remarks
1	FY 2028	2.11	
2	FY 2035	7.71	
3	FY 2042	7.71	

Sr. No.	Year	HTMS O&M / Replacement Cost (Cr.)	Remarks
4	FY 2049	7.71	
Total Cost (Cr.)		**25.24**	

5.7 Escalation Assumption

Following escalation has been considered for the O&M cost as provided by Client.

Table 5-5 Escalation

Year	Escalation	Year	Escalation
2025	-	**2041**	3.99%
2026	-	**2042**	3.99%
2027	5.25%	**2043**	3.99%
2028	4.86%	**2044**	3.99%
2029	4.44%	**2045**	3.99%
2030	4.24%	**2046**	3.99%
2031	4.13%	**2047**	3.99%
2032	4.08%	**2048**	3.99%
2033	4.01%	**2049**	3.99%
2034	4.00%	**2050**	3.99%
2035	4.03%	**2051**	3.99%
2036	4.01%	**2052**	3.99%
2037	3.98%	**2053**	3.99%
2038	3.98%	**2054**	3.99%
2039	4.00%	**2055**	3.99%
2040	3.99%	**2056**	3.99%

5.8 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summarised yearly for remaining concession period along with escalation as mentioned in clause 5.7.

Escalated O&M Cost (in INR Cr.)

Year of expense	FY27	FY28	FY29	FY30	FY31	FY32	FY33	FY34	FY35	FY36	FY37	FY38	FY39	FY40	FY41	FY42	FY43	FY44	FY45	FY46	FY47	FY48	FY49	FY50	FY51
Routine O&M Cost																									
Salary and Welfare Expense	1.11	1.17	1.22	1.27	1.32	1.38	1.43	1.49	1.55	1.61	1.68	1.74	1.81	1.88	1.96	2.04	2.12	2.20	2.29	2.38	2.48	2.58	2.68	2.79	2.90

1 INTRODUCTION

1.1 Background

Cube Highways Fund Advisors Pvt. Ltd. (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InvIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an Infrastructure Investment Trust under the SEBI InVIT Regulations. Cube Highways Fund Advisors Pvt. Ltd. has appointed **M/s. FP Project Management Consultancy Services Private Limited** (hereinafter referred as "Technical Consultant" or "FPPM") to carry out Technical Due Diligence of Jhansi - Lalitpur section [Package-I] of NH-44 (old "NH-26") from km. 0+000 to km. 49+700 in the State of Uttar Pradesh (hereinafter referred as "Project Road").

M/s. Jhansi Lalitpur Tollway Private Limited (hereinafter referred as "Concessionaire") is a special purpose vehicle (SPV) for tolling, operation, maintenance, and transfer of Jhansi to Lalitpur Section (from km. 0+000 to km. 49+700) of NH-44 or Project Road under TOT. The project was awarded to Concessionaire on 20th October 2020 with a concession period of 30 years by National Highway Authority of India (NHAI). The length of Project Road is 49.700 kms with one toll plaza at km. 32+100 near Babina.

Accordingly, Technical Consultant has undertaken the work of assessment of operation and maintenance (O&M) cost based on site inspections and filed investigations. The same is presented in this report.

1.2 Scope of Work

The detailed scope of work for conducting the technical due diligence of Project Road is presented as below:

1. A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets
2. Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, As-built drawings, O&M manual, COD / PCOD certificate, punch list, previous major maintenance etc.
3. Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, axle load, material investigations etc.
4. Formulation of future major maintenance strategy
5. Estimation of any initial expenses to be incurred due to deficiencies observed in diligence
6. Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period
7. Estimation of Annual Operation expenses along with Systems cost (TMS / HTMS) till the end of concession period
8. Review of balance work cost for Project Road including estimation of quantities and item rates

1.3 Our Approach Philosophy

1.3.1 Composition of Team

Our team consists of well-qualified engineers and other professionals, whose experience covers all the skills and specializations required for undertaking such assignments. All the team personnel proposed are our regular employees and have a long and stable working relationship with our firm.

The Team Leader coordinates the activities between all the key staff who work closely together. The key staff is assisted by various support staff who report to the respective key staff in their field of expertise. The Team Leader is the point of contact for Client on Technical Study.

The technical study includes review of all the available documents namely:

a) Concession Agreement including Technical Schedules
b) O&M Contract, work order and their provisions
c) Quality of construction based on available data, design and drawings
d) Documents on historical expenditure on operation and maintenance
e) O&M cost schedule for the concession period
f) Review of Completion / Provisional Completion along with punch list items
g) Review of recent pavement surveys conducted
h) Correspondence regarding scope of works and during O&M
i) Recent O&M Report submitted to Authority
j) Toll operation manual / ATMS related documents

The review of above documents is the first step towards accomplishment of the task. This gives a complete idea of the project and is used as input data for preparation of report after necessary analysis.

1.3.2 Site Visit and Data Collection

A team of experts from various streams has carried out the preliminary site visit to understand the assessment of project assets mainly condition of the pavement and structures.

- The site visit is undertaken for detailed reconnaissance and visual pavement condition assessment.
- The condition assessment of major structures by visual inspection
- The information like material sources and the probable cost is collected for the purpose of cost estimate.

The detailed design / drawings viz. Plan & L-sections, drainage design, structure design, layout drawings for project facilities like toll plaza, bus bay, truck lay-byes, highway lighting facilities etc. are studied. Also, design / drawing and provision pertaining to road furniture are studied.

The information on availability of material in the vicinity is gathered. It has direct impact on cost of maintenance work and balance work.

The basic approach for preparation of cost estimates for operation and maintenance is as per the practice of State PWD / MORT&H in respect of highways and structures.

1.3.3 Data Analysis

Based on the study of the available information and preliminary site visits, the consultants share their preliminary observations with the Client based on the evaluation of the technical data and reports provided by the Client.

1.4 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Company. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyze the same as per the best engineering / industry practices.

The site visit and inspection were carried out between the periods from **25th March 2026** to **27th March 2026**.

The report is organized with the following chapters for easy understanding of various issues.

Chapter 1 **Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for due diligence studies.

Chapter 2 **Project Description:** The chapter describes existing project features and overviews of project development.

Chapter 3 **Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on site visit.

Chapter 4 **Pavement Investigation and Assessment:** The chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance.

Chapter 5 **Cost Estimates**: The chapter summarizes the forecast for O&M and major maintenance costs over the remaining concession period.

2 PROJECT DESCRIPTION

2.1 Introduction

National Highways Authority of India signed the Concession Agreement with **Jhansi Lalitpur Tollway Private Limited**, is a company promoted by Cube Highways or Special Purpose Vehicle (SPV) formed for implementing this project. The Appointed Date of the project was 20th October 2020 (as TOT Package). The concession period of the project is 30 years including construction period. The project has received COD on 12th November 2014.

Presently, there are two Concessionaires for Project Road. One is Cube Highways who maintains Toll Operation activities (TOT Concessionaire) and the other Concessionaire is Gayatri Group (Annuity Concessionaire) who maintains the project length as per their original scope of work.

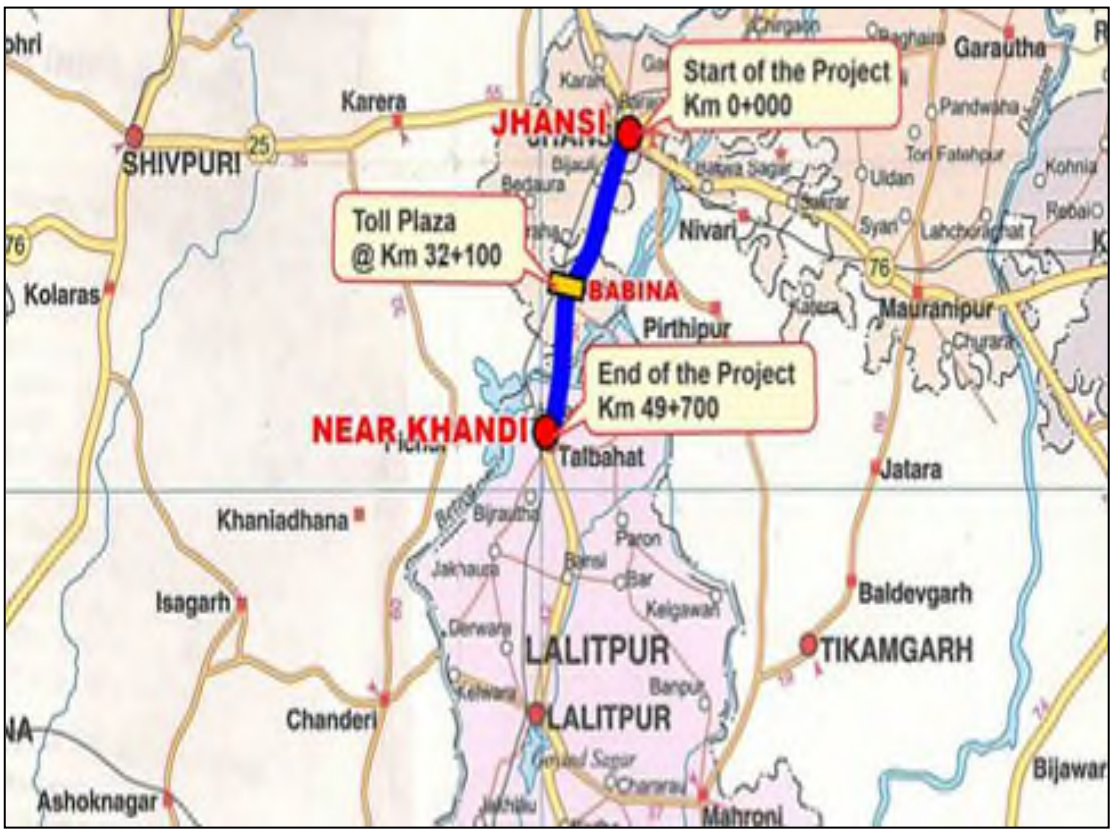
The project is being developed through Annuity BOT mode under TOT (Toll Operate Transfer) Bundle-3 with concession period of 30 years from the Appointed Date while O&M will start from April 2027 as per Clause 10.2.2 of Concession Agreement.

2.2 Location

The Project Road is part of National Highway No. 44 (old "NH-26") of Jhansi - Lalitpur section in the state of Uttar Pradesh. The total project length is 49.700 kms.

The Location Map of the Project Road is presented below:

Figure 2-1 Location Map



The photographs taken during the site visit are presented below:

Figure 2-2 Start of Project Road

Figure 2-3 End of Project Road

2.3 Climate

The project area being on a rocky plateau, Jhansi experiences extreme temperatures. Winter begins in October and peaks in mid-December. Temperature is about 4 °C minimum and 21 °C maximum. Summer begins by April and summer temperatures can peak 47 °C in May. The rainy season starts by the third week of June, while the monsoon rains gradually weaken in September and end before the last week of September. In the rainy season, the average daily high temperature hovers around 36 °C with high humidity. The average rainfall for the project is about 850 mm per year, occurring almost entirely within the three-and-a-half months of the Southwest Monsoon. In summer, temperatures as high as 45 to 47 °C while in winter the temperatures can fall as low as 0 to 1 °C as recorded in winter 2011.

2.4 Terrain

The Project Road traverses through plain / rolling terrain.

2.5 Abutting Land Use

The land use along the Project Road is predominantly agriculture or barren with intermittent built-up areas.

2.6 Right of Way

The width of the existing Right of Way (ROW) throughout the Project Road is 60 m.

2.7 Existing Utilities

During widening of the Project Road, various affected utility services were shifted to proposed ROW. The different types of utilities found along the road include, electrical poles, telephone poles, OFC Cables, etc.

2.8 Development as per Schedule-B

The Project Road from Jhansi (km. 0+000) to Lalitpur (km. 49+700) has been developed as a four-lane divided carriageway with median width of 2 m, service road and other arrangements. The Project Road passes through rural as well as built-up section.

As per Article 2 of Concession Agreement, the scope of project defined in Schedule-A and Schedule-B, (the **"Scope of the Project"**) shall mean and include, during the Concession Period:

a) Construction of the project on the Site set forth in Schedule-A and as specified in Schedule-B together with provision of project facilities as specified in Schedule-C and in conformity with the Specification and Standards set forth in Schedule-D.

b) Tolling, operation, management, maintenance, and transfer of the Project Road subject to and in accordance with the provisions of this Agreement.

c) performance and fulfilment of all other obligations of the Concessionaire in accordance with the provisions of this Agreement and matters incidental thereto or necessary for the performance of any or all of the obligations of the Concessionaire under this Agreement.

Following is the Scope of Work as per Schedule-B of Concession Agreement.

Table 2-1 Details of Scope of Work

Sr. No.	Type of Structure	Unit	Scope	Remark
1	O&M of Main Carriageway	km.	49.700	From April 2027
2	Construction of Service Road	km.	3.310	
3	Reconstruction of Pipe Culvert	Nos.	01	
4	Reconstruction of Box Culvert	Nos.	05	
5	New Construction of Box Culvert	Nos.	-	
6	Vehicular Underpasses	Nos.	-	
7	Reinforce Cement concrete cover Drain with footpath	km.	3.310	
8	Road marking by Thermoplastic Paint	km.	3.310	
9	Rigid Concrete Barrier	km.	-	
10	Additional cantilever Sign Boards	Nos.	-	

3 CONDITION ASSESSMENT OF PROJECT ROAD

3.1 Pavement

The Project Road is four lane divided carriageway and generally has paved carriageway of 9.0 m with an earthen shoulder of 1.5 m on either side. The Project Road has a median width of 2.0 m throughout its length.

The entire stretch of Project Road including service road is constructed with flexible pavement. The pavement type for the Toll Plaza including taper is of rigid pavement.

3.1.1 Pavement Condition Survey

The pavement condition survey was carried out from **25th March 2026** to **27th March 2026** through visual inspection for the entire project length. From the visual inspection, it is found that the pavement condition of the Project Road at LHS side is around 30% length in poor condition, 60% length in fair condition and only 10% length is in good to fair condition. The Project Road on RHS side is around 20% length is in poor condition, 30% length is in fair condition, and 50% length is in good condition. The Concessionaire has done BC overlaying activities from Km 00+000 to 23+000; Overlay work for balance stretches are in progress.

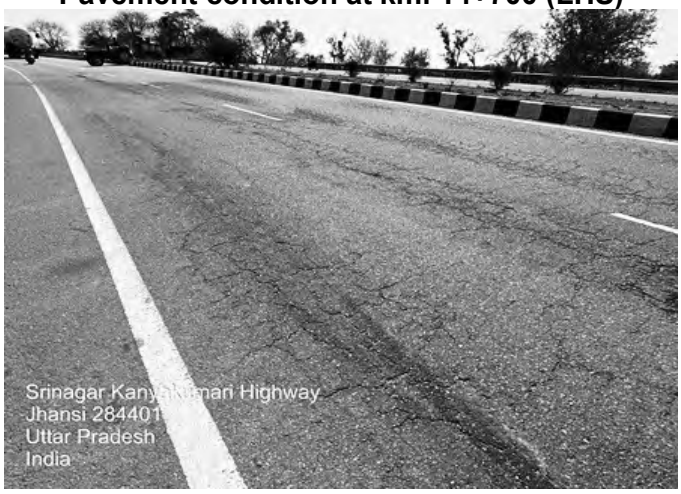
Some of the photographs taken during the site visit are presented as below.

Figure 3-1 Photographs of Pavement Condition (Main Carriageway)

Pavement condition at km. 00+240 (LHS)

Pavement condition at km. 14+700 (LHS)

Pavement condition at km. 20+800 (IHS)

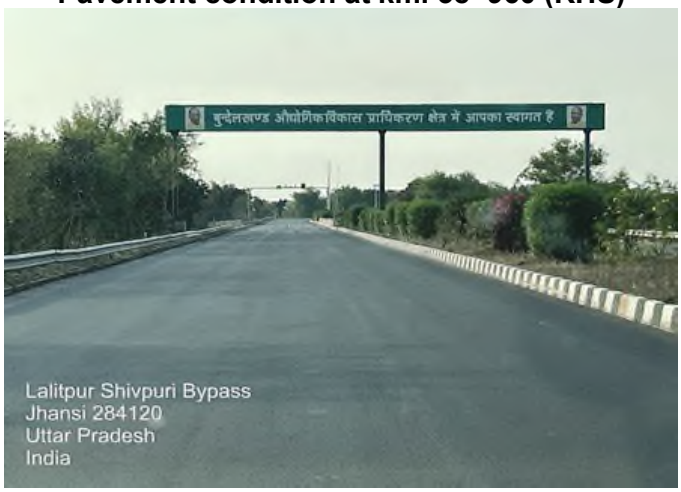


Pavement condition at km. 41+500 (LHS)

Pavement condition at km. 48+560 (RHS)

Pavement condition at km. 38+960 (RHS)

Pavement condition at km. 24+000 (RHS)



Overlay done from 0+000 to 23+000 (RHS)

3.2 Service Road / Slip Road

The service road with width 5.5 is constructed in built-up area and adjoining underpass locations. The total service road length is 3.310 kms. The photographs taken during the site visit are presented below.

Figure 3-2 Photographs of Service Road

km. 04+660 LHS

km. 08+750 RHS

3.3 Major / Minor Junction

There are 01 no. of major junctions and 14 nos. of minor junctions along Project Road.

The photographs taken during site visit is presented as below:

Figure 3-3 Photographs of Major / Minor Junctions

Junction at km. 8+900 LHS

Orchha Junction at km. 21+300 LHS

Junction at km. 35+380 LHS

Babina Junction at km. 31+760 RHS

3.4 Condition Survey of Bridge

The inventory of structures including major bridges, minor bridges, ROB's, underpasses and culverts is presented in table as below:

Table 3-1 Details of Summary for Structures

Type of Structure	Total Number of Structures
Road Over Bridge (ROB)	01
Flyover	01
Major Bridges (MJB)	05
Minor Bridges (MNB)	04
Vehicular Underpass (VUP)	12
Light Vehicular Underpass (LVUP)	-
Pedestrian Underpass (PUP)	04
Cattle Underpass (CUP)	-
Foot over Bridge	-
Culverts (Box / Slab / HPC)	79

Type of Structure	Total Number of Structures
Total	**106**

The detailed condition survey of structures was carried out by visual inspection. The observations and findings are presented in table below:

Table 3-2 Condition Survey of Major Structure

3.5 Condition Survey of Culverts

The cross-drainage structure includes hume pipe culverts and box culverts at various locations. There are 23 Nos. of pipe culverts, 66 Nos. of box culverts along the Project Road. The height of culvert varies from 1.0 m to 3.0 m from bed level. During the condition survey of structure, these culverts were inspected on sample basis.

The project involves strengthening and widening of existing road to four lane divided carriageway. The culverts beneath existing alignment are either widened or reconstructed. The structural condition of culverts is generally found in sound condition. The quality of surface concrete of box culverts is satisfactory. The RCC parapet, crash barrier or RCC railing has been provided at culvert locations, which is maintained properly.

In most of culverts, the waterway is clear. However, near to urban area and some location is found blocked due to debris, drainage water or bushes, tree growth, which will be removed by the Annuity Concessionaire. The cement concrete pitching or stone pitching has been provided for slope protection.

The culverts are maintained by the Annuity Concessionaire during O&M period. However, in case of some culverts, cement concrete pitching has been observed damage which required to be addressed under routine repair work by the Annuity Concessionaire.

km. 22+700 Cute Drain

3.8 Road Furniture

The Concessionaire has provided additional road furniture along Project Road as per the standards and specifications mentioned in Schedule-C.

Table 3-3 Details of Summary for Road Furniture Items

Sr. No.	Description	Unit	Quantity
1	Solar Blinkers	Nos.	Nil
2	Streetlights	Nos.	Nil
3	High Mast Lights	Nos.	Nil
4	Transverse Bar Makings / Thermoplastic Bar Markings	km.	4.870
5	New installation of Safety Barriers		
	W-Beam Safety Barriers	m	Nil
	Concrete Median Barrier	m	Nil
	Rigid Concrete Barrier	m	Nil
6	Guard Posts	m	Nil
7	Pedestrian Guard Rails	m	Nil
8	Road Studs / Raised Pavement Markers		
9	Road Markings		
10	Traffic Delineators	As per Section-9 of IRC:SP:84-2014	

Sr. No.	Description	Unit	Quantity
11	Kilometer / Hectometer / Boundary Stones		
12	Additional Sign Boards		
	Gantry Sign Boards	Nos.	Nil
	Cantilever Sign Boards	Nos.	Nil
	Shoulder Mounted Dual Post Sign Boards	As per Section 9 of IRC:SP:84-2014	
	Shoulder / Median Mounted Single Post Sign Boards		

Pavement Marking and Road Studs

Pavement marking for the Project Road is done as per the design standards indicated in section 12 of Schedule-D. Pavement marking is faded at some locations which will be rectified by the Annuity Concessionaire.

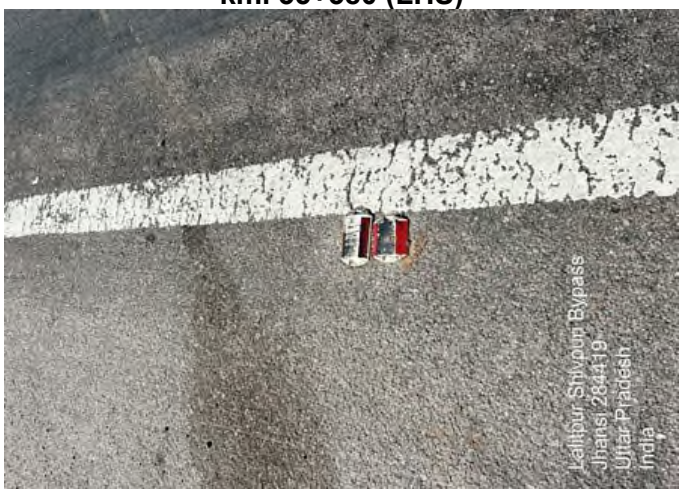
Cat's eye / road studs for the Project Road are done as per the design standards indicated in section 12 of Schedule-D. Cat's eye has been fixed at junction and zebra crossings. However, at few locations some road studs have damaged which will be rectified by the Annuity Concessionaire.

Some of the photographs of road marking and road studs are presented below.

Figure 3-7 Photographs of Pavement Marking and Road Studs

km. 35+380 (LHS)

km. 00+540 (RHS)



km. 02+560 (LHS)

km. 35+800 (RHS)

Traffic Signage / Median Kerb painting / KM Stone

Traffic signs include roadside signs, overhead signs, kerb mounted signs and median signs along the Project Road. The design for the traffic signs along the Project Road is done as per the design standards indicated in section 11 of Schedule-D.

The height, lateral clearance, location and installation are as per relevant clauses of Schedule 'D'. Overhead sign has been installed ahead of major intersections, toll plazas, start / end of Project Road and urban areas as per detailed design requirements.

Kilometre stones, vertical post of sign boards, chevron boards and median kerb paint are faded at few locations which will be rectified by the Annuity Concessionaire.

Some of the photographs of sign boards are presented below.

Highway Lighting / Crash Barriers / Delineators

Highway lighting is provided at underpasses, flyovers, toll plaza, ROBs and built-up locations. High mast lighting is provided at toll plaza location. Highway lighting is also provided at approaches of underpass and flyovers.

Metal beam crash barriers are provided at bridge approaches, locations of high embankment and sharp curves. All the crash barriers provided by the Concessionaire are maintained at site.

The traffic delineators are provided by Concessionaire for road users in abnormal condition of weather for the Project Road. The same is maintained by the Annuity Concessionaire.

Some of the photographs of highway lighting, crash barrier and delineators are presented below.

Road Land Boundary

Road land boundary pillars are found at km 19+000 along Project Road.

Road land boundary pillars at km. 01+980 (MCW)

3.9 Avenue Plantation and Median Plantation

Avenue plantations are done only where ROW is available, and median plantation has been providing in the project length as per IRC specification.

Some of the photographs of avenue plantation and median plantation are presented below.

Figure 3-10 Photographs of Avenue and Median Plantation

km. 00+240

km. 35+380

3.10 Toll Plaza

As per the Concession Agreement, there is one existing toll plaza at km. 32+100 near Babina with the following infrastructure.

Table 3-4 Details of Summary for Toll Plaza Items

Sr. No.	Particulars	Details
1	Toll Plaza Chainage	km. 32+100
2	Number of Tolling Lanes	8 (4+4) lanes for toll operation for vehicles.
3	Weigh in Motion Facility (Number of Lanes)	Yes
4	No. of ETC Lanes	in each direction
5	Number of Toll Booths	8
6	Canopy	Present
7	Administrative Building	Present
8	Parking cum Toilet Block	Present
9	Availability of Tunnel or Elevated Walkway for Movement between Toll Lanes and Administrative Building	Tunnel/Yes
10	Availability of Static Weigh Bridge	Yes
11	Availability of Loading/Unloading Facility for Overloaded Vehicles	No
12	Storage facility for Overloaded Material	No
13	High mast Light	Yes
14	Streetlight	Yes
15	Low mast Light	No
16	User Fee Boards	3
17	Cantilever/Gantry Boards	Yes
18	Automatic boom barrier	Yes

Note:

- *Presently, the Concessionaire is using Annuity Concessionaire's building as an administration building for toll plaza.*
- *The electricity supply for the existing streetlights is provided by the TOT Concessionaire. The maintenance of these streetlights is in the scope of Annuity Concessionaire.*

- *Toll plaza is completed as per rehabilitation work and as per scope given in schedule-B.*

Toll Rate Chart

3.11 Lane Equipment

Following are the lane hardware and equipment installed at toll plaza.

1. RFID ETC Transceiver
2. Lane Controller with Industrial PC
3. AVC Sensors
4. Automatic Lane Barrier (ALB)
5. Lane Traffic Light and user fare display
6. Incident Capture Camera
7. Overhead Lane Signals
8. Traffic Lights
9. Toll Booth Equipment

3.11.1 RFID ETC Transceiver

RFID ETC Transceiver reads tags installed on the windshield of vehicles and mounted on a pole at about 6 m height. Handheld RFID readers are provided (1 no. in each direction) in case a tag is not detected by the fixed reader.

RFID

3.11.2 Lane Controller with Industrial PC

Toll Lane Controller is located within the Electronic Enclosure placed inside each toll booth which are connected to the common server and are capable of independent storage of data.

3.11.3 Automatic Vehicle Classification (AVC) Sensors

The AVC equipment comprises of a pair of height sensor poles, axle sensors and inductive loops. The height detector has a high sensing resolution and detects height when object blocks the path. The presence of vehicle is detected by inductive loop. The loop sensors embedded on the pavement trigger the AVC height sensors located on parallel pillars.

AVCC at Toll Plaza

3.11.4 Automatic Lane Barrier

Boom barriers installed on all lanes are in working condition and have a working time of 0.6 - 0.9 s. Automatic Lane Barrier is used to allow only authorized vehicles to pass through the lane. The barrier is activated only on generation of user fee receipt or other relevant vehicle processing activity. A torque motor powers the barrier for raising and lowering the boom. The motor can be blocked at any position without causing any damage. In the event of power failure, the boom is automatically raised. The boom weight is exactly balanced by built-in springs.

ALB at Toll Plaza

3.11.5 Lane Traffic Light (LTL) and User Fare Display (UFD)

Lane Traffic Light (LTL) is used to instruct vehicles to stop or pass through the lane. The LTL is RED when the toll collector is expecting the vehicle at the booth. After the transaction is done; the LTL turns Green to instruct the vehicle to pass through the lane. The User Fare Display is a part of electronic toll collection equipment located at the toll booth. It is a mini variable message sign (VMS) made of Light Emitting Diodes (LED). The user fare display is used to display the toll fare that is due and that must be paid by the motorist and the classification of vehicle selected by the collector.

LTL at Toll Plaza

3.11.6 Incident Capture Camera (AVC Camera)

The incident capture camera is installed on the island of the booth to capture the image of the vehicle from the back side. The AVC triggers the Image capture system.

AVC Camera

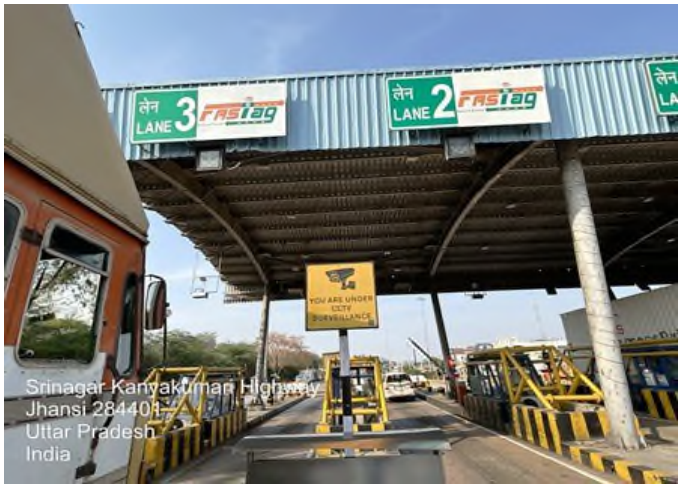
3.11.7 License Plate Image Capture Camera (LPIC)

License Plate Image capture camera is installed on a 3 m pole facing incoming vehicle to capture the image of the vehicle number plate.

LPIC

3.11.8 Over Head Lane Signal (OHLS)

The **Overhead Lane Signal (OHLS)** for lane "Open" and "Close" sign consists of a pair of "GREEN" (arrow) and "RED" (cross) lights. The OHLS is located at the vehicle approaching side of the canopy to show the drivers whether the lane is open or closed.



OHLS at Toll Plaza

3.11.9 Toll Booth Equipment

Toll Booth Hardware / Equipment provided are:

- Toll Collector Display (Operator Monitor)
- Customized Industrial Keyboard
- Receipt Printer
- Intercom Slave unit
- Bar code reader
- Violation Light and alarm
- Manual Booth Control (MBC)
- Booth Camera

The operator monitor termed as Toll Collector Display (TCD) is located on the toll collector's desk. It is the system's interface to the toll collector, to display the status of transactions and status of the lane peripherals.

The keyboard on the toll terminal is a programmable keyboard for Registration of toll operations and is customized for different vehicle types and type of ticket.

Toll Collector Display (TCD)

Thermal printers are installed at the toll booths to print tickets. Intercom slave unit facilitates communication with the master unit located in the control room.

Violation system has an alarm switch which is triggered whenever there is a violation such as run-through happening on the lane. When there is an emergency, a foot switch pressed by the booth operator alerts the control room.

Booth Cameras are provided on the inside roof corner of the booth to provide surveillance through CCTV screen located in the control room. Manual Booth Controller is used to release exempt vehicles.

3.11.10 Medium Speed Weigh in Motion (MSWIM)

Medium Speed Weigh in Motion (MSWIM) is installed on entry lanes of Toll Plaza.

MSWIM at Toll Plaza

3.12 Plaza Equipment

3.12.1 TMS Server

Plaza Server is provided in a hot standby configuration and provided with port non-POE network switch and Port PoE switch. Internet connectivity is available through one lease line (Airtel) and Jio Wi-Fi module. Firewall with Sophos antivirus is provided.

TMS Server

3.12.2 55” LED screen for CCTV monitoring

55” LED screen for CCTV monitoring installed at the toll plaza admin block provides view of all the toll booths, important zones within the plaza where cash transactions take place (server room, control room, cash up).

CCTV Monitor

The toll plaza manager is able to observe the activities at the toll lanes and toll booth. When the toll collector calls up on the intercom, the manager is able to comprehend the situation at the lane by a zoomed view of the particular lane.

3.12.3 Workstations in Control Room, POS room

Workstations are available in control room (lane monitoring, administration, and audit), cash room and POS.

Control Room

3.13 Advanced Traffic Management System (ATMS)

Advanced Traffic Management System (ATMS) installed for the Project Road is controlled by the ATMS center at the toll plaza location. As per Concession Agreement, ATMS shall conform to ATMS Policy guidelines (2016) which comprises of the following:

- Automatic Traffic Counter cum Classifier (ATCC)
- Mobile Radio communication system
- Emergency Call Box
- Portable Weigh in Motion
- Meteorological Data system
- Variable Message Signboards (VMS)
- CCTV system
- Video Incident Detection System (VIDS)
- Vehicle actuated Speed Display (VASD)

Status of these systems at site is described below:

3.13.1 Automatic Traffic Counter cum classifier (ATCC)

Automatic Traffic Counter cum Classifiers (ATCC) is installed at Toll Plaza.

ATCC

3.13.2 Mobile Radio communication System (MRCS)

Mobile Radio communication System (MRCS) is not yet installed. Application for MRCS UHF band has been sought from WPC, DoT, Ministry of Communications which is not yet allocated.

3.13.3 Emergency Call Boxes (ECB)

Emergency Call Boxes (ECB) is not installed at site.

3.13.4 Portable Weigh-in-Motion (PWIM)

Portable Weigh-in-Motion (PWIM) is provided at the site.

3.13.5 MET System

Meteorological sensors comprise of sensors to measure the atmospheric temperature, humidity, pavement surface temperature, visibility and equipment for measuring wind speed and direction and installed at Toll Plaza km. 42+650.

MET System

3.13.6 Variable Message Signboards (VMS)

Variable message sign boards are installed at 14 locations. These display specific messages to the users based on the prevailing conditions on the highway. The message can be changed at any point of time from the HTMS centre. About 250 customised messages can be stored on the system.

VMS at km. 14+900 LHS

VMS at km. 49+160 RHS

3.13.7 CCTV Surveillance Cameras

Surveillance cameras are installed at various locations along the Project Road. The ATMS control room has video wall to monitor these locations through the cameras installed.

km. 33+500 (LHS)

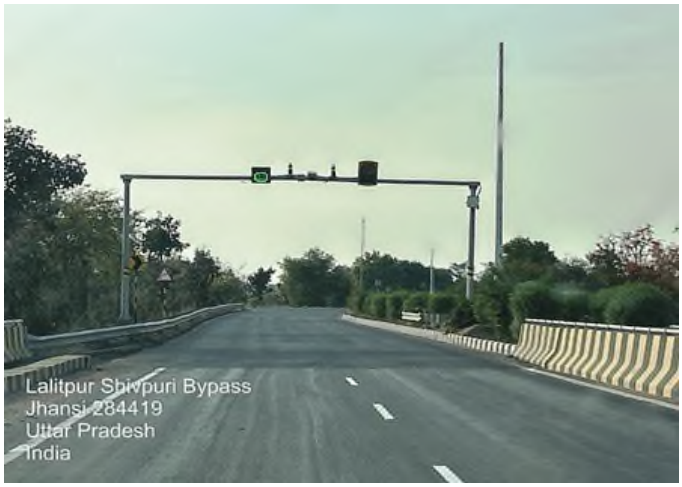
km. 09+750 (RHS)

3.13.8 Video Incident Detection System

62 Nos. of fixed CCTV cameras are installed as part of Video incident detection system.

3.13.9 Vehicle Actuated Speed Display (VASD)

VASD is installed at locations each on LHS and RHS.



km. 06+600 RHS

km. 21+000 LHS

3.13.10 Adequacy of Toll Collection System and ATMS

- Adequacy-All lanes are hybrid ETC system as stipulated by NHAI in Technical Specifications of Hybrid ETC system. NHAI has approved maintenance costs for TMS. TMS shall be upgraded every 5 years at the cost of the Authority.
- The Advanced Traffic Management System (ATMS) installed is as per specifications required by the Authority and in working condition.

3.14 Truck Lay-bye

The Concessionaire has constructed truck lay-bye at the following locations.

Table 3-5 Details of Truck Lay-bye

Sr. No.	Chainage (km)	Remarks
1	0+280	LHS
2	38+040	RHS

The photographs taken during the site visit are presented below.

Figure 3-12 Photographs of Truck Lay-bye

Truck lay-bye at km. 0+280 (LHS)

Truck lay-bye at km. 38+040 (RHS)

3.15 Traffic Aid Post and Medical Aid Post

Traffic Aid Post and Medical Aid Post are in the scope of Annuity Concessionaire.

Traffic Aid Post and Medical Aid Post

3.16 Toilet Block

The Annuity Concessionaire has constructed 02 Nos. of Toilet Blocks along the Project Road and maintenance of the same is in Annuity Concessionaire's scope.

Table 3-6 Details of Toilet Block

Sr. No.	Chainage (km)	Side		Remarks
		LHS	RHS	
1	32+250	Yes	-	
2	32+050	-	Yes	

The photographs taken during the site visit are presented below.

Toilet Block at Toll Plaza

Highway Nest at Toll Plaza

3.17 Bus Bays and Passenger Shelters

There are 04 Nos. of bus bays / passenger shelters along Project Road. The photographs taken during the site visit are presented below.

Figure 3-14 Photographs of Bus Bay / Passenger Shelter

Km. 00+400

Km. 40+360

3.18 Balance Work Status

The project has received Final Completion Certificate on 12th November 2014 by completing all the works as mentioned in the Technical Schedules of Concession Agreement. There are no balance works to be executed as per Concession Agreement.

3.19 Operation and Maintenance

3.19.1 O&M Contract

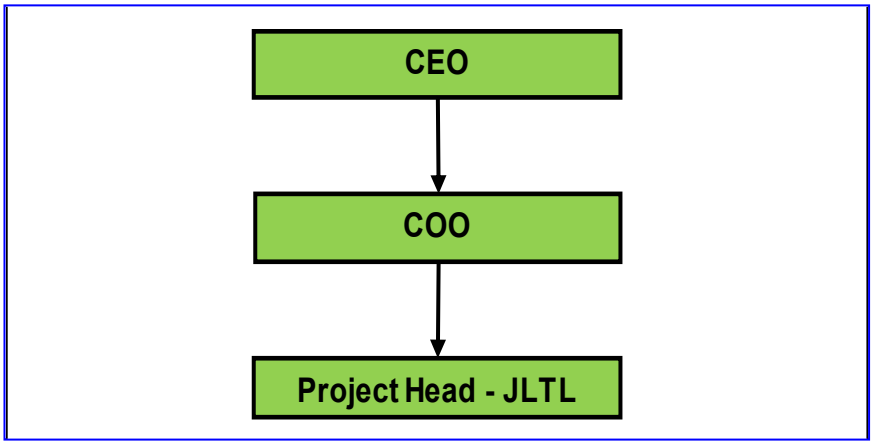
As per Clause 15.1 of the Concession Agreement, the Concessionaire shall operate and maintain the Project Road by itself, or through O&M Contractors and if required, modify, repair, improve the Project Road to comply with Specifications and Standards, and other requirements set forth in the Agreement through Good Industry Practice, Applicable Laws and Applicable Permits and manufacturer's guidelines and instructions with respect to toll systems. The Operation and Maintenance activities shall confirm to all the requirements laid down in MoRT&H, IRC Specifications and the Concession Agreement.

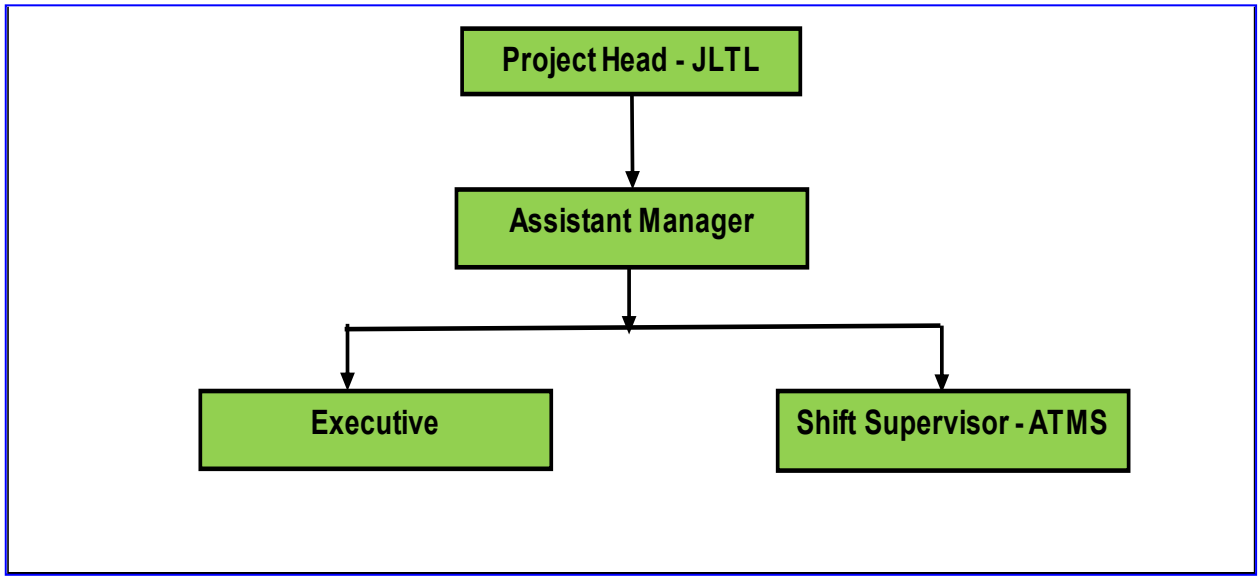
The Concessionaire has outsourced for carrying out the activities related to operation and maintenance of the Project Road including toll operation services, security services, AMC for TMC and AMC for DG set.

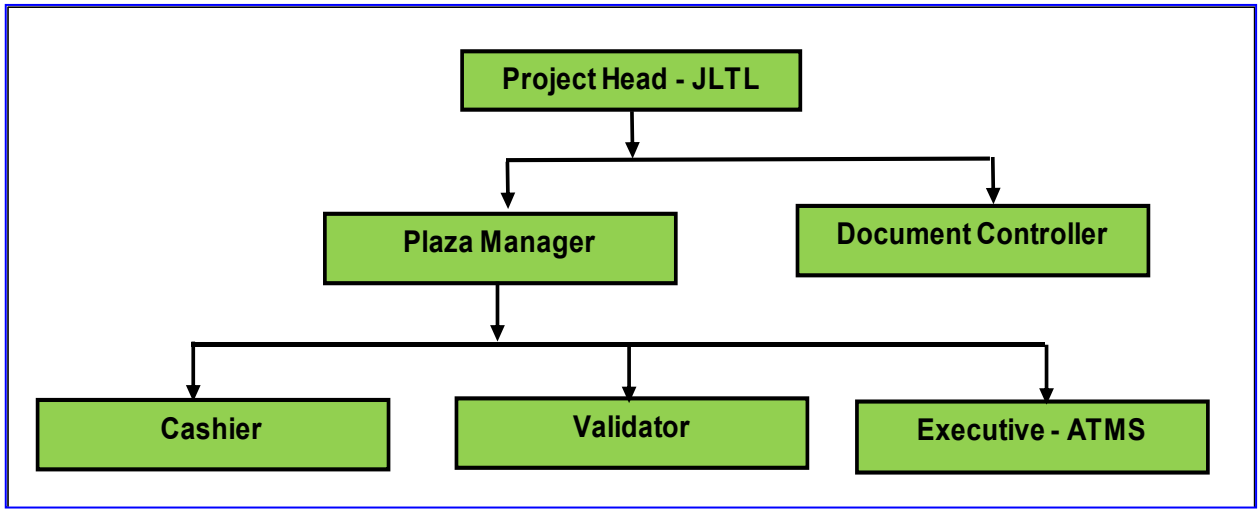
3.19.2 Organization Chart

The Concessionaire has given the Organization Chart at site for Operation and maintenance. Accordingly, there is 01 Project Head, 01 Senior Executive (HR), 01 Assistant Manager (TMS / IT), 01 Executive (TMS / IT), 01 Plaza Manager, 01 Assistant Plaza Manager, 04 Cashiers and 04 validators to carry out O&M activities. The team controls the maintenance activities. However, the maintenance work is undertaken and executed through competent sub-contractors.

Organization Chart







3.19.3 Operation

Operation cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses and other miscellaneous expenses. The Concessionaire has provided the expenses occurred towards operation expenses for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on the best industry practices and are compared with the operating cost in the vicinity of the project area.

The Operation Cost is presented in the subsequent chapter.

3.19.4 Routine Maintenance

The Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey.

Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

Currently, the Project Road is maintained by Annuity Concessionaire. The project will be handed over to TOT Concessionaire in April 2027. Hence, the routine maintenance is considered from FY 2028 till end of concession period.

The Routine Maintenance Cost is presented in the subsequent chapter.

4 PAVEMENT INVESTIGATION AND ASSESSMENT

4.1 General

Presently, the pavement of the Project Road is being maintained by the Annuity Concessionaire as per Scope of Work. The Annuity Concessionaire received Completion Certificate on 12th November 2014.

The project is currently under the Operation and Maintenance stage. The concession period of the project is 30 years from the Appointed Date (as TOT Package i.e., 20th October 2020) including construction period. The project will be handed over to TOT Concessionaire in April 2027.

4.2 Axle Load and VDF

The Concessionaire has conducted the Axle Load Survey on Project Road at km. 32+100 (near Toll Plaza) on 19th July 2019 and 20th July 2019. The summary of Vehicle Damage Factor (VDF) as calculated and provided by the Concessionaire is tabulated below.

Table 4-1 Vehicle Damage Factor

Vehicle Category	Vehicle Damage Factor	
	LHS	RHS
Bus	0.86	1.13
LCV	1.08	0.63
2A	2.59	2.44

4.3 Design Traffic

Traffic in Million Standard Axles (MSA) for the homogeneous section based on the historical traffic data provided by the Concessionaire, current traffic has been used for future projections and the estimated design MSA is computed and presented in subsequent table.

For the estimation of design MSA, Actual Traffic Growth Rates as provided by the Concessionaire were used.

Table 4-2 MSA Calculation

Year	MSA (LHS)	Cumulative MSA (LHS)	MSA (RHS)	Cumulative MSA (RHS)	Remarks
FY2021	3.57	**3.57**	3.40	**3.40**	
FY2022	3.83	**7.40**	3.64	**7.04**	
FY2023	4.17	**7.74**	3.97	**7.37**	
FY2024	4.30	**12.04**	4.10	**11.47**	
FY2025	4.65	**16.69**	4.43	**15.90**	
FY2026	4.73	**21.42**	4.50	**20.40**	
FY2027	4.83	**26.25**	4.60	**25.00**	
FY2028	5.01	**31.26**	4.77	**29.77**	Handing over from Annuity Concessionaire in FY2027
FY2029	5.11	**36.37**	4.86	**34.63**	
FY2030	5.36	**41.73**	5.11	**39.74**	MM Cycle 1

Year	MSA (LHS)	Cumulative MSA (LHS)	MSA (RHS)	Cumulative MSA (RHS)	Remarks
FY2031	5.63	**47.36**	5.36	**45.10**	
FY2032	5.91	**53.27**	5.63	**50.73**

4.4 Network Survey Vehicles (NSV) Survey

The O&M is not under the scope of Concessionaire / Client.

4.5 Structural Investigations

The O&M is not under the scope of Concessionaire / Client.

4.6 Periodic Maintenance Strategy

Unlike the old Concession Agreements where periodicity and threshold limits were clearly described for the major maintenance, the Concession Agreement of this project does not specify the periodicity or the threshold limits for carrying out the full-length periodic maintenance. Schedule-F of the Concession Agreement specifies the threshold limits and the timeline for carrying out repairs to the distresses during the operation period.

The maintenance thus can be carried out as and when required basis and to the compliance of Schedule-F requirement to maintain the road in serviceable condition. Only improvement to Riding Quality is expected if the roughness value exceeds 3000 mm/km.

Currently, the Project Road is maintained by the existing Annuity Concessionaire. The project will be handed over to TOT Concessionaire in April 2027. It is assumed that the pavement will be overlaid before handing over the project confirming the pavement parameters kept within the limits as per Table-1 (Maintenance Criteria for Pavements) of Schedule-F. Hence, the major maintenance cycles are proposed between FY 2028 and the end of concession period i.e. FY 2046.

The table below shows the major / periodic maintenance cycle throughout the concession period for the Project Road.

Table 4-3 Major Maintenance Cycle

Sr. No.	Year	Main Carriageway	Service Road
1	FY 2028	Handing over Project Road from Annuity Concessionaire	
2	FY 2029	-	-
3	FY 2030	Major maintenance with 30 mm BC	Major maintenance with 30 mm

Sr. No.	Year	Main Carriageway	Service Road
		(PMB) (100%) + Milling & 50 mm DBM (100%)	BC (VG-30) (50%) + Micro-surfacing (50%)
4	FY 2031 to FY 2036	-	-
5	FY 2037	Major maintenance with 40 mm BC (PMB) (100%) + Milling & 50 mm DBM (5%)	Major maintenance with 30 mm BC (VG-30) (50%) + Micro-surfacing (50%)
6	FY 2038 to FY 2044	-	-
7	FY 2045	Major maintenance with 30 mm BC (PMB) (100%) + Milling & 50 mm DBM (5%)	Major maintenance with 30 mm BC (VG-30) (50%) + Micro-surfacing (50%)
8	FY 2046*	End of Concession Period	

**Actual end of concession period as per Concession Agreement is October 2050. However, as per traffic details submitted by the Concessionaire, the revised concession period is up to FY 2046 as per provision of Article 14 of CA.*

The projected cost for periodic / major maintenance is presented in the subsequent chapter.

5 COST ESTIMATES

5.1 General

Based on the assessment carried out in previous chapters, various costs were worked out. The costs are divided into following categories.

I. Balance Work Cost
II. Routine O&M Cost
III. Major Maintenance Cost
IV. Periodic Replacement of TMS / ATMS system

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and escalation.

5.2 Rate Assumption

Following assumptions are considered for unit rates of various items while estimating the cost:

1. Unit rates of different items (BC, DBM, Concrete, Road markings etc.) are calculated as per the MoRTH Standard Data Book 2019. The input rates for MoRTH standard data book were adopted as below:

   a. **Manpower and labour:** As per applicable minimum wages published by Ministry of Labour & Employment, Government of India.

   b. **Bitumen:** Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. Some discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.

   Therefore, bitumen prices are considered as per the forecast of Client. Current published of bitumen are considered for unit rates calculation for FY 2027. Average 10 years of price of bitumen are considered for unit rates calculation for FY 2028 and onwards. Following rates of bitumen are considered.

   Polymer cost and modification costs are provided by client to work out BC rate with PMB.

Table 5-1 Bitumen Rates - Ex-MI Supply excluding discount and GST

Sr. No.	Supply Location	Applicability of Rates	Product	Rate for FY2027 (Rs. / MT)	Rate for FY2028 onwards (Rs. / MT)
1	Mathura,	All States	VG10	45,102	35,125
2			VG30	46,402	36,137
3			VG40	48,962	38,131
4	Panipat	All States	VG10	45,102	35,125
5			VG30	46,402	36,137
6			VG40	48,962	38,131
7	Koyali	All States	VG10	47,102	37,125
8			VG30	48,402	38,137
9			VG40	51,082	40,251
10	Haldia	All States	VG10	46,602	35,683

Sr. No.	Supply Location	Applicability of Rates	Product	Rate for FY2027 (Rs. / MT)	Rate for FY2028 onwards (Rs. / MT)
11			VG30	47,402	36,95
12			VG40	49,962	38,256
13	Barauni	All States	VG10	47,132	36,213
14			VG30	48,432	37,325
15			VG40	50,992	39,286
16	CPCL	Kerala	VG10	47,402	35,519
17			VG30	48,402	36,395
18			VG40	50,762	38,120
19	CPCL	Tamil Nadu	VG10	47,902	36,019
20			VG30	48,402	36,395
21			VG40	50,962	38,320
22	CPCL	Telangana and Andhra Pradesh	VG10	44,602	32,719
23			VG30	45,402	33,395
24			VG40	47,962	35,320
25	CPCL	Karnataka	VG10	44,602	32,719
26			VG30	45,402	33,395
27			VG40	47,962	35,320

c. **Sand and Aggregate:** Market rates are considered from the quarry located nearest to Project Road.

d. **Cement:** Market rates are considered from the nearest local market.

e. **Steel :** Rate of steel is taken from Tata Tiscon website.

f. **Machinery Hire charges:** Hire charges for the machinery are considered in accordance with applicable PWD SOR.

g. **Actual Rates of items as per work order:** The rates of road marking, road stud, kerb raising, micro surfacing, milling etc. are considered as per the work order shared by the client.

2. Goods and Service Tax (GST) is considered as 18% as per the latest Government Guidelines.

Summary of Unit Rates worked out using Standard Data Book adopted for major items is given below.

Table 5-2 Summary of Unit Rates

Sr. No.	Item Description	Unit	Rates (Rs.)
1	Dense Bituminous Macadam (VG-40)	Cum	9,081
2	Bituminous Concrete (PMB)	Cum	11,619
3	Bituminous Concrete (VG-30)	Cum	9,968
4	Milling	Sqm	90
5	Micro-surfacing	Sqm	180
6	Kerb Re-laying	Rmt	440
7	Road Marking	Sqm	596
8	Road Studs	Nos.	244

5.3 Balance Work Cost

As discussed in the previous chapter, there are no balance works to be executed as per Concession Agreement. Hence, balance work cost is **NIL**.

5.4 Routine O&M Cost

Routine O&M cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area. Same has been divided into following major heads.

1. Salary and Welfare Expenses
2. Tolling Operations Services
3. Incident Management Services
4. Electricity and Diesel Charges
5. TMS / HTMS / System Expenses
6. Office Operating Expenses
7. Vehicle Running Expenses
8. Professional Fees Expense
9. Insurance Expense
10. IE Fees
11. Horticulture & ROW Maintenance
12. Routine Maintenance Cost

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

Currently, the Project Road is maintained by existing Annuity Concessionaire. The project will be handed over to TOT Concessionaire in April 2027. Hence, the routine maintenance and horticulture maintenance is considered from FY 2028 till end of concession period.

The Routine Operation Cost is presented as below. The detailed working of routine maintenance (Sr. No. 15 of below table) is presented in **Annexure-I**.

Table 5-3 Summary of Operation Cost

Sr. No.	Particulars	Amount (FY 2027)	After Annuity Amount (FY 2028-2046)
1	Salary and Welfare Expenses	92,40,000	92,40,000
2	Tolling Operations Services	2,20,97,559	2,20,97,559
3	Toll Security Services	57,53,265	57,53,265

Sr. No.	Particulars	Amount (FY 2027)	After Annuity Amount (FY 2028-2046)
4	Incident Management & Emergency Services	-	1,59,84,410
5	Electricity and Diesel Charges	30,25,522	67,95,256
6	TMS/HTMS/System Expenses	23,14,000	47,46,278
7	Office Operating Expenses	35,03,845	35,03,845
8	Vehicle Running Expenses	35,40,000	35,40,000
9	Professional Fees Expense	78,63,802	82,21,248
10	Community Development	4,44,360	4,44,360
11	Communication Expenses	3,64,514	3,64,514
12	Conveyance Expenses	3,97,651	3,97,651
13	Insurance Expense	26,51,012	26,51,012
14	IE Fees	33,40,275	33,40,275
15	Routine Maintenance Cost (Project Highway)	-	2,14,90,746
16	Horticulture & ROW Maintenance	-	1,45,67,666
17	Miscellaneous including Contingency	25,81,432	34,83,187
	Total Cost (Rs.)	**6,71,17,236**	**12,66,21,271**
	Total Cost (Cr.)	6.71	12.66
	Per km Cost (Lakh)	**13.50**	**25.48**

5.5 Major Maintenance Cost

As mentioned in earlier chapter, the Project Road is maintained by existing Annuity Concessionaire. The project will be handed over to TOT Concessionaire in April 2027. It is assumed that the pavement will be overlaid before handing over of the project confirming the pavement parameters kept within the limits as per Table-1 (Maintenance Criteria for Pavements) of Schedule-F. Hence, the major maintenance cycles are proposed between FY 2028 and end of concession period.

The summary of Major Maintenance Cost is provided as below. The detailed working of the same is presented in **Annexure-II**.

Sr. No.	Year	Major Maintenance Cost (Cr.)	Remarks
1	FY 2030	98.51	
2	FY 2037	62.39	
3	FY 2045	49.03	
Total Cost (Cr.)		**209.93**	

5.6 Periodic Replacement of TMS / ATMS System

Every 7 years, replacement of cost of major TMS / ATMS system is considered. The same is provided as below.

Sr. No.	Year	HTMS O&M / Replacement Cost (Cr.)	Remarks
1	FY 2027	5.15	
2	FY 2034	5.15	
3	FY 2041	5.15	
Total Cost (Cr.)		**15.45**	

5.7 Escalation Assumption

Following escalation has been considered for the O&M cost as provided by Client.

Table 5-4 Escalation

Year	Escalation	Year	Escalation
2027	-	**2041**	3.99%
2028	5.25%	**2042**	3.99%
2029	4.86%	**2043**	3.99%
2030	4.44%	**2044**	3.99%
2031	4.24%	**2045**	3.99%
2032	4.13%	**2046**	3.99%
2033	4.08%	**2047**	3.99%
2034	4.01%	**2048**	3.99%
2035	4.00%	**2049**	3.99%
2036	4.03%	**2050**	3.99%
2037	4.01%	**2051**	3.99%
2038	3.98%	**2052**	3.99%
2039	3.98%	**2053**	3.99%
2040	4.00%	**2054**	3.99%
2040	3.99%	**2055**	3.99%

5.8 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summaries yearly for remaining concession period along with escalation as mentioned in clause 5.7.

Escalated O&M Cost (in INR Cr.)

	Year of expense	FY27	FY28	FY29	FY30	FY31	FY32	FY33	FY34	FY35	FY36	FY37	FY38	FY39	FY40	FY41	FY42	FY43	FY44	FY45	FY46

Ordinary Repairs

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity**
				More than 4500 CVD
				BT Surface
1	**2**	**3**	**4**	**5**
1	**Maintenance of Carriageway & Paved Shoulders (1.5m wide); B.T. Surface**			
	i) Pot holes repair (50 mm deep)	100 % Pot hole free	As & when required	1.00%
	Volume (cum)			5.00
	Rs/m^3			10886
	Cost in Rupees			54,428
	ii) Patch repair	100 % Patch less	As & when required	1.00%
	Area (sqm)			100
	Rs/m^2			435
	Cost in Rupees			43,542
	iii) Sealing (Crack)			
	a) Wider than 3 mm	100 % Crack Less	As & when required	1.50%
	Area (sqm)			150
	Rs/m^2			97
	Cost in Rupees			14,615
	b) Width less than 3 mm	75 % Crack Less	As & when required	1.50%
	Area (sqm)			112.5
	Rs/m^2			66
	Cost in Rupees			7,386
	iv) Repair of ruts and undulations			
	a) Greater than 20 mm	75%	As & when required	1.00%
	Area (sqm)			75
	Rs/m^2			435
	Cost in Rupees			32,657

1 INTRODUCTION

1.1 Background

Cube Highways Fund Advisors Pvt. Ltd. (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InVIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an Infrastructure Investment Trust under the SEBI InVIT Regulations. Cube Highways Fund Advisors Pvt. Ltd. has appointed **M/s. FP Project Management Consultancy Services Private Limited** (hereinafter referred as "Technical Consultant" or "FPPM") to carry out Technical Due Diligence of Mahua - Jaipur section of NH-11 from km. 120+000 to km. 229+100 in the State of Rajasthan (hereinafter referred as "Project Road").

Jaipur Mahua Tollway Private Limited (hereinafter referred as "Concessionaire") is a special purpose vehicle (SPV) for tolling, operation, maintenance, and transfer of Jaipur to Mahua Section (from km. 120+000 to km. 229+100) of NH-11 BOT Basis. The project was awarded to Concessionaire on 23rd September 2005 with a concession period of 25 years including construction period of 3 years by National Highway Authority of India (NHAI). The length of Project Road is 109.100 kms with two toll plazas at km. 156+600 (Sikandra) and at km. 204+700 (Rajadhok).

Accordingly, Technical Consultant has undertaken the work of assessment of operation and maintenance (O&M) cost based on site inspections and filed investigations. Same is presented in this report.

1.2 Scope of Work

The detailed scope of work for conducting the technical due diligence of Project Road is presented as below:

- A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets
- Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, As-built drawings, O&M manual, COD / PCOD certificate, punch list, previous major maintenance etc.
- Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, axle load, material investigations etc.
- Formulation of future major maintenance strategy
- Estimation of any initial expenses to be incurred due to deficiencies observed in diligence
- Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period
- Estimation of Annual Operation expenses along with Systems cost (TMS / HTMS) till the end of concession period
- Review of balance work cost for Project Road including estimation of quantities and item rates

1.3 Our Approach Philosophy

1.3.1 Composition of Team

Our team consists of well-qualified Engineers and other professionals, whose experience covers all the skills and specializations required for undertaking such assignments. All the team personnel proposed are our regular employees and have a long and stable working relationship with our firm.

The Team Leader coordinates the activities between all the key staff who work closely together. The key staff is assisted by various support staff, who report to the respective key staff in their field of expertise. The Team Leader is the point of contact for Client on Technical Study.

The technical study includes review of all the available documents namely:

a) Concession Agreement including Technical Schedules
b) O&M Contract, work order and their provisions
c) Quality of construction based on available data, design, and drawings
d) Documents on historical expenditure on operation and maintenance
e) O&M cost schedule for the concession period
f) Review of Completion / Provisional Completion along with punch list items
g) Review of recent pavement surveys conducted
h) Correspondence regarding scope of works and during O&M
i) Recent O&M Report submitted to Authority
j) Toll operation manual / ATMS related documents

The review of above documents is the first step towards accomplishment of the task. This gives a complete idea of the project and is used as input data for preparation of report after necessary analysis.

1.3.2 Site Visit and Data Collection

A team of experts from various streams has carried out the preliminary site visit to understand the assessment of project assets mainly condition of the pavement and structures.

- The site visit is undertaken for detailed reconnaissance and visual pavement condition assessment.
- The condition assessment of major structures by visual inspection
- The information like material sources and the probable cost is collected for the purpose of cost estimate.

The detailed design / drawings viz. Plan & L-sections, drainage design, structure design, layout drawings for project facilities like toll plaza, bus bay, truck lay-byes, highway lighting facilities etc. are studied. Also, design / drawing and provision pertaining to road furniture are studied.

The information on availability of material in the vicinity is gathered. It has direct impact on cost of maintenance work and balance work.

The basic approach for preparation of cost estimates for operation and maintenance is as per the practice of State PWD / MORT&H in respect of highways and structures.

1.3.3 Data Analysis

Based on the study of the available information and preliminary site visits, the consultants share their preliminary observations with the Client based on the evaluation of the technical data and reports provided by the Client.

1.4 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Company. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyse the same as per the best engineering / industry practices.

The site visit and inspection were carried out between the periods from **04th March 2026 to 06th March 2026**.

The report is organized with the following chapters for easy understandings of various issues.

Chapter 1 **Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for due diligence studies.

Chapter 2 **Project Description:** The chapter describes existing project features, overview of project development.

Chapter 3 **Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on site visit.

Chapter 4 **Pavement Investigation and Assessment:** The chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance.

Chapter 5 **Cost Estimates:** The chapter summarizes the forecasting of O&M and major maintenance cost over the remaining concession period.

2 PROJECT DESCRIPTION

2.1 Introduction

National Highways Authority of India signed the Concession Agreement **Jaipur Mahua Tollway Private Limited**, is a company promoted by Cube Highways or a Special Purpose Vehicle (SPV) formed for implementing this project on 23rd September 2005. The Appointed Date of the Project Road is on 20th March 2006.

The project is being developed through BOT basis with concession period of 25 years from the Appointed Date including construction period of 3 years. The Concessionaire received Completion Certificate on 9th March 2015. The Project Road is currently under Operation and Maintenance stage.

2.2 Location

The Project Road is part of National Highway No. 11 of Jaipur - Mahua section in the state of Rajasthan. The total project length is 109.100 kms.

The Location Map of the Project Road is presented below:

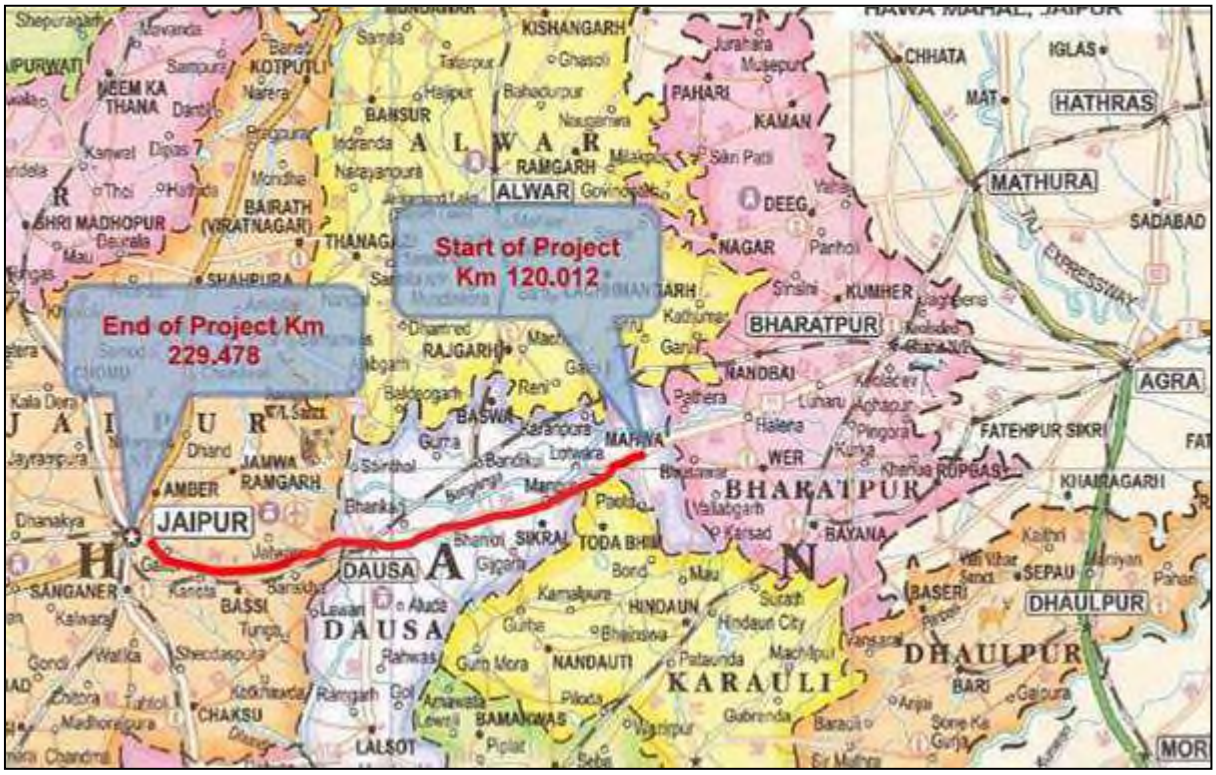

Figure 2-1 Location Map

The photographs taken during the site visit are presented below.

Figure 2-2 Start of Project Road

Start of Project Road

Start of Project Road

Figure 2-3 End of Project Road

End of Project Road

End of Project Road

2.3 Climate

The climate features of the area covered by the Project Road are:

Summer	March - May, with maximum temperature up to 47C.
Monsoon	June - August, with annual rainfall of about 560-660 mm.
Retreating monsoon season	September - November, with dry weather and moderate temperature.
Winter	December - February, temperature falls up to 3C.

2.4 Terrain

This section of National Highway traverses through plain terrain.

2.5 Abutting Land Use

The Project Road is characterized by a mix of habituated area and agriculture lands.

2.6 Right of Way

The width of existing Right of Way (RoW) for the Project Road varies from 13.50 m to 22.50 m.

2.7 Existing Utilities

During widening of the Project Road, various affected utility services located along the Project Road were shifted to the PROW. The different types of utilities found along the road include, electrical poles, telephone poles, OFC cables, etc.

2.8 Development as per Schedule-B

The Project Road from Mahua (km. 120+000) to Jaipur (km. 229+100) has been developed as a four-lane divided carriageway with median width of 4.5 m and 2.0 m, service road and other arrangements. The Project Road passes through rural as well as built-up sections.

As per Article 2 of Concession Agreement, the scope of project defined in Schedule-A and Schedule-B, (the **"Scope of the Project"**) shall mean and include, during the Concession Period:

a) Construction of the project on the Site set forth in Schedule-A and as specified in Schedule-B together with provision of project facilities as specified in Schedule-C and in conformity with the Specification and Standards set forth in Schedule-D.

b) Tolling, operation, management, maintenance, and transfer of the Project Road subject to and in accordance with the provisions of this Agreement.

c) performance and fulfilment of all other obligations of the Concessionaire in accordance with the provisions of this Agreement and matters incidental thereto or necessary for the performance of any or all of the obligations of the Concessionaire under this Agreement.

Following is the Scope of Work as per Schedule-B of Concession Agreement.

Table 2-1 Details of Scope of Work

Sr. No.	Type of Structure	Unit	Scope	Remark
1	O&M of Main Carriageway	km.	109.100	
2	Construction of Service Road	km.	28.628	each Side
3	Major Bridge	Nos.	01	
4	Minor Bridge	Nos.	17	
5	Reconstruction of Pipe Culvert	Nos.	24	
6	Reconstruction of Slab Culvert	Nos.	65	
7	New Construction of Box Culvert	Nos.	01	
8	Underpasses	Nos.	07	
9	Grade Separated Structure	Nos	01	
10	Rail Over Bridge	Nos	01	

3 CONDITION ASSESSMENT OF PROJECT ROAD

3.1 Pavement

The Project Road is four lane divided carriageway and generally has paved carriageway of 9.0 m with earthen shoulder of 1.5 m on either side. The Project Road has median width of 4.5 m and 2.0 m throughout its length.

The entire stretch of Project Road including service road is constructed with flexible pavement. The pavement type for the Toll Plaza is rigid pavement.

3.1.1 Pavement Condition Survey

Pavement condition survey was carried out from **04th March 2026 to 06th March 2026**. through visual inspection for the entire project length. From the visual inspection, it is found that the average pavement condition of the Project Road is found to be Good.

Some of the photographs taken during the site visit are presented as below.

Figure 3-1 Photographs of Pavement Condition (MCW-LHS)

3.2 Service Road / Slip Road

The service road of width 5.5 m is constructed in built-up area and adjoining underpass locations. The Project Road has total service road length of 28.628 kms on each side. The photographs taken during the site visit are presented below.

Figure 3-3 Photographs of Service Road

3.4 Condition Survey of Structure

The inventory of structures including major bridges, minor bridges, ROB's, underpasses and culverts is presented in table as below:

Table 3-1 Details of Summary for Structures

Type of Structure	Total Number of Structures
Major Structures:	
Road Over Bridge (ROB)	01
Grade Separator	01
Major Bridges (MJB)	01
Minor Bridges (MNB)	17
Underpass (UP)	07
Culverts:	
Pipe Culverts	24
Slab Culverts	65
Total	**116**

The detailed condition survey of structures was carried out by visual inspection. The observations and findings are presented in table below:

Table 3-2 Condition Survey of Major Structure

Sr. No.	Chainage (km)	Description	Type of Structure	Span Arrangement (No. x Length (m)	Width (m)	Remarks
1	131+825	Minor Bridge	RCC Slab	2 x 6.72 (skew) 2 x 5.82 (Square)	12.5	**LHS -** Newly constructed, Substructure RCC abutment and pier, RCC deck slab, Tar Paper Bearing are used, Footpath side RCC Railing, Median and shoulder side RCC Crash Barrier with handrail. Crash barrier and slope protection are in good condition. Drainage spouts are cleaned; Structure is in sound condition. **RHS -** Existing Bridge, Stone masonry are used for Abutment and Pier, RCC deck slab, Tar paper bearing are used, Footpath side RCC Railing, Median and shoulder side RCC Crash Barrier with handrail., Crash barrier and slope protection are in good condition. Drainage spouts are cleaned; Structure is in sound condition.
2	135+000	Underpass	RCC Box Type	1 x 10 x 4	12.5	Newly constructed, RCC box type structure and Structure is in sound condition. Drainage spouts are choked
3	144+700	Underpass	RCC Box Type	1 x 10 x 4	12.5	Newly constructed, RCC box type structure and Structure is in sound condition. Drainage spouts are choked
4	148+606	Minor Bridge	T beam bridge	1 x 11.00	12.5	**LHS -** Newly constructed, Substructure RCC abutment and pier, RCC T-Beam Girder 5 no. for each span, Elastomeric Bearing are used, Footpath side RCC Railing, Median and shoulder side RCC Crash Barrier with handrail. Expansion Joint, Crash barrier and slope protection are in good condition. Drainage spouts are choked; Structure is in sound condition. **RHS -** Existing Bridge, Stone masonry are used for Abutment and Pier, RCC T-Beam Girder 5 no. for each span, Elastomeric bearing are used, Footpath side RCC Railing, Median and shoulder side RCC Crash Barrier with handrail, Expansion Joint, Crash barrier and slope protection are in good condition. Drainage spouts are Choked; Structure is in sound condition. Partly Masonry and Partly PCC Return wall with handrail.

Sr. No.	Chainage (km)	Description	Type of Structure	Span Arrangement (No. x Length (m)	Width (m)	Remarks
5	149+750	Minor Bridge	RCC Slab	3 x 7.0	12.5	**LHS -** Newly constructed, RCC abutment and pier, RCC deck slab, Tar Paper Bearing are used, Footpath side RCC Railing, Median and shoulder side RCC Crash Barrier with handrail. Crash barrier and slope protection are in good condition. Drainage spouts are Cleaned; Structure is in sound condition. RCC return wall and RCC Crash Barrier with handrail. At slab joint cracks are seen on Main Carriageway **RHS -** Existing Bridge, Stone masonry is used for Abutment and Pier, RCC deck slab, Tar Paper bearing are used, Footpath side RCC Railing, Median and shoulder side RCC Crash Barrier with handrail. Crash barrier and slope protection are in good condition. Drainage spouts are cleaned; Structure is in sound condition. Masonry and PCC Return wall with handrail.
6	153+600	Underpass	RCC Box Type	1 x 10 x 4	12.5	Newly constructed, RCC box type structure and Structure is in sound condition. Drainage spouts are choked.
7	154+952	Minor Bridge	RCC Slab	6 x 6.0	12.5	**LHS -** Newly constructed, Substructure RCC abutment and pier, RCC deck slab, Tar Paper Bearing are used, Footpath side RCC Railing, shoulder side RCC Crash Barrier with handrail. Crash barrier is in good condition. The structure is in sound condition. Drainage spouts are choked. No Slope protection. At slab joint cracks are seen on Main Carriageway **RHS -** Newly constructed, Substructure RCC abutment and pier, RCC deck slab, Tar Paper Bearing are used, Return wall RCC crash Barrier with handrail. Footpath side RCC Railing, shoulder side RCC Crash Barrier with handrail. Crash barrier is in good condition. The structure is in sound condition. Drainage spout chocked. No Slope protection. At slab joint cracks are seen on Main Carriageway. Vegetation seen on Pier Top and Slab joint
8	161+016	Minor Bridge	RCC Slab	5 x 6.0	12.5	**LHS -** Newly constructed, RCC abutment and pier, RCC deck slab, Tar Paper Bearing are used, Footpath side RCC Railing, Median

Sr. No.	Chainage (km)	Description	Type of Structure	Span Arrangement (No. x Length (m)	Width (m)	Remarks
						and shoulder side RCC Crash Barrier with handrail. Crash barrier and slope protection are in good condition. Drainage spouts are chocked; Structure is in sound condition. At slab joint cracks are seen on Main Carriageway **RHS -** Existing Bridge, Stone masonry are used for Abutment and Pier, RCC deck slab, Tar Paper bearing are used, Footpath side RCC Railing, Median and shoulder side RCC Crash Barrier with handrail., Crash barrier and slope protection are in good condition. 3.5 Condition Survey of Culverts

The cross-drainage structure includes Hume pipe culverts and slab culverts at various locations. There is 24 Nos. of pipe culverts, 65 Nos. of slab culverts along the Project Road. The height of culvert varies from 1.0 m to 3.0 m from bed level. During the condition survey of structure, these culverts were inspected on sample basis.

The project involves strengthening and widening of existing road to four lane divided carriageway. The culverts beneath existing alignment are either widened or reconstructed. The structural condition of culverts is generally found in sound condition. The quality of surface concrete of Slab culverts is satisfactory. The RCC parapet, crash barrier or RCC railing has been provided at culvert locations, which is maintained properly.

In most of culverts, the waterway is clear. However, near to urban area and some location is found blocked due to debris, drainage water or bushes, tree growth, which will be removed by the Annuity Concessionaire. The cement concrete pitching or stone pitching has been provided for slope protection.

The culverts are maintained by the Annuity Concessionaire during O&M period. However, in case of some culverts, cement concrete pitching have been damaged which required to be addressed under routine repair work by the Annuity Concessionaire.

Slope Protection at km. 148+606 (LHS-MNB)

3.8 Road Furniture

The Concessionaire has provided road furniture along the Project Road as per the Standards and Specifications mentioned in Schedule-C.

Pavement Marking

Pavement marking for the Project Road is done as per the design standards indicated in section 12 of Schedule-D. Some of the photographs of road marking are presented below.

Some of the photographs of road marking are presented below.

Figure 3-15 Photographs of Pavement Marking

Road Marking at km. 211+240 (RHS)

Pedestrian Cross Marking at km. 235+350 (RHS)

Road Marking at km. 209+200

Centre Lane Marking at km. 171+550 (RHS)

Road Studs

Road studs for the Project Road are done as per the design standards indicated in section 12 of Schedule-D. Road studs has been fixed at junction and zebra crossings.

Some of the photographs of road studs are presented below.

Figure 3-16 Photographs of Road Studs

Road Studs at km. 198+675 (LHS)

Road Studs at km. 185+650 (RHS)

Traffic Signage / Median Kerb painting / KM Stone

Traffic signs include roadside signs, overhead signs, kerb mounted signs and median signs along the Project Road. The design for the traffic signs along the Project Road is done as per the design standards indicated in section 11 of Schedule-D.

The height, lateral clearance, location, and installation are as per relevant clauses of Schedule 'D'. Overhead sign has been installed ahead of major intersections, toll plazas, start / end of Project Road and urban areas as per detailed design requirements.

Kilometre stones, vertical post of sign boards, chevron boards are properly placed. Median kerb painting is completed by the Concessionaire.

Some of the photographs of sign boards are presented below.

Figure 3-17 Photographs of Traffic Signages

Traffic Sign Board at km. 195+725 (RHS)

Traffic Sign Board at km. 176+150 (LHS)

Kilometre Stone at km. 185+000 RHS

Traffic Sign Board at km. 183+375

Highway Lighting

Highway lighting is provided at underpasses, flyovers, toll plaza, ROBs and built-up locations. High mast lighting is provided at toll plaza location. Highway lighting is also provided at approaches of underpass and flyovers. Some of the photographs of highway lighting are presented below.

Figure 3-18 Photographs of Street Light

Street Lighting at km. 221+600

Street Lighting at km. 181+400

Crash Barriers

Metal beam crash barriers are provided at bridge approaches, locations of high embankment and sharp curves. All the crash barriers provided by the Concessionaire are maintained at site. Some of the photographs of metal beam crash barriers are presented below.

Figure 3-19 Photographs of MBCB / Crash Barrier

Crash Barrier at km. 199+425 (RHS)

Crash Barrier at km. 188+612 (LHS)

Avenue Plantation at km. 139+850 (LHS)

3.10 Toll Plaza

As per Concession Agreement, there are two no. of toll plazas at km. 156+500 (Sikandra) and at km. 204+700 (Rajadhok) with the following infrastructure.

Table 3-3 Details of Summary for Toll Plaza Items

Sr. No.	Particulars	Details
1	Toll Plaza Chainage	km. 156+500 and km. 204+700
2	Number of Tolling Lanes	8 lanes for toll operation plus 2 lanes for Class-I Vehicles.
3	Weigh in Motion Facility (Number of Lanes)	Yes
4	No. of ETC Lanes	in each direction
5	Number of Toll Booths	8 singles
6	Canopy	Present
7	Administrative Building	Present
8	Parking cum Toilet Block	Present
9	Availability of Tunnel or Elevated Walkway for Movement between Toll Lanes and Administrative Building	Tunnel/Yes
10	Availability of Static Weigh Bridge	Yes
11	Availability of Loading/Unloading Facility for Overloaded Vehicles	No
12	Storage facility for Overloaded Material	No
13	High mast Light	Yes
14	Streetlight	Yes (only 20 nos. near Toll Plaza. 10 nos. in both direction)
15	Low mast Light	No
16	User Fee Boards	3
17	Cantilever/Gantry Boards	Yes
18	Automatic boom barrier	Yes

Figure 3-24 Photographs of Toll Plaza

Sikandra Toll Plaza at km. 156+600

Sikandra Toll Plaza at km. 156+600

Rajadhok Toll Plaza at km. 204+700

Rajadhok Toll Plaza at km. 204+700

3.10.1 Lane Equipment

Following are the lane hardware and equipment installed at toll plaza.

1. RFID ETC Transceiver
2. Lane Controller with Industrial PC
3. AVC Sensors
4. Automatic Lane Barrier (ALB)
5. Lane Traffic Light and user fare display
6. Incident Capture Camera
7. Overhead Lane Signals
8. Traffic Lights
9. Toll Booth Equipment

3.10.2 RFID ETC Transceiver

RFID ETC Transceiver reads tags installed on the windshield of vehicles and mounted on a pole at about 6 m height. Handheld RFID readers are provided (1 no. in each direction) in case a tag is not detected by the fixed reader.

3.10.3 Lane Controller with Industrial PC

Toll Lane Controller is located within the Electronic Enclosure placed inside each toll booth which are connected to the common server and are capable of independent storage of data at Km 156+500 and at km. 204+700 is located inside the Tunnel.

Lane Controller in Tunnel at TP

3.10.4 Automatic Vehicle Classification (AVC) Sensors

The AVC equipment comprises of a pair of height sensor poles, axle sensors and inductive loops. The height detector has a high sensing resolution and detects height when object blocks the path. The presence of vehicle is detected by inductive loop. The loop sensors embedded on the pavement trigger the AVC height sensors located on parallel pillars.

3.10.5 Automatic Lane Barrier

Boom barriers installed on all lanes are in working condition and have a working time of 0.6 - 0.9 s. Automatic Lane Barrier is used to allow only authorized vehicles to pass through the lane. The barrier is activated only on generation of user fee receipt or other relevant vehicle processing activity. A torque motor powers the barrier for raising and lowering the boom. The motor can be blocked at any position without causing any damage. In the event of power failure, the boom is automatically raised. The boom weight is exactly balanced by built-in springs.

ALB at TP

3.10.6 Lane Traffic Light (LTL) and User Fare Display (UFD)

Lane Traffic Light (LTL) is used to instruct vehicles to stop or pass through the lane. The LTL is RED when the toll collector is expecting the vehicle at the booth. After the transaction is done; the LTL turns Green to instruct the vehicle to pass through the lane. The User Fare Display is a part of electronic toll collection equipment located at the toll booth. It is a mini variable message sign (VMS) made of Light Emitting Diodes (LED). The user fare display is used to display the toll fare that is due and that must be paid by the motorist and the classification of vehicle selected by the collector.

LTL at TP

3.10.7 Incident Capture Camera (AVC Camera)

The incident capture camera is installed on island of the booth to capture the image of the vehicle from the back side. The AVC triggers the Image capture system.

3.10.8 License Plate Image Capture Camera (LPIC)

License Plate Image capture camera is installed on a 3 m pole facing incoming vehicle to capture the image of the vehicle number plate.

3.10.9 Over Head Lane Signal (OHLS)

The **Overhead Lane Signal (OHLS)** for lane "Open" and "Close" sign consists of a pair of "GREEN" (arrow) and "RED" (cross) lights. The OHLS is located at the vehicle approaching side of the canopy to show the drivers whether the lane is open or closed.

Overhead Lane Signal at Toll Plaza

3.10.10 Toll Booth Equipment

Toll Booth Hardware / Equipment provided are:

- Toll Collector Display (Operator Monitor)
- Customized Industrial Keyboard

- Receipt Printer
- Intercom Slave unit
- Bar code reader
- Violation Light and alarm
- Manual Booth Control (MBC)
- Booth Camera

The operator monitor termed as Toll Collector Display (TCD) is located on the toll collector's desk. It is the system's interface to the toll collector, to display the status of transactions and status of the lane peripherals.

The keyboard on the toll terminal is a programmable keyboard for Registration of toll operations and is customized for different vehicle types and type of ticket.

Thermal printers are installed at the toll booths to print tickets. Intercom slave unit facilitates communication with the master unit located in the control room.

Violation system has an alarm switch which is triggered whenever there is a violation such as run-through happening on the lane. When there is an emergency, a foot switch pressed by the booth operator alerts the control room.

Booth Camera is provided on the inside roof corner of the booth to provide surveillance through CCTV screen located in the control room. Manual Booth Controller is used to release exempt vehicles.

3.11 Plaza Equipment

3.11.1 TMS Server

Plaza Server is provided in a hot standby configuration and provided with port non-POE network switch and Port PoE switch. Internet connectivity is available through one lease line (Airtel) and Jio Wi-Fi module. Firewall with Sophos antivirus is provided.

Server Room

3.11.2 55” LED screen for CCTV monitoring

55” LED screen for CCTV monitoring installed at the toll plaza admin block provides view of all the toll booths, important zones within the plaza where cash transactions take place (server room, control room, cash up).

The toll plaza manager is able to observe the activities at the toll lanes and toll booth. When the toll collector calls up on the intercom, the manager is able to comprehend the situation at the lane by a zoomed view of the particular lane.

3.11.3 Workstations in Control Room, POS room

Workstations are available in control room (lane monitoring, administration, and audit), cash room and PoS.

3.12 Truck Lay-bye

The following are the truck lay-bye locations.

Table 3-4 Details of Truck Lay-bye

Sr. No.	Design Chainage (km)	Name of the Village
1	154+800	Sikandra
2	182+200	Jatwara
3	210+200	Bassi

3.16 Balance Work Status

The project has received Completion Certificate on 09th March 2015 by completing all the works as mentioned in the Technical Schedules of Concession Agreement. There are no balance works to be executed as per CA.

3.17 Operation and Maintenance

3.17.1 O&M Contract

As per Clause 18.1 of the Concession Agreement, the Concessionaire shall operate and maintain the Project Road by itself, or through O&M Contractors and if required, modify, repair, or otherwise make improvements to the Project Road to comply with Specifications and Standards, and other requirements set forth in the Agreement, Good Industry Practice, Applicable Laws and Applicable Permits and manufacturer's guidelines and instructions with respect to toll systems, More Specifically.

The Concessionaire has outsourced for carrying out the activities related to operation and maintenance of the Project Road including toll operation services, security services.

3.17.2 Operation

Operation cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, and other miscellaneous expenses. The Concessionaire has provided the expenses occurred towards operation expenses for past years. Necessary assumptions have made from the

expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area.

The Operation Cost is presented in the subsequent chapter.

3.17.3 Routine Maintenance

The Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey.

Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

Currently, the Project Road is maintained by Concessionaire.

The Routine Maintenance Cost is presented in the subsequent chapter.

3.17.4 Organization Chart

The Concessionaire has provided the Organization Chart at site for Operation and maintenance. The team controls the maintenance activities. However, the maintenance work is undertaken and executed through competent sub-contractors.

4 PAVEMENT INVESTIGATION AND ASSESSMENT

4.1 General

Presently, the pavement of the Project Road is being maintained by the Concessionaire as per Scope of Work. The Project Road has received Completion Certificate on 9th March 2015.

The project is currently under the Operation and Maintenance stage. The concession period of the project is 25 years from the Appointed Date including construction period of 36 months. For operation and maintenance purposes, the Project Road is divided into two sections viz **MS-1** (Length of 54.729 kms, from km. 119+567 to km. 174+296) and **MS-2** (Length of 54.359 kms, from km. 174+741 to km. 229+100).

4.2 Axle Load and VDF

The Concessionaire has conducted the Axle Load Survey on Project Road at km. 156+600 (near Sikandra Toll Plaza) in the month of March 2022 and at km. 204+500 (near Rajadhok Toll Plaza) in the month of August 2023. The summary of Vehicle Damage Factor (VDF) calculated as provided by the Concessionaire is tabulated below.

Table 4-1 Vehicle Damage Factor (VDF)

Vehicle Category	Vehicle Damage Factor (VDF)			
	MS-1		MS-2	
	LHS	RHS	LHS	RHS
Bus	1.210	1.171	1.139	1.001
LCV	0.628	1.130	0.508	1.196
2-Axle	2.666	4.842	2.487	4.053
3-Axle	6.601	7.662	4.909	7.126
MAV	16.108	24.161	12.309	20.772

4.3 Design Traffic

Traffic in Million Standard Axles (MSA) for the homogeneous section based on the historical traffic data as provided by the Concessionaire, current traffic has been used for future projections and the estimated design MSA is computed and presented in subsequent table.

For the estimation of design MSA, Actual Traffic Growth Rates as provided by the Concessionaire were used.

Table 4-2 MSA Calculation

MSA Calculation (MS-1 LHS)			
Year	**MSA**	**Cumulative MSA**	**Remarks**
FY 27	9.67	**9.67**	
FY 28	10.20	**19.87**	
FY 29	10.71	**30.58**

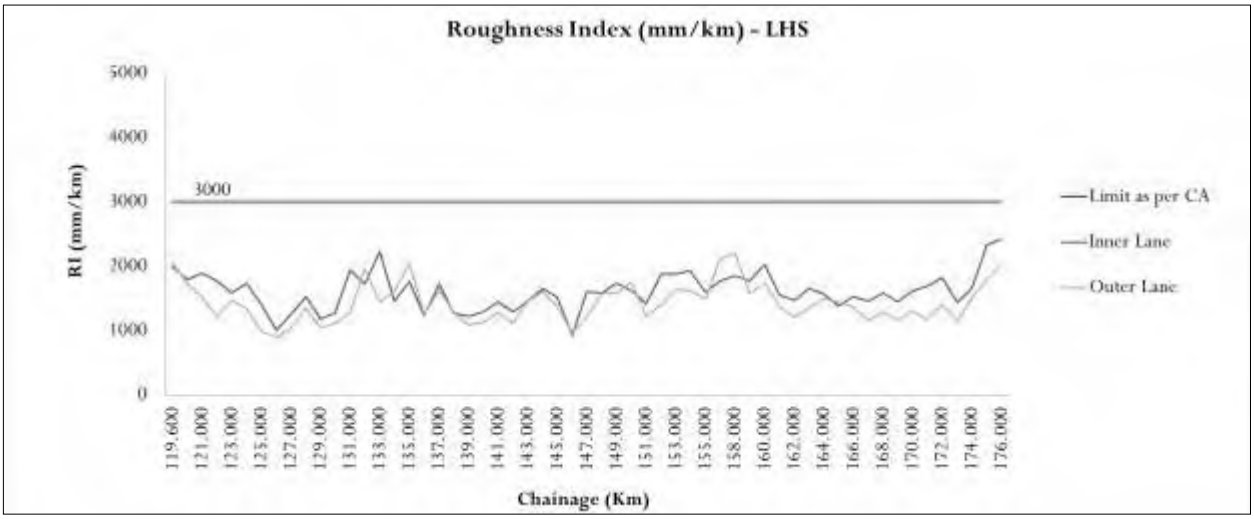
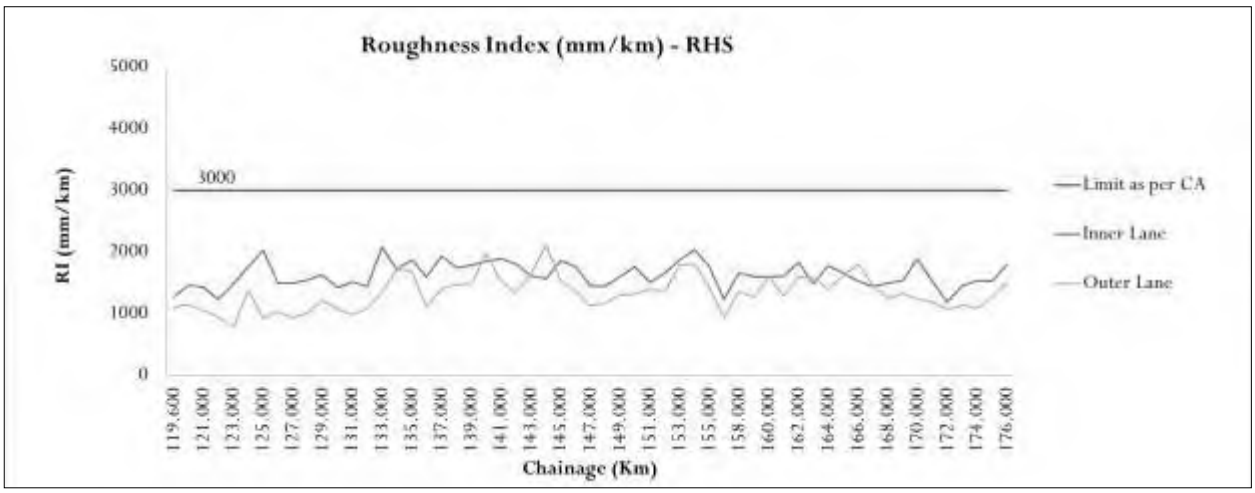
4.4 Network Survey Vehicles (NSV) Survey

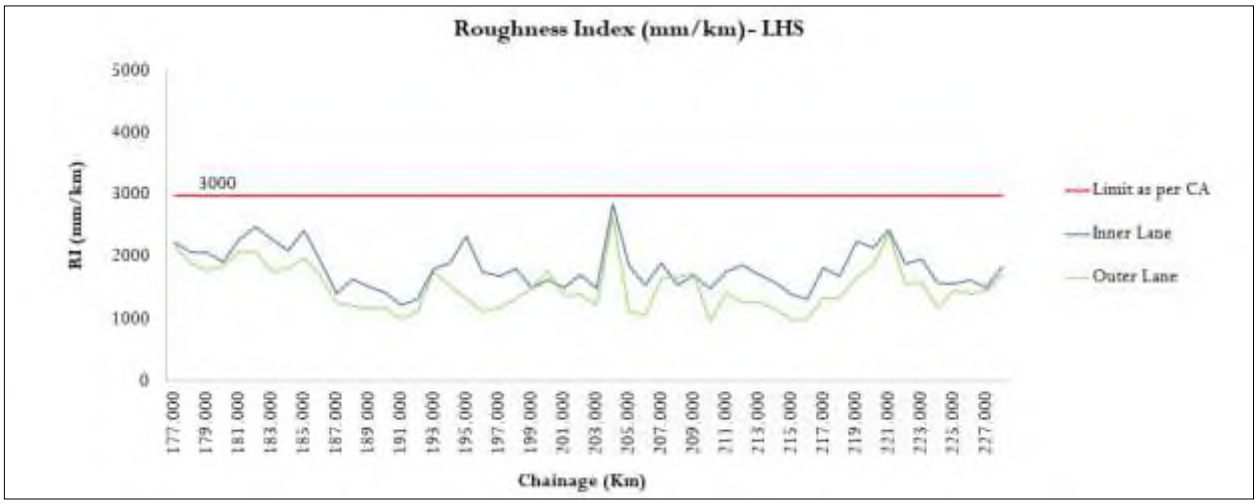
The Concessionaire has provided NSV survey data conducted on MS-1 and MS-2 on 23-April-2024 to 25 April-2024. The NSV data is used to assess the riding quality and pavement condition of Project Road. The summary of classification of pavement as per Schedule - L is given in below table:

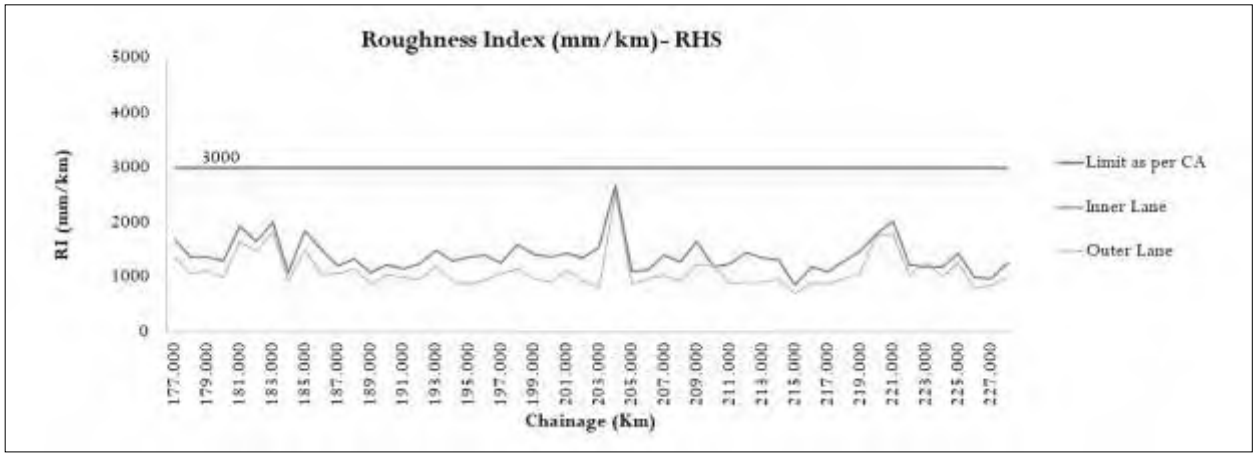
MS-1					
Riding Condition	**Roughness Index (mm/km)**	**Length (km)**			
		LHS		**RHS**	
		Inner	**Outer**	**Inner**	**Outer**
Good	<2000	52.0	52.0	53.4	55.4
Fair	2001-3000	5.4	5.4	3.0	1.0
Poor	>3000	0.0	0.0	0.0	0.0





MS-2					
Riding Condition	Roughness Index (mm/km)	Length (km)			
		LHS		RHS	
		Inner	Outer	Inner	Outer
Good	<2000	39.0	47.0	49.0	51.0
Fair	2001-3000	13.0	5.0	3.0	1.0
Poor	>3000	0.0	0.0	0.0	0.0





Conclusion:

Riding quality is generally fair to good.

4.5 Structural Investigations

Evaluation of existing pavement using Falling Weight Deflectometer (FWD) survey was carried out in the month of September 2024. Summary of FWD Survey report for is presented below:

Table 4-3 Summary of FWD Survey

Description	Length (km)	
	LHS	RHS
Less than 20 MSA	10	8
20-50 MSA	18	15
Greater than 50 MSA	81.1	86.1

The strengthening/ overlay of pavement for project stretch are derived from 15th percentile of corrected E moduli of existing pavement, existing crust thickness etc. The combination of existing pavement and overlay will be analysed as a four-layer system to ensure that fatigue and rutting criteria are satisfied for the calculated design traffic in terms of MSA. IITPAVE program is used to compute strain value at bottom of bituminous layer and top of subgrade in order to calculate design life of the proposed overlay. Poisson's ratio values used in overlay analysis from top to bottom of existing pavement layers are 0.5, 0.4 and 0.4 for existing bituminous, existing granular and existing subgrade layers respectively. Elastic modulus of 3000 MPa (VG-40) is used for the new bituminous layer.

4.6 Test pit and Subgrade Investigation

The Concessionaire has carried out the subgrade investigation for Project Road. The results of the same as provided by the Concessionaire is tabulated as below.

Table 4-4 Test Results Summary of Natural Ground Soil Samples

Sr. No.	Design Chainage (km)	Side (LHS / RHS)	Soil Classification as per IS: 1498	Gradation: Percent by weight passing through the Sieve (IS:2720-IV)						Clay & silt content %	Atterberg Limits [IS :2720-Pt-V]			Modified Proctor Test (IS:2720-Pt-VIII)		Field Density		4-Days Soaked CBR at MDD (%)	Free Swell Index (%)	Degree of Compaction (%)

4.7 Periodic Maintenance Strategy

Major Maintenance is required in order to comply requirement of Concession Agreement and to maintain performance level as defined in Schedule-L. As per schedule-L of Concession Agreement, periodic maintenance shall be carried out at least once every 5th year from COD and in the last year of concession period.

It is noted that Concessionaire has carried out 1st Major Maintenance in year 2018 / 2019 for both MS-1 and MS-2. Presently, the Concessionaire has carried out 2nd Major Maintenance for MS-1 in the month of March 2023 and completed 2nd Major Maintenance for MS-2 in FY 2025.

3rd Major Maintenance for MS-1 is forecasted in FY 2028 and for MS-2 in FY 2029. As per Concession Agreement, periodic maintenance shall be carried out in the last year of concession period prior to handover. Accordingly, major maintenance is proposed in FY 2031 for the entire length. Before carrying out major maintenance, structural evaluation shall be done through surveys and investigation to determine the overlay requirement.

The table below shows the major / periodic maintenance cycle throughout the balance concession period for the Project Road.

Table 4-6 Major Maintenance Cycle

Sr. No.	Year	Main Carriageway	Service Road
1	FY 2028	**MS-1:** LHS: BC 30 mm (PMB) - 100%, DBM 50 mm (VG 40) - 10% RHS: BC 40 mm (PMB) - 100%, DBM 50 mm (VG 40) - 10%	30 mm BC overlay in 50% and Micro-surfacing in 50% length
2	FY 2029	**MS-2:** LHS: BC 30 mm (PMB) - 100%, DBM 50 mm (VG-40) - 10% RHS: BC 30 mm (PMB) - 100%, DBM 50 mm (VG-40) - 10%	30 mm BC overlay in 50% and Micro-surfacing in 50% length
3	FY 2030	-	-
4	FY 2031	30 mm BC (VG-40) - 100%, 50 mm DBM (VG-40) - 10%	30 mm BC overlay in 50% and Micro-surfacing in 50% length

The projected cost for periodic/ major maintenance is presented in the subsequent chapter.

5 COST ESTIMATES

5.1 General

Based on the assessment carried out in previous chapters, various costs were worked out. The costs are divided into following categories.

I. Balance Works Cost
II. Routine O&M Cost
III. Major Maintenance Cost
IV. Periodic Replacement of TMS / ATMS system

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and escalation.

5.2 Rate Assumption

Following assumptions are considered for unit rates of various items while estimating the cost:

- Unit rates of different items (BC, DBM, Concrete, Road markings etc.) are calculated as per the MoRTH Standard Data Book 2019. The input rates for MoRTH standard data book were adopted as below:

- **Manpower and labour:** As per applicable minimum wages published by Ministry of Labour & Employment, Government of India.

- **Bitumen:** Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. Same discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.

  Therefore, bitumen prices are considered as per the forecast of Client. Current published price of bitumen is considered for unit rates calculation for FY 27. Average 10 years of price of bitumen are considered for unit rates calculation for FY 2028 and onwards, since bitumen prices have been range bound over the last five-six years.

  Polymer cost and modification cost are provided by the client to work out BC rate with PMB and HiMA.

  Following rates of bitumen are considered.

Table 5-1 Bitumen Rates - Ex- MI Supply excluding discount and GST

Sr. No.	Supply Location	Applicability of Rates	Product	Current Published Price (FY 2027)	Long term price (Avg. last 10 years)
1	Mathura	All States	VG-10	45,102	35,125

22	CPCL	Telangana and Andhra Pradesh	VG-10	44,602	32,719
23			VG-30	45,402	33,395
24			VG-40	47,962	35,320
25	CPCL	Karnataka	VG-10	44,602	32,719
26			VG-30	45,402	33,395
27			VG-40	47,962	35,320

- **Sand and Aggregate:** Market rates are considered from the quarry located nearest to Project Road.
- **Cement:** Market rates are considered from the nearest local market.
- **Steel :** Rate of steel is taken from SAIL.
- **Machinery Hire charges:** Hire charges for the machinery are considered in accordance with applicable PWD SOR.
- **Actual Rates of items as per work order:** The rates of road marking, road stud, kerb raising, micro surfacing, milling, aggregate rates etc. are considered as per the work order shared by the client.
- Goods and Service Tax (GST) is considered as 18% as per the latest Government Guidelines.

  Summary of Unit Rates worked out using Standard Data Book adopted for major items is given below:

Table 5-2 Summary of Unit Rates

Sr. No.	Item Description	Unit	Rates (Rs.) (FY 28 onwards)
1	Dense Bituminous Macadam (PMB)	Cum	11,549
2	Dense Bituminous Macadam (VG-40)	Cum	9,467
3	Bituminous Concrete (HiMA)	Cum	14,512
4	Bituminous Concrete (PMB)	Cum	13,332
5	Bituminous Concrete (VG-40)	Cum	10,675
6	Bituminous Concrete (VG-30)	Cum	10,362
7	Milling	Sqm	75
8	Micro-surfacing	Sqm	150

Sr. No.	Item Description	Unit	Rates (Rs.) (FY 28 onwards)
9	Kerb Re-laying	Rmt	270
10	Road Marking - BC Surface	Sqm	423
11	Road Marking - Micro Surface	Sqm	526
12	Road Studs	Nos.	168

5.3 Balance Works Cost

As discussed in the previous chapter, there are no balance works to be executed as per CA. Hence, balance work cost is **NIL**.

5.4 Routine O&M Cost

Routine O&M cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance, and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area. Same has been divided into following major heads:

1. Salary and Welfare Expenses
2. Tolling Operations Services
3. Toll Security Services
4. Incident Management Services
5. Electricity and Diesel Charges
6. TMS / HTMS / System Expenses
7. Office Operating Expenses
8. Vehicle Running Expenses
9. Professional Fees Expense
10. Community Development
11. Communication Expenses
12. Conveyance Expenses
13. Insurance Expense
14. IE Fees
15. Horticulture & ROW Maintenance
16. Routine Maintenance Cost

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Operation and Maintenance cost (Routine O&M) is presented below. The detailed working of routine maintenance (Sr. No. 15 of below table) is presented in **Annexure-I**.

Table 5-3 Summary of Operation & Routine Maintenance Cost

Sr. No.	Particulars	Amount (Rs)
1	Salary and Welfare Expenses	1,26,00,000
2	Tolling Operations Services	5,34,52,743
3	Toll Security Services	2,16,22,320
4	Incident Management & Emergency Services	3,09,94,146
5	Electricity and Diesel Charges	73,02,885
6	TMS / System Expenses	27,52,500
7	Office Operating Expenses	38,31,310
8	Vehicle Running Expenses	39,60,000
9	Professional Fees Expense	54,73,300
10	Community Development	19,70,388
11	Communication Expenses	5,47,330
12	Conveyance Expenses	6,56,796
13	Insurance Expense	49,25,970
14	IE Fees	54,73,300
15	Routine Maintenance Cost (Project Road)	5,70,89,669
16	Horticulture & ROW Maintenance	2,98,65,368
17	Miscellaneous including Contingency	62,22,520
	Total O&M Cost (in Rs)	**24,87,40,545**
	Total O&M Cost (in Cr)	**24.87**
	Per km Cost (Lakh)	**22.72**

5.5 Major Maintenance Cost

The summary of Major Maintenance Cost (Base year cost) is provided as below. The detailed working of the same is presented in **Annexure-II**.

Sr. No.	Year	Major Maintenance Cost (Cr.)	Remark
1	FY 2026	-	-
2	FY 2027	-	-
3	FY 2028	78.28	MS -1
4	FY 2029	75.39	MS -2
5	FY 2030	-	-
6	FY 2031	125.83	MS -1 & MS -2
Total MM Cost (Cr.)		**279.50**	

5.6 Periodic Replacement of TMS / ATMS System

Every 7 years, replacement of cost of major TMS / ATMS system is considered. The same is provided as below.

Sr. No.	Year	ATMS O&M / Replacement Cost (Cr.)	Remarks
1	FY 2030	0.58	
Total Cost (Cr.)		**0.58**	

5.7 Escalation Assumption

Following escalation has been considered for the O&M cost as provided by Client.

Table 5-4 Escalation

Year	Escalation	Year	Escalation
2027	-	**2042**	3.99%
2028	4.86%	**2043**	3.99%
2029	4.44%	**2044**	3.99%
2030	4.24%	**2045**	3.99%
2031	4.13%	**2046**	3.99%
2032	4.08%	**2047**	3.99%
2033	4.01%	**2048**	3.99%
2034	4.00%	**2049**	3.99%
2035	4.03%	**2050**	3.99%
2036	4.01%	**2051**	3.99%
2037	3.98%	**2052**	3.99%
2038	3.98%	**2053**	3.99%
2039	4.00%	**2054**	3.99%
2040	3.99%	**2055**	3.99%
2041	3.99%	**2056**	3.99%

5.8 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summarised yearly for remaining concession period along with escalation as mentioned in the above section.

Escalated O&M Cost (in INR Cr.)

	Year of expense	FY27	FY28	FY29	FY30	FY31
1	Routine O&M Cost					
1.01	Salary and Welfare Expense	1.26	1.32	1.38	1.44	1.50
1.02	Tolling Operations Services	5.35	5.61	5.85	6.10	6.35
1.03	Toll Security Services	2.16	2.27	2.37	2.47	2.57
1.04	Incident Management Services	3.10	3.25	3.39	3.54	3.68
1.05	Electricity and Diesel Charges	0.73	0.77	0.80	0.83	0.87
1.06	TMS / System Expenses	0.28	0.29	0.30	0.31	0.33
1.07	Office Operating Expenses	0.38	0.40	0.42	0.44	0.46
1.08	Vehicle Running Expenses	0.40	0.42	0.43	0.45	0.47
1.09	Professional Fees Expense	0.55	0.57	0.60	0.62	0.65
1.10	Community Development	0.20	0.21	0.22	0.22	0.23
1.11	Communication Expenses	0.05	0.06	0.06	0.06	0.07
1.12	Conveyance Expenses	0.07	0.07	0.07	0.07	0.08
1.13	Insurance Expense	0.49	0.52	0.54	0.56	0.59
1.14	IE Fees	0.55	0.57	0.60	0.62	0.65
1.15	Routine Maintenance Cost	5.71	5.99	6.25	6.52	6.79
1.16	Horticulture & ROW Maintenance	2.99	3.13	3.27	3.41	3.55
1.17	Miscellaneous and Contingency	0.62	0.65	0.68	0.71	0.74
	Subtotal of O&M Cost	24.87	26.08	27.24	28.40	29.57
2	Major Maintenance Cost		80.55	79.77		141.91
3	Periodic Cost of TMS / HTMS Replacement	-	-	-	0.66	
	Total O&M + MM Cost	**24.87**	**106.63**	**107.01**	**29.06**	**171.48**

ANNEXURES

ANNEXURE I - ROUTINE MAINTENANCE COST

Routine Maintenance Cost	
Ordinary Repair Cost for Flexible (with GST)	**5,70,89,669**
(Inclusive of GST)	**= 5.22 lakhs per km**

Sr. No.	Description for Flexible Pavement		Factor	Normal	Urban	Project Length (km)		Per Year Project Maintenance Cost	
				More than 4500 CVD	More than 4500 CVD				
				2,70,932	3,16,442	Normal	Urban	Normal	Urban
1	Four-lane with divided carriageway	Without paved shoulder	1.53	414526.00	484156.00	-	-	-	-
		Paved shoulder	1.70	460584.00	537951.00	81.15	-	3,73,75,470	-
2	Four-lane with divided carriageway and service lane on either side	Without paved shoulder	2.00	541863.00	632884.00	-	-	-	-
		Paved shoulder	2.20	596050.00	696172.00	-	28.32	-	1,97,14,199
					Total	**109.466**		**5,70,89,669**	

Ordinary Repairs

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity**
				More than 4500 CVD
				BT Surface
1	**2**	**3**	**4**	**5**
1	**Maintenance of Carriageway & Paved Shoulders (1.5m wide); B.T. Surface**			
	i) Potholes repair (50 mm deep)	100 % Pothole free	As & when required	1%
	Volume (cum)			3.75
	Rs/m^3			12066
	Cost in Rupees			45,246
	ii) Patch repair	100 % Patch less	As & when required	1%
	Area (sqm)			100
	Rs/m^2			483
	Cost in Rupees			48,262
	iii) Sealing (Crack)			
	a) Wider than 3 mm	100 % Crack Less	As & when required	2.5%
	Area (sqm)			250
	Rs/m^2			109
	Cost in Rupees			27,140
	b) Width less than 3 mm	75 % Crack Less	As & when required	2.00%
	Area (sqm)			150
	Rs/m^2			89
	Cost in Rupees			13,275
	iv) Repair of ruts and undulations			
	a) Greater than 20 mm	75%	As & when required	1.50%
	Area (sqm)			112.5
	Rs/m^2			483
	Cost in Rupees			54,295
	v) Road marking	14%	Once in 7th year & @	19843

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity** **More than 4500 CVD** **BT Surface**
1	**2**	**3**	**4**	**5**
			Repaired location	
	SUB TOTAL			**2,08,061**
2	**Maintenance of earthen Shoulders:**			
	i) Renewal of earthen shoulders	80%	Once in a Year	6210
	ii) Kuccha Drain Maintenance	100%	Twice in a Year	1092
	SUB TOTAL			**7,302**
3	**Maintenance of Cross Drainage works:**			
	i) Repair of floors	100%	Once in a Year	4978
	ii) Repair of parapets	100%	As & when required	2074
	SUB TOTAL			**7,052**
4	**Maintenance of Minor & Major Bridges:**			
	i) Spot painting & protective Coating required on Bearing and greasing of Bearings, railing, structural members, Expansion joints	100%	As & when required	36,387
	ii) Repair of minor washouts, erosion scour and animal holes			
	iii) Sealing Cracks with Cement/ Epoxy Mortar			
	iv) Replacement & Correction of safety barriers, Guard rails and damaged members			
	SUB TOTAL			**36,387**
5	**Miscellaneous Items:**			
	i) Lettering, Painting of Km stones & kerbs, sign boards, hectometre stone etc.		Once in a Year	3639
	ii) Replacement and providing additional retro reflective signage	20%	Covering Total Network in 4-5 Years	7277
	iii) Providing first aid kits, Umbrella, Safety Jackets, Vardi etc.		Once in a Year	1213
	iv) Traffic Census		Once in a Year	0
	v) Provision for roughness measurement		Twice in a Year	0

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity** **More than 4500 CVD** **BT Surface**
1	**2**	**3**	**4**	**5**
	SUB TOTAL			**12,129**
	GRAND TOTAL (Normal)			**2,70,932**
6	**Additional Cost required for Urban Area**			
	i) Renewal of Centre Line, Edge Marking, Kerb Marking/ Zebra crossing etc. in City Portion	33%	Once in three years with thermoplastic paint	16157
	ii)Repairs to footpath	100%	As & when required	4852
	iii) ROB/ Fly-over Railings & repair	100%	As & when required	4852
	iv) Street Lighting	0%	As & when required	0
	v) Encroachment Removal Squad	100%	As & when required	7520
	vi) Repair of divider/ Railing in City portion	100%	As & when required	9703
	vii) Provision for maintenance of pedestrian underpass	100%	As & when required	2426
	SUB TOTAL			**45,510**
	GRAND TOTAL (Urban)			**3,16,442**

ANNEXURE II - MAJOR MAINTENANCE COST

Major Maintenance Cost (FY 28) (MS-1)

C 1.

Chapter 1. INTRODUCTION AND SCOPE OF SERVICES

1.1 BACKGROUND

Cube Highways Trust ("Trust" or "InvIT") is registered with Securities and Exchange Board of India ("SEBI") as an infrastructure investment trust under the SEBI InVIT Regulations. Cube Highways Trust has appointed **M/s Knight Frank India (KFI)** (hereinafter referred as "Technical Consultant" or "KFI") to carry out Technical Due Diligence of Rehabilitation, Strengthening and Four Laning of Jammu - Udhampur Section from Km 15.00 (Jammu Bypass) To Km 67.00 of NH-1A on BOT (Annuity) Basis on DBFOT Pattern in the state of Jammu & Kashmir (hereinafter referred as "Project Road").

1.2 SCOPE OF SERVICES

The detailed scope of work for conducting the technical due diligence of Project Road is presented as below –

Exhibit 1 Scope of TDD Services

S. No	Terms of Reference
1	A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets.
2	Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, as built drawings, O&M manual, COD/PCOD certificate, Punch list, previous major maintenance etc.
3	Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, Axle Load, material investigations etc.
4	Formulation of future major maintenance Strategy.
5	Estimation of any initial expenses to be incurred due to deficiencies observed in diligence.
6	Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period
7	Estimation of Annual Operation expenses along with Systems cost (TMS/HTMS) till the end of concession period.

S. No	Terms of Reference
8	Review of balance work cost for Project Road including estimation of quantities and item rates

1.3 Approach

Approach followed for this Due Diligence study is to understand the requirement of the client and terms of reference set forth. Our aim is that the study report should assist the clients in achieving their objectives.

1.4 Methodology

Methodology adopted is broadly outlined as under:

- Objectives of the client were identified from discussions and terms of reference spelt out for the study.
- Available data was collated and analysed by desk study.
- Requirements were identified to augment information/ data as available.
- Detailed List of data required was sent to Concessioner team from time to time
- Personal discussions were carried out with Clients by senior executives from KF to explain data requirements.
- Extensive interaction was made by KF with Clients and data was collected.
- Information to be gathered from Client head office & team were listed
- Relevant documents regarding project highway, including CA Agreement and other documents were collected and the provisions studied in detail.
- All data as collected was duly collated and arranged in the order as required for preparation of the report.

1.5 Study

- Data collected from all sources was duly collated and disseminated to concerned experts in KF.
- Project documents such as CA Agreement, O&M Costing details, O&M Manual etc were studied in detail.
- The data made available was analysed, and comments formulated for inclusion in the report.

1.6 Structure of the Report

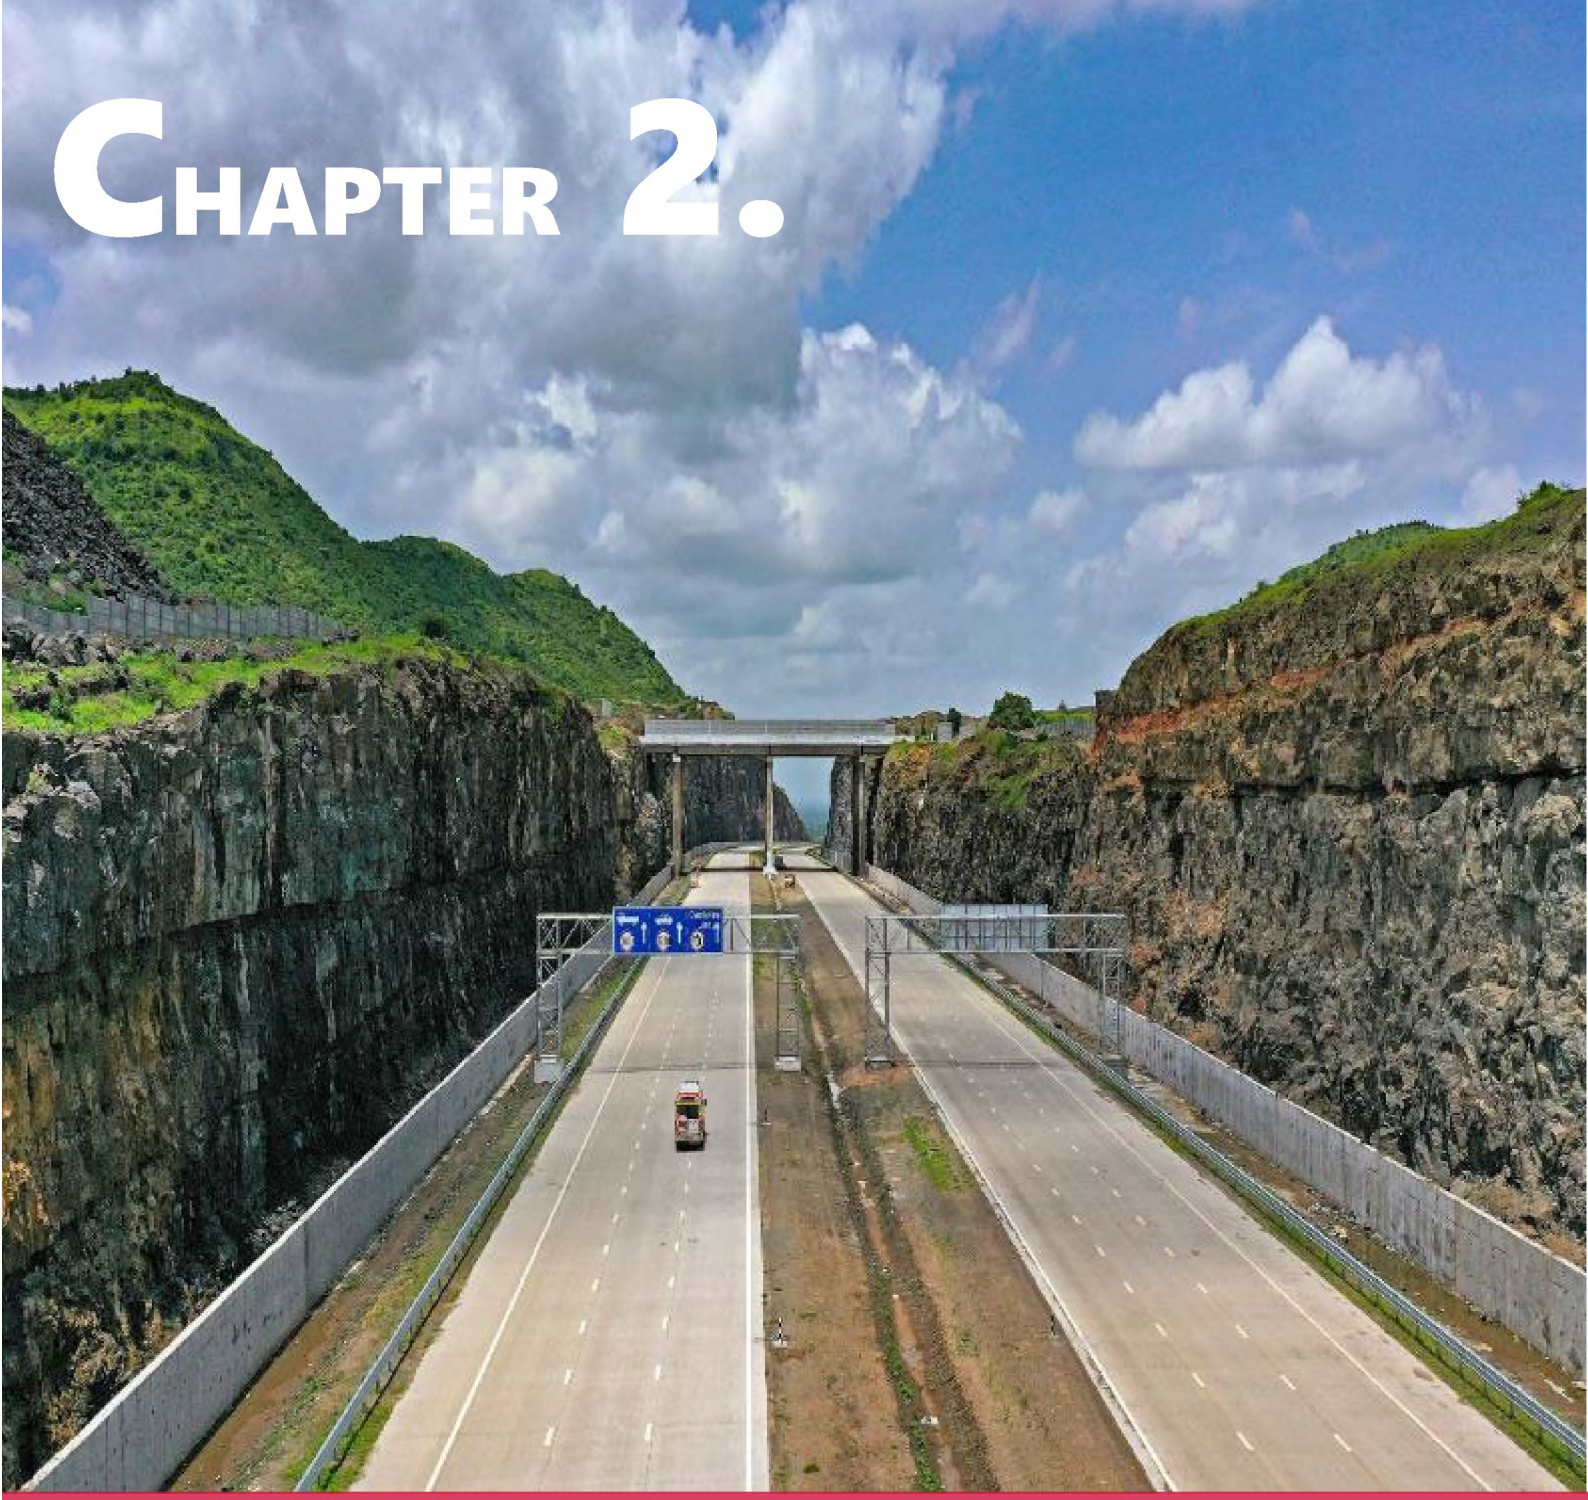
This report has been prepared based on the information, reports and documents made available to us by the Company. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyse the same as per the best engineering / industry practices.

The report is organized with the following chapters for easy understanding of various issues –

Exhibit 2 Structure of the Report

S.nos	Chapter	Description
1	**Chapter 1**	**Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for due diligence studies**.**
2	**Chapter 2**	**Project Description:** The chapter describes existing project features, overview of project development.
3	**Chapter 3**	**Review of Agreements:** The chapter describes review of CA, Supplementary, State Support Agreement, Settlement Agreement & Various O & M Agreements.
4	**Chapter 4**	**Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on site visit**.**
5	**Chapter 5**	**Pavement Investigation and Assessment:** This chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance
6	**Chapter 6**	**Cost Estimates**: This chapter summarizes the forecasting of O&M and major maintenance cost over the remaining concession period

Chapter 2.



Chapter 2. PROJECT DESCRIPTION

2.1 Project Road

National Highway-1A (NH-1A) is presently known as National Highway-44 (NH-44). This highway is a four lane road in Jammu and Kashmir that connects city of Udhampur with Jammu City passing through mountain terrain. This road connects important Army and Air bases in the state of J & K and passes along the international border. The highway also serves as the main pilgrimage and tourist route for pilgrims going to Amarnath Shrine and to Katra for Vaishno Devi Shrine and tourists going to Kashmir valley and even further up to Leh Ladakh.

The project corridor passes through following urban stretches namely Sidhra, Nagrota, Suketar, Jhajjarkotli, Tikri, Mand and Udhampur. The terrain of this project corridor is mostly mountainous except at Jammu bypass, which has rolling terrain. The state of Jammu & Kashmir is accessed by only one major highway, this National Highway-1A linking Uri in the north of J&K with the rest of the country via the cities of Jammu and Srinagar.

The highway runs through Nandini Wildlife Sanctuary. The highway enables seamless movement of traffic and goods, with enhanced inter-region connectivity and a significant reduction of travel time between the hilly cities.

To execute the project, NHAI issued a Request for Qualification (RFQ) on February 27, 2009, inviting bids for the project. Shapoorji Pallonji & Co. Ltd. was selected as the successful bidder and received the Letter of Award (LOA) on April 30, 2010. A Special Purpose Vehicle (SPV), M/s SP Jammu Udhampur Highway Limited, was incorporated for project implementation. The Concession Agreement was signed on July 19, 2010.

Accordingly, Technical Consultant has undertaken the work of assessment of operation and maintenance (O&M) cost based on site inspections and flied investigations. Same is presented in this report.

The project achieved Provisional Completion (PCOD) on June 1, 2014, and the Final Completion Certificate was issued on May 31, 2018. The project is currently in the Operation & Maintenance (O&M) phase with toll collection ongoing.

Subsequently, ***NIIF acquired SP Jammu Udhampur Highway Limited on July 30, 2022***. The project has since been managed by Athaang Infrastructure, NIIF's proprietary roads platform, and the company was renamed ***M/s Athaang Jammu Udhampur Highway Limited***. The **current proposed acquisition** of the project is by ***M/s Cube Highways Trust.***

The total project length is **64.58 km**, commencing from **Km 15.00 near Jammu** to **Km 67.00 near Udhampur**, comprising **one toll plazas** located at **Ban (Km 22.00)**. The project plays a crucial role in enhancing connectivity between **Jammu and Srinagar**, ensuring improved traffic flow, safety, and overall highway efficiency.

The Project Location Map in wider context and Specific Project Road Context is shown below at **Exhibit 3.** The Project Location Map is shown below in

Exhibit 4

Exhibit 3 Project Location Map

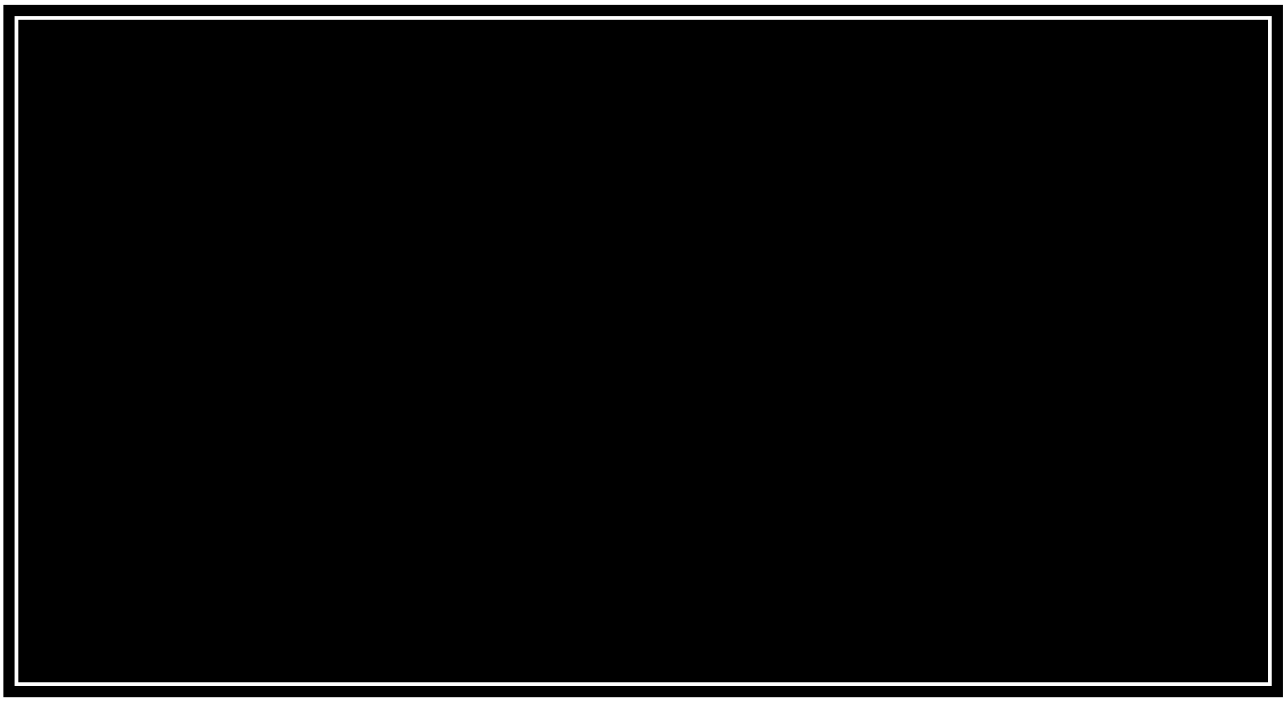


Exhibit 4 Key Location Map

As per the CA, the corridor has different design chainage systems, which are presented in the table below.

Exhibit 5: Project Chainage Details

Referencing System	Section	Chainage		Length	Total Length (km)
		From	To	(km)	
CA Design Chainage	Jammu Bypass (JBP)	15.2	20.3	5.1	5.1
CA Design Chainage	Main Road (MR)	9.35	9.9	0.55	
	Nagrota Bypass (NBP)	9.9	21.78	11.88	43.027
	Main Road (MR)	21.78	50.33	28.55	
	Realignment Udhampur Bypass	50.33	52.377	2.047	
	Udhampur Bypass (UBP)	0	16.452	16.452	16.452
Total length				64.579	
Descope length				16.995	
Actual length (kms)				47.584	

2.2 Climate

The project corridor experiences a **sub-tropical to temperate climate**, influenced by its varying elevation along the Himalayan foothills. The region is characterized by **hot summers, moderate monsoons, and cold winters**.

During the **summer months (April to June)**, the temperature ranges between **25°C to 40°C**, while in **winter (November to February)**, it may drop to **4°C to 10°C**, with occasional frost in elevated zones. The **monsoon season (July to September)** brings considerable rainfall, contributing to high surface runoff, landslides, and localized flooding in low-lying stretches.

Relative humidity generally varies from **40% to 90%**, depending on season and altitude. The **annual average rainfall** in the region is approximately **1,100–1,400 mm**, predominantly concentrated during the monsoon months.

Due to these climatic conditions, special attention is required in the **design and maintenance of pavement, drainage structures, slope protection works, and erosion control measures**, to ensure long-term performance and serviceability of the project road.

2.3 Terrain

The terrain along the project alignment is **predominantly hilly and undulating**, traversing through the lower Himalayan ranges. The topography exhibits **sharp gradients, steep slopes, and deep valleys**, especially in the middle and northern sections of the corridor.
The **southern stretch** of the alignment, near Jammu, consists of **rolling terrain with moderate gradients**, while the **northern portion towards Udhampur** features **rugged terrain with significant elevation differences**, requiring multiple **cutting and filling operations, retaining structures, and slope stabilization measures**.
Geotechnically, the area comprises **sedimentary and metamorphic rock formations**, with occasional exposure of shale and sandstone. The soil is generally **silty clay to sandy loam**, prone to erosion during heavy rainfall.
The complex topography and geotechnical conditions necessitate careful consideration of **geometric design standards, drainage planning, and slope protection works**, along with **regular geotechnical monitoring** to mitigate risks of slope instability and landslides.

2.4 Administrative details of the Project

The Concession stands granted to operate the road from the Appointed date for the concession period with the obligation on concessionaire to maintain the road in the same period. Administrative details of projects are as at Exhibit 2 below.

Exhibit 6: Administrative Details of Project

S. No	Particulars	Details
1	Project Corridor	Rehabilitation, Strengthening and Four Laning of Jammu - Udhampur Section from Km 15.00 (Jammu Bypass) To Km 67.00 of NH-1A on BOT (Annuity) Basis on DBFOT Pattern in the state of Jammu & Kashmir
2	Employer	National Highways Authority of India
3	Concessionaire	**M/s Athaang Jammu Udhampur Highway Limited**
4	Independent Engineer (During O & M)	M/s TPF Getinsa Euroestudios SL in association with Segmental Consulting Infrastructure Advisory Pvt Ltd.
5	EPC Contractor	Afcons Infrastructure Limited

S. No	Particulars	Details
6	Project Road Length	Total Length 64.579 kms Descope: 16.995 kms Actual length: 47.584 Kms
7	Project Cost	₹1814 Cr.
8	Annuity Bi-annually	34 installments of ₹201.90 Crores each, every 6 months
9	Date of LOA	30-Apr-10
10	Date of Concession Agreement	19-Jul-10
11	Appointed Date	16-Jun-11
12	Concession Period	20 years (including construction period of 1095 days from appointed date)
13	Construction Period	1095
14	Schedule Date of COD	16-Jun-14
15	Schedule End to Concession Period	22-Jul-31
16	PCOD	01-Jun-14
17	Final COD	31-May-18
18	No. of Toll Plazas (Number and Location)	Ban Toll Plaza: Ch. 22+700

2.5 Salient Features of the Project

Salient features of the project are covered at **Exhibit 7** below.

Exhibit 7:Salient Features of Project

S. No	Particulars	Description and details
1	Main Carriageway	Total Length: 64.579 Kms Descope Length: 16.995 Kms **Actual Length: 47.584 Kms**
2	Existing Slip / Service Road	20.18 Km
3	Major Bridges	36 Nos
4	Minor Bridges	31 Nos
5	Causeway	01 no
6	Box Culverts	177 Nos
7	Pipe Culvert	45 Nos
8	Underpass	12 Nos
9	FOB	02 Nos
10	VOP	02 Nos
11	No of Toll Plaza & Location of Toll Plaza (chainage) & Toll Lanes	1 No (Ban Ch. 22+700) Toll Plaza with 8 lanes
12	Tunnels	4 nos Twin Tunnels
13	Traffic Control and Management	• Ambulance – 3 nos. • Tow away cranes - 3 nos. • Corridor Management Vehicle – 3 nos
14	Length of RCC Crash Barrier	31.588 km
15	Length of W-Beam Crash Barrier	21.007 km
16	Brifen Wire Rope	12.292 km
17	Length of Median Drain	30.536 km
18	RCC Cover Drain	9.407 Km
19	Toe Drain	56.577 km
20	Median Width	1.5m/4.00m
21	Toll Plaza Sign Boards	8 Nos
22	Sign Boards	3412 Nos
23	Overhead Gantry	2 Nos
24	Solar Blinkers	62 Nos
25	Highway Lighting	26 Nos (single arm poles), 71 Nos (double arm poles)
26	Highway Mast Lighting	32 Nos
27	Toilets and Drinking water facility	12 Nos

S. No	Particulars	Description and details
28	DG Set	15 Nos (11 nos at Tunnels, 1 no at Toll Plaza & 3 nos at office & medical aid post)
29	Major Intersection	13 Nos
30	Minor Intersection	15 Nos
31	Median Opening	44 Nos
32	Bus Bay with Shelter	28 nos
33	Truck Lay Bye	13 nos
34	Rest Area	Nil
35	Breast Wall	23.607 Km
36	Gabion Wall	1.576 km
37	RCC Retaining wall	10.231 KM
38	Stepped Wall	1.060 Km
39	Concrete Railing	19.379 Km
40	Transformers	22 Nos
41	5th Kilometre/ Kilometre/ HM Kilometre stones	320 Nos
42	Delineators	336 nos

2.6 Tunnel Details

The highway features four twin-tube tunnels with a combined length of 2.77 km. An overview of the tunnel details for the project is provided below.

Exhibit 8:Salient Features of Project

Tunnel No.	Section	LHS/RHS	Design Chainage		length(m)
T-1	Main Road	LHS	23.72	23.89	170
		RHS	23.715	23.88	165
T-2	Main Road	LHS	24.48	24.711	231
		RHS	24.533	24.8	267
T-3	Main Road	LHS	24.94	25.37	430
		RHS	24.916	25.39	474
T-4	Main Road	LHS	25.49	26.02	530
		RHS	25.49	26.00	510

2.7 Pavement Composition

The pavement has been designed in accordance with IRC:37-2001. The concessionaire has based the design on CBR values of 8% and 10%. Although the design traffic on the RHS is relatively lower than on the LHS, the concessionaire has opted to provide the same pavement thickness for both directions.

As mentioned in Pavement Design Report, design consultants summarized the calculated design traffic for the next 20 years for BT and Base and subbase layer respectively.

Exhibit 9: Design traffic in MSA for New Construction & Overlay Section

As per Concessionaire			
S. No	**Section Type**	**Design Traffic MSA for 20 years (Jammu to Udhampur)**	**Design Traffic MSA for 20years (Udhampur to Jammu)**
1	New Construction	41	16
2	Overlay	47	19

Pavement Configuration for Project is given in **Exhibit 24**

Exhibit 10: Pavement Composition-Main Carriageway

S. No	Design MSA	As built drawings
Flexible Pavement		
1	**Adopted MSA – 10**	
2	BC in mm	40
3	DBM in mm	110
4	WMM in mm	250
5	GSB in mm	200
Rigid Pavement		
	PQC	**DLC**
1	300	150
Overlay Works		
The Overlay thickness proposed for design traffic of 50 MSA for the project corridor. Based on the BBD Test Result Concessionaire Proposed Overlay of 50 mm thickness with DMB of 50 mm thickness.		

As per the Preliminary Design Report (PDR), the concessionaire has stated that the existing bituminous layer in the JBP, NBP, and MR sections ranges between 140 to 150 mm, with a granular layer thickness of 325 to 330 mm. In contrast, the Udhampur Bypass section has a thinner bituminous layer of only 80 mm but a thicker base/sub-base layer of approximately 430 mm.

As per Approved Pavement Design Report the service road has been designed for 10 MSA & CBR-10%. The Pavement layer adopted for service road as given below:

Exhibit 11: Pavement Composition -Service Road

S. No	Design MSA	
	Adopted MSA – 10 years	**25**
1	BC in mm	40
2	DBM in mm	50
3	WMM in mm	250
4	GSB in mm	200

2.8 Project Completion Certificate and PCOD & FCOD

A. Partial Commercial Operation Date (PCOD):

- The scheduled completion date was 1 June 2014. (Letter attached as annexure)

B. Final Commercial Operation Date (COD):

- The final COD achieved date was 31st May 2018. (Letter attached as annexure)

2.9 Extension of Time

There is no extension of the concession period on the project.

2.10 Penalty

There is no penalty on project as of now.

2.11 Annuity Payment

As per the Concession Agreement, an annuity amount of ₹201.90 crore is payable every six months. To date, a total of 22 annuity payments has been made by the Authority. The detailed breakdown of these annuity payments is provided below

Exhibit 12: Details of Annuity Payments

Annuity No.	Amount Payable (₹-Crore)	Deductions (₹-Crore)	Amount Received (₹-Crore)	Remarks
1st Annuity	197.93	-	197.93	
2nd Annuity	201.90	-	201.90	
3rd Annuity	201.90	0.17	201.73	
4th Annuity	201.90	0.08	201.82	
5th Annuity	201.90	0.13	201.77	
6th Annuity	201.90	0.10	201.80	
7th Annuity	201.90	0.20	201.70	
8th Annuity	201.90	-	201.90	
9th Annuity	201.90	-	201.90	
10th Annuity	201.90	0.09	201.81	
11th Annuity	201.90	-	201.90	
12th Annuity	201.90	0.10	201.80	
13th Annuity	201.90	-	201.90	
14th Annuity	201.90	-	201.90	
15th Annuity	201.90	-	201.90	
16th Annuity	201.90	-	201.90	
17th Annuity	201.90	0.01	201.89	
18th Annuity	201.90	0.26	201.64	
19th Annuity	201.90	0.20	201.70	
20th Annuity	201.90	-	201.90	
21st Annuity	201.90	0.02	201.88	
22nd Annuity	201.90	-	201.90	01-06-25
23rd Annuity			-	01-12-25
Total Amount (₹-Crore)	**4,438**	**1.35**	**4,436**	
Deduction %		**0.030%**		

Based on the above, Knight Frank is of the opinion that the cumulative deductions amounting to only ₹1.35 crore across all 22 annuity payments reflect the consistently high standard of maintenance maintained by the concessionaire over the 11-year duration of the project.

2.12 Change of Scope

Following items considered under Change of scope.

Exhibit 13: Change of Scope Details

S. No.	Structure Type	Location (Chainage)	Change Details
1	Major Bridge (MJB)	Ch. 20+690 (MNB-V/2B)	Span changed from 55m (as per CA) to 150m (executed as MJB)
2	Major Bridge (MJB)	Ch. 11+886 (BHS, UBP Section)	Flyover constructed and considered under MJB
3	Major Bridge to Causeway	Ch. 9+928 (CD1 at NBP)	Executed as Causeway instead of MJB under Negative COS
4	Major Bridge (MJB) / Minor Bridge (MNB)	Ch. 36+923 (V-12)	RHS converted to MNB; LHS remains as MJB
5	Minor Bridge (MNB)	Ch. 12+607 (B31A at RHS)	Additional MNB executed at site
6	Minor Bridge (MNB)	Ch. 13+545 (B32 at LHS)	Additional MNB executed at site
7	Vehicular Overpass (VOP)	Not specified	Executed under COS
8	Foot Over Bridge (FOB)	Not specified	Executed under COS

2.13 Approvals & Permits

Since Project is in O & M stage therefore all necessary approvals required are in place with concessionaire.

C 3.

REVIEW OF PROJECT AGREEMENT

Chapter 3. Review of Project Agreements

3.1 Review of Concession Agreement

Concession Agreement was executed on **19th July 2010** between:

- **National Highways Authority of India (NHAI)**, (hereinafter referred to as the "Authority"); and **SP Jammu Udhampur Highway Private Limited**, (hereinafter referred to as the "Concessionaire").

The Agreement relates to the *Rehabilitation, Strengthening and Four Laning of Jammu–Udhampur Section from Km 15.000 (Jammu Bypass) to Km 67.000 of NH-1A in Jammu & Kashmir on DBFOT (Annuity) basis under NHDP Phase-II.*

Exhibit 14: Key Terms of Concession Agreement

Parameter	Details
Date of Agreement	19th July 2010
Appointed Date	Declared by NHAI after Conditions Precedent are fulfilled 16th June 2011
Employer (Authority)	**National Highways Authority of India (NHAI)**, Ministry of Road Transport & Highways, GoI
Concessionaire	**M/s Athang Jammu Udhampur Highway Private Limited**
Concession Period	20 years from Appointed Date
Length of Project	**Total Length: 64.579 km** (Km 15.000 to Km 67.000, NH-1A, J&K)
Total Project Cost	**₹1814 crore** (as per definition in Concession Agreement)
Project Milestones	Linked to Right of Way & completion schedule
Construction/Scheduled Completion	COD on achieving Completion Certificate
Premium / Concession Fee	₹1 per year (token concession fee)
Annuity Payment	₹201.90 crore per half year, payable by NHAI to Concessionaire post COD
Performance Security	₹90.70 crore Bank Guarantee, valid until 1 year from Appointed Date; replenishable if encashed
Extension of Time / COD	Permitted in case of NHAI default / Force Majeure
PCOD	Provisional Commercial Operation Date (partial completion)

Parameter	Details
FCOD	Final Commercial Operation Date (full completion & tests)
Respective Rights & Obligations	NHAI: ROW, support, annuity payment. Concessionaire: DBFOT design, construction, O&M, financing
Change in Ownership	No dilution below 51% during construction & 2 years post COD (without NHAI approval)
Dispute Resolution	Arbitration under ICADR Rules, New Delhi
Governing Law & Jurisdiction	Laws of India; Courts at Delhi

3.1.1 Obligations of the Authority & Concessionaire

Exhibit 15: Key Obligations of Parties

Authority	Concessionaire
Provide Right of Way (ROW) for the Project Highway, free from encumbrances	Design, engineer, finance, procure, construct, operate, and maintain the Project Highway on DBFOT (Annuity) basis
Assist in obtaining statutory approvals, permits, and clearances from Government authorities	Achieve Financial Close within 180 days (extendable with damages) and furnish Performance Security
Pay annuity of ₹201.90 crore (half yearly) post COD, as per Article 27	Maintain the Project Highway in accordance with Specifications, Standards, and O&M requirements (Schedule K)
Maintain existing highway during the development period until Appointed Date	Comply with safety requirements, traffic regulations, and emergency response obligations
Provide assistance for utilities shifting, police support, medical aid posts, and land acquisition (if required)	Ensure timely achievement of project milestones and Scheduled Completion Date (COD within 1,095 days of Appointed Date)
Not levy any additional local tax/toll on the Project Highway	Hand back the Project Highway to NHAI at the end of Concession Period or upon termination, free of encumbrances
Cooperate with Independent Engineer for monitoring construction and O&M	Bear project risks, costs, and liabilities, except as specifically allocated to NHAI under the Agreement

3.1.2 Financial Covenants

The Agreement (Articles 28, 29; Schedules L & R) sets out strict financial safeguards to protect cash flows and lender interests. All revenues and annuities flow through an escrow with defined payment priority, equity is locked in to ensure sponsor commitment, and lenders hold substitution rights in case of default. Provisions on insurance, change in law, and regular financial reporting further enforce financial discipline. **The detailed covenants are presented in the exhibit below.**

Exhibit 16: Key Financial covenants detail

Aspect	Details
Escrow Account	All project revenues, annuity payments, insurance proceeds, and other receivables to be deposited in an **Escrow Account** maintained with an Escrow Bank. Disbursements in priority order: (i) statutory dues, (ii) O&M expenses, (iii) senior debt servicing, (iv) reserve creation, (v) equity distribution.
Annuity Payments	NHAI to pay fixed annuity of **₹201.90 crore (semi-annually)** post COD. Payments routed through Escrow, first applied to debt servicing.
Debt Service Coverage	Senior lenders have priority rights over project cash flows. Any shortfall to be funded by Concessionaire through sponsor support until COD achieved.
Equity Lock-In	Minimum **51% equity shareholding** of lead sponsor (SP group) to be maintained during construction period and for **2 years after COD** without NHAI's prior approval.
Change in Law Compensation	Financial impact of change in law to be compensated on **Net Present Value (NPV)** principle, adjusted via annuity or concession period extension.
Insurance	Comprehensive insurance cover required during construction and O&M periods, with assignment of benefits to lenders and NHAI.
Substitution Rights	Lenders empowered to substitute Concessionaire in case of persistent default, through a **Substitution Agreement** (Schedule R).
Financial Reporting	Concessionaire to furnish audited accounts, progress reports, and financial statements to NHAI and Lenders periodically.

3.1.3 Delay Damages and Penalties under the Concession Agreement

Exhibit 17: Key Terms of Damages/ Penalty

Clause / Article	Situation	Damages / Penalty	Remarks
Clause 4.2 & 10.3	Delay by Authority in providing Right of Way beyond 90 days from Appointed Date	₹50 per day per 1,000 sq. m. of land delayed	Payable to Concessionaire until ROW is given
Clause 4.3 & 24.1	Delay by Concessionaire in achieving **Financial Close** within 180 days	0.1% of Performance Security per day (extendable up to 120 days); further extension possible at 0.2% per day; max 20% of Performance Security	Weekly advance payment required for extension
Article 15.2 (COD Delay)	COD not achieved within 91 days after Scheduled Completion Date (Appointed Date + 1095 days)	0.1% of Performance Security per day until COD	If not achieved within 270 days, Authority may terminate
Article 17.7.3 (Lane Closure)	Delay in reopening lanes after repair/maintenance	0.1% of Average Daily Annuity per 250 m stretch/day	Independent Engineer approval required for closures
Article 35 (Compensation for Breach)	Breach by Concessionaire or Authority (other than those with specified damages)	Compensation = direct costs incurred by non-defaulting party	Does not include consequential losses
Article 49 (Transitional Arrangements)	Delay in completing Affected Stretch (wildlife clearance pending) beyond 180 days after Scheduled COD	₹57,250 per day	Recoverable by deduction from annuity

3.1.4 Legal and Operational Framework:

- **Force Majeure Events:**
    - Covers natural events, political events, and indirect events.
    - Relief is available only if reported within 7 days.
    - Time extensions granted for achievement of milestones and COD.
    - Compensation limited to actual costs, no claim for indirect losses.
- **Compensation for Breach of Agreement**
    - Sets principles for damages due to breach.
    - Damages are pre-estimated, not penalties.
    - Both parties are obligated to mitigate costs/losses.
- **Termination:**
    - Covers natural events, political events, and indirect events.
    - Relief is available only if reported within 7 days.
    - Time extensions granted for achievement of milestones and COD.
    - Compensation limited to actual costs, no claim for indirect losses.
- **Divestment of Rights and Interest**
    - On termination, Concessionaire must hand over project assets free of encumbrance.
    - Obligations include O&M records, designs, clearances, contracts, and project facilities.
- **Defects Liability after Termination**
    - Concessionaire remains liable for construction defects discovered post-termination.
    - Liability period typically one year from termination/transfer date.

3.2 Review of Supplementary Agreement

The Concession Agreement of **19.07.2010** was modified through three Supplementary Agreements. The first, dated **14.03.2011**, revised termination and delayed payment provisions by linking payouts to debt due, adjusted equity, and 10-year Government Security (G-Sec) yield, thereby strengthening financial clarity. The second, dated **18.06.2015**, addressed delays in land availability by obligating completion of ~9.5 km balance works, waiving annuity interest claims, and proportionally extending the O&M period. The third, dated **15.05.2018**, implemented the **Hybrid ETC system**, mandating installation and O&M of RFID and tolling infrastructure under Change of Scope, with costs reimbursable and periodic escalation. Together, these agreements ensured financial certainty, addressed construction delays, and modernized project operations.

Exhibit 18: Summary of Supplementary Agreements

Date	Parties	Purpose / Context	Key Terms / Amendments
14.03.2011	NHAI & SP Jammu Udhampur Highway Pvt. Ltd.	Early Supplementary Concession Agreement	• Revised termination payment structure (Force Majeure, Defaults). • Linked delay interest to 10-year Government Security (G-Sec) yield. • Termination payments = full & final settlement.
18.06.2015	NHAI & SP Jammu Udhampur Highway Ltd.	Addressing ROW delays & pending works post COD	• Identified ~9.5 km "Remaining Sites". • Completion window: 18 months max. • No annuity reduction if admissible. - Extended maintenance obligations proportionately. • Concessionaire waived interest on delayed annuity.
15.05.2018	NHAI & SP Jammu Udhampur Highway Ltd.	Implementation of Hybrid ETC System	• Scope expanded for ETC installation & O&M. • Hybrid ETC to reduce congestion. • 5-year O&M cycle with NHAI cost. - Equipment handover at concession end. • Quarterly O&M charges with escalation.

3.3 Review of State Support Agreement

State Support Agreement was executed on **28th November 2011** between:

- **The Governor of Jammu & Kashmir**, (the *State Government*), and
- **The President of India**, represented by the Joint Secretary, Ministry of Road Transport & Highways (the *Authority*).

This agreement provides the framework for support from the State Government to ensure smooth implementation and operation of the *Jammu–Udhampur Highway Project* under the Concession Agreement.

Exhibit 19: Key Terms of the State Support Agreement

Parameter	Details
Date of Agreement	28th November 2011
Parties	The Governor of Jammu & Kashmir (State Government) & The President of India (Authority)
Purpose	To ensure State Government support for implementation and operation of the Jammu–Udhampur Highway BOT (Annuity) Project
Support by State Government	• Provide continued access to Site/ROW • Assist in obtaining permits & approvals • Facilitate shifting of utilities • Ensure no barriers/taxes imposed by local authorities • Provide police, traffic, and medical aid support • Prohibit competing roads or tollways except as per Agreement
Restriction on Competing Roads	State shall not construct any competing roads violating Concession Agreement; exceptions only if notified annually to Authority
Restriction on Additional Tollways	No additional Tollway construction except as per Concession Agreement
Restriction on Local Taxes	State Government shall not levy local taxes/tolls on project highways; existing revenue interests at Lakhanpur & Lower Munda protected
Substitution of Concessionaire	State acknowledges lenders and Authority's right to substitute Concessionaire under Concession Agreement
Obligations of Authority	Ensure Concessionaire complies with laws, permits, and Concession Agreement

Parameter	Details
State Default	Failure by State Government/Agency to cure breach within 60 days constitutes *State Default*; treated as breach under Concession Agreement
Compensation & Termination Payments	State Government liable for compensation/damages/termination payments arising from its breach or default, payable within 60 days (with interest for delay at Bank Rate +3%)
Duration	Effective from date of signing; continues till termination of all related Concession Agreements
Indemnity	Both Authority and State indemnify each other against losses due to their respective breaches
Dispute Resolution	First conciliation (under Arbitration & Conciliation Act, 1996), failing which arbitration under ICADR Rules, New Delhi
Governing Law & Jurisdiction	Laws of India; Courts at Delhi
Miscellaneous	• Waiver of sovereign immunity by State Govt • Agreement binding on successors/assigns • Notices to be in writing - Agreement in English

3.4 Review of Settlement Agreement

Settlement Agreement was executed on **15th March 2022** at NHAI HQ, New Delhi, between:

- **National Highways Authority of India (NHAI** (Authority); and **SP Jammu Udhampur Highway Limited**, (Concessionaire).

The Agreement was signed under **Section 73 of the Arbitration and Conciliation Act, 1996**, following conciliation proceedings by the Conciliation Committee of Independent Experts (CCIE-2). It records the settlement of disputes arising from the Concession Agreement dated 19.07.2010, including arbitration awards, counterclaims, and change in law claims.

Exhibit 20: Key Aspects of Settlement Agreement

Parameter	Details
Parties	National Highways Authority of India (NHAI) & SP Jammu Udhampur Highway Ltd.
Context	Settlement under Section 73 of Arbitration and Conciliation Act, 1996, resolving disputes from Concession Agreement (2010)
Reference 1 – Arbitration Award (25.02.2021)	Tribunal award ~₹333.55 Cr → Settled at **₹282.67 Cr**
Reference 2 – Pending Arbitration	Concessionaire claims ~₹275.48 Cr → Settled at **₹36.28 Cr**
Total Settlement Amount	**₹318.95 Cr (₹282.67 + ₹36.28)**
Financial Impact	Reduction of ~₹290 Cr (~48%) vs. total arbitral awards/claims
O&M Extension	Concessionaire to perform O&M for **36 days beyond concession end** (16.06.2031–22.07.2031)
NHAI Obligations	Pay settlement amounts; withdraw Section 34 & 36 petitions
Concessionaire Obligations	Withdraw claims; record settlement in arbitration award; indemnify NHAI from third-party claims
Finality	Full and final settlement; no residual claims or litigation permitted
Governing Law	Laws of India; Courts at Delhi

3.5 Review of Final Settlement Agreement

The **Final Settlement Agreement** was executed on **30th April 2025** at **NHAI HQ, New Delhi**, between:

- **National Highways Authority of India (NHAI)** – *Authority*
- **Athaang Jammu Udhampur Highway Pvt. Ltd.** – *Concessionaire*

This Settlement Agreement addresses the **financial settlement arising due to descoping of 16.995 km of maintenance obligations** from the Concessionaire's scope, following the **overlapping construction of Delhi–Amritsar–Katra (DAK) Expressway Packages 17 & 18** over the existing **Jammu–Udhampur NH-44 corridor**.

Exhibit 21: Overlapping Stretch Between DAK Expressway and Jammu–Udhampur NH-44

Section / Package	Chainage (Start – End)	Overlapping Length
DAK Expressway – Package 17	528.100 to 528.900 550.900 to 552.300	**0.8 km + 1.4 km**
DAK Expressway – Package 18	530.000 to 543.100 544.000 to 545.300	**13.395 km + 1.4 km**
Jammu–Udhampur Section (as per CA)	15.200 to 16.000 17.100 to 19.475 28.400 to 29.800 21.864 to 23.264	—
Total Overlapping / Affected Length	—	**2.2 km + 14.795 km = 16.995 km**

It implements a **financial reconciliation mechanism through annuity deductions**, based on the **Lenders' Financial Model shared by Standard Chartered Bank**, with **bi-annual recovery linked to Annexure-1 of Final Settlement Agreement (30 April 2025)**.

Exhibit 22: Key Aspects of Final Settlement Agreement

Parameter	Details
Parties	National Highways Authority of India (NHAI) & Athaang Jammu Udhampur Highway Pvt. Ltd.
Legal Basis	Settlement under **Section 73** of Arbitration & Conciliation Act, 1996 (Conciliation Outcome – Binding as Arbitral Consent Award)

<table>

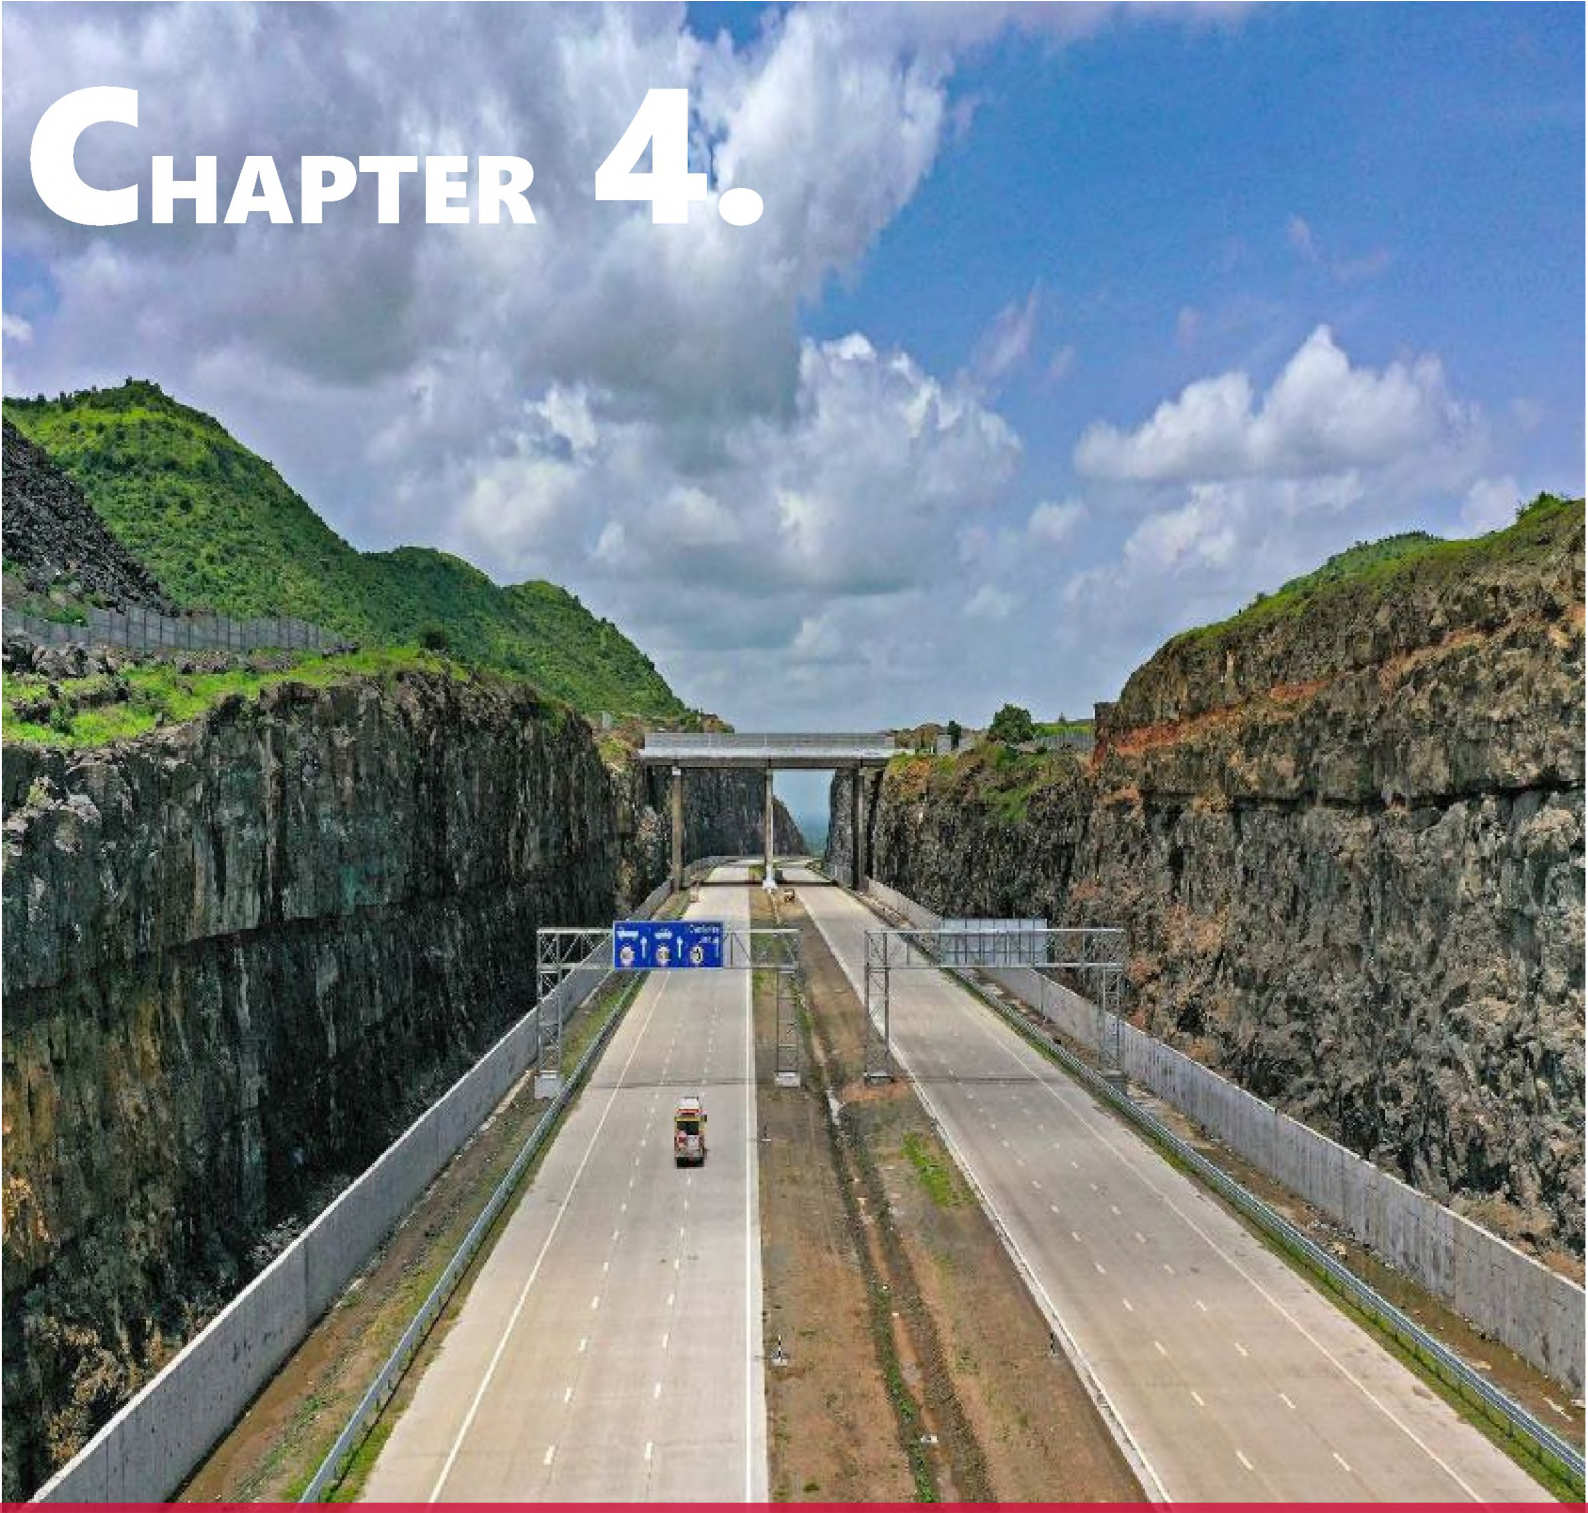
Knight Frank reviewed and noted that an amount of ₹7,63,87,976/- towards IE Fees has been deducted by the Independent Engineer from the 22nd Annuity Bill, in accordance with the provisions of the Settlement Agreement-2 Signed on 30.04.2025. The deduction was made vide letter reference LION-HCPT/O&M1124/Athaang/Jammu-Udhampur/0239, dated 07.05.2025, issued by the Independent Engineer to the Concessionaire.

Chapter 4.



Condition Assessment of Project Road

Chapter 4. CONDITION ASSESMENT OF PROJECT ROAD

4.1 General

This chapter presents a detailed assessment of the existing condition of the Jammu–Udhampur Project Highway in accordance with the provisions of the Concession Agreement and relevant IRC guidelines. The objective of this assessment is to evaluate the current condition and performance of the pavement, structures, tunnels, toll plaza facilities, service roads, drainage systems, safety installations and other highway assets. The observations are based on site inspections, maintenance records, annuity performance, and interaction with the concessionaire's O&M team.

This section presents the findings of the **condition assessment** of the **Jammu–Udhampur Section of NH-44** (Km 15+000 to Km 67+000) in the **Union Territory of Jammu & Kashmir**. The assessment has been prepared based on **field observations** recorded during the **site inspection conducted on 08 October 2025** & Based on Result of **Falling Weight Deflectometer (FWD) survey** carried out in **June 2023**, and the **Mobile Bridge Inspection Unit (MBIU) survey** conducted in **November 2023**.

The integration of these three key datasets — **pavement deflection study (FWD)**, **structural evaluation of bridges (MBIU)**, and **visual field inspection** — provides a **comprehensive and reliable representation** of the current **structural and functional condition** of the project highway and its associated assets.

The **project corridor** traverses the **Shivalik foothills** of the outer Himalayas, characterized by **steep terrain, deep cuttings, and landslide-prone zones**, with sections passing through high embankments, tunnels, and major structures. The alignment commences near **Jammu (Km 15+000)** and terminates near **Udhampur (Km 67+000)**, covering the **Jammu Bypass, Nandni and Jakhani Hills**, and the **Udhampur Bypass**. The stretch forms a vital component of **NH-44**, serving as a strategic link for all-weather connectivity between **Jammu and Srinagar** and facilitating both civil and defense transport movement.

The assessment integrates **instrumental evaluations** (FWD and MBIU) and **visual observations** to provide a holistic appraisal of pavement condition, bridge integrity, drainage, and highway appurtenances.

This assessment has been carried out in accordance with the following key references:

- **IRC:115-2014** – Guidelines for Structural Evaluation and Strengthening of Flexible Road Pavements using FWD Technique
- **IRC:117-2014** – Guidelines for Structural Evaluation of Rigid Pavements
- **IRC:37-2018** – Guidelines for the Design of Flexible Pavements
- **IRC: SP:35-2015** – Code of Practice for Inspection and Maintenance of Bridges
- **IRC:83-2019 (Part I & II)** – Guidelines for Design and Condition Assessment of Bridge Components
- **IRC: SP:16** and **IRC: SP:83** – Guidelines for Maintenance and Management of Highways and Toll Facilities

4.2 Pavement Composition

The pavement has been designed in accordance with IRC:37-2001. The concessionaire has based the design on CBR values of 8% and 10%. Although the design traffic on the RHS is relatively lower than on the LHS, the concessionaire has opted to provide the same pavement thickness for both directions.

As mentioned in Pavement Design Report, design consultants summarized the calculated design traffic for the next 20 years for BT and Base and subbase layer respectively.

Exhibit 23: Design traffic in MSA for New Construction & Overlay Section

As per Concessionaire			
S. No	**Section Type**	**Design Traffic MSA for 20 years (Jammu to Udhampur)**	**Design Traffic MSA for 20years (Udhampur to Jammu)**
1	New Construction	41	16
2	Overlay	47	19

Pavement Configuration for Project is given in **Exhibit 24**

Exhibit 24: Pavement Composition-Main Carriageway

Overlay Works		
The Overlay thickness proposed for design traffic of 50 MSA for the project corridor. Based on the BBD Test Result Concessionaire Proposed Overlay of 50 mm thickness with DMB of 50 mm thickness.		

As per Approved Pavement Design Report the service road has been designed for 10 MSA & CBR-10%. The Pavement layer adopted for service road as given below:

Exhibit 25: Pavement Composition -Service Road

S. No	Design MSA	
	Adopted MSA – 10 years	**25**
1	BC in mm	40
2	DBM in mm	50
3	WMM in mm	250
4	GSB in mm	200

4.3 Assessment of Highway

Knight Frank carried out a detailed review and assessment of the **project highway assets**, which included **Service Roads (SR), Intersections, TLBs, BLBs, Sign Boards, MBCBs, and other related infrastructure components**. The assessment was undertaken through **comprehensive visual inspections** along the entire project stretch, supplemented by a **review of relevant reports and maintenance records** shared by the Client during site visit.

The objective of this exercise was to evaluate the **existing physical condition, functionality, and maintenance requirements** of each asset category. Based on the observations and data collected, a **maintenance strategy** has been formulated covering **regular repair, preventive, and routine maintenance activities** to ensure the long-term sustainability and serviceability of the highway assets.

Furthermore, the **pavement condition** was assessed through a combination of **visual inspection, Network Survey Vehicle (NSV) survey, and Falling Weight Deflectometer (FWD) testing**, providing a comprehensive understanding of surface condition, structural strength, and performance.

Overall, the review indicates that the **project highway assets are in satisfactory condition**, with all key components performing as intended. Minor deficiencies identified during the inspection can be addressed through routine and preventive maintenance measures as part of the recommended asset management plan.

a) Service Road/Slip:

Total length of service road is 20.180 kms. The width of service road is 5.50m to 7.00m. Service Road / Slip Roads is constructed along the project as flexible pavements. The overall pavement condition is good. Pavement Markings are also found in service roads but are faded at some places

b) Highway Lighting:

Highway lighting has been provided at key locations such as junctions, flyovers, tunnels, and toll plazas to ensure adequate visibility and road safety during night hours. High mast lighting systems are installed specifically at junctions and toll plaza areas for enhanced illumination. Additionally, solar-powered blinker signals have been installed at selected median openings to alert and guide motorists at potential conflict points.

c) Drainage:

As per CA, lined between MCW and Service Road to be provided and at outer edge of slip road at approach of grade separated structures.

Drainage arrangements are provided in the project. But these Roadside drainage along the Highway as well as lined drains at median needs appropriate maintenance by cleaning debris and vegetations to make the arrangement working. Total 9.47 Kms of RCC covered drains available at site.

The project includes a total drainage network comprising 30.536 km of median drain, 9.407 km of RCC cover drain, and 56.577 km of toe drain, ensuring effective surface water management along the highway.

d) Metal Beam & Wire Rope Safety Barrier:

The project stretch includes 31.588 km of RCC crash barriers, 21.007 km of W-Beam crash barriers, and 12.292 km of Brifen wire rope barriers, ensuring road safety across various sections of the highway.

Metal Beam Crash Barriers (MBCBs) have been installed along the main carriageway, at underpasses, on approach sections, and at high embankment locations along the inner side of service roads to enhance road safety and prevent vehicular run-off. During the inspection, it was observed that at a few locations, the wire ropes appear slightly loose. These minor deficiencies can be rectified through routine maintenance activities to restore the barriers to their optimal functional condition.

e) Bus Bays /Bus Shelters & Truck Lay Byes:

There are 28 numbers bus-bays both side along the project road, out of these at 02 locations bus bays are not there. Lighting has not been provided at any bus bay locations. Pavement condition of bus bays is satisfactory.

There are 13 Truck lay byes provided along the project highway.

f) Major/Minor Junctions

Intersections are the places where one or more roads shares the common space. These includes major and minor intersections. There is total 28 junctions along the project road. Out of these, there are 13 major junctions and 15 minor junctions. Junctions are provided with flexible pavement.

g) Traffic Signs Boards:

The project highway is equipped with various types of road signs, including roadside signs, overhead gantry-mounted signs, kerb-mounted signs, and median signs. The stretch features approximately 1,873 signboards, 15 overhead gantry signboards, and 19 cantilever gantry signboards.

h) Plantation

Landscaping and avenue plantation are present along the project highway; however, they are observed to be sparse and unevenly distributed. Shrubs and flowering plants have been intermittently planted within the median, though the variety of species is limited. Median plantation is available at certain stretches of the corridor, comprising a mix of shrubs and ornamental plants, but the overall continuity and density of plantation remain inconsistent throughout the project road.

i) Median & Median Opening:

Width of median is 1.5m/4.00m

Median openings have been provided in accordance with the Concession Agreement (CA) provisions and the requirements of local authorities and nearby residents along the project highway. These openings are generally equipped with pavement markings to guide traffic movement. A total of 46 median openings were identified during the site inspection. However, it was observed that at a few locations, blinker lights and signboards are missing, which should be reinstated as part of regular maintenance activities to ensure road safety and compliance with standards.

KF View:

Overall, the project highway is in satisfactory condition, with all major assets performing as intended. Minor deficiencies such as faded markings, missing blinkers, and loose barriers can be addressed through routine maintenance to ensure continued safe and efficient operation.

4.4 Assessment of Structures

A **visual condition survey** of all bridge and culvert structures was carried out jointly by the **Knight Frank (KF) team** and the **Concessionaire**, with the objective of **identifying and quantifying structural deterioration** arising from various factors such as **dead load, live load, wind load**, and **physical or chemical influences** exerted by the environment. In addition to examining **damages caused by unpredictable natural events** or **vehicular collisions**, the inspection also aimed to detect or monitor the impact of any **construction-related imperfections** that may affect long-term performance. Such periodic inspections play an important role in **enhancing the service life and safety** of both existing and newly built bridge structures.

Knight Frank reviewed the **structural condition assessment** of bridges and culverts along the **Jammu–Udhampur Section of NH-44 (Km 15+000 to Km 67+000)** during the **Operation & Maintenance phase**, based on **visual inspection** and findings from the **Mobile Bridge Inspection Unit (MBIU) survey** carried out in **November 2023 (attached as Para 5.4.2)**. The assessment encompassed all **major and minor bridges**, as well as **underpasses** along both the **left-hand and right-hand carriageways** of the corridor.

The objective of the inspection was to evaluate the **structural integrity, durability, and functional safety** of bridge assets through a **systematic visual examination**, supplemented by **limited Non-Destructive Testing (NDT)** wherever required. The assessment methodology adhered to the provisions of **IRC: SP:35-2015** (Code of Practice for Inspection and Maintenance of Bridges) and **IRC:83-2019 (Part I & II)** pertaining to bridge design and inspection standards.

A total of **335 structures** were covered under this assessment, comprising:

- **4 Major Bridges** – PSC Box Girder / PSC T-Beam Type
- **24 Minor Bridges** – RCC T-Beam and RCC Slab Type
- **1 Vehicular/Non-Vehicular Underpass** – RCC Box Type
- **44 Arch Culverts** – Masonry Arch / RCC Type
- **3 Pipe Culverts** – RCC Pipes (1.0–1.5 m dia.)
- **261 Slab Culverts** – RCC Slab Spans (2–6 m)
- **1 Grade Separator** – RCC Box Configuration

Most bridges are of **RCC T-Beam or PSC Box Girder construction**, supported by **reinforced concrete abutments and piers** with open foundations and **stone-pitched protection works**. The **superstructure and substructure** elements were generally found to be **structurally sound** and **stable**, with no significant distress reported.

KF View:

Overall, based on the review of the previous MBIU survey reports (conducted by the SPV in November 2023) and a comprehensive visual examination during the site visit, it was observed that most structures are in sound structural condition and maintained in a fair state of serviceability.

4.5 Assessment of Tunnels

The **Kashmir Himalaya** is divided into three main physiographic zones from south to north — the **Siwalik Himalaya**, the **Middle Himalaya**, and the **Greater Himalaya**. The project area primarily lies within the **Siwalik formation** of the Outer Himalaya, part of the **Siwalik Himalayan Belt (Foreland Basin)** comprising the **Siwalik and Murree formations**, which overlie the northern margin of the Indian shield.

The **Siwalik group** is subdivided into **Lower, Middle, and Upper Siwalik**, consisting mainly of **fine to medium-grained sandstone** (light grey to reddish brown), **siltstone**, **claystone**, and **shale**. The **Lower Murree formation** is predominantly **argillaceous** with hard sandstone bands, while the **Upper Murree** is **arenaceous**, comprising fine to medium-grained sandstone.

Tunnels 1, 2, 3, and 4 traverse through the **Middle Siwalik**, except for a portion of **Tunnel 4 (near Portal 2)**, which passes through the **Lower Siwalik**. **None of the tunnels in the Jammu–Udhampur section of NH-44 intersect major fault zones such as the Reasi Thrust.** All tunnels are located along the **southern limb of the Suruin–Mastgarh anticline**, whose axial plane passes through **Jhajjar Kotli**.

The highway features four twin-tube tunnels with a combined length of 2.77 km. An overview of the tunnel details for the project is provided below.

Exhibit 26: Details of Tunnel

Tunnel No.	Section	LHS/RHS	Design Chainage		length(m)
T-1	Main Road	LHS	23.72	23.89	170
		RHS	23.715	23.88	165
T-2	Main Road	LHS	24.48	24.711	231
		RHS	24.533	24.8	267
T-3	Main Road	LHS	24.94	25.37	430
		RHS	24.916	25.39	474
T-4	Main Road	LHS	25.49	26.02	530
		RHS	25.49	26.00	510

4.5.1 Power Supply & Substations in Tunnels:

- **Each tunnel portal is supported by a dedicated substation, totaling four substations across the project.**
    - **Substation 1** (Tunnel 1) receives an 11 KV HT power supply from JDPL, which also feeds **Substations 2 and 3**.
    - **Substation 4** (Tunnel 4) receives an independent 11 KV HT power supply from JDPL dedicated solely to that substation.
- **Tunnel Ventilation System & Safety Features**:

The tunnels at lengths of 530 m and 510 m operate using a longitudinal ventilation system. Both tubes are interconnected via a cross passage, which serves as an emergency escape route. Each tube is equipped with 8 jet fans to support ventilation. Additionally, 4 carbon monoxide (CO) sensors and 4 nitrogen dioxide (NO_2) sensors are installed on either side of the tunnel to monitor air quality. The entire ventilation system is currently operating on diesel generator (DG) power supply

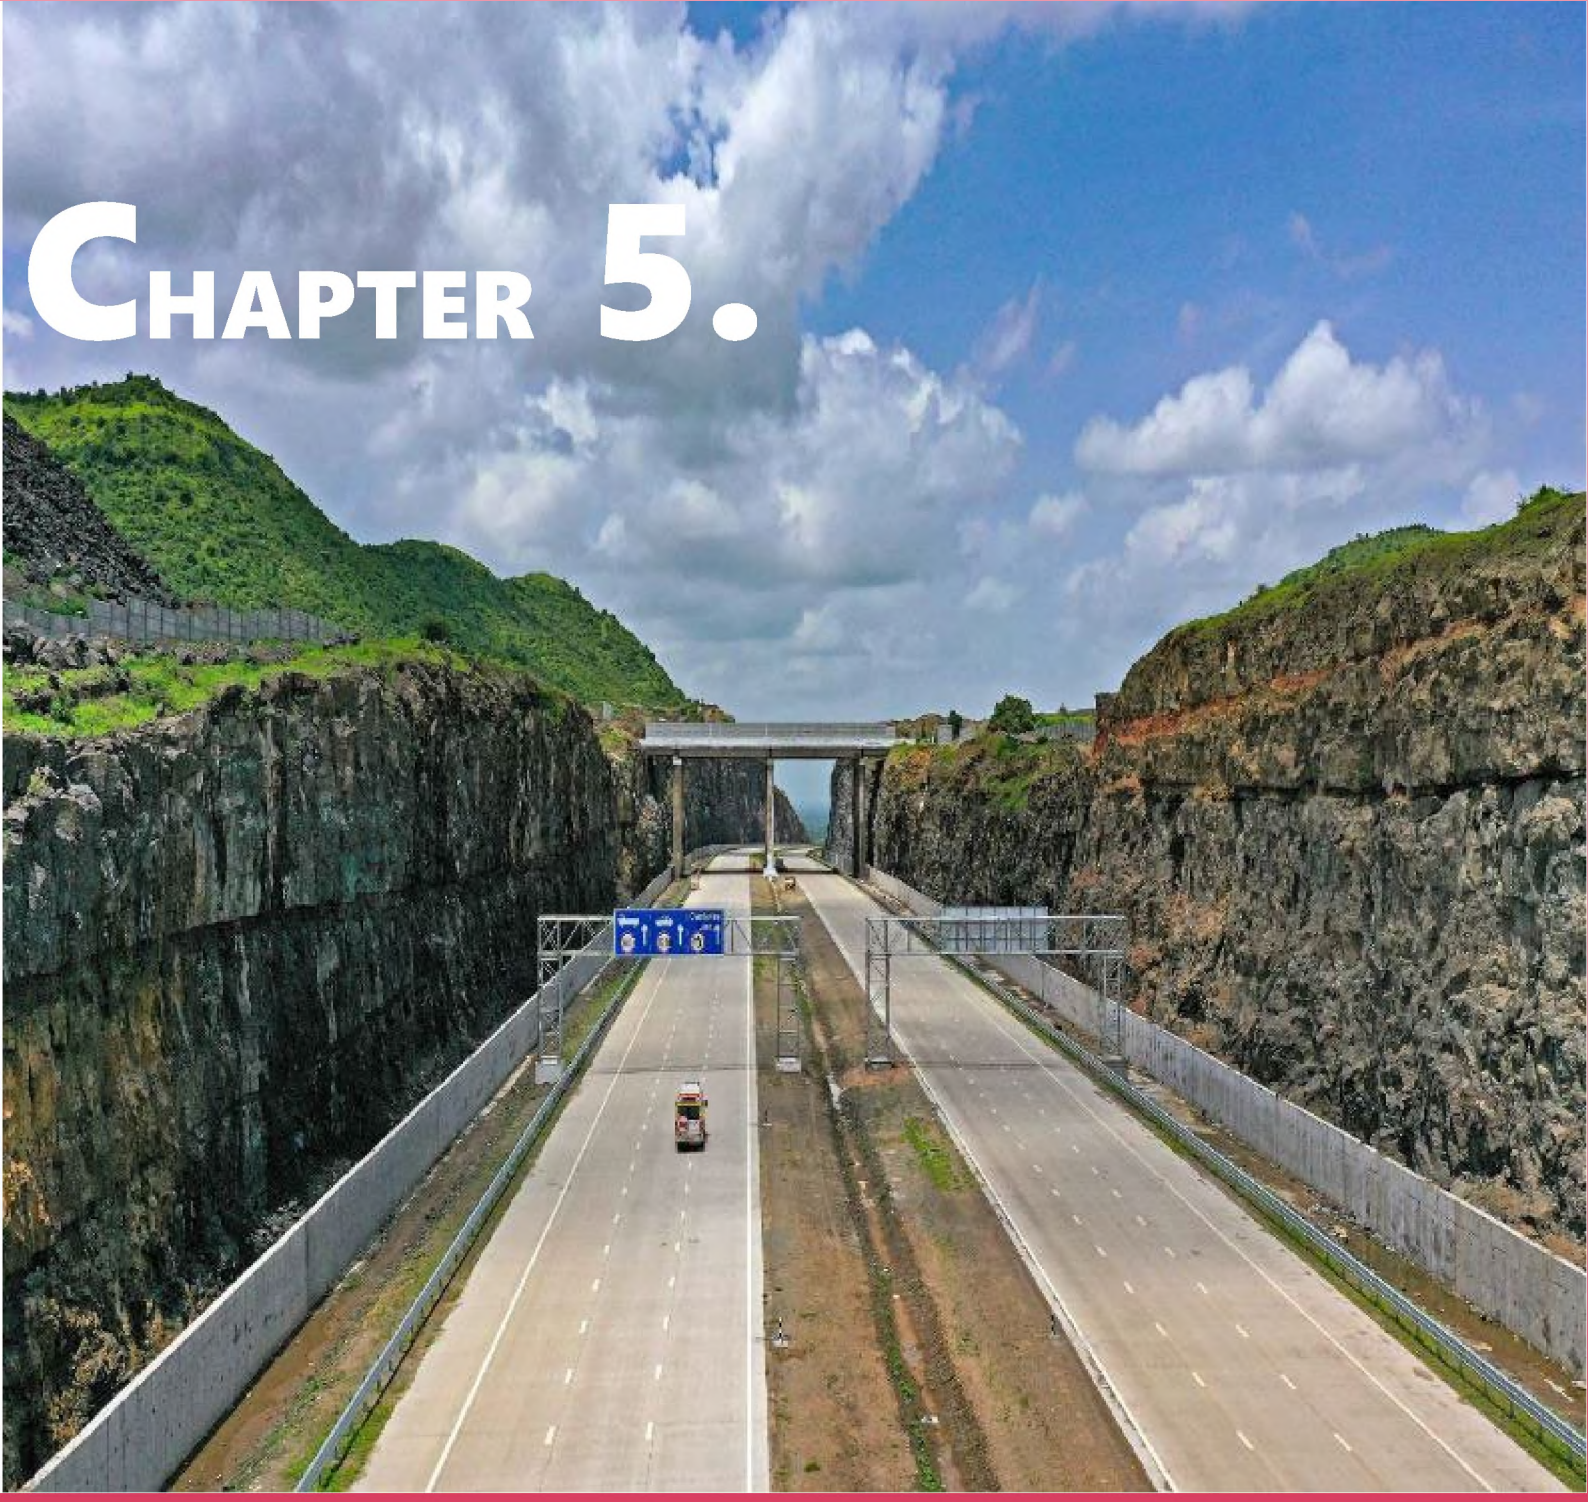
The tunnels are equipped with a comprehensive ventilation system that includes:

- 2 nos. of 500 KVA DG sets
- 1 DG synchronizing panel (with 3 nos. of 1600A ACBs)
- 1 ventilation panel (comprising 3 nos. of 1600A ACBs and 6 nos. of 400A MCCBs)
- 4 sub-panels (each with 1 no. 400A MCCB and 6 nos. of 100A MCCBs)
- 16 nos. of VFD (Variable Frequency Drive) panels

KF View:

The Jammu–Udhampur section of NH-44 has been operational for over nine years, and no major issues related to tunnel or slope stability have been reported during this period.

- ***During Site Visit, Minor erosion and distress of shotcrete have been observed, but no major mass movements were detected. The subsurface drainage system is functional and in good condition.***
- ***The false portal is protected with shotcrete wire mesh and berm, while longitudinal drains on both sides are in satisfactory condition.***



Chapter 5.

Review of Pavement Condition & Design

Chapter 5. REVIEW OF PAVEMENT CONDITION & DESIGN

5.1 Pavement Condition

The life of the Pavement has a co-relation with both its structural as well as Functional Condition. Inspecting and tracking of pavement condition, scheduling maintenance, and treating distress can have serious ramifications impinging on safety of road users and enhancing functional efficiency in end use of the Facility. It is therefore essential to carry out the assessment of the condition of the pavement on a given date taking into cognizance a variety of data to arrive at well-considered decisions and drawing up of the maintenance strategy and taking appropriate course of action to apply funds and resources in optimizing the desired levels of operations on the road assets. Condition data can include factors like roughness, specific distresses, friction, and overall structural health.

Once measurements of road condition are available, they are interpreted in such a way that allows the decision-making process to occur in a logical fashion. This might involve converting multiple physical parameters into a single index, allowing different sections of a road network to be directly compared against one another etc.

Pavement performance under prevailing environmental conditions is crucial as it has a direct bearing on the economic returns from the project development. While an under-designed pavement will fail prematurely, imposing undesirable Cost Over runs on the Project. It is therefore necessary to ensure the pavement layer thicknesses; configurations and materials are adequately designed and require minimal maintenance under the anticipated traffic loading throughout the life cycle of the project.

To achieve this objective and thereby to predict the performance of any pavement structure, it is necessary to analyze material characteristics, traffic condition, present physical condition of the pavement layers, local environment, and its impacts.

Due to the variety of variables involved, it is essential to determine the exact level of pavement performance through the project life. But, based on the assessment of present condition of pavement, analysis of available survey data, and estimations regarding the pavement life, future maintenance requirements can be estimated.

This part of the report deals with the details of the series of field investigations and analysis carried out to find out the present condition of pavement as well as to determine the future maintenance requirements for sound pavement performance throughout the project life.

5.2 Objectives

- Collect data regarding physical conditions of pavement.
- Prepare a plan for rectification as required for damaged/poor sections in consonance with requirements of the CA.
- Project maintenance requirement in physical and monetary terms over the life cycle of the project road.

5.3 Review of Pavement Design

A. Design Period

As per the four-laning manual and IRC: SP:84-2009, the sub-base and base layers of the pavement should be designed for a minimum period of 15 years, while the initial bituminous surfacing should be designed for a minimum of 10 years. ***However, the concessionaire has opted to design the flexible pavement for an extended design life of 20 years.***

B. Design CBR

As per the pavement design report, concessionaire considered the 8% and 10% CBR for pavement design. However, during execution time only 8% CBR is used.

C. Design MSA

As stated in the Pavement Design Report, the design consultants have provided a summary of the projected design traffic for the next 20 years, separately for the bituminous (BT) layer and the base and sub-base layers. The design of the new traffic construction and overlay is as detailed below:

Sl. No	Section Type	Design Traffic MSA for 20years (Jammu to Udhampur)	Design Traffic MSA for 20years (Udhampur to Jammu)
1	New Construction	41	16
2	Overlay	47	19

D. Pavement Crust of Main Carriageway

The adopted pavement crust for the Main Carriageway meets the requirements of IRC 37-2001 Concessionaire carried out the pavement design with 8% & 10% CBR values. Even though the design traffic in RHS direction is relatively less compared to the LHS direction, but the concessionaire is providing the same thickness for both directions

The crust thicknesses are as follows:

Exhibit 27 Pavement Design Composition of Main Carriageway

S. No	Design MSA	As built drawings
Flexible Pavement		
1	**Adopted MSA – 10**	
2	BC in mm	40
3	DBM in mm	110
4	WMM in mm	250
5	GSB in mm	200
Rigid Pavement		
	PQC	**DLC**
1	300	150
Overlay Works		
The Overlay thickness proposed for design traffic of 50 MSA for the project corridor. Based on the BBD Test Result Concessionaire Proposed Overlay of 50 mm thickness with DMB of 50 mm thickness.		

E. <u>For Service Road/Slip Road</u>

As per the Preliminary Design Report (PDR), the concessionaire has stated that the existing bituminous layer in the JBP, NBP, and MR sections ranges between 140 to 150 mm, with a granular layer thickness of 325 to 330 mm. In contrast, the Udhampur Bypass section has a thinner bituminous layer of only 80 mm but a thicker base/sub-base layer of approximately 430 mm.

As per Approved Pavement Design Report the service road has been designed for 10 MSA & CBR-10%. The Pavement layer adopted for service road as given below:

Exhibit 28: Pavement Composition -Service Road

S. No	Design MSA	
	Adopted MSA – 10 years	**25**
1	BC in mm	40
2	DBM in mm	50
3	WMM in mm	250
4	GSB in mm	200

F. Pavement Overlay design for Existing Carriageway

As per the Pavement Design Report (PDR), the concessionaire noted that the existing bituminous layer thickness ranges from 140 to 150 mm, and the granular layer thickness is around 325 to 330 mm in the JBP, NBP, and MR sections. In contrast, the Udhampur Bypass has a thinner bituminous crust of 80 mm, but a thicker base/sub-base layer of approximately 430 mm. A Benkelman Beam Deflection test was conducted on the existing surface in April 2011, and based on the analysis, the concessionaire proposed overlay thicknesses, details of which are provided in the below

Exhibit 29: Pavement Composition -Overlay Works

Section	Design Chainages	Jammu to Udhampur direction		Udhampur to Jammu direction	
		BC (mm)	DBM (mm)	BC (mm)	DBM (mm)
Main Road	21+940 to 26+710 27+250 to 33+971 34+975 to 41+695	50	50	50	50
	42+850 to 52+340	50	65	50	50
Nagrota Bypass	10+400 to 21+730	50	50	50	50
Udhampur Bypass	0+225 to 2+650 3+220 to 7+310 8+055 to 15+025	50	55	50	50
	15+540 to 16+550	50	50	50	50
Jammu Bypass	15+200 to 20+000	50	50	50	50

5.4 Pavement Evaluation by Falling Weight Deflectometer (FWD) Technique

FWD surveys were carried out to determine the present condition of pavement as well as finding out the future maintenance requirements.

a) Introduction:

The **Falling Weight Deflectometer (FWD) survey** was conducted in 2023 for the Jammu–Udhampur section of NH-44, covering chainage **Km 15+000 to Km 67+000**. The primary objective of this exercise was to evaluate the **structural strength of the in-service pavement**, determine the **moduli of individual pavement layers**, and estimate the **remaining life** of the pavement with respect to fatigue and rutting criteria.

This evaluation was carried out as per the provisions of **IRC:115-2014 "Guidelines for Structural Evaluation and Strengthening of Flexible Road Pavements Using Falling Weight Deflectometer"**. The survey results form a critical input for deciding the overlay requirements and long-term maintenance strategy of the project highway.

b) Project Road

The Jammu–Udhampur section of NH-44 serves as a vital north–south corridor, connecting Jammu city with Udhampur and further to Srinagar. The project alignment includes three distinct segments:

1. **Section I: Jammu Bypass (Km 15+200 to Km 20+260) -** Urban and peri-urban stretch with relatively high mixed traffic.
2. **Section II: MR & NBP (Km 9+380 to Km 52+450) -** A long intermediate stretch carrying a large share of heavy commercial vehicles.
3. **Section III: Udhampur Bypass (Km 0+000 to Km 16+352) -** A bypass section designed for smoother passage of highway traffic avoiding city areas.

The section passes through rolling to hilly terrain, experiencing climatic variations including hot summers and cold winters, both of which impact pavement performance

c) Falling Weight Deflectometer

The FWD survey was carried out using standard equipment with the following parameters:

- **Load Applied:** Equivalent to 40 kN impulse load (representing 80 kN standard axle).

- **Deflection Measurement:** At 7 radial offsets (D0 to D7) up to 1200 mm from the load center.
- **Survey Spacing:** 250–500 m interval along both carriageways.
- **Temperature Correction:** All bituminous layer moduli corrected to a reference temperature of 35°C.
- **Seasonal Correction:** Since the survey was conducted in winter (November 2023), appropriate seasonal correction factors were applied to granular and subgrade moduli.
- **Back-calculation Software:** KGPBACK (Genetic Algorithm based) used for determining layer moduli; IITPAVE used for fatigue and rutting life analysis

5.4.1.1 FWD Analysis

The FWD data collected has been analysed as per IRC:115-2014 guidelines with the suggested ranges for in-service pavements.

Description	Range
Subgrade Modulus	5 CBR to 20 CBR
Granular Layer Modulus	100 MPa to 500 MPa
Bituminous Layers –Thick without distress	750 MPa to 3000 MPa
Bituminous Layers in distressed condition	400 MPa to 1500 MPa

The above suggested ranges are for guidance only and pavement engineer shall use his judgment based on available data while fixing the above ranges. By looking at the age, condition and performance of the pavement following different set of ranges have been used in the analysis:

Layer	Bituminous Layers	Granular Layer Modulus	Subgrade
Modulus Value (MPa)	750-3000	100-500	50-75

Bituminous layer Moduli obtained from back calculations shall be corrected for a standard pavement temperature of 35°C using given equations. Whereas, for back calculated moduli values obtained for granular and subgrade layer shall be corrected for seasonal variations (using winter and summer equations). As FWD tests are performed during winter, accordingly winter correction factor is applied for granular and subgrade layers.

Remaining life in base year and overlay requirement (with VG-40 mix for >20 MSA) has been estimated in accordance with IRC: 115-2014 and IRC: 37-2018. The summary of the results is shown in tables below.

Exhibit 30 Remaining life of the existing pavement,

Sl. No.	Homogenous Sections (SCI)		Length	Thickness, mm		Total Crust	Moduli, Mpa			Strains		Life remains 90% reliability			Design MSA	Check

The FWD survey results demonstrate that the Jammu–Udhampur corridor is **structurally sound and serviceable** for current and near-future traffic. The majority of sections have long fatigue and rutting lives, well above the design traffic demand. However, **localized deficiencies in Section II** require corrective overlays and rehabilitation to ensure uniform serviceability across the entire stretch.

This evaluation reinforces that **targeted strengthening, rather than uniform overlays**, is the most cost-effective maintenance approach for this corridor**.**

5.4.2 MBIU survey

a. Introduction:

The **Mobile Bridge Inspection Unit (MBIU) survey** was conducted in **November 2023** for the Jammu–Udhampur Section of NH-44, covering **Km 15+000 (Jammu Bypass) to Km 67+000 (Udhampur)**. This was undertaken as part of Independent Engineer services during the O&M period, in accordance with **Clause 6.4 of the Terms of Reference** of the Concession Agreement.

The primary objective of the inspection was to assess the **structural and functional condition of bridges and culverts**, covering superstructure, substructure, bearings, deck, joints, drainage spouts, crash barriers, and approaches. The inspection was carried out with the aid of a **truck-mounted Palfinger PK1901 articulated unit**, enabling access to the underside of bridge decks and otherwise inaccessible elements

b. Project Corridor:

The inspected section forms a crucial part of the North–South corridor. The Jammu–Udhampur stretch includes **Jammu Bypass, MR & Nagarota Bypass, and Udhampur Bypass**, covering a mix of **major bridges, minor bridges, vehicular underpasses (VUPs), pedestrian underpasses (PUPs), and causeways**.

The bridges traverse rivers, streams, and gorges, many of which are subject to **siltation, waterlogging, heavy monsoon flows, and vegetation growth** along slopes. Accessibility issues in high-level bridges made the MBIU indispensable for systematic inspection.

c. Instrumentation & Methodology:

Instrument: Palfinger PK1901 MBIU, electro-mechanically operated articulated arm system mounted on truck.

Working Range: Allows horizontal, vertical, and underneath access across long spans.

Supporting Equipment: Laser densitometer, crack measurement card, tape (5 m, 30 m), ladders, torches, hammer, and digital cameras.

Inspection Standard: Observations recorded in accordance with **IRC SP-35 (Guidelines for Inspection and Maintenance of Bridges) and IRC SP-52 (Bridge Condition Survey Manual).**

Procedure:

- Visual examination of deck slab, girders, expansion joints, spouts, parapets, crash barriers.
- Recording of defects like honeycombing, spalling, exposed reinforcement, vegetation growth, clogged drainage, cracks, silting at abutments and pier caps.
- Photographic evidence taken for all critical observations

Exhibit 31 List of Bridge Inspected

S.No	Chainage (km)	Type of Structure	Side	No. of Spans	Total length (m)	Carriage way Width (m)	Deck Width (m)	Superstructure	General Observations

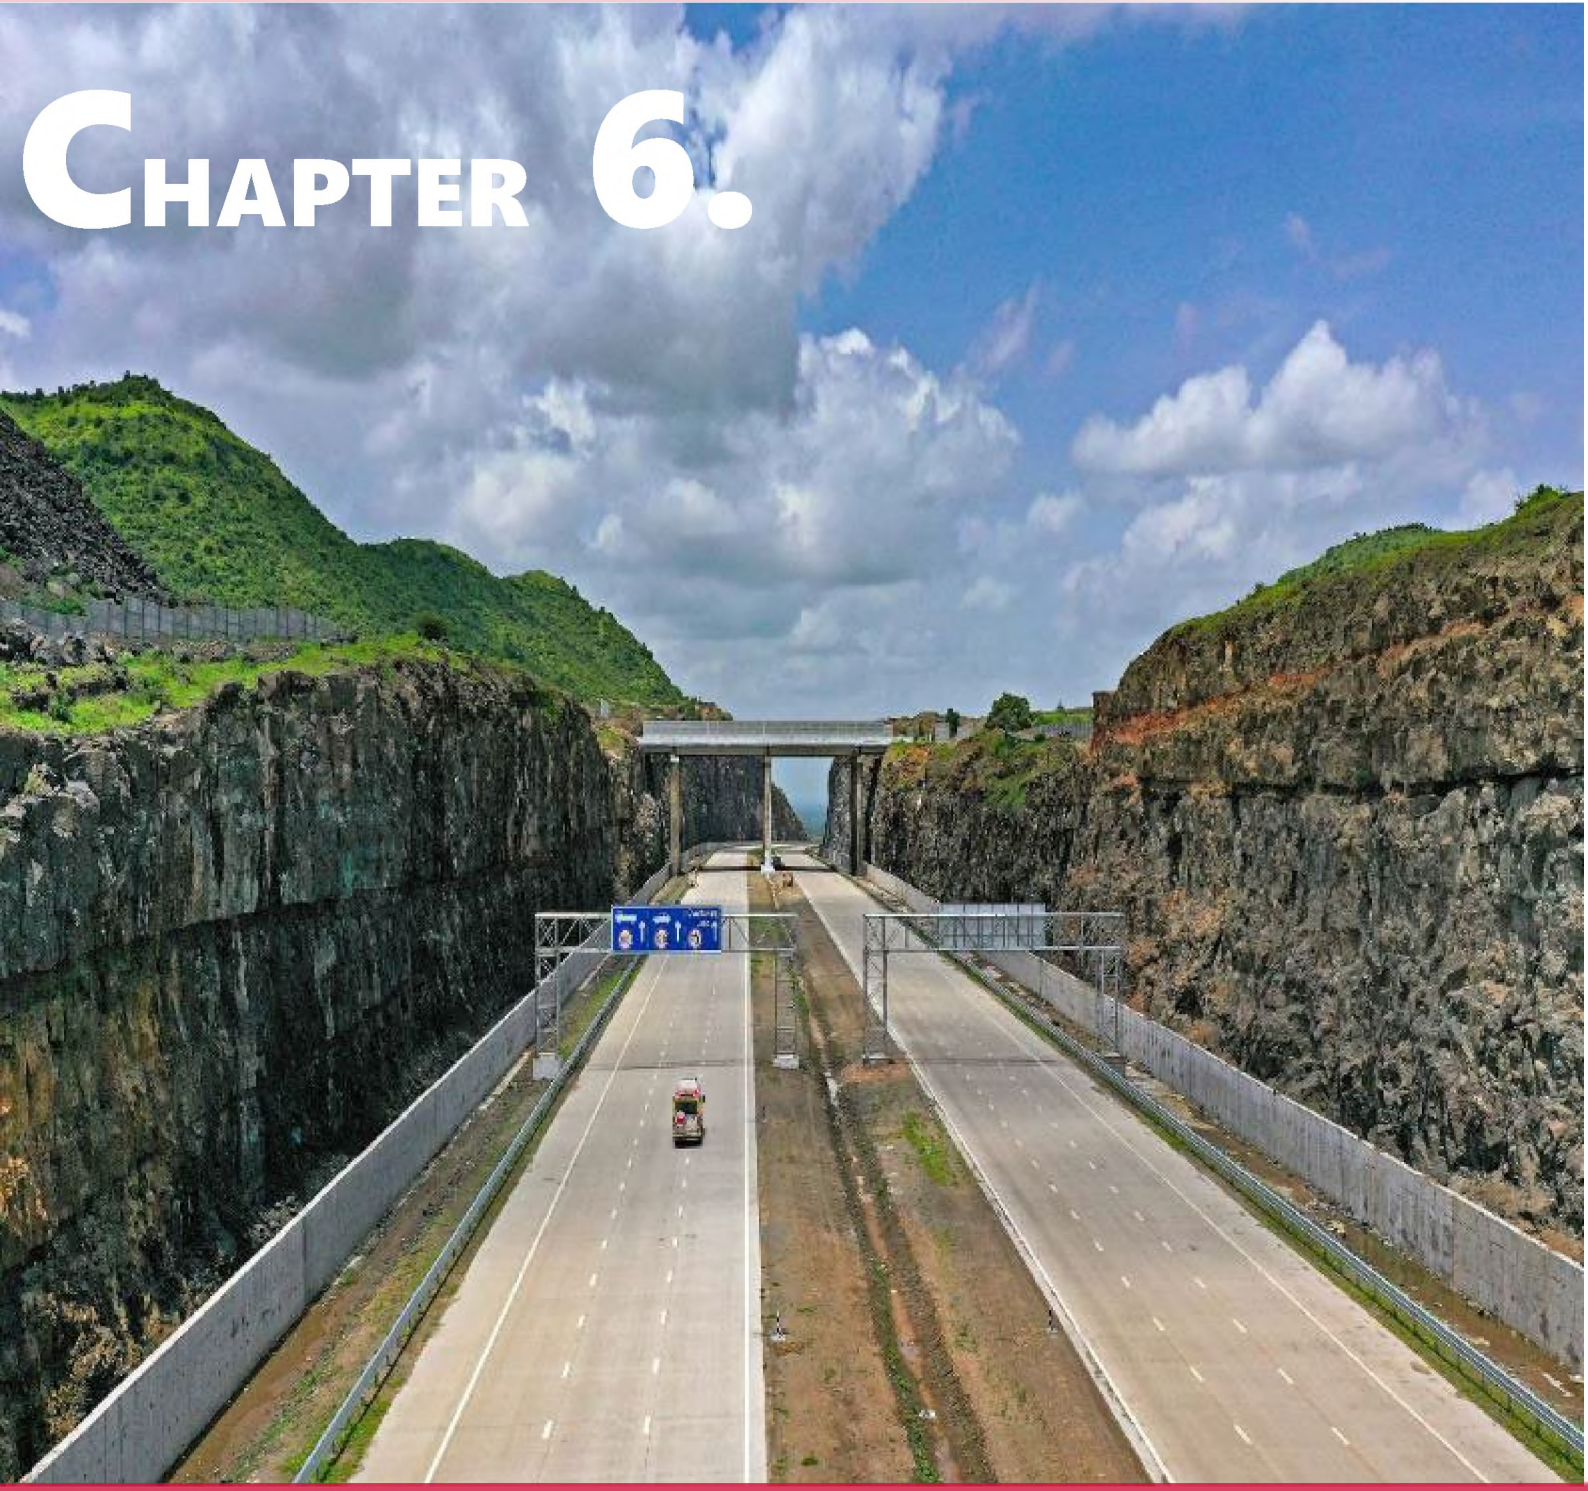
The MBIU survey of November 2023 has provided a comprehensive assessment of the bridge and culvert inventory of the Jammu–Udhampur section. The findings highlight that while the overall load-carrying capacity of structures remains adequate, the functional and durability-related deficiencies are substantial. Timely maintenance interventions are necessary to ensure the safety, serviceability, and long-term performance of the structures throughout the concession period.

5.5 Major Maintenance of Pavement

All pavements require maintenance. Stresses from traffic, weather, and moisture change effects on the Surface. Regardless of the reason, without maintenance, pavement deteriorates at a fast pace. An asphalt pavement is an essential asset which must always be maintained. Allowing the pavement to have minor problems will grow into major ones. No road user likes to hit potholes or step into a puddle of water. Sun, rain, and wind age the pavement. Friction from tires rolling wears away the asphalt glues and line stripping. Sunlight oxidizes and draws all the essential oils which results in the pavement breaking away. Water enters the lower layers of the pavement through cracks damaging the foundation which leads to potholes and failure. The summary of required overlay thickness in LHS direction as per FWD (MCW)

Major Maintenance details discussed at **Chapter 6**

Chapter 6.



Cost Estimate

Chapter 6. COST ESTIMATE

Based on the assessment carried out in above chapters, various costs were worked out by Knight Frank. The costs are divided into following categories

- Routine Maintenance
- Major Maintenance Cost
- Periodic Replacement of TMS/ATMS system

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and Escalation.

6.1 Assumptions

The cost estimates are based on the following assumptions:

Following assumptions are considered for unit rates of various items while estimating the cost –

1. Unit rates of different items (BC, DBM, Concrete, Road markings etc.) are calculated as per the MoRTH Standard data book. The input rates for MoRTH standard data book were adopted as below
   a) **Manpower and labor** – As per applicable minimum wages published by Ministry of Labour & Employment, Government of India
   b) **Bitumen** – Bitumen rates are considered to be sourced from IOCL Panipat Refinery. The distance (to- from) from the midpoint of Project Highway is considered as 550 kms. VG-30 and VG-40 grades of bitumen are considered in our cost estimate.

☛ ***Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. Same discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.***

Therefore, Bitumen prices are considered as per the client's forecast. Current published of bitumen are considered for unit rates calculation for FY26 and FY27. Average 10 years of price of bitumen are considered for unit rates calculation for FY28 and onwards, since bitumen prices have been range bound over the last five-six years. Following rates of bitumen are considered

Exhibit 32 Bitumen Rates (in INR/MT) - Ex-MI supply excluding discount and GST

Refineries	Grade	Rate for FY24 and FY25	Rate for FY26 onwards
IOC Mathura	VG10	45522	33955
IOC Mathura	VG30	46322	34552
IOC Mathura	VG40	48652	36290
IOC Haldia	VG10	45922	33258
IOC Haldia	VG30	46722	33838
IOC Haldia	VG40	49052	35525
IOC Barauni	VG10	46952	34004
IOC Barauni	VG30	47752	34584
IOC Barauni	VG40	50082	36271
CPC Chennai	VG10	44922	33541
CPC Chennai	VG30	45722	34138
CPC Chennai	VG40	48052	35878
IOCL Panipat	**VG10**	**45,830**	**33,915**
IOCL Panipat	**VG30**	**46,630**	**34,506**
IOCL Panipat	**VG40**	**48,960**	**36,230**

c) **Sand and Aggregate** are sourced from the nearest quarry located on project highway.

d) **Cement** is procured from the nearest local market.

e) **Machinery Hire charges** of Plant and Machinery for various items of works have been considered from J&K SOR 2022 and some rates are considered from MORT&H Standard Data Book 2001-2002. Escalation has been considered on MORT&H Plant and Machinery rates to arrive at the present rates of 2024-25.

f) **Material Rates** are obtained from SOR of J&K, PWD 2021-22.

g) Some of the rates are based on Consultant's experience on similar ongoing projects in adjacent locations.

h) **Overheads and profits** have been considered based on MORT&H Standard Data Book. Applicable taxes have been considered in the Rate Analysis.

i) **Goods and Service Tax (GST)** is considered as 18% as per the latest Government Guidelines.

Exhibit 33: Adopted Unit Rates for Key items

S.nos	Items Description	Unit	Rates (₹)
1	Bituminous Concrete	Cum	10,249
	DBM	Cum	8,847
2	Milling	Cum	89
3	Tack Coat	Sqm	12
4	Road Marking	Sqm	432
5	Earthen Shoulder	Cum	294
6	Kerb Raising	Rm	311
7	Kerb Painting	Sqm	116
8	Road Studs	Nos.	191

- *The above unit rates are excluding GST.
- The unit rate of each item includes 10 % overhead for road works, 15 % overhead for structure works and 10 % contractor's profit.
- Details of components considered in rate analysis & quantification are presented in below **Exhibit 34.**

Exhibit 34: Major components detail for Key items

Sr. No.	Particular	Source	Reference
1	Rate Analysis	MORTH	Standard Data Books published by MORTH
2	**Material**		
A	Aggregate Rates	Nearby Project Corridor	As per Local Market Rates
B	ATMS, TMS cost		As per Vendor offer.
C	Cement	As provided in Local market	As per Local Market Rates
3	Equipment hire cost	Nearby project location	Standard Data Books published by MORTH
4	Labour	As per minimum wages	As per minimum wages

6.2 Routine Operation & Maintenance (O& M) Cost

Operations and Routine Maintenance work required as per the CA. During the concession period, the Concessionaire is fully responsible for Operation & Maintenance of Project Highway. Schedule K elaborates the requirements of various service factor desirable level and acceptable level during O & M period along with time if any parameter level of service beyond acceptable limit.

The CA Stipulates that the Concessionaire shall Operate and Maintain the Project Highway in accordance with Article 17 – Operation & Maintenance & Schedule –K Maintenance Requirements of Concession Agreement. The obligation of Concessionaire as per Article 17 is as follows:

- permitting safe, smooth, and uninterrupted flow of traffic on the Project Highway during normal operating conditions; collecting and appropriating the Fee.
- minimizing disruption to traffic in the event of accidents or other incidents affecting the safety and use of the Project Highway by providing a rapid and effective response and maintaining liaison with the emergency services of the State.
- carrying out periodic preventive maintenance of the Project Highway.
- undertaking routine maintenance including prompt repairs too, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices.
- undertaking major maintenance such as replacement of panels in rigid pavement and associated activities
- preventing, with the assistance of concerned law enforcement agencies, any unauthorized use of the Project Highway
- preventing, with the assistance of the concerned law enforcement agencies, any encroachments on the Project Highway
- protection of the environment and provision of equipment and materials therefore
- operation and maintenance of all communication, control and administrative systems necessary for the efficient operation of the Project Highway
- maintaining a public relations unit to interface with and attend to suggestions from the Users, government agencies, media, and other agencies; and
- Complying with Safety Requirements in accordance with Article 18.

Routine O&M cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have been made from the expenses of similar types of projects to arrive at the operating cost. The estimates are projected based on best industry practices and are compared with the operation cost in the vicinity of the project area. Same has been divided into following major head

1. Salary and Welfare Expenses
2. Tolling Operations Services
3. Incident Management Services
4. Electricity and Diesel Charges
5. TMS/HTMS/System Expenses
6. Office Operating Expenses
7. Vehicle Running Expenses
8. Professional Fees Expense
9. Insurance Expense
10. IE Fees
11. Horticulture & ROW Maintenance
12. Routine Maintenance Cost

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or "wear-and-tear". Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

6.2.1 O & M Strategy

Important Operations and maintenance work have been outsourced by the SPV. Details of important work orders outsourced are listed below **Exhibit 35**

Exhibit 35: Work outsourcing for Operations and Maintenance work.

Sn	Activity	Strategy
1	Routine Maintenance	In-house
2	Preventive Maintenance	In-house
3	Management and Supervision Staff	In-house
4	Security	Outsource
5	Corridor Management	Outsource

6.2.2 Routine Maintenance

Routine and Preventive maintenance encompasses work that is performed in reaction to an event, season, or overall deterioration of the transportation asset. This work requires regularity and reoccurring in nature. Routine and Preventive Maintenance is essential to maintain the condition of the highway asset or to respond to specific conditions or events that restore the highway system to a functional state of operation.

Total Routine Maintenance cost estimated by Knight Frank is ₹ 16.50 Crore for the balance concession period of 05 years. The routine and preventive maintenance covers maintenance of the following assets:

- Cleaning of Main Carriageway, service road, bridge deck
- Pruning of median plantation, watering
- Maintenance of Avenue Plantation
- Cleaning of debris from carriageway and shoulder
- Plantation and Landscaping
- ROW Cleaning
- Cleaning of all road asset, Toll Plaza
- Tunnel, MEP & Slope Protection

The average cost for Routine Maintenance is ₹35,484/ km/ month including GST. Based on our previous projects experience & based on the thumb rule method routine maintenance costs are reasonable.

Exhibit 36: Routine Maintenance Cost

Sr. No.	Item Description	As per Knight Frank	Remarks
1)	Routine Maintenance Cost (₹-Crore) (5 Years Concession Period)	16.50	
2)	Routine Maintenance Cost Per Year (₹-Crore)	3.30	
3)	Routine Maintenance Cost Per Km/Year (₹-Lakh)	5.11	

Above cost is including of GST

6.2.3 Preventive Maintenance

Total Preventive maintenance cost considered is **₹7.44 Crore** for balance concession period of 05 years & following items considered for preventive maintenance work:

- Repair cost of pavement as and when pavement distress occurred.
- Repair of road Kerb, crash barrier, metal beam crash barrier and guard rail
- Repair of faded road marking
- Fixing of damaged sign boards, KM stones
- Shoulder maintenance
- Repair and maintenance of structure – bearing, expansion joint.
- Repair of crossroad junction
- Maintenance of Truck lay-bys

Average cost considered for Preventive Maintenance is ₹ 15,993/km/ month including GST. Based on our previous projects' experience & based on thumb rule method, preventive maintenance cost is reasonable.

Exhibit 37: Preventive maintenance Cost

Sr. No.	Item Description	As per KF	Remarks
1	Preventive Maintenance Cost (₹-Crore) (5 Years Concession Period)	7.44	
2	Preventive Maintenance Cost Per Year (₹-Crore)	1.49	
3	Preventive Maintenance Cost Per Km/Year (₹-Lakh)	2.30	

Above cost is including of GST

6.3 Highway Lighting

Electricity charge and maintenance cost of highway lighting is calculated as follows:

a) Each lighting post has counted from site and consider having LED light will be operated for 12 hours a day round the year.

b) Lighting post at median / separator are having with two halogen/LED lamp and service road shall be with single lamp only.

c) Tunnel & MEP OPEX

The O & M Cost estimated towards highway lighting is ₹2.23 Crore per year including GST.

6.4 Tunnel Opex

Following Items Considered for Tunnel Opex calculation as follows:

a) AMC Cost for MEP & ITCS Equipment = 20.88 lakh (annually)

b) Annual Cost of Spare/Consumable of MEP = 47.45 lakh (annually)

The O & M Cost estimated towards Tunnel Opex is ₹68.34 Lakh per year including GST.

6.5 Corridor Management

The following equipment along with operation manpower is required to provide as per Concession agreement.

a) 3 nos. of Crane

b) 3 nos. of route patrol vehicle

c) 3 nos. of Ambulance

O & M Cost estimated towards incident management with operation manpower is ₹1.12 Crore per year including GST.

6.6 Manpower Cost

The requirement of manpower is worked out to function all activity at project road for compliance of CA requirement, toll collection and security of asset. Requirement of manpower is classified into following broad division:

a) Management, Administration/HR and Supervision Staff: in-house manpower (**Cost considered towards SPV Manpower is ₹1.50 Crore per year)**

b) Toll Operation Manpower: outsource/In-house for providing 24-hour uninterrupted traffic flow at toll plaza and collection of tolls. Due to Nationwide implementation of Hybrid-ETC System, it is expected drop in toll collection manpower. However, where collection of overloading is expected, manpower for toll collection is not possible at this stage. The company is expecting revenue from overloading in this asset therefore curtailment of toll collectors is not expected. (**Cost considered towards SPV 3rd Party Manpower is ₹4.05 crore per year)**

The cost of manpower is estimated as ₹5.56 crore per year.

6.7 Office Expenses

Cost towards operation of office, insurance premium, professional fees for carrying out traffic, asset condition survey etc., IE fees, AMC for equipment installed at office, communication charge, conveyance cost etc. are considered under Office Expenses. **The cost considered regarding office expenses & operation are ₹5.59 crore per year which is bifurcated as follows.**

- ***₹1.57 crore per year for Independent Engineer (IE)/Authority Engineer (AE) and professional fees covering legal, arbitration, and audit certification during the O&M period***
- ***Actual cost of insurance policy: ₹3.63 crore per year (inclusive of 18% GST)***
- ***Survey and investigation charges: ₹0.09 crore per year (inclusive of 18% GST)***

6.8 Major Maintenance

As mentioned in earlier chapter, Currently, the Project Highway is maintained by existing Annuity Concessionaire.

Based on RI & FWD Test results, SPV team made 02 MM cycles for the overlay of projects. Following items were considered during each MM cycle based on the ground requirements.

A. Flexible Pavement

- Overlay of 30-40 mm BC on MCW based on ground conditions and Test results.
- Overlay of 30 mm BC on service road considered.

B. Rigid Pavement

- Dismantling for existing PQC
- Relaying of dismantled panels
- Grouting with cement mortar
- Replacement and relaying of joints
- Diamond grinding with texturing

C. Replacement of Wearing Coat on structures

It is assumed that the pavement will be overlaid before handing over of the project confirming the pavement parameters kept within the limits as per Detailed strategy at **Exhibit 38.** Hence, the major maintenance cycles are proposed between year 2029 and end of concession period.

6.9 Major Maintenance items

Based on detailed highway inventory carried out during site investigation and data provided by the concessionaire following items considered during major maintenance work

- Bituminous concrete for MCW using VG-30
- Dense Bituminous Macadam for MCW using VG-30
- Bituminous concrete for Service Road using VG-30
- Dense Bituminous Macadam for MCW using VG-30
- Micro surfacing
- Repair of Transverse & Longitudinal joints on MCW & Service Road for Rigid pavement area
- Joint Sealant replacement of rigid area
- PQC taxing for rigid pavement area
- Removal & Relaying of Panels
- Crack Sealing

6.10 Major Maintenance Cycles & Cost

Major maintenance works to be considered in 02 cycles up to the year 2032. A total Cost of ₹74.01 crore (Without Escalation) considered for major maintenance work Upto end of Concession period. Major maintenance Strategy is shown in **Exhibit 38. Detailed Cost Estimate attached as Annexure A.**

Exhibit 38: Major Maintenance Cycles & Cost

Tack Coat: 100% RHS + 20% on LHS 05. Road Marking: (100% RHS and 20% LHS) 06. Kerb Raising: 50% length 07. Kerb Painting: 100% Length 08. Road Studs: 50%	33.06
Total MMR Cost (₹-Crore) with GST			**74.01**

6.11 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summaries yearly for remaining concession period as below.

Exhibit 39: Summary O & M Cost for Remaining Concession Period

Summary of Cost (₹-Crore)									
S.nos	**Type/Year of Expenses**	**2025***	**2026**	**2027**	**2028**	**2029**	**2030**	**2031****	**Total Cost**

1 INTRODUCTION

1.1 Background

Cube Highways Fund Advisors Pvt. Ltd. (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InvIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an Infrastructure Investment Trust under the SEBI InVIT Regulations. Cube Highways Fund Advisors Pvt. Ltd. has appointed **M/s. FP Project Management Consultancy Services Private Limited** (hereinafter referred as "Technical Consultant" or "FPPM") to carry out Technical Due Diligence of Jhansi - Lalitpur section of NH-44 (old "NH-26") from km. 49+700 to km. 99+005 in the State of Uttar Pradesh (hereinafter referred as "Project Road").

M/s. Jhansi Vigakhet Tollway Private Limited (hereinafter referred as "Concessionaire") is a special purpose vehicle (SPV) for tolling, operation, maintenance, and transfer of Jhansi to Lalitpur Section (from km. 49+700 to km. 99+005) of NH-44 or Project Road under TOT. The Project was awarded to Concessionaire on 20th October 2020 with a concession period of 30 years. The length of Project Road is 49.305 kms with one toll plaza at km. 85+280.

Accordingly, the Technical Consultant has undertaken the work of assessment of operation and maintenance (O&M) cost based on site inspections and field investigations. The same is presented in this report.

1.2 Scope of Work

The detailed scope of work for conducting the technical due diligence of Project Road is presented as below:

1. A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets
2. Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, As-built drawings, O&M manual, COD / PCOD certificate, punch list, previous major maintenance etc.
3. Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, axle load, material investigations etc.
4. Formulation of future major maintenance strategy
5. Estimation of any initial expenses to be incurred due to deficiencies observed in diligence
6. Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period
7. Estimation of Annual Operation expenses along with Systems cost (TMS / HTMS) till the end of concession period
8. Review of balance work cost for Project Road including estimation of quantities and item rates

1.3 Our Approach Philosophy

1.3.1 Composition of Team

Our team consists of well-qualified engineers and other professionals, whose experience covers all the skills and specializations required for undertaking such assignments. All the team personnel proposed are our regular employees and have a long and stable working relationship with our firm.

The Team Leader coordinates the activities between all the key staff who work closely together. The key staff is assisted by various support staff, who report to the respective key staff in their field of expertise. The Team Leader is the point of contact for Client on Technical Study.

The technical study includes review of all the available documents namely:

a) Concession Agreement including Technical Schedules
b) O&M Contract, work order and their provisions
c) Quality of construction based on available data, design and drawings
d) Documents on historical expenditure on operation and maintenance
e) O&M cost schedule for the concession period
f) Review of Completion / Provisional Completion along with punch list items
g) Review of recent pavement surveys conducted
h) Correspondence regarding scope of works and during O&M
i) Recent O&M Report submitted to Authority
j) Toll operation manual / ATMS related documents

The review of above documents is the first step towards accomplishment of the task. This gives a complete idea of the project and is used as input data for preparation of report after necessary analysis.

1.3.2 Site Visit and Data Collection

A team of experts from various streams has carried out the preliminary site visit to understand the assessment of project assets mainly condition of the pavement and structures.

- The site visit is undertaken for detailed reconnaissance and visual pavement condition assessment.
- The condition assessment of major structures by visual inspection
- The information like material sources and the probable cost is collected for the purpose of cost estimate.

The detailed design / drawings viz. Plan & L-sections, drainage design, structure design, layout drawings for project facilities like toll plaza, bus bay, truck lay-byes, highway lighting facilities etc. are studied. Also, design / drawing and provision pertaining to road furniture are studied.

The information on availability of material in the vicinity is gathered. It has direct impact on cost of maintenance work and balance work.

The basic approach for preparation of cost estimates for operation and maintenance is as per the practice of State PWD / MORT&H in respect of highways and structures.

1.3.3 Data Analysis

Based on the study of the available information and preliminary site visits, the consultants share their preliminary observations with the Client based on the evaluation of the technical data and reports provided by the Client.

1.4 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Company. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyzing the same as per the best engineering / industry practices.

The site visit and inspection were carried out between the periods from **23rd March 2026** to **25th March 2026**.

The report is organized with the following chapters for easy understanding of various issues.

Chapter 1 **Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for due diligence studies.

Chapter 2 **Project Description:** The chapter describes existing project features and overviews of project development.

Chapter 3 **Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on site visit.

Chapter 4 **Pavement Investigation and Assessment:** The chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance.

Chapter 5 **Cost Estimates**: The chapter summarizes the forecast for O&M and major maintenance costs over the remaining concession period.

2 PROJECT DESCRIPTION

2.1 Introduction

National Highways Authority of India signed the Concession Agreement with **M/s. Jhansi Vigakhet Tollway Private Limited**, is a company promoted by Cube Highways or a Special Purpose Vehicle (SPV) formed for implementing this project. The Appointed Date of the project was 20th October 2020 (as TOT Package). The concession period of the Project is 30 years including construction period. The project has received COD on 12th November 2014.

Presently, there are two Concessionaires for the Project Road. One is Cube Highways who maintains Toll Operation activities (TOT Concessionaire) and the other Concessionaire is Gayatri Group (Annuity Concessionaire) who maintains the project length as per their original scope of work.

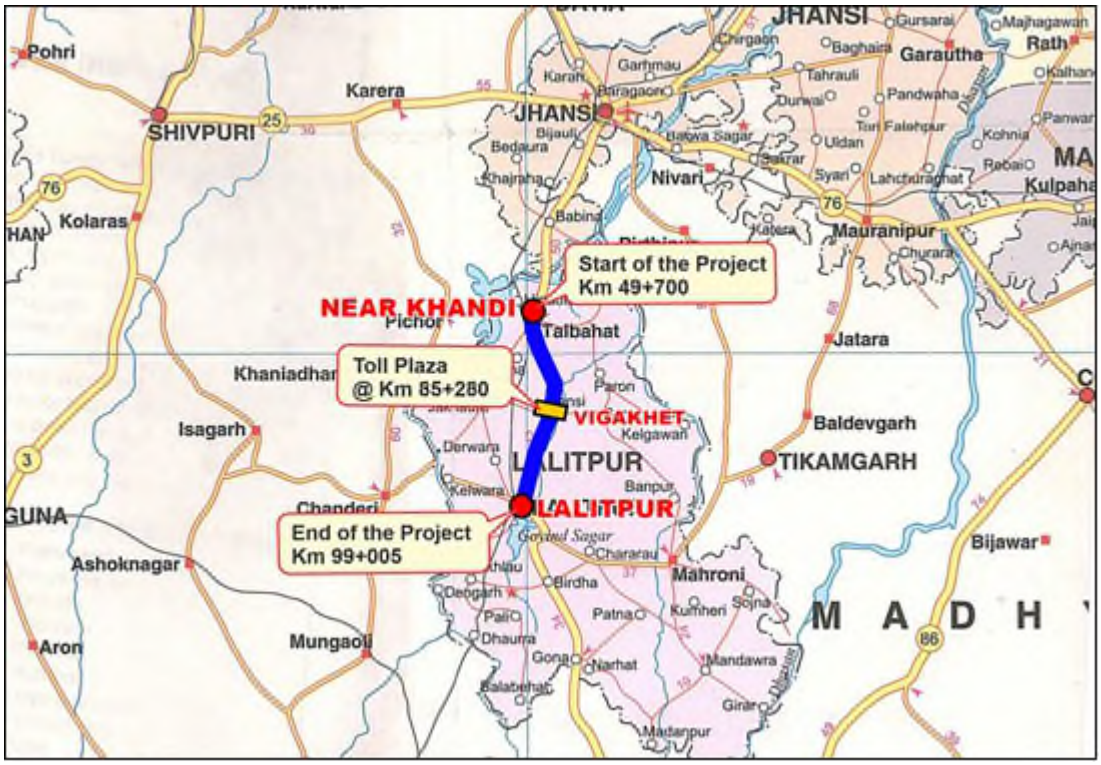
The project is being developed through Annuity BOT mode under TOT (Toll Operate Transfer) Bundle-3 with a concession period of 30 years from Appointed Date while O&M will start from April 2027 as per Clause 10.2.2 of Concession Agreement.

2.2 Location

The Project Road is part of National Highway No. 44 (old "NH-26") of Jhansi - Lalitpur section in the state of Uttar Pradesh. The total project length is 49.305 kms.

The Location Map of the Project Road is presented below:

Figure 2-1 Location Map



The photographs taken during the site visit are presented below.

Figure 2-2 Start of Project Road

km. 49+700

km. 49+700

Figure 2-3 End of Project Road

km. 99+005

km. 99+005

2.3 Climate

Project area being on a rocky plateau, Jhansi experiences extreme temperatures. Winter begins in October and peaks in mid-December. Temperature is about 4 °C minimum and 21 °C maximum. Summer begins by April and summer temperatures can peak 47 °C in May. The rainy season starts by the third week of June, while the monsoon rains gradually weaken in September and end before the last week of September. In the rainy season, the average daily high temperature hovers around 36 °C with high humidity. The average rainfall for the project is about 850 mm per year, occurring almost entirely within the three-and-a-half months of the Southwest Monsoon. In summer, temperatures as high as 45 to 47 °C while in winter the temperatures can fall as low as 0 to 1 °C as recorded in winter 2011.

2.4 Terrain

The Project Road traverses through plain / rolling terrain.

2.5 Abutting Land Use

The land use along the Project Road is predominantly agriculture or barren with intermittent built-up areas.

2.6 Right of Way

The width of the existing Right of Way (ROW) throughout the Project Road is 60 m.

2.7 Existing Utilities

During widening of the Project Road, various affected utility services were shifted to proposed ROW. The different types of utilities found along the road include, electrical poles, telephone poles, OFC cables, etc.

2.8 Development as per Schedule-B

The Project Road from Jhansi to Lalitpur has been developed as a four-lane divided carriageway with median width of 2 m, service road and other arrangements. The Project Road passes through rural as well as built-up sections.

As per Article 2 of Concession Agreement, the scope of project defined in Schedule-A and Schedule-B, (the **"Scope of the Project"**) shall mean and include, during the Concession Period:

a) Construction of the project on the site set forth in Schedule-A and as specified in Schedule-B together with provision of project facilities as specified in Schedule-C and in conformity with the Specification and Standards set forth in Schedule-D.
b) Tolling, operation, management, maintenance, and transfer of the Project Road subject to and in accordance with the provisions of this Agreement.
c) Performance and fulfilment of all other obligations of the Concessionaire in accordance with the provisions of this Agreement and matters incidental thereto or necessary for the performance of any or all the obligations of the Concessionaire under this Agreement.

Following is the Scope of Work as per Schedule-B of Concession Agreement.

Table 2-1 Details of Scope of Work

Sr. No.	Type of Structure	Unit	Scope	Remark
1	O&M of Main Carriageway	km.	49.305	
2	Construction of Service Road	km.	0.6	
3	Reconstruction of Pipe Culvert	Nos.	-

8	Road marking by Thermoplastic Paint	km.	0.6	
9	Rigid Concrete Barrier	km.	-	
10	Additional cantilever Sign Boards	Nos.	-	

3 CONDITION ASSESSMENT OF PROJECT ROAD

3.1 Pavement

The Project Road is four lane divided carriageway and generally has paved carriageway of 9.0 m with earthen shoulder of 1.5 m on either side. The Project Road has a median width of 2.0 m throughout its length.

The entire stretch of Project Road including service road is constructed with flexible pavement. The pavement type for the Toll Plaza including taper is of rigid pavement.

3.1.1 Pavement Condition Survey

The pavement condition survey was conducted from 23rd March 2026 to 25th March 2026 through visual inspection along the entire project stretch. Based on the observations, approximately 30% of the pavement is in poor condition, 60% is in average condition, and the remaining 10% is in good condition. Further, it is assessed that about 15–20% of the roadway requires immediate repair to ensure safe and smooth traffic movement.

Some of the photographs taken during the site visit are presented as below.

Pothole, Sattlement at km. 54+540 (RHS)

3.2 Service Road / Slip Road

The service road with width 5.5 is constructed in built-up area and adjoining underpass locations. The Project Road has a total service road length of 600 m on both side (under construction).

The photographs taken during the site visit are presented below.

Figure 3-2 Photographs of Service Road

km. 96+500 to km. 97+100

km. 96+500 to km. 97+100

3.3 Major / Minor Junctions

There are 04 nos. of major junctions and 20 nos. of minor junction along Project Road.

The photographs taken during site visit is presented as below:

3.4 Condition Survey of Bridge

The inventory of structures including major bridges, minor bridges, ROB's, underpasses and culverts is presented in table as below:

Table 3-1 Summary for Structures

Type of Structure	Total Number of Structures
Road under Bridge (ROB)	-
Flyover	01
Major Bridges (MJB)	04
Minor Bridges (MNB)	16
Vehicular Underpass (VUP)	06
Light Vehicular Underpass (LVUP)	-
Pedestrian Underpass (PUP)	01
Cattle Underpass (CUP)	-
Foot over Bridge	-
Culverts (Box / Slab / HPC)	71
Total	**99**

The detailed condition survey of structures was carried out by visual inspection. The observations and findings are presented in table below:

Table 3-2 Condition Survey of Major Structure

Sr. No.	Chainage (km)	Side	Span Arrangement (m)	Carriageway Width (m)	Deck Width (m)	Footpath (m)	Type of Super structure	Type of Sub structure	Type of Foundation	Remarks

3.5 Condition Survey of Culverts

The cross-drainage structure includes hume pipe culverts and box culverts at various locations. There are 23 Nos. of pipe culverts and 66 Nos. of box culverts along the Project Road. The height of culvert varies from 1.0 m to 3.0 m from bed level. During the condition survey of structure, these culverts were inspected on sample basis.

The project involves strengthening and widening of existing road to four lane divided carriageway. The culverts beneath existing alignment are either widened or reconstructed. The structural condition of culverts is generally found in sound condition. The quality of surface concrete of box culverts is satisfactory. The RCC parapet, crash barrier or RCC railing has been provided at culvert locations which is maintained properly except culvert at km. 59+600 for which parapet wall is damaged.

In most of culverts, the waterway is clear. However, near to urban area and some location is found blocked due to debris, drainage water or bushes, tree growth, which will be removed by the Annuity Concessionaire. The Cement Concrete pitching or stone pitching has been provided for slope protection.

The culverts are maintained by the Annuity Concessionaire during O&M period. However, in case of some culverts, Cement Concrete pitching has been damaged which required to be addressed under routine repair work by the Annuity Concessionaire.

3.6 Drainage

There are existing drains on both side of the Project Road as per Concession Agreement. However, 600 m of RCC drain is additionally constructed in built-up areas and locations where service roads are provided. The photographs taken during site visit is presented as below:

Figure 3-6 Photograph of Drainage

km 89+450 Cute Drain

km. 68+280 Side Drain

3.7 Slope Protection

Slope protection and chute drains are found on Project Road at required locations. A few of the slope protection at various locations of Box Culvert and chute drains are damaged which will be rectified by the Annuity Concessionaire. The photographs taken during site visit is presented as below:

Figure 3-7 Photographs of Slope Protection and Chute Drain

km. 56+280 (RHS - VUP)

km. 72+900 (RHS - Box Culvert)

Chute Drain at km. 75+665 (LHS - VUP)

3.8 Road Furniture

The Concessionaire has provided additional road furniture along the Project Road as per the standards and specifications mentioned in Schedule-C. Details of the items are provided below.

a) Lighting Along the Project Road

Lighting including fixing of poles and LED lights are provided at following locations on the Project Road in accordance with Clause 12.3 of IRC:SP:84-2014.

b) Transverse / Thermoplastic Bar Marking Locations

Transverse / thermoplastic bar markings on either side of carriageway on proposed service road / VUP / VUP approach locations are provided as per Section 11.2 of IRC:35-2015.

c) New Installation of Safety Barriers

Following are the details of new installation of safety barriers along the Project Road.

Table 3-3 Details of New Installation of Safety Barriers

Sr. No.	Chainage (km)		Length (m)	Location	Type of Barrier
	From	To			
1	96+500	97+100	600	BHS	Rigid barrier

d) Additional Gantry / Cantilever Sign Board

As per schedule-B, additional gantry / cantilever signs are provided at the following locations:

Table 3-4 Details of Additional Gantry / Cantilever Sign

Sr. No.	Chainage (km)	Location	Type
1	96+375	VUP	Cantilever Sign Boards
2	97+365	VUP	Cantilever Sign Boards

e) Summary of Quantity for Road Furniture Items

The following details show the summary of the quantity for road furniture items provided on Project Road.

Table 3-5 Details of Summary for Road Furniture Items

Sr. No.	Description	Unit	Quantity
1	Solar Blinkers	Nos.	Nil
2	Streetlights	Nos.	600
3	High Mast Lights	Nos.	Nil
4	Transverse Bar Makings / Thermoplastic Bar Markings	km.	1.200
5	New installation of Safety Barriers		
	W-Beam Safety Barriers	m	Nil
	Concrete Median Barrier	m	Nil
	Rigid Concrete Barrier	m	1200
6	Guard Posts	m	Nil
7	Pedestrian Guard Rails	m	Nil
8	Road Studs / Raised Pavement Markers		
9	Road Markings		
10	Traffic Delineators	As per Section-9 of IRC:SP:84-2014	
11	Kilometer / Hectometer / Boundary Stones		
12	Additional Sign Boards		
	Gantry Sign Boards	Nos.	Nil
	Cantilever Sign Boards	Nos.	Nil
	Shoulder Mounted Dual Post Sign Boards	As per Section 9 of IRC:SP:84-2014	
	Shoulder / Median Mounted Single Post Sign Boards		

Pavement Marking and Road Studs

Pavement marking for the Project Road is done as per the design standards indicated in section 12 of Schedule-D. Pavement marking is faded at some locations which will be rectified by the Annuity Concessionaire.

Road studs / cat's eye fixing for the Project Road is done as per the design standards indicated in section 12 of Schedule-D. Road studs / cat's eye has been fixed at junction and zebra crossings. However, at few locations some cat eye has damaged which will be rectified by the Annuity Concessionaire.

Some of the photographs of road marking are presented below.

Figure 3-8 Photographs of Pavement Marking

Ghost island marking at Bus Bay

Pedestrian crossing

Road Direction marking

Longitudinal edge marking

Traffic Signage / Median Kerb painting / KM Stone

Traffic signs include roadside signs, overhead signs, kerb mounted signs and median signs along the Project Road. The design for the traffic signs along the Project Road is done as per the design standards indicated in section 11 of Schedule-D.

The height, lateral clearance, location and installation are as per relevant clauses of Schedule 'D'. Overhead sign has been installed ahead of major intersections, toll plazas, start / end of Project Road and urban areas as per detailed design requirements.

Kilometre stones, vertical post of sign boards, chevron boards and median kerb paint are faded at few locations which will be rectified by the Annuity Concessionaire.

Some of the photographs of sign boards, km stones and kerb paintings are presented below.

Figure 3-9 Photographs of Road Signages / Km Stone / Kerb Painting

km. 51+480

km. 54+000

km. 60+000

km. 78+600

km. 96+930

Highway Lighting / Crash Barriers / Delineators

Highway lighting is provided at underpasses, flyovers, toll plaza, ROBs and built-up locations. High mast lighting is provided at toll plaza location. Highway lighting is also provided at approaches of underpass and flyovers.

Metal beam crash barriers are provided at bridge approaches, locations of high embankment and sharp curves. All the crash barriers provided by the Concessionaire are maintained at site.

The traffic delineators are not found for road users in abnormal condition of weather for the Project Road.

Some of the photographs of street lighting, MBCB and concrete crash barriers are presented below.

Figure 3-10 Photographs of Highway Light / MBCB / Crash Barrier

MBCB at km. 53+840

Concrete Crush Barrier at km. 54+022

Highway Lighting at km. 62+640

Road Land Boundary

Road land boundary pillar is not found / available on Project Road.

3.9 Avenue Plantation and Median Plantation

Avenue plantations are done only where ROW is available and median plantation has been providing in the project length as per IRC specification. The photographs taken during site visit is presented as below:

Figure 3-11 Photographs of Avenue Plantation and Median Plantation

km. 55+940 - Avenue Plantation

km. 54+000 - Median Plantation

3.10 Toll Plaza

As per the Concession Agreement, there is one existing toll plaza at km. 85+280 with the following infrastructure.

Table 3-6 Details of Summary for Toll Plaza Items

Sr. No.	Particulars	Details
1	Toll Plaza Chainage	km. 85+280
2	Number of Tolling Lanes	8 (4+4) lanes for toll operation for vehicles.
3	Weigh in Motion Facility (Number of Lanes)	Yes
4	No. of ETC Lanes	One in each direction
5	Number of Toll Booths	8
6	Canopy	Present
7	Administrative Building	Present (Temporary)
8	Parking cum Toilet Block	Present
9	Availability of Tunnel or Elevated Walkway for Movement between Toll Lanes and Administrative Building	NO
10	Availability of Static Weigh Bridge	Yes
11	Availability of Loading/Unloading Facility for Overloaded Vehicles	No
12	Storage facility for Overloaded Material	No
13	High mast Light	Yes

Sr. No.	Particulars	Details
14	Streetlight	Yes
15	Low mast Light	No
16	User Fee Boards	4
17	Cantilever/Gantry Boards	Yes
18	Automatic boom barrier	Yes

Note:

- *Presently, the Concessionaire is using Annuity Concessionaire's building as an administration building for toll plaza.*
- *The electricity supply for the existing streetlights is provided by the TOT Concessionaire. The maintenance of these streetlights is in the scope of Annuity Concessionaire.*
- *Toll plaza is completed as per rehabilitation work and as per scope given in schedule-B.*

Figure 3-12 Photographs of Toll Plaza

Toll Plaza at km. 85+280

Toll Administrative Building

Medical & Traffic Aid Post

Toll O&M Centre

3.11 Lane Equipment

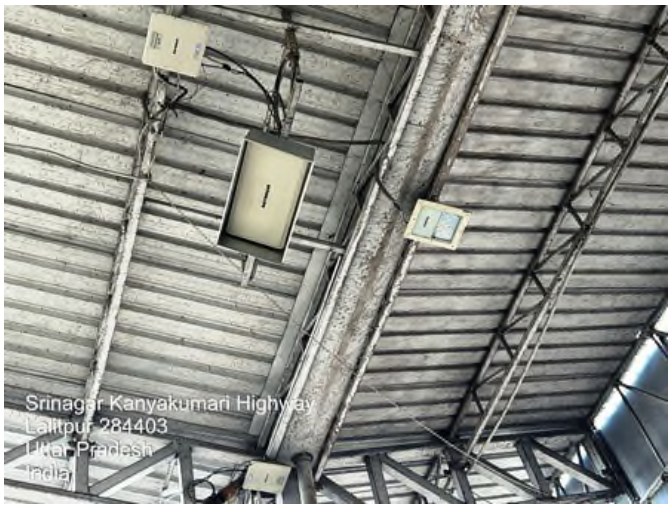
Following are the lane hardware and equipment installed at toll plaza.

1. RFID ETC Transceiver
2. Lane Controller with Industrial PC

3. AVC Sensors
4. Automatic Lane Barrier (ALB)
5. Lane Traffic Light and user fare display
6. Incident Capture Camera
7. Overhead Lane Signals
8. Traffic Lights
9. Toll Booth Equipment

3.11.1 RFID ETC Transceiver

RFID ETC Transceiver reads tags installed on the windshield of vehicles and mounted on a pole at about 6 m height. Handheld RFID readers are provided (1 no. in each direction) in case a tag is not detected by the fixed reader.



RFID

3.11.2 Lane Controller with Industrial PC

Toll Lane Controller is located within the Electronic Enclosure placed inside each toll booth which are connected to the common server and are capable of independent storage of data.

3.11.3 Automatic Vehicle Classification (AVC) Sensors

The AVC equipment comprises of a pair of height sensor poles, axle sensors and inductive loops. The height detector has a high sensing resolution and detects height when object blocks the path. The presence of vehicle is detected by inductive loop. The loop sensors embedded on the pavement trigger the AVC height sensors located on parallel pillars.

AVCC at TP

3.11.4 Automatic Lane Barrier

Boom barriers installed on all lanes are in working condition and have a working time of 0.6 - 0.9 s. Automatic Lane Barrier is used to allow only authorized vehicles to pass through the lane. The barrier is activated only on generation of user fee receipt or other relevant vehicle processing activity. A torque motor powers the barrier for raising and lowering the boom. The motor can be blocked at any position without causing any damage. In the event of power failure, the boom is automatically raised. The boom weight is exactly balanced by built-in springs.

ALB at TP

3.11.5 Lane Traffic Light (LTL) and User Fare Display (UFD)

Lane Traffic Light (LTL) is used to instruct vehicles to stop or pass through the lane. The LTL is RED when the toll collector is expecting the vehicle at the booth. After the transaction is done; the LTL turns Green to instruct the vehicle to pass through the lane. The User Fare Display is a part of electronic toll collection equipment located at the toll booth. It is a mini variable message sign (VMS) made of Light Emitting Diodes (LED). The user fare display is used to display the toll fare that is due and that must be paid by the motorist and the classification of vehicle selected by the collector.

LTL at TP

3.11.6 Incident Capture Camera (AVC Camera)

The incident capture camera is installed on the island of the booth to capture the image of the vehicle from the back side. The AVC triggers the Image capture system.

AVC Camera

3.11.7 License Plate Image Capture Camera (LPIC)

License Plate Image capture camera is installed on a 3 m pole facing incoming vehicle to capture the image of the vehicle number plate.

LPIC

3.11.8 Over Head Lane Signal (OHLS)

The **Overhead Lane Signal (OHLS)** for lane "Open" and "Close" sign consists of a pair of "GREEN" (arrow) and "RED" (cross) lights. The OHLS is located at the vehicle approaching side of the canopy to show the drivers whether the lane is open or closed.

OHLS at TP

3.11.9 Toll Booth Equipment

Toll Booth Hardware / Equipment provided are:

- Toll Collector Display (Operator Monitor)
- Customized Industrial Keyboard
- Receipt Printer
- Intercom Slave unit
- Bar code reader
- Violation Light and alarm
- Manual Booth Control (MBC)
- Booth Camera

The operator monitor termed as Toll Collector Display (TCD) is located on the toll collector's desk. It is the system's interface to the toll collector, to display the status of transactions and status of the lane peripherals.

The keyboard on the toll terminal is a programmable keyboard for Registration of toll operations and is customized for different vehicle types and type of ticket.

Toll Booth Equipment at Toll Plaza

Thermal printers are installed at the toll booths to print tickets. Intercom slave unit facilitates communication with the master unit located in the control room.
Violation system has an alarm switch which is triggered whenever there is a violation such as run-through happening on the lane. When there is an emergency, a foot switch pressed by the booth operator alerts the control room.
Booth Cameras are provided on the inside roof corner of the booth to provide surveillance through CCTV screen located in the control room. Manual Booth Controller is used to release exempt vehicles.

3.11.10 Medium Speed Weigh in Motion (MSWIM)

Medium Speed Weigh in Motion (MSWIM) is installed on entry lanes of Toll Plaza.

MSWIM at TP

3.12 Plaza Equipment

3.12.1 TMS Server

Plaza Server is provided in a hot standby configuration and provided with port non-POE network switch and Port PoE switch. Internet connectivity is available through one lease line (Airtel) and Jio WiFi module. Firewall with Sophos antivirus is provided.

3.12.2 55" LED screen for CCTV monitoring

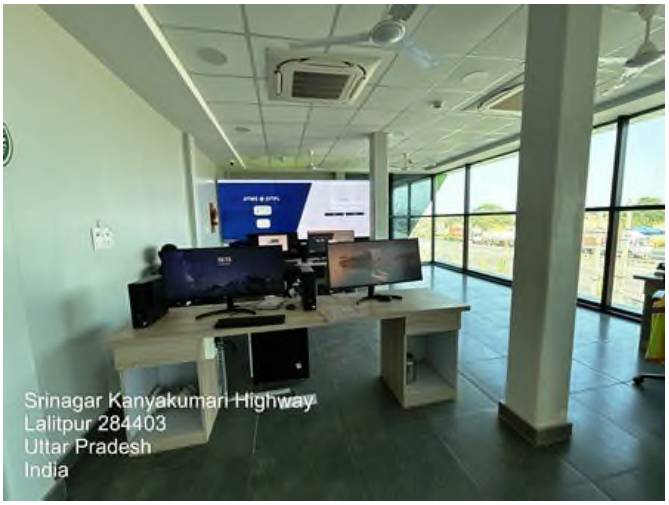
55" LED screen for CCTV monitoring installed at the toll plaza admin block provides view of all the toll booths, important zones within the plaza where cash transactions take place (server room, control room, cash up).

The toll plaza manager is able to observe the activities at the toll lanes and toll booth. When the toll collector calls up on the intercom, the manager is able to comprehend the situation at the lane by a zoomed view of the particular lane.

3.12.3 Workstations in Control Room, POS room

Workstations are available in control room (lane monitoring, administration, and audit), cash room and PoS.

Control Room



POS Room

3.13 Advanced Traffic Management System (ATMS)

Advanced Traffic Management System (ATMS) installed for the Project Road is controlled by the ATMS center at the toll plaza location. As per Concession Agreement, ATMS shall conform to ATMS Policy guidelines (2016) which comprises of the following:

- Automatic Traffic Counter cum Classifier (ATCC)
- Mobile Radio communication system
- Emergency Call Box
- Portable Weigh in Motion
- Meteorological Data system
- Variable Message Signboards (VMS)
- CCTV system
- Video Incident Detection System (VIDS)
- Vehicle actuated Speed Display (VASD)

Status of these systems at site is described below:

3.13.1 Automatic Traffic Counter cum classifier (ATCC)

Automatic Traffic Counter cum Classifiers (ATCC) is installed at Toll Plaza

3.13.2 Mobile Radio communication System (MRCS)

Mobile Radio communication System (MRCS) is not yet installed. Application for MRCS UHF band has been sought from WPC, DoT, Ministry of Communications which is not yet allocated.

3.13.3 Emergency Call Boxes (ECB)

It is not installed at site.

3.13.4 Portable Weigh in Motion (PWIM)

Portable Weigh in Motion is provided at the site.

3.13.5 MET System

Meteorological sensors comprise of sensors to measure the atmospheric temperature, humidity, pavement surface temperature, visibility and equipment for measuring wind speed and direction and installed at Toll Plaza km 85+260.

3.13.6 Variable Message Signboards (VMS)

Variable message sign boards are installed at 14 locations. These display specific messages to the users based on the prevailing conditions on the highway. The message can be changed at any point of time from the HTMS centre. About 250 customised messages can be stored on the system.

km. 59+500

km. 80+600

3.13.7 CCTV Surveillance Cameras

Surveillance cameras are installed at various locations along the Project Road. The ATMS control room has video wall to monitor these locations through the cameras installed.

3.13.8 Video Incident Detection System

62 fixed CCTV cameras are installed as part of Video incident detection system.

3.13.9 Vehicle Actuated Speed Display (VASD)

VASD is installed at locations each on LHS and RHS.

km. 56+600

km. 62+420

3.13.10 Adequacy of Toll Collection System and ATMS

- Adequacy-All lanes are hybrid ETC system as stipulated by NHAI in Technical Specifications of Hybrid ETC system. NHAI has approved maintenance costs for TMS. TMS shall be upgraded every 5 years at the cost of the Authority.
- Advanced Traffic Management System (ATMS) installed is as per specifications required by the Authority and in working condition.

3.14 Bus Bays and Passenger Shelter

There are 5 Nos. of bus bays / passenger shelter along Project Road. Some of the photographs of the bus bays are presented below.

Figure 3-13 Photographs of Passenger Shelter

km. 56+540

km. 92+680

3.15 Traffic Aid Post and Medical Aid Post

Traffic Aid Post and Medical Aid Post are in the scope of Annuity Concessionaire.

3.16 Toilet Block

There are two nos. toilet blocks and maintenance of the same is in Annuity Concessionaire's scope.

Table 3-7 Details of Toilet Block

Sr. No.	Chainage (km)	Remarks
1	85+300	RHS

Some of the photographs of the Toilet Block are presented below.

Figure 3-14 Photographs of Toilet Block

Toilet Block

3.17 Balance Work Status

During site visit it has been observed that construction of Toll Plaza Admin Building is completed. The construction of VUP at km. 96+795 is completed and traffic is moving on the same. Hence there is no balance work in the Project Road.

3.18 Operation and Maintenance

3.18.1 O&M Contract

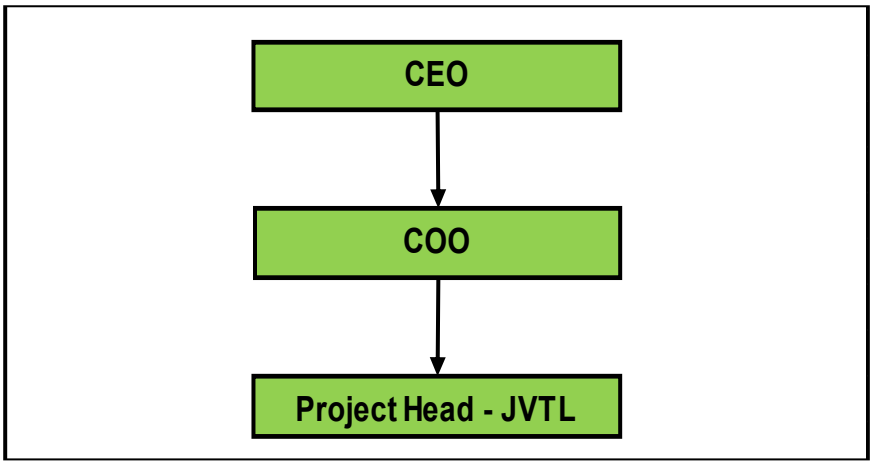
As per Clause 15.1 of the Concession Agreement, the Concessionaire shall operate and maintain the Project Road by itself, or through O&M Contractors and if required, modify, repair, improve the Project Road to comply with Specifications and Standards, and other requirements set forth in the Agreement through Good Industry Practice, Applicable Laws and Applicable Permits and manufacturer's guidelines and instructions with respect to toll systems. The Operation and Maintenance activities shall confirm to all the requirements laid down in MoRT&H, IRC Specifications and the Concession Agreement.

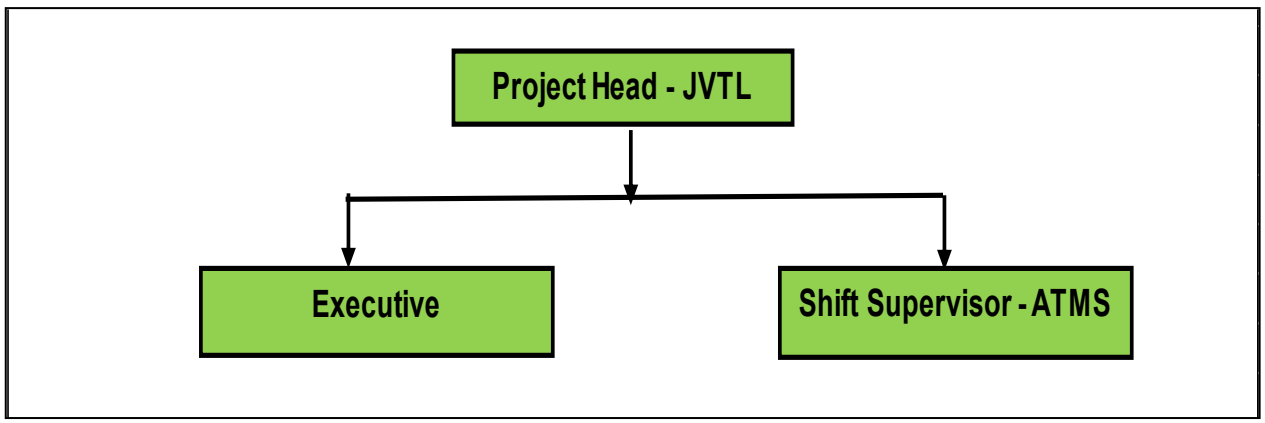
The Concessionaire has outsourced for carrying out the activities related to operation and maintenance of the Project Road including toll operation services, security services, AMC for TMC and AMC for DG set.

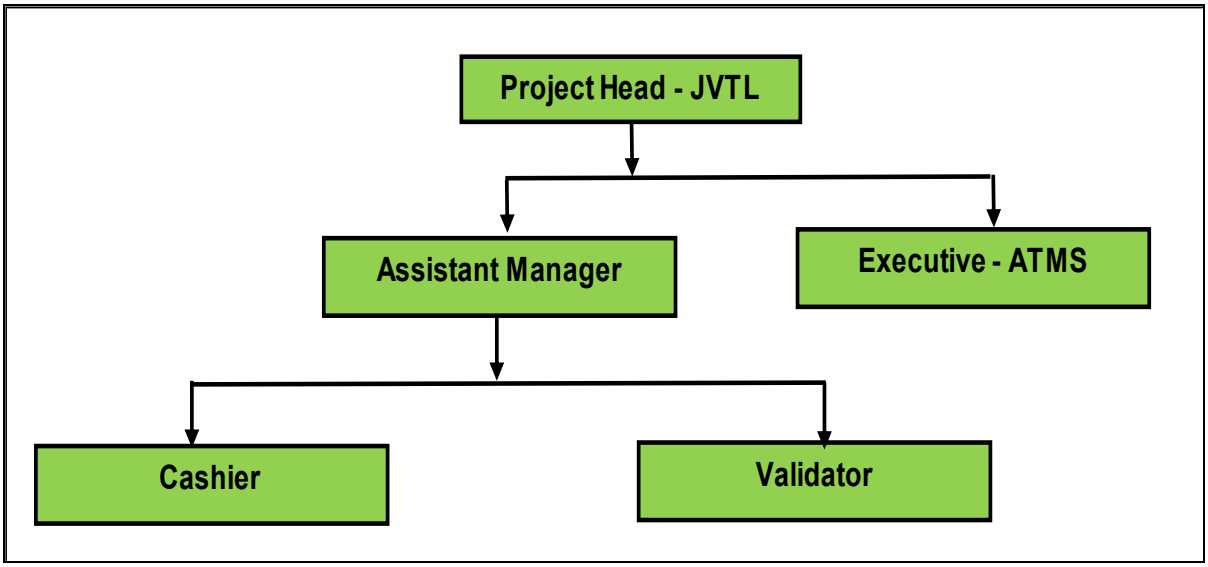
3.18.2 Organization Chart

The Concessionaire has given the Organization Chart at site for Operation and maintenance. The team controls the maintenance activities. However, the maintenance work is undertaken and executed through competent sub-contractors.

Organization Chart







3.18.3 Operation

Operation cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses and other miscellaneous expenses. The Concessionaire has provided the expenses occurred towards operation expenses for past years. Necessary assumptions have made from the expenses of similar types of projects to arrive at the operation cost. The estimates are projected based on the best industry practices and are compared with the operating cost in the vicinity of the project area.

The Operation Cost is presented in the subsequent chapter.

3.18.4 Routine Maintenance

The Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey.

Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

Currently, the Project Road is maintained by Annuity Concessionaire.

The Routine Maintenance Cost is presented in the subsequent chapter.

4 PAVEMENT INVESTIGATION AND ASSESSMENT

4.1 General

Presently, the pavement of the Project Road is being maintained by the Annuity Concessionaire as per Scope of Work. The Annuity Concessionaire has received the Completion Certificate on 19th March 2012.

The project is currently under the Operation and Maintenance stage. The concession period of the project is 30 years from the Appointed Date (as TOT Package i.e., 20th October 2020) including construction period. The project will be handed over to TOT Concessionaire in March 2027.

4.2 Axle Load and VDF

The Concessionaire has conducted the Axle Load Survey on Project Road at km. 85+160 (near Toll Plaza) on19th July 2019 and 20th July 2019. The summary of Vehicle Damage Factor (VDF) calculated as provided by the Concessionaire is tabulated below.

Table 4-1 Vehicle Damage Factor

Vehicle Category	Vehicle Damage Factor	
	LHS	RHS
Bus	1.15	0.80
LCV	1.29	0.62
2A	3.91	2.61
3A	7.29	6.06
MAV	14.96	14.31

4.3 Design Traffic

Traffic in Million Standard Axles (MSA) for the homogeneous section based on the historical traffic data as provided by the Concessionaire, current traffic has been used for future projections and the estimated design MSA is computed and presented in subsequent table.

For the estimation of design MSA, Actual Traffic Growth Rates as provided by the Concessionaire were used.

Table 4-2 MSA Calculation

Year	MSA (LHS)	Cumulative MSA (LHS)	MSA (RHS)	Cumulative MSA (RHS)	Remarks
2024-25	5.91	**5.91**	5.24	**5.24**	
2025-26	6.23	**12.14**	5.52	**10.76**	
2026-27	6.29	**18.43**	5.59	**16.35**	Handing over from Annuity Concessionaire in FY2027
2027-28	6.56	**24.99**	5.84	**22.19**	
2028-29	6.91	**31.90**	6.16	**28.35**	
2029-30	7.25	**39.15**	6.47	**34.82**	
2030-31	7.61	**46.76**	6.80	**41.62**	MM Cycle 1

Year	MSA (LHS)	Cumulative MSA (LHS)	MSA (RHS)	Cumulative MSA (RHS)	Remarks
2031-32	7.69	**54.45**	6.88	**48.50**	
2032-33	8.09	**62.54**	7.25	**55.75**	
2033-34	8.50	**71.04**	7.63	**63.38**	
2034-35	8.94	**79.98**	8.03	**71.41**	
2035-36	9.40	**89.38**	8.45	**79.86**	
2036-37	9.87	**99.25**	8.88	**88.74**	MM Cycle 2
2037-38	10.37	**109.62**	9.34	**98.08**	
2038-39	10.90	**120.52**	9.82	**107.90**	
2039-40	11.44	**131.96**	10.32	**118.22**	
2040-41	12.01	**143.97**	10.84	**129.06**	
2041-42	12.60	**156.57**	11.39	**140.45**	
2042-43	10.57	**167.14**	9.56	**150.01**	
2043-44	11.09	**178.23**	10.04	**160.05**	
2044-45	11.63	**189.86**	10.53	**170.58**	MM Cycle 3
2045-46	12.18	**202.04**	11.04	**181.62**	End of Concession Period

4.4 Network Survey Vehicles (NSV) Survey

The O&M is not under the scope of Concessionaire / Client.

4.5 Structural Investigations

The O&M is not under the scope of Concessionaire / Client.

4.6 Periodic Maintenance Strategy

Unlike the old Concession Agreements where periodicity and threshold limits were clearly described for the major maintenance, the Concession Agreement of this project does not specify the periodicity or the threshold limits for carrying out the full-length periodic maintenance. Schedule-F of the Concession Agreement specifies the threshold limits and the timeline for carrying out repairs to the distresses during the operation period.

The maintenance thus can be carried out as and when required basis and to the compliance of Schedule-F requirement to maintain the road in serviceable condition. Only improvement to Riding Quality is expected if the roughness value exceeds 3000 mm/km.

Currently, the Project Road is maintained by the existing Annuity Concessionaire. The project will be handed over to TOT Concessionaire in March 2027. It is assumed that the pavement will be overlaid before handing over the project confirming the pavement parameters kept within the limits as per Table-1 (Maintenance Criteria for Pavements) of Schedule-F. Hence, the major maintenance cycles are proposed between the year 2029 and end of concession period i.e. FY 2046.

The table below shows the major / periodic maintenance cycle throughout the concession period for the Project Road.

Table 4-3 Major Maintenance Cycle

Sr. No.	Year	Main Carriageway	Service Road
1	FY 2027	Handing over of Project from Annuity Concessionaire	
2	FY 2028	-	-
3	FY 2029	-	-
4	FY 2030	Major Maintenance with 30 mm BC (PMB) (100%) + Milling & 50 mm DBM (100%)	Major Maintenance with 30 mm BC (VG-30) (50%) + Micro-surfacing (50%)
5	FY 2031 to FY 2036	-	-
6	FY 2037	Major Maintenance with 40 mm BC (PMB) (100%) + Milling & 50 mm DBM (5%)	Major Maintenance with 30 mm BC (VG-30) (50%) + Micro-surfacing (50%)
7	FY 2038 to FY 2044	-	-
8	FY 2045	Major Maintenance with 30 mm BC (PMB) (100%) + Milling & 50 mm DBM (5%)	Major Maintenance with 30 mm BC (VG-30) (50%) + Micro-surfacing (50%)
9	FY 2046*	End of Concession Period	

**Actual end of concession period as per Concession Agreement is October 2050. However, as per traffic details submitted by the Concessionaire, the revised concession period is up to FY 2046 as per provision of Article 14 of CA.*

The projected cost for periodic / major maintenance is presented in the subsequent chapter.

5 COST ESTIMATES

5.1 General

Based on the assessment carried out in previous chapters, various costs were worked out. The costs are divided into following categories.

I. Balance Works Cost
II. Routine O&M Cost
III. Major Maintenance Cost
IV. Periodic Replacement of TMS / ATMS system

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and escalation.

5.2 Rate Assumption

Following assumptions are considered for unit rates of various items while estimating the cost:

1. Unit rates of different items (BC, DBM, Concrete, Road markings etc.) are calculated as per the MoRTH Standard Data Book 2019. The input rates for MoRTH standard data book were adopted as below:

   a. **Manpower and labour:** As per applicable minimum wages published by Ministry of Labour & Employment, Government of India.

   b. **Bitumen:** Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. Same discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.

Therefore, bitumen prices are considered as per the forecast of Client. Current published of bitumen are considered for unit rates calculation for FY 2027. Average 10 years of price of bitumen are considered for unit rates calculation for FY 2028 and onwards. Following rates of bitumen are considered.

Polymer cost and modification costs are provided by client to work out BC rate with PMB.

Table 5-1 Bitumen Rates - Ex-MI Supply excluding discount and GST

Sr. No.	Supply Location	Applicability of Rates	Product	Rate for FY2027 (Rs. / MT)	Rate for FY2028 onwards (Rs. / MT)
1	Mathura,	All States	VG10	45,102	35,125
2			VG30	46,402	36,137
3			VG40	48,962	38,131
4	Panipat	All States	VG10	45,102	35,125
5			VG30	46,402	36,137
6			VG40	48,962	38,131
7	Koyali	All States	VG10	47,102	37,125
8			VG30	48,402	38,137
9			VG40	51,082	40,251
10	Haldia	All States	VG10	46,602	35,683

Sr. No.	Supply Location	Applicability of Rates	Product	Rate for FY2027 (Rs. / MT)	Rate for FY2028 onwards (Rs. / MT)
11			VG30	47,402	36,295
12			VG40	49,962	38,256
13	Barauni	All States	VG10	47,132	36,213
14			VG30	48,432	37,325
15			VG40	50,992	39,286
16	CPCL	Kerala	VG10	47,402	35,519
17			VG30	48,402	36,395
18			VG40	50,762	38,120
19	CPCL	Tamil Nadu	VG10	47,902	36,019
20			VG30	48,402	36,395
21			VG40	50,962	38,320
22	CPCL	Telangana and Andhra Pradesh	VG10	44,602	32,719
23			VG30	45,402	33,395
24			VG40	47,962	35,320
25	CPCL	Karnataka	VG10	44,602	32,719
26			VG30	45,402	33,395
27			VG40	47,962	35,320

c. **Sand and Aggregate:** Market rates are considered from the quarry located nearest to Project Road.

d. **Cement:** Market rates are considered from the nearest local market.

e. **Steel :** Rate of steel is taken from Tata Tiscon website.

f. **Machinery Hire charges:** Hire charges for the machinery are considered in accordance with applicable PWD SOR.

g. **Actual Rates of Items as per Work Order:** The rates of road marking, road stud, kerb raising, micro surfacing, milling etc. are considered as per the work order shared by the client.

2. Goods and Service Tax (GST) is considered as 18% as per the latest Government Guidelines.

Summary of Unit Rates worked out using Standard Data Book adopted for major items is given below.

Table 5-2 Summary of Unit Rates

Sr. No.	Item Description	Unit	Rates (Rs.)
1	Dense Bituminous Macadam (VG-40)	Cum	9,162
2	Bituminous Concrete (PMB)	Cum	11,638
3	Bituminous Concrete (VG-30)	Cum	10,261
4	Milling	Sqm	90
5	Micro-surfacing	Sqm	180
6	Kerb Re-laying	Rmt	460
7	Road Marking	Sqm	569
8	Road Studs	Nos.	244

5.3 Balance Work Cost

As discussed in the previous chapter, there are no balance works to be executed as per Concession Agreement. Hence, balance work cost is **NIL**.

5.4 Routine O&M Cost

Routine O&M cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area. Same has been divided into following major heads.

1. Salary and Welfare Expenses
2. Tolling Operations Services
3. Incident Management Services
4. Electricity and Diesel Charges
5. TMS / HTMS / System Expenses
6. Office Operating Expenses
7. Vehicle Running Expenses
8. Professional Fees Expense
9. Insurance Expense
10. IE Fees
11. Horticulture & ROW Maintenance
12. Routine Maintenance Cost

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

Currently, the Project Road is maintained by existing Annuity Concessionaire. The project will be handed over to TOT Concessionaire in March 2027. Hence, the routine maintenance and horticulture maintenance is considered from FY 2028 till End of Concession Period.

The Routine Operation Cost is presented as below. The detailed working of routine maintenance (Sr. No. 15 of below table) is presented in **Annexure-I**.

Table 5-3 Summary of Operation Cost

Sr. No.	Particulars	Amount (FY 2027)	After Annuity Amount (FY 2028)
1	Salary and Welfare Expenses	92,40,000	92,40,000
2	Tolling Operations Services	2,32,74,281	2,32,74,281

Sr. No.	Particulars	Amount (FY 2027)	After Annuity Amount (FY 2028)
3	Toll Security Services	50,75,241	50,75,241
4	Incident Management & Emergency Services	-	1,58,83,842
5	Electricity and Diesel Charges	31,43,280	57,11,462
6	TMS/HTMS/System Expenses	23,14,000	47,46,278
7	Office Operating Expenses	35,57,712	35,57,712
8	Vehicle Running Expenses	35,40,000	35,40,000
9	Professional Fees Expense	63,57,827	63,57,827
10	Community Development	4,55,974	4,55,974
11	Communication Expenses	3,64,514	3,64,514
12	Conveyance Expenses	3,97,651	3,97,651
13	Insurance Expense	26,51,012	26,51,012
14	IE Fees	33,40,275	33,40,275
15	Routine Maintenance Cost (Project Highway)	-	2,02,32,341
16	Horticulture & ROW Maintenance	-	1,44,51,887
17	Miscellaneous including Contingency	25,48,471	33,83,843
	Total Cost (Rs.)	**6,62,60,237**	**12,26,64,139**
	Total Cost (Cr.)	6.63	12.27
	Per km Cost (Lakh)	**13.44**	**24.88**

5.5 Major Maintenance Cost

As mentioned in earlier chapter, Currently, the Project Road is maintained by existing Annuity Concessionaire. The project will be handed over to TOT Concessionaire in March 2027. It is assumed that the pavement will be overlaid before handing over of the project confirming the pavement parameters kept within the limits as per Table-1 (Maintenance Criteria for Pavements) of Schedule-F. Hence, the major maintenance cycles are proposed between year FY 2028 and End of Concession Period.

The summary of Major Maintenance Cost is provided as below. The detailed working of the same is presented in **Annexure-II.**

Sr. No.	Year	Major Maintenance Cost (Cr.)	Remarks
1	FY 2030	97.62	
2	FY 2037	60.02	
3	FY 2045	47.00	
Total Cost (Cr.)		**204.64**	

5.6 Periodic Replacement of TMS / ATMS System

Every 7 years, replacement of cost of major TMS / ATMS system is considered. The same is provided as below:

Sr. No.	Year	HTMS O&M / Replacement Cost (Cr.)	Remarks
1	FY 2027	5.15	
2	FY 2034	5.15	
3	FY 2041	5.15	
Total Cost (Cr.)		**15.45**	

5.7 Escalation Assumption

Following escalation has been considered for the O&M cost as provided by Client.

Table 5-4 Escalation

Year	Escalation	Year	Escalation
2027	-	**2041**	3.99%
2028	5.25%	**2042**	3.99%
2029	4.86%	**2043**	3.99%
2030	4.44%	**2044**	3.99%
2031	4.24%	**2045**	3.99%
2032	4.13%	**2046**	3.99%
2033	4.08%	**2047**	3.99%
2034	4.01%	**2048**	3.99%
2035	4.00%	**2049**	3.99%
2036	4.03%	**2050**	3.99%
2037	4.01%	**2051**	3.99%
2038	3.98%	**2052**	3.99%
2039	3.98%	**2053**	3.99%
2040	4.00%	**2054**	3.99%
2040	3.99%	**2055**	3.99%

5.8 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summarised yearly for remaining concession period along with escalation as mentioned in clause 5.7.

Escalated O&M Cost (Cr.)

Sr. No.	Year of expense	FY27	FY28	FY29	FY30	FY31	FY32	FY33	FY34	FY35	FY36	FY37	FY38	FY39	FY40	FY41	FY42	FY43	FY44	FY45	FY46
1	Routine O&M Cost																				
1.01	Salary and Welfare Expense	0.92	0.97	1.02	1.07	1.11	1.16	1.20	1.25	1.30	1.35	1.41	1.46	1.52	1.58	1.65	1.71	1.78	1.85	1.93	2.00
1.02	Tolling Operations Services	2.33	2.45	2.57	2.68	2.80	2.91	3.03	3.15	3.28	3.41	3.55	3.69	3.84	3.99	4.15	4.31	4.49	4.66	4.85	5.04

ANNEXURES

ANNEXURE I - ROUTINE MAINTENANCE COST

Routine Maintenance Cost	
Jhansi Lalitpur Project - P2	
Ordinary Repair Cost for Flexible (with GST)	**2,02,32,341.24**
(Inclusive of GST)	**= 4.1 lakhs per km**

CONVERSION FACTORS									
National Highways / State Highways									
Reference cost taken for Two / four lane (7.0 or 14m or 21m) with 1.5m wide shoulders									
(Refer Chapter 6.17 of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 45)									
Sr. No.	**Description for Flexible Pavement**		**Factor**	**Normal** More than 4500 CVD **2,40,039**	**Hilly** More than 4500 CVD **2,84,243**	**Project Length (km)**		**Per Year Project Maintenance Cost**	
						Normal	**Urban**	**Normal**	**Urban**
1	Four-lane with divided carriageway	Without paved shoulder	1.53	367260.00	434892.00	-	-	-	-
		Paved shoulder	1.70	408067.00	483214.00	48.71	-	1,98,74,903	-
2	Four-lane with divided carriageway and service lane on either side	Without paved shoulder	2.00	480079.00	568487.00	-	-	-	-
		Paved shoulder	2.20	528087.00	625336.00	-	0.60	-	3,57,438
					TOTAL		**49.305**		**2,02,32,341**

Ordinary Repairs

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity**
				More than 4500 CVD
				BT Surface
1	**2**	**3**	**4**	**5**
1	**Maintenance of Carriageway & Paved Shoulders (1.5m wide); B.T. Surface**			
	i) Pot holes repair (50 mm deep)	100 % Pot hole free	As & when required	1.00%
	Volume (cum)			5.00
	Rs/m^3			10416
	Cost in Rupees			52,080
	ii) Patch repair	100 % Patch less	As & when required	1.00%
	Area (sqm)			100
	Rs/m^2			417
	Cost in Rupees			41,664
	iii) Sealing (Crack)			
	a) Wider than 3 mm	100 % Crack Less	As & when required	1.50%
	Area (sqm)			150
	Rs/m^2			93
	Cost in Rupees			13,902
	b) Width less than 3 mm	75 % Crack Less	As & when required	1.50%
	Area (sqm)			112.5
	Rs/m^2			62
	Cost in Rupees			7,017
	iv) Repair of ruts and undulations			
	a) Greater than 20 mm	75%	As & when required	1.00%
	Area (sqm)			75
	Rs/m^2			417
	Cost in Rupees			31,248
	v) Road marking	14%	Once in 7th year & @	30127

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity** **More than 4500 CVD** **BT Surface**
1	**2**	**3**	**4**	**5**
			Repaired location	
	SUB TOTAL			**1,76,038**
2	**Maintenance of earthen Shoulders:**			
	i) Renewal of earthen shoulders	80%	Once in a Year	6322
	iii) Kuccha Drain Maintenance	100%	Twice in a Year	1111
	SUB TOTAL			**7,433**
3	**Maintenance of Cross Drainage works:**			
	ii) Repair of floors	100%	Once in a Year	5067
	iii) Repair of parapets	100%	As & when required	2111
	SUB TOTAL			**7,178**
4	**Maintenance of Minor & Major Bridges:**			
	i) Cleaning and removal of dirt & vegetation from pier caps, Bearings, Expansion Joints, Superstructure, Substructure and Retaining wall etc.	100%	As & when required	37,043
	ii) Spot painting & protective Coating required on Bearing and greasing of Bearings, railing, structural members, Expansion joints			
	iii) Repair of minor washouts, erosion scour and animal holes			
	iv) Sealing Cracks with Cement/ Epoxy Mortar			
	v) Replacement & Correction of safety barriers, Guard rails and damaged members			
	SUB TOTAL			**37,043**
5	**Miscellaneous Items:**			
	i) Lettering, Painting of Km stones & kerbs, sign boards, hectometer stone etc.		Once in a Year	3704
	ii) Replacement and providing additional retro reflective signage	20%	Covering Total Network in 4-5 Years	7409
	iii) Providing first aid kits, Umbrella, Safety Jackets, Vardi etc.		Once in a Year	1235

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity**
				More than 4500 CVD

1 INTRODUCTION

1.1 Background

Cube Highways Fund Advisors Pvt. Ltd. (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InvIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an Infrastructure Investment Trust under the SEBI InVIT Regulations. Cube Highways Fund Advisors Pvt. Ltd. has appointed **M/s. FP Project Management Consultancy Services Private Limited** (hereinafter referred as "Technical Consultant" or "FPPM") to carry out Technical Due Diligence of Madurai to Kanyakumari section (Package-II) km. 52+300 to km. 116+500 in the State of Tamil Nādu (hereinafter referred as "Project Road").

Kanyakumari Etturavattam Tollway Private Limited (hereinafter referred as "Concessionaire") is a special purpose vehicle (SPV) for tolling, operation, maintenance, and transfer of Madurai to Kanyakumari Section (from km. 52+300 to km. 116+500) of NH-44. The project was awarded to Concessionaire on 20th October 2020. The length of Project Road is 64.20 kms with one toll plaza at Etturavattam village at km. 75+280.

Accordingly, the Technical Consultant has undertaken the work of assessment of operation and maintenance (O&M) cost based on site inspections and field investigations. The same is presented in this report.

1.2 Scope of Work

The detailed scope of work for conducting the technical due diligence of Project Road is presented as below:

- A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets
- Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, As-built drawings, O&M manual, COD / PCOD certificate, punch list, previous major maintenance etc.
- Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, aaxle load, material investigations etc.
- Formulation of future major maintenance sstrategy
- Estimation of any initial expenses to be incurred due to deficiencies observed in diligence
- Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period
- Estimation of Annual Operation expenses along with Systems cost (TMS / HTMS) till the end of concession period
- Review of balance work cost for Project Road including estimation of quantities and item rates

1.3 Our Approach Philosophy

1.3.1 Composition of Team

Our team consists of well-qualified engineers and other professionals, whose experience covers all the skills and specializations required for undertaking such assignments. All the team personnel proposed are our regular employees and have a long and stable working relationship with our firm.

The Team Leader coordinates the activities between all the key staff who work closely together. The key staff is assisted by various support staff, who report to the respective key staff in their field of expertise. The Team Leader is the point of contact for Client on Technical Study.

The technical study includes review of all the available documents namely:

a) Concession Agreement including Technical Schedules
b) O&M Contract, work order and their provisions
c) Quality of construction based on available data, design, and drawings
d) Documents on historical expenditure on operation and maintenance
e) O&M cost schedule for the concession period
f) Review of Completion / Provisional Completion along with punch list items
g) Review of recent pavement surveys conducted
h) Correspondence regarding scope of works and during O&M
i) Recent O&M Report submitted to Authority
j) Toll operation manual / ATMS related documents

The review of above documents is the first step towards accomplishment of the task. This gives a complete idea of the project and is used as input data for preparation of report after necessary analysis.

1.3.2 Site Visit and Data Collection

A team of experts from various streams has carried out the preliminary site visit to understand the assessment of project assets, mainly condition of the pavement and structures.

- The site visit is undertaken for detailed reconnaissance and visual pavement condition assessment.
- The condition assessment of major structures by visual inspection
- The information like material sources and the probable cost is collected for the purpose of cost estimate.

The detailed design / drawings viz. Plan & L-sections, drainage design, structure design, layout drawings for project facilities like toll plaza, bus bay, truck lay-byes, highway lighting facilities etc. are studied. Also, design / drawing and provision pertaining to road furniture are studied.

The information on availability of material in the vicinity is gathered. It has direct impact on cost of maintenance work and balance work.

The basic approach for preparation of cost estimates for operation and maintenance is as per the practice of State PWD / MORT&H in respect of highways and structures.

1.3.3 Data Analysis

Based on the study of the available information and preliminary site visits, the consultants share their preliminary observations with the Client based on the evaluation of the technical data and reports provided by the Client.

1.4 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Company. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyze the same as per the best engineering / industry practices.

The site visit and inspection were carried out on **15th March 2026 and 16th March 2026**.

The report is organized with the following chapters for easy understanding of various issues.

Chapter 1 **Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for due diligence studies.

Chapter 2 **Project Description:** The chapter describes existing project feature overview of project development.

Chapter 3 **Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on site visit.

Chapter 4 **Pavement Investigation and Assessment:** The chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance.

Chapter 5 **Cost Estimates**: The chapter summarizes the forecast for O&M and major maintenance costs over the remaining concession period.

2 PROJECT DESCRIPTION

2.1 Introduction

National Highways Authority of India signed the Concession Agreement with **Kanyakumari Etturavattam Tollway Private Limited**, is a company promoted by Cube Highways or a Special Purpose Vehicle (SPV) formed for implementing this project on 27th December 2019. The Appointed Date for the Project Road is 20th October 2020.

The project is being developed under TOT (Toll Operate Transfer) Bundle-3 with a concession period of 30 years from the Appointed Date. The end of the concession period is 21st October 2050.

2.2 Location

The Project Road is part of National Highway No. 44 (old NH-7) of Madurai - Kanyakumari section in the state of Tamil Nādu. The total project length is 64.20 kms.

The Location Map of the Project Road is presented below:

Figure 2-1 Location Map

The photographs taken during the site visit are presented below.

Figure 2-2 Start and End of Project Road

Start of Project Road at km. 52+300

End of Project Road at km. 116+500

2.3 Climate

The project area being in the region under southeast of the western ghats, the area is hot and dry. Temperatures range between a maximum of 37 °C and a minimum of 22 °C. April to June are the hottest months and December and January are the coldest with temperatures rising towards the end of February. Rainfall occurs mostly during the north-east monsoon in the months of October to December. However, the project stretch receives little rainfall, averaging 840 mm. Annual rainfall has ranged from 964 mm to 228 mm during past decades.

2.4 Terrain

The Project Road traverses through plain terrain.

2.5 Abutting Land Use

The land use along the Project Road is predominantly agriculture or barren with intermittent built-up area.

2.6 Right of Way

The width of the existing Right of Way (ROW) for the Project Road is 60 m throughout its length.

2.7 Existing Utilities

During widening of the Project Road, various affected utility services were shifted to proposed ROW. The different types of utilities found along the road include, electrical poles, telephone poles, OFC Cables, etc.

2.8 Development as per Schedule-B

The Project Road from Virudhunagar (km. 52+300) to Nanguneri village (km. 116+500) has been developed as a four-lane divided carriageway with median width of 2 m, service road at some built-up locations and other arrangements. The Project Road passes through rural as well as built-up sections.

Following is the Scope of Work as per Schedule-B of Concession Agreement.

Table 2-1 Details of Scope of Work

Sr. No.	Type of Structure	Unit	Scope	Remark
1	O&M of Main Carriageway	km.	64.20	
2	Construction of Service Road	km.	1.14	Total (LHS+RHS)
3	Widening of Pipe Culvert	Nos.	02	
4	Repair & rehabilitation of Major Bridges	Nos.	20	
5	Repair & rehabilitation of Box Culvert	Nos.	41	
6	Repair & rehabilitation of Pipe Culvert	Nos.	48	
7	Repair & rehabilitation of ROB	Nos.	02	
8	Repair & rehabilitation Vehicular Underpass (VUP)	Nos.	10	
9	Improvement of Major Junction	Nos.	01	
10	Improvement of Minor Junction	Nos.	11	
11	Provision of Drain	km.	1.14	Total (LHS+RHS)
12	Construction of new LVUP	Nos.	01	

3 CONDITION ASSESSMENT OF PROJECT ROAD

3.1 Pavement

The Project Road is four lane divided carriageway and generally has paved carriageway of 9.0 m with earthen shoulder of 1.5 m on either side. The Project Road has a median width of 2.0 m throughout its length.

The entire stretch of Project Road including service road is constructed with flexible pavement. The pavement type for the Toll Plaza including taper is of rigid pavement.

3.1.1 Pavement Condition Survey

Pavement condition survey was carried out on **15th March 2026 and 16th March 2026** through visual inspection for the entire project length. From the visual inspection, it is found that the pavement condition of the Project Road is Good to Fair.

Some of the photographs taken during the site visit are presented as below.

Figure 3-1 Photographs of Pavement Condition (MCW)

km. 53+600

km. 59+400

km. 64+140

km. 70+200

km. 98+700

km. 107+560

3.2 Service Road / Slip Road

The service road width varies from 7 m to 5.5 m and is constructed in built-up areas and adjoining underpass locations. The Project Road has total service road length of 56.05 kms (LHS + RHS).

The photographs taken during the site visit are presented below.

Figure 3-2 Photographs of Service Road

Service Road / Slip Road at km. 62+950 (LHS)

Service Road / Slip Road at km. 69+500 (RHS)

3.3 Major / Minor Junctions

There are 15 nos. of major junctions and 49 nos. of minor junctions along the Project Road. The photographs taken during site visit is presented as below:

Figure 3-3 Photographs of Junctions

Major Junction at km. 66+500

Minor Junction at km. 69+665

3.4 Condition Survey of Bridge

The inventory of structures including major bridges, minor bridges, ROB's, underpasses and culverts is presented in table as below:

Table 3-1 Details of Summary for Structures

Type of Structure	Total Number of Structures
Road Over Bridge (ROB)	2
Flyover	-
Major Bridges (MJB)	3
Minor Bridges (MNB)	20
Vehicular Underpass (VUP)	10
Culverts	89
Total	**124**

The detailed condition survey of structures was carried out by visual inspection. The observations and findings are presented in table below:

Table 3-2 Condition Survey of Major Structure

3.5 Condition Survey of Culverts

The cross-drainage structure includes hume pipe culverts and box culverts at various locations. There are 89 Nos. of culverts along the Project Road. The height of culvert varies from 1.0 m to 3.0 m from bed level. During condition survey of structure, these culverts were inspected on sample basis.

The project involves strengthening and widening of existing road to four lane divided carriageway. The culverts beneath existing alignment are either widened or reconstructed. The structural condition of culverts is generally found in sound condition. The quality of surface concrete of box culverts is satisfactory. The RCC parapet, crash barrier or RCC railing has been provided at culvert locations, which is maintained properly.

In most of culverts, the waterway is clear. However, near to urban area and some location is found blocked due to debris, drainage water or bushes, tree growth, which will be removed by the Concessionaire. The cement concrete pitching or stone pitching has been provided for slope protection.

The culverts are maintained by the Concessionaire during O&M period. However, in case of some culverts, cement concrete pitching has been damaged which required to be addressed under routine repair work by the Concessionaire.

Figure 3-5 Photographs of Culverts

Box Culvert at km. 90+810

Pipe Culvert at km. 63+150

3.6 Drainage

There is 27.40 kms of existing drain (which includes drain on both sides) on the Project Road as per Concession Agreement. However, 1.49 kms of RCC drain is additionally constructed in locations where service roads are provided. The photographs taken during site visit is presented as below.

Figure 3-6 Photographs of Drainage

Existing Drain at km. 59+400

Existing Drain at km. 81+170

3.7 Slope Protection

Slope protection and chute drains are found on Project Road at required locations.

3.8 Road Furniture

The Concessionaire has provided additional road furniture along the Project Road as per the standards and specifications mentioned in Schedule-C. Details of the items are provided below.

a) Lighting Along the Project Road

Lighting including fixing of poles and LED lights are provided at following locations on the Project Road in accordance with Clause 12.3 of IRC: SP:84-2014.

Table 3-3 Details of Lighting

Sr. No.	Chainage (km)		Side	Location	Length (m)
1	55+260	56+170	Both Side	For each number of light, the minimum specification shall be street lighting with a single pole and double arm fitting 45 W (5050 LUMENS)-Blue tooth enabled MPPT Based Charge Controller, 9 Mts octagonal pole with all accessories, Automatic switch on / off, Duty Cycle 12 hrs working each night.	910.00

In addition to above, suitable lighting arrangements is provided and maintained at underside of PUP, VUP and other Structures.

b) Transverse / Thermoplastic Bar Marking Locations

Transverse / thermoplastic bar markings on either side of carriageway on proposed service road / VUP / VUP approach locations are provided as per Section 11.2 of IRC:35-2015.

c) New Installation of Safety Barriers

Following are the details of new installation of safety barriers along the Project Road.

Table 3-4 Details of New Installation of Safety Barriers

Sr. No.	Chainage (km)		Length (m)	Location	Type of Barrier
	From	To			
2932.00 m					

d) Additional Gantry / Cantilever Sign Board

As per schedule-B, additional gantry / cantilever sign are provided at the following locations:

Table 3-5 Details of Additional Gantry / Cantilever Sign

Sr. No.	Chainage (km)	Side	Location	Type
1	52+400	BHS	Underpass	Cantilever Gantry Sign Board
2	80+560	BHS	Underpass	Cantilever Gantry Sign Board
3	96+350	BHS	Underpass	Cantilever Gantry Sign Board

e) Summary of Quantity for Road Furniture Items

The following details show the summary of quantity for road furniture items provided on Project Road.

Table 3-6 Details of Summary for Road Furniture Items

Sr. No.	Description	Unit	Quantity
1	Solar Blinkers	Nos.	04
2	Streetlights	m	910
3	High Mast Lights	Nos.	Nil
4	Transverse Bar Makings / Thermoplastic Bar Markings	km	64.200
	New installation of Safety Barriers		
5	W-Beam Safety Barriers	m	2932
6	Concrete Median Barrier	m	Nil
7	Rigid Concrete Barrier	m	800
8	Guard Posts	m	Nil
9	Pedestrian Guard Rails	m	14755
10	Road Studs / Raised Pavement Markers	As per Section-9 of IRC:SP:84-2014	
11	Road Markings		
12	Traffic Delineators		
13	Kilometer / Hectometer / Boundary Stones		
14	Additional Sign Boards		
15	Gantry Sign Boards	Nos.	Nil
16	Cantilever Sign Boards	Nos.	06
17	Shoulder Mounted Dual Post Sign Boards	As per Section-9 of IRC:SP:84-2014	
18	Shoulder / Median Mounted Single Post Sign Boards		

Pavement Marking

Pavement marking for the Project Road is done as per the design standards indicated in section 12 of Schedule-D. Pavement marking is faded at some locations which will be rectified by the Concessionaire. Some of the photographs of road marking are presented below.

Figure 3-7 Photographs of Pavement Marking

km. 53+600 (RHS)

km. 62+700 (LHS)

km. 64+260 (RHS)

km. 111+530 (LHS)

Road Studs

Road studs / cat's eye for the project Road is done as per the design standards indicated in section 12 of Schedule-D. Road studs / cat's eye has been fixed at junction and zebra crossings. However, at few locations some cat's eye has damaged which will be rectified by the Concessionaire. Some of the photographs of road studs are presented below.

Figure 3-8 Photographs of Road Studs

km. 53+700(LHS)

km. 62+700 (RHS)

Traffic Signage / Median Kerb Painting / KM Stone

Traffic signs includes roadside signs, overhead signs, kerb mounted signs and median signs along the Project Road. The design for the traffic signs along the Project Road is done as per the design standards indicated in section 11 of Schedule-D.

The height, lateral clearance, location and installation are as per relevant clauses of Schedule 'D'. Overhead sign has been installed ahead of major intersections, toll plazas, start / end of Project Road and urban areas as per detailed design requirements.

Roadside signs, overhead signs, kerb mounted signs, kilometre stones, vertical post of sign boards, chevron boards and median kerb paint are all in good condition. Some of the photographs of sign boards are presented below.

Kerb Painting at km.70+200

km. 94+630

km. 116+000

Crash Barriers

Metal beam crash barriers are provided at bridge approaches, locations of high embankment and sharp curves. All the crash barriers provided by the Concessionaire are maintained at site. Some of the photographs of metal beam crash barriers are presented below.

Figure 3-10 Photographs of MBCB / Crash Barrier

km. 54+100 (RHS)

km. 107+515 (LHS)

Delineators

The traffic delineators are provided by Concessionaire for road users in abnormal condition of weather for the Project Road. The same is maintained by the Concessionaire. Some of the photographs of delineators are presented below.

Figure 3-11 Photographs of Delineator

km. 53+400

km. 111+530

Pedestrian Guard Rail

The pedestrian guard rails are provided in the median. It is maintained by the Concessionaire. Some of the photographs of pedestrian guard rails are presented below.

Figure 3-12 Photographs of Pedestrian Guard Rail

km. 66+500

km. 101+450

Road Land Boundary

Road land boundary pillar has been found / available on Project Road.

3.9 Avenue Plantation and Median Plantation

Avenue plantation is provided in open country locations and median plantation has been provided in the project length as per IRC specification. Some of the photographs of avenue plantation and median plantation are presented below.

Figure 3-13 Photographs of Avenue Plantation and Median Plantation

Avenue Plantation at km. 62+800

Median Plantation at km. 64+200

3.10 Toll Plaza

As per the Concession Agreement, there is one existing toll plaza at Etturavattam Village at km. 75+280 with the following infrastructure.

Table 3-7 Details of Summary for Toll Plaza Items

Sr. No.	Particulars	Details
1	Toll Plaza Chainage	km. 75+280
2	Number of Tolling Lanes	8 lanes for toll operation plus 2 lanes for over dimensional vehicles.
3	Weigh in Motion Facility (Number of Lanes)	Yes
4	No. of ETC Lanes	in each direction
5	Number of Toll Booths	9 singles
6	Canopy	Present
7	Administrative Building	Present
8	Parking cum Toilet Block	Present
9	Availability of Tunnel or Elevated Walkway for Movement between Toll Lanes and Administrative Building	Tunnel / No
10	Availability of Static Weigh Bridge	Yes
11	Availability of Loading/Unloading Facility for Overloaded Vehicles	No
12	Storage facility for Overloaded Material	No
13	High mast Light	Yes
14	Streetlight	Yes
15	Low mast Light	No
16	User Fee Boards	4
17	Cantilever/Gantry Boards	Yes
18	Automatic boom barrier	Yes

Figure 3-14 Photograph of Toll Plaza

Toll Plaza at km. 75+280

Toll Plaza at km. 75+280

3.11 Lane Equipment

Following are the lane hardware and equipment installed at toll plaza.

1. RFID ETC Transceiver
2. Lane Controller with Industrial PC
3. AVC Sensors
4. Automatic Lane Barrier (ALB)
5. Lane Traffic Light and user fare display
6. Incident Capture Camera
7. Overhead Lane Signals
8. Traffic Lights
9. Toll Booth Equipment

3.11.1 RFID ETC Transceiver

RFID ETC Transceiver reads tags installed on the windshield of vehicles and mounted on a pole at about 5 m height. Handheld RFID readers are provided (1 no. in each direction) in case a tag is not detected by the fixed reader.

RFID

3.11.2 Lane Controller with Industrial PC

Toll Lane Controller is located within the Electronic Enclosure placed inside each toll booth which are connected to the common server and are capable of independent storage of data.

3.11.3 Automatic Vehicle Classification (AVC) Sensors

The AVC equipment comprises of camera based, axle sensors and inductive loops. The height detector has a high sensing resolution and detects height when object blocks the path. The presence of vehicle is detected by inductive loop. The loop sensors embedded on the pavement trigger the AVC height sensors located on parallel pillars.

3.11.4 Automatic Lane Barrier

Boom barriers installed on all lanes are in working condition and have a working time of 0.6 - 0.9 s. Automatic Lane Barrier is used to allow only authorized vehicles to pass through the lane. The barrier is activated only on generation of user fee receipt or other relevant vehicle processing activity. A torque motor powers the barrier for raising and lowering the boom. The motor can be blocked at any position without causing any damage. In the event of power failure, the boom is automatically raised. The boom weight is exactly balanced by built-in springs.

ALB at Toll Plaza

3.11.5 Lane Traffic Light (LTL) and User Fare Display (UFD)

Lane Traffic Light (LTL) is used to instruct vehicles to stop or pass through the lane. The LTL is RED when the toll collector is expecting the vehicle at the booth. After the transaction is done; the LTL turns Green to instruct the vehicle to pass through the lane. The User Fare Display is a part of electronic toll collection equipment located at the toll booth. It is a mini variable message sign (VMS) made of Light Emitting Diodes (LED). The user fare display is used to display the toll fare that is due and that must be paid by the motorist and the classification of vehicle selected by the collector.

LTL at Toll Plaza

3.11.6 Incident Capture Camera (AVC Camera)

The incident capture camera is installed on island of the booth to capture the image of the vehicle from the back side. The AVC triggers the Image capture system.

AVC Camera

3.11.7 License Plate Image Capture Camera (LPIC)

License Plate Image capture camera is installed on a 3 m pole facing incoming vehicle to capture the image of the vehicle number plate.

3.11.8 Over Head Lane Signal (OHLS)

The **Overhead Lane Signal (OHLS)** for lane “Open” and “Close” sign consists of a pair of “GREEN” (arrow) and “RED” (cross) lights. The OHLS is located at the vehicle approaching side of the canopy to show the drivers whether the lane is open or closed.

OHLS at Toll Plaza

3.11.9 Toll Booth Equipment

Toll Booth Hardware / Equipment provided are:

- Toll Collector Display (Operator Monitor)
- Customized Industrial Keyboard
- Receipt Printer
- Intercom Slave unit
- Bar code reader
- Violation Light and alarm
- Manual Booth Control (MBC)
- Booth Camera

The operator monitor termed as Toll Collector Display (TCD) is located on the toll collector's desk. It is the system's interface to the toll collector, to display the status of transactions and status of the lane peripherals.

The keyboard on the toll terminal is a programmable keyboard for registration of toll operations and is customized for different vehicle types and type of ticket.

Thermal printers are installed at the toll booths to print tickets. Intercom slave unit facilitates communication with the master unit located in the control room.

The violation system has an alarm switch which is triggered whenever there is a violation such as run-through happening on the lane. When there is an emergency, a foot switch pressed by the booth operator alerts the control room.

Booth Camera is provided on the inside roof corner of the booth to provide surveillance through CCTV screen located in the control room. Manual Booth Controller is used to release exempt vehicles.

3.11.10 Medium Speed Weigh in Motion (MSWIM)

Medium Speed Weigh in Motion (MSWIM) is installed on entry lanes of Toll Plaza.

MSWIM at Toll Plaza

3.12 Plaza Equipment

3.12.1 TMS Server

Plaza Server is provided in a hot standby configuration and provided with port non-POE network switch and Port PoE switch. Internet connectivity is available through one lease line (Airtel) and Jio WiFi module. Firewall with Sophos antivirus is provided.

3.12.2 55” LED screen for CCTV monitoring

55” LED screen for CCTV monitoring installed at the toll plaza admin block provides view of all the toll booths, important zones within the plaza where cash transactions take place (server room, control room, cash up).

The toll plaza manager is able to observe the activities at the toll lanes and toll booth. When the toll collector calls up on the intercom, the manager is able to comprehend the situation at the lane by a zoomed view of the particular lane.

3.12.3 Workstations in Control Room, POS room

Workstations are available in control room (lane monitoring, administration, and audit), cash room and PoS.

3.13 Advanced Traffic Management System (ATMS)

Advanced Traffic Management System (ATMS) installed for the Project Road is controlled by the ATMS center at the toll plaza location (km. 42+650). As per Concession Agreement, ATMS shall conform to ATMS Policy guidelines (2016) which comprises of the following:

- Automatic Traffic Counter cum Classifier (ATCC)
- Mobile Radio communication system
- Emergency Call Box
- Portable Weigh in Motion
- Meteorological Data system
- Variable Message Signboards (VMS)
- CCTV system
- Video Incident Detection System (VIDS)
- Vehicle actuated Speed Display (VASD)

Status of these systems at site is described below:

3.13.1 Automatic Traffic Counter cum classifier (ATCC)

Automatic Traffic Counter cum Classifiers (ATCC) is installed at Toll Plaza (km. 75+280).

3.13.2 Mobile Radio communication System (MRCS)

Mobile Radio communication System (MRCS) is not yet installed. Application for MRCS UHF band has been sought from WPC, DoT, Ministry of Communications which is not yet allocated.

3.13.3 Emergency Call Boxes (ECB)

ECB's are not installed at site.

3.13.4 Portable Weigh in Motion (PWIM)

PWIM is provided at site.

3.13.5 MET System

Meteorological sensors comprise of sensors to measure the atmospheric temperature, humidity, pavement surface temperature, visibility and equipment for measuring wind speed and direction and installed at Toll Plaza at km. 75+280.

3.13.6 Variable Message Signboards (VMS)

Variable message sign boards are installed at 11 locations. These display specific messages to the users based on the prevailing conditions on the highway. The message

can be changed at any point of time from the HTMS centre. About 250 customised messages can be stored on the system.

3.13.7 CCTV Surveillance Cameras

Surveillance cameras are installed at 35 locations along the Project Road. The ATMS control room has video wall to monitor these locations through the cameras installed.

3.13.8 Video Incident Detection System

44 nos. fixed CCTV cameras are installed as part of Video incident detection system.

3.13.9 Vehicle Actuated Speed Display (VASD)

VASD is installed at 9 locations each on LHS and RHS.

3.13.10 Adequacy of Toll Collection System and ATMS

- Adequacy-All lanes are hybrid ETC system as stipulated by NHAI in Technical Specifications of Hybrid ETC system. NHAI has approved maintenance costs for TMS. TMS shall be upgraded every 5 years at the cost of the Authority.

- The Advanced Traffic Management System (ATMS) installed is as per specifications required by the Authority and in working condition.

3.14 Traffic Aid Post and Medical Aid Post

Traffic Aid Post and Medical Aid Post are maintained by the Concessionaire.

3.15 Toilet Block

There is one no. of Toilet Block constructed at site and the same is maintained by the Concessionaire. The details of the same are tabulated below. Some of the photographs taken during the site visit are presented below.

Table 3-8 Details of Toilet Block

Sr. No.	Chainage (km)	Side		Remarks
		LHS	RHS	
1	75+280	Yes	-	

Figure 3-15 Photograph of Toilet Block

3.16 Bus Bays and Passenger Shelters

There are 27 Nos. of bus bays / passenger shelter along the Project Road. Some of the passenger shelters are damaged and the same will be rectified by the Concessionaire.

Some of the photographs of the bus bay / passenger shelter photographs are presented below.

Figure 3-16 Photograph of Bus Bay / Passenger Shelter

km. 60+580

km. 95+020

3.17 Balance Work Status

During site visit it has been observed that construction of 01 No. of LVUP at km. 55+750 along with approaches and highway lighting are balance due to change in proposal from LVUP to VUP. As informed the Concessionaire, now Concessionaire issued a work order to TMP Manoharan Infrastructure Pvt Ltd. for construction of VUP at km. 55+750.

The balance works cost is presented in the subsequent chapter.

3.18 Operation and Maintenance

3.18.1 O&M Contract

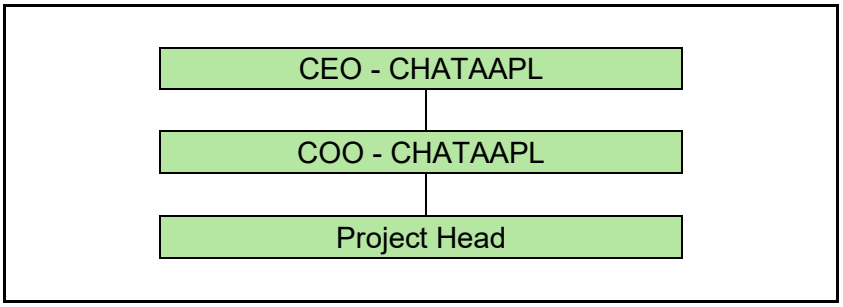
As per Clause 15.1 of the Concession Agreement, the Concessionaire shall operate and maintain the Project Road by itself, or through O&M Contractors and if required, modify, repair, improve the Project Road to comply with Specifications and Standards, and other requirements set forth in the Agreement through Good Industry Practice, Applicable Laws and Applicable Permits and manufacturer's guidelines and instructions with respect to toll systems. The Operation and Maintenance activities shall conform to all the requirements laid down in MoRT&H, IRC Specifications and the Concession Agreement.

The Concessionaire has outsourced for carrying out the activities related to operation and maintenance of the Project Road including toll operation services, security services, AMC for TMC and AMC for DG set.

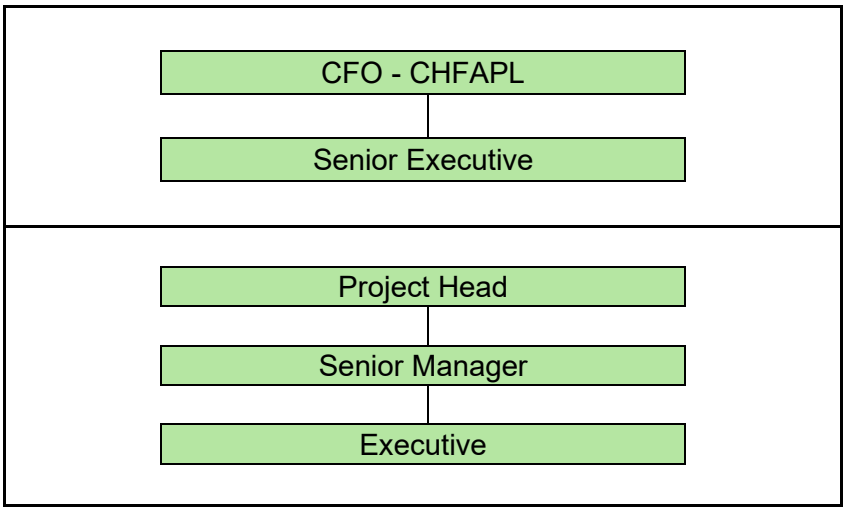
3.18.2 Organization Chart

The Concessionaire has shared the Organization Chart at site for Operation and maintenance. Accordingly, there is 01 Project Head, 01 Senior Executive, 01 Senior Manager, 01 Assistant Manager (HR), 02 Assistant Manager, 01 Senior Supervisor, 02 Supervisor, 07 Executive, 02 Electrician, 01 Manager, 01 Plaza Manager, 01 Assistant Plaza Manager, 03 Cashiers and 04 Validators to carry out O&M activities. The team controls the maintenance activities. However, the maintenance work is undertaken and executed through competent subcontractors.

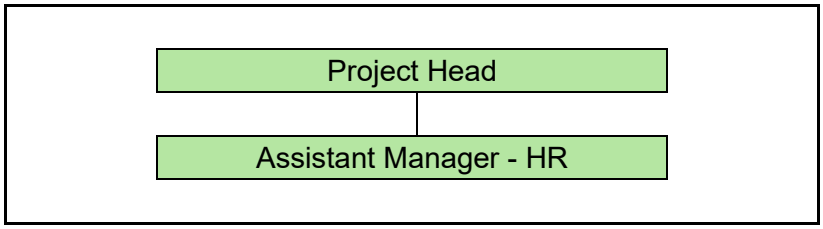
Organization Chart



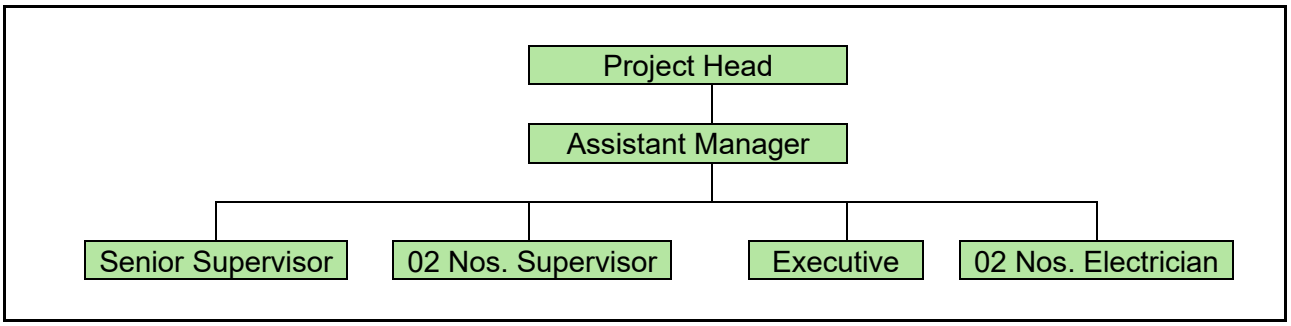
Finance & Accounts



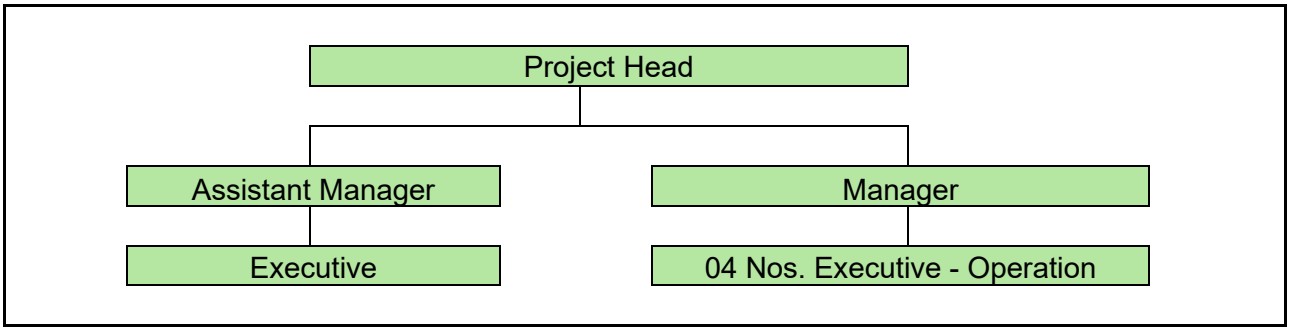
Human Resource



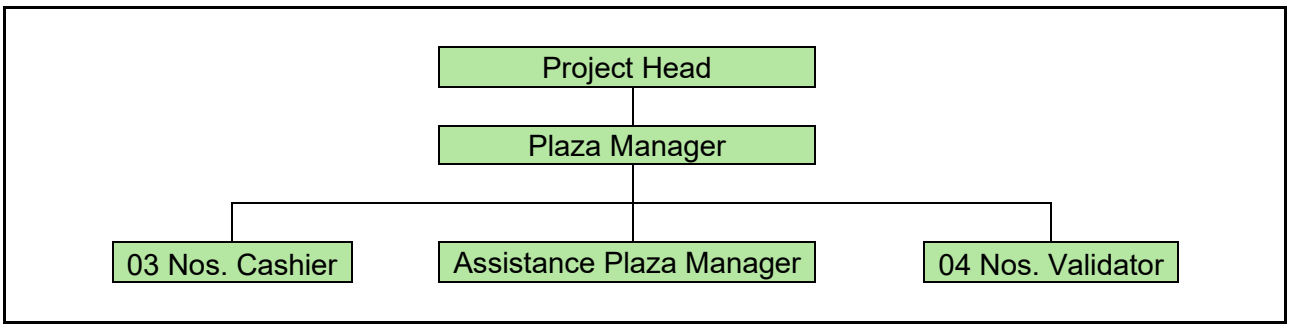
Maintenance



Operations System



Operations



3.18.3 Operation

Operation cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses and other miscellaneous expenses. The Concessionaire has provided the expenses occurred towards operation expenses for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are

projected based on best industry practices and are compared with the operating cost in the vicinity of the project area.

The Operation Cost is presented in the subsequent chapter.

3.18.4 Routine Maintenance

The Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey.

Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Maintenance Cost is presented in the subsequent chapter.

4 PAVEMENT INVESTIGATION AND ASSESSMENT

4.1 General

Article 15 and Schedule-F of the Concession Agreement defines the Operation and Maintenance requirement during the concession period.

The project is currently under the Operation and Maintenance stage. The concession period of the project is 30 years from the Appointed Date (as TOT Package i.e., 20th October 2020) including construction period.

4.2 Axle Load and VDF

The Concessionaire has conducted the Axle Load Survey on Project Road at km. 75+280 (near Toll Plaza) from 14th March 2020 to 16th March 2020. The summary of Vehicle Damage Factor (VDF) calculated as provided by the Concessionaire is tabulated below.

Table 4-1 Vehicle Damage Factor (VDF)

Weighted Average VDF Values			
Sr. No	Vehicle Type	Direction	
		Madurai - Kanyakumari	Kanyakumari - Madurai
1	BUS	0.964	1.009
2	LCV	0.678	0.518
3	2-Axle	2.775	1.993
4	3-Axle	5.875	3.726
5	MAV	15.025	5.561

4.3 Design Traffic

Traffic in Million Standard Axles (MSA) for the homogeneous section based on the historical traffic data provided by the Concessionaire, current traffic has been used for future projections and the estimated design MSA is computed and presented in subsequent table.

For the estimation of design MSA, Actual Traffic Growth Rates as provided by the Concessionaire were used.

Table 4-2 MSA Calculation

MSA Calculation					
Year	MSA (LHS)	Cumulative MSA (LHS)	MSA (RHS)	Cumulative MSA (RHS)	Remarks

4.4 Network Survey Vehicles (NSV) Survey

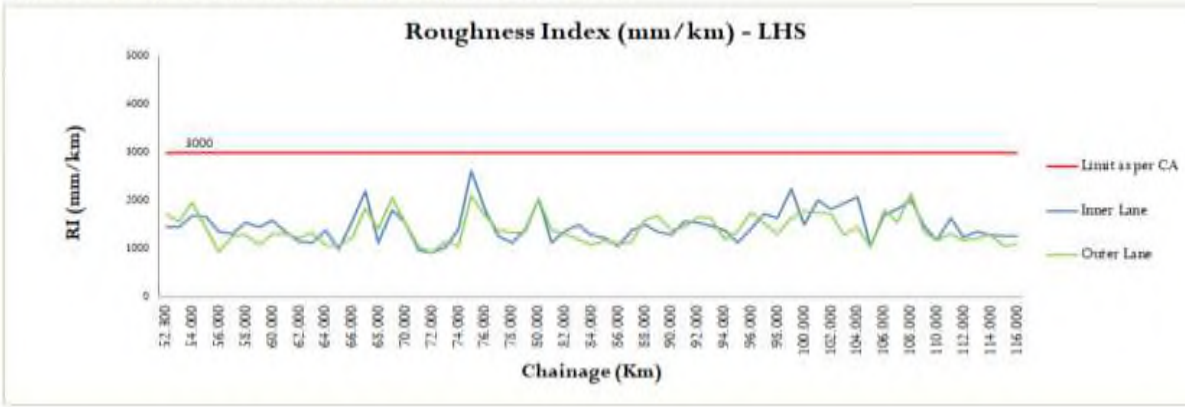
The Concessionaire has conducted pavement condition survey on each lane of carriageway through NSV. The NSV survey was conducted on the Project Road from 15th January 2025 to 18th January 2025. The summary of the same is presented below.

Table 4-3 Summary of NSV Survey

Table 2-1: Summary of RI Limit as per Schedule F of CA

Roughness Summary % as per Schedule F of CA (mm/km)					
Condition	Limit as per Schedule F of CA (mm/km)	LHS		RHS	
		Inner Lane	Outer Lane	Inner Lane	Outer Lane
Good	<3000	100.00%	100.00%	100.00%	100.00%
Poor	>3000	0.00%	0.00%	0.00%	0.00%

Figure 2-3: Roughness Summary for KETPL as per Schedule F of CA



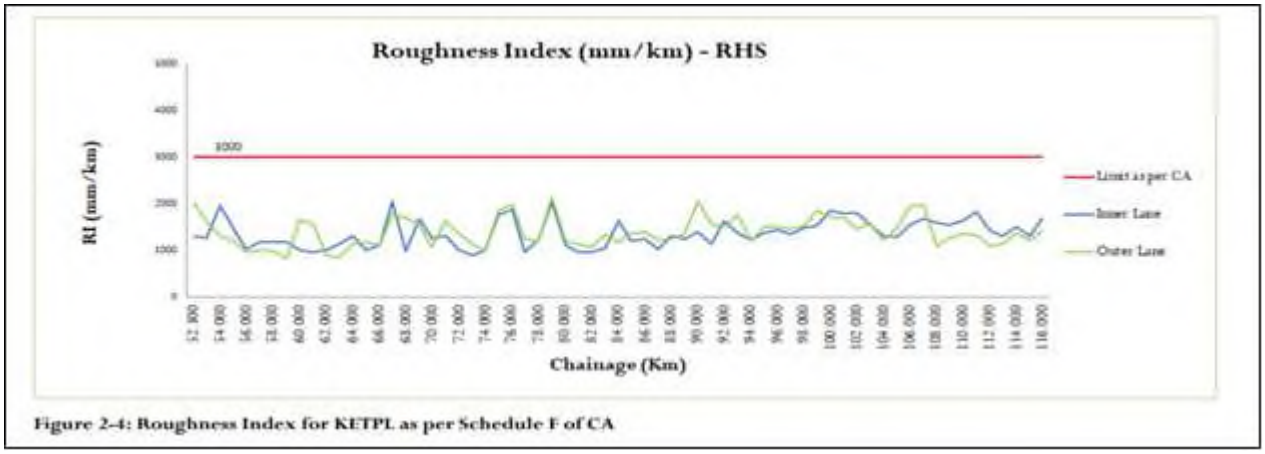


Figure 2-4: Roughness Index for KETPL as per Schedule F of CA

However, the maintenance can be carried out as and when required basis and to the compliance of Schedule-F requirement to maintain the road in serviceable condition. However, improvement in riding quality is expected if the roughness value exceeds 3000 mm/km.

4.5 Test pit and Subgrade Investigation

The Concessionaire has carried out the subgrade investigation for Project Road. The results of the same as provided by the Concessionaire are tabulated as below.

Table 4-4 CBR Analysis

Sr. No.	Road Name	Existing Chainage (km)	Side	DCP-CBR
1	NH-7	54+950	LHS	14.1
2	NH-7	55+050	RHS	21.8

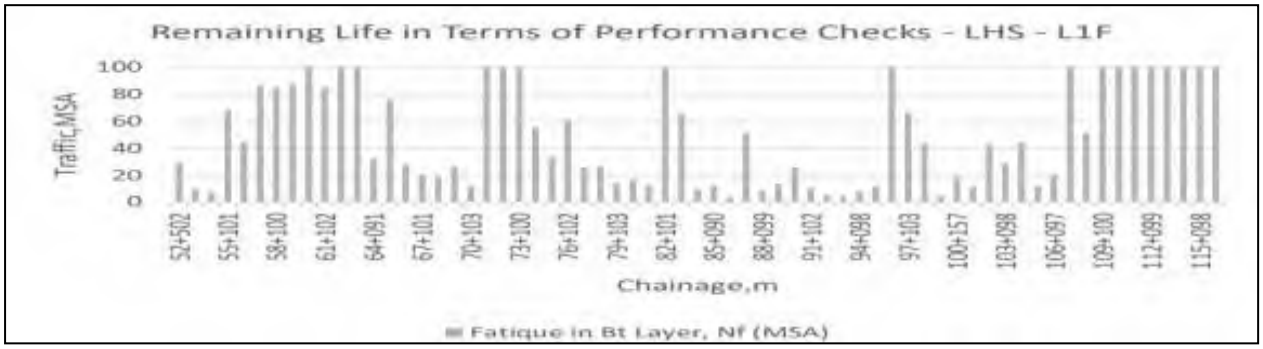
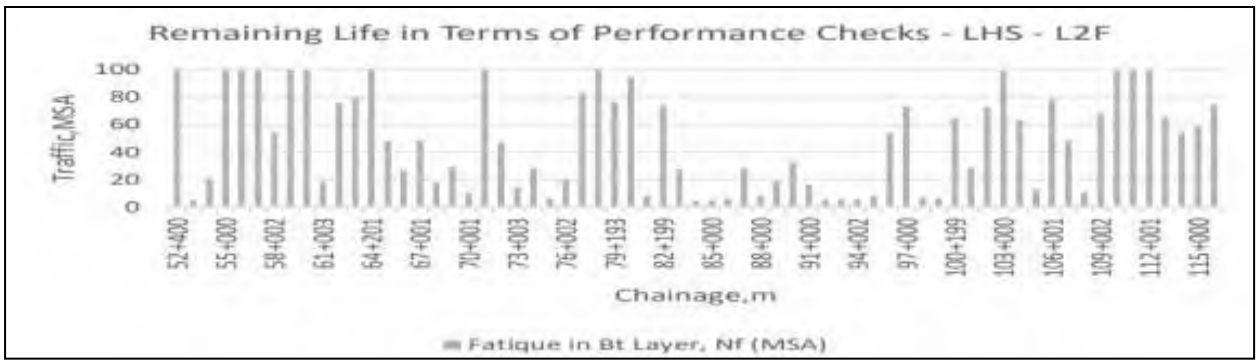
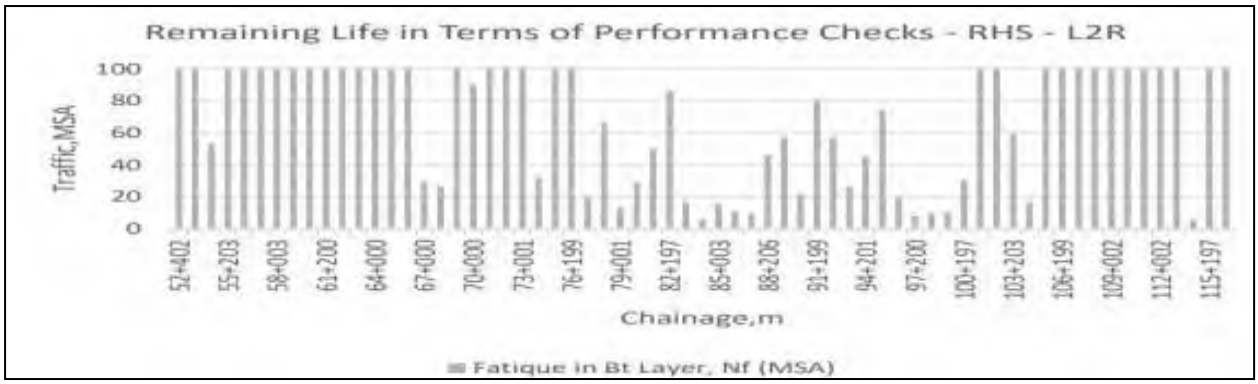
4.6 Falling Weight Deflectometer (FWD) Survey

The structural evaluation and analysis of the remaining life of project was carried out in conformity with IRC:115-2014"Guidelines for Structural Evaluation and Strengthening of Flexible Road Pavements Using Falling Weight Deflectometer (FWD) Technique".

The FWD survey was conducted on the Project Road from 27th January 2025 to 01st February 2025. The summary of the same is presented below.







4.7 Periodic Maintenance Strategy

Unlike the old Concession Agreements where periodicity and threshold limits were clearly described for the major maintenance, the Concession Agreement of this project does not specify the periodicity or the threshold limits for carrying out the full-length periodic maintenance. Schedule-F of the Concession Agreement specifies the threshold limits and the timeline for carrying out repairs to the distresses during the operation period.

The maintenance thus can be carried out as and when required basis and to the compliance of Schedule-F requirement to maintain the road in serviceable condition. Only improvement to Riding Quality is expected if the roughness value exceeds 3000 mm/km.

Overlay work is completed at site on both side of the carriageway in the month of October 2021 i.e., FY 2022. Thus, next cycle of the overlay is proposed in FY 2029 after 7 years from previous MM cycle.

As per Article 14 of CA, the Authority shall carry out capacity augmentation under EPC contract if traffic exceeds 40,000 PCU for three consecutive accounting years. As per the traffic study report submitted by the Company it is observed that the project traffic crosses 40,000 PCU in FY 2040, FY 2041, FY 2042. Assumption has made that execution of 6-laning of Project Road will start in the year 2045 or 2046. It is also assumed that during 6-laning of Project Road, overlay of existing four lane road will be the part of the capacity augmentation. Hence, the major maintenance cycle is adjusted accordingly.

The table below shows the major / periodic maintenance cycle throughout the concession period for the Project Road.

Table 4-6 Major Maintenance Cycle

Sr. No.	Year	Main Carriageway	Service Road
1	FY 2027 to FY 2028	-	-
2	FY 2029	Major maintenance with 30 mm BC with PMB (100%) + Milling & 50 mm DBM (5%)	Major maintenance with 30 mm BC with VG40 (50%) + Micro-surfacing (50%)
3	FY 2030 to FY 2035	-	-
4	FY 2036	Major maintenance with 30 mm BC with PMB (100%) + Milling & 50 mm DBM (5%)	Major maintenance with 30 mm BC with VG40 (50%) + Micro-surfacing (50%)
5	FY 2037 to FY 2042	-	-
6	FY 2043	Major maintenance with 30 mm BC with PMB (100%) + Milling & 50 mm DBM (5%)	Major maintenance with 30 mm BC with VG40 (50%) + Micro-surfacing (50%)
7	FY 2044	-	-
8	FY 2045	Assumption of Capacity Augmentation to Six Lane Configuration	
9	FY 2046 to FY 2050		
10	FY 2051	End of Concession Period	

The projected cost for periodic / major maintenance is presented in the subsequent chapter.

5 COST ESTIMATES

5.1 General

Based on the assessment carried out in previous chapters, various costs were worked out. The costs are divided into following categories.

I. Balance Works Cost
II. Routine O&M Cost
III. Major Maintenance Cost
IV. Periodic Replacement of TMS / ATMS system

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and escalation.

5.2 Rate Assumption

Following assumptions are considered for unit rates of various items while estimating the cost:

1. Unit rates of different items (BC, DBM, Concrete, Road markings etc.) are calculated as per the MoRTH Standard Data Book 2019. The input rates for MoRTH standard data book were adopted as below:

   a. **Manpower and labour:** As per applicable minimum wages published by Ministry of Labour & Employment, Government of India.

   b. **Bitumen:** Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. Same discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.

   Therefore, bitumen prices are considered as per the forecast of Client. Current published of bitumen are considered for unit rates calculation for FY 2027. Average 10 years of price of bitumen are considered for unit rates calculation for FY 2028 and onwards, since bitumen prices have been range bound over the last five-six years. Following rates of bitumen are considered.

Table 5-1 Bitumen Rates - Ex-MI Supply excluding discount and GST

Supply Location	Applicability of Rates	Product	Current Published Price (FY 2027)	Long term price (Avg last 10 years)
Mathura	All States	VG-10	45,102	35,125
		VG-30	46,402	36,137
		VG-40	48,962	38,131

		VG-30	46,402	36,137
		VG-40	48,962	38,131
Koyali	All States	VG-10	47,102	37,125
		VG-30	48,402	38,137
		VG-40	51,082	40,251

Supply Location	Applicability of Rates	Product	Current Published Price (FY 2027)	Long term price (Avg last 10 years)
Haldia	All States	VG-10	46,602	35,683
		VG-30	47,402	36,295
		VG-40	49,962	38,256
Barauni	All States	VG-10	47,132	36,213
		VG-30	48,432	37,325
		VG-40	50,992	39,286
CPCL	Kerala	VG-10	47,402	35,519
		VG-30	48,402	36,395
		VG-40	50,762	38,120
CPCL	Tamil Nadu	VG-10	47,902	36,019
		VG-30	48,402	36,395
		VG-40	50,962	38,320
CPCL	Telangana and Andhra Pradesh	VG-10	44,602	32,719
		VG-30	45,402	33,395
		VG-40	47,962	35,320
CPCL	Karnataka	VG-10	44,602	32,719
		VG-30	45,402	33,395
		VG-40	47,962	35,320

c. **Sand and Aggregate:** Rates are taken from Public works Department Tamilnadu SOR FY 2025-26.

d. **Cement:** Rates are taken from Public works Department Tamilnadu SOR FY 2025-26.

e. **Steel :** Rates are taken from Public works Department Tamilnadu SOR FY 2025-26.

f. **Machinery Hire charges:** Hire charges for the machinery are considered in accordance with NHAI standard data book.

g. **Actual Rates of items as per work order:** The rates of road marking, road stud, kerb raising, micro surfacing, milling, median filling rates etc. are considered as per the work order shared by the client.

2. Goods and Service Tax (GST) is considered as 18% as per the latest Government Guidelines.

Summary of Unit Rates worked out using Standard Data Book adopted for major items is given below.

Table 5-2 Summary of Unit Rates

Sr. No.	Item Description	Unit	Rates (Rs.)
1	Dense Bituminous Macadam	Cum	9,198
2	Bituminous Concrete (VG40)	Cum	10,335
3	Bituminous Concrete (PMB)	Cum	12,641
4	Milling	Sqm	90

Sr. No.	Item Description	Unit	Rates (Rs.)
5	Micro-surfacing	Sqm	162
6	Kerb Re-laying	Rmt	330
7	Road Marking on BC surface	Sqm	573
8	Road Marking on micro surface	Sqm	682
9	Road Studs	Nos.	202

5.3 Balance Work Cost

As discussed in previous chapters, construction of 01 Nos. of LVUP at km. 55+750 along with approaches and highway lighting are balance due to change in proposal from LVUP to VUP. However, Concessionaire has issued work order to TMP Manoharan Infrastructure Pvt Ltd. for construction of VUP at km. 55+750. The cost of construction of VUP as per workorder is Rs. 21.652 Cr. (including GST). The construction period is 12 months from the issued of work order.

5.4 Routine O&M Cost

Routine O&M cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area. Same has been divided into following major heads.

1 Salary and Welfare Expenses
2 Tolling Operations Services
3 Toll Security Services
4 Incident Management & Emergency Services
5 Electricity and Diesel Charges
6 TMS/HTMS/System Expenses
7 Office Operating Expenses
8 Vehicle Running Expenses
9 Professional Fees Expense
10 Community Development
11 Communication Expenses
12 Conveyance Expenses
13 Insurance Expense
14 IE Fees
15 Routine Maintenance Cost (Project Road)
16 Horticulture & ROW Maintenance
17 Miscellaneous including Contingency

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs

due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Operation and Maintenance cost (Routine O&M) is presented below. The detailed working of routine maintenance (Sr. No. 15 of below table) is presented in **Annexure-I**.

Table 5-3 Summary of Operation Cost

Sr. No.	Particulars	Amount (FY 2027 to 48)	Amount FY 2049 onwards
1	Salary and Welfare Expenses	1,39,57,740	1,39,57,740
2	Tolling Operations Services	2,47,86,790	2,47,86,790
3	Toll Security Services	56,76,418	56,76,418
4	Incident Management & Emergency Services	2,34,64,198	2,34,64,198
5	Electricity and Diesel Charges	29,77,739	29,77,739
6	TMS / HTMS / System Expenses	52,18,594	45,45,802
7	Office Operating Expenses	38,26,851	38,26,851
8	Vehicle Running Expenses	27,60,000	27,60,000
9	Professional Fees Expense	67,99,844	1,04,24,868
10	Community Development	13,17,272	13,17,272
11	Communication Expenses	3,47,156	3,47,156
12	Conveyance Expenses	3,78,716	3,78,716

	Per km Cost (Lakhs)	25.94	28.24

5.5 Major Maintenance Cost

The summary of Major Maintenance Cost is provided as below. The detailed working of the same is presented in **Annexure-II**.

Table 5-4 Summary of Major Maintenance Cost

Sr. No.	Year	Major Maintenance Cost (Cr.)	Remarks
1	FY 2027 to FY 2028	-	
2	FY 2029	81.26	
3	FY 2030 to FY 2035	-	
4	FY 2036	90.98	
5	FY 2037 to FY 2042	-	
6	FY 2043	81.26	
7	FY 2044 to FY 2050	-	
8	FY 2051	-	End of concession period
	Total Cost (Cr.)	**253.50**	

5.6 Periodic Replacement of TMS / ATMS System

Every 7 years, replacement of cost of major TMS / ATMS system is considered. The same is provided as below.

Sr. No.	Year	HTMS O&M / Replacement Cost (Cr.)	Remarks
1	FY 2027	7.56	
2	FY 2034	7.56	
3	FY 2041	7.56	
4	FY 2048	7.56	
Total Cost (Cr.)		**30.26**	

5.7 Escalation Assumption

Following escalation has been considered for the O&M cost as provided by Client.

Table 5-5 Escalation

Year	Escalation	Year	Escalation
2025	-	**2041**	3.99%
2026	-	**2042**	3.99%
2027	5.25%	**2043**	3.99%
2028	4.86%	**2044**	3.99%
2029	4.44%	**2045**	3.99%
2030	4.24%	**2046**	3.99%
2031	4.13%	**2047**	3.99%
2032	4.08%	**2048**	3.99%
2033	4.01%	**2049**	3.99%
2034	4.00%	**2050**	3.99%
2035	4.03%	**2051**	3.99%
2036	4.01%	**2052**	3.99%
2037	3.98%	**2053**	3.99%
2038	3.98%	**2054**	3.99%
2039	4.00%	**2055**	3.99%
2040	3.99%	**2056**	3.99%

5.8 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summaries yearly for remaining concession period along with escalation as mentioned in clause 5.7.

Escalated O&M Cost (in INR Cr.)

Sr.	Year of expense	FY27	FY28	FY29	FY30	FY31	FY32	FY33	FY34	FY35	FY36	FY37	FY38	FY39	FY40	FY41	FY42	FY43	FY44	FY45	FY46	FY47	FY48	FY49	FY50	FY51

1 INTRODUCTION

1.1 Background

Cube Highways Fund Advisors Pvt. Ltd. (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InvIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an infrastructure investment trust under the SEBI InVIT Regulations. Cube Highways Fund Advisors Pvt. Ltd. has appointed M/s. **FP Project Management Consultancy Services Private Limited** (hereinafter referred as "Technical Consultant" or "FPPM") to carry out Technical Due Diligence of Kotwa - Muzaffarpur section of NH-27 (Old NH-28) from km. 440+000 to km. 520+000 [Bundle-III] in the State of Bihar through Annuity BOT basis (hereinafter referred as "Project Road").

Kotwa Muzaffarpur Tollway Private Limited, (hereinafter referred as "Concessionaire") is a special purpose vehicle (SPV) for tolling, operation, maintenance, and transfer of Kotwa - Muzaffarpur section (from km. 440+000 to km. 520+000) of NH-27 or Project Road under TOT Bundle-3. The project was awarded to Concessionaire on 20th October 2020 with a concession period of 30 years by National Highway Authority of India (NHAI). The length of Project Road is 80.0 km with one toll plaza at Parsonikhem at km. 467+700.

Accordingly, Technical Consultant has undertaken the work of assessment of operation and maintenance (O&M) cost based on site inspections and field investigations. The same is presented in this report.

1.2 Scope of Work

The detailed scope of work for conducting the technical due diligence of Project Road is presented below:

- A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets
- Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, As-built drawings, O&M manual, COD / PCOD certificate, Punch list, previous major maintenance etc.
- Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, Axle Load, material investigations etc.
- Formulation of future major maintenance strategy
- Estimation of any initial expenses to be incurred due to deficiencies observed in diligence
- Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period
- Estimation of Annual Operation expenses along with Systems cost (TMS / HTMS) till the end of concession period
- Review of balance work cost for Project Road including estimation of quantities and item rates

1.3 Our Approach Philosophy

1.3.1 Composition of Team

Our proposed team consists of well-qualified engineers and other professionals, whose experience covers all the skills and specializations required for undertaking such assignments. All the team personnel proposed are our regular employees and have a long and stable working relationship with our firm.

The Team Leader coordinates the activities between all the key staff who work closely together. The key staff is assisted by various support staff, who report to the respective key staff in their field of expertise. The Team Leader is the point of contact for Client on Technical Study.

The technical study shall include review of all the available documents namely:

a) Concession Agreement including Technical Schedules
b) O&M Contract, work order and their provisions
c) Quality of construction based on available data, design and drawings
d) Documents on historical expenditure on operation and maintenance
e) O&M cost schedule for the concession period
f) Review of Completion / Provisional Completion along with punch list items
g) Review of recent pavement survey conducted
h) Correspondence regarding scope of works and during O&M
i) Recent O&M Report submitted to Authority
j) Toll operation manual / ATMS related documents

The review of above documents is the first step towards accomplishment of the task. This gives a complete idea of the project as per the contract and is used as input data for preparation of report after necessary analysis.

1.3.2 Site Visit and Data Collection

A team of experts from various streams are expected to carry out the preliminary site visit to understand the assessment of project assets mainly condition of the pavement and structures.

- The site visit is undertaken for detailed reconnaissance and visual pavement condition assessment.
- The condition assessment of major structures by visual inspection.
- The information like material sources and the probable cost is collected for the purpose of cost estimates.

The detailed design / drawings viz. Plan & L-sections, drainage design, structure design, layout drawings for project facilities like toll plaza, bus bay, truck lay-byes, highway lighting facilities etc. are studied. Also, design / drawing and provision pertaining to road furniture are studied.

The information on availability of material in the vicinity are gathered. It has direct impact on cost of maintenance work and balance work.

The basic approach for preparation of cost estimates for operation and maintenance is as per the practice of State PWD / MORT&H in respect of highways and structures.

1.3.3 Data Analysis

Based on the study of the available information and preliminary site visits, the Consultants share their preliminary observations with the Client based on the evaluation of the technical data and reports provided by the Client.

1.4 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Company. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyse the same as per the best engineering / industry practices.

The site visit and inspection for the reconnaissance, road inventory and condition survey were carried from **03rd April 2026** to **05th April 2026**.

The report is organized with the following chapters for easy understanding of various issues.

Chapter 1 **Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for due diligence studies.

Chapter 2 **Project Description:** The chapter describes existing project features and overviews of project development.

Chapter 3 **Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on site visit.

Chapter 4 **Pavement Investigation and Assessment:** The chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance.

Chapter 5 **Cost Estimates:** The chapter summarizes the forecast for O&M and major maintenance costs over the remaining concession period.

2 PROJECT DESCRIPTION

2.1 Introduction

National Highways Authority of India had signed the Concession Agreement with **Kotwa Muzaffarpur Tollway Private Limited**, is a company promoted by Cube Highways or a Special Purpose Vehicle (SPV) formed for implementing this project on 27th December 2019. The Appointed Date for the Project Road is 20th October 2020.

The project is being developed through BOT mode under TOT (Toll Operate Transfer) Bundle-3 with a concession period of 30 years from the Appointed Date.

2.2 Location of the Project Road

The Project Road is a part of National Highway No. 27, (Old NH-28) of Kotwa - Muzaffarpur section in the state of Bihar. The total project length is 80.00 kms.

The Location Map of the Project Road is presented below:

Figure 2-1 Location Map

The Photographs taken during the site visit are presented as below.

Figure 2-2 Start and End of Project Road (LHS)

Figure 2-3 Start and End of Project Road (RHS)

2.3 Climate

The climate of the project area is characterized by general dryness (except in the southwest monsoon season), a hot summer and a cold winter. The year may be divided into four seasons. The period from about the middle of December to February is the cold season. This is followed by the summer season from March to about the end of June. The south-west monsoon season commences in June and continues up to about the end of September. The month with the most days of rain alone in Muzaffarpur is July, with an average of 20.0 days. Based on this categorization, the most common form of precipitation throughout the year is rain alone, with a peak probability of 66% in July. The period from mid-September to the middle of November constitutes the post-monsoon or transition season. The temperature ranges from a minimum of 9°C in winter to 38°C in summer. April, May and June are generally the hottest months and December and January are the coldest months. Relative humidity is high, averaging about 60% to 67% in May month and decrease it gradually up to 85% at the end of season due to gradual warming. The average annual rainfall in the district is 720 millimeters.

2.4 Terrain

This section of National Highway traverses through plain / rolling terrain.

2.5 Abutting Land Use

As NH-27 is a part of the East West Corridor, the following are the various developments that are anticipated in the Four Laning of Kotwa Muzaffarpur Section.

This Project Road reduces the travel time for getting access to Gorakhpur, Lucknow, Bongaigaon, Siliguri, Darbhanga and Porbandar which results in better industrial growth and economy.

Lots of development is anticipated in Kotwa Muzaffarpur Corridor, which transits through NH-27 / NH-28 and hence the development / maintenance of the Project Road would accelerate the development as majority of traffic would use the highway for getting access to Champaran region.

The tourism industry gets a great booster as majority of people using this highway, for going to foreign like Nepal etc.,

A lot of commercial establishments along the Project Road in the form of hotels, snack Parlors may be developed in coming future as tourist will use this road for going to Nepal/ Ashok Stambh.

2.6 Right of Way

The width of the existing Right of Way (Row) for the Project Road varies from 35 m to 45/ 120 m.

2.7 Existing Utilities

During widening of the Project Road, various affected utility services located along the Project Road were shifted to the PROW. The different types of utilities found along the road include, electrical poles, telephone poles, OFC Cables, etc.

2.8 Development as per Schedule B

The Project Road from Kotwa (km. 440.000) to Muzaffarpur (km. 520.000) has been developed as a four-lane divided carriageway with median width 1.5 m to 4.5 m, service road and other arrangements. The Project Road passes through rural as well as built-up sections.

As per Article 2 of Concession Agreement, the scope of project defined in Schedule-A and Schedule-B, (the **"Scope of the Project"**) shall mean and include, during the Concession Period:

a) Tolling, operation, management, maintenance, and transfer of the Project Road subject to and in accordance with the provisions of this Agreement; and
b) performance and fulfilment of all other obligations of the Concessionaire in accordance with the provisions of this Agreement and matters incidental thereto or necessary for the performance of any or all the obligations of the Concessionaire under this Agreement.

The following is the Scope of Work as per Schedule-B of the Concession Agreement.

Sr. No.	Type of Structure	Unit	Scope	Remark
1	O&M of Main Carriageway	km.	80.00	From October 2020
2	Construction of Service Road	km.	0.450	0.900 B/S
3	Widening of Existing Pipe Culvert	Nos.	01	
4	Widening of Existing Box Culvert	Nos.	01	
5	Improvement of Major Junction	Nos.	01	X Type
6	Improvement of Minor Junction	Nos.	21	
7	Reinforce Cement concrete cover Drain with footpath	km.	0.450	0.900 B/S
8	Solar Blinker	Nos.	74	As per Corrigendum-04
9	W-Beam Safety Barrier	km.	1.940	
10	Guard Post	km.	0.900	
11	Bar marking by Thermoplastic Paint	km.	80.00	
12	Cantilever Sign Boards	Nos.	04	

Note:

1. *The above quantities are the minimum to be provided and any addition to the above shall not be treated under change of scope.*

2. *The Concessionaire has completed most of the above-said work given in table and the same has been confirmed by the IE vide their letter no. CPCPL/IE/03-24/315 Dated 27.03.2024 and letter no. CPC/IE/06-24/335 Dated 14.06.2024. However, some work is balance due to land unavailability. The balance work details are as below.*

Sr. No.	Descriptions	Unit	Balance Quantity	Chainage (km)	Remark
1	Service Road	km	0.175	455+590 to 455+765	LHS
2	Drain	km	0.174	455+596 to 455+770	LHS
3	PGR	km	0.113	455+587 to 455+700	LHS

3 CONDITION ASSESSMENT OF PROJECT ROAD

3.1 Pavement

The Project Road is four lane divided carriageway and generally has paved carriageway of 8.75 m with earthen shoulder of 1.0 m to 2.0 m on either side. The Project Road has a median width of 1.5 m to 4.5 m throughout its length. The entire stretch of Project Road including service road is constructed with flexible pavement (except few stretches of MCW). The pavement type for the toll plaza including taper and few stretches of main carriageway is of rigid pavement. The details of the existing pavement of the Project Road are tabulated below.

Table 3-1 Pavement Details

Sr. No.	Chainage (km)		Pavement Type		Length (km)
	From	To	LHS	RHS	
1	440.000	467.600	BT-Bituminous	BT-Bituminous	27.600
2	467.600	468.050	CC-Cement Concrete	CC-Cement Concrete	0.450
3	468.050	482.000	BT-Bituminous	BT-Bituminous	13.950
4	482.000	493.000	CC-Cement Concrete	BT-Bituminous	11.000
5	493.000	494.700	BT-Bituminous	BT-Bituminous	1.700
6	494.700	501.200	CC-Cement Concrete	BT-Bituminous	6.500
7	501.200	502.500	BT-Bituminous	BT-Bituminous	1.300
8	502.500	504.000	CC-Cement Concrete	BT-Bituminous	1.500
9	504.000	504.900	BT-Bituminous	BT-Bituminous	0.900
10	504.900	508.000	CC-Cement Concrete	BT-Bituminous	3.100
11	508.000	520.000	BT-Bituminous	BT-Bituminous	12.000

3.2 Pavement Condition Survey

The pavement condition survey was carried out from **03rd April 2026** to **05th April 2026** through visual inspection for the entire project length. From the visual inspection, it is found that the average pavement condition of the Project Road is Good to Fair. The summary of pavement condition survey is presented in table below:

Table 3-2 Summary of Pavement Condition

Rating	Main carriageway	
	LHS	RHS
Good	40%	75%
Fair	47%	25%
Fair / Poor	08%	-
Poor	05%	-
Very Poor	-	-
Total	**100%**	**100%**

3.3 Service Road / Slip Road

a) Construction of New Service Road

Service Road with a partial width of 5.5 m to 7 m is constructed in a built-up area and adjoining underpass locations. The length of service road as per Concession Agreement / Corrigendum-05, 2019 is 53.870 kms on B/S. The photographs taken during the site visit are presented below.

3.6 Condition Survey of Culverts

The cross-drainage structure includes hume pipe culverts, box culverts and slab culverts at various locations. There are 20 Nos. of pipe culverts, 16 Nos. of slab culverts and 81 Nos. of box culverts along the Project Road. The height of culvert varies from 1.0 m to 3.0 m from bed level. During the condition survey of structure, these culverts were inspected on sample basis.

The project involves strengthening and widening of existing road to four lane divided carriageway. The culverts beneath existing alignment are either widened or reconstructed. The structural condition of culverts is generally found in sound condition. The quality of surface concrete of box culverts and slab culverts is satisfactory. The RCC railing has been provided at culvert locations, which is maintained properly.

In most of culverts, the waterway is clear. However, near to urban area and some location, it is found blocked due to debris, drainage water or bushes, tree growth, which must be removed and cleaned before monsoon. The wing wall has been provided for slope protection.

The culverts are maintained by the Concessionaire during O&M period. However, in case of some culverts, damaged wing walls have been observed at culverts, which need to be addressed under routine repair work.

3.7 Drainage

There are 0.9 kms of existing drain on both side of the Project Road as per Concession Agreement. However, there also exist 26.780 kms of shoulder drain (BHS) and 22.06 kms of median drain along the Project Road. The photographs taken during site visit is presented as below:

3.9 Road Furniture

The Concessionaire has provided additional road furniture along Project Road as per the standards and specifications mentioned in Schedule-C. The details of the items are provided below.

a) Solar Blinkers

The Concessionaire has provided a total of 74 Nos. solar blinkers at median opening locations for the entire length of Project Road.

b) Transverse / Thermoplastic Bar Marking Locations

Transverse / Thermoplastic Bar Marking is provided on either side of carriageway for the entire length of Project Road.

c) New Installation of Safety Barriers

The Concessionaire has newly installed 1940 m of safety barrier wherever required along the Project Road.

d) Pedestrian Guard Rails

The Concessionaire has additionally provided pedestrian guard rail for 450 m length along the Project Road.

e) Additional Gantry / Cantilever Sign Board

The Concessionaire has additionally provided gantry / cantilever sign boards (4 Nos.) at VUP and flyover locations along the Project Road.

f) Summary of Quantity for Road Furniture Items

Following are the details of the summary of quantity for road furniture's items provided at Site.

Table 3-5 Summary for Road Furniture Items

Sr. No.	Description	Unit	Quantity
1	Solar Blinkers	Nos.	74
2	Transverse Bar Makings / Thermoplastic Bar Markings	km.	80.0
3	New installation of Safety Barriers		
a	W-Beam Safety Barriers	Rmt	1940.00
4	Pedestrian Guard Rails	Rmt	900.00
5	Road Studs / Raised Pavement Markers	As per Section-9 of IRC:SP:84-2014	
6	Road Markings		
7	Traffic Delineators		
8	Kilometer / Hectometer / Boundary Stones		
9	Additional Sign Boards		
10	Cantilever Sign Boards	Nos.	4
11	Shoulder Mounted Dual Post Sign Boards	As per Section-9 of IRC: SP:84-2014	
12	Shoulder / Median Mounted Single Post Sign Boards		

Pavement Marking

Pavement marking for the Project Road is done as per the design standards indicated in section 12 of Schedule-D. Pavement marking is faded at some locations which needs rectification. Some of the photographs of road marking are presented below.

Figure 3-12 Photographs of Pavement Marking

km. 474+200-RHS

Road Studs

Cat's eye / road studs for the Project Road are done as per the design standards indicated in section 12 of Schedule-D. Cat's eye has been fixed at junction and zebra crossings. However, at few locations some cat's eyes have damaged which need rectification in O&M. Some of the photographs of road studs are presented below.

Figure 3-13 Photographs of Road Studs

Traffic signage / Median Kerb painting / KM Stone

Traffic signs include roadside signs, overhead signs, kerb mounted signs and median signs along the Project Road. The design for the traffic signs along the Project Road is done as per the design standards indicated in section 11 of Schedule-D.

The height, lateral clearance, location and installation are as per relevant clauses of Schedule 'D'. Overhead sign has been installed ahead of major intersections, toll plazas, start / end of Project Road and urban areas as per detailed design requirements.

Kilometre stones, vertical post of sign boards, chevron boards and median kerb paint are faded at few locations. The Concessionaire needs to rectify the same. Some of the photographs of sign boards are presented below:

Highway Lighting / Solar Blinker

Highway lighting is provided at underpasses, flyovers, toll plaza, ROBs and built-up locations. High mast lighting is provided at toll plaza location.

At underpass and flyover locations, highway lighting is provided at the structure locations and at its approaches.

Solar amber blinker signals are provided at each median opening location. These lights are properly maintained and are in good working condition. Regular maintenance work is carried out to ensure their efficient operation. Some of the photographs of highway lightings are presented below.

3.11 Toll Plaza

As per the Concession Agreement, there is one existing toll plaza at km. 467+700 near Parsoni Khem village with the following infrastructure.

Table 3-6 Details of Summary for Toll Plaza Items

Sr. No.	Particulars	Details
1	Toll Plaza Chainage	km. 467.700
2	Number of Tolling Lanes	10 lanes including 2 for over dimensional lanes
3	Weigh in Motion Facility (Number of Lanes)	Yes, in every lane
4	No. of ETC Lanes	10
5	Number of Toll Booths	10 Nos.
6	Canopy	Yes
7	Administrative Building	Yes
8	Parking cum Toilet Block	Yes (02 Nos.) LHS & RHS
9	Availability of Tunnel or Elevated Walkway for Movement between Toll Lanes and Administrative Building	No
10	Availability of Static Weigh Bridge	Yes
11	Availability of Loading / Unloading Facility for	Not Available

Sr. No.	Particulars	Details
	Overloaded Vehicles	
12	Storage facility for Overloaded Material	Not Available
13	High mast Light	Yes
14	Streetlight	Yes
15	Low mast Light	Not Available
16	User Fee Boards	Yes
17	Cantilever / Gantry Boards	Available
18	Automatic boom Barrier	Yes

Note:

- *Rehabilitation work and scope given in schedule-B for Toll Plaza is generally completed.*
- *New construction of Administrative Building is completed and finishing work is in progress.*
- *The Concessionaire is maintaining the Project Road including Toll Plaza as per scope of work.*
- *ATMS / HTMS is in the scope of Concessionaire and the work is completed.*

Some of the photographs of toll plaza are presented below.

3.12 Lane Equipment

Following are the lane hardware and equipment installed at toll plaza.

1. RFID ETC Transceiver
2. Lane Controller with Industrial PC
3. AVC Sensors
4. Automatic Lane Barrier (ALB)
5. Lane Traffic Light and user fare display
6. Incident Capture Camera
7. Overhead Lane Signals
8. Traffic Lights

9. Toll Booth Equipment

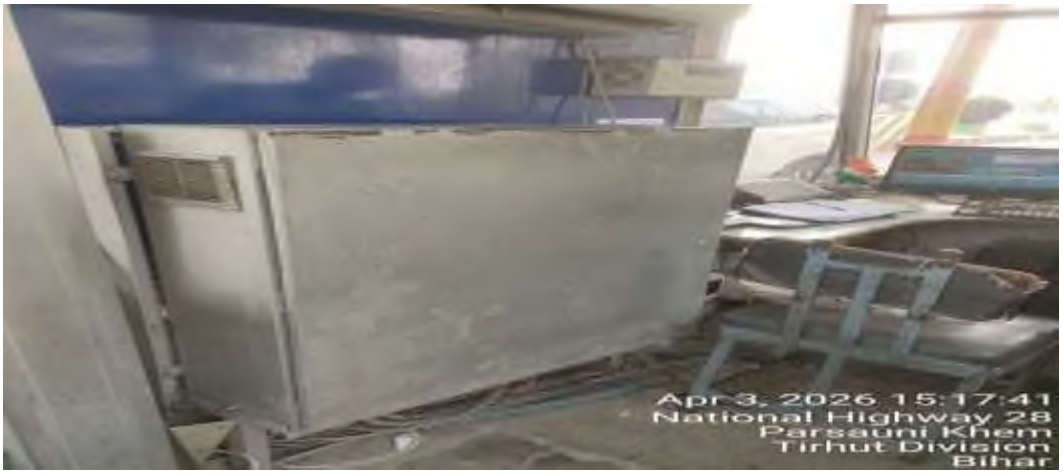
3.12.1 RFID ETC Transceiver

RFID ETC Transceiver reads tags installed on the windshield of vehicles and mounted on a pole at about 3 m height. Handheld RFID readers are provided (1 no. in each direction) in case a tag is not detected by the fixed reader.

RFID

3.12.2 Lane Controller with Industrial PC

Toll Lane Controller is located within the Electronic Enclosure placed inside each toll booth which are connected to the common server and are capable of independent storage of data.



Lane Controller in Toll Booth at TP

3.12.3 Automatic Vehicle Classification (AVC) Sensors

The AVC equipment comprises of a pair of height sensor poles, axle sensors and inductive loops. The height detector has a high sensing resolution and detects height when object blocks the path. The presence of vehicle is detected by inductive loop. The loop sensors embedded on the pavement trigger the AVC height sensors located on parallel pillars.

AVCC at TP

3.12.4 Automatic Lane Barrier

Boom barriers installed on all lanes are in working condition and have a working time of 0.6 - 0.9 s. Automatic Lane Barrier is used to allow only authorized vehicles to pass through the lane. The barrier is activated only on generation of user fee receipt or other relevant vehicle processing activity. Torque motor powers the barrier for raising and lowering the boom. The motor can be blocked at any position without causing any damage. In the event of power failure, the boom is automatically raised. The boom weight is exactly balanced by built-in springs.

ALB at TP

3.12.5 Lane Traffic Light (LTL) and User Fare Display (UFD)

Lane Traffic Light (LTL) is used to instruct vehicles to stop or pass through the lane. The LTL is RED when the toll collector is expecting the vehicle at the booth. After the transaction is done; the LTL turns Green to instruct the vehicle to pass through the lane. The User Fare Display is a part of electronic toll collection equipment located at the toll booth. It is a mini variable message sign (VMS) made of Light Emitting Diodes (LED). The user fare display is used to display the toll fare that is due and that must be paid by the motorist and the classification of vehicle selected by the collector.

LTL at TP

3.12.6 Incident Capture Camera (AVC Camera)

The incident capture camera is installed on the island of the booth to capture the image of the vehicle from the back side. The AVC triggers the Image capture system.

AVC Camera

3.12.7 License Plate Image Capture Camera (LPIC)

License Plate Image capture camera is installed on a 3m pole facing incoming vehicle to capture the image of the vehicle number plate.

LPIC

3.12.8 Over Head Lane Signal (OHLS)

The **Overhead Lane Signal (OHLS)** for lane "Open" and "Close" sign consists of a pair of "GREEN" (arrow) and "RED" (cross) lights. The OHLS is located at the vehicle approaching side of the canopy to show the drivers whether the lane is open or closed.

OHLS at TP

3.12.9 Toll Booth Equipment

Toll Booth Hardware / Equipment provided are:

- Toll Collector Display (Operator Monitor)
- Customized Industrial Keyboard
- Receipt Printer
- Intercom Slave unit
- Bar code reader
- Violation Light and alarm
- Manual Booth Control (MBC)
- Booth Camera

The operator monitor termed as Toll Collector Display (TCD) is located on the toll collector's desk. It is the system's interface to the toll collector, to display the status of transactions and status of the lane peripherals.

The keyboard on the toll terminal is a programmable keyboard for Registration of toll operations and is customized for different vehicle types and type of ticket.

TBE

Thermal Printers are installed at the toll booths to print tickets. Intercom slave unit facilitates communication with the master unit located in the control room.

Violation system has an alarm switch which is triggered whenever there is a violation such as run-through happening on the lane. When there is an emergency, a foot switch pressed by the booth operator alerts the control room.

Booth Cameras are provided on the inside roof corner of the booth to provide surveillance through CCTV screen located in the control room. Manual Booth Controller is used to release exempt vehicles.

3.12.10 Medium Speed Weigh in Motion (MSWIM)

Medium Speed Weigh in Motion (MSWIM) is installed on entry lanes of Toll Plaza.

MSWIM at TP

3.13 Plaza Equipment

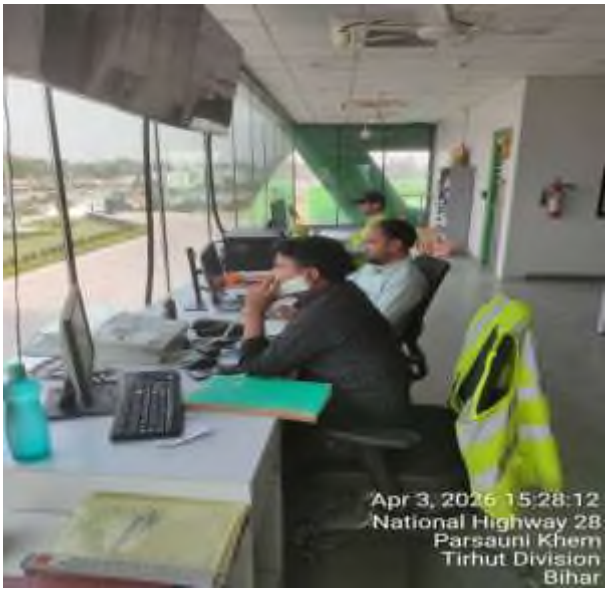
3.13.1 TMS Server

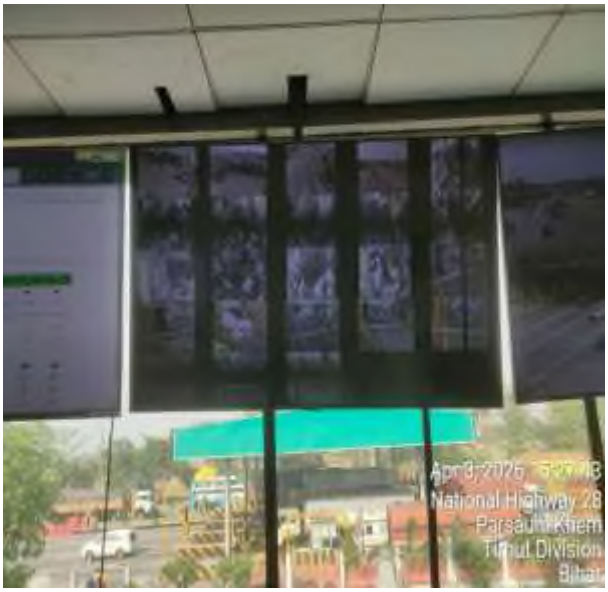
Plaza Server is provided in a hot standby configuration and provided with port non-POE network switch and Port PoE switch. Internet connectivity is available through one lease line (Airtel) and Jio WiFi module. Firewall with Sophos antivirus is provided.

Server

3.13.2 55” LED screen for CCTV monitoring

55” LED screen for CCTV monitoring installed at the toll plaza admin block provides view of all the toll booths, important zones within the plaza where cash transactions take place (server room, control room, cash up).





Control Room

The toll plaza manager is able to observe the activities at the toll lanes and toll booth. When the toll collector calls up on the intercom, the manager is able to comprehend the situation at the lane by a zoomed view of the particular lane.

3.13.3 Workstations in Control Room, POS room

Workstations are available in control room (lane monitoring, administration, and audit), cash room and PoS.

3.14 Advanced Traffic Management System (ATMS)

Advanced Traffic Management System (ATMS) installed for the project road is controlled by the ATMS center at the toll plaza location (km. 467.700). As per Concession agreement ATMS shall conform to ATMS Policy guidelines (2016) which comprises of the following:

- Automatic Traffic Counter cum Classifier (ATCC)
- Mobile Radio communication system
- Emergency Call Box
- Portable Weigh in Motion
- Meteorological Data system
- Variable Message Signboards (VMS)
- CCTV system
- Video Incident Detection System (VIDS)
- Vehicle actuated Speed Display (VASD)

Status of these systems at site are described below:

3.14.1 Automatic Traffic Counter cum classifier (ATCC)

Automatic Traffic Counter cum Classifiers (ATCC) is installed at km. 467+290 and at km. 450+510.

ATCC

3.14.2 Mobile Radio communication System (MRCS)

Mobile Radio communication System (MRCS) is not yet installed. Application for MRCS UHF band has been sought from WPC, DoT, Ministry of Communications which is not yet allocated.

3.14.3 Emergency Call Boxes (ECB)

It is not installed at site.

3.14.4 MET System

Meteorological sensors comprise of sensors to measure the atmospheric temperature, humidity, pavement surface temperature, visibility and equipment for measuring wind speed and direction and installed at Toll Plaza at km. 467+700.

MET

3.14.5 Variable Message Signboards (VMS)

Variable message sign boards are installed at 17 locations out of which 4 nos. are full and 13 nos. are compact type. These display specific messages to the users based on the prevailing conditions on the highway. The message can be changed at any point of time from the HTMS centre. About 250 customised messages can be stored on the system.

km. 518+550-RHS

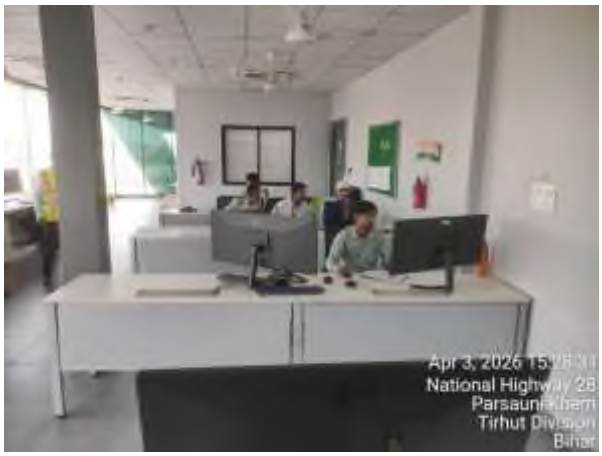
km. 483+900-RHS

km. 440+650-LHS

km.460+450-LHS

3.14.6 CCTV Surveillance Cameras

Surveillance Cameras are installed at 56 locations along the project corridor. The ATMS control room has video wall to monitor these locations through the cameras installed.



At Toll Plaza Building

km. 519+750

km. 516+800

km. 483+900

3.14.7 Vehicle Actuated Speed Display (VASD)

VASD is installed at 12 locations each on LHS and RHS.

km. 491+800-RHS

km. 456+100-RHS

km. 450+350-LHS

km. 471+600-LHS

3.14.8 Adequacy of Toll Collection System and ATMS

- Adequacy - All lanes are hybrid ETC system as stipulated by NHAI in technical specifications of Hybrid ETC system. NHAI has approved maintenance costs for TMS. TMS shall be upgraded every 5 years, at the cost of the authority.
- Advanced Traffic Management System (ATMS) installed is as per specifications required by the Authority and in working condition. Some components such as ECB and MRCS have not been installed.

3.15 Truck Layby

There are 14 Nos. of truck lay-bye in the Project Road. The photographs taken during the site visit are presented below.

Figure 3-23 Photographs of Truck Lay-bye

km. 450+400-LHS

km. 456+200-LHS

km. 475+680-RHS

km. 475+850-RHS

3.16 Traffic Aid Post and Medical Aid Post

Traffic Aid Post and Medical Aid Post have been shifted to newly constructed buildings at Toll Plaza. It is being maintained by the Concessionaire.

Figure 3-24 Photograph of Traffic Aid Post / Medical Aid Post

Medical Aid Post Ambulance

Medical Aid Post Hydra Crane

3.17 Toilet Block

The Concessionaire has constructed 02 No. of Toilet Block along the Project Road at Toll Plaza. The photographs taken during the site visit are presented below.

Figure 3-25 Photograph of Toilet Block

3.18 Bus Bays and Passenger Shelters

The Concessionaire has constructed 20 Nos. of bus bays and passenger shelters along Project Road. The photographs taken during the site visit are presented below.

Figure 3-26 Photograph of Passenger Shelter

km. 515+100-RHS

km. 513+380-RHS

km. 494+550-LHS

km. 505+300-LHS

3.19 Balance Work Status

During the site visit, it is observed that the Concessionaire has completed most of the civil work. However, due to unavailability of land the following work is balance at site and the same has been confirmed by the IE vide their letter no. CPCPL/IE/03-24/315 Dated 27.03.2024 and letter no. CPC/IE/06-24/335 Dated 14.06.2024. The balance work details are as below.

The same is presented as below:

- The civil work of toll plaza building is completed.
- ATMS and other civil work has been completed, and IE has confirmed for the same in their letters (COD).
- Work between km. 455+400 to km. 455+850 (BHS) i.e. service road drain and its associate work etc. is in progress. It is being delayed due to LA and not shifting the utility. However, as on date Concessionaire has started the SR work where utility shifting, and LA has done.

Sr. No.	Description	Unit	Balance Quantity	Chainage (km)	Remark
1	Service Road	km	0.175	455+590 to 455+765	LHS
2	Drain	km	0.174	455+596 to 455+770	LHS
3	PGR	km	0.113	455+587 to 455+700	LHS

- During visual condition survey, it is observed at site, NHAI has awarded new Structures and Service Road work under COS through separate tender. NHAI has appointed M/s. Dhariwal Builtech. Ltd. With JV M/s. Evarascon Uarpal to execute these COS work vide their letter no. NHAI/PIU-DBGVUP's/DBL/ATMS/1465 Dated 29.11.2024. Details are as under.

Sr. No	Chainage (km)		Length (m)	Location	Structure Name	Contractor Name	Work Status
	From	To					
1	502+960	503+820	860	Kharika Chowk	LVUP	M/s Dhariwal Builtech Limited.	In Progress
2	507+270	508+090	820	Near Maa Chhinmastika Mandir	LVUP	M/s Dhariwal Builtech Limited.	In Progress
3	509+200	510+210	1010	Kanti Thermal Power	FLYOVER	M/s Dhariwal Builtech Limited.	In Progress
4	510+210	511+100	890	Neta Chowk	LVUP	M/s Dhariwal Builtech Limited.	In Progress
5	469+550	470+500	950	Banjhula Chowk	VUP & LVUP	M/s EVRASCON UARPL JV	In Progress
6	486+850	488+040	1190	Bargi Bazar	-	M/s EVRASCON UARPL JV	Work yet to start
7	492+100	493+425	1325	Kali Mandir Motipur	-	M/s EVRASCON UARPL JV	Work yet to start
8	496+700	497+870	1170	Pansalwa Chowk	Widening of Box Culvert	M/s EVRASCON UARPL JV	In Progress
9	498+824	499+790	966	Narriyar	-	M/s EVRASCON UARPL JV	Work yet to start
10	453+650	455+055	1405	Piprakothi	Service Road	M/s EVRASCON UARPL JV	In Progress

- During site visit it has been observed at site that NHAI has awarded some additional work under COS to annuity concessionaire vide their letter no. NHAI/2025/PIU-Muzaffarpur/TOT/Kot-Mehsi/IE/1704 dated 02.02.2026. Details are as under:

Sr. No.	COS Item	Amount (Rs.)
1	Construction of missing RCC drain (5870 m + 1093 m)	8,26,29,162/-
2	Shifting of 11 KVA Pole & DTR Metering	5,06,777/-
3	Development of Junction (VUP)	48,01,58,356/-
	Total Cost	**56,32,94,295**

3.20 Operation and Maintenance

3.20.1 O&M Contract

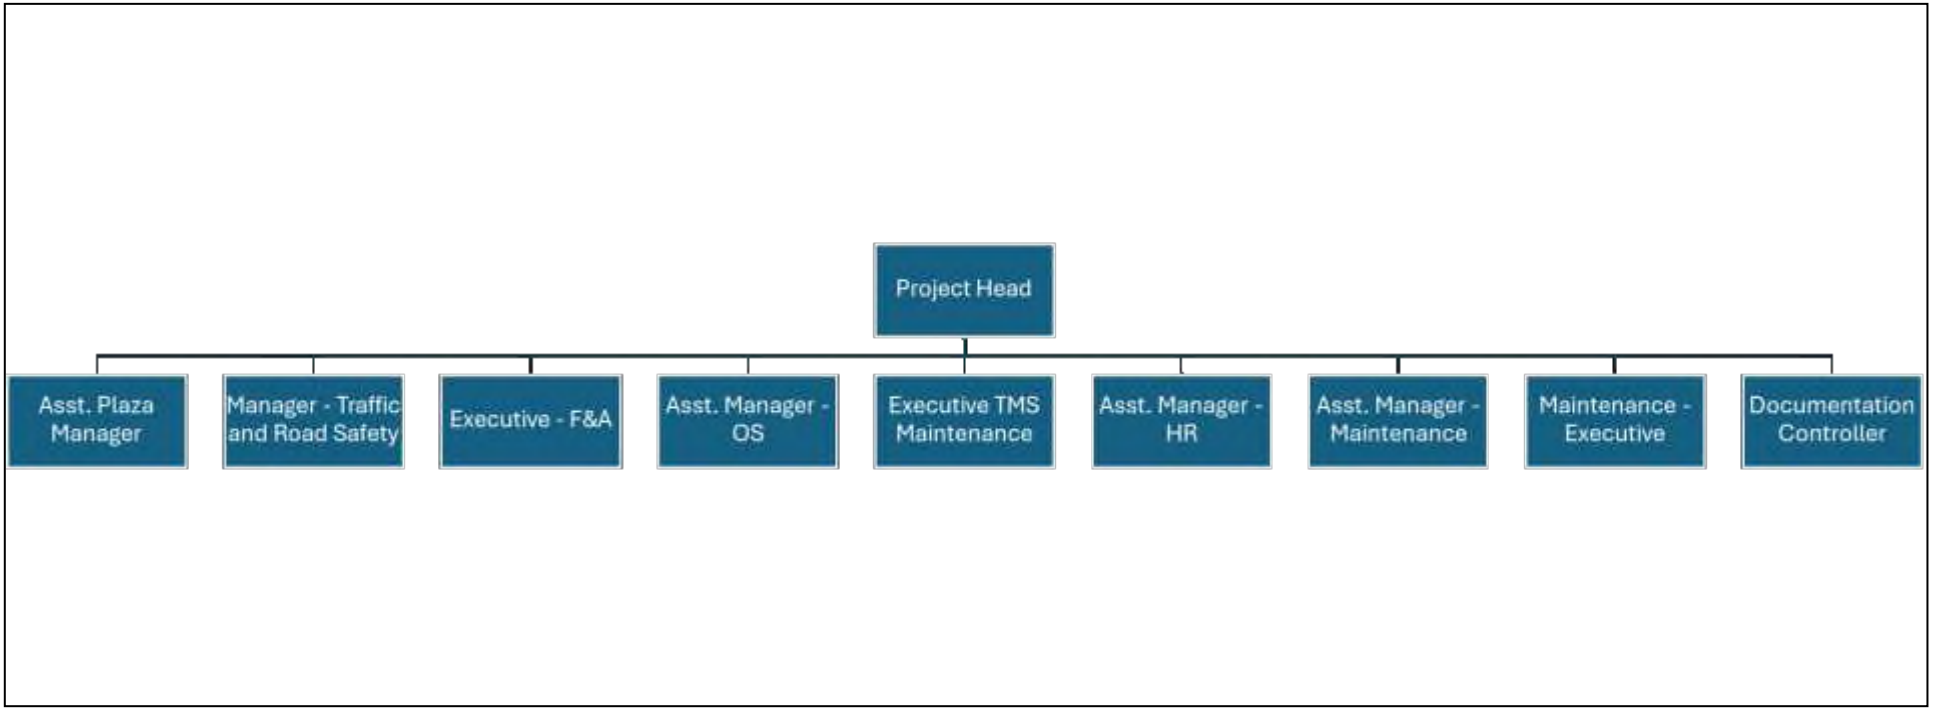
As per Clause 15.1 of the Concession Agreement, the Concessionaire shall operate and maintain the Project Road by itself, or through O&M Contractors and if required, modify, repair, improve the Project Road to comply with Specifications and Standards, and other requirements set forth in the Agreement through Good Industry Practice, Applicable Laws and Applicable Permits and manufacturer's guidelines and instructions with respect to toll systems. The Operation and Maintenance activities shall confirm to all the requirements laid down in MoRT&H, IRC Specifications, and the Concession Agreement.

The Concessionaire has outsourced for carrying out the activities related to operation and maintenance of the Project Road including toll operation services, security services, AMC for TMC and AMC for DG set.

3.20.2 Organization Chart

The Concessionaire has given the Organization Chart at site for Operation and maintenance. Accordingly, there is 01 Project Head, 01 Plaza Manager, 01 Manager (Traffic and Road Safety), 01 Asst. Manager (IT), 01 Executive (F&A), 01 Asst. Manager (HR), Manager (Maintenance) to carry out O&M activities. The team controls the maintenance activities. However, the maintenance work is undertaken and executed through competent subcontractors.

Organization Chart



3.20.3 Operation

Operation cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, and other miscellaneous expenses. The Concessionaire has provided the expenses occurred towards operation expenses for past years. Necessary assumptions have been made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area.

The Operation Cost is presented in the subsequent chapter.

3.20.4 Routine Maintenance

The Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey.

Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Maintenance Cost is presented in the subsequent chapter.

4 PAVEMENT INVESTIGATION AND ASSESSMENT

4.1 General

The project is currently under the Operation and Maintenance stage. The concession period of the project is 30 years from the Appointed Date (as TOT Package i.e., 20th October 2020) including construction period.

4.2 Axle Load and VDF

The Concessionaire has conducted the Axle Load Survey on Project Road at km. 467+700 (near Toll Plaza) on 16th March 2020 and 17th March 2020. The summary of Vehicle Damage Factor (VDF) calculated as provided by the Concessionaire is tabulated below.

Table 4-1 Vehicle Damage Factor

Sr. No.	Vehicle Type	Direction	
		Muzaffarpur - Kotwa	Kotwa - Muzaffarpur
1	BUS	1.954	1.477
2	LCV	1.712	0.602
3	2-Axle	3.039	2.811
4	3-Axle	9.576	5.875
5	MAV	14.097	11.301

4.3 Design Traffic

Traffic in Million Standard Axles (MSA) for the homogeneous section based on the historical traffic data provided by the Concessionaire, current traffic has been used for future projections and the estimated design MSA is computed and presented in subsequent table.

For the estimation of design MSA, Actual Traffic Growth Rates as provided by the Concessionaire were used.

Table 4-2 MSA Calculation

Year	MSA (LHS)	Cumulative MSA (LHS)	MSA (RHS)	Cumulative MSA (RHS)	Remarks
2026-27	7.36	**7.36**	5.67	**5.67**	
2027-28	7.70	**15.06**	5.95	**11.62**	
2028-29	8.06	**23.12**	6.24	**17.86**	MM Cycle on 4 Lane highway
2029-30	8.42	**31.54**	6.53	**24.39**	
2030-31	8.79	**40.33**	6.83	**31.22**	
2031-32	9.18	**49.51**	7.14	**38.36**	
2032-33	9.61	**59.12**	7.49	**45.85**	
2033-34	10.06	**69.18**	7.84	**53.69**	
2034-35	9.43	**78.61**	7.37	**61.06**	
2035-36	9.58	**88.19**	7.50	**68.56**	MM Cycle on 4 Lane highway
2036-37	10.02	**98.21**	7.85	**76.41**	
2037-38	10.48	**108.69**	8.22	**84.63**	

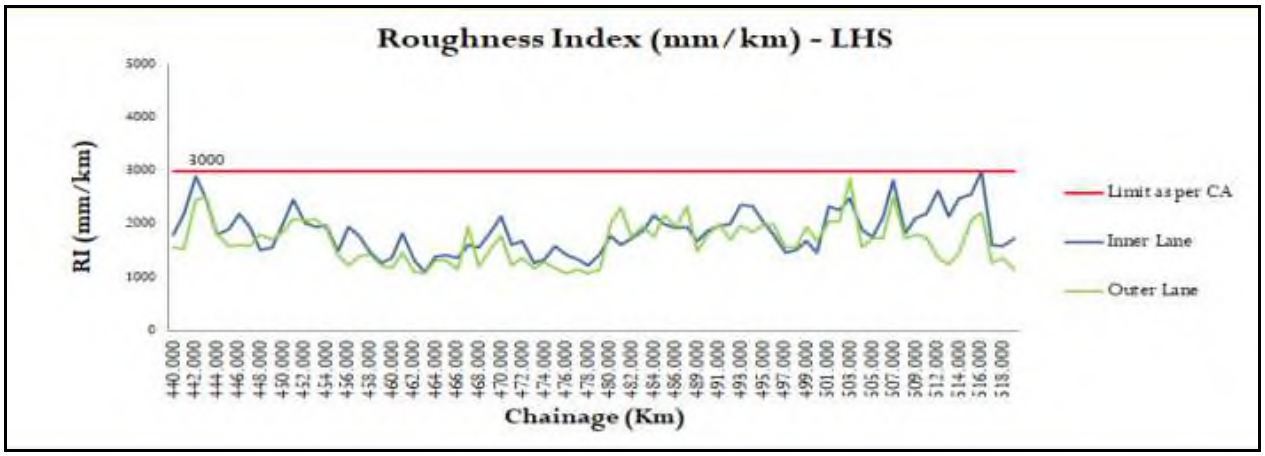
Year	MSA (LHS)	Cumulative MSA (LHS)	MSA (RHS)	Cumulative MSA (RHS)	Remarks
2038-39	10.96	**119.65**	8.61	**93.24**	
2039-40	11.46	**131.11**	9.01	**102.25**	Crossing 40000 PCU's
2040-41	11.98	**143.09**	9.43	**111.68**	Crossing 40000 PCU's
2041-42	12.52	**155.61**	9.86	**121.54**	Crossing 40000 PCU's
2042-43	13.08	**168.69**	10.31	**131.85**	Preparation of DPR
2043-44	13.66	**182.35**	10.78	**142.63**	Preparation of DPR
2044-45	14.26	**196.61**	11.27	**153.90**	Six Laning
2045-46	14.89	**211.50**	11.77	**165.67**	Six Laning / End of Concession Period as per target revenue
2046-47	12.43	**223.93**	9.84	**175.51**	
2047-48	13.05	**236.98**	10.34	**185.85**	
2048-49	13.61	**250.59**	10.79	**196.64**	
2049-50	14.19	**264.78**	11.25	**207.89**	
2050-51	14.76	**279.54**	11.72	**219.61**	End of concession period as per Appointed date & CA

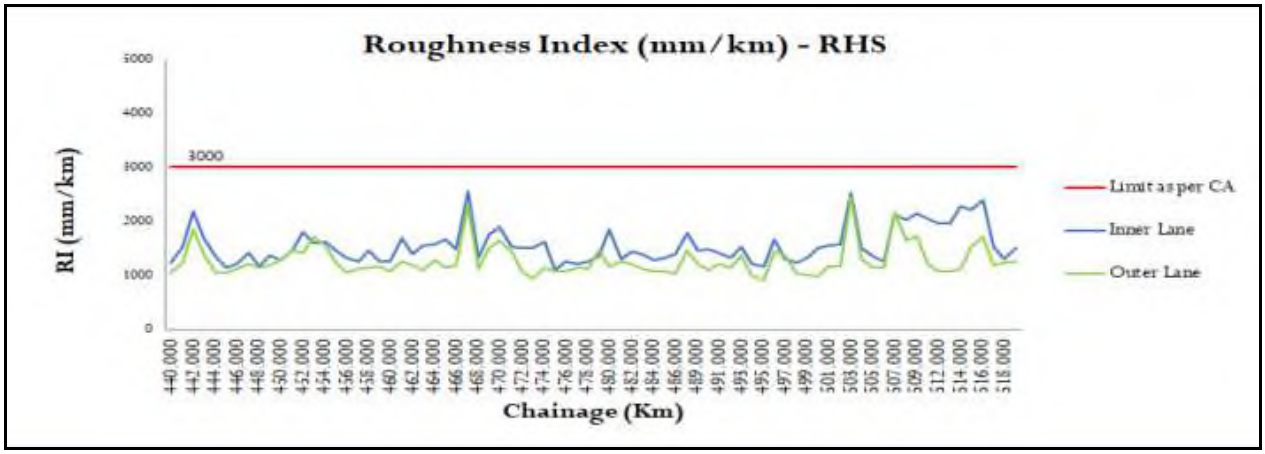
4.4 Network Survey Vehicles (NSV) Survey

The Concessionaire has provided NSV survey data conducted in November 2025. The NSV data is used to assess the riding quality and pavement condition of project road. The summary Roughness Index is given in the table below:

Table 4-3 Roughness Index Summary

Rating	Roughness Value	Length (km)			
		LHS		RHS	
		Inner Lane	Outer Lane	Inner Lane	Outer Lane
Good	<2000	53.30	60.90	67.30	73.90
Fair	2000-3000	23.60	16	9.60	3
Poor	>3000	0	-	-	-





4.5 Structural Investigations

Falling Weight Deflectometer survey was conducted for flexible pavement by the Concessionaire in FY 2025. The summary of the FWD survey report is presented in the table below.

Table 4-4 FWD Summary

Fatigue in BT Layer, N_f (MSA)	Length (km)			
	LHS		RHS	
	Inner Lane	Outer Lane	Inner Lane	Outer Lane
<50	-	2.00	2.00	13.00
50-100	19.00	19.00	30.00	4.00
100-200	21.00	16.70	-	32.70
200-300	13.70	16.00	18.70	-
300-400	-	-	-	1.00
400-500	-	-	-	-
>500	-	-	28.00	26.00
Total Length	**53.70**	**53.70**	**78.70**	**76.70**

From the above table, it is observed that the residual life of the pavement exceeds the cumulative design MSA up to FY 2029, i.e., up to the first Major Maintenance Cycle, except for 1 km on the LHS and 3 km on the RHS. These deficient stretches will be addressed under routine maintenance. Based on these observations, periodic maintenance of the project road has been proposed accordingly.

4.6 Test pit and Subgrade Investigation

The Concessionaire has carried out the subgrade investigation for Project Road. The results of the same as provided by the Concessionaire are tabulated as below.

Table 4-5 Test Results Summary of Natural Ground Soil Samples

Sr. No.	Location (Km.)	Side (LHS/RHS)	Soil Classification as per IS: 1498	Gradation: Percent by weight passing through the Sieve (IS:2720-IV)						Clay & silt content %	Atterberg Limits [IS :2720-Pt-V]			Modified Proctor Test (IS:2720-Pt-VIII)		4-Days Soaked CBR (%)	Free Swell Index (%)
				19.0 mm	10.0 mm	4.75 mm	2.0 mm	425 micron	75 micron		Liquid Limit (LL) %	Plastic Limit (PL) %	Plasticity Index (PI)	Max. dry density (gm/cc)	OMC (%)		
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	19	18

4.7 Periodic Maintenance Strategy

Unlike the old Concession Agreements where periodicity and threshold limits were clearly described for the major maintenance, the Concession Agreement of this project does not specify the periodicity or the threshold limits for carrying out the full-length periodic maintenance. Schedule-F of the Concession Agreement specifies the threshold limits and the timeline for carrying out repairs to the distresses during the operation period.

The maintenance thus can be carried out as and when required basis and to the compliance of Schedule-F requirement to maintain the road in serviceable condition. Only improvement to Riding Quality is expected if the roughness value exceeds 3000 mm/km.

As per Article 14 of CA, the Authority shall carry out capacity augmentation under EPC contract if traffic exceeds 40,000 PCU for three consecutive accounting years. As per the traffic study report submitted by the Company it is observed that the project traffic crosses 40,000 PCU in FY 2040, FY 2041, FY 2042. Assumption has made that execution of 6-laning of project highway will start in the year 2045 or 2046. It is also assumed that during the 6-laning of project highway, overlay of existing four lane road will be the part of the capacity augmentation. As informed by the Concessionaire, major maintenance for the entire length of the Project Road was carried out in FY 2022. The major maintenance cycle is adjusted accordingly.

The table below shows the major/ periodic maintenance cycle throughout the concession period for the Project Road.

Table 4-10 Major Maintenance Cycle

Sr. No.	Year	Main Carriageway	Service Road
1	FY 2027 to FY 2028	-	-
2	FY 2029	Major Maintenance with 30 mm BC (PMB) (100%) + Milling & 50 mm DBM (VG-40) (10%)	Major Maintenance with 30 mm BC (VG-30) (50%) + Micro-surfacing (50%)
3	FY 2030 to FY 2035	-	-
4	FY 2036	Major Maintenance with 30 mm BC (PMB) (100%) + Milling & 50 mm DBM (VG-40) (5%)	Major Maintenance with 30 mm BC (VG-30) (50%) + Micro-surfacing (50%)
6	FY 2037 to FY 2044	-	-
8	FY 2045 to FY 2046	Assumption of Capacity Augmentation to Six Lane Configuration	
9	FY 2046*	End of Concession Period	

**Actual end of concession period as per Concession Agreement is October 2051. However, as per traffic details submitted by the Concessionaire, the revised concession period is up to FY 2046 as per provision of Article 14 of CA.*

The projected cost for periodic / major maintenance is presented in the subsequent chapter.

5 COST ESTIMATES

5.1 General

Based on the assessment carried out in previous chapters, various costs were worked out. The costs are divided into following categories.

I. Balance Works Cost
II. Routine O&M Cost
III. Major Maintenance Cost
IV. Periodic Replacement of TMS / ATMS system

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and escalation.

5.2 Rate Assumption

Following assumptions are considered for unit rates of various items while estimating the cost:

1. Unit rates of different items (BC, DBM, Concrete, Road markings etc.) are calculated as per PWD SoR 2026. The input rates for PWD SoR were adopted as below:

2. **Manpower and labour**: As per applicable minimum wages published by Schedule of Rates, Government of Bihar.

3. **Bitumen**: Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. Same discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.

Therefore, bitumen prices are considered as per the forecast of Client. Current published of bitumen are considered for unit rates calculation for FY 2027. Average 10 years of price of bitumen are considered for unit rates calculation for FY 2028 and onwards, since bitumen prices have been range bound over the last five-six years. Following rates of bitumen are considered.

Table 5-1 Bitumen Rates - Ex-MI Supply excluding discount and GST

Supply Location	Applicability of Rates	Product	Current Published Price (FY 2027)	Long term price (Avg last 10 years)
Mathura	All States	VG-10	45,102	35,125
		VG-30	46,402	36,137
		VG-40	48,962	38,131
Panipat	All States	VG-10	45,102	35,125
		VG-30	46,402	36,137
		VG-40	48,962	38,131
Koyali	All States	VG-10	47,102	37,125
		VG-30	48,402	38,137
		VG-40	51,082	40,251
Haldia	All States	VG-10	46,602	35,683
		VG-30	47,402	36,295
		VG-40	49,962	38,256
Barauni	All States	VG-10	47,132	36,213

Supply Location	Applicability of Rates	Product	Current Published Price (FY 2027)	Long term price (Avg last 10 years)
		VG-30	48,432	37,325
		VG-40	50,992	39,286
CPCL	Kerala	VG-10	47,402	35,519
		VG-30	48,402	36,395
		VG-40	50,762	38,120
CPCL	Tamil Nadu	VG-10	47,902	36,019
		VG-30	48,402	36,395
		VG-40	50,962	38,320
CPCL	Telangana and Andhra Pradesh	VG-10	44,602	32,719
		VG-30	45,402	33,395
		VG-40	47,962	35,320
CPCL	Karnataka	VG-10	44,602	32,719
		VG-30	45,402	33,395
		VG-40	47,962	35,320

a. Sand and Aggregate: Market rates are considered from the quarry located nearest to Project Road.

b. Cement: Market rates are considered from the nearest local market.

c. Steel : Rate of steel is taken from Market rate.

d. Machinery Hire charges: Hire charges for the machinery are considered in accordance with applicable PWD SOR.

e. Actual Rates of items as per work order: The rates of road marking, road stud, kerb raising, micro surfacing, milling, aggregate rates etc. are considered as per the work order shared by the client.
Goods and Service Tax (GST) is considered as 18% as per the latest Government Guidelines.

Summary of Unit Rates worked out using Standard Data Book adopted for major items is given below.

Table 5-2 Summary of Unit Rates

Sr. No.	Item Description	Unit	Rates (Rs.)
1	Dense Bituminous Macadam (VG-40)	Cum	10,833
2	Bituminous Concrete (VG-30)	Cum	11,669
3	Bituminous Concrete (PMB)	Cum	14,248
4	Milling	Sqm	92
5	Micro-surfacing	Sqm	162
6	Kerb Re-laying	Rmt	311
7	Road Marking	Sqm	625
8	Road Studs	Nos.	296

5.3 Balance Work Cost

The Concessionaire has provided the detail of balance work. The summary of balance cost is presented in below table.

Table 5-3 Summary of Balance Works

Sr. No.	Items of Work	Cost (Rs.)
1	Earth Work	13,52,632
2	Subbase, Base (Non-Bituminous) & Shoulder	91,26,847
3	Bases and Surface course (Bituminous layer)	1,49,60,241
4	Box Culvert	18,99,198
5	Pipe Culvert	30,19,368
6	Junction	95,23,644
7	Drain	10,90,554
8	Miscellaneous	39,93,214
	Total Balance Amount (Rs.)	**4,49,65,699**
	Total Balance Amount (Cr.)	**4.50**

5.4 Routine O&M Cost

Routine O&M cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance, and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area. Same has been divided into following major heads.

1. Salary and Welfare Expenses
2. Tolling Operations Services
3. Incident Management Services
4. Electricity and Diesel Charges
5. TMS / HTMS / System Expenses
6. Office Operating Expenses
7. Vehicle Running Expenses
8. Professional Fees Expense
9. Insurance Expense
10. IE Fees
11. Horticulture & ROW Maintenance
12. Routine Maintenance Cost

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Operation and Maintenance cost (Routine O&M) is presented below. The detailed working of routine maintenance (Sr. No. 15 of below table) is presented in **Annexure-I**.

Table 5-4 Summary of Operation Cost

Sr. No.	Particulars	Amount after (FY 2027-45)	Amount after Capacity Augmentation (FY 2046)
1	Salary and Welfare Expenses	1,44,91,008	1,44,91,008
2	Tolling Operations Services	2,68,83,688	2,68,83,688
3	Toll Security Services	66,73,070	66,73,070
4	Incident Management & Emergency Services	3,38,63,048	3,38,63,048
5	Electricity and Diesel Charges	35,50,783	35,50,783
6	TMS / HTMS / System Expenses	48,09,046	75,75,936
7	Office Operating Expenses	37,22,696	37,22,696
8	Vehicle Running Expenses	27,75,000	27,75,000
9	Professional Fees Expense	84,66,978	1,01,60,373
10	Community Development	19,44,294	19,44,294
11	Communication Expenses	3,62,250	3,62,250
12	Conveyance Expenses	3,95,182	3,95,182
13	Insurance Expense	2,04,17,728	2,04,17,728
14	IE Fees	46,10,454	46,10,454
15	Routine Maintenance Cost (Project Road)	3,69,62,427	4,91,00,048
16	Horticulture & ROW Maintenance	2,38,39,776	2,38,39,776
17	Miscellaneous including Contingency	53,17,808	54,97,020
	Total Cost (Rs.)	**19,90,85,236**	**21,58,62,354**
	Total Cost (Cr.)	**19.91**	**21.59**
	Per km Cost (Lakhs)	24.89	26.98

5.5 Major Maintenance Cost

The summary of Major Maintenance Cost is provided as below. The detailed working of the same is presented in **Annexure-II**.

Table 5-5 Summary of Major Maintenance Cost

Sr. No.	Year	Major Maintenance Cost (Cr.)	Remarks
1	FY 2027 to FY 2028	-	
2	FY 2029	100.10	
3	FY 2030 to FY 2035	-	
4	FY 2036	106.73	
5	FY 2037 to FY 2046	-	
Total Cost (Cr.)		**206.82**	

5.6 Periodic Replacement of TMS / ATMS System

Every 7 years, replacement of cost of major TMS / ATMS system is considered. The same is provided as below.

Sr. No.	Year	HTMS O&M / Replacement Cost (Cr.)	Remarks
1	FY 2027	8.77	
2	FY 2034	8.77	
3	FY 2041	8.77	
Total Cost (Cr.)		**26.31**	

5.7 Escalation Assumption

Following escalation has been considered for the O&M cost as provided by Client.

Table 5-6 Escalation

Year	Escalation	Year	Escalation
2026	-	**2042**	3.99%
2027	5.25%	**2043**	3.99%
2028	4.86%	**2044**	3.99%
2029	4.44%	**2045**	3.99%
2030	4.24%	**2046**	3.99%
2031	4.13%	**2047**	3.99%
2032	4.08%	**2048**	3.99%
2033	4.01%	**2049**	3.99%
2034	4.00%	**2050**	3.99%
2035	4.03%	**2051**	3.99%
2036	4.01%	**2052**	3.99%
2037	3.98%	**2053**	3.99%
2038	3.98%	**2054**	3.99%
2039	4.00%	**2055**	3.99%
2040	3.99%	**2056**	3.99%
2041	3.99%	**2057**	3.99%

5.8 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summaries yearly for remaining concession period along with escalation as mentioned in clause 5.7.

Escalated O&M Cost (in INR Cr)

	Year of expense	FY27	FY28	FY29	FY30	FY31	FY32	FY33	FY34	FY35	FY36	FY37	FY38	FY39	FY40	FY41	FY42	FY43	FY44	FY45	FY46

1 INTRODUCTION

1.1 Background

Cube Highways Fund Advisors Pvt. Ltd. (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InvIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an Infrastructure Investment Trust under the SEBI InVIT Regulations. Cube Highways Fund Advisors Pvt. Ltd. has appointed **M/s. FP Project Management Consultancy Services Private Limited** (hereinafter referred as "Technical Consultant" or "FPPM") to carry out Technical Due Diligence of Tiruchirappalli to Kallagam section from km. 0+000 to km. 38+700 in the State of Tamil Nādu (hereinafter referred as "Project Road").

M/s. SRIRANGAM INFRA PRIVATE LIMITED (SIPL) (hereinafter referred as "Concessionaire") is a special purpose vehicle (SPV) for operation, maintenance, and transfer of Tiruchirappalli to Kallagam section from km. 191+000 to km. 229+700 of NH-81 (from km. 0+000 to km. 38+700 of old NH-44). The project has been taken over by the Concessionaire in January 2023. The length of Project Road is 38.700 kms with one toll plaza at Kappalur village at km. 223+460.

Accordingly, the Technical Consultant has undertaken the work of assessment of operation and maintenance (O&M) cost based on site inspections and field investigations. The same is presented in this report.

1.2 Scope of Work

The detailed scope of work for conducting the technical due diligence of Project Road is presented as below:

- A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets.
- Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, As-built drawings, O&M manual, COD / PCOD certificate, punch list, previous major maintenance etc.
- Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, aaxle load, material investigations etc.
- Formulation of future major maintenance strategy
- Estimation of any initial expenses to be incurred due to deficiencies observed in diligence.
- Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period
- Estimation of Annual Operation expenses along with Systems cost (TMS / HTMS) till the end of concession period.
- Review of balance work cost for Project Road including estimation of quantities and item rates.

1.3 Our Approach Philosophy

1.3.1 Composition of Team

Our team consists of well-qualified Engineers and other professionals, whose experience covers all the skills and specializations required for undertaking such assignments. All the team personnel proposed are our regular employees and have a long and stable working relationship with our firm.

The Team Leader coordinates the activities between all the key staff who work closely together. The key staff is assisted by various support staff, who report to the respective key staff in their field of expertise. The Team Leader is the point of contact for Client on Technical Study.

The technical study includes review of all the available documents namely:

a) Concession Agreement including Technical Schedules
b) O&M Contract, work order and their provisions
c) Quality of construction based on available data, design, and drawings.
d) Documents on historical expenditure on operation and maintenance
e) O&M cost schedule for the concession period
f) Review of Completion / Provisional Completion along with punch list items
g) Review of recent pavement surveys conducted.
h) Correspondence regarding scope of works and during O&M
i) Recent O&M Report submitted to Authority.
j) Toll operation manual / ATMS related documents

The review of above documents is the first step towards accomplishment of the task. This gives a complete idea of the project and is used as input data for preparation of report after necessary analysis.

1.3.2 Site Visit and Data Collection

A team of experts from various streams has carried out the preliminary site visit to understand the assessment of project assets, mainly condition of the pavement and structures.

- The site visit is undertaken for detailed reconnaissance and visual pavement condition assessment.
- The condition assessment of major structures by visual inspection
- The information like material sources and the probable cost is collected for the purpose of cost estimate.

The detailed design / drawings viz. Plan & L-sections, drainage design, structure design, layout drawings for project facilities like toll plaza, bus bay, truck lay-byes, highway lighting facilities etc. are studied. Also, design / drawing and provision pertaining to road furniture are studied.

The information on availability of material in the vicinity is gathered. It has direct impact on cost of maintenance work and balance work.

The basic approach for preparation of cost estimates for operation and maintenance is as per the practice of State PWD / MORT&H in respect of highways and structures.

1.3.3 Data Analysis

Based on the study of the available information and preliminary site visits, the consultants share their preliminary observations with the Client based on the evaluation of the technical data and reports provided by the Client.

1.4 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Company. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyze the same as per the best engineering / industry practices.

The site visit and inspection were carried out between the periods from **28th February 2026 to 2nd March 2026**.

The report is organized with the following chapters for easy understanding of various issues.

Chapter 1 **Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for due diligence studies**.**

Chapter 2 **Project Description:** The chapter describes existing project features, and overview of project development.

Chapter 3 **Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on site visit**.**

Chapter 4 **Pavement Investigation and Assessment:** This chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance

Chapter 5 **Cost Estimates**: This chapter summarizes the forecast for O&M and major maintenance costs over the remaining concession period

2 PROJECT DESCRIPTION

2.1 Introduction

National Highways Authority of India signed the Concession Agreement with **M/s. SRIRANGAM INFRA PRIVATE LIMITED**, is a company promoted by Cube Highway or company a Special Purpose Vehicle (SPV) formed for implementing this project on 11th April 2018. The Appointed Date for the Project Road is 01st March 2019.

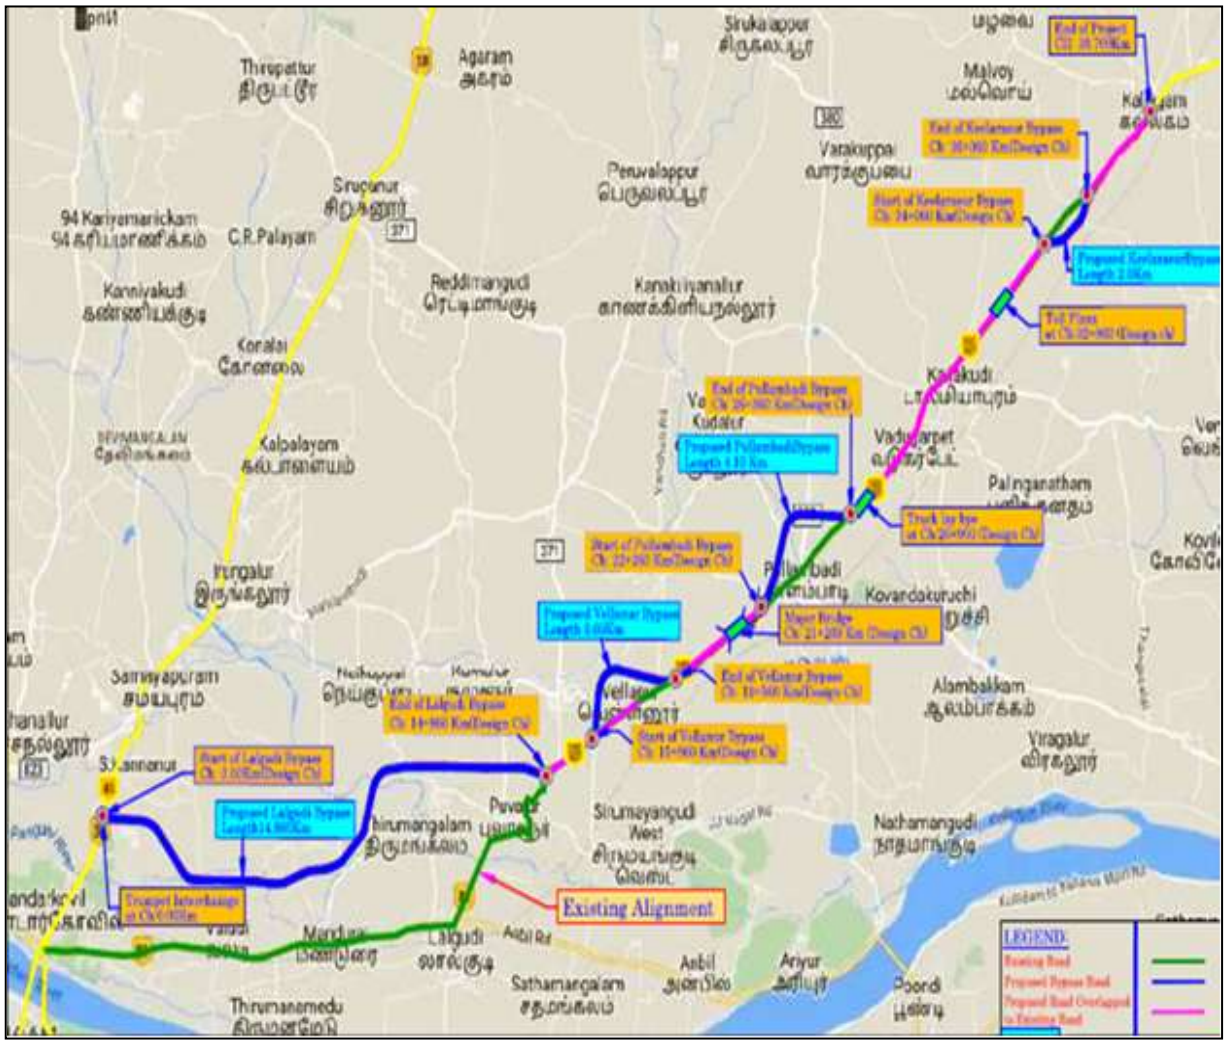
The project has been developed under HAM (Hybrid Annuity Mode) with a concession period of 15 years from COD. The end of the concession period is in the year 2038.

2.2 Location

The Project Road is part of National Highway No. 81 of Tiruchirappalli to Kallagam section in the state of Tamil Nadu, total project length is 38.700 kms.

The Location Map of the Project Road is presented below.

Figure 2-1 Location Map



The photographs taken during the site visit are presented below.

Figure 2-2 Start and End of the Project Road

Start of the Project Road at km. 191+000

End of the Project Road at km. 229+700

2.3 Climate

As the is on the Deccan Plateau, the days are extremely warm and dry; evenings are cooler because of cold winds that blow from the South-East. From June to September, the project experiences a moderate climate tempered by heavy rain and thundershowers. Rainfall is heaviest between October and December because of the North-East monsoon winds, and from December to February the climate is cool and moist. The average annual rainfall is 841.9 mm (33.15 in). Fog and dew are rare and occur only during the winter season. The project experiences a dry-summer tropical savanna climate with no major change in temperature between summer and winter. The climate is generally characterized by high temperature and low humidity, with an annual mean temperature of 28.9 °C (84.0 °F) and monthly average temperatures ranging between 25 °C (77 °F) and 32 °C (90 °F). The warmest months are from April to June

2.4 Terrain

The Project Road traverses through plain terrain.

2.5 Abutting Land Use

The land use along the Project Road is predominantly agriculture or barren with intermittent built-up area.

2.6 Right of Way

The existing Right of Way (ROW) for the Project Road is 45 m throughout its length.

2.7 Existing Utilities

During widening of the Project Road, various affected utility services were shifted to proposed ROW. The different types of utilities found along the road include, electrical poles, telephone poles, OFC cables, etc.

2.8 Development as per Schedule-B

The Project Road from Tiruchirappalli (km. 191+000) to Kallagam (km. 229+700) has been developed as a four-lane divided carriageway with median width of 3.50 m, service road at some underpass locations and other arrangements. The Project Road passes through rural as well as built-up sections.

Following is the Scope of Work as per Schedule-B of Concession Agreement.

Table 2-1 Details of Scope of Work

Sr. No.	Type of Structure	Unit	Scope	Remark
1	O&M of Main Carriageway	km.	38.70	
2	Construction of Service Road	km.	30.72	Both side
3	Construction of Major Bridge	Nos.	01	
4	Repair & rehabilitation of Minor Bridges, widening of existing Minor Bridges	Nos.	02	
5	Minor Bridges-Reconstruction	Nos.	03	
6	Minor Bridges-New construction	Nos.	16	
7	Trumpet Interchange	Nos.	01	
8	Vehicular Underpass (VUP & LVUP)	Nos.	17	VUP-13 Nos., LVUP-04 Nos.
9	Box Culverts	Nos.	89	
10	Minor Intersections	Nos.	10	
11	Bus Bays	Nos.	35	
12	Truck Parking	No.	02	
13	Toll Plaza	No.	01	

3 CONDITION ASSESSMENT OF PROJECT ROAD

3.1 Pavement

The Project Road is four lane divided carriageway and generally has paved carriageway of 9.0 m with earthen shoulder of 1.5 m on either side. The Project Road has a median width of 3.50 m throughout its length.

The entire stretch of Project Road is constructed with flexible pavement and rigid pavement. The pavement type for the Toll Plaza including taper is of rigid pavement.

3.1.1 Pavement Condition Survey

Pavement condition survey was carried out from **28th February 2026 to 2nd March 2026** through visual inspection for the entire project length. From the visual inspection, it is found that the pavement condition of the Project Road is found to be Good to Fair.

Some of the photographs taken during the site visit are presented as below.

3.2 Service Road / Slip Road

The width of the service road varies from 5.5 m to 7.5 m. The service road is constructed in built-up area and adjoining underpass locations. The Project Road has total service road length of 30.720 kms.

The photographs taken during the site visit are presented below.

Figure 3-2 Photographs of Service Road

Service Road at km. 201+500 (RHS)

Service Road at km. 204+100(LHS)

Service Road at km. 220+300 (LHS)

Service Road at km. 221+310 (LHS)

3.3 Junctions / Intersections

There are total 38 No. of junctions / Intersections along Project Road, all of which are minor junctions only.

The photographs taken during site visit is presented as below:

Figure 3-3 Photographs of Junctions

Minor Junction at km. 220+500

Minor Junction at km. 201+500

3.4 Condition Survey of Bridges

The inventory of structures including major bridges, minor bridges, underpasses and culverts is presented in table as below:

Table 3-1 Details of Summary for Structures

Type of Structure	Total Number of Structures
Major Bridges (MJB)	01
Minor Bridges (MNB)	21
Vehicular Underpass (VUP)	13
Light Vehicular Underpass (LVUP)	05
SVUP / PUP	02
Culverts (including crossroad culverts)	111

The detailed condition survey of structures was carried out by visual inspection. The observations and findings are presented in table below.

Table 3-2 Condition Survey of Major Structure

Major Bridge

Sr. No.	Chainage as per CA (km)	Chainage as per Site (km)	Structure	Span	Length (m)	Remarks
1	21+268	212+269	MJB(W)	16 x 10.5	168.00	Overall structure is in good condition. Pavement, Expansion joints are in sound condition on both sides.

Minor Bridge

Sr. No.	Chainage as per CA (km)	Chainage as per Site (km)	Structure	Span	Length (m)	Remarks
1	2+978	193+978	MNB(N)	2 x 10.00	20.00	Structure is in sound condition.
2	3+082	194+082	MNB(N)	1 x 8.00	8.00	Structure is in sound condition.
3	5+190	196+190	MNB(N)	2 x 10.00	20.00	Structure is in sound condition.
4	5+762	196+762	MNB(N)	1 x 8.00	8.00	Structure is in sound condition.
5	9+420	200+420	MNB(N)	2 x 10.00	20.00	Structure is in sound condition.
6	11+520	202+520	MNB(N)	1 x 8.00	8.00	Structure is in sound condition.
7	16+668	207+668	MNB(N)	1 x 10.00	10.00	Structure is in sound condition.
8	16+785	207+785	MNB(N)	2 x 10.00	20.00	Structure is in sound condition.
9	17+832	208+832	MNB(N)	2 x 8.00	16.00	Structure is in sound condition.
10	23+273	214+273	MNB(N)	1 x 12	12.00	Structure is in sound condition.
11	23+419	214+419	MNB(N)	1 x 12	12.00	Structure is in sound condition.
12	23+620	214+620	MNB(N)	1 x 12.00	12.00	Structure is in sound condition.
13	24+336	215+336	MNB(N)	2 x 12.00	24.00	Structure is in sound condition.
14	25+740	216+740	MNB(N)	1 x 12	12.00	Structure is in sound condition.
15	28+715	219+715	MNB(R)	2 x 10	20.00	Structure is in sound condition.
16	30+660	221+660	MNB(R)	1 x 10	10.00	Structure is in sound condition.
17	32+055	223+055	MNB(R)	2 x 10 x 2.5	20.00	Structure is in sound condition.
18	33+560	224+560	MNB(W)	4 x 7.4	29.60	Structure is in sound condition.
19	34+490	225+490	MNB(N)	1 x 10	10.00	Structure is in sound condition.
20	35+361	226+361	MNB(N)	2 x 8.00	16.00	Structure is in sound condition.
21	36+787	227+787	MNB(W)	6 x 7 x 1.5	42.00	Structure is in sound condition.

Vehicular Underpass (VUP)

Sr. No.	Chainage as per CA (km)	Chainage as per Site (km)	Structure	Span	Length	Status
1	7+510	197+510	VUP(N)	1 x 25 x 5.5	25.00	Structure is in sound condition.
2	10+390	201+402	VUP(N)	1 x 15 x 5.5	15.00	Structure is in sound condition.
3	13+350	204+350	VUP(N)	1 x 12 x 5.5	12.00	Structure is in sound condition.
4	14+460	205+460	VUP(N)	1 x 12 x 5.5	12.00	Structure is in sound condition.
5	16+260	207+260	VUP(N)	1 x 12 x 5.5	12.00	Structure is in sound condition.
6	19+215	210+215	VUP(N)	1 x 12 x 5.5	12.00	Structure is in sound condition.
7	22+720	193+260	VUP(N)	1 x 12 x 5.5	12.00	Structure is in sound condition.
8	24+915	215+915	VUP(N)	1 x12 x 5.5	12.00	Structure is in sound condition.
9	26+030	217+030	VUP(N)	1 x 12 x 5.5	12.00	Structure is in sound condition.
10	28+803	219+803	VUP	1 x 12 x 5.5	12.00	Structure is in sound condition.
11	29+003	220+003	VUP	1 x 12 x 5.5	12.00	Structure is in sound condition.
12	34+360	225+360	VUP(N)	1 x 12 x 5.5	12.00	Structure is in sound condition.
13	35+800	226+800	VUP(N)	1 x 12 x 5.5	12.00	Structure is in sound condition.

Light Vehicular Underpass (LVUP)

Sr. No.	Chainage as per CA (km)	Chainage as per Site (km)	Structure	Span	Length	Status
1	3+900	194+900	LVUP	1 x 12 x 5	12.00	Structure is in sound condition.
2	23+990	214+990	LVUP(N)	1 x 12 x 4	12.00	Structure is in sound condition.
3	30+960	221+960	LVUP(N)	1 x 12 x 4	12.00	Structure is in sound condition.
4	38+190	229+190	LVUP(N)	1 x 12 x 4	12.00	Structure is in sound condition.

3.5 Condition Survey of Culverts

The cross-drainage structure includes hume pipe culverts and box culverts at various locations. There is total 111 Nos. of culverts along the Project Road. The height of culvert varies from 1.0 m to 3.0 m from bed level. During the condition survey of structure, these culverts were inspected on sample basis.

The project involved strengthening and widening of existing road to four lane divided carriageway. The structural condition of culverts is generally found in sound condition. The quality of surface concrete of box culverts is satisfactory. The RCC parapet, metal beam crash barrier or RCC railing has been provided at culvert locations wherever required, which is maintained properly.

3.6 Drainage

There is 7.618 kms of existing drain (which includes drain on both sides) along the Project Road as per Concession Agreement.

Figure 3-6 Photographs of Drainage

Drain at km. 219+300 (LHS)

Drain at km. 221+310 (RHS)

3.7 Slope Protection

Slope protection and chute drains are found on Project Road at required locations.

Photographs taken during the site visit are presented below.

Figure 3-7 Photographs of Slope Protection and Chute Drain

Slope Protection at km. 202+700

Slope Protection at km. 215+360

3.8 Road Furniture

The Concessionaire has provided road furniture along the Project Road as per the standards and specifications mentioned in Schedule-C.

3.8.1 Pavement Marking

Pavement marking for the Project Road is done as per the design standards indicated in section 12 of Schedule-D. The pavement marking is found to be Good throughout the Project Road.

Some of the photographs of road marking are presented below.

Figure 3-8 Photographs of Pavement Marking

Pavement marking at km. 204+300

Pavement marking at km. 201+900

Pavement marking at km. 227+750

Pedestrian crossing at km. 202+970

3.8.2 Road Studs

Road studs / cat's eye for the Project Road is done as per the design standards indicated in section 12 of Schedule-D. Road studs / cat's eye has been fixed at junction and zebra crossings.

Some of the photographs of Road studs are presented below.

Figure 3-9 Photographs of Road studs

Road studs at km. 203+010 (Median opening)

Road studs at km. 214+200 (RHS)

3.8.3 Traffic Signage / Median Kerb painting / KM Stone

Traffic signs include roadside signs, overhead signs, kerb mounted signs and median signs along the Project Road. The design for the traffic signs along the Project Road is done as per the design standards indicated in Schedule-D.

The height, lateral clearance, location and installation are as per relevant clauses of Schedule 'D'. Overhead sign has been installed ahead of major intersections, toll plazas, start / end of Project Road and urban areas as per detailed design requirements.

Roadside signs, overhead signs, kerb mounted signs, vertical post of sign boards, chevron boards and median kerb paint are all in good condition.

Some of the photographs of sign boards are presented below.

Figure 3-10 Photographs of Sign Boards and km stones

Km Stone at km. 191+000

Caution sign board at km. 191+100

Hectometer stone at km. 203+200 (BHS)

Boundary stone at km. 229+600

3.8.4 Highway Lighting

Highway lighting is provided at underpasses, flyovers, toll plaza and built-up locations. High mast lighting is provided at toll plaza location. Highway lighting is also provided at approaches of underpass and flyovers.

Some of the photographs of highway lighting are presented below.

Figure 3-11 Photographs of Highway Lighting

Highway Lighting at km. 191+050

Highway Lighting at km. 225+700

3.8.5 Crash Barriers

Metal beam crash barriers are provided at bridge approaches, locations of high embankment and sharp curves. All the crash barriers provided by the Concessionaire are maintained at site.

Some of the photographs of crash barriers are presented below.

Figure 3-12 Photographs of MBCB / Crash Barrier

Metal beam crash barrier at km. 204+300

RCC crash barrier at km. 228+700 (LHS)

3.8.6 Delineators

The traffic delineators are provided by the Concessionaire for road users in abnormal condition of weather for the Project Road. The same is maintained by the Concessionaire.

Some of the photographs of delineators are presented below.

Figure 3-13 Photographs of Delineator

Delineator at km. 201+900

Delineator at km. 191+800

3.8.7 Road Land Boundary

Road land boundary pillar has been found / available on Project Road.

3.9 Avenue Plantation and Median Plantation

Avenue plantation is provided in open country locations and median plantation has been provided in the project length as per IRC specification. Some of the photographs of avenue plantation and median plantation are presented below.

Figure 3-14 Photographs of Avenue and Median Plantation

Median Plantation at km. 193+950

Avenue Plantation at km. 205+100

3.10 Toll Plaza

As per the Concession Agreement, there is 01 No. of Toll plaza at Kallakudi Village at km. 223+955 with the following infrastructure.

Table 3-3 Details of Summary for Toll Plaza Items

Sr. No.	Particulars	Details
1	Toll Plaza Chainage	km. 223+955 (km. 32+955)
2	Number of Tolling Lanes	14 lanes for toll operation plus 2 lanes for over dimensional vehicles.
3	Weigh in Motion Facility (Number of Lanes)	Yes
4	No. of ETC Lanes	in each direction
5	Number of Toll Booths	15 singles
6	Canopy	Present
7	Administrative Building	Present
8	Parking cum Toilet Block	Present
9	Availability of Tunnel or Elevated Walkway for Movement between Toll Lanes and Administrative Building	Tunnel
10	Availability of Static Weigh Bridge	Yes
11	Availability of Loading/Unloading Facility for Overloaded Vehicles	No
12	Storage facility for Overloaded Material	No
13	High mast Light	Yes
14	Streetlight	Yes (only 20 nos. near Toll Plaza. 10 nos. in both direction)
15	Low mast Light	No
16	User Fee Boards	4
17	Cantilever/Gantry Boards	Yes
18	Automatic boom barrier	Yes

Figure 3-15 Photographs of Toll Plaza

View of Toll Plaza at km. 223+955

Admin Building at Toll Plaza

DG Room at Toll Plaza

Highway Patrol Vehicle

Crane at Toll Plaza

3.11 Lane Equipment

Following are the lane hardware and equipment installed at toll plaza.

1. RFID ETC Transceiver
2. Lane Controller with Industrial PC
3. AVC Sensors

4. Automatic Lane Barrier (ALB)
5. Lane Traffic Light and user fare display
6. Incident Capture Camera
7. Overhead Lane Signals
8. Traffic Lights
9. Toll Booth Equipment

3.11.1 RFID ETC Transceiver

RFID ETC Transceiver reads tags installed on the windshield of vehicles and mounted on a pole at about 6 m height. Handheld RFID readers are provided (1 no. in each direction) in case a tag is not detected by the fixed reader.

RFID

3.11.2 Lane Controller with Industrial PC

Toll Lane Controller is located within the Electronic Enclosure placed inside each toll booth which are connected to the common server and are capable of independent storage of data.

Lane Controller at Toll Booth

3.11.3 Automatic Vehicle Classification (AVC) Sensors

The AVC equipment comprises of camera based, axle sensors and inductive loops. The height detector has a high sensing resolution and detects height when object blocks the path. The presence of vehicle is detected by inductive loop. The loop sensors embedded on the pavement trigger the AVC height sensors located on parallel pillars.

AVCC at Toll Plaza

3.11.4 Automatic Lane Barrier

Boom barriers installed on all lanes are in working condition and have a working time of 0.6 - 0.9 s. Automatic Lane Barrier is used to allow only authorized vehicles to pass through the lane. The barrier is activated only on generation of user fee receipt or other relevant vehicle processing activity. A torque motor powers the barrier for raising and lowering the boom. The motor can be blocked at any position without causing any damage. In the event of power failure, the boom is automatically raised. The boom weight is exactly balanced by built-in springs.

ALB at Toll Plaza

3.11.5 Lane Traffic Light (LTL) and User Fare Display (UFD)

Lane Traffic Light (LTL) is used to instruct vehicles to stop or pass through the lane. The LTL is RED when the toll collector is expecting the vehicle at the booth. After the transaction is done; the LTL turns Green to instruct the vehicle to pass through the lane. The User Fare Display is a part of electronic toll collection equipment located at the toll booth. It is a mini variable message sign (VMS) made of Light Emitting Diodes (LED). The user fare display is used to display the toll fare that is due and that must be paid by the motorist and the classification of vehicle selected by the collector.

LTL at Toll Plaza

3.11.6 Incident Capture Camera (AVC Camera)

The incident capture camera is installed on the island of the booth to capture the image of the vehicle from the back side. The AVC triggers the Image capture system.

3.11.7 License Plate Image Capture Camera (LPIC)

License Plate Image capture camera is installed on a 3 m pole facing incoming vehicle to capture the image of the vehicle number plate.

LPIC at Toll Plaza

3.11.8 Over Head Lane Signal (OHLS)

The **Overhead Lane Signal (OHLS)** for lane “Open” and “Close” sign consists of a pair of “GREEN” (arrow) and “RED” (cross) lights. The OHLS is located at the vehicle approaching side of the canopy to show the drivers whether the lane is open or closed.

OHLS at Toll Plaza

3.11.9 Toll Booth Equipment

Toll Booth Hardware / Equipment provided are:

- Toll Collector Display (Operator Monitor)
- Customized Industrial Keyboard
- Receipt Printer
- Intercom Slave unit
- Bar code reader
- Violation Light and alarm
- Manual Booth Control (MBC)
- Booth Camera

The operator monitor termed as Toll Collector Display (TCD) is located on the toll collector's desk. It is the system's interface to the toll collector, to display the status of transactions and status of the lane peripherals.

The keyboard on the toll terminal is a programmable keyboard for Registration of toll operations and is customized for different vehicle types and types of ticket.

Thermal printers are installed at the toll booths to print tickets. Intercom slave unit facilitates communication with the master unit located in the control room.

Violation system has an alarm switch which is triggered whenever there is a violation such as run-through happening on the lane. When there is an emergency, a foot switch pressed by the booth operator alerts the control room.

Booth Cameras are provided on the inside roof corner of the booth to provide surveillance through CCTV screen located in the control room. Manual Booth Controller is used to release exempt vehicles.

3.11.10 Medium Speed Weigh in Motion (MSWIM)

Medium Speed Weigh in Motion (MSWIM) is installed on entry lanes of Toll Plaza.

MSWIM at Toll Plaza

3.12 Plaza Equipment

3.12.1 TMS Server

Plaza Server is provided in a hot standby configuration and provided with port non-POE network switch and Port PoE switch. Internet connectivity is available through one lease line (Airtel) and Jio WiFi module. Firewall with Sophos antivirus is provided.

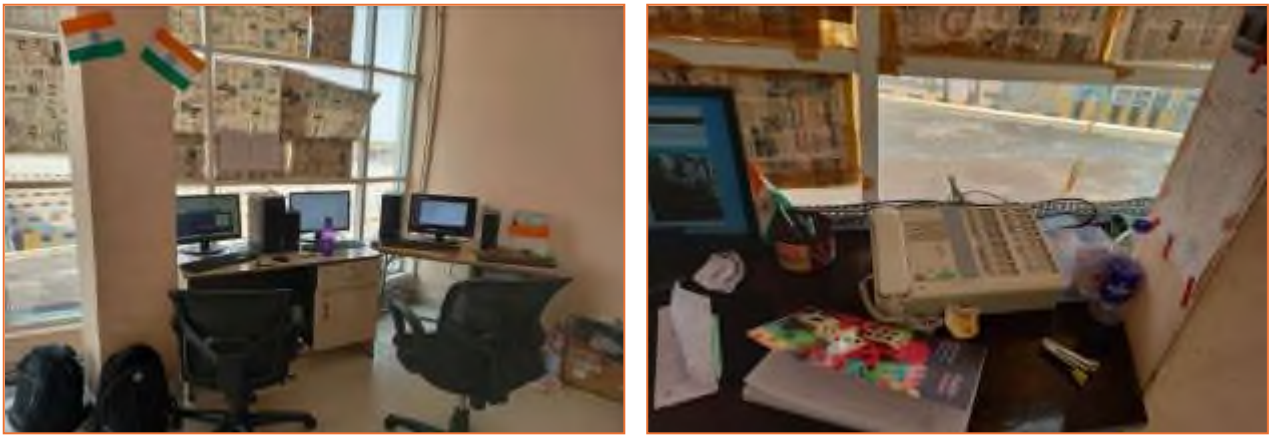
3.12.2 55” LED screen for CCTV monitoring

55” LED screen for CCTV monitoring installed at the toll plaza admin block provides view of all the toll booths, important zones within the plaza where cash transactions take place (server room, control room, cash up).

The toll plaza manager is able to observe the activities at the toll lanes and toll booth. When the toll collector calls up on the intercom, the manager is able to comprehend the situation at the lane by a zoomed view of the particular lane.

3.12.3 Workstations in Control Room, POS room

Workstations are available in control room (lane monitoring, administration, and audit), cash room and PoS.



Control Room at Toll Plaza

3.13 Advanced Traffic Management System (ATMS)

Advanced Traffic Management System (ATMS) installed for the Project Road is controlled by the ATMS center at the Toll plaza location (km. 32+955). As per Concession Agreement, ATMS shall conform to ATMS Policy guidelines (2016) which comprises of the following:

- Automatic Traffic Counter cum Classifier (ATCC)
- Mobile Radio communication system
- Emergency Call Box
- Portable Weigh in Motion
- Meteorological Data system
- Variable Message Signboards (VMS)
- CCTV system
- Video Incident Detection System (VIDS)
- Vehicle actuated Speed Display (VASD)

Status of these systems at site are described below:

3.13.1 Automatic Traffic Counter cum classifier (ATCC)

Automatic Traffic Counter cum Classifiers (ATCC) is installed at Toll Plaza (km. 32+955).

3.13.2 Mobile Radio communication System (MRCS)

Mobile Radio communication System (MRCS) is installed.

3.13.3 Emergency Call Boxes (ECB)

These are installed / available at site.

3.13.4 Portable Weigh in Motion (PWIM)

It is not provided at the project site.

3.13.5 MET System

Meteorological sensors comprise of sensors to measure the atmospheric temperature, humidity, pavement surface temperature, visibility and equipment for measuring wind speed and direction and installed at Toll Plaza km. 32+955.

3.13.6 Variable Message Signboards (VMS)

Variable message sign boards are installed at 04 locations. These display specific messages to the users based on the prevailing conditions on the highway. The message can be changed at any point of time from the HTMS centre. About 250 customised messages can be stored on the system.

3.13.7 CCTV Surveillance Cameras

There are 06 nos. PTZ cameras and 07 nos. of VIDS cameras are installed along the Project Road. The ATMS control room has video wall to monitor these locations through the cameras installed. At toll plaza 4 PTZ and 10 lane cover cameras are installed.

3.13.8 Video Incident Detection System

Fixed CCTV cameras are installed as part of Video incident detection system.

3.13.9 Vehicle Actuated Speed Display (VASD)

VASD is installed at 02 No. of locations each on LHS and RHS.

3.13.10 Adequacy of Toll Collection System and ATMS

- Adequacy - All lanes are hybrid ETC system as stipulated by NHAI in Technical Specifications of Hybrid ETC system. NHAI has approved maintenance costs for TMS. TMS shall be upgraded every 7 years at the cost of the Authority.

- The Advanced Traffic Management System (ATMS) installed is as per specifications required by the Authority and in working condition.

3.14 Traffic Aid Post and Medical Aid Post

Traffic Aid Post and Medical Aid Posts are located at Toll Plaza location.

Traffic and Medical Aid Post at TP

Ambulance at Toll Plaza

3.15 Toilet Block

There are 02 Nos. of toilet blocks at Toll Plaza location.

Toilet Block at Toll Plaza

3.16 Bus Bays and Passenger Shelters

There are 35 Nos. of bus bays / passenger shelters provided along the Project Road.

Passenger Shelter with Bus Bay

Passenger Shelter

3.17 Truck Lay Bye

There is 01 No. of Truck lay bye provided at km. 216+400 along the Project Road.

Truck lay bye at km. 216+400

Toilet block at Truck lay bye

3.18 Balance Work Status

There are no balance works to be executed as per CA. Hence, the balance work is **NIL**.

3.19 Operation and Maintenance

3.19.1 O&M Contract

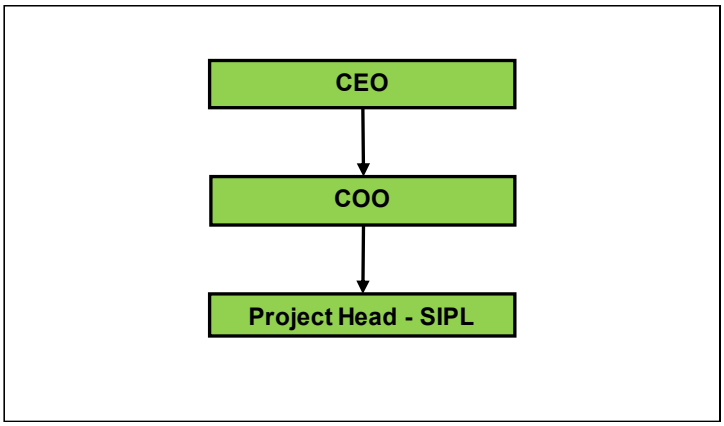
As per Clause 17.1.1 of the Concession Agreement, the Concessionaire shall operate and maintain the Project Road by itself, or through O&M Contractors and if required, modify, repair, improve the Project Road to comply with Specifications and Standards, and other requirements set forth in the Agreement through Good Industry Practice, Applicable Laws and Applicable Permits and manufacturer's guidelines and instructions with respect to toll systems. The Operation and Maintenance activities shall conform to all the requirements laid down in MoRT&H, IRC Specifications and the Concession Agreement.

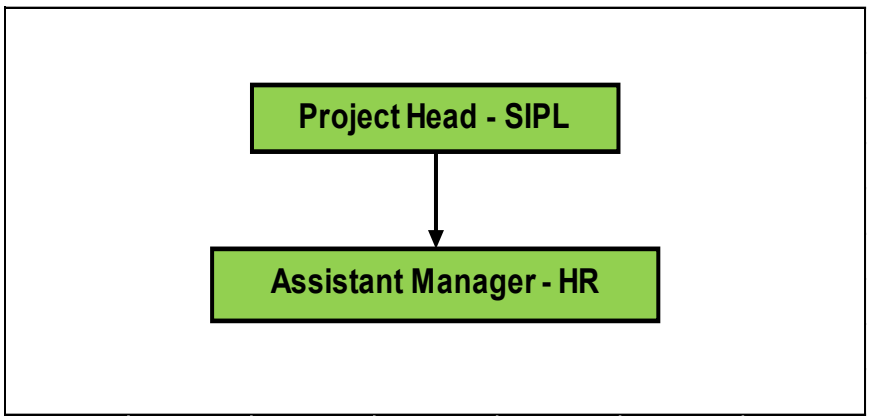
The Concessionaire has outsourced for carrying out the activities related to operation and maintenance of the Project Road including toll operation services, security services, AMC for TMC and AMC for DG set.

3.19.2 Organization Chart

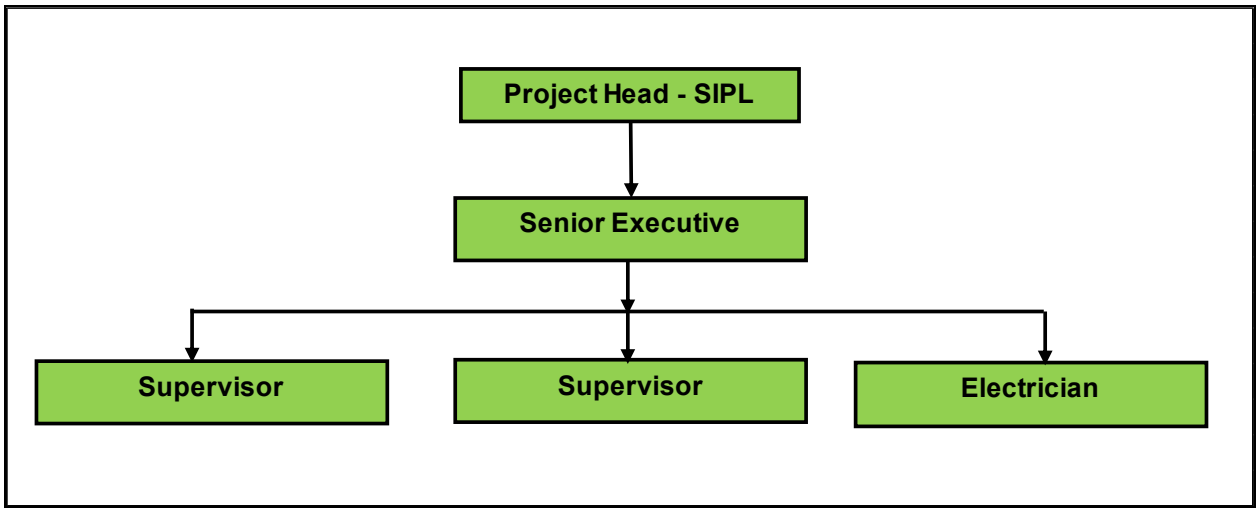
The Concessionaire has shared the Organization Chart at site for Operation and maintenance. Accordingly, there is 01 Project Head, 01 Senior Executive (HR), 01 Assistant Manager (TMS / IT), 01 Executive (TMS / IT), 01 Plaza Manager, 01 Assistant Plaza Manager, 03 Cashiers and 03 validators 01 traffic and road safety manager to carry out O&M activities. The team controls the maintenance activities. However, the maintenance work is undertaken and executed through competent subcontractors.

Organization Chart

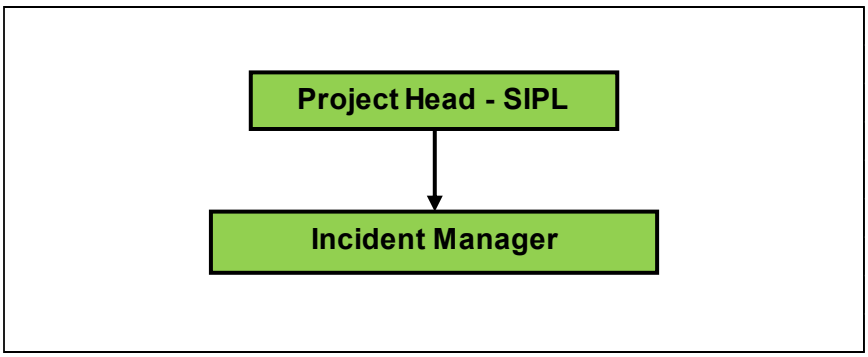




Maintenance



Operations



3.19.3 Operation

Operation cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses and other miscellaneous expenses. The Concessionaire has provided the expenses occurred towards operation expenses for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area.

The Operation Cost is presented in the subsequent chapter.

3.19.4 Routine Maintenance

The Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey.

Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs

of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

Currently, the entire length of the Project Road is maintained by Concessionaire.

The Routine Maintenance Cost is presented in the subsequent chapter.

4 PAVEMENT INVESTIGATION AND ASSESSMENT

4.1 General

Presently, the pavement of the Project Road is being maintained by the Concessionaire as per scope of work. The Concessionaire received Completion Certificate on 15th June 2023.

The project is currently under Operation and Maintenance stage. The Concession Period of the project is 15 years from the Date of Commercial Operation i.e., 03.06.2022. Appointed Date of Project Road is 01st March 2019.

4.2 Axle Load and VDF

The Concessionaire has conducted the Axle Load Survey on Project Road at km. 36+960 (near Toll Plaza) on 24th July & 25th July 2021. The summary of Vehicle Damage Factor (VDF) calculated as provided by the Concessionaire is tabulated below.

Table 4-1 Vehicle Damage Factor

VDF Summary				
Sr. No.	**Vehicle Type**	**Direction**		**Adopted Value**
		Kallagam - Trichy	**Trichy - Kallagam**	
1	BUS	0.867	1.074	1.074

4.3 Design traffic

Traffic surveys are conducted in April 2026. The following is the summary of total traffic count and projected traffic data.

Table 4-2 MSA Calculation

MSA Calculations at Kappalur Toll Plaza					
Year	**MSA (LHS)**	**Cumulative MSA (LHS)**	**MSA (RHS)**	**Cumulative MSA (RHS)**	**Remarks**
FY2021	4.27	**4.27**	3.50	**3.50**	
FY2022	4.26	**8.53**	3.52	**7.02**	
FY2023	4.26	**8.53**	3.52	**7.02**	
FY2024	4.39	**12.92**	3.63	**10.65**

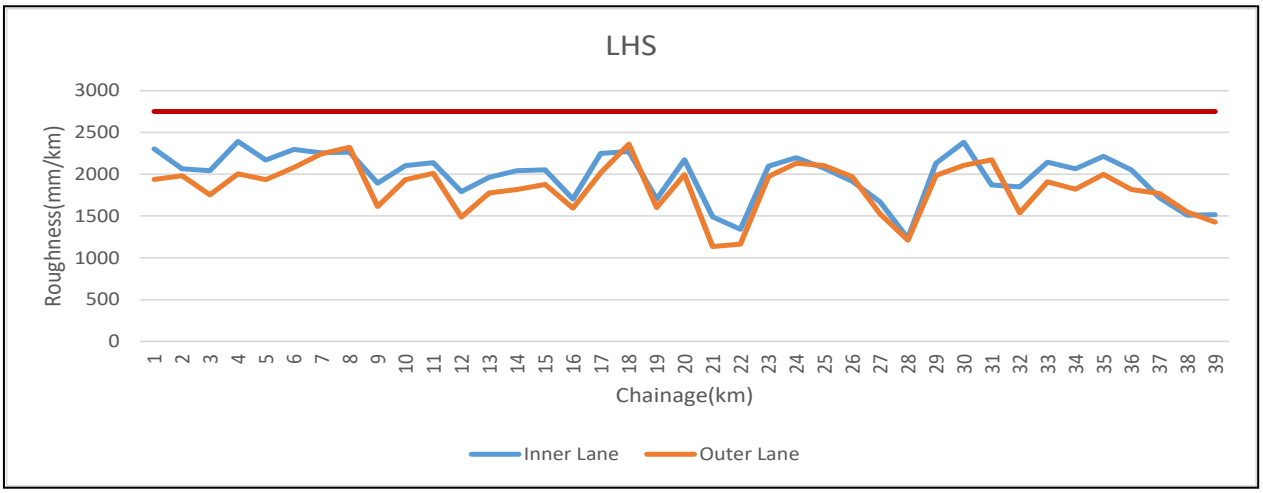
4.4 Network Survey Vehicles (NSV) Survey

The Concessionaire has conducted pavement condition survey on each lane of carriageway through NSV. The NSV survey was conducted on the Project Road in February 2025. The summary of the same is presented below.



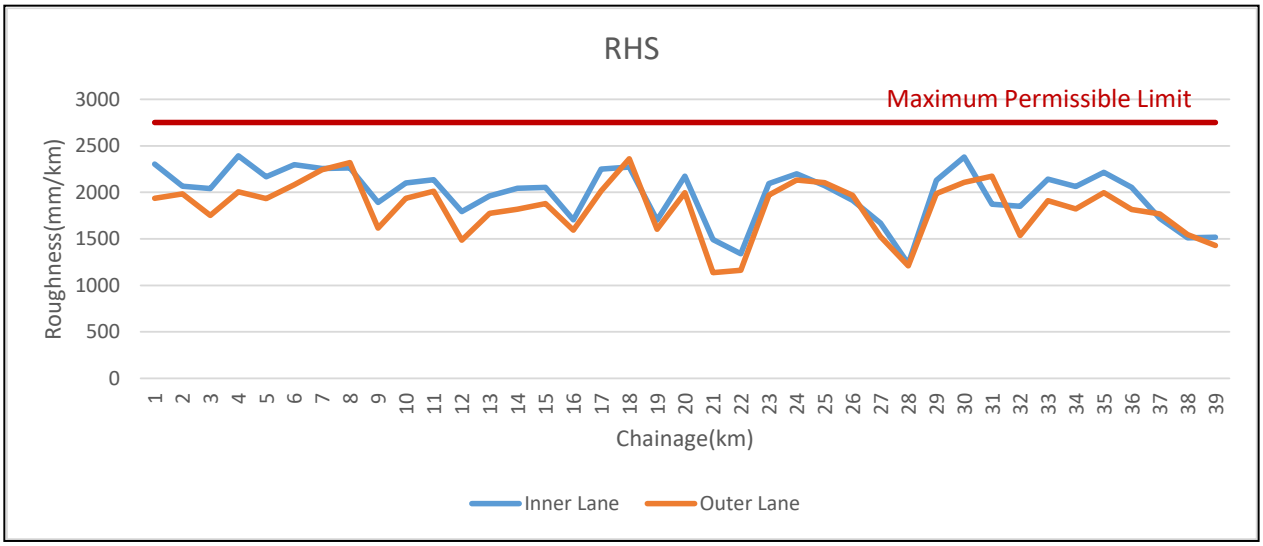


Table 4-3 Summary of Roughness

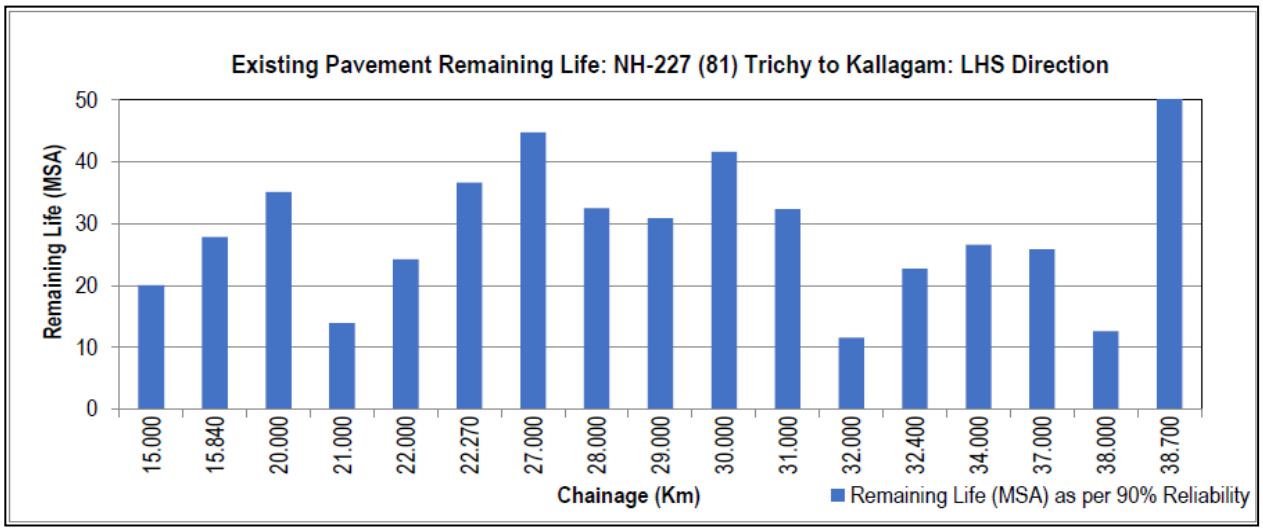
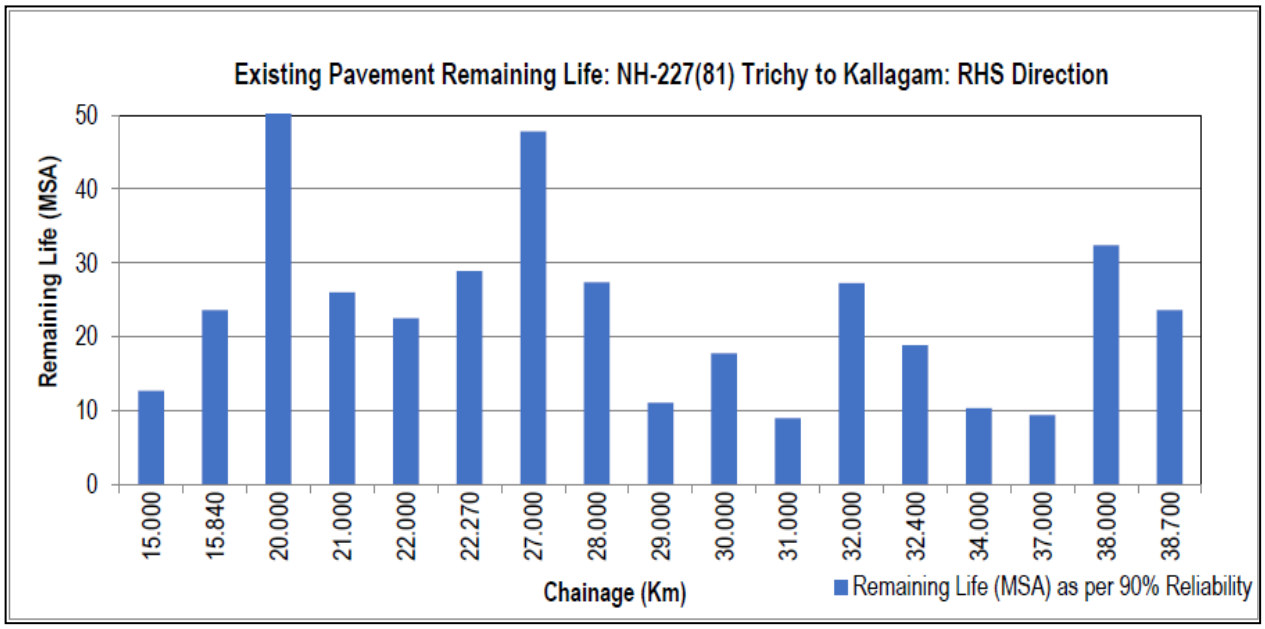
Roughness Summary as per Schedule-K of CA					
Condition	**Limit as per Schedule-K of CA (mm/km)**	**LHS**		**RHS**	
		Inner Lane	**Outer Lane**	**Inner Lane**	**Outer Lane**
Good	< 2750	100.00 %	100.00 %	100.00 %	100.00 %
Poor	> 2750	-	-	-	-

4.5 Falling Weight Deflectometer (FWD) Survey

Falling Weight Deflectometer survey was conducted for flexible pavement by the Concessionaire on 24th August 2024 and 25th August 2024. The summary of the FWD survey report is presented below.





4.6 Test pit and Subgrade Investigation

The Concessionaire has carried out the subgrade investigation for Project Road. The results of the same as provided by the Concessionaire are tabulated below.

Table 4-4 Summary Pavement Crust Details

Sr. No.	Existing Road	Location (km)		Side (LHS / RHS)	Pavement Composition (mm)		
		From	To		Bituminous Layer	Granular Layer	Total Thickness
1	NH-227	14.760	37.300	Both Directions	135	450	585

Subgrade CBR Results

The obtained existing subgrade 4-days soaked CBR results for the entire project road from Km.14.760 to Km.37.300 is listed below for back calculation of E values, the same were used.

Table 4-5 Summary of Subgrade CBR along the project corridor

Sr. No.	Location (km)	Side (LHS/RHS)	4-Days Soaked CBR (%)
1	15+250	RHS	18
2	20+222	LHS	20
3	21+020	RHS	19
4	21+940	LHS	20
5	27+540	RHS	21
6	31+940	RHS	17
7	33+800	LHS	19
8	37+090	RHS	19

4.7 Periodic Maintenance Strategy

Unlike the old Concession Agreements where periodicity and threshold limits were clearly described for the major maintenance, the Concession Agreement of this project does not specify the periodicity or the threshold limits for carrying out the full length periodic maintenance. Schedule-K of the Concession Agreement specifies the threshold limits and the timeline for carrying out repairs to the distresses during the operation period.

The maintenance thus can be carried out as and when required basis and to the compliance of Schedule-K requirement to maintain the road in serviceable condition. Only improvement to Riding Quality is expected if the roughness value exceeds 2750 mm/km.

The Concessionaire received Completion Certificate on 15th June 2023. Hence, the major maintenance cycle is projected accordingly.

The table below shows the major / periodic maintenance cycle throughout the concession period for the Project Road.

Table 4-6 Major Maintenance Cycle

Sr. No.	Year	Main Carriageway	Service Road
1	FY 2029	**Flexible -** 35 mm BC overlay 60%, 50 mm DBM 2.5% and micro-surfacing for 40% length **Rigid -** Re-texturing and Grinding 40%, Replacement of PQC Slab 1%, Joint sealant (Silicon) 40%	Re-texturing and Grinding 25%, Replacement of PQC Slab 1%, Joint sealant (Silicon) 5%
2	FY 2036	**Flexible -** 35 mm BC overlay 40%, 50 mm DBM 2.5% and micro-surfacing for 60% length **Rigid -** Re-texturing and Grinding 40%, Replacement of PQC Slab 1%, Joint sealant (Silicon) 40%	Re-texturing and Grinding 25%, Replacement of PQC Slab 1%, Joint sealant (Silicon) 5%

The projected cost for periodic / major maintenance is presented in the subsequent chapter.

5 COST ESTIMATES

5.1 General

Based on the assessment carried out in previous chapters, various costs were worked out. The costs are divided into following categories.

I. Balance Works Cost
II. Routine O&M Cost
III. Major Maintenance Cost
IV. Periodic Replacement of TMS / ATMS system

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and escalation.

5.2 Rate Assumption

Following assumptions are considered for unit rates of various items while estimating the cost:

1. Unit rates of different items (BC, DBM, Concrete, Road markings etc.) are calculated as per the MoRTH Standard Data Book 2019. The input rates for MoRTH standard data book were adopted as below:

   a. **Manpower and Labour:** As per applicable minimum wages published by Ministry of Labour & Employment, Government of India.

   b. **Bitumen:** The Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. Same discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.

      Therefore, bitumen prices are considered as per the forecast of Client. Current publish of bitumen are considered for unit rates calculation for FY 2027. Average 10 years of price of bitumen are considered for unit rates calculation for FY 2028 and onwards. Following rates of bitumen are considered.

      Polymer and modification costs are provided by the client to work out BC Rate with PMB.

Table 5-1 Bitumen Rates - Ex-MI Supply excluding discount and GST

Sr. No.	Supply Location	Applicability of Rates	Product	Rate for FY2027 (Rs. / MT)	Rate for FY2028 onwards (Rs. / MT)
1	Mathura	All States	VG-10	45,102	35,125
2			VG-30	46,402	36,137
3			VG-40	48,962	38,131
4	Panipat	All States	VG-10	45,102	35,125
5			VG-30	46,402	36,137
6			VG-40	48,962	38,131
7	Koyali	All States	VG-10	47,102	37,125

Sr. No.	Supply Location	Applicability of Rates	Product	Rate for FY2027 (Rs. / MT)	Rate for FY2028 onwards (Rs. / MT)
8			VG-30	48,402	38,137
9			VG-40	51,082	40,251
10	Haldia	All States	VG-10	46,602	35,683
11			VG-30	47,402	36,295
12			VG-40	49,962	38,256
13	Barauni	All States	VG-10	47,132	36,213
14			VG-30	48,432	37,325
15			VG-40	50,992	39,286
16	CPCL	Kerala	VG-10	47,402	35,519
17			VG-30	48,402	36,395
18			VG-40	50,762	38,120
19	CPCL	Tamil Nadu	VG-10	47,902	36,019
20			VG-30	48,402	36,395
21			VG-40	50,962	38,320
22	CPCL	Telangana and Andhra Pradesh	VG-10	44,602	32,719
23			VG-30	45,402	33,395
24			VG-40	47,962	35,320
25	CPCL	Karnataka	VG-10	44,602	32,719
26			VG-30	45,402	33,395
27			VG-40	47,962	35,320

c. **Sand and Aggregate:** Market rates are considered from the quarry located nearest to Project Road.

d. **Cement:** Market rates are considered from the nearest local market.

e. **Steel :** Rate of steel is taken from SAIL.

f. **Machinery Hire charges:** Hire charges for the machinery are considered in accordance with applicable NHAI Standard data book.

g. **Actual Rates of items as per work order:** The rates of road marking, road stud, kerb raising, micro surfacing, milling rates etc. are considered as per the work order shared by the client.

Goods and Service Tax (GST) is considered as 18% as per the latest Government Guidelines.

Summary of Unit Rates worked out using Standard Data Book adopted for major items is given below.

Table 5-2 Summary of Unit Rates

Sr. No.	Item Description	Unit	Rates (Rs.)
1	Dense Bituminous Macadam	Cum	8,635
2	Bituminous Concrete (VG-40)	Cum	10,060
3	Milling	Sqm	90
4	Micro-surfacing	Sqm	150
5	Kerb re-laying	m	316

Sr. No.	Item Description	Unit	Rates (Rs.)
6	Road Marking - BC Surface	Sqm	563
7	Road Marking - Micro surface	Sqm	713
8	Road Studs	Nos.	247

5.3 Balance Work Cost

The Concessionaire has completed all the works as per Concession Agreement. Hence, there is no balance work.

5.4 Routine O&M Cost

Routine O&M cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area. Same has been divided into following major heads.

1. Salary and Welfare Expenses
2. Toll Security Services Outsourced
3. Incident Management & Emergency Services
4. Electricity and Diesel Charges
5. TMS / HTMS / System Expenses
6. Office Operating Expenses
7. Vehicle Running Expenses
8. Professional Fees Expense
9. Community Development
10. Communication Expenses
11. Conveyance Expenses
12. Insurance Expense
13. IE Fees
14. Routine Maintenance Cost (Project Highway)
15. Horticulture & ROW Maintenance
16. Routine Maintenance Cost

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Operation and Maintenance cost (Routine O&M) is presented below. The detailed working of routine maintenance (Sr. No. 15 of below table) is presented in **Annexure-I**.

Table 5-3 Summary of Operation Cost

Sr. No.	Particulars	Amount (FY 2027 to FY 2037)
1	Salary and Welfare Expenses	1,35,30,000
2	Tolling Operation Services	
3	Toll Security Services	15,82,744
4	Incident Management & Emergency Services	61,63,786
5	Electricity and Diesel Charges	1,82,00,072
6	TMS / HTMS / System Expenses	89,37,500
7	Office Operating Expenses	23,41,350
8	Vehicle Running Expenses	16,38,000
9	Professional Fees Expense	1,06,42,500
10	Community Development	1,21,00,000
11	Communication Expenses	2,59,677
12	Conveyance Expenses	2,76,705
13	Insurance Expense	10,64,250
14	IE Fees	46,20,000
15	Routine Maintenance Cost (Project Road)	2,51,00,428
16	Horticulture & ROW Maintenance	1,14,93,900
17	Miscellaneous including Contingency	32,54,263
	Total Cost (Rs.)	**12,12,05,174**
	Total Cost (Cr.)	**12.12**
	Per km Cost (Lakhs)	19.10

5.5 Major Maintenance Cost

The summary of Major Maintenance Cost is provided as below. The detailed working of the same is presented in **Annexure-II**.

Summary of Major Maintenance Cost

Sr. No.	Year	Major Maintenance Cost (Cr.)	Remarks
1	FY 2029	24.25	1st Major Maintenance cycle
2	FY 2036	25.35	2nd Major Maintenance cycle
	Total	**49.60**	

5.6 Periodic Replacement of TMS / ATMS System

Every 7 years, replacement of cost of major TMS / ATMS system is considered. The same is provided as below.

Sr. No.	Year	HTMS O&M / Replacement Cost (Cr.)	Remarks
1	FY 2029	3.85	
2	FY 2036	3.85	
Total Cost (Cr.)		**7.70**	

5.7 Escalation Assumption

The following escalation is considered basis discussions with Client and our internal estimates.

Table 5-4 Escalation

Year	Escalation	Year	Escalation
2028	4.86%	**2042**	3.99%
2029	4.44%	**2043**	3.99%
2030	4.24%	**2044**	3.99%
2031	4.13%	**2045**	3.99%
2032	4.08%	**2046**	3.99%
2033	4.01%	**2047**	3.99%
2034	4.00%	**2048**	3.99%
2035	4.03%	**2049**	3.99%
2036	4.01%	**2050**	3.99%
2037	3.98%	**2051**	3.99%
2038	3.98%	**2052**	3.99%
2039	4.00%	**2053**	3.99%
2040	3.99%	**2054**	3.99%
2041	3.99%	**2055**	3.99%

5.8 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summaries yearly for remaining concession period along with escalation as mentioned in clause 5.7.

Escalated O&M Cost (in INR Cr.)

Sr. No.	Year of expense	FY 27	FY 28	FY 29	FY 30	FY 31	FY 32	FY 33	FY 34	FY 35	FY 36	FY 37
1	Routine O&M Cost											
1.01	Salary and Welfare Expense	1.35	1.42	1.48	1.54	1.61	1.67	1.74	1.81	1.88	1.96	2.04

ANNEXURES

ANNEXURE I - ROUTINE MAINTENANCE COST

Routine Maintenance Cost	
Project - Trichy to Kallagam (KSIPL)	
Ordinary Repair Cost (with GST)	**2,51,00,428**
(inclusive of GST)	**= 6.49 lakhs per km**

CONVERSION FACTORS									
National Highways / State Highways									
Reference cost taken for Two / four lane (7.0 or 14m or 21m) with 1.5m wide shoulders									
(Refer Chapter 6.17 of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 45)									
Sr. No.	**Description for Flexible Pavement**		**Factor**	**Normal** More than 4500 CVD **3,51,000**	**Urban** More than 4500 CVD **3,83,869**	**Project Length (km)**		**Per Year Project Maintenance Cost**	
						Normal	**Urban**	**Normal**	**Urban**
1	Four-lane with divided carriageway	Without paved shoulder	1.53	537029.00	587319.00	-	-	-	-
		Paved shoulder	1.70	596699.00	652577.00	24.03	-	1,43,38,677	-
2	Four-lane with divided carriageway and service lane on either side	Without paved shoulder	2.00	701999.00	767737.00	-	-	-	-
		Paved shoulder	2.20	772199.00	844511.00	-	-	-	-
3	Six lane with divided carriageway	without Paved shoulder	2.09	733589.00	802285.00	14.67	-	1,07,61,751	-
		with Paved shoulder	2.26	793259.00	867543.00	-	-	-	-
					TOTAL	**38.700**		**2,51,00,428**	

Ordinary Repairs

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity**
				More than 4500 CVD
				BT Surface
1	**2**	**3**	**4**	**5**
	Maintenance of Carriageway & Paved Shoulders (1.5m wide); B.T. Surface			
	i) Pot holes repair (50 mm deep)	100 % Pot hole free	As & when required	1.50%
	Volume (cum)			7.50
	Rs/m^3			10797
	Cost in Rupees			80,978
	ii) Patch repair	100 % Patch less	As & when required	1.50%
	Area (sqm)			150
	Rs/m^2			584
	Cost in Rupees			87,615
	iii) Sealing (Crack)			
	a) Wider than 3 mm	100 % Crack Less	As & when required	1.50%
1	Area (sqm)			113
	Rs/m^2			79
	Cost in Rupees			8,876
	b) Width less than 3 mm	75 % Crack Less	As & when required	1.50%
	Area (sqm)			112.5
	Rs/m^2			79
	Cost in Rupees			8,876
	iv) Repair of ruts and undulations			
	a) Greater than 20 mm	75%	As & when required	1.00%
	Area (sqm)			75
	Rs/m^2			584
	Cost in Rupees			43,808
	v) Road marking	10%	Once in 7th year & @	16682

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity** **More than 4500 CVD** **BT Surface**
1	**2**	**3**	**4**	**5**
			Repaired location	
	vi) Joint Sealant Repair/Replacement	7%		21609
	SUB TOTAL			**2,68,444**
2	**Maintenance of earthen Shoulders:**			
	i) Renewal of earthen shoulders	80%	Once in a Year	6954
	ii) Jungle Clearance	100%	Twice in a Year	2282
	iii) Kuccha Drain Maintenance	100%	Twice in a Year	1222
	SUB TOTAL			**10,458**
3	**Maintenance of Cross Drainage works:**			
	i) Cleaning of culvert bed	100%	Once in a Year	3080
	ii) Repair of floors	100%	Once in a Year	5574
	iii) Repair of parapets	100%	As & when required	2323
	SUB TOTAL			**10,977**
4	**Maintenance of Minor & Major Bridges:**			
	i) Cleaning and removal of dirt & vegetation from pier caps, Bearings, Expansion Joints, Superstructure, Substructure and Retaining wall etc.	100%	As & when required	40,747
	ii) Spot painting & protective Coating required on Bearing and greasing of Bearings, railing, structural members, Expansion joints			
	iii) Repair of minor washouts, erosion scour and animal holes			
	iv) Sealing Cracks with Cement/ Epoxy Mortar			
	v) Replacement & Correction of safety barriers, Guard rails and damaged members			
	SUB TOTAL			**40,747**
5	**Miscellaneous Items:**			
	i) Turfing and Arboriculture		Once in a Year	2716

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)

1 INTRODUCTION

1.1 Background

Cube Highways Fund Advisors Pvt. Ltd. (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InvIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an Infrastructure Investment Trust under the SEBI InVIT Regulations. Cube Highways Fund Advisors Pvt. Ltd. has appointed **M/s. FP Project Management Consultancy Services Private Limited** (hereinafter referred as "Technical Consultant" or "FPPM") to carry out Technical Due Diligence of Ramsanpalle - Mangloor section of NH-161 from km. 39+980 to km. 86+788 in the State of Telangana (hereinafter referred as "Project Road").

M/s. KNR Shankarampet Projects Pvt. Ltd. (hereafter known as Shankarampet Projects Private Limited**)** vide COI dated 08-Nov-2024 (hereinafter referred as "Concessionaire") is a special purpose vehicle (SPV) for operation, maintenance, and transfer of Ramsanpalle to Mangloor Section (Design Chainage from km. 39+980 to km. 86+788) of NH-161 or Project Road under Hybrid Annuity basis. The project was awarded to Concessionaire, **KNR Shankarampet Projects Pvt. Ltd**., a company promoted and incorporated by M/s. KNR Shankarampet Projects Pvt. Ltd. on 26-Mar-2018 (Including construction period) by National Highway Authority of India (NHAI). Cube Highway group is a shareholder in the Concessionaire company. The length of Project Road as per CA is 46.808 kms without toll plaza.

Accordingly, the Technical Consultant has undertaken the work of assessment of operation and maintenance (O&M) cost based on site inspections and field investigations. The same is presented in this report.

1.2 Scope of Work

The detailed scope of work for conducting the technical due diligence of Project Road is presented as below:

- A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets.
- Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, As-built drawings, O&M manual, COD / PCOD certificate, punch list, previous major maintenance etc.
- Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, axle load, material investigations etc.
- Formulation of future major maintenance strategy.
- Estimation of any initial expenses to be incurred due to deficiencies observed in diligence.
- Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period.
- Estimation of Annual Operation expenses along with Systems cost (TMS / ATMS) till the end of concession period.
- Review of balance work cost for Project Road including estimation of quantities and item rates.

1.3 Our Approach Philosophy

1.3.1 Composition of Team

Our proposed team consists of well-qualified Engineers and other professionals, whose experience covers all the skills and specializations required for undertaking such assignments. All the team personnel proposed are our regular employees and have a long and stable working relationship with our firm.

The Team Leader will coordinate the activities between all the key staff who will work closely together. The key is assisted by various support staff, who report to the respective key staff in their field of expertise. The Team Leader will act as the point of contact for Client Technical Study.

The technical study include review of all the available documents namely:

a) Concession Agreement including Technical Schedules
b) O&M Contract, work order and their provisions
c) Quality of construction based on available data, design and drawings.
d) Documents on historical expenditure on operation and maintenance
e) O&M cost schedule for the concession period
f) Review of Completion / Provisional Completion along with punch list items
g) Review of recent pavement surveys conducted.
h) Correspondence regarding scope of works and during O&M
i) Recent O&M Report submitted to Authority.
j) Toll operation manual / ATMS related documents

The review of above documents is the first step towards accomplishment of the task. This gives a complete idea of the project and is used as input data for preparation of report after necessary analysis.

1.3.2 Site Visit and Data Collection

A team of experts from various streams has carried out the preliminary site visit to understand the assessment of project assets mainly condition of the pavement and structures.

- The site visit is undertaken for detailed reconnaissance and visual pavement condition assessment.
- The condition assessment of major structures by visual inspection
- The information like material sources and the probable cost is collected for the purpose of cost estimate.

The detailed design / drawings viz. Plan & L-sections, drainage design, structure design, layout drawings for project facilities like toll plaza, bus bay, truck lay-byes, highway lighting facilities etc. are studied. Also, design / drawing and provision pertaining to road furniture are studied.

The information on availability of material in the vicinity is gathered. It has direct impact on cost of maintenance work and balance work.

The basic approach for preparation of cost estimates for operation and maintenance is as per the practice of State PWD / MORT&H in respect of highways and structures.

1.3.3 Data Analysis

Based on the study of the available information and preliminary site visits, the consultants share their preliminary observations with the Client based on the evaluation of the technical data and reports provided by the Client.

1.4 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Company. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyze the same as per the best engineering / industry practices.

The site visit and inspection were carried out between the periods from **07th March 2026 to 08th March 2026**.

The report is organized with the following chapters for easy understanding of various issues.

Chapter 1 **Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for due diligence studies**.**

Chapter 2 **Project Description:** The chapter describes existing project features, overview of project development.

Chapter 3 **Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on site visit**.**

Chapter 4 **Pavement Investigation and Assessment:** This chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance.

Chapter 5 **Cost Estimates**: This chapter summarizes the forecast for O&M and major maintenance costs over the remaining concession period.

2 PROJECT DESCRIPTION

2.1 Introduction

National Highways Authority of India signed the Concession Agreement with **M/s. KNR Shankarampet Projects Pvt. Limited** (hereafter known as Shankarampet Projects Private Limited) is a company promoted by Cube Highway group. The Appointment Date of the project was on 02nd May 2019. The concession period of the project is 17 years including construction period. The project has received PCOD on 5th October 2021 for the length 43.138 kms out of 46.808 kms and COD on 21.06.2022 for the length 46.808 kms. The Cube Highway group is a shareholder in the Concessionaire Company.

2.2 Location

The Project Road is part of National Highway No. 161, of Ramsanpalle - Mangloor section in the state of Telangana. The total project length is 46.808 kms as per CA.

The Location Map of the Project Road is presented below:

Figure 2-1 Location Map

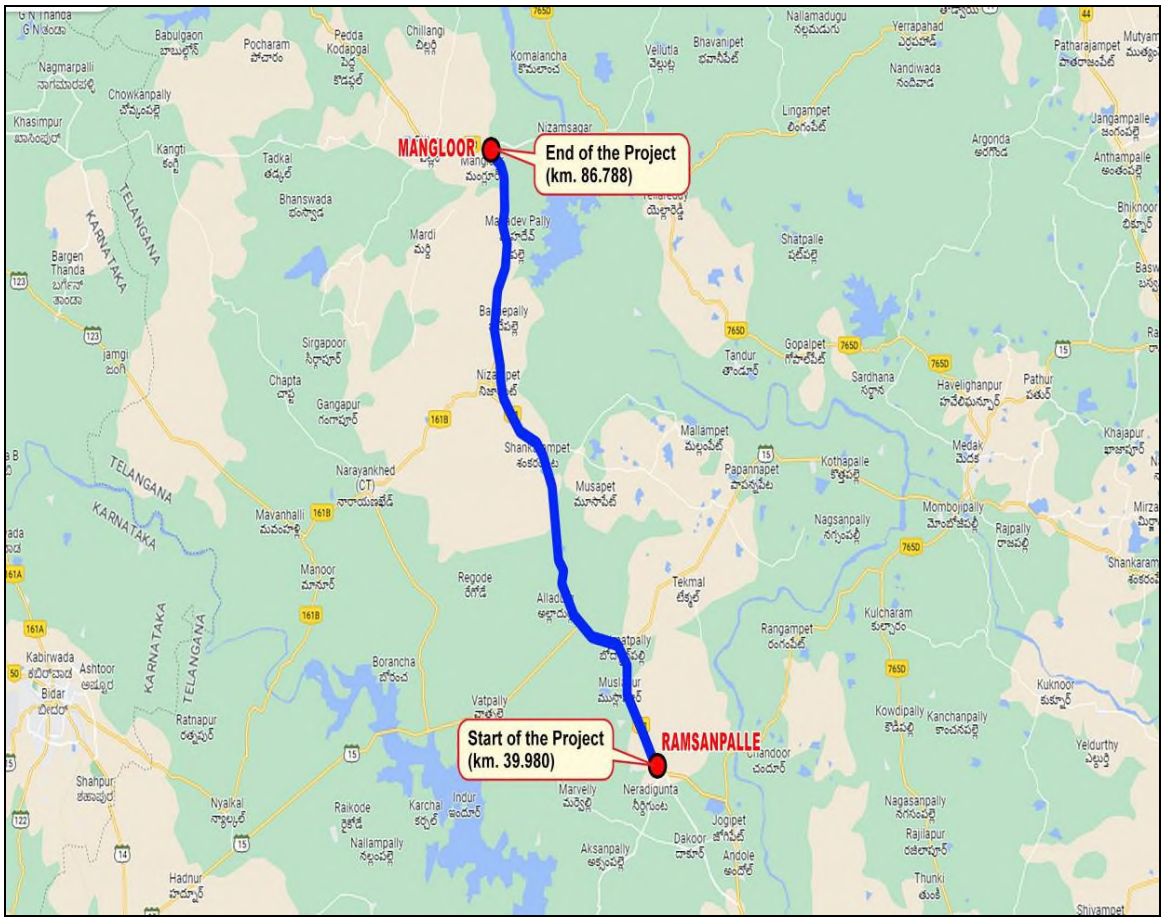

Figure 2-2 Start / End of Project Road (LHS)

Start of the Project Road End of the Project Road

Figure 2-3 Start / End of Project Road (RHS)

Start of the Project Road End of the Project Road

2.3 Climate

The climate of the region is marked by heavy rainfall with high humidity in the hot season. The Indian Meteorological Department (IMD) has identified the following four seasons in the region.

Sr. No.	Weather	Month
1	Summer	February to May
2	Monsoon	June to September
3	Post Monsoon	October
4	Winter	November to February
5	Maximum Temperature	38 ^{0}C
6	Minimum Temperature	18 ^{0}C
7	Average annual rainfall	910 mm

2.4 Terrain

The Project Road passes through plain to rolling terrain.

2.5 Abutting Land Use

The following are the various developments that are anticipated in the Four Lanning of Ramsanpalle Mangloor Section.

- Agriculture is the predominant land use along the Project Road.
- This Project Road reduces the travel time for getting access to Hyderabad, Nanded Sahib, Akola, Nagpur and Shegaon which results in better industrial growth and economy.
- The tourism industry gets a great booster as majority of people using this Project Road, for going to places like Nanded Sahib & Shegaon, a group of temples & Gurudwara etc.

A lot of commercial establishments along the Project Road in the form of hotels and Snack Parlors may be developed in the coming future.

2.6 Right of Way

The width of the existing Right of Way (ROW) for the Project Road varies from 30 m to 60 / 180 m.

2.7 Existing Utilities

During widening of the Project Road, various affected utility services were shifted to proposed ROW and presently no utility shifting is balance at site. The different types of utilities found along the road include, electrical poles, telephone poles, OFC Cables, etc.

2.8 Development as per Schedule-B

The Project Road from Ramsanpalle to Mangloor (km. 39+980 to Km. 86+788) has been developed as a four-lane divided carriageway with median width varies from 4.0 m to 12.0 m, service road and other arrangements. The Project Road passes through rural as well as built-up sections.

As per Article 2 of Concession Agreement, the scope of project defined in Schedule-A and Schedule-B, (the **"Scope of the Project"**) shall mean and include, during the Concession Period:

a) Construction of the project on the Site set forth in Schedule-A and as specified in Schedule-B together with provision of project facilities as specified in Schedule-C and in conformity with the Specification and Standards set forth in Schedule-D.
b) Operation and maintenance of the Project in accordance with the provisions of this Agreement.
c) performance and fulfilment of all other obligations of the Concessionaire in accordance with the provisions of this Agreement and matters incidental thereto or necessary for the performance of any or all of the obligations of the Concessionaire under this Agreement.

2.9 Bypass and Realignment

There are two Bypass on Project Road. The total length of Bypass is 7.20 kms. Apart from it there are nine realignments in the Project Road. The Bypass constructed along the Project Road as well as realignment is as tabulated below.

Table 2-1 Details of Bypass

Sr. No.	Name of Bypass	Design Chainage (km)		Length (km)
		From	To	
1	Shankarampet	60+900	63+600	2.70
2	Nizam pet	66+400	70+900	4.50
Total Length (km)				**7.20**

Table 2-2 Details of Realignment

Sr. No.	Existing Chainage (km)		Design Chainage (km)		Length (km)
	From	To	From	To	
1	50+100	50+950	45+300	46+100	0.800
2	57+950	60+025	53+100	55+200	2.100

3 CONDITION ASSESSMENT OF PROJECT ROAD

3.1 Pavement

The Project Road is four lane divided carriageway and generally has paved carriageway of 8.5 m with earthen shoulder of 1.75 m to 2.00 m on either side. The Project Road has median width varies from 4.0 m to 12.0 m.

The entire stretch of Project Road including service road is constructed with flexible pavement.

3.1.1 Pavement Condition Survey

Pavement condition survey was carried out from **07th March 2026 to 08th March 2026** through visual inspection for the entire project length. From the visual inspection, it is found that the average pavement condition of the Project Road is Good. The summary of pavement condition survey is presented in below table:

Table 3-1 Summary of Pavement Condition survey

Rating	Main Carriageway	
	LHS	RHS
Good / Fair	100%	100%
Poor	-	-
Total	100%	100%

Some of the photographs taken during the site visit are presented as below.

3.2 Service Road

a) Existing Service Road

The width of Service Road found 7 m and it is constructed in built-up areas, adjoining underpasses and flyover locations. The scope of service road as per CA is 3.840 kms and slip road is 49.100 kms. Details of service road are presented below in table.

Table 3-2 Details of Service Road

3.5 Condition Survey of Culverts

The cross-drainage structures include reconstruction and new construction of box culverts at various locations. There is total 117 Nos. of culverts in which 14 Nos. of reconstruction of box culverts, 33 Nos. of reconstruction of pipe to box culverts, 49 Nos. of new construction of box culverts, and 21 Nos. is box culvert (constructed under Change of Scope) along the Project Road. The height of culvert varies from 1.0 m to 3.0 m from bed level. During the condition survey of structure, these culverts were inspected on sample basis.

The project involves strengthening and widening of existing road to four lane divided carriageway with service road on both side and construction of new four lane carriageway at proposed bypass location. The culverts beneath existing alignment are either widened or reconstructed. The structural condition of culverts is generally found in sound condition. The quality of surface concrete of box culverts and slab culverts is found to be satisfactory. The RCC parapet, metal beam crash barrier or RCC railing has been provided at culvert locations, which is maintained properly.

Vegetation growth and accumulation of debris at waterway is being removed and cleaned by the Concessionaire on regular basis.

km. 73+600 (RHS)

Traffic Signage / Median Kerb painting / KM Stone

Traffic signs include roadside signs, overhead signs, kerb mounted signs and median signs along the Project Road & Kilometre stone etc, the design for the traffic signs along the Project Road is done as per the design standards indicated in section 11 of Schedule-D.

The height, lateral clearance, location, and installation are as per relevant clauses of Schedule 'D'. Overhead sign has been installed ahead of major intersections, toll plazas, start / end of Project Road and urban areas as per detailed design requirements.

Kilometre stones, vertical post of sign boards, chevron boards & Median kerb paint are generally in good condition except few locations. Some of the photographs of sign boards are presented below.

3.11 Highway Lighting / Solar Blinker / High Mast

Highway lighting / high mast is provided at underpasses, flyovers, toll plaza, truck lay byes, passenger shelters, major and minor junctions, and built-up locations.

At underpass and flyover locations, highway lighting is provided at the structure locations and at its approaches.

Solar amber blinker signals are provided at median opening and service Road, junctions and bus stop locations. These lights are properly maintained and are in good working condition.

Some of the photographs of highway lightings are presented below.

3.18 Toll Plaza

There was one temporary Toll Plaza at km. 57+893 near Kolla Palle village along the Project Road. It was foreclosed from 02-Feb-2023 at 8.00 Hrs. However, the control room for ATMS is available at km. 66+700 (RHS). The same is in the scope of the Concessionaire.

km. 57+850

3.19 Advance Traffic Management System (ATMS)

Advance Traffic Management System (ATMS) installed for the project road is controlled by the ATMS center near the toll plaza location (km 66+700). As per Concession agreement ATMS shall conform to ATMS Policy guidelines (2016) which comprises of the following:

- Mobile Radio communication system
- Emergency Call Box
- Variable Message Signboards (VMS)
- CCTV system
- Video Incident Detection System (VIDS)

Status of these systems at site are described below:

3.19.1 Automatic Traffic Counter cum Classifier (ATCC)

Automatic Traffic Counter Cum Classifier (ATCC) is installed at km. 65+200 (LHS) and km. 40+000 (RHS).

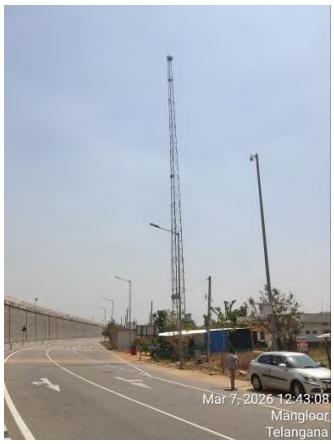
km. 65+200 (LHS)

3.19.2 Mobile Radio Communication System

The mobile radio communication system is installed along the project length, and all are functional. The same are maintained by the Concessionaire.

km. 41+700

km. 68+800



km. 85+00

3.19.3 Emergency Call Boxes (ECB)

The emergency call boxes are installed along the project length, and all are functional. The same is maintained by the Concessionaire.

km. 40+550 (LHS)

km. 64+400 (RHS)

3.19.4 MET System

Meteorological sensors comprise of sensors to measure the atmospheric temperature, humidity, pavement surface temperature, visibility and equipment for measuring wind speed and direction and installed at km. 66+700 (RHS) near O&M office in Nizam Peth village.

km. 66+700

3.19.5 Variable Message Signboards (VMS)

Variable message sign boards are installed in the Project Road. These display specific messages to the users based on the prevailing conditions on the highway. The message can be changed at any point of time from the ATMS centre. About 250 customised messages can be stored on the system.

km. 40+100 (LHS)

km. 86+400 (RHS)

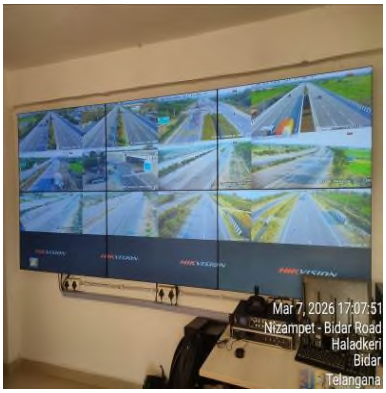
3.19.6 CCTV Surveillance Cameras

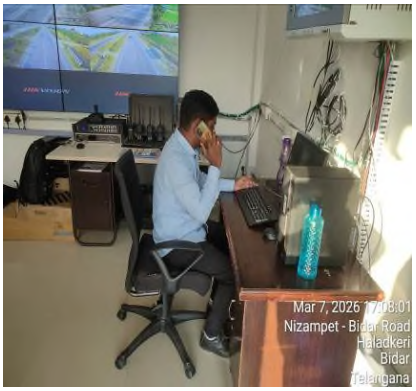
Surveillance Cameras are installed along the project corridor which are monitored through the ATMS control room.

km. 41+650

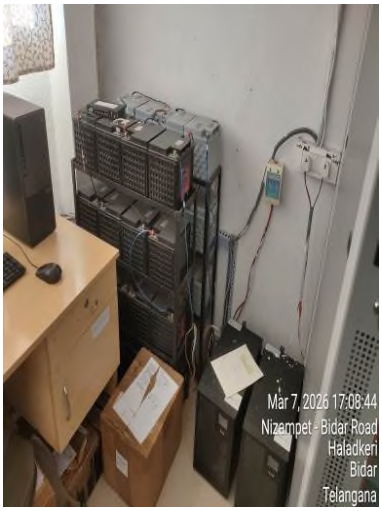
km. 50+200

km. 58+100





Control Monitor Control Room Office



Server UPS Room O&M Centre

3.19.7 Vehicle Actuated speed Display (VASD-Speedometer)

VASD / Speedometers are installed along the Project Road which are monitored through the ATMS control room. The Advance Traffic Management System (ATMS) installed is as per specifications required by the Authority and in working condition.

km. 65+200

3.20 Truck Lay bye

The following are the Truck Lay-Bye cum Rest Room locations.

Table 3-7 Details of Truck lay bye

Sr. No.	Chainage as per Site (km)	Side
1	40+400 (LHS) & 40+300 (RHS)	BHS
2	57+550	BHS
3	77+850	BHS
4	84+250	BHS

3.21 Traffic Aid Post and Medical Aid Post (Incident Management)

Traffic and Medical Aid Post are available at O&M office and are in Concessionaire's scope. The Patrolling Vehicle, Ambulance & Crane are available at site. Some of the photographs are presented below.

Figure 3-24 Photograph of Incident Management

Medical Aid Room Cranes

RPV-1 RPV-2 Ambulance

3.22 Toilet Block

Apart from Toll Plaza, there are 40 nos. of Toilet Block along Project Road i.e., at Truck lay-bye and passenger shelter locations which are in Concessionaire's scope.

Figure 3-25 Photographs of Toilet Blocks

km. 66+700 (RHS)

3.23 Bus Bays and Passenger Shelters

There are 32 nos. bus bays / passenger shelters along Project Road. All are in operational condition. Some of the photographs are presented below.

3.24 Wayside Amenities

There are no wayside amenities along the Project Road.

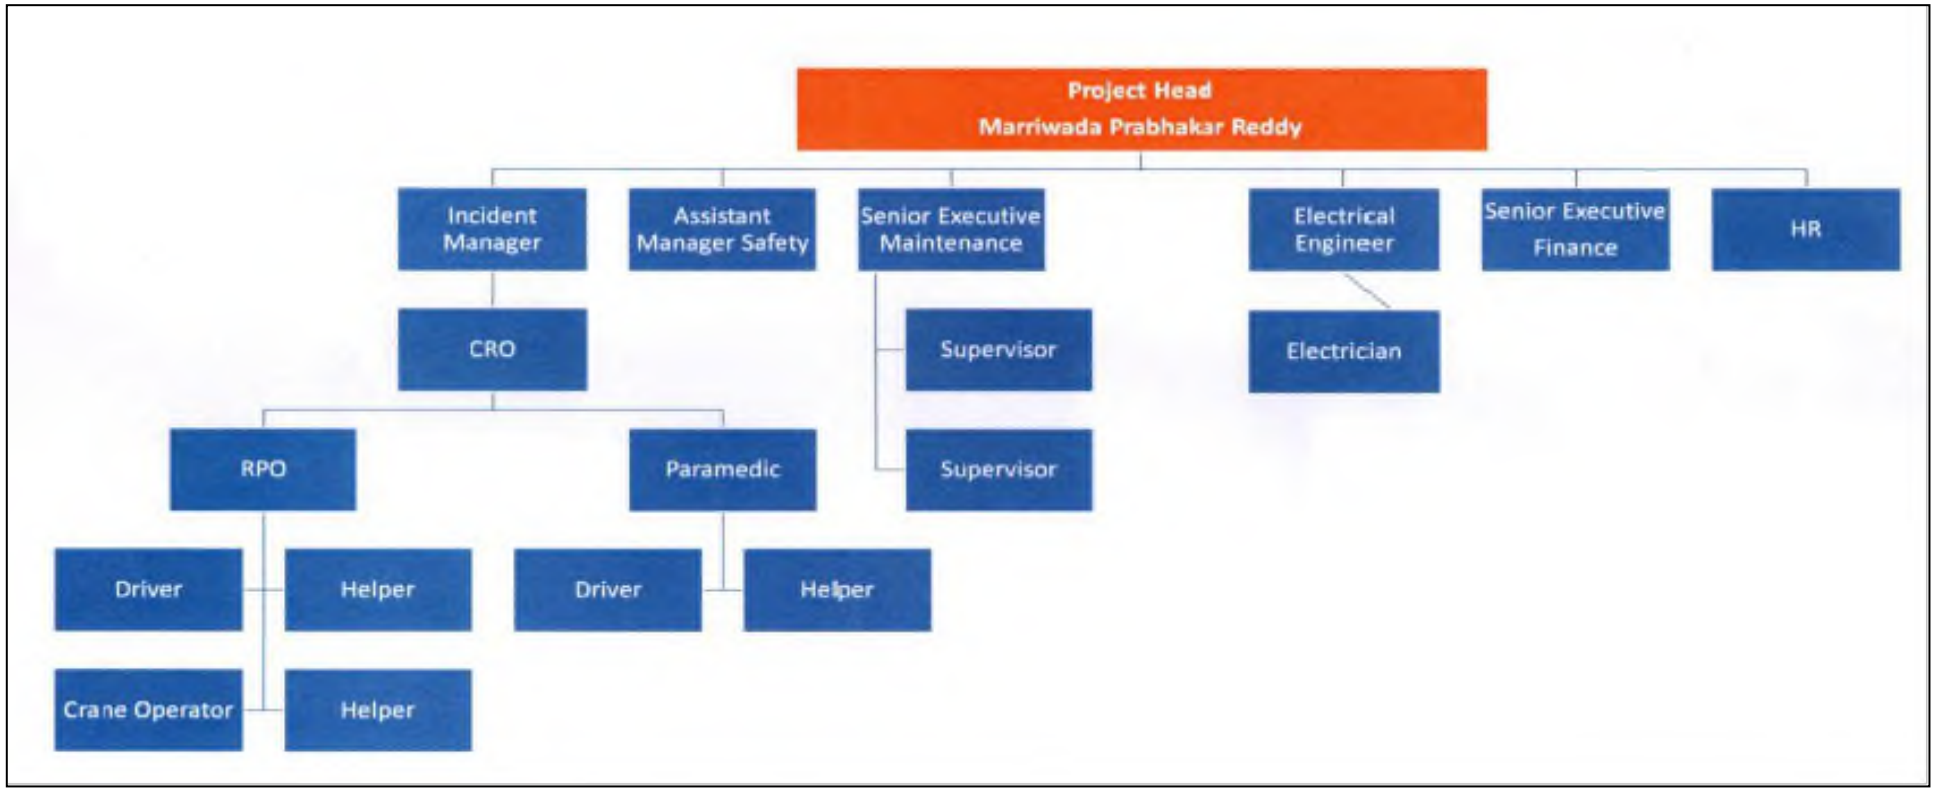
3.25 Balance Work

Presently, all work has been completed. IE has issued the Completion Certificate effecting from 27th October 2025 vide their letter no. MSV/IE(O&M)/Pkg-II&III/2025/MHPL/1005 Dated 10.12.2025.

3.26 Organization Chart

The Concessionaire has given the Organization Chart at site for Operation and maintenance.

Organization Chart



3.26.1 Operation

Operation cost is comprised of manpower cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, and other miscellaneous expenses. As the Project is in Annuity mode, the Toll Operation is not in the Scope of Concessionaire. The Concessionaire has provided the expenses occurred towards operation expenses for past years. Necessary assumptions have been made from the expenses of similar types of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area.

The Operation Cost is presented in the subsequent chapter.

3.26.2 Routine Maintenance

The Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey.

Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Maintenance Cost is presented in the subsequent chapter.

4 PAVEMENT INVESTIGATION AND ASSESSMENT

4.1 General

The Project Road is currently in the Operation and Maintenance stage. The concession period of the project is 17 years from the Appointed / Commencement Date (i.e., 2nd May 2019) including construction period of 2 years (730 days).

The Project has received Completion Certificate on 27th October 2025.

4.2 Axle Load and VDF

The Concessionaire has conducted the Axle Load Survey on Project Road at km. 52+700 from 24th July 2021 to 25th July 2021. The summary of Vehicle Damage Factor (VDF) calculated as provided by the Concessionaire is tabulated below.

Table 4-1 Vehicle Damage Factor

Sr. No.	Vehicle Type	Direction	
		LHS (Ramsanpalle - Mangloor)	RHS (Mangloor - Ramsanpalle)
1	BUS	0.748	0.776
2	LCV	0.935	1.130
3	2-Axle	3.462	2.849
4	3-Axle	5.308	9.012
5	MAV	12.472	13.876

4.3 Design Traffic

Traffic in Million Standard Axles (MSA) for the homogeneous section based on the historical traffic data as provided by the Concessionaire, current traffic has been used for future projections and the estimated design MSA is computed and presented in subsequent table.

For the estimation of design MSA, Actual Traffic Growth Rates as provided by the Concessionaire were used.

Table 4-2 MSA Calculation

Year	4-Lane				6-Lane				Remarks
	MSA (LHS)	Cumulative MSA (LHS)	MSA (RHS)	Cumulative MSA (RHS)	MSA (LHS)	Cumulative MSA (LHS)	MSA (RHS)	Cumulative MSA (RHS)	
2025-26	-	**-**	-	**-**	-	**-**	-	**-**	
2026-27	1.73	**1.73**	2.07	**2.07**	1.38	**1.38**	1.65	**1.65**	
2027-28	1.81	**3.54**	2.17	**4.24**	1.45	**2.83**	1.74	**3.39**	
2028-29	1.90	**5.44**	2.28	**6.52**	1.52	**4.35**	1.82	**5.21**	1st MM Cycle
2029-30	2.00	**7.44**	2.40	**8.92**	1.60	**5.95**	1.92	**7.13**	
2030-31	2.10	**9.54**	2.52	**11.44**	1.68	**7.63**	2.01	**9.14**	
2031-32	2.21	**11.75**	2.64	**14.08**	1.76	**9.39**	2.11	**11.25**	
2032-33	2.32	**14.07**	2.77	**16.85**	1.85	**11.24**	2.22	**13.47**	
2033-34	2.43	**16.50**	2.91	**19.76**	1.95	**13.19**	2.33	**15.80**	

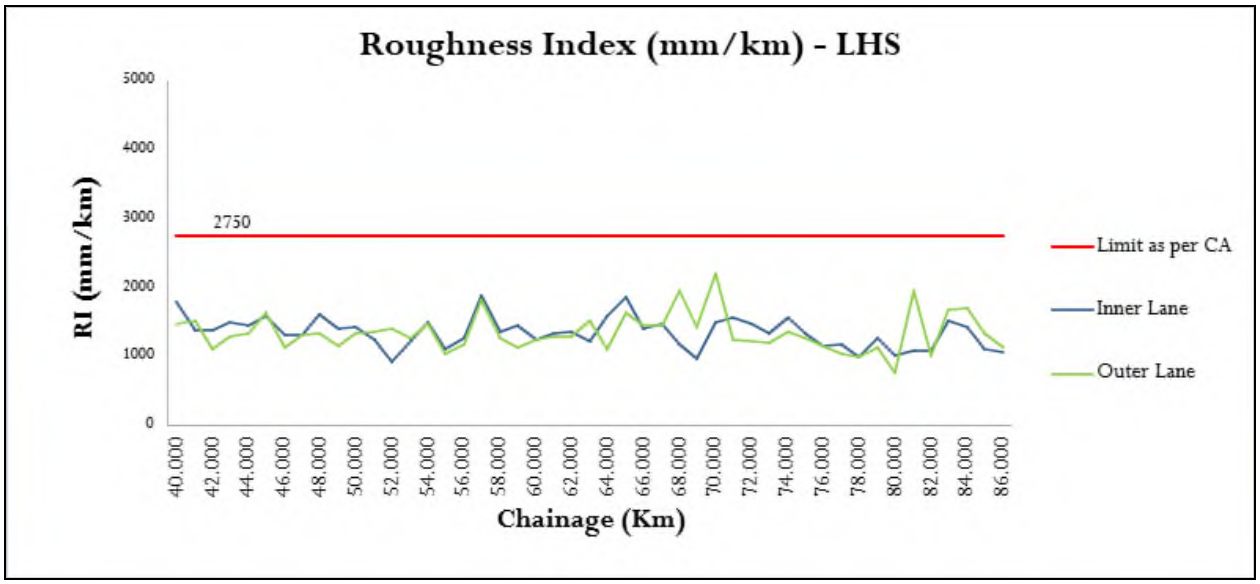
Year	4-Lane				6-Lane				Remarks
	MSA (LHS)	Cumulative MSA (LHS)	MSA (RHS)	Cumulative MSA (RHS)	MSA (LHS)	Cumulative MSA (LHS)	MSA (RHS)	Cumulative MSA (RHS)	
2034-35	2.55	**19.05**	3.06	**22.82**	2.04	**15.23**	2.45	**18.25**	
2035-36	2.68	**21.73**	3.21	**26.03**	2.14	**17.37**	2.57	**20.82**	2nd MM cycle
2036-37	2.81	**24.54**	3.37	**29.40**	2.25	**19.62**	2.70	**23.52**	

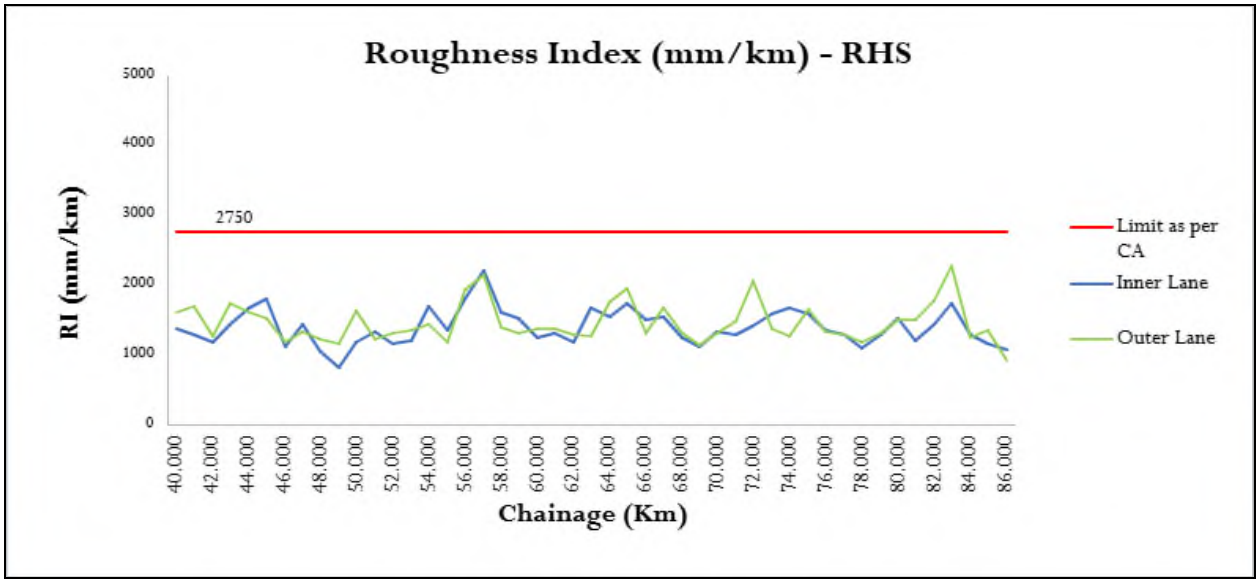
4.4 Network Survey Vehicles (NSV) Survey

The Concessionaire has provided NSV survey data conducted in November 2024. The NSV data is used to assess the riding quality and pavement condition of project road. The summary of Roughness Index is given in table below:

Table 4-3 Roughness Index Summary

Sr. No.	Rating	Roughness Value as per CA limit	Length (km)			
			LHS		RHS	
			Inner Lane	Outer Lane	Inner Lane	Outer Lane
1	Good - Fair	<2750	46.80	46.80	46.80	46.80
2	Poor	>2750	-	-	-	-





4.5 Structural Investigation

The Falling Weight Deflectometer survey was conducted for flexible pavement by the Concessionaire in October 2024. The summary of the FWD survey report is presented in the table below.

Table 4-4 FWD Summary

Remaining life (MSA)	Length (km)		Remark
	LHS	RHS	
<40	-	-	Strengthening not required
>40	46.808	46.808	
Total Length	**46.808**	**46.808**	

From the above table, it is observed that residual life of the pavement is more than the cumulative design MSA up to FY 2037 i.e., up to end of concession period. Hence, strengthening of the pavement is not required. The periodic maintenance of Project Road is proposed considering the above results.

4.6 Periodic Maintenance Strategy

Unlike the old Concession Agreements where periodicity and threshold limits were clearly described for the major maintenance, the Concession Agreement of this project does not specify the periodicity or the threshold limits for carrying out the full-length periodic maintenance. Schedule-K of the Concession Agreement specifies the threshold limits and the timeline for carrying out repairs to the distresses during the operation period.

The maintenance thus can be carried out as and when required basis and to the compliance of Schedule-F requirement to maintain the road in serviceable condition. Only improvement in Riding Quality is expected if the roughness value exceeds 2750 mm/km.

The Provisional COD for the project was achieved in the financial year of 2021 (5th August 2021). Hence, the major maintenance cycle is adjusted accordingly.

The table below shows the major / periodic maintenance cycle throughout the concession period for the Project Road.

Table 4-5 Major Maintenance Cycle

Sr. No.	Year	Main Carriageway	Service Road
1	FY 2026 to FY 2028	-	-
2	FY 2029	Major maintenance with 35 mm BC (VG-40) (60%) +Micro surfacing (40%) + Milling & 50 mm DBM (2.5%)	Major Maintenance with Micro-surfacing (100%)
3	FY 2030 to FY 2035	-	-
4	FY 2036	Major maintenance with 35 mm BC (VG-40) (40%) +Micro surfacing (60%) + Milling & 50 mm DBM (2.5%)	Major Maintenance with Micro-surfacing (100%)

**End of concession period as per Concession Agreement is FY 2037.*

The projected cost for periodic/ major maintenance is presented in the subsequent chapter.

5 COST ESTIMATE

5.1 General

Based on the assessment carried out in previous chapters, various costs were worked out. The costs are divided into following categories.

I. Balance Works Cost
II. Routine O&M Cost
III. Major Maintenance Cost
IV. Periodic Replacement of TMS / ATMS system

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and escalation.

5.2 Rate Assumption

Following assumptions are considered for unit rates of various items while estimating the cost:

1. Unit rates of different items (BC, DBM, Concrete, Road markings etc.) are calculated as per Government of Telangana Common SoR (Road & Bridge Works) 2024-25. The input rates for SoR were adopted as below:

   a. **Manpower and labour:** As per applicable minimum wages published by Sschedule of Rates, Government of Telangana.

   b. **Bitumen:** Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. Same discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.

   Therefore, bitumen prices are considered as per the forecast of Client. Current published of bitumen are considered for unit rates calculation for FY 2027. Average 10 years of price of bitumen are considered for unit rates calculation for FY 2028 and onwards, since bitumen prices have been range bound over the last five-six years. Following rates of bitumen are considered.

Table 5-1 Bitumen Rates - Ex-MI Supply excluding discount and GST

Supply Location	Applicability of Rates	Product	Current Published Price (16th Feb 26)	Long term price (Avg last 10 years)
Mathura	All States	VG-10	45,102	35,125
		VG-30	46,402	36,137
		VG-40	48,962	38,131
Panipat	All States	VG-10	45,102	35,125
		VG-30	46,402	36,137
		VG-40	48,962	38,131
Koyali	All States	VG-10	47,102	37,125
		VG-30	48,402	38,137
		VG-40	51,082	40,251
Haldia	All States	VG-10	46,602	35,683

Supply Location	Applicability of Rates	Product	Current Published Price (16th Feb 26)	Long term price (Avg last 10 years)
		VG-30	47,402	36,295
		VG-40	49,962	38,256
Barauni	All States	VG-10	47,132	36,213
		VG-30	48,432	37,325
		VG-40	50,992	39,286
CPCL	Kerala	VG-10	47,402	35,519
		VG-30	48,402	36,395
		VG-40	50,762	38,120
CPCL	Tamil Nadu	VG-10	47,902	36,019
		VG-30	48,402	36,395
		VG-40	50,962	38,320
CPCL	Telangana and Andhra Pradesh	VG-10	44,602	32,719
		VG-30	45,402	33,395
		VG-40	47,962	35,320
CPCL	Karnataka	VG-10	44,602	32,719
		VG-30	45,402	33,395
		VG-40	47,962	35,320

c. **Sand and Aggregate:** Market rates are considered from the quarry located nearest to Project Road.

d. **Cement:** Market rates are considered from the nearest local market.

e. **Steel :** Rate of steel is taken from market rate.

f. **Machinery Hire charges:** Hire charges for the machinery are considered in accordance with applicable PWD SOR.

g. **Actual Rates of items as per work order:** The rates of road marking, road stud, kerb raising, micro surfacing, milling, aggregate rates etc. are considered as per the work order shared by the client.

2. Goods and Service Tax (GST) is considered as 18% as per the latest Government Guidelines.

Summary of Unit Rates worked out using Standard Data Book / rate as per work order adopted for major items is given below.

Table 5-2 Summary of Unit Rates

Sr. No.	Item Description	Unit	Rates (Rs.)
1.	Dense Bituminous Macadam (VG-40)	Cum	8,610
2.	Bituminous Concrete (VG-40)	Cum	9,782
3.	Bituminous Concrete (VG-30)	Cum	9,294
4.	Milling	Sqm	92
5.	Micro-surfacing	Sqm	162
6.	Kerb Re-laying	Rmt	316
7.	Road Marking	Sqm	549
8.	Road Studs	Nos.	179

5.3 Balance Work Cost

As discussed in the previous chapter, there is no balance work on the Project Road.

5.4 Routine O&M Cost

Routine O&M cost is comprised of manpower cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance, and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area. Same has been divided into following major heads.

1. Salary and Welfare Expenses
2. Tolling Operations Services (Not in Scope)
3. Incident Management Services
4. Electricity and Diesel Charges
5. HTMS Expenses
6. Office Operating Expenses
7. Vehicle Running Expenses
8. Professional Fees Expense
9. Insurance Expense
10. IE Fees
11. Horticulture & ROW Maintenance
12. Routine Maintenance Cost

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Operation and Maintenance cost (Routine O&M) is presented below. The detailed working of routine maintenance (Sr. No. 15 of below table) is presented in **Annexure-I**.

Table 5-3 Summary of Operation Cost

Sr. No.	Particulars	Amount (FY 2027-37)	Remark
1	Salary and Welfare Expenses	80,73,000	
2	Tolling Operations Services	-	
3	Toll Security Services	27,12,518	
4	Incident Management & Emergency Services	1,97,85,427	
5	Electricity and Diesel Charges	79,20,593	
6	TMS / HTMS / System Expenses	54,79,521	
7	Office Operating Expenses	22,60,826	

Sr. No.	Particulars	Amount (FY 2027-37)	Remark
8	Vehicle Running Expenses	48,75,000	
9	Professional Fees Expense	91,50,964	
10	Community Development	15,07,218	
11	Communication Expenses	1,34,573	
12	Conveyance Expenses	2,69,146	
13	Insurance Expense	1,26,50,000	
14	IE Fees	22,33,912	
15	Routine Maintenance Cost (Project Road)	2,13,81,060	
16	Horticulture & ROW Maintenance	1,74,54,872	
17	Miscellaneous including Contingency	30,82,108	
	Total Cost (Rs.)	**11,89,70,738**	
	Total Cost (Cr.)	**11.90**	
	Per km Cost (Lakhs)	14.87	

5.5 Major Maintenance Cost

The summary of Major Maintenance Cost is provided as below. The detailed working of the same is presented in **Annexure-II**.

Table 5-4 Summary of Major Maintenance Cost

Sr. No.	Year	Major Maintenance Cost (Cr)	Remarks
1	FY 2024 to FY 2028	-	
2	FY 2029	59.29	
3	FY 2030 to FY 2035	-	
4	FY 2036	52.49	
5	FY 2037	-	
Total Cost (Cr.)		**111.78**	

5.6 Periodic Replacement of TMS / ATMS System

Every 7 years, replacement cost of major TMS / ATMS system is considered. The same is provided as below.

Sr. No.	Year	HTMS O&M / Replacement Cost (Cr)	Remarks
1	FY 2026 - FY 2028	-	
2	FY 2029	2.62	
3	FY 2030 - FY 2035	-	
4	FY 2036	2.62	
5	FY 2037	-	
Total Cost (Cr.)		**5.24**	

5.7 Escalation Assumption

The following escalation is considered basis discussions with Client and our internal estimates.

Table 5-5 Escalation

Year	Escalation	Year	Escalation
2027	-	**2043**	3.99%
2028	4.86%	**2044**	3.99%
2029	4.44%	**2045**	3.99%
2030	4.24%	**2046**	3.99%
2031	4.13%	**2047**	3.99%
2032	4.08%	**2048**	3.99%
2033	4.01%	**2049**	3.99%
2034	4.00%	**2050**	3.99%
2035	4.03%	**2051**	3.99%
2036	4.01%	**2052**	3.99%
2037	3.98%	**2053**	3.99%
2038	3.98%	**2054**	3.99%
2039	4.00%	**2055**	3.99%
2040	3.99%	**2056**	3.99%
2041	3.99%	**2057**	3.99%
2042	3.99%	**2058**	3.99%

5.8 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summaries yearly for remaining concession period along with escalation as mentioned in above clause.

Escalated O&M Cost (in INR Cr.)

Year of expense	FY27	FY28	FY29	FY30	FY31	FY32	FY33	FY34	FY35	FY36	FY37
Routine O&M Cost											
Salary and Welfare Expense	0.81	0.85	0.88	0.92	0.96	1.00	1.04	1.08	1.12	1.17	1.22

ANNEXURES

ANNEXURE I - ROUTINE MAINTENANCE COST

Routine Maintenance Cost	
Ordinary Repair Cost for Flexible (with GST)	**21,381,060**
(Inclusive of GST)	**= 4.57 lakhs per km**

National Highways / State Highways (Flexible Pavement)									
Reference cost taken for Four/Six lane (7.0 or 14m or 21m) with 1.5m wide shoulders									
(Refer Chapter 6.17 of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 45)									
Sr. No.	**Description for Flexible Pavement**		**Factor**	**Normal**	**Urban**	**Project Length (km)**		**Per Year Project Maintenance Cost**	
				More than 4500 CVD	**More than 4500 CVD**				
				198,575	**230,591**	**Normal**	**Urban**	**Normal**	**Urban**
1	Four-lane with divided carriageway	Without paved shoulder	1.53	303820	352804	-	-	-	-
		Paved shoulder	1.70	337578	392005	18.74		6,326,212	-
2	Four-lane with divided carriageway and service lane on either side	Without paved shoulder	2.00	397150	461182	2.36	-	937,274	-
		Paved shoulder	2.20	436865	507300	-	-	-	-
3	Six lane with divided carriageway	without Paved shoulder	2.09	415022	481935	-	-		-
		with Paved shoulder	2.26	448780	521136	0.99	-	445,190	-
4	Six lane with divided carriageway and service lane on either side	without Paved shoulder	2.56	508352	590313	-	-	-	-
		with Paved shoulder	2.76	548067	636431	23.29	1.43	12,762,288	910,096
TOTAL						**46.808**		**21,381,060**	

Details of Ordinary Repair in Rs. For one km. of Four lane and Six lane (7.0 or 14.0 or 21.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity**
				More than 4500 CVD
				BT Surface
1	**2**	**3**	**4**	**5**
1	**Maintenance of Carriageway & Paved Shoulders (1.5m wide); B.T. Surface**			
	i) Pot holes repair (50 mm deep)	100 % Pot hole free	As & when required	0.50%
	Volume (cum)			2.50
	Rs/m^3			10414
	Cost in Rupees			26,034
	ii) Patch repair	100 % Patch less	As & when required	0.50%
	Area (sqm)			50
	Rs/m^2			417
	Cost in Rupees			20,827
	iii) Sealing (Crack)			
	a) Wider than 3 mm	100 % Crack Less	As & when required	2.50%
	Area (sqm)			250
	Rs/m^2			76
	Cost in Rupees			18,992
	b) Width less than 3 mm	75 % Crack Less	As & when required	2.00%
	Area (sqm)			150
	Rs/m^2			51
	Cost in Rupees			7,583
	iv) Repair of ruts and undulations			
	a) Greater than 20 mm	75%	As & when required	1.00%
	Area (sqm)			75
	Rs/m^2			417
	Cost in Rupees			31,241
	v) Road marking	14%	Once in 7th year & @ Repaired location	30056
	SUB TOTAL			**1,34,733**

Details of Ordinary Repair in Rs. For one km. of Four lane and Six lane (7.0 or 14.0 or 21.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity** **More than 4500 CVD** **BT Surface**
1	**2**	**3**	**4**	**5**
2	**Maintenance of earthen Shoulders:**			
	i) Renewal of earthen shoulders	80%	Once in a Year	6306
	ii) Kuccha Drain Maintenance	100%	Twice in a Year	1108
	SUB TOTAL			**7,414**
3	**Maintenance of Cross Drainage works:**			
	i) Repair of floors	100%	Once in a Year	5055
	ii) Repair of parapets	100%	As & when required	2106
	SUB TOTAL			**7,161**
4	**Maintenance of Minor & Major Bridges:**			
	i) Spot painting & protective Coating required on Bearing and greasing of Bearings, railing, structural members, Expansion joints	100%	As & when required	36,950
	ii) Repair of minor washouts, erosion scour and animal holes			
	iii) Sealing Cracks with Cement/ Epoxy Mortar			
	iv) Replacement & Correction of safety barriers, Guard rails and damaged members			
	SUB TOTAL			**36,950**
5	**Miscellaneous Items:**			
	i) Lettering, Painting of Km stones & kerbs, sign boards, hectometre stone etc.		Once in a Year	3695
	ii) Replacement and providing additional retro reflective signage	20%	Covering Total Network in 4-5 Years	7390
	iii) Providing first aid kits, Umbrella, Safety Jackets, Vardi etc.		Once in a Year	1232
	iv) Traffic Census		Once in a Year	0
	v) Provision for roughness measurement		Twice in a Year	0

Details of Ordinary Repair in Rs. For one km. of Four lane and Six lane (7.0 or 14.0 or 21.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)

1 INTRODUCTION

1.1 Background

Cube Highways Fund Advisors Pvt. Ltd. (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InVIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an Infrastructure Investment Trust under the SEBI InVIT Regulations. Cube Highways Fund Advisors Pvt. Ltd. has appointed **M/s. FP Project Management Consultancy Services Private Limited** (hereinafter referred as "Technical Consultant" or "FPPM") to carry out Technical Due Diligence study of Chittor to Mallavaram Section of National Highway No. 140 (NH-140) from km. 0+000 to km. 61+128 in the State of Andhra Pradesh (hereinafter referred as "Project Road")

M/s. KNR Tirumala Infra Private Limited (KTIPL) (hereinafter referred as "Concessionaire") is a special purpose vehicle (SPV) for construction, operation, maintenance, and transfer of Chittor to Mallavaram Section (from km. 0+000 to km. 61+128) of National Highway No. 140 (NH-140) on design, built, operate and transfer (the "DBOT Annuity" or "Hybrid Annuity") basis. The project was awarded to Concessionaire on 09th May 2018 with a concession period of 15 years excluding construction period of 2.5 years by National Highway Authority of India (NHAI). The length of Project Road is 61.128 kms with one toll plaza at km. 37+350 (Gadanki).

Accordingly, the Technical Consultant has undertaken the work of assessment of operation and maintenance (O&M) cost based on site inspections and field investigations. The same is presented in this report.

1.2 Scope of Work

The detailed scope of work for conducting the technical due diligence of Project Road is presented as below:

a) A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets
b) Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, As-built drawings, O&M manual, COD / PCOD certificate, punch list, previous major maintenance etc.
c) Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, axle load, material investigations etc.
d) Formulation of future major maintenance strategy
e) Estimation of any initial expenses to be incurred due to deficiencies observed in diligence
f) Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period
g) Estimation of Annual Operation expenses along with Systems cost (TMS) till the end of concession period
h) Review of balance work cost for Project Road including estimation of quantities and item rates

1.3 Our Approach Philosophy

1.3.1 Composition of Team

Our team consists of well-qualified Engineers and other professionals, whose experience covers all the skills and specializations required for undertaking such assignments. All the team personnel proposed are our regular employees and have a long and stable working relationship with our firm.

The Team Leader coordinates the activities between all the key staff who work closely together. The key staff is assisted by various support staff, who report to the respective key staff in their field of expertise. The Team Leader is the point of contact for Client on Technical Study.

The technical study includes review of all the available documents namely:

a) Concession Agreement including Technical Schedules
b) O&M Contract, work order and their provisions
c) Quality of construction based on available data, design, and drawings.
d) Documents on historical expenditure on operation and maintenance
e) O&M cost schedule for the concession period
f) Review of Completion / Provisional Completion along with punch list items
g) Review of recent pavement surveys conducted.
h) Correspondence regarding scope of works and during O&M
i) Recent O&M Report submitted to Authority.
j) Toll operation manual / ATMS related documents

The review of above documents is the first step towards accomplishment of the task. This gives a complete idea of the project and is used as input data for preparation of report after necessary analysis.

1.3.2 Site Visit and Data Collection

A team of experts from various streams has carried out the preliminary site visit to understand the assessment of project assets mainly condition of the pavement and structures.

- The site visit is undertaken for detailed reconnaissance and visual pavement condition assessment.
- The condition assessment of major structures by visual inspection.
- The information like material sources and the probable cost is collected for the purpose of cost estimate.

The detailed design / drawings viz. Plan & L-sections, drainage design, structure design, layout drawings for project facilities like toll plaza, bus bay, truck lay-byes, highway lighting facilities etc. are studied. Also, design / drawing and provision pertaining to road furniture are studied.

The information on availability of material in the vicinity is gathered. It has direct impact on cost of maintenance work and balance work.

The basic approach for preparation of cost estimates for operation and maintenance is as per the practice of State PWD / MORT&H in respect of highways and structures.

1.3.3 Data Analysis

Based on the study of the available information and preliminary site visits, the consultants share their preliminary observations with the Client based on the evaluation of the technical data and reports provided by the Client.

1.4 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Company. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyzing the same as per the best engineering / industry practices.

The site visit and inspection were carried out between the periods from **3rd March 2026** to **5th March 2026**.

The report is organized with the following chapters for easy understanding of various issues.

Chapter 1 **Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for due diligence studies**.**

Chapter 2 **Project Description:** The chapter describes existing project features, and overview of project development.

Chapter 3 **Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on site visit**.**

Chapter 4 **Pavement Investigation and Assessment:** This chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance

Chapter 5 **Cost Estimates**: This chapter summarizes the forecast for O&M and major maintenance costs over the remaining concession period

2 PROJECT DESCRIPTION

2.1 Introduction

National Highways Authority of India signed the Concession Agreement **M/s. KNR Tirumala Infra Private Limited (KTIPL)**, is a company promoted by Cube Highways or company a Special Purpose Vehicle (SPV) formed for implementing this project on 09th May 2018. The Appointed Date for the Project Road is 4th January 2019.

The project has been developed through DBOT Annuity basis with concession period of 17.5 years from the Appointed Date including construction period of 2.5 years. The Concessionaire received Provisional COD on 10th May 2021. The Concessionaire received the Completion Certificate on 8thJune 2023. The project is currently under operation and maintenance phase.

2.2 Location

The Project Road is a section of National Highway No. 140 from Chittoor to Mallavaram in the state of Andhra Pradesh. The total project length is 61.128 kms.

The Location Map of the Project Road is presented below:

Figure 2-1 Location Map

The photographs taken during the site visit are presented below.

Figure 2-2 Start of the Project Road

Figure 2-3 End of the Project Road

2.3 Climate

The project road has a tropical wet and dry climate, designated under the Koppen climate classification. In winter the minimum temperatures are between 18^0 C and 20^0 C. Usually, summer lasts from March to June, with the advent of the rainy season in July, followed by winter which lasts until the end of February. The project road experiences heavy rainfall in November during the northeast monsoon season. The highest rainfall in 24 hours was on 16 November 2015, during the 2015 South India floods, with 219 millimeters or 8.62 inches. Cyclones commonly hit the Coast of Nellore and bring heavy rain.

2.4 Terrain

This section of National Highway traverses through plain / rolling terrain.

2.5 Abutting Land Use

The land use along the Project Road is predominantly agriculture or barren with intermittent built-up area.

2.6 Right of Way

The width of the existing Right of Way (RoW) throughout the project stretch is 60.0 m.

2.7 Existing Utilities

During widening of the Project Road, various affected utility services located along the project road were shifted to the PROW. The different types of utilities found along the road include, electrical poles, telephone poles, OFC Cables, etc.

2.8 Development as per Schedule-B

The Project Road from Chittoor (km. 0+000) to Mallavaram (km. 61+128) has been developed as a six-lane divided carriageway with median width of 4.0 m and 1.5 m, service road and other arrangements. The Project Road passes through rural as well as built-up sections.

As per Article 2 of Concession Agreement, the scope of project defined in Schedule-A and Schedule-B, (the **"Scope of the Project"**) shall mean and include, during the Concession Period:

a) construction of the project on the Site set forth in Schedule-A and as specified in Schedule-B together with provision of project facilities as specified in Schedule-C and in conformity with the Specification and Standards set forth in Schedule-D;
b) operation and maintenance of the Project in accordance with the provisions of the agreement; and
c) performance and fulfilment of all other obligations of the Concessionaire in accordance with the provisions of this Agreement and matters incidental thereto or necessary for the performance of any or all the obligations of the Concessionaire under this Agreement.

Following is the Scope of Work as per Schedule-B of Concession Agreement.

Table 2-1 Details of Scope of Work

Sr. No.	Type of Structure	Unit	Scope	Remark
1	O&M of Main Carriageway	km.	61.128	
2	Construction of Service Road	km.	118.916	Both Side (LHS + RHS)
3	Major Bridge	Nos.	06	
4	Minor Bridge	Nos.	23	
5	Vehicular Underpass (VUP)	Nos.	11	
6	Light Vehicular Underpass (LVUP)	Nos.	04	
7	RUB	Nos.	01	
8	Pipe Culvert	Nos.	11	
9	Box Culvert	Nos.	104	

3 CONDITION ASSESSMENT OF PROJECT ROAD

3.1 General

The Project Road is six lane divided carriageway and generally has paved carriageway of 12.5 m with earthen shoulder of 2.00 m on either side. The Project Road has a median width of 4.0 m in rural section and 1.5 m in urban section.

The entire stretch of Project Road including service road is constructed with flexible pavement. The pavement type for the Toll Plaza is rigid pavement.

3.2 Pavement Condition Survey

Pavement condition survey was carried out from **3rd March 2026 to 5th March 2026**. through visual inspection for the entire project length. From the visual inspection, the pavement condition of the Project Road for the entire length is generally found to be Good.

Some of the photographs taken during the site visit are presented as below.

Figure 3-1 Photographs of Pavement Condition (MCW)

3.3 Bypass / Realignment

There are two bypasses on Project Road. The detail of the bypass is tabulated below:

Bypass:

Sr. No.	Name of Bypass	Design Chainage (km)		Length (km)	Lane Configuration
		From	To		
1	Kanipakam	3+565	20+800	17.235	6-Lane
2	Kashipentla	40+700	47+700	7.000	6-Lane

Figure 3-2 Photographs of Bypass

Kanipakam Bypass at km. 20+000

Kashipentla Bypass at km. 42+000

3.4 Service Road / Slip Road

The service road with a width of 7.0 is constructed in built-up areas and adjoining underpass locations. The Project Road has total service road length of 118.916 kms on both sides. The photographs taken during the site visit are presented below.

Figure 3-3 Photographs of Service Road

Service Road at km. 9+350 (LHS)

3.6 Condition Survey of Structures

The inventory of structures including major bridges, minor bridges, RUB, underpasses and culverts is presented in table as below:

Table 3-1 Details of Summary for Structures

Type of Structure	Total Number of Structures
Major Structures:	
Road Under Bridge (RUB)	01
Grade Separator	-
Major Bridges (MJB)	06
Minor Bridges (MNB)	23
Vehicular Underpass (VUP)	11
Light Vehicular Underpass (LVUP)	04
Culverts:	
Pipe Culverts	11
Slab Culverts	-
Box Culverts	104
Total	**160**

The detailed condition survey of structures was carried out by visual inspection. The observations and findings are presented in table below.

Table 3-2 Condition Survey of Major Structure

Sr. No.	Chainage (km)	Type of Structure	Side	Span Arrangement (m)	Width (m)	Type of Sub-structure	Type of Super-structure	Type of Foundation	Type of Bearings	Remarks
1	04+215	Minor Bridge	LHS-MCW	3 x 5	1 x 14.5	RCC	RCC	Raft	NA	New Construction - Box type - Structure is in sound condition. On LHS and RHS some vegetation observed in water way. RCC return wall on both sides.

3.7 Condition Survey of Culverts

The cross-drainage structure includes hume pipe culverts and box culverts at various locations. There are 11 No. of pipe culverts, 104 No. of box culverts along the Project Road. The height of culvert varies from 1.0 m to 4.0 m from bed level. During the condition survey of structures, these culverts were inspected on sample basis.

The project involves strengthening and widening of existing road to six lane divided carriageway. The culverts beneath existing alignment are either widened or reconstructed. The structural condition of culverts is generally found in sound condition. The quality of surface concrete of box culverts is satisfactory. The RCC parapet, crash barrier or RCC railing has been provided at culvert locations which is maintained properly.

In most of culverts, the waterway is clear. However, near to urban area and some location is found blocked due to debris, drainage water or bushes, tree growth, which will be removed by the Concessionaire. The cement concrete pitching or stone pitching has been provided for slope protection.

The culverts are maintained by the Concessionaire during O&M period. However, in case of some culverts, cement concrete pitching has damaged which requires to be addressed under routine repair work by the Concessionaire.

3.8 Drainage

RCC cover drains are constructed at built-up areas and at locations where service roads are provided. RCC drain and PCC V/U type lined drain is constructed in between main carriageway and service road. Longitudinal and transverse drain is provided at the median. Site inspections revealed several locations where drains are clogged with debris and require cleaning. The photographs taken during site visit is presented as below.

Figure 3-12 Photographs of Drain

RCC Covered Drain at km. 51+500

Open Lined Drain at km. 6+600

RCC Covered Drain at km. 4+200

U-Shape Drain at km. 2+700

Median Chute Drain at km. 32+000

U-Shape Drain at km. 60+500

3.9 Slope Protection

Slope protection is found on Project Road at required locations. A few of the slope protection is damaged which will be rectified by the Concessionaire. The photographs taken during site visit is presented as below.

Figure 3-13 Photographs of Slope Protection

km. 48+750

km. 10+250

km. 49+145

km. 48+555

3.10 Road Furniture

The Concessionaire has provided road furniture along Project Road as per the standards and specifications mentioned in Schedule-C.

Pavement Marking

Pavement marking for the Project Road is done as per the design standards. Some of the photographs of road marking are presented below.

Figure 3-14 Photographs of Pavement Marking

Road Marking at km. 32+600

Lane Marking at km. 48+200 (RHS)

Rumble Strip Marking at 48+600 RHS

Pedestrian crossing marking at km. 9+600 (RHS - Slip Lane)

Road Studs

Cat's eye / road studs for the Project Road are done as per the design standards. Cat's eye has been fixed at junction and zebra crossings. The road studs are found in good condition. Some of the photographs of cat's eye / road studs are presented below.

Figure 3-15 Photographs of Road Studs

km. 54+627

km. 52+300

Traffic Signage / Median Kerb painting / KM Stone

Traffic signs include roadside signs, overhead signs, and kerb mounted signs etc. along the entire Project Road. Kilometre stones, vertical post of sign boards, chevron boards are properly placed. Some of the photographs of sign boards are presented below.

Figure 3-16 Photographs of Traffic Signages

Cantilever Sign Board at km. 57+700

Overhead Gantry Sign Board at km. 8+300

Chevron Sign Board at km. 56+100

Kilometer Stone at km. 35+000

Speed Limit Sign Board at km. 56+100

Pedestrian Crossing Sign Board at Km. 26+800

Highway Lighting

Highway lighting is provided at underpasses, toll plaza, RUB, and built-up locations. High mast lighting is provided at toll plaza and underpass locations. Highway lighting is also provided at approaches of underpasses. Some of the photographs of highway lighting are presented below.

Figure 3-17 Photographs of Street Light

Street Lighting at km. 53+000

High Mast light at Toll Plaza

High Mast light at VUP

Street Lighting at built-up location

Crash Barriers

Metal beam crash barriers are provided at bridge approaches, built-up locations, locations of high embankment and sharp curves. RCC crash barrier is provided on the approaches of underpasses and at structure locations. Some of the photographs of crash barriers are presented in below table.

Figure 3-18 Photographs of MBCB / Crash Barrier

RCC Crash Barrier at km. 8+300 (MJB)

MBCB at km. 53+300

Delineators

The traffic delineators are provided on the Project Road. Few of the photographs captured during site visit are provided below.

Figure 3-19 Photographs of Traffic Delineators

Traffic Delineator at km. 30+000

Traffic Delineator at km. 56+000

Traffic Delineator at km. 46+800

LED Traffic Blinkers

LED traffic blinkers are provided on the entire Project Road near pedestrian crossings, crossroads and median openings. Few photographs of LED traffic blinker captured during site visit are presented below.

Solar Blinker at km. 60+100

Solar Blinker at km.53+600

Solar Blinker at km.40+700

Road Land Boundary

Road land boundary pillars are not found / available on Project Road.

Emergency Call Box (ECB)

Emergency call boxes are provided on the Project Road as per the schedules of CA. Few photographs are provided below:

ECB at km. 20+000

ECB at km. 56+000

ECB at km. 46+000

3.11 Avenue Plantation and Median Plantation

Avenue plantation is not provided due to ROW constraint. However, median plantation are provided along the project length as per IRC specification except at built-up locations. The photographs taken during site visit is presented as below.

Figure 3-20 Photographs of Median Plantation

Median Plantation at km. 55+000

Median Plantation at km. 44+300

3.12 Toll Plaza

As per the Concession Agreement, there is one no. of toll plaza at km. 37+350 (Gadanki) with the following infrastructure.

Figure 3-21 Photographs of Toll Plaza

Toll Plaza Near Gadanki at km. 37+350

Toll Plaza Near Gadanki at km. 37+350

Toll Booth at Toll Plaza

WIM Bridge at Toll Lane

3.13 Lane Equipment

Following are the lane hardware and equipment installed at toll plaza.

1. RFID ETC Transceiver
2. Lane Controller with Industrial PC
3. AVC Sensors
4. Automatic Lane Barrier (ALB)
5. Lane Traffic Light and user fare display
6. Incident Capture Camera
7. Overhead Lane Signals
8. Traffic Lights
9. Toll Booth Equipment

3.13.1 RFID ETC Transceiver

RFID ETC Transceiver reads tags installed on the windshield of vehicles and mounted on a pole at about 6 m height. Handheld RFID readers are provided (1 no. in each direction) in case a tag is not detected by the fixed reader.

3.13.2 Lane Controller with Industrial PC

Toll Lane Controller is located within the Electronic Enclosure placed inside each toll booth which are connected to the common server and are capable of independent storage of data at km. 37+350 is in tunnel.

Lane Controller in Booth at TP

3.13.3 Automatic Vehicle Classification (AVC) Sensors

The AVC equipment comprises of a pair of height sensor poles, axle sensors and inductive loops. The height detector has a high sensing resolution and detects height when object blocks the path. The presence of vehicle is detected by inductive loop. The loop sensors embedded on the pavement trigger the AVC height sensors located on parallel pillars.

AVC Height Sensor

3.13.4 Automatic Lane Barrier

Boom barriers installed on all lanes are in working condition. The Automatic Lane Barrier is used to allow only authorized vehicles to pass through the lane. The barrier is activated only on generation of user fee receipt or other relevant vehicle processing activity. Torque motor powers the barrier for raising and lowering the boom. The motor can be blocked at any position without causing any damage. In the event of power failure, the boom is automatically raised. The boom weight is exactly balanced by built-in springs.

ALB at TP

3.13.5 Lane Traffic Light (LTL) and User Fare Display (UFD)

Lane Traffic Light (LTL) is used to instruct vehicles to stop or pass through the lane. The LTL is RED when the toll collector is expecting the vehicle at the booth. After the transaction is done; the LTL turns Green to instruct the vehicle to pass through the lane. The User Fare Display is a part of electronic toll collection equipment located at the toll booth. It is a mini variable message sign (VMS) made of Light Emitting Diodes (LED). The user fare display is used to display the toll fare that is due and that must be paid by the motorist and the classification of vehicle selected by the collector.

User Fare Display (UFD)

3.13.6 Incident Capture Camera (AVC Camera)

The incident capture camera is installed on the island of the booth to capture the image of the vehicle from the back side. The AVC triggers the Image capture system.

AVC Camera

3.13.7 License Plate Image Capture Camera (LPIC)

License Plate Image capture camera is installed on a 3 m pole facing incoming vehicle to capture the image of the vehicle number plate.

3.13.8 Over Head Lane Signal (OHLS)

The **Overhead Lane Signal (OHLS)** for lane “Open” and “Close” sign consists of a pair of “GREEN” (arrow) and “RED” (cross) lights. The OHLS is located at the vehicle approaching side of the canopy to show the drivers whether the lane is open or closed.

OHLS at TP

3.13.9 Toll Booth Equipment

Toll Booth Hardware / Equipment provided are:

- Toll Collector Display (Operator Monitor)
- Customized Industrial Keyboard
- Receipt Printer
- Intercom Slave unit
- Bar code reader
- Violation Light and alarm
- Manual Booth Control (MBC)
- Booth Camera

The operator monitor termed as Toll Collector Display (TCD) is located on the toll collector's desk. It is the system's interface to the toll collector, to display the status of transactions and status of the lane peripherals.

The keyboard on the toll terminal is a programmable keyboard for Registration of toll operations and is customized for different vehicle types and types of ticket.

Thermal printers are installed at the toll booths to print tickets. Intercom slave unit facilitates communication with the master unit located in the control room.

Violation system has an alarm switch which is triggered whenever there is a violation such as run-through happening on the lane. When there is an emergency, a foot switch pressed by the booth operator alerts the control room.

Booth Cameras is provided on the inside roof corner of the booth to provide surveillance through CCTV screen located in the control room. Manual Booth Controller is used to release exempt vehicles.

3.14 Plaza Equipment

3.14.1 TMS Server

Plaza Server is provided in a hot standby configuration and provided with port non-POE network switch and Port PoE switch. Internet connectivity is available through one lease line (Airtel) and Jio Wi-Fi module. Firewall with Sophos antivirus is provided.

Server Room

3.14.2 55” LED screen for CCTV monitoring

55” LED screen for CCTV monitoring installed at the toll plaza admin block provides view of all the toll booths, important zones within the plaza where cash transactions take place (server room, control room, cash up).

The toll plaza manager is able to observe the activities at the toll lanes and toll booth. When the toll collector calls up on the intercom, the manager is able to comprehend the situation at the lane by a zoomed view of the particular lane.

3.14.3 Workstations in Control Room, POS room

Workstations are available in control room (lane monitoring, administration, and audit), cash room and PoS.

3.15 Truck Lay-bye

The Concessionaire has provided truck lay-bye at the following locations.

Table 3-3 Details of Truck Lay-bye

Sr. No.	Location (km)	Side
1	5+550	LHS
2	49+830	LHS
3	5+550	RHS
4	51+375	RHS

Figure 3-22 Photographs of Truck Lay-bye

Truck Lay-Bye at km. 49+830

Truck Lay-Bye at km. 5+550

3.16 Administrative, Operation and Maintenance Base Camp

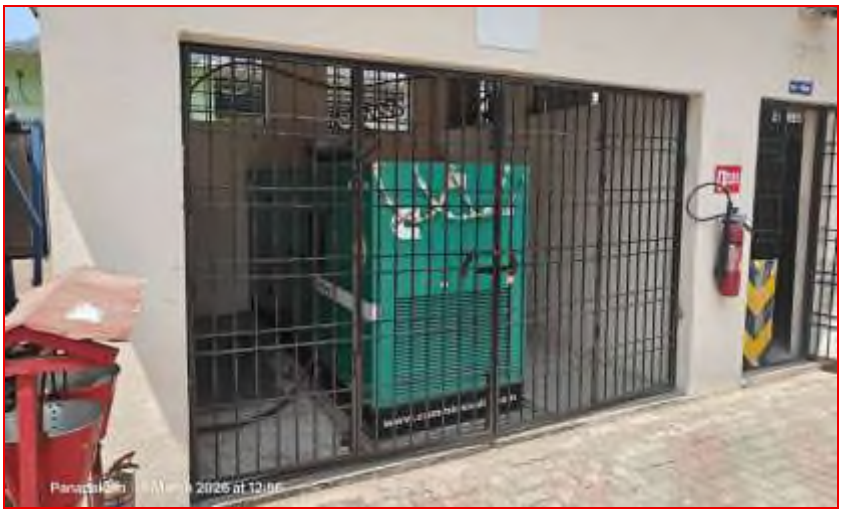
Traffic Aid Post and Medical Aid Post are in the scope of the Concessionaire.

Toll Plaza Administrative Building at km. 37+350

Toll Plaza Administrative Building at km. 37+750

Traffic and Medical Aid Post

Meteorological System



DG set at Toll Plaza Building

3.17 Toilet Block

There are 04 Nos. toilet blocks at truck lay bye locations and the same are being maintained by the Concessionaire.

Table 3-4 Details of Toilet Block

Sr. No.	Design Chainage (km)	Side
1	05+250	LHS
2	51+350	LHS
3	05+515	RHS
4	51+493	RHS

Figure 3-23 Photographs of Toilet Block

3.18 Bus Bays and Passenger Shelters

There are 26 Nos. of bus bays / passenger shelters along Project Road. Some of the photographs of the bus bays are presented below.

Figure 3-24 Photographs of Bus Bays / Passenger Shelters

Passenger Shelter at km. 53+020

Bus Bay and Shelter at km. 7+500

Passenger Shelter at km. 35+400

Passenger Shelter at km. 26+900

3.19 Balance Work Status

The project has received Provisional Completion Certificate on 10th May 2021 by completing the project length of 56.304 kms. All the works completed in available land and the balance work in encumbered land is de-scoped by the Authority as mentioned in the Technical Schedules of Concession Agreement. There is no balance work to be executed as per CA. The Project Director, PIU Tirupati has recommended the proposal for issuance of Completion Certificate to the Concessionaire for a completed length of 60.538 kms with effect from 08.06.2023 to the RO NHAI, Vijayawada vide their letter no. 484 dated 19th June 2023.

3.20 Operation and Maintenance

3.20.1 O&M Contract

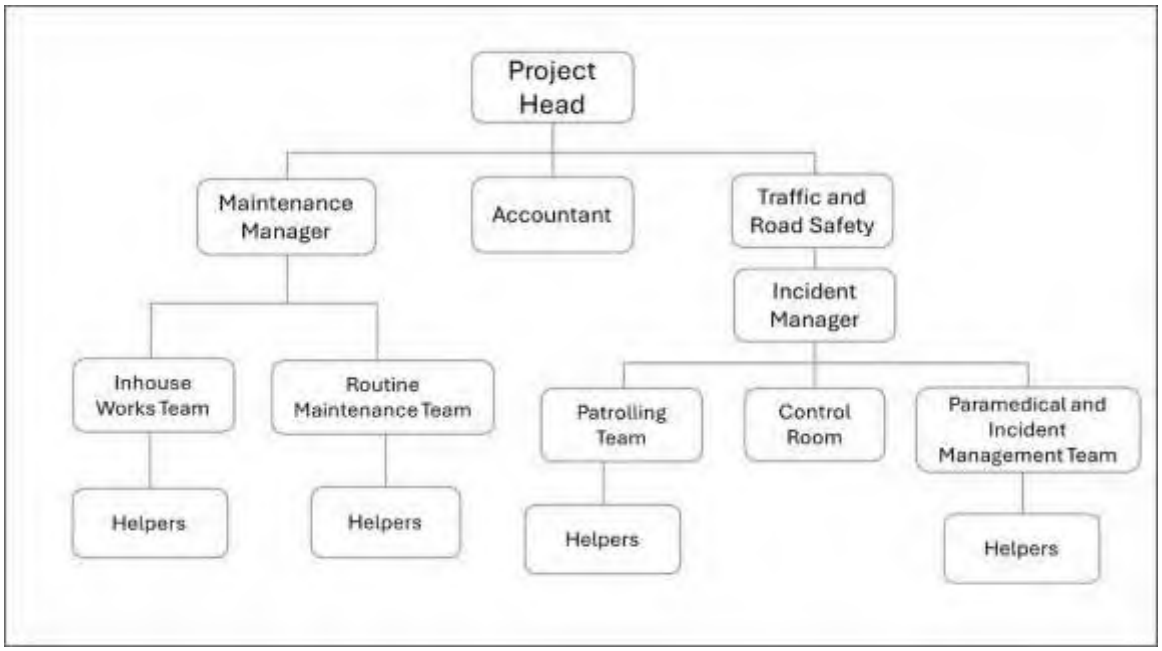
As per Clause 17.1.1 of the Concession Agreement, the Concessionaire shall operate and maintain the Project Road by itself, or through O&M Contractors and if required, modify, repair, or otherwise make improvements to the Project Road to comply with Specifications and Standards, and other requirements set forth in the Agreement, Good Industry Practice, Applicable Laws and Applicable Permits and manufacturer's guidelines and instructions with respect to toll systems, more specifically.

Toll Gazette Notification completed, and e-tenders were conducted by NHAI. The NHAI has selected M/s Sahakar Global Pvt. Ltd. for operating the toll collection The toll collection has started at 8.00 am of 26th June 2021. The Concessionaire has been carrying out the activities related to the operation and maintenance of the Project Road. The Operation Cost is presented in the subsequent chapter.

3.20.2 Organization Chart

The Concessionaire has provided the Organization Chart at site for Operation and maintenance. The team controls the maintenance activities. However, the maintenance work is undertaken and executed through competent sub-contractors.

Organization Chart



3.20.3 Operation

Operation cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, and other miscellaneous expenses. The Concessionaire has provided the expenses incurred towards operation expenses for past years. Necessary assumptions have been made from the expense of similar types of projects to arrive at the operation cost. The estimates are projected based on the best industry practices and are compared with the operating cost in the vicinity of the project area.

3.20.4 Routine Maintenance

The Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways-Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey.

Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

Currently, the entire length of the Project Road is maintained by the Concessionaire.

The Routine Maintenance Cost is presented in the subsequent chapter.

4 PAVEMENT INVESTIGATION AND ASSESSMENT

4.1 General

Presently, the pavement of the Project Road is being maintained by the Concessionaire as per Scope of Work. The Concessionaire received the Completion Certificate on 8th June 2023.

The project is currently under the Operation and Maintenance stage. The concession period of the project is 17.5 years from the Appointed Date including construction period of 30 months.

4.2 Axle Load and VDF

The Concessionaire conducted the axle load survey on Project Road at Toll Plaza location in July 2021. The summary of Vehicle Damage Factor (VDF) calculated as provided by the Concessionaire is tabulated below.

Table 4-1 Vehicle Damage Factor

Sr. No.	Vehicle Type	Direction	
		Chittoor - Mallavaram	Mallavaram - Chittoor
1	BUS	0.975	0.802
2	LCV	1.087	0.592
3	2-Axle	3.066	3.151
4	3-Axle	5.078	5.772
5	MAV	8.799	11.614

4.3 Design traffic

Traffic in Million Standard Axles (MSA) for the homogeneous section based on the traffic data provided by the Concessionaire has been used for future projections and the estimated design MSA is computed and presented in subsequent table.

For the estimation of design MSA, Actual Traffic Growth Rates as provided by the Concessionaire were used.

Table 4-2 MSA Calculation

MSA Calculation (LHS)			
Year	MSA	Cumulative MSA	Remarks
FY 26	2.93	2.93	
FY 27	3.08	6.01	
FY 28	3.23	9.23	
FY 29	3.39	12.63	1st Major Maintenance
FY 30	3.56	16.19	
FY 31	3.74	19.92	
FY 32	3.93	23.85	
FY 33	4.12	27.97	
FY 34	4.33	32.30	
FY 35	4.54	36.84	
FY 36	4.77	41.62	2nd Major Maintenance
FY 37	5.01	46.63	End of concession period

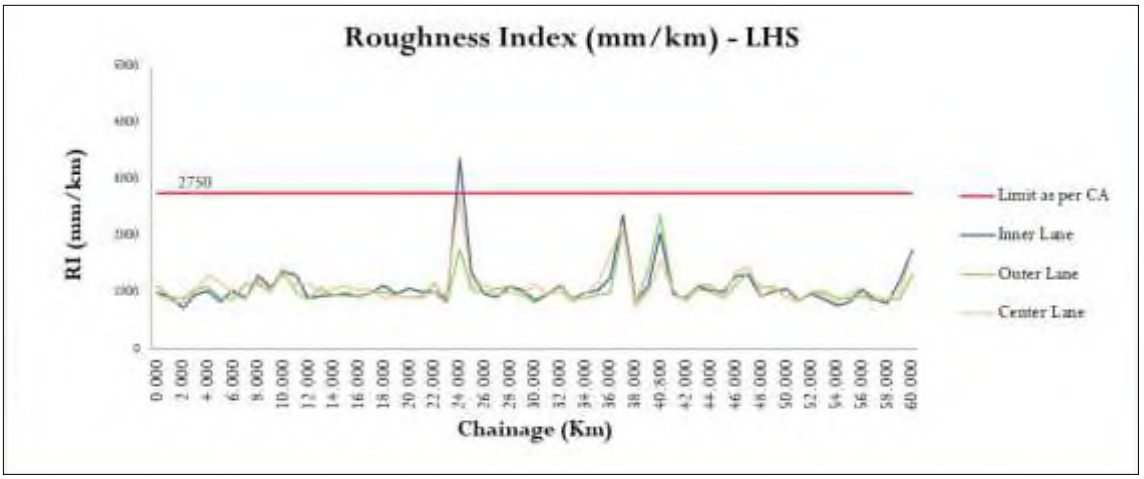
MSA Calculation (RHS)			
Year	**MSA**	**Cumulative MSA**	**Remarks**
FY 26	3.56	3.56	
FY 27	3.73	7.29	
FY 28	3.92	11.21	
FY 29	4.12	15.33	1st Major Maintenance
FY 30	4.32	19.65	
FY 31	4.54	24.19	
FY 32	4.77	28.96	
FY 33	5.00	33.96	
FY 34	5.25	39.21	
FY 35	5.52	44.73	
FY 36	5.79	50.52	2nd Major Maintenance
FY 37	6.08	56.61	End of concession period

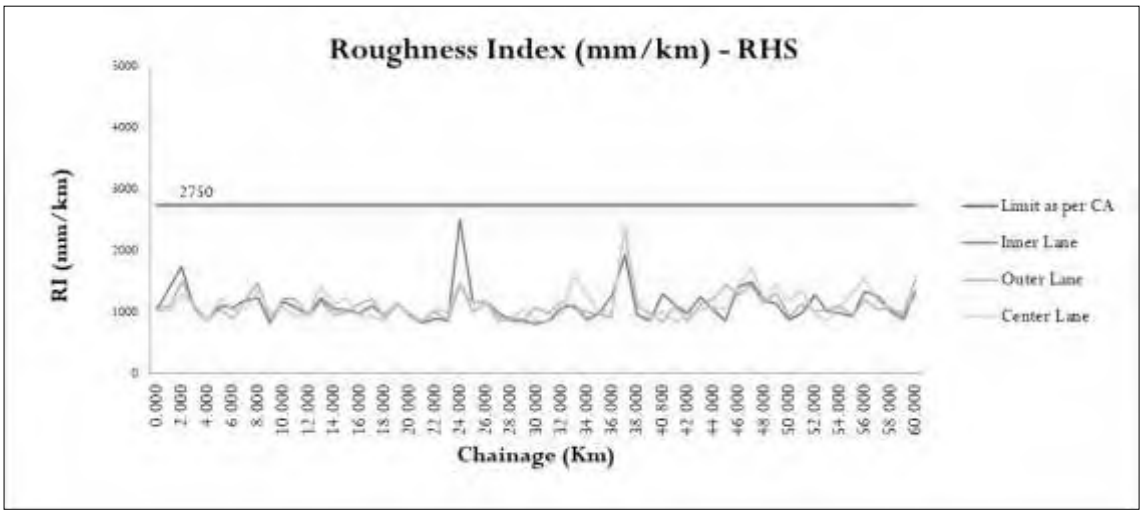
4.4 Network Survey Vehicles (NSV) Survey

The Concessionaire has provided NSV survey data conducted in November 2024. The NSV data is used to assess the riding quality and pavement condition of Project Road. The summary of classification of pavement as per CA is given in the table below:

Roughness Summary as per Schedule-K of CA							
Condition	**Limit as per Schedule K of CA (mm/km)**	**Length (km) - LHS**			**Length (km) - RHS**		
		Outer Lane	**Middle Lane**	**Inner Lane**	**Outer Lane**	**Middle Lane**	**Inner Lane**
Good	<2750	100%	100%	98.32%	100%	100%	100%
Poor	>2750	-	-	1.68%	-	-	-

From the above table, it is observed that the overall condition of pavement is good. At a few stretches the condition is found to be fair. Graphical representation of the results is presented below:





4.5 Structural Investigations

An evaluation of existing pavements using Falling Weight Deflectometer (FWD) survey was carried out by the Concessionaire in August 2024. Summary of FWD Survey report is presented in the table below:

Residual life (MSA)	Length (km)	
	LHS	RHS
<20	9.00	8.02
20-50	32.708	39.838
>50	16.79	10.64

The strengthening / overlay of pavement for project stretch are derived from 15th percentile of corrected E moduli of existing pavement, existing crust thickness etc. The combination of existing pavement and overlay will be analyzed as a four-layer system to ensure that fatigue and rutting criteria are satisfied for the calculated design traffic in terms of MSA. IITPAVE program is used to compute strain value at bottom of bituminous layer and top of subgrade in order to calculate design life of the proposed overlay. Poisson's ratio values used in overlay analysis from top to bottom of existing pavement layers are 0.5, 0.4 and 0.4 for existing bituminous, existing granular and existing subgrade layers respectively. Elastic modulus of 3000 MPa (VG-40) is used for the new bituminous layer.

4.6 Periodic Maintenance Strategy

Unlike the old Concession Agreements where periodicity and threshold limits were clearly described for the major maintenance, the Concession Agreement of this project does not specify the periodicity or the threshold limits for carrying out the full-length periodic maintenance. Schedule-K of the Concession Agreement specifies the threshold limits and the timeline for carrying out repairs to the distresses during the operation period.

The maintenance thus can be carried out as and when required basis and to the compliance of Schedule-K requirement to keep the road in serviceable condition. Only improvement in riding quality is expected if the roughness value exceeds 2750 mm/km.

The Provisional COD for the project was achieved on 10th May 2021. Hence, the major maintenance cycle is projected accordingly.

The table below shows the major/ periodic maintenance cycle throughout the concession period for the Project Road.

Table 4-3 Major Maintenance Cycle

Sr. No.	Year	Main Carriageway	Service Road
1	FY 2029	35 mm BC overlay for 60%, 50 mm DBM in 2.5% and Micro-surfacing in 40% length	Micro-surfacing on 100% length
2	FY 2036	35 mm BC overlay for 40%, 50 mm DBM in 2.5% and Micro-surfacing in 60% length	Micro-surfacing on 100% length

The projected cost for periodic / major maintenance is presented in the subsequent chapter.

5 COST ESTIMATES

5.1 General

Based on the assessment carried out in previous chapters, various costs were worked out. The costs are divided into following categories.

I. Balance Works Cost
II. Routine O&M Cost
III. Major Maintenance Cost
IV. Periodic Replacement of TMS system

Costs for different categories are detailed out in subsequent sections along with the assumptions considered for rate and escalation.

5.2 Rate Assumption

Following assumptions are considered for unit rates of various items while estimating the cost:

1 Unit rates of different items (BC, DBM, Concrete, Road markings etc.) are calculated as per the MoRTH Standard Data Book 2019. The input rates for MoRTH standard data book were adopted as below:

a) Manpower and labour: As per applicable minimum wages published by Ministry of Labour & Employment, Government of India.

b) Bitumen: The Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. Same discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.

Therefore, bitumen prices are considered as per the forecast of Client. Current published of bitumen are considered for unit rates calculation for FY 27. Average 10 years of price of bitumen are considered for unit rates calculation for FY 28 and onwards, since bitumen prices have been range bound over the last five-six years. Following rates of bitumen are considered.

Table 5-1 Bitumen Rates - Ex-MI Supply excluding discount and GST

Sr. No.	Supply Location	Applicability of Rates	Product	Rate for FY 2027 (Rs. / MT)	Rate for FY 2028 onwards (Rs. / MT)
1	Mathura	All States	VG-10	45,102	35,125
2			VG-30	46,402	36,137
3			VG-40	48,962	38,131
4	Panipat	All States	VG-10	45,102	35,125
5			VG-30	46,402	36,137
6			VG-40	48,962	38,131
7	Koyali	All States	VG-10	47,102	37,125
8			VG-30	48,402	38,137
9			VG-40	51,082	40,251
10	Haldia	All States	VG-10	46,602	35,683
11			VG-30	47,402	36,295

Sr. No.	Supply Location	Applicability of Rates	Product	Rate for FY 2027 (Rs. / MT)	Rate for FY 2028 onwards (Rs. / MT)
12			VG-40	49,962	38,256
13	Barauni	All States	VG-10	47,132	36,213
14			VG-30	48,432	37,325
15			VG-40	50,992	39,286
16	CPCL	Kerala	VG-10	47,402	35,519
17			VG-30	48,402	36,395
18			VG-40	50,762	38,120
19	CPCL	Tamil Nadu	VG-10	47,902	36,019
20			VG-30	48,402	36,395
21			VG-40	50,962	38,320
22	CPCL	Telangana and Andhra Pradesh	VG-10	44,602	32,719
23			VG-30	45,402	33,395
24			VG-40	47,962	35,320
25	CPCL	Karnataka	VG-10	44,602	32,719
26			VG-30	45,402	33,395
27			VG-40	47,962	35,320

c) Sand and Aggregate: Market rates are considered from the quarry located nearest to Project Road.

d) Cement: Market rates are considered from the nearest local market.

e) Steel : Rate of steel is taken from SAIL.

f) Machinery Hire charges: Hire charges for the machinery are considered in accordance with applicable PWD SOR.

2 Goods and Service Tax (GST) is considered as 18% as per the latest Government Guidelines.

Summary of Unit Rates worked out using Standard Data Book adopted for major items is given below.

Table 5-2 Summary of Unit Rates

Sr. No.	Item Description	Unit	Rates (FY 27 onwards)
1	Dense Bituminous Macadam	Cum	8,156
2	Bituminous Concrete	Cum	9,177
3	Milling	Sqm	75
4	Micro-surfacing	Sqm	165
5	Kerb re-laying	Rmt	270
6	Road Marking	Sqm	515
7	Road Studs	Nos.	200

5.3 Balance Work Cost

As discussed in the previous chapter, there are no balance works to be executed as per CA. Hence, the balance work is **NIL**.

5.4 Routine O&M Cost

Routine O&M cost is comprised of labour cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance, and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area.

The O&M estimate has been divided into following major heads:

1 Salary and Welfare Expenses
2 Toll Security Services Outsourced
3 Incident Management & Emergency Services Outsourced
4 Electricity and Diesel Charges
5 ATMS / HTMS / System Expenses
6 Office Operating Expenses
7 Vehicle Running Expenses
8 Professional Fees / Expense
9 Community Development
10 Communication Expenses
11 Conveyance Expenses
12 Insurance Expense
13 IE Fees
14 Routine Maintenance Cost (Project)
15 Horticulture & ROW Maintenance
16 Contingency

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Operation Cost is presented as below. The detailed working of routine maintenance (Sr. No. 14 of below table) is presented in **Annexure-I**.

Table 5-3 Summary of Operation Cost

Sr. No.	Particulars	Amount (Rs.)
1	Salary and Welfare Expenses	1,19,08,856
2	Toll Security Services	11,40,034
3	Incident Management & Emergency Services	2,05,26,519
4	Electricity and Diesel Charges	72,35,271
5	ATMS / HTMS / System Expenses	79,98,000
6	Office Operating Expenses	5,75,190
7	Vehicle Running Expenses	53,27,842
8	Professional Fees /Expense	35,57,400

Sr. No.	Particulars	Amount (Rs.)
9	Community Development	5,77,500
10	Communication Expenses	1,38,600
11	Conveyance Expenses	4,15,800
12	Insurance Expense	1,56,75,660
13	IE Fees	66,00,000
14	Routine Maintenance Cost (Project Road)	4,44,98,609
15	Horticulture & ROW Maintenance	1,91,01,277
16	Contingency (3%)	24,50,300
	Total Cost (Rs.)	**14,77,26,858**
	Total Cost (Cr.)	**14.77**
	Per km Cost (Lakhs)	24.17

5.5 Major Maintenance Cost

The summary of Major Maintenance Cost is provided as below. The detailed working of the same is presented in **Annexure-II**.

Sr. No.	Year	Major Maintenance Cost (Cr.)	Remarks
1	FY 2029	87.71	
2	FY 2036	78.51	
Total Cost (Cr.)		**166.22**	

5.6 Periodic Replacement of TMS / ATMS System

Every 7 years, replacement of major TMS system is considered. The cost for the same is provided as below.

Sr. No.	Year	ATMS O&M / Replacement Cost (Cr.)	Remarks
1	FY 2027	3.96	
2	FY 2034	3.96	
Total Cost (Cr.)		**7.92**	

5.7 Escalation Assumption

The following escalation is considered basis discussions with Client and our internal estimates.

Table 5-4 Escalation Factor

Year	Escalation	Year	Escalation
2027	-	**2042**	3.99%
2028	4.86%	**2043**	3.99%
2029	4.44%	**2044**	3.99%
2030	4.24%	**2045**	3.99%
2031	4.13%	**2046**	3.99%
2032	4.08%	**2047**	3.99%
2033	4.01%	**2048**	3.99%
2034	4.00%	**2049**	3.99%
2035	4.03%	**2050**	3.99%
2036	4.01%	**2051**	3.99%

Year	Escalation	Year	Escalation
2037	3.98%	**2052**	3.99%
2038	3.98%	**2053**	3.99%
2039	4.00%	**2054**	3.99%
2040	3.99%	**2055**	3.99%
2041	3.99%	**2056**	3.99%

5.8 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summaries yearly for remaining concession period along with escalation as mentioned in Clause 5.7.

Escalated O&M Cost (in INR Cr.)

	Year of expense	FY27	FY28	FY29	FY30	FY31	FY32	FY33	FY34	FY35	FY36
1	Routine O&M Cost										
1.01	Salary and Welfare Expense	1.19	1.25	1.30	1.36	1.42	1.47	1.53	1.59	1.66	1.72
1.02	Tolling Operations Services	-	-	-	-	-	-	-	-	-	-
1.03	Toll Security Services	0.11	0.12	0.12	0.13	0.14	0.14	0.15	0.15	0.16	0.17

ANNEXURES

ANNEXURE I - ROUTINE MAINTENANCE COST

Routine Maintenance Cost	
Ordinary Repair Cost for Flexible (with GST)	**4,44,98,609**
(Inclusive of GST)	**= 7.28 lakhs per km**

CONVERSION FACTORS										
National Highways / State Highways										
Reference cost taken for Two / four lane (7.0 or 14m or 21m) with 1.5m wide shoulders										
(Refer Chapter 6.17 of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 45)										
Sr. No.	**Description for Flexible Pavement**		**Factor**	**Normal**	**Urban**	**Hilly**	**Project Length (km)**		**Per Year Project Maintenance Cost (Cr.)**	
				More than 4500 CVD	**More than 4500 CVD**	**More than 4500 CVD**				
				2,61,768	**2,92,715**	**3,05,687**				
							Normal	**Urban**	**Normal**	**Urban**
1	Six lanes with divided carriageway	Without Paved shoulder	2.09	5,47,095	6,11,775	6,38,885	-	-	-	-
		With Paved shoulder	2.26	5,91,595	6,61,537	6,90,852	-	-	-	-
2	Six lanes with divided carriageway and service lane on either side	Without Paved shoulder	2.56	6,70,126	7,49,351	7,82,558	-	-	-	-
		With Paved shoulder	2.76	7,22,479	8,07,894	8,43,696	57.21	3.92	4,13,30,856	31,67,752
						TOTAL	**61.128**		**4,44,98,609**	

Ordinary Repairs

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity**
				More than 4500 CVD
				BT Surface
1	**2**	**3**	**4**	**5**
1	**Maintenance of Carriageway & Paved Shoulders (1.5m wide); B.T. Surface**			
	i) Potholes repair (50 mm deep)	100 % Pothole free	As & when required	1.00%
	Volume (cum)			5.00
	Rs/m^3			9044
	Cost in Rupees			45,220
	ii) Patch repair	100 % Patch less	As & when required	1.00%
	Area (sqm)			100
	Rs/m^2			362
	Cost in Rupees			36,176
	iii) Sealing (Crack)			
	a) Wider than 3 mm	100 % Crack Less	As & when required	2.50%
	Area (sqm)			250
	Rs/m^2			165
	Cost in Rupees			41,233
	b) Width less than 3 mm	75 % Crack Less	As & when required	2.50%
	Area (sqm)			187.5
	Rs/m^2			158
	Cost in Rupees			29,564
	iv) Repair of ruts and undulations			
	a) Greater than 20 mm	75%	As & when required	1.00%
	Area (sqm)			75
	Rs/m^2			362
	Cost in Rupees			27,132

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity**
				More than 4500 CVD
				BT Surface
1	**2**	**3**	**4**	**5**
	v) Road marking	14%	Once in 7th year & @ Repaired location	7875
	SUB TOTAL			**1,87,200**
2	**Maintenance of earthen Shoulders:**			
	i) Renewal of earthen shoulders	80%	Once in a Year	6282
	ii) Jungle Clearance	100%	Twice in a Year	2061
	iii) Kuccha Drain Maintenance	100%	Twice in a Year	1104
	SUB TOTAL			**9,447**
3	**Maintenance of Cross Drainage works:**			
	i) Cleaning of culvert bed	100%	Once in a Year	2782
	ii) Repair of floors	100%	Once in a Year	5035
	iii) Repair of parapets	100%	As & when required	2098
	SUB TOTAL			**9,915**
4	**Maintenance of Minor & Major Bridges:**			
	i) Cleaning and removal of dirt & vegetation from pier caps, Bearings, Expansion Joints, Superstructure, Substructure and Retaining wall etc.	100%	As & when required	36,804
	ii) Spot painting & protective Coating required on Bearing and greasing of Bearings, railing, structural members, Expansion joints			
	iii) Repair of minor washouts, erosion scour and animal holes			
	iv) Sealing Cracks with Cement/ Epoxy Mortar			
	v) Replacement & Correction of safety barriers, Guard rails and damaged members			
	SUB TOTAL			**36,804**

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity**
				More than 4500 CVD
				BT Surface
1	**2**	**3**	**4**	**5**
5	**Miscellaneous Items:**			
	i) Turfing and Arboriculture		Once in a Year	2454
	ii) Maintenance of gang hut store, sheds, animal & debris removal		Once in a Year	3680
	iii) Lettering, Painting of Km stones & kerbs, sign boards, hectometre stone etc.		Once in a Year	3680
	iv) Replacement and providing additional retro reflective signage	20%	Covering Total Network in 4-5 Years	7361
	v) Providing first aid kits, Umbrella, Safety Jackets, Vardi etc.		Once in a Year	1227
	vi) Traffic Census		Once in a Year	0
	vii) Provision for roughness measurement		Twice in a Year	0
	SUB TOTAL			**18,402**
	GRAND TOTAL (Normal)			**2,61,768**
6	**Additional Cost required for Urban Area**			
	i) Renewal of Centre Line, Edge Marking, Kerb Marking/ Zebra crossing etc. in City Portion	33%	Once in three years with thermoplastic paint	1259
	ii)Repairs to footpath	100%	As & when required	4907
	iii) ROB/ Fly-over Railings & repair	100%	As & when required	4907
	iv) Street Lighting	0%	As & when required	0
	v) Encroachment Removal Squad	100%	As & when required	7606
	vi) Repair of divider/ Railing in City portion	100%	As & when required	9814
	vii) Provision for maintenance of pedestrian underpass	100%	As & when required	2454
	SUB TOTAL			**30,947**
	GRAND TOTAL (Urban)			**2,92,715**

ANNEXURE II - MAJOR MAINTENANCE COST

1 INTRODUCTION

1.1 Background

Cube Highways Fund Advisors Pvt. Ltd. (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InvIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an Infrastructure Investment Trust under the SEBI InVIT Regulations. Cube Highways Fund Advisors Pvt. Ltd. has appointed **M/s FP Project Management Consultancy Services Private Limited** (hereinafter referred as "Technical Consultant" or "FPPM") to carry out Technical Due Diligence of Lucknow - Raibareli section of NH-30 (Old NH-24B) from km. 12+700 to km. 82+700 in the State of Uttar Pradesh (hereinafter referred as "Project Road").

Lucknow Raebareli Tollway Limited (hereinafter referred as "Concessionaire") is a special purpose vehicle (SPV) for tolling, operation, maintenance and transfer of Lucknow to Raebareli Section (from km. 12+700 to km. 82+700) of NH-30 or Project Road under TOT Bundle-3. The project was awarded to Concessionaire on 27th December 2019 with a concession period of 30 years by National Highway Authority of India (NHAI). The length of Project Road is 70.0 kms with one toll plaza at Dakshina Shekhpur at km. 42+650.

Accordingly, Technical Consultant has undertaken the work of assessment of operation and maintenance (O&M) cost based on site inspections and filed investigations. The same is presented in this report.

1.2 Scope of Work

The detailed scope of work for conducting the technical due diligence of Project Road is presented below.

- A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets
- Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, As-built drawings, O&M manual, COD / PCOD certificate, punch list, previous major maintenance etc.
- Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, axle load, material investigations etc.
- Formulation of future major maintenance strategy
- Estimation of any initial expenses to be incurred due to deficiencies observed in diligence
- Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period
- Estimation of Annual Operation expenses along with Systems cost (TMS / HTMS) till the end of concession period
- Review of balance work cost for Project Road including estimation of quantities and item rates

1.3 Our Approach Philosophy

1.3.1 Composition of Team

Our team consists of well-qualified engineers and other professionals, whose experience covers all the skills and specializations required for undertaking such assignments. All the team personnel proposed are our regular employees and have a long and stable working relationship with our firm.

The Team Leader coordinates the activities between all the key staff who work closely together. The key staff is assisted by various support staff, who report to the respective key staff in their field of expertise. The Team Leader is the point of contact for Client on Technical Study.

The technical study includes review of all the available documents namely:

a) Concession Agreement including Technical Schedules
b) O&M Contract, work order and their provisions
c) Quality of construction based on available data, design and drawings
d) Documents on historical expenditure on operation and maintenance
e) O&M cost schedule for the concession period
f) Review of Completion / Provisional Completion along with punch list items
g) Review of recent pavement surveys conducted
h) Correspondence regarding scope of works and during O&M
i) Recent O&M Report submitted to Authority
j) Toll operation manual / ATMS related documents

The review of above documents is the first step towards accomplishment of the task. This gives a complete idea of the project and is used as input data for preparation of report after necessary analysis.

1.3.2 Site Visit and Data Collection

A team of experts from various streams has carried out the preliminary site visit to understand the assessment of project assets mainly condition of the pavement and structures.

- The site visit is undertaken for detailed reconnaissance and visual pavement condition assessment.
- The condition assessment of major structures by visual inspection.
- The information like material sources and the probable cost is collected for the purpose of cost estimate.

The detailed design / drawings viz. Plan & L-sections, drainage design, structure design, layout drawings for project facilities like toll plaza, bus bay, truck lay-byes, highway lighting facilities etc. are studied. Also, design / drawing and provision pertaining to road furniture are studied.

The information on availability of material in the vicinity is gathered. It has direct impact on cost of maintenance work and balance work.

The basic approach for preparation of cost estimates for operation and maintenance is as per the practice of State PWD / MORT&H in respect of highways and structures.

1.3.3 Data Analysis

Based on the study of the available information and preliminary site visits, the Consultants share their preliminary observations with the Client based on the evaluation of the technical data and reports provided by the Client.

1.4 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Company. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyze the same as per the best engineering / industry practices.

The site visit and inspection were carried out between the periods from **21st March 2026 to 23rd March 2026**.

The report is organized with the following chapters for easy understanding of various issues.

Chapter 1 **Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for due diligence studies.

Chapter 2 **Project Description:** The chapter describes existing project features, overview of project development.

Chapter 3 **Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on site visit.

Chapter 4 **Pavement Investigation and Assessment:** The chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance.

Chapter 5 **Cost Estimates:** The chapter summarizes the forecast for O&M and major maintenance cost over the remaining concession period.

2 PROJECT DESCRIPTION

2.1 Introduction

National Highways Authority of India signed the Concession Agreement with **Lucknow Raebareli Tollway Limited**, is a company promoted by Cube Highways or Special Purpose Vehicle (SPV) formed for implementing this project on 27th December 2019. The Appointed Date for the Project Road is on 14th October 2020.

Presently, there are two Concessionaires for Project Road. One is Cube Highways who maintains Toll Operation activities (TOT Concessionaire) and the other Concessionaire is Path Enterprises (Annuity Concessionaire) who maintains the project length as per their original scope of work.

The project is being developed through Annuity BOT mode under TOT (Toll Operate Transfer) Bundle-3 with concession period of 30 years from the Appointed Date while O&M will start from March 2029 as per Clause 10.2.2 of Concession Agreement.

2.2 Location

The Project Road is a part of National Highway No. 30 (old NH-24) of Lucknow - Raebareli section in the state of Uttar Pradesh. The total project length is 70.00 kms.

The Location Map of the Project Road is presented below:

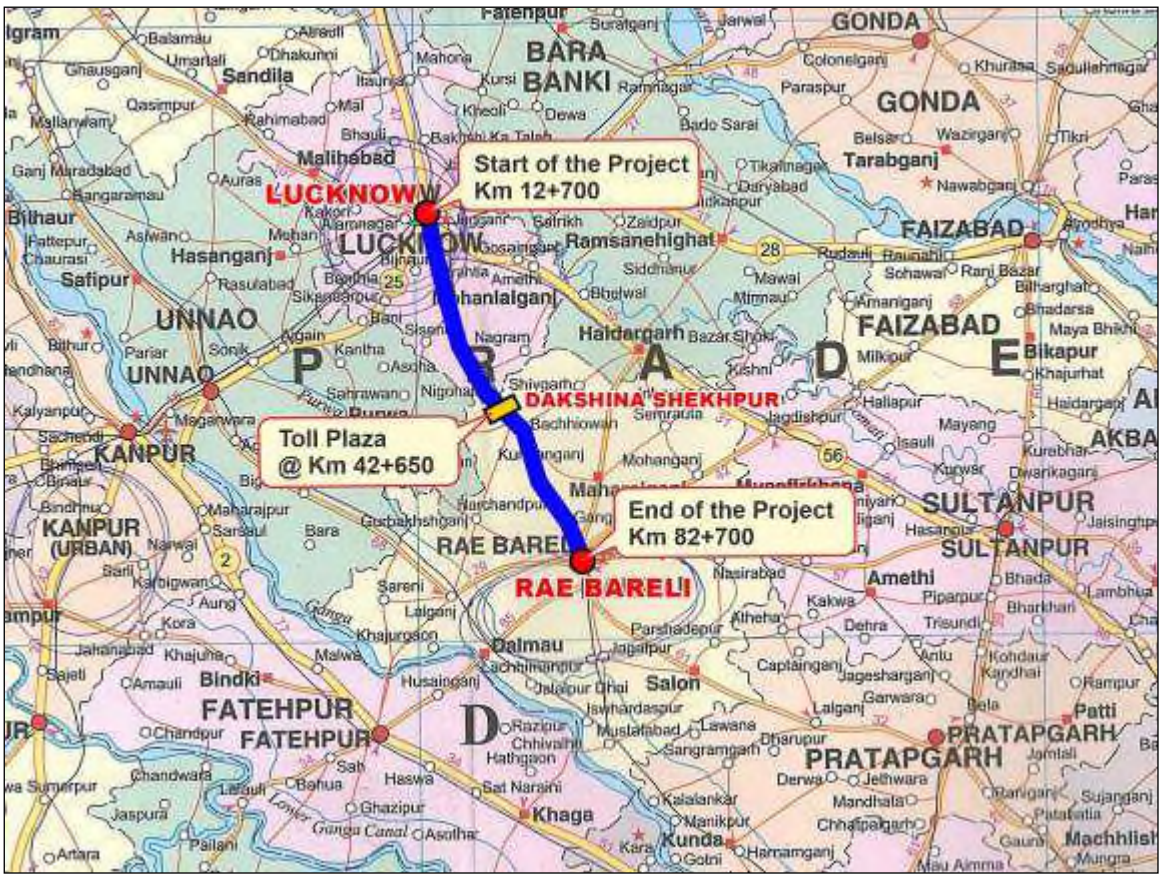

Figure 2-1 Location Map

The photographs taken during the site visit are presented below.

Figure 2-2 Start/End of Project Road (LHS)

Figure 2-3 Start/End of Project Road (RHS)

2.3 Climate

The climate of the project area is characterized by general dryness (except in the southwest monsoon season), a hot summer and a cold winter. The year may be divided into four seasons. The period from about middle of November to February is the cold season. This is followed by the summer season from March to about the end of June. The south-west monsoon season commences late in June and continues up to about the middle of September. The period from mid-September to the middle of November constitutes the post-monsoon or transition season. The temperature ranges from a minimum of 4°C in winter to 47°C in summer. May and June are generally the hottest months and December and January are the coldest months. Relative humidity is high, averaging about 80% to 90% in February month and decrease it gradually up to 85% at the end of season due to gradual warming. The average annual rainfall in the district is 900 millimeters.

2.4 Terrain

The Project Road traverses through plain / rolling terrain.

2.5 Abutting Land Use

The following are the various developments that are anticipated in the Four Lanning of Lucknow Raibareli section.

- This Project Road reduces the travel time for getting access to Raibareli, Sultanpur, Prayagraj and Fatehpur which results in better industrial growth and economy.

- A lot of development is anticipated in Lucknow Raibareli Section, which transits through NH-24B / NH-30 and hence the development / maintenance of this Project Road would accelerate the development as majority of traffic would use the highway for getting access to Prayagraj Mirzapur.

- The tourism industry get a great booster as majority of people using this highway for going to places like Prayagraj etc.,

- A lot of commercial establishment along the project highway in the form of hotels, snack parlours as well as railway coach parts factory are developed.

2.6 Right of Way

The width of existing Right of Way (ROW) for the Project Road varies from 26.0 m to 45.0 m / 100 m.

2.7 Existing Utilities

During widening of the Project Road, various affected utility services were shifted to proposed ROW. The different types of utilities found along the road include, electrical poles, telephone poles, OFC Cables, etc.

2.8 Development as per Schedule-B

The Project Road from Lucknow (km. 12+700) to Raebareli (km. 82+700) has been developed as a four-lane divided carriageway with median width of 2 m, service road and other arrangements. The Project Road passes through rural as well as built-up sections.

As per Article 2 of Concession Agreement, the scope of project defined in Schedule-A and Schedule-B, (the **"Scope of the Project"**) shall mean and include, during the Concession Period:

a) Construction of the project on the Site set forth in Schedule-A and as specified in Schedule-B together with provision of project facilities as specified in Schedule-C and in conformity with the Specification and Standards set forth in Schedule-D.
b) Tolling, operation, management, maintenance, and transfer of the Project Highway subject to and in accordance with the provisions of this Agreement.
c) performance and fulfilment of all other obligations of the Concessionaire in accordance with the provisions of this Agreement and matters incidental thereto or necessary for the performance of any or all of the obligations of the Concessionaire under this Agreement.

Following is the Scope of Work as per Schedule-B of Concession Agreement.

Table 2-1 Details of Scope of Work

Sr. No.	Type of Structure	Unit	Scope	Remark
1	O&M of Main Carriageway	km.	70.00	From March 2029
2	Construction of Service Road	km.	1.60	Both Side
3	Reconstruction of Pipe Culvert	Nos.	02	
4	Reconstruction of Box Culvert	Nos.	02	
5	New Construction of Box Culvert	Nos.	01	
6	Vehicular Underpasses	Nos.	02	
7	Reinforce Cement concrete cover Drain with footpath	km.	1.60	Both Side
8	Road marking by Thermoplastic Paint	km.	3.2	
9	Rigid Concrete Barrier	km.	3.2	
10	Additional cantilever Sign Boards	Nos.	04	

Note:

1. *Above Quantities are the minimum to be provided and any addition in the above shall not be treated under change of scope.*

2. *The Concessionaire informed that earlier IE had suggested a change of scope as IE had proposed an elevated road instead of two nos. new VUP. However, later NHAI rejected the same vide their letter no. NHAI/PIU/LKO/NH-24B/TOT/2022/3287 Dated 04-10-2022 and the same has been conveyed to Concessionaire as well as to start the original scope of work vide their letter no. IE/LKO-RBL/24B/O&M/2022/470 Dated 08-10-2022.*

3 CONDITION ASSESSMENT OF PROJECT ROAD

3.1 Pavement

The Project Road is four lane divided carriageway and generally has paved carriageway of 9.0 m with earthen shoulder of 1.5 m on either side. The Project Road has a median width of 2.0 m throughout its length.

The entire stretch of Project Road including service road is constructed with flexible pavement. The pavement type for the Toll Plaza including taper is of rigid pavement.

3.1.1 Pavement Condition Survey

Pavement condition survey was carried out from **21st March 2026 to 23rd March 2026** through visual inspection for the entire project length. From the visual inspection, it is found that the average pavement condition of the Project Road is found to be **fair to poor except few locations**.

Sr. No.	Side	Condition	% Age
1.	LHS	Fair to Poor	56%
2.	RHS	Fair to Poor	55%
3.	LHS	Good	14%
4.	RHS	Good	15%

3.5 Condition Survey of Culverts

The cross-drainage structure includes Hume pipe culverts and box culverts at various locations. There are 23 Nos. of pipe culverts, 66 Nos. of box culverts along the Project Road. The height of culvert varies from 1.0 m to 3.0 m from bed level. During the condition survey of structure, these culverts were inspected on sample basis.

The project involves strengthening and widening of existing road to four lane divided carriageway. The culverts beneath existing alignment are either widened or reconstructed. The structural condition of culverts is generally found in sound condition. The quality of surface concrete of box culverts is satisfactory. The RCC parapet or crash barrier has been provided at culvert locations which is maintained properly.

In most of culverts, the waterway is clear. However, near to urban area and some location is found blocked due to debris, drainage water or bushes, tree growth, which will be removed by the Annuity Concessionaire. The Cement Concrete pitching or stone pitching has been provided for slope protection.

The culverts are maintained by the Annuity Concessionaire during O&M period. However, in case of some culverts, cement concrete pitching has been damaged which required to be addressed under routine repair by the Annuity Concessionaire.

3.6 Drainage

There are 31.48 kms of existing drain on both side of the Project Road as per Concession Agreement. However, 3.2 kms of RCC drain is additionally constructed in built-up area and locations where service roads are provided. The photographs taken during site visit is presented as below:

3.8 Road Furniture

The Concessionaire has to provided additional road furniture along the Project Road as per the standards and specifications mentioned in Schedule-C / Schedule-B. The details of the items are provided below.

a) Lighting Along the Project Road

Lighting including fixing of poles and LED lights are to be provided at following locations on Project Road in accordance with Clause 12.3 of IRC:SP:84-2014.

Table 3-4 Details of Lighting on Project Road

Sr. No.	Chainage (km)		Side	Remarks	Length (m)
	From	To			
1	76+850	77+650	Both Side	For each number of light, the minimum specification shall be: street lighting with single pole and double arm fitting 45W (5050 LUMENS) - Blue tooth enabled MPPT Based Charge Controller, 9 Mts octagonal pole with all accessories, Automatic switch on / off, Duty Cycle 12 hrs. working each night	800.00

Sr. No.	Chainage (km)		Side	Remarks	Length (m)
	From	To			
2	78+400	79+200	Both Side	For each number of light, the minimum specification shall be street lighting with single pole and double arm fitting 45W (5050 LUMENS) - Blue tooth enabled MPPT Based Charge Controller, 9 Mts octagonal pole with all accessories, Automatic switch on / off, Duty Cycle 12 hrs. working each night	800.00
Total Length (m)					**1600.00**

In addition to above, suitable lighting arrangements are to be provided and maintained at underside of PUP, VUP and other structures mentioned in schedule-B.

b) Transverse / Thermoplastic Bar Marking Locations

Transverse / thermoplastic bar markings on either side of carriageway on proposed service road / VUP / VUP approach locations are provided as per Section 11.2 of IRC:35-2015.

c) New Installation of Safety Barriers

Following are the details of new installation of safety barriers along the Project Road which is yet to installed.

Table 3-5 Details of New Installation of Safety Barriers

Sr. No.	Chainage (km)		Length (m)	Location	Type of Barrier
	From	To			
1	76+850	77+650	800.00	BHS	Rigid barrier
2	78+400	79+200	800.00	BHS	Rigid barrier
		Total Length	**1600.00**		

d) Additional Gantry / Cantilever Sign Board

As per schedule-B, an additional gantry / cantilever sign has to provide at the following locations:

Table 3-6 Details of Additional Gantry / Cantilever Sign

Sr. No.	Chainage (km)	Location	Type
1	76+675	VUP	Cantilever Sign Boards
2	77+925	VUP	Cantilever Sign Boards
3	78+200	VUP	Cantilever Sign Boards
4	79+300	VUP	Cantilever Sign Boards

e) Summary of Quantity for Road Furniture Items

The following details show the summary of the quantity for road furniture items to be provided on Project Road.

Table 3-7 Details of Summary for Road Furniture Items

Sr. No.	Description	Unit	Quantity
1	Solar Blinkers	Nos.	Nil
2	Streetlights	Nos.	1152
3	High Mast Lights	Nos.	Nil
4	Transverse Bar Makings / Thermoplastic Bar Markings	km.	3.2
5	New installation of Safety Barriers		
	W-Beam Safety Barriers	m	Nil
	Concrete Median Barrier	m	Nil
	Rigid Concrete Barrier	m	3200
6	Guard Posts	m	Nil
7	Pedestrian Guard Rails	m	Nil
8	Road Studs / Raised Pavement Markers		
9	Road Markings		
10	Traffic Delineators	As per Section-9 of IRC:SP:84-2014	
11	Kilometer / Hectometer / Boundary Stones		
12	Additional Sign Boards		
	Gantry Sign Boards	Nos.	Nil
	Cantilever Sign Boards	Nos.	4
	Shoulder Mounted Dual Post Sign Boards	As per Section 9 of IRC:SP:84-2014	
	Shoulder / Median Mounted Single Post Sign Boards		

Pavement Marking

Pavement marking for the Project Road is done as per the design standards indicated in section 12 of Schedule-D. Pavement marking is faded at some locations which will be rectified by the Annuity Concessionaire. Some of the photographs of road marking are presented below.

Figure 3-12 Photographs of Pavement Marking

km. 44+00-LHS

km. 49+200-LHS

Km. 61+400-RHS

km. 55+800-RHS

km. 52+600-RHS

Road Studs

Road studs / cat's eye for the Project Road is done as per the design standards indicated in section 12 of Schedule-D. Cat's eye has been fixed at junction and zebra crossings. However, at few locations some cat eye has damaged which will be rectified by the Annuity Concessionaire. Some of the photographs of road studs are presented below.

Figure 3-13 Photographs of Road Studs

km. 63+00-RHS

km. 61+400-RHS

Traffic Signage / Median Kerb painting / KM Stone

Traffic signs include roadside signs, overhead signs, kerb mounted signs and median signs along the Project Road. The design for the traffic signs along the Project Road is done as per the design standards indicated in section 11 of Schedule-D.

The height, lateral clearance, location and installation are as per relevant clauses of Schedule 'D'. Overhead sign has been installed ahead of major intersections, toll plazas, start / end of project highway and urban areas as per detailed design requirements.

Kilometre stones, vertical post of sign boards, chevron boards and median kerb paint are faded at few locations which will be rectified by the Annuity Concessionaire. Some of the photographs of sign boards are presented below.

Crash Barriers

Metal beam and concrete crash barriers are provided at bridges, approaches of structures, locations of high embankment and sharp curves. All the crash barriers provided by the Concessionaire are maintained at site however proper nailing required between MBCB and concrete crash barrier joint wherever required. Some of the photographs of metal beam crash barriers are presented below.

Figure 3-16 Photographs of MBCB / Crash Barrier

km. 41+845-LHS

km. 44+735-RHS km. 48+625-RHS/LHS

km. 54+030-LHS

km. 60+961-RHS

Delineators

The traffic delineators are provided by Concessionaire for road users in abnormal condition of weather for the Project Road. However, at few locations some delineators have damaged which will be rectified by the Annuity Concessionaire.

km. 75+675-LHS km. 61+400-RHS

Pedestrian Guard Rail

The pedestrian guard rails are provided in the median. It is maintained by the Annuity Concessionaire. Some of the photographs of pedestrian guard rails are presented below.

Figure 3-17 Photographs of Pedestrian Guard Rail

km. 13+00 km. 23+800 km. 35+200

Road Land Boundary

Road land boundary pillar is not found / available on Project Road.

3.9 Avenue Plantation and Median Plantation

Avenue plantations are done only in forest land due to ROW issues and median plantation has been provided in the project length as per IRC specification.

Some of the photographs of plantation are presented below.

3.10 Toll Plaza

As per the Concession Agreement, there is one existing toll plaza at km. 42+650 near Dakshina Sekhpur with the following infrastructure.

Table 3-8 Details of Summary for Toll Plaza Items

Sr. No.	Particulars	Details
1	Toll Plaza Chainage	km. 42+650
2	Number of Tolling Lanes	8 lanes for toll operation plus 2 lanes for over dimensional vehicles.
3	Weigh in Motion Facility (Number of Lanes)	Yes
4	No. of ETC Lanes	in each direction
5	Number of Toll Booths	9 singles
6	Canopy	Present
7	Administrative Building	Present
8	Parking cum Toilet Block	Present
9	Availability of Tunnel or Elevated Walkway for Movement between Toll Lanes and Administrative Building	Tunnel / Yes
10	Availability of Static Weigh Bridge	Yes
11	Availability of Loading/Unloading Facility for Overloaded Vehicles	No
12	Storage facility for Overloaded Material	No
13	High mast Light	Yes
14	Streetlight	Yes (only 20 nos. near Toll plaza i.e., 10 nos. in both direction)
15	Low mast Light	No
16	User Fee Boards	3
17	Cantilever / Gantry Boards	Yes
18	Automatic boom barrier	Yes

Note:

- *Presently, Concessionaire is using Annuity Concessionaire's building as an administration building for toll plaza.*

- *The electric supply for the existing streetlights is provided by the TOT Concessionaire. The maintenance of these streetlights is in the scope of Annuity Concessionaire.*
- *Toll plaza is completed as per rehabilitation work and as per scope given in schedule-B.*

3.11 Lane Equipment

Following are the lane hardware and equipment installed at toll plaza.

1. RFID ETC Transceiver
2. Lane Controller with Industrial PC

3. AVC Sensors
4. Automatic Lane Barrier (ALB)
5. Lane Traffic Light and user fare display
6. Incident Capture Camera
7. Overhead Lane Signals
8. Traffic Lights
9. Toll Booth Equipment

3.11.1 RFID ETC Transceiver

RFID ETC Transceiver reads tags installed on the windshield of vehicles and mounted on a pole at about 6 m height. Handheld RFID readers are provided (1 no. in each direction) in case a tag is not detected by the fixed reader.

RFID

3.11.2 Lane Controller with Industrial PC

Toll Lane Controller are located within the Electronic Enclosure placed inside the tunnel below the toll booth which are connected to the common server and are capable of independent storage of data.

Lane Controller in Tunnel at TP

3.11.3 Automatic Vehicle Classification (AVC) Sensors

The AVC equipment comprises of a pair of height sensor poles, axle sensors and inductive loops. The height detector has a high sensing resolution and detects height when object blocks the path. The presence of vehicle is detected by inductive loop. The loop sensors embedded on the pavement trigger the AVC height sensors located on parallel pillars.

AVCC at TP

3.11.4 Automatic Lane Barrier

Boom barriers installed on all lanes are in working condition Automatic Lane Barrier is used to allow only authorized vehicles to pass through the lane. The barrier is activated only on generation of user fee receipt or other relevant vehicle processing activity. A torque motor powers the barrier for raising and lowering the boom. The motor can be blocked at any position without causing any damage. In the event of power failure, the boom is automatically raised. The boom weight is exactly balanced by built-in springs.

ALB at TP

3.11.5 Lane Traffic Light (LTL) and User Fare Display (UFD)

Lane Traffic Light (LTL) is used to instruct vehicles to stop or pass through the lane. The LTL is RED when the toll collector is expecting the vehicle at the booth. After the transaction is done; the LTL turns Green to instruct the vehicle to pass through the lane. The User Fare Display is a part of electronic toll collection equipment located at the toll booth. It is a mini variable message sign (VMS) made of Light Emitting Diodes (LED). The user fare display is used to display the toll fare that is due and that must be paid by the motorist and the classification of vehicle selected by the collector.

LTL at TP

3.11.6 Incident Capture Camera (AVC Camera)

The incident capture camera is installed on island of the booth to capture the image of the vehicle from the back side. The AVC triggers the Image capture system.

AVC Camera

3.11.7 License Plate Image Capture Camera (LPIC)

License Plate Image capture camera is installed on a 3 m pole facing incoming vehicle to capture the image of the vehicle number plate.

LPIC

3.11.8 Over Head Lane Signal (OHLS)

The **Overhead Lane Signal (OHLS)** for lane "Open" and "Close" sign consists of a pair of "GREEN" (arrow) and "RED" (cross) lights. The OHLS is located at the vehicle approaching side of the canopy to show the drivers whether the lane is open or closed.

OHLS at TP

3.11.9 Toll Booth Equipment

Toll Booth Hardware / Equipment provided are:

- Toll Collector Display (Operator Monitor)
- Customized Industrial Keyboard
- Receipt Printer
- Intercom Slave unit
- Bar code reader
- Violation Light and alarm
- Manual Booth Control (MBC)
- Booth Camera

The operator monitor termed as Toll Collector Display (TCD) is located on the toll collector's desk. It is the system's interface to the toll collector to display the status of transactions and status of the lane peripherals.

The keyboard on the toll terminal is a programmable keyboard for Registration of toll operations and is customized for different vehicle types and type of ticket.

Thermal printers are installed at the toll booths to print tickets. Intercom slave unit facilitates communication with the master unit located in the control room.

Violation system has an alarm switch which is triggered whenever there is a violation such as run-through happening on the lane. When there is an emergency, a foot switch pressed by the booth operator alerts the control room.

Booth Cameras are provided on the inside roof corner of the booth to provide surveillance through CCTV screen located in the control room. Manual Booth Controller is used to release exempt vehicles.

3.11.10 Medium Speed Weigh in Motion (MSWIM)

Medium Speed Weigh in Motion (MSWIM) is installed on entry lanes of Toll Plaza.

MSWIM at TP

3.12 Plaza Equipment

3.12.1 TMS Server

Plaza Server is provided in a hot standby configuration and provided with port non-POE network switch and Port PoE switch. Internet connectivity is available through one lease line (Airtel) and Jio WiFi module. Firewall with Sophos antivirus is provided.

Server

3.12.2 55” LED screen for CCTV monitoring

55” LED screen for CCTV monitoring installed at the toll plaza admin block provides view of all the toll booths, important zones within the plaza where cash transactions take place (server room, control room, cash up).

Control Room

The toll plaza manager is able to observe the activities at the toll lanes and toll booth. When the toll collector calls up on the intercom, the manager is able to comprehend the situation at the lane by a zoomed view of the particular lane.

3.12.3 Workstations in Control Room, POS room

Workstations are available in control room (lane monitoring, administration, and audit), cash room and PoS.

3.13 Advanced Traffic Management System (ATMS)

Advanced Traffic Management System (ATMS) installed for the Project Road is controlled by the ATMS center at the toll plaza location (km. 42+650). As per Concession Agreement, ATMS shall conform to ATMS Policy guidelines (2016) which comprises of the following:

- Automatic Traffic Counter cum Classifier (ATCC)
- Mobile Radio communication system
- Emergency Call Box
- Portable Weigh in Motion
- Meteorological Data system
- Variable Message Signboards (VMS)
- CCTV system
- Video Incident Detection System (VIDS)
- Vehicle Actuated Speed Display (VASD)

Status of these systems at site is described below:

3.13.1 Automatic Traffic Counter cum classifier (ATCC)

Automatic Traffic Counter cum Classifiers (ATCC) is installed at Toll Plaza (km 15+465).

3.13.2 Mobile Radio communication System (MRCS)

Mobile Radio communication System (MRCS) is not yet installed. Application for MRCS UHF band has been sought from WPC, DoT, Ministry of Communications which is not yet allocated.

3.13.3 Emergency Call Boxes (ECB)

It is not installed at site.

3.13.4 Portable Weigh in Motion (PWIM)

Portable Weigh in Motion (PWIM) is available at site.

3.13.5 MET System

Meteorological sensors comprise of sensors to measure the atmospheric temperature, humidity, pavement surface temperature, visibility and equipment for measuring wind speed and direction and installed at Toll Plaza km. 42+650.

3.13.6 Variable Message Signboards (VMS)

Variable message sign boards are installed at 14 locations. These display specific messages to the users based on the prevailing conditions on the highway. The message can be changed at any point of time from the HTMS centre. About 250 customised messages can be stored on the system.

km. 17+050-LHS

km. 82+200-RHS

3.13.7 CCTV Surveillance Cameras

Surveillance cameras are installed at 55 locations along the Project Road. The ATMS control room has video wall to monitor these locations through the cameras installed.

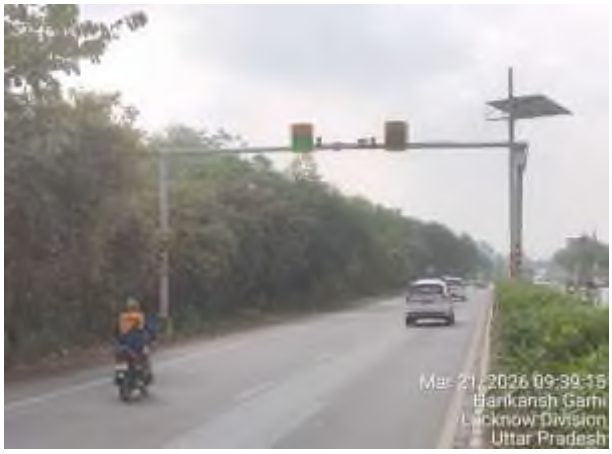
km. 80+100 km. 64+200

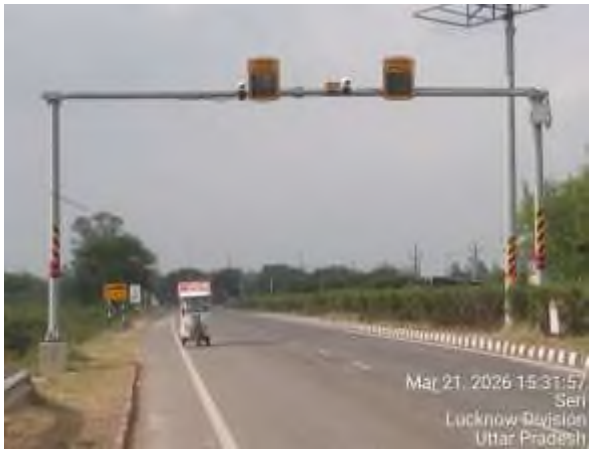
3.13.8 Video Incident Detection System

62 fixed CCTV cameras are installed as part of Video incident detection system.

3.13.9 Vehicle Actuated Speed Display (VASD)

VASD is installed at 3 locations each on LHS and RHS.





Km. 19+620-LHS km. 61+620-RHS

3.13.10 Adequacy of Toll Collection System and ATMS

- Adequacy - All lanes are hybrid ETC system as stipulated by NHAI in Technical Specifications of Hybrid ETC system. NHAI has approved maintenance costs for TMS. TMS shall be upgraded every 5 years at the cost of the Authority.

- The Advanced Traffic Management System (ATMS) installed is as per specifications required by the Authority and in working condition. Some components such as ECB and MRCS have not been installed.

3.13.11 Truck Lay-bye

The following are the truck lay-bye locations.

Table 3-9 Details of Truck Lay-bye

Sr. No.	Chainage (km)	Remarks
1	52+555	LHS
2	32+300	RHS

Figure 3-21 Photographs of Truck Lay Bye

km. 52+555-LHS

km. 30+750-RHS (As per site chainage)

3.14 Traffic Aid Post and Medical Aid Post

Traffic Aid Post and Medical Aid Post are in the scope of Annuity Concessionaire. photographs of the Traffic Aid Post and Medical Aid Post are presented below.

Traffic Aid Post and Medical Aid Post

3.15 Toilet Block

There are two nos. of toilet blocks and maintenance of the same is in Annuity Concessionaire's scope.

Table 3-10 Details of Toilet Block

Sr. No.	Chainage (km)	Side		Remarks
		LHS	RHS	
1	42+500	Yes	-	
2	42+700	-	Yes

Km. 26+350-LHS

3.17 Balance Work Status

During site visit it has been observed that construction of 2 Nos. of VUPs at km. 77+276 and at km. 78+770 along with approaches are balance due to non-availability of land. As informed the Concessionaire, the correspondence is in progress with Authority to resolve the issue. The same is referred as below.

- Concessionaire informed to TDD Consultant that earlier there was a change of scope as IE had proposed an elevated road instead of two nos. new VUP vide their letter no. IE/LKO-RBL/24B/O&M/2021/160 dated 05-07-2021 to NHAI. However, later NHAI decided to continue at site as per their original scope of work given in schedule B vide their letter no. NHAI/PIU/LKO/NH-24B/TOT/2022/3287 Dated 04-10-2022 to IE and the same has been communicated with Concessionaire to start as per the original scope of work vide their letter no. IE/LKORBL/24B/O&M/ 2022/470 Dated 08-10-2022. Concessionaire again informed TDD consultant that LA is in process at NHAI end and after LA, concessionaire will start the work.

3.18 Operation and Maintenance

3.18.1 O&M Contract

As per Clause 15.1 of the Concession Agreement, the Concessionaire shall operate and maintain the Project Road by itself, or through O&M Contractors and if required, modify, repair, improve the Project Road to comply with Specifications and Standards, and other requirements set forth in the Agreement through Good Industry Practice, Applicable Laws and Applicable Permits and manufacturer's guidelines and instructions with respect to toll systems. The Operation and Maintenance activities shall confirm all the requirements laid down in MoRT&H, IRC Specifications and the Concession Agreement.

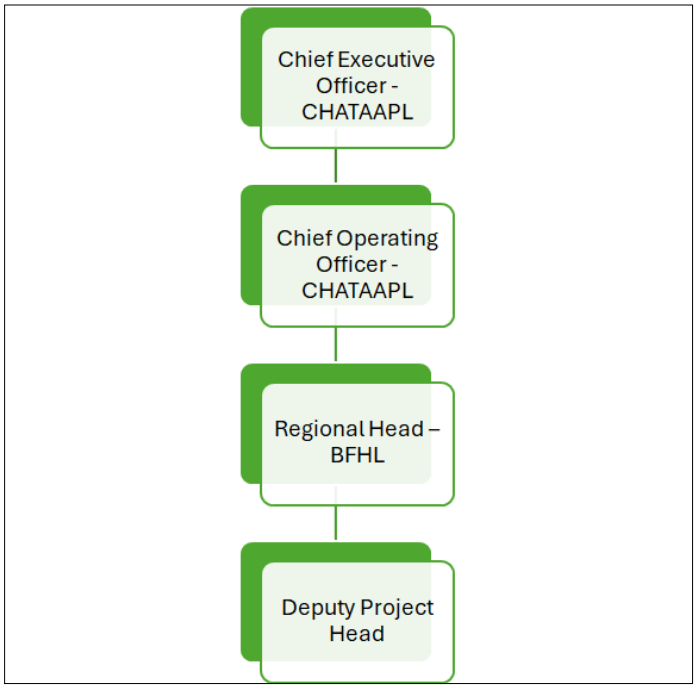
The Concessionaire has outsourced for carrying out the activities related to operation and maintenance of the Project Road including toll operation services, security services, AMC for TMC and AMC for DG set.

3.18.2 Organization Chart

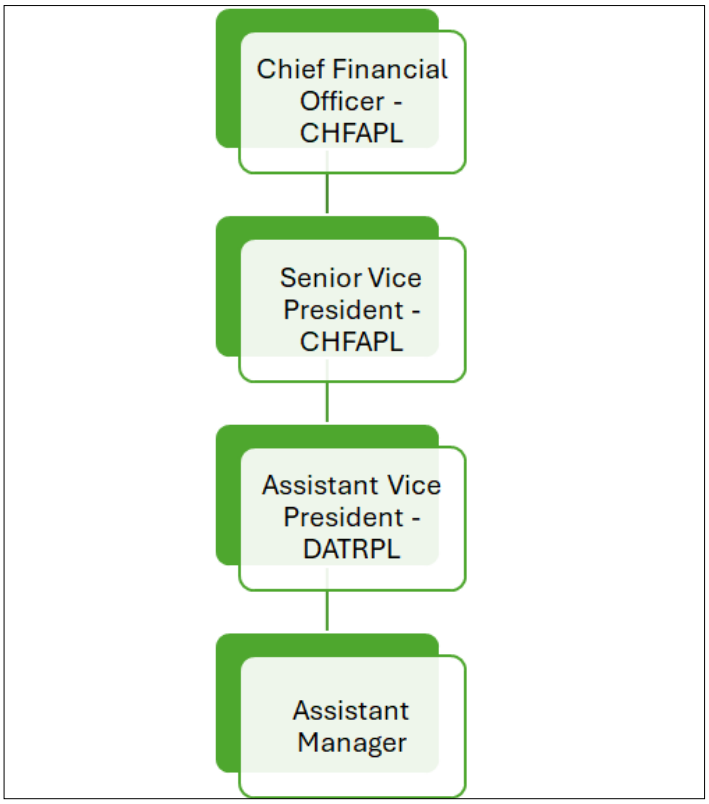
The Concessionaire has given the Organization Chart at site for operation and maintenance. Accordingly, there is 01 Project Head, 01 CFO-CHFA, 01 Executive (F&A), 01 Assistant Manager, 01 Executive, 04 Shift Supervisor (ATMS), 01 Plaza Manager, 01 Assistant Manager, 04 Cashiers, 04 validators and 02 Executive (ATMS) to carry out

O&M activities. The team controls the maintenance activities. However, the maintenance work is undertaken and executed through competent sub-contractors.

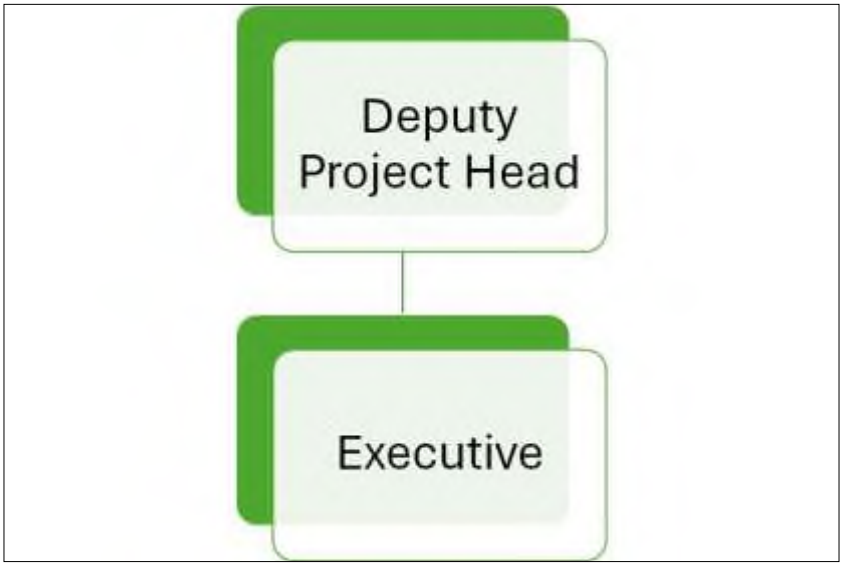
Organization Chart



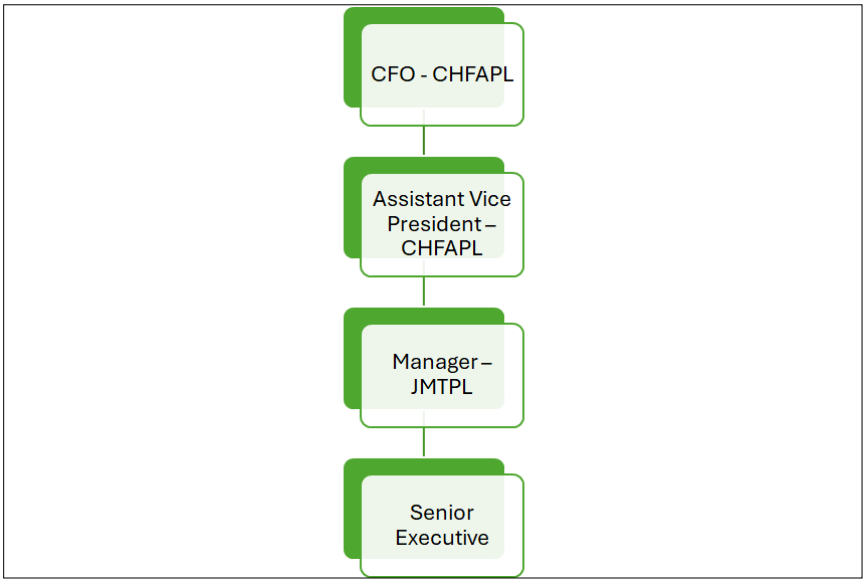
HO – Capital Structuring and Budgeting



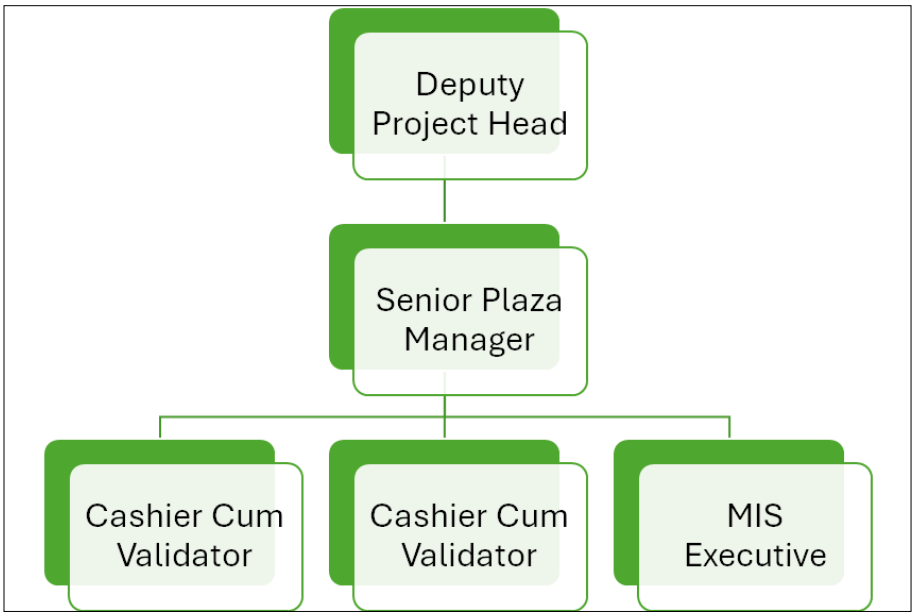
Finance & Accounts - Site



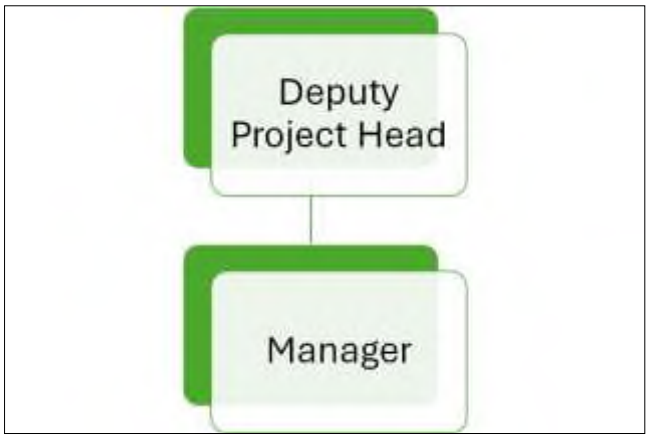
HO – Finance Controlling



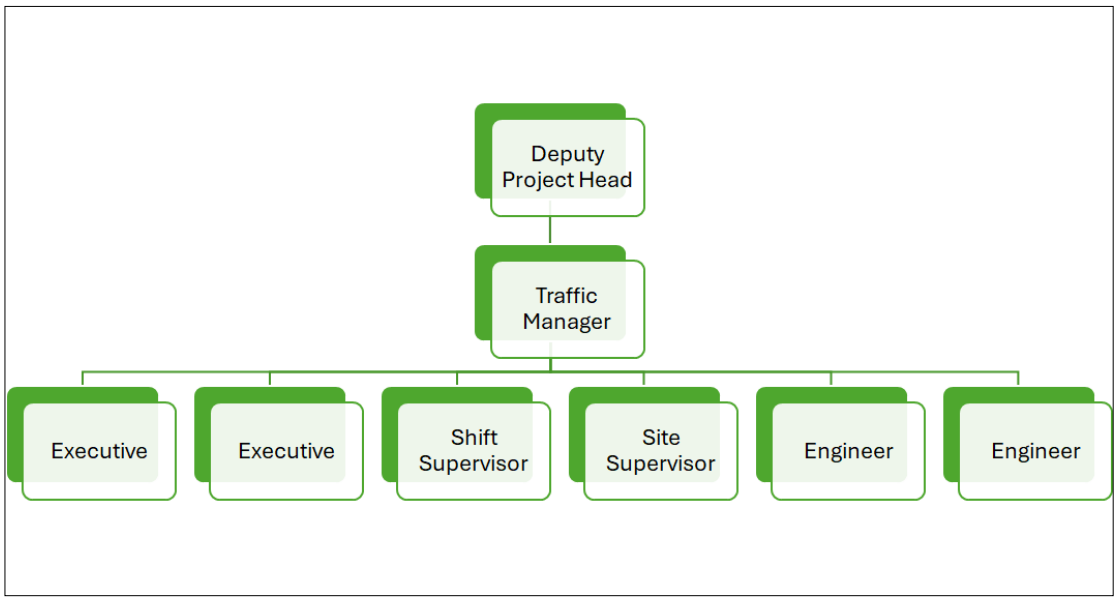
Site - Operations



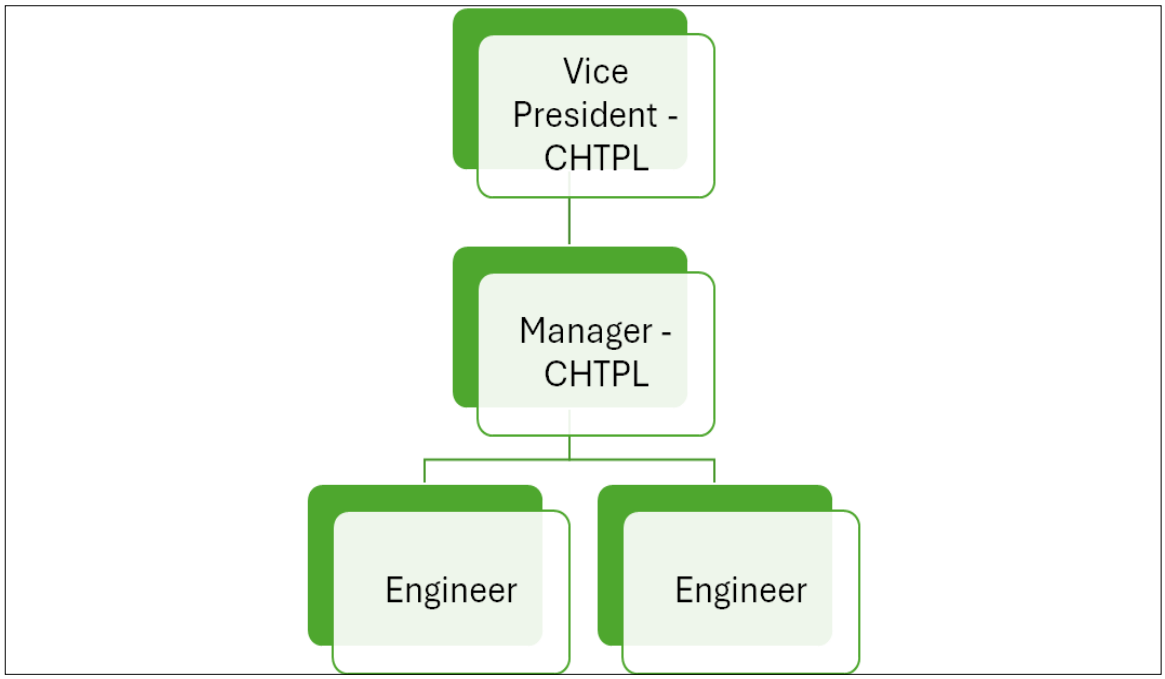
Site – Operation System



Site – ATMS Maintenance



Site – TMS Maintenance



LRTPL - Manpower Summary

S.NO.	DEPARTMENT	HEAD OFFICE	SITE	TOTAL STRENGTH
1	Capital Structure & Budgeting	1	0	1
2	Finance & Accounts	0	0	0
3	Finance Controlling	1	0	1
4	Operations	0	8	8
5	Operations System	0	1	1
6	ATMS Maintenance	0	10	10
7	TMS Maintenance	0	4	4
	TOTAL	2	23	25

3.18.3 Operation

Operation cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses and other miscellaneous expenses. The Concessionaire has provided the expenses occurred towards operation expenses for past years. Necessary assumptions have been made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area.

The Operation Cost is presented in the subsequent chapter.

3.18.4 Routine Maintenance

The Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey.

Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

Currently, the Project Road is maintained by Annuity Concessionaire. The project will be handed over to TOT Concessionaire in March 2029. Hence, routine maintenance is considered from the year 2029 till end of concession period.

The Routine Maintenance Cost is presented in the subsequent chapter.

4 PAVEMENT INVESTIGATION AND ASSESSMENT

4.1 General

Presently, the pavement of the Project Road is being maintained by the Annuity Concessionaire as per Scope of Work. The Annuity Concessionaire has received Completion Certificate on 14th April 2015.

The project is currently under the Operation and Maintenance stage. The concession period of the project is 30 years from the Appointed Date (as TOT Package i.e., 20th October 2020) including construction period. The project will be handed over to TOT Concessionaire in March 2029.

4.2 Axle Load and VDF

The Concessionaire has conducted the Axle Load Survey on Project Road at km. 42+500 (near Toll Plaza) on 23rd July 2019 and 24th July 2019. The summary of Vehicle Damage Factor (VDF) calculated as provided by the Concessionaire is tabulated below.

Table 4-1 Vehicle Damage Factor

Sr. No.	Vehicle Category	Direction	
		Lucknow - Raebareli	Raebareli - Lucknow
1	Bus	0.82	0.76
2	LCV	1.48	0.57
3	2-Axle	3.18	3.05
4	3-Axle	5.31	8.55
5	MAV	10.56	17.09

4.3 Design Traffic

Traffic in Million Standard Axles (MSA) for the homogeneous section based on the historical traffic data as provided by the Concessionaire, current traffic has been used for future projections and the estimated design MSA is computed and presented in subsequent table.

For the estimation of design MSA, Actual Traffic Growth Rates as provided by the Concessionaire were used.

Table 4-2 MSA Calculation

Year	MSA (LHS)	Cumulative MSA (LHS)	MSA (RHS)	Cumulative MSA (RHS)	Remarks
2026-27	1.48	**1.48**	2.11	**2.11**	
2027-28	1.51	**2.99**	2.15	**4.26**	
2028-29	1.55	**4.54**	2.20	**6.46**	Handing over from Annuity Concessionaire in Mar 2029
2029-30	1.58	**6.12**	2.25	**8.71**	
2030-31	1.62	**7.74**	2.30	**11.01**	
2031-32	1.65	**9.39**	2.35	**13.36**	MM Cycle on 4 Lane highway
2032-33	1.69	**11.08**	2.40	**15.76**	
2033-34	1.73	**12.81**	2.46	**18.22**	
2034-35	1.77	**14.58**	2.51	**20.73**	

Year	MSA (LHS)	Cumulative MSA (LHS)	MSA (RHS)	Cumulative MSA (RHS)	Remarks
2035-36	1.81	**16.39**	2.57	**23.30**	
2036-37	1.86	**18.25**	2.63	**25.93**	
2037-38	1.89	**20.14**	2.68	**28.61**	
2038-39	1.94	**22.08**	2.74	**31.35**	MM Cycle on 4 Lane highway
2039-40	1.98	**24.06**	2.80	**34.15**	
2040-41	2.02	**26.08**	2.86	**37.01**	
2041-42	2.06	**28.14**	2.92	**39.93**	
2042-43	2.11	**30.25**	2.99	**42.92**	PCU crossed 40000
2043-44	2.15	**32.40**	3.05	**45.97**	PCU crossed 40000
2044-45	2.20	**34.60**	3.11	**49.08**	PCU crossed 40000
2045-46	2.24	**36.84**	3.17	**52.25**	DPR Preparation for 6 Laning
2046-47	2.29	**39.13**	3.24	**55.49**	DPR Preparation for 6 Laning
2047-48	2.34	**41.47**	3.30	**58.79**	6 Laning of Project Road
2048-49	2.39	**43.86**	3.38	**62.17**	6 Laning of Project Road
2049-50	2.43	**46.29**	3.44	**65.61**	6 Laning of Project Road
2050-51	1.98	**48.27**	2.80	**68.41**	End of Concession Period

4.4 Network Survey Vehicles (NSV) Survey

The O&M is not under the scope of Concessionaire / Client.

4.5 Structural Investigations

The O&M is not under the scope of Concessionaire / Client.

4.6 Test pit and Subgrade Investigation

The Concessionaire has carried out the subgrade investigation for Project Road. The results of the same as provided by the Concessionaire are tabulated as below.

Table 4-3 Test Results Summary of Natural Ground Soil Samples

Sr. No.	Location (km)	Side (LHS / RHS)	Soil Classification as per IS:1498	Gradation: Percent by weight passing through the Sieve (IS:2720-IV)						Clay & silt content %	Atterberg Limits [IS :2720-Pt-V]			Modified Proctor Test (IS:2720-Pt-VIII)		4-Days Soaked CBR (%)	Free Swell Index (%)
				19.0 mm	10.0 mm	4.75 mm	2.0 mm	425 microns	75 microns		Liquid Limit (LL) %	Plastic Limit (PL) %	Plasticity Index (PI)	Max. dry density (gm/cc)	OMC (%)		
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18
1	77+100	LHS	CL	96.7	94.3	93.2	91.5	89.6	85.8	85.8	32	19	13	1.86	11.8	4.1	25.0

3	78+700	RHS	ML	100.0	99.5	98.7	97.9	96.4	87.1	87.1	25	NP	NP	1.84	10.7	4.7	11.1
4	79+100	LHS	CL	99.2	96.3	91.7	87.6	81.9	67.7	67.7	29	21	8	1.93	11.6	5.4	20.0

4.7 Periodic Maintenance Strategy

Unlike the old Concession Agreements where periodicity and threshold limits were clearly described for the major maintenance, the Concession Agreement of this project does not specify the periodicity or the threshold limits for carrying out the full-length periodic maintenance. Schedule-F of the Concession Agreement specifies the threshold limits and the timeline for carrying out repairs to the distresses during the operation period.

The maintenance thus can be carried out as and when required basis and to the compliance of Schedule-F requirement to maintain the road in serviceable condition. Only improvement in Riding Quality is expected if the roughness value exceeds 3000 mm/km.

Currently, the Project Road is maintained by the existing Annuity Concessionaire. The project will be handed over to TOT Concessionaire in March 2029. It is assumed that the pavement will be overlaid before handing over the project confirming the pavement parameters kept within the limits as per Table-1 (Maintenance Criteria for Pavements) of Schedule-F. Hence, the major maintenance cycles are proposed between the year 2029 and end of concession period.

As per Article 14 of CA, the Authority shall carry out capacity augmentation under EPC contract if traffic exceeds 40,000 PCU for three consecutive accounting years. As per the traffic study report submitted by the Company, it is observed that the project traffic crosses 40,000 PCU in FY 2043, FY 2044, FY 2045. Assumption has made that execution of 6-laning of project highway will start in the year 2048 or 2049. It is also assumed that during the 6-laning of Project Road, overlay of existing four lane road will be the part of the capacity augmentation. Hence, the major maintenance cycle is adjusted accordingly.

The table below shows the major/ periodic maintenance cycle throughout the concession period for the Project Road.

Table 4-4 Major Maintenance Cycle

Sr. No.	Year	Main Carriageway	Service Road
1	FY 2027 to FY 2028	-	-
2	FY 2029	Handing over of Project Road from Annuity Concessionaire	
3	FY 2030 to FY 2031	-	-
4	FY 2032	Major maintenance with 30 mm BC (PMB) (50%) + Major maintenance with 40 mm BC (PMB) (50%) + Milling & 50 mm DBM (VG-40) (100%)	Major maintenance with 30 mm BC (VG-40) (50%) + Micro-surfacing (50%)
5	FY 2033 to FY 2038	-	-
6	FY 2039	Major maintenance with 40 mm BC (VG40) (100%) + Milling & 50 mm DBM (VG-40) (5%)	Major maintenance with 30 mm BC (VG-40) (50%) + Micro-surfacing (50%)
7	FY 2040 to FY 2047	-	-
8	FY 2048 to	Assumption of Capacity Augmentation to Six Lane Configuration	

Sr. No.	Year	Main Carriageway	Service Road
	FY 2050		
9	FY 2051	End of Concession Period	

The projected cost for periodic / major maintenance is presented in the subsequent chapter.

5 COST ESTIMATES

5.1 General

Based on the assessment carried out in previous chapters, various costs were worked out. The costs are divided into following categories.

I. Balance Works Cost
II. Routine O&M Cost
III. Major Maintenance Cost
IV. Periodic Replacement of TMS / ATMS system

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and escalation.

5.2 Rate Assumption

Following assumptions are considered for unit rates of various items while estimating the cost:

1. Unit rates of different items (BC, DBM, Concrete, Road markings etc.) are calculated as per the MoRTH Standard Data Book 2019. The input rates for MoRTH standard data book were adopted as below:

    a. **Manpower and labour:** As per applicable minimum wages published by Ministry of Labour & Employment, Government of India.

    b. **Bitumen:** The Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. The same discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.

Therefore, bitumen prices are considered as per the forecast of Client. Current published of bitumen are considered for unit rates calculation for FY 2027. Average 10 years of bitumen price are considered for unit rates calculation for FY 2028 and onwards, since bitumen prices have been range bound over the last five-six years. Following rates of bitumen are considered.

Table 5-1 Bitumen Rates - Ex-MI Supply excluding discount and GST

Supply Location	Applicability of Rates	Product	Current Published Price (16th Feb 26)	Long term price (Avg last 10 years)
Mathura	All States	VG-10	45,102	35,125
		VG-30	46,402	36,137
		VG-40	48,962	38,131
Panipat	All States	VG-10	45,102	35,125
		VG-30	46,402	36,137
		VG-40	48,962	38,131
Koyali	All States	VG-10	47,102	37,125
		VG-30	48,402	38,137
		VG-40	51,082	40,251
Haldia	All States	VG-10	46,602	35,683
		VG-30	47,402	36,295
		VG-40	49,962	38,256

Supply Location	Applicability of Rates	Product	Current Published Price (16th Feb 26)	Long term price (Avg last 10 years)
Barauni	All States	VG-10	47,132	36,213
		VG-30	48,432	37,325
		VG-40	50,992	39,286
CPCL	Kerala	VG-10	47,402	35,519
		VG-30	48,402	36,395
		VG-40	50,762	38,120
CPCL	Tamil Nadu	VG-10	47,902	36,019
		VG-30	48,402	36,395
		VG-40	50,962	38,320
CPCL	Telangana and Andhra Pradesh	VG-10	44,602	32,719
		VG-30	45,402	33,395
		VG-40	47,962	35,320
CPCL	Karnataka	VG-10	44,602	32,719
		VG-30	45,402	33,395
		VG-40	47,962	35,320

c. **Sand and Aggregate:** Market rates are considered from the quarry located nearest to Project Road.

d. **Cement:** Market rates are considered from the nearest local market.

e. **Steel :** Rate of steel is taken from Market rate.

f. **Machinery Hire charges:** Hire charges for the machinery are considered in accordance with applicable PWD SOR.

g. **Actual Rates of items as per work order:** The rates of road marking, road stud, kerb raising, micro surfacing, milling rates etc. are considered as per the work order shared by the client.

2. Goods and Service Tax (GST) is considered as 18% as per the latest Government Guidelines.

Summary of Unit Rates worked out using Standard Data Book adopted for major items is given below.

Table 5-2 Summary of Unit Rates

Sr. No.	Item Description	Unit	Rates (Rs.)
1	Dense Bituminous Macadam (VG-40)	Cum	9,825
2	Bituminous Concrete (VG-30)	Cum	10,947
3	Bituminous Concrete (VG-40)	Cum	11,249
4	Bituminous Concrete (PMB)	Cum	13,912
5	Milling	Sqm	92
6	Micro-surfacing	Sqm	162
7	Kerb re-laying	Rmt	311
8	Road Marking	Sqm	607
9	Road Studs	Nos.	179

5.3 Balance Work Cost

As discussed in previous chapters, the construction of two VUPs at km. 77+276 and at km. 78+770 has not started yet due to various reasons stated earlier. However, Concessionaire has worked out the cost of construction of these VUP which was subsequently also approved by IE. The IE has recommended the balance work amounting Rs.53,61,73,996.00 vide their letter no.SAICPL/OMT/NH-24B/LUC-REI/2022/MG/18938 Dated 18-08-2022 to NHAI. The same is presented below.

Table 5-3 Summary of Balance Works

Sr. No.	Items of Work	Balance Cost
1	Earth Work	12,035,953.00
2	Sub-base, Base (Non-Bituminous) & Shoulder	147,206,127.00
3	Bases and Surface course (Bituminous layer)	101,344,029.00
4	Box Culvert	23,061,971.00
5	Pipe Culvert	1,913,756.00
6	Structure at Underpasses	102,540,280.00
7	Drainage and protective works (RE Wall)	144,284,980.00
8	Traffic Signs, Marking & other road Appurtenances	3,786,901.00
	Total Balance Amount (Rs.)	**536,173,996.00**
	Total Balance Amount (Cr.)	**53.62**

5.4 Routine O&M Cost

Routine O&M cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area. Same has been divided into following major heads.

1. Salary and Welfare Expenses
2. Tolling Operations Services
3. Incident Management Services
4. Electricity and Diesel Charges
5. TMS / HTMS / System Expenses
6. Office Operating Expenses
7. Vehicle Running Expenses
8. Professional Fees Expense
9. Insurance Expense
10. IE Fees
11. Horticulture & ROW Maintenance
12. Routine Maintenance Cost

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs

due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

Currently, the Project Road is maintained by existing Annuity Concessionaire. The project will be handed over to TOT Concessionaire in March 2029. Hence, the routine maintenance and horticulture maintenance is considered from year 2029 till end of concession period.

The Routine Operation Cost is presented as below.

Table 5-4 Summary of Operation Cost

Sr. No.	Particulars	Amount (FY 2027-29)	Amount after Annuity (FY 2030-49)	Amount after Annuity & 6 lane Augmentation (FY 2050-51)
1	Salary and Welfare Expenses	1,03,95,000	1,03,95,000	1,03,95,000
2	Tolling Operations Services	3,04,50,445	3,04,50,445	3,04,50,445
3	Toll Security Services	69,11,071	69,11,071	69,11,071
4	Incident Management & Emergency Services	-	2,53,90,836	2,53,90,836
5	Electricity and Diesel Charges	34,03,596	3,08,42,740	3,08,42,740
6	TMS/HTMS/System Expenses	48,38,501	75,04,699	58,12,689
7	Office Operating Expenses	32,53,663	32,53,663	32,53,663
8	Vehicle Running Expenses	36,00,000	36,00,000	36,00,000
9	Professional Fees Expense	48,92,139	71,15,487	82,27,161
10	Community Development	10,41,962	10,41,962	10,41,962
11	Communication Expenses	3,62,250	3,62,250	3,62,250
12	Conveyance Expenses	3,95,182	3,95,182	3,95,182
13	Insurance Expense	26,34,546	26,34,546	26,34,546
14	IE Fees	66,39,054	66,39,054	66,39,054
15	Routine Maintenance Cost (Project Road)	-	2,64,73,654	3,50,60,312
16	Horticulture & ROW Maintenance	-	2,09,16,798	2,09,16,798
17	Miscellaneous including Contingency	31,52,696	54,61,477	54,38,264
	Total Cost (Rs.)	**8,19,70,105**	**18,93,88,865**	**19,73,71,972**
	Total Cost (Cr.)	**8.20**	**18.94**	**19.74**
	Per km Cost (Lakhs)	11.71	27.06	28.20

5.5 Major Maintenance Cost

The summary of Major Maintenance Cost is provided as below. The detailed working of the same is presented in Annexure-II.

Table 5-5 Summary of Major Maintenance Cost

Sr. No.	Year	Major Maintenance Cost (Cr.)	Remarks
1	FY 2027 to FY 2031	-	
2	FY 2032	191.91	

Sr. No.	Year	Major Maintenance Cost (Cr.)	Remarks
3	FY 2033 to FY 2038	-	
4	FY 2039	94.90	
5	FY 2040 to FY 2050	-	
6	FY 2051	-	End of Concession Period
	Total Cost (Cr.)	286.81	

5.6 Periodic Replacement of TMS / ATMS System

Every 7 years, replacement of cost of major TMS / ATMS system is considered. The same is provided as below.

Sr. No.	Year	HTMS O&M / Replacement Cost (Cr.)	Remarks
1	FY 2027	7.40	
2	FY 2034	7.40	
3	FY 2041	7.40	
4	FY 2048	7.40	
Total Cost (Cr.)		**29.60**	

5.7 Escalation Assumption

Following escalation has been considered for the O&M cost as provided by Client.

Table 5-6 Escalation

Year	Escalation	Year	Escalation
2027	-	**2040**	3.99%
2028	4.86%	**2041**	3.99%
2029	4.44%	**2042**	3.99%
2030	4.24%	**2043**	3.99%
2031	4.13%	**2044**	3.99%
2032	4.08%	**2045**	3.99%
2033	4.01%	**2046**	3.99%
2034	4.00%	**2047**	3.99%
2035	4.03%	**2048**	3.99%
2036	4.01%	**2049**	3.99%
2037	3.98%	**2050**	3.99%
2038	3.98%	**2051**	3.99%
2039	4.00%	**2052**	3.99%

5.8 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summaries yearly for remaining concession period along with escalation as mentioned in clause 5.7.

Escalated O&M Cost (in INR Cr.)

ANNEXURES

ANNEXURE I - ROUTINE MAINTENANCE COST

Routine Maintenance Cost (Up to FY 2048)	
Project - Lucknow Raibareli	
Ordinary Repair Cost for Flexible (with GST)	**2,64,73,654**
(Inclusive of GST)	**= 3.78 lakhs per km**

CONVERSION FACTORS									
National Highways / State Highways									
Reference cost taken for Two / four lane (7 m or 14 m or 21 m) with 1.5 m wide shoulders									
(Refer Chapter 6.17 of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 45)									
Sr. No.	**Description for Flexible Pavement**		**Factor**	**Normal** More than 4500 CVD **2,17,494**	**Urban** More than 4500 CVD **2,51,006**	**Project Length (km)**		**Per Year Project Maintenance Cost**	
						Normal	**Urban**	**Normal**	**Urban**
1	Four-lane with divided carriageway	Without paved shoulder	1.53	332766.00	384040.00	-	-	-	-
		Paved shoulder	1.70	369740.00	426711.00	66.76	-	2,46,82,548	-
2	Four-lane with divided carriageway and service lane on either side	Without paved shoulder	2.00	434989.00	502013.00	-	-	-	-
		Paved shoulder	2.20	478487.00	552214.00	-	3.24	-	17,91,106
					TOTAL	**70.000**		**2,64,73,654**	

Routine Maintenance Cost (For FY 2049 onwards)	
Project - Lucknow Raebareli	
Ordinary Repair Cost for Flexible (with GST)	**3,50,60,312**
(Inclusive of GST)	**= 5.01 lakhs per km**

CONVERSION FACTORS

1 INTRODUCTION

1.1 Background

Cube Highways Fund Advisors Pvt. Ltd. (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InvIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an Infrastructure Investment Trust under the SEBI InVIT Regulations. Cube Highways Fund Advisors Pvt. Ltd. has appointed **M/s. FP Project Management Consultancy Services Private Limited** (hereinafter referred as "Technical Consultant" or "FPPM") to carry out Technical Due Diligence of Bharatpur - Mahua section of NH-11 from km. 63+000 to km. 120+000 in the State of Rajasthan (hereinafter referred as "Project Road").

M/s. Mahua Bharatpur Expressway Ltd. (MBEL) (hereinafter referred as "Concessionaire") is a special purpose vehicle (SPV) for tolling, operation, maintenance, and transfer of Mahua to Bharatpur Section (from km. 63+000 to km. 120+000) of NH-11 on BOT Basis. The project was awarded to Concessionaire on 07th March 2005 with a concession period of 25 years including construction period of 3 years by National Highway Authority of India (NHAI). The length of Project Road is 57.000 kms with two toll plazas at km. 64+570 (Ludhawai) and at km. 98+500 (Amoli).

Accordingly, Technical Consultant has undertaken the work of assessment of operation and maintenance (O&M) cost based on site inspections and field investigations. The same is presented in this report.

1.2 Scope of Work

The detailed scope of work for conducting the technical due diligence of Project Road is presented as below:

- A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets
- Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, As-built drawings, O&M manual, COD / PCOD certificate, punch list, previous major maintenance etc.
- Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, axle load, material investigations etc.
- Formulation of future major maintenance strategy
- Estimation of any initial expenses to be incurred due to deficiencies observed in diligence
- Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period
- Estimation of Annual Operation expenses along with Systems cost (TMS) till the end of concession period
- Review of balance work cost for Project Road including estimation of quantities and item rates

1.3 Our Approach Philosophy

1.3.1 Composition of Team

Our team consists of well-qualified engineers and other professionals, whose experience covers all the skills and specializations required for undertaking such assignments. All the team personnel proposed are our regular employees and have a long and stable working relationship with our firm.

The Team Leader coordinates the activities between all the key staff who work closely together. The key staff is assisted by various support staff, who report to the respective key staff in their field of expertise. The Team Leader is the point of contact for Client on Technical Study.

The technical study includes review of all the available documents namely:

a) Concession Agreement including Technical Schedules
b) O&M Contract, work order and their provisions
c) Quality of construction based on available data, design and drawings
d) Documents on historical expenditure on operation and maintenance
e) O&M cost schedule for the concession period
f) Review of Completion / Provisional Completion along with punch list items
g) Review of recent pavement surveys conducted
h) Correspondence regarding scope of works and during O&M
i) Recent O&M Report submitted to Authority
j) Toll operation manual / ATMS related documents

The review of above documents is the first step towards accomplishment of the task. This gives a complete idea of the project and is used as input data for preparation of report after necessary analysis.

1.3.2 Site Visit and Data Collection

A team of experts from various streams has carried out the preliminary site visit to understand the assessment of project assets mainly condition of the pavement and structures.

- The site visit is undertaken for detailed reconnaissance and visual pavement condition assessment.
- The condition assessment of major structures by visual inspection
- The information like material sources and the probable cost is collected for the purpose of cost estimate.

The detailed design / drawings viz. Plan & L-sections, drainage design, structure design, layout drawings for project facilities like toll plaza, bus bay, truck lay-byes, highway lighting facilities etc. are studied. Also, design / drawing and provision pertaining to road furniture are studied.

The information on availability of material in the vicinity is gathered. It has direct impact on cost of maintenance work and balance work.

The basic approach for preparation of cost estimates for operation and maintenance is as per the practice of State PWD / MORT&H in respect of highways and structures.

1.3.3 Data Analysis

Based on the study of the available information and preliminary site visits, the consultants share their preliminary observations with the Client based on the evaluation of the technical data and reports provided by the Client.

1.4 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Company. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyzing the same as per the best engineering / industry practices.

The site visit and inspection were carried out between the periods from **07th March 2026 to 08th March 2026**.

The report is organized with the following chapters for easy understanding of various issues.

Chapter 1 **Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for due diligence studies.

Chapter 2 **Project Description:** The chapter describes existing project features, and overview of project development.

Chapter 3 **Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on site visit.

Chapter 4 **Pavement Investigation and Assessment:** The chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance.

Chapter 5 **Cost Estimates:** The chapter summarizes the forecast for O&M and major maintenance costs over the remaining concession period.

2 PROJECT DESCRIPTION

2.1 Introduction

National Highways Authority of India signed the Concession Agreement **M/s. Mahua Bharatpur Expressway Ltd. (MBEL),** is a company promoted by Cube Highways or company a Special Purpose Vehicle (SPV) formed for implementing this project on 07th March 2005. The Appointed Date for the Project Road is 10th April 2006.

The project was developed on a BOT basis with a concession period of 25 years from the Appointed Date including construction period of 3 years. The Project Road has received the Completion Certificate on 9th March 2015. The project is currently under operation and Maintenance phase.

2.2 Location

The Project Road is a section of National Highway No. 11 from Bharatpur to Mahua in the state of Rajasthan. The total project length is 57.000 kms.

The Location Map of the Project Road is presented below:

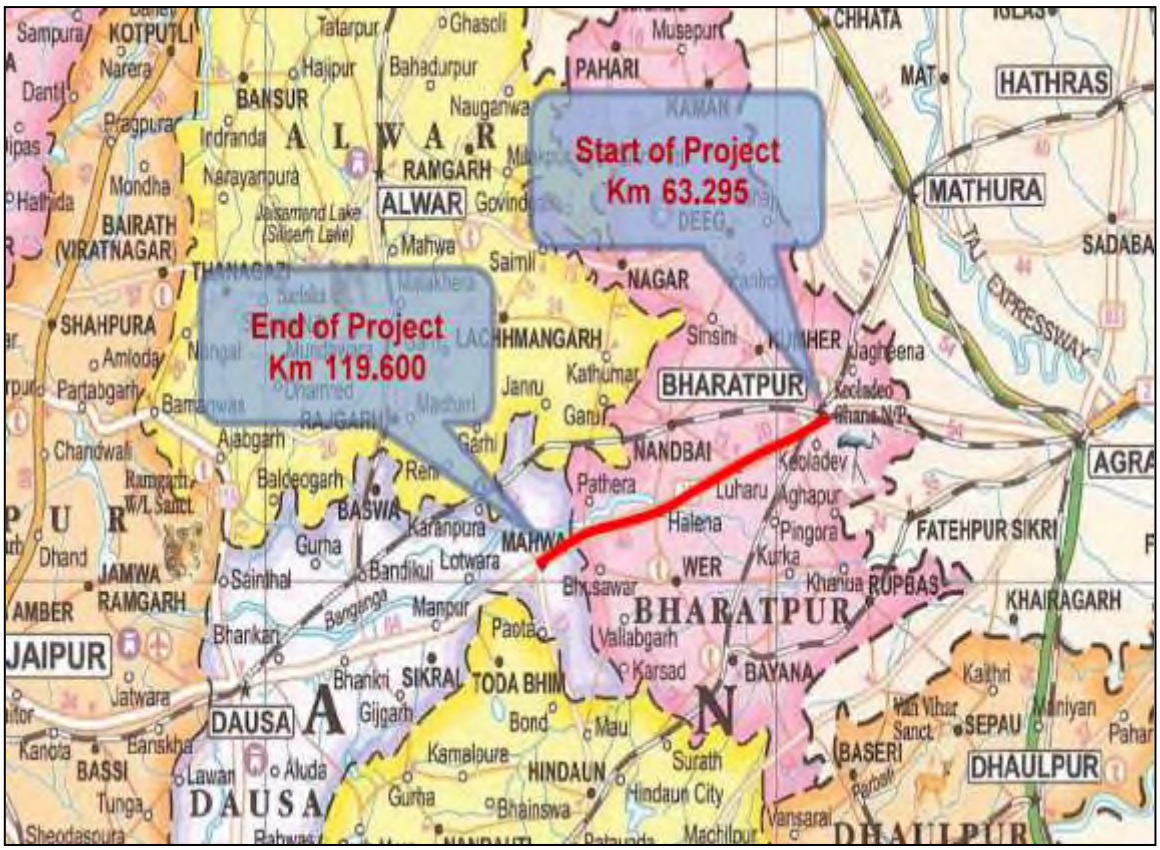

Figure 2-1 Location Map

The photographs taken during the site visit are presented below.

Figure 2-2 Start of Project Road

Start of Project Road (LHS)

Start of Project Road (RHS)

Figure 2-3 End of Project Road

End of Project Road

End of Project Road (RHS)

2.3 Climate

The climate features of the area covered by the Project Road are:

Summer	March - May, with maximum temperature up to 47 ^{0}C.
Monsoon	June - August, with annual rainfall of about 560-660 mm.
Retreating monsoon season	September - November, with dry weather and moderate temperature.
Winter	December - February, temperature falls up to 3 ^{0}C.

2.4 Terrain

This section of National Highway traverses through plain terrain.

2.5 Abutting Land Use

The Project Road is characterized by a mix of habituated areas and agriculture lands.

2.6 Right of Way

The width of existing Right of Way (RoW) for the Project Road varies from 13.50 m to 22.50 m.

2.7 Existing Utilities

During widening of the Project Road, various affected utility services located along the Project Road were shifted to the PROW. The different types of utilities found along the road include, electrical poles, telephone poles, OFC Cables, etc.

2.8 Development as per Schedule-B

The Project Road from Bharatpur (km. 63+000) to Mahua (km. 120+000) has been developed as a four-lane divided carriageway with median width of 4.5 m and 2.0 m, service road and other arrangements. The Project Road passes through rural as well as built-up sections.

As per Article 2 of Concession Agreement, the scope of project defined in Schedule-A and Schedule-B, (the **"Scope of the Project"**) shall mean and include, during the Concession Period:

a) Construction of the project on the Site set forth in Schedule-A and as specified in Schedule-B together with provision of project facilities as specified in Schedule-C and in conformity with the Specification and Standards set forth in Schedule-D.
b) Tolling, operation, management, maintenance, and transfer of the Project Road subject to and in accordance with the provisions of this Agreement.
c) performance and fulfilment of all other obligations of the Concessionaire in accordance with the provisions of this Agreement and matters incidental thereto or necessary for the performance of any or all of the obligations of the Concessionaire under this Agreement.

Following is the Scope of Work as per Schedule-B of Concession Agreement.

Table 2-1 Details of Scope of Work

Sr. No.	Type of Structure	Unit	Scope	Remark
1	O&M of Main Carriageway	Km.	57.000	
2	Construction of Service Road	Km.	12.980	Both Side
3	Major Bridge	Nos.	01	
4	Minor Bridge	Nos.	04	
5	Pipe Culvert	Nos.	25	
6	Slab Culvert	Nos.	12	
7	Box Culvert	Nos.	03	
8	Underpasses	Nos.	05	
9	Grade Separated Structure	Nos.	01	
10	Rail Over Bridge	Nos.	01	

3 CONDITION ASSESSMENT OF PROJECT ROAD

3.1 General

The Project Road is four lane divided carriageway and generally has a paved carriageway of 9.0 m with an earthen shoulder of 1.5 m on either side. The Project Road has a median width of 4.5 m in rural section and 2.0 m in urban section.

The entire stretch of Project Road including service road is constructed with flexible pavement. The pavement type for the Toll Plaza including taper is rigid pavement.

3.2 Pavement Condition Survey

Pavement condition survey was carried out from **07th March 2026 to 08th March 2026** through visual inspection for the entire project length. From the visual inspection, the pavement condition of the Project Road for the entire length is generally found to be Good. In the project, Major maintenance work has been done in FY 2025. The same has been intimated to NHAI by the Concessionaire.

Some of the photographs taken during the site visit are presented as below.

Figure 3-1 Photographs of Pavement Condition (MCW-LHS)

3.3 Bypass / Realignment

There is one bypass on Project Road. The detail of the bypass is tabulated below:

Bypass:

Location of Bypass	Design Chainage (km)		Design Length (km)
	From	To	
Mahwa	114+380	118+680	4.30

The photographs taken during the site visit are presented below.

Figure 3-3 Photographs of Bypass

Start of Mahua Bypass

End of Mahua Bypass

3.4 Service Road / Slip Road

The service road with a 5.5 width is constructed in built-up area and adjoining underpass locations. The Project Road has total service road length of 12.980 kms on both sides. The photographs taken during the site visit are presented below.

Figure 3-4 Photographs of Service Road

Service Road at km. 65+260 (LHS)

Service Road at km. 82+700 (RHS)

3.6 Condition Survey of Bridge

The inventory of structures including major bridges, minor bridges, ROB's, underpasses and culverts is presented in table as below:

Table 3-1 Details of Summary for Structures

Type of Structure	Total Number of Structures
Major Structures:	
Road Over Bridge (ROB)	01
Grade Separator	01
Major Bridges (MJB)	01
Minor Bridges (MNB)	04
Underpass (UP)	05
Culverts:	
Pipe Culverts	25
Slab Culverts	12
Box Culverts	03
Total	**52**

The detailed condition survey of structures was carried out by visual inspection. The observations and findings are presented in table below:

Table 3-2 Condition Survey of Major Structure

Sr. No.	Name of Structure	Chainage (km)	Size (m)	Width (m)	Remarks
1	Minor Bridge (SLAB)	62+800	5 x 6.40	12	**LHS -** Existing Bridge, Stone masonry is used for Abutment, Pier and Wing wall, RCC deck slab, Tar Paper bearings are used, Median and Shoulder side RCC Railing, Cracks are observed on RCC Railing at span no. 4 and 5, and slope protection are in good condition. Drainage spouts are choked, Structure is in sound condition. Vegetations seen on pier cap at slab joints. **RHS -** Newly constructed Bridge, Substructure RCC abutment and Pier, RCC deck slab, Tar Paper bearings are used, Footpath side RCC Railing, Median side RCC Crash Barrier with handrail. Shoulder side RCC Crash Barrier. Crash barriers are in good condition. Expansion Joints are filled with Bituminous material. A1 side Slope protection damage. Drainage spouts are choked, Structure is in sound condition.
2	ROB	63+236	LHS - 1 x 48.65 RHS - 1 x 14.56 + 1 x 23 + 1 x 14.56	12	**LHS -** Single span Existing Bridge, Substructure RCC abutment, PSC Girder 4 nos. are used, Elastomeric bearing are used, Footpath. Shoulder, Median side RCC Crash Barrier, Expansion Joint, crash barrier and Slope protection are in good condition. Drainage spouts are cleaned, Structure is in sound condition. **RHS -** Newly constructed Bridge, Substructure RCC abutment, PSC Girder 5 no. are used for Railway span, RCC T Beam Girder 5 no. are used for obligatory span, Elastomeric Bearings are used, Footpath, Shoulder, and Median side RCC Crash Barrier. Expansion Joint cleaning is required. Expansion Joint, Crash Barrier and Slope protection are in good condition. Drainage spouts are cleaned, Structure is in sound condition. A return wall with RCC parapet is constructed. One high mass is erected at A1 side.
3	Minor Bridge	63+600	2 x 6.40	LHS - 12.00 RHS - 13.95	**LHS -** Existing Bridge, Stone masonry is used for Abutment, Pier and Return Wall. RCC deck slab, Tar Paper bearings are used, Median and Shoulder side RCC Railing. RCC Railing and slope protection are in good condition. Drainage spouts are choked. The structure is in sound condition.

Sr. No.	Name of Structure	Chainage (km)	Size (m)	Width (m)	Remarks
					RHS - Newly constructed Bridge, Substructure RCC abutment, Pier and Wing Wall, RCC deck slab, Tar Paper bearings are used, Footpath side RCC Railing, Shoulder side RCC Crash Barrier and Median side RCC Crash Barrier with handrail. A2 side Slope protection damaged. Crash barrier is in good condition. Drainage spouts are cleaned. The structure is in sound condition.
4	Ludhawai Underpass	66+305	1 x 11.16	12.25	Newly constructed, RCC Abutments, RCC Girder 4 no. for each span, Elastomeric Bearings are used, RCC Crash Barrier is in good condition. Drainage spouts are choked. The structure is in sound condition.
5	Hantra Underpass	82+050	1 x 11.16	12.25	Newly constructed, RCC Abutments, RCC Girder 4 no. for each span, Elastomeric Bearings are used, RCC Crash Barrier is in good condition. Drainage spouts are choked. Structure is in sound condition Cross Drain on RHS Service Road is damaged and obstructed to traffic. In the VUP cleaning is required.
6	Minor Bridge(SLAB)	92+350 in Skew	3 x 10	13.95	**LHS -** Newly constructed Bridge, Substructure RCC abutment and Pier, RCC deck slab, Tar Paper bearings are used, Footpath side RCC Railing, Shoulder side RCC Crash Barrier, Median side RCC Crash Barrier with handrail. RCC Return wall with RCC railing. Slope protection damaged. Crash barrier is in good condition. Drainage spouts are choked. The structure is in sound condition. At slab joint cracks are seen on Main Carriageway **RHS -** Newly constructed Bridge, Substructure RCC abutment and Pier, RCC deck slab, Tar Paper bearings are used, Footpath side RCC Railing, Shoulder side RCC Crash Barrier Median side RCC Crash Barrier with handrail. RCC Return wall with RCC railing. Crash barrier and slope protection are in good condition. Drainage spouts are choked. Structure is in sound condition. At slab joint cracks are seen on Main Carriageway
7	Major Bridge	95+450	7 x 39.75 + 1 x 40.25	13.95	**LHS and RHS** - Newly constructed Bridge, Substructure RCC abutment and Pier, PSC Girder 4 no., POT PTFE bearings are used, Footpath side RCC Railing, Shoulder side RCC Crash Barrier, Median side RCC Crash Barrier with handrail. Expansion Joint Cleaning work in progress on RHS side. Crash Barrier

Sr. No.	Name of Structure	Chainage (km)	Size (m)	Width (m)	Remarks
					is in good condition, Slope protection is in good condition Except A1 side LHS slope protection not done. Drainage spouts are cleaned. The structure is in sound condition.
8	Chhankarwada Underpass	100+460	1 x 11.16	12.25	Newly constructed, RCC Abutments, RCC Girder 4 no. for each span, Elastomeric Bearings are used, RCC Crash Barrier is in good condition. Drainage spouts are cleaned. Structure is in sound condition
9	Bachhrain Underpass	105+570	1 x 11.16	12.25	Newly constructed, RCC Abutments, RCC Girder 4 no. for each span, Elastomeric Bearings are used, RCC Crash Barrier is in good condition. Drainage spouts are cleaned. Structure is in sound condition
10	Minor Bridge	108+180 in Skew	2 x 7	LHS - 13.95 RHS - 11.00	**LHS -** Newly constructed Bridge, Substructure RCC abutment and Pier, RCC deck slab, Tar Paper bearings are used, RCC return wall, Footpath side RCC Railing, Median side RCC Crash Barrier and shoulder side RCC Crash Barrier with handrail. Crash barrier and slope protection is damaged. The structure is in sound condition. **RHS -** Existing Bridge, Stone masonry are used for Abutment and Pier, RCC deck slab, Tar Paper bearings are used, Parapet Constructed in Brick work, Median side Partly RCC Railing and partly Parapet constructed in stone masonry, Slope protection are in good condition. The structure is in sound condition.
11	Flyover / GS	116+839	LHS and RHS - 1 x 12 + 2 x 16 + 1 x 12	13.5	Newly constructed, Substructure RCC abutment and Pier, RCC Girder 5 no. for each span, Elastomeric bearings are used, Footpath side RCC Railing, Shoulder side RCC Crash Barrier, Expansion Joint and RCC wing wall are in good condition, Drainage spouts are Cleaned. The structure is in sound condition.
12	Mahwa Underpass	118+110	1 x 11.16	12.25	Newly constructed, RCC Abutments, RCC Girder 4 no. for each span, Elastomeric Bearings are used, Shoulder side RCC Crash Barrier and Median side RCC Crash Barrier with handrail. RCC Crash Barrier is in good condition. Drainage spouts are choked. Structure is in sound condition

3.7 Condition Survey of Culverts

The cross-drainage structure includes hume pipe culverts and slab culverts at various locations. There are 25 Nos. of pipe culverts, 12 Nos. of slab culverts and 03 Nos. of box culverts along the Project Road. The height of culvert varies from 1.0 m to 3.0 m from bed level. During the condition survey of structure these culverts were inspected on sample basis.

The project involves strengthening and widening of existing road to four lane divided carriageway. The culverts beneath existing alignment are either widened or reconstructed. The structural condition of culverts is generally found sound. The quality of surface concrete of box culverts is satisfactory. The RCC parapet, crash barrier or RCC railing has been provided at culvert locations which is maintained properly.

In most of culverts, the waterway is clear. However, near to urban area and some location is found blocked due to debris, drainage water or bushes, tree growth, which will be removed by the Concessionaire. The cement concrete pitching or stone pitching has been provided for slope protection.

The culverts are maintained by the Concessionaire during O&M period. However, in case of some culverts, cement concrete pitching has been damaged which required to be addressed under routine repair work by the Concessionaire.

3.8 Drainage

RCC drain is constructed in built-up areas and locations where service roads are provided. The photographs taken during site visit is presented as below:

Figure 3-14 Photographs of Drainage

RCC Drain at km. 65+260 (LHS)

V Shape RCC Drain at km. 66+000 (LHS)

RCC Drain at km. 82+700 (LHS)

RCC Drain at km. 101+650 (RHS)

3.9 Slope Protection

Slope protection and chute drains are found on Project Road at required locations. A few of the slope protection and chute drains are damaged which will be rectified by the Concessionaire. The photographs taken during site visit is presented as below:

Figure 3-15 Photographs of Slope Protection and Chute Drain

Chute Drain at km. 63+000 (RHS)

Slope Protection at km. 63+650 (RHS)

Slope Protection at km. 95+450 (RHS)

Slope Protection at km. 116+750 (LHS)

3.10 Road Furniture

The Concessionaire has provided road furniture along Project Road as per the standards and specifications mentioned in Schedule-C.

Pavement Marking

Pavement marking for the Project Road is done as per the design standards indicated in section 12 of Schedule-D. Some of the photographs of road marking are presented below.

Figure 3-16 Photographs of Pavement Marking

Road Marking at km. 70+700 (LHS)

Road Marking at km. 74+780 (LHS)

Road Marking at km. 118+700

Road Marking at km. 108+700

Road Studs

Cat's eyes / road studs for the Project Road are done as per the design standards indicated in section 12 of Schedule-D. Cat's eyes have been fixed at junction and at pedestrian crossings locations. Some of the photographs of road studs are presented below.

Figure 3-17 Photographs of Road Studs

Road Studs km. 70+700 (LHS)

Road Studs km. 118+700

Traffic Signage / Median Kerb painting / KM Stone

Traffic signs include roadside signs, overhead signs, kerb mounted signs and median signs along the Project Road. The design for the traffic signs along the Project Road is done as per the design standards indicated in section 11 of Schedule-D.

The height, lateral clearance, location and installation are as per relevant clauses of Schedule 'D'. Overhead sign has been installed ahead of major intersections, toll plazas, start / end of Project Road and urban areas as per detailed design requirements.

Kilometre stones, vertical post of sign boards, chevron boards are properly placed.

Some of the photographs of sign boards are presented below.

Figure 3-18 Photographs of Traffic Signages

Directional Sign Board at km. 91+160 (RHS)

Kilometer Stone at km. 106+700 (LHS)

Sign Board at km. 114+400 (RHS)

Highway Lighting

Highway lighting is provided at underpasses, flyovers, toll plaza, ROBs and built-up locations. High mast lighting is provided at toll plaza location. Highway lighting is also provided at approaches of underpass and flyovers. Some of the photographs of highway lighting are presented below.

Figure 3-19 Photographs of Street Light

Street Lighting at km. 64+720

Street Lighting at km. 83+050

Crash Barriers

Metal beam crash barriers are provided at bridge approaches, locations of high embankment and sharp curves. All the crash barriers provided by the Concessionaire are maintained at site. Some of the photographs of metal beam crash barriers and concrete crash barriers are presented below.

Figure 3-20 Photographs of MBCB / Crash Barrier

Metal Beam Crash Barrier at km. 118+400 (RHS)

Crash Barrier at km. 117+200 (RHS)

Concrete Barrier at km. 95+450 (LHS)

Concrete Crash Barrier at km. 82+000

Delineators

The traffic delineators are seen in median on curve portion and at median openings along the Project Road. Some of the photographs of delineators are presented below.

Figure 3-21 Photographs of Delineators

Delineators at km. 117+400

Delineators at km. 102+200

Pedestrian Guard Rail

The pedestrian guard rails are provided in between the main carriageway and service road. It is maintained by the Concessionaire. Some of the photographs of pedestrian guard rails are presented below.

Figure 3-22 Photographs of Pedestrian Guard Rail

Pedestrian Guard Rail at km. 65+260

Pedestrian Guard Rail at km. 104+900

Pedestrian Guard Rail at km. 83+500

Road Land Boundary

Some of the road land boundary stones are seen along the Project Road. The photographs taken during site visit are presented below.

Figure 3-23 Photographs of Road Land Boundary

Boundary Stone at km. 90+650 (RHS)

Boundary Stone at km. 71+660 (LHS)

3.11 Avenue Plantation and Median Plantation

Avenue plantation and median plantation are done along the project length as per IRC specification except at built-up Locations.

Figure 3-24 Photographs of Avenue Plantation and Median Plantation

Avenue and Median Plantation at km. 68+400 (LHS)

Avenue and Median Plantation at km. 74+400

Median Plantation at km. 76+600

Median Plantation at km. 117+000

3.12 Toll Plaza

As per the Concession Agreement, there are two no. of toll plazas at km. 64+570 (Ludhawali) and at km. 98+500 (Amoli) with the following infrastructure.

Figure 3-25 Photographs of Toll Plaza

Ludhawai Toll Plaza at km. 64+360

Ludhawai Toll Plaza at km. 64+360

Amoli Toll Plaza at km. 98+500

Amoli Toll Plaza at km. 98+500

3.13 Lane Equipment

Following are the lane hardware and equipment installed at toll plaza.

1. RFID ETC Transceiver
2. Lane Controller with Industrial PC
3. AVC Sensors
4. Automatic Lane Barrier (ALB)
5. Lane Traffic Light and user fare display
6. Incident Capture Camera
7. Overhead Lane Signals
8. Traffic Lights
9. Toll Booth Equipment

3.13.1 RFID ETC Transceiver

RFID ETC Transceiver reads tags installed on the windshield of vehicles and mounted on a pole at about 6 m height. Handheld RFID readers are provided (1 no. in each direction) in case a tag is not detected by the fixed reader.

3.13.2 Lane Controller with Industrial PC

Toll Lane Controller is located within the Electronic Enclosure placed inside each toll booth which are connected to the common server and are capable of independent storage of data at Km 64+360 and at km 98+500 is located in Tunnel.

Lane Controller in Booth at TP

3.13.3 Automatic Vehicle Classification (AVC) Sensors

The AVC equipment comprises of a pair of height sensor poles, axle sensors and inductive loops. The height detector has a high sensing resolution and detects height when object blocks the path. The presence of vehicle is detected by inductive loop. The loop sensors embedded on the pavement trigger the AVC height sensors located on parallel pillars.

3.13.4 Automatic Lane Barrier

Boom barriers installed on all lanes are in working condition. Automatic Lane Barrier is used to allow only authorized vehicles to pass through the lane. The barrier is activated only on generation of user fee receipt or other relevant vehicle processing activity. Torque motor powers the barrier for raising and lowering the boom. The motor can be blocked at any position without causing any damage. In the event of power failure, the boom is automatically raised. The boom weight is exactly balanced by built-in springs.

ALB at TP

3.13.5 Lane Traffic Light (LTL) and User Fare Display (UFD)

Lane Traffic Light (LTL) is used to instruct vehicles to stop or pass through the lane. The LTL is RED when the toll collector is expecting the vehicle at the booth. After the transaction is done; the LTL turns Green to instruct the vehicle to pass through the lane. The User Fare Display is a part of electronic toll collection equipment located at the toll booth. It is a mini variable message sign (VMS) made of Light Emitting Diodes (LED). The user fare display is used to display the toll fare that is due and that must be paid by the motorist and the classification of vehicle selected by the collector.

3.13.6 Incident Capture Camera (AVC Camera)

The incident capture camera is installed on the island of the booth to capture the image of the vehicle from the back side. The AVC triggers the Image capture system.

3.13.7 License Plate Image Capture Camera (LPIC)

License Plate Image capture camera is installed on a 3 m pole facing incoming vehicle to capture the image of the vehicle number plate.

3.13.8 Over Head Lane Signal (OHLS)

The **Overhead Lane Signal (OHLS)** for lane “Open” and “Close” sign consists of a pair of “GREEN” (arrow) and “RED” (cross) lights. The OHLS is located at the vehicle approaching side of the canopy to show the drivers whether the lane is open or closed.

OHLS at TP

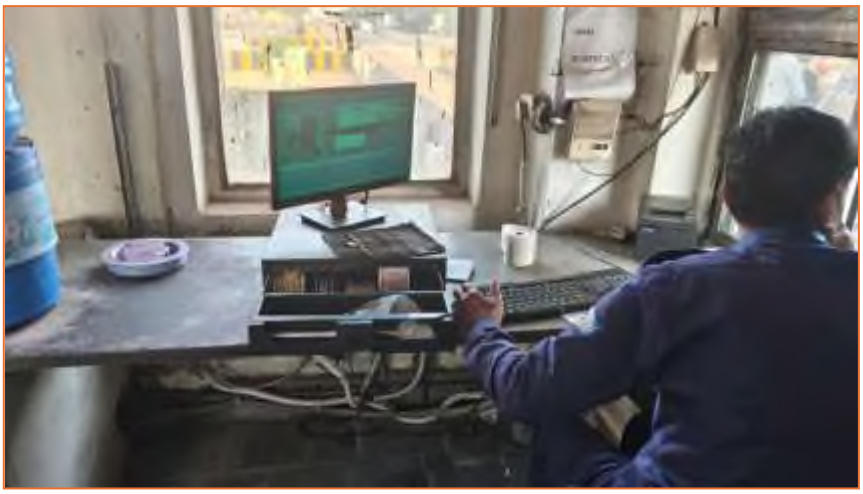
3.13.9 Toll Booth Equipment

Toll Booth Hardware / Equipment provided are:

- Toll Collector Display (Operator Monitor)
- Customized Industrial Keyboard
- Receipt Printer
- Intercom Slave unit
- Bar code reader
- Violation Light and alarm
- Manual Booth Control (MBC)
- Booth Camera

The operator monitor termed as Toll Collector Display (TCD) is located on the toll collector's desk. It is the system's interface to the toll collector, to display the status of transactions and status of the lane peripherals.

The keyboard on the toll terminal is a programmable keyboard for Registration of toll operations and is customized for different vehicle types and type of ticket.



Thermal printers are installed at the toll booths to print tickets. Intercom slave unit facilitates communication with the master unit located in the control room.

Violation system has an alarm switch which is triggered whenever there is a violation such as run-through happening on the lane. When there is an emergency, a foot switch pressed by the booth operator alerts the control room.

Booth Cameras are provided on the inside roof corner of the booth to provide surveillance through CCTV screen located in the control room. Manual Booth Controller is used to release exempt vehicles.

3.14 Plaza Equipment

3.14.1 TMS Server

Plaza Server is provided in a hot standby configuration and provided with port non-POE network switch and Port PoE switch. Internet connectivity is available through one lease line (Airtel) and Jio WiFi module. Firewall with Sophos antivirus is provided.

3.14.2 55" LED screen for CCTV monitoring

55" LED screen for CCTV monitoring installed at the toll plaza admin block provides view of all the toll booths, important zones within the plaza where cash transactions take place (server room, control room, cash up).

The toll plaza manager is able to observe the activities at the toll lanes and toll booth. When the toll collector calls up on the intercom, the manager is able to comprehend the situation at the lane by a zoomed view of the particular lane.

3.14.3 Workstations in Control Room, POS room

Workstations are available in control room (lane monitoring, administration, and audit), cash room and PoS.

3.15 Truck Lay-bye

The Concessionaire has provided truck lay-bye at the following locations.

Table 3-3 Details of Truck Lay-bye

Sr. No.	Design Chainage (km)	Side
1	90+740	LHS
2	91+200	RHS
3	113+820	LHS
4	113+820	RHS

Some of the photographs of the truck lay-bye are presented below.

Figure 3-26 Photographs of Truck Lay-bye

Truck Lay-Bye at km. 91+500

Truck Lay-Bye at km. 114+000 RHS

3.16 Administrative, Operation and Maintenance Base Camp

Traffic Aid Post and Medical Aid Post are in the scope of Concessionaire.

Toll Plaza Administrative Building at km. 64+570

Toll Plaza Administrative Building at km. 98+500

3.17 Toilet Block

There are 04 Nos. toilet blocks at truck lay bye locations and the same is being maintained by the Concessionaire.

Table 3-4 Details of Toilet Block

Sr. No.	Design Chainage (km)	Side
1	90+740	LHS
2	91+200	RHS
3	113+820	LHS
4	113+820	RHS

Some of the photographs of the toilet block are presented below.

Figure 3-27 Photograph of Toilet Block

Toilet Block at km. 91+150 (LHS)

Toilet Block at km. 113+900 (RHS)

3.18 Bus Bays and Passenger Shelters

There are 42 Nos. of bus bays / passenger shelters along Project Road. Some of the photographs of the bus bays are presented below.

Figure 3-28 Photographs of Bus Bays

Bus Bay at km. 70+600 (LHS)

Bus Bay at km. 97+020 (LHS)

Bus Bay at km. 98+950 (RHS)

Bus Bay at km. 118+800 (RHS)

3.19 Balance Work Status

The Project Road has received Completion Certificate on 09th March 2015 by completing all the works as mentioned in the Technical Schedules of Concession Agreement. There are no balance works to be executed as per CA.

3.20 Operation and Maintenance

3.20.1 O&M Contract

As per Clause 18.1 of the Concession Agreement, the Concessionaire shall operate and maintain the Project Road by itself, or through O&M Contractors and if required, modify, repair, or otherwise make improvements to the Project Road to comply with Specifications and Standards, and other requirements set forth in the Agreement, Good Industry Practice, Applicable Laws and Applicable Permits and manufacturer's guidelines and instructions with respect to toll systems, More Specifically.

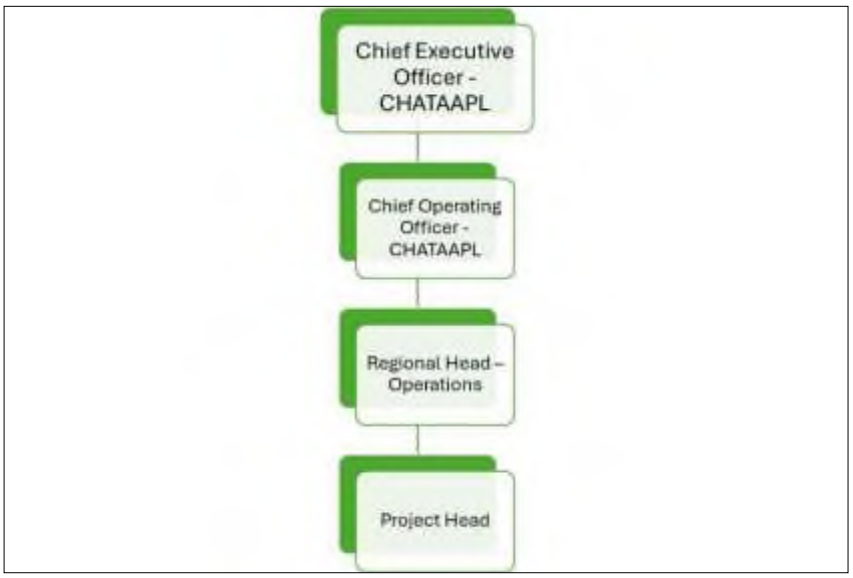
The Concessionaire has been outsourced to carry out the activities related to operation and maintenance of the Project Road including toll operation services, security services.

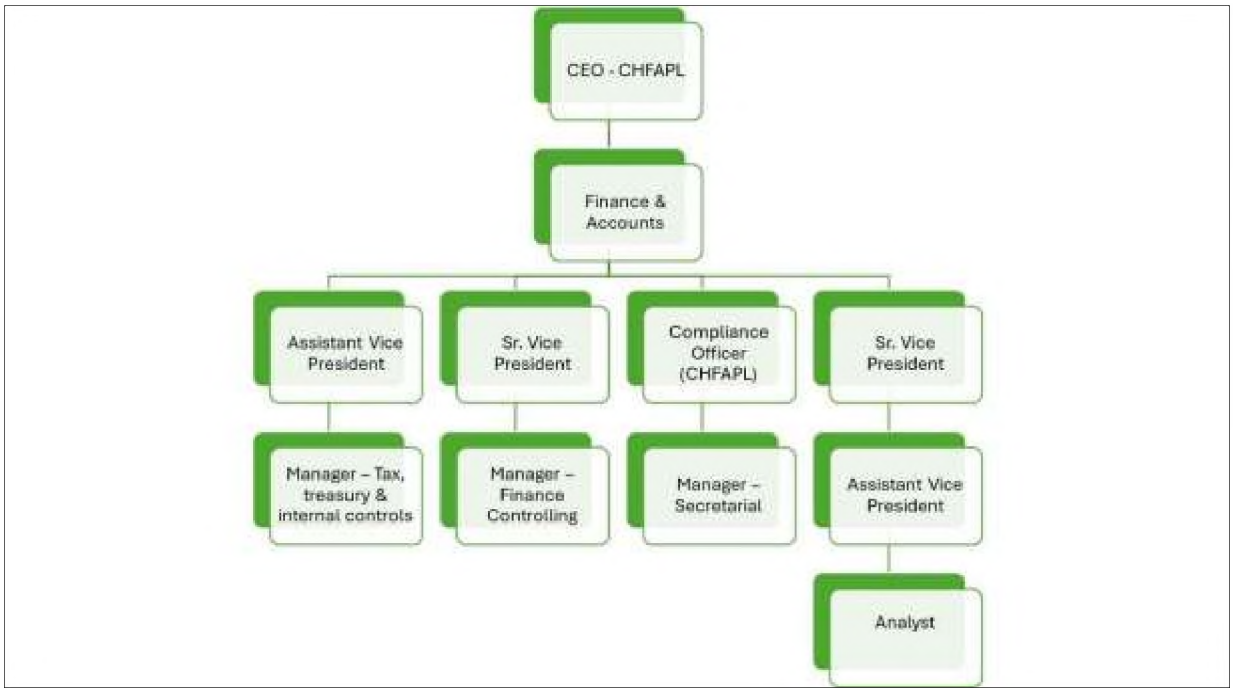
The Operation Cost is presented in the subsequent chapter.

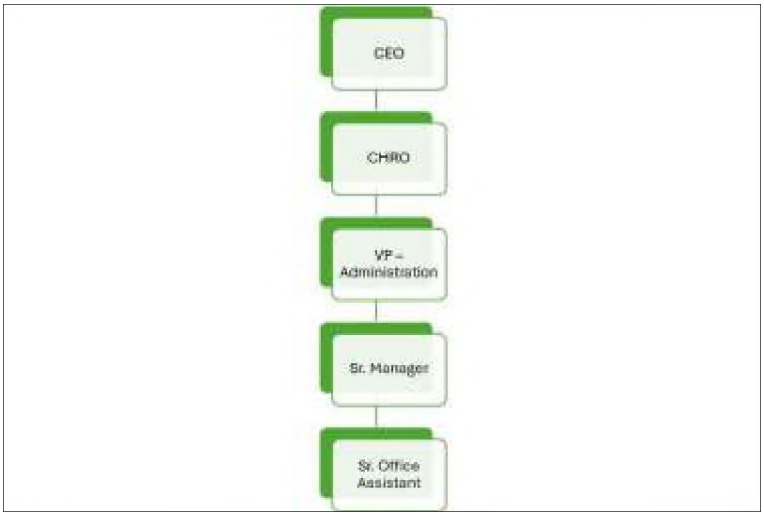
3.20.2 Organization Chart

The Concessionaire has provided the Organization Chart at site for Operation and maintenance. The team controls the maintenance activities. However, the maintenance work is undertaken and executed through competent subcontractors.

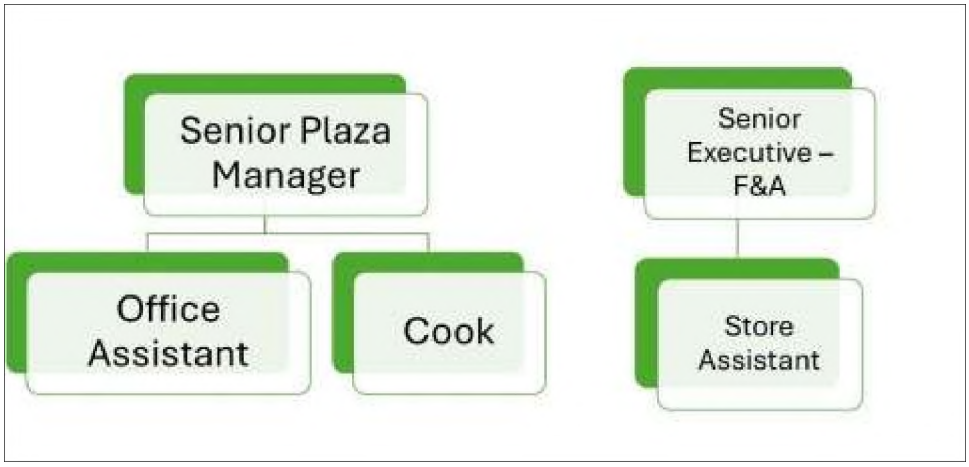
Organization Chart of Head Office Administration



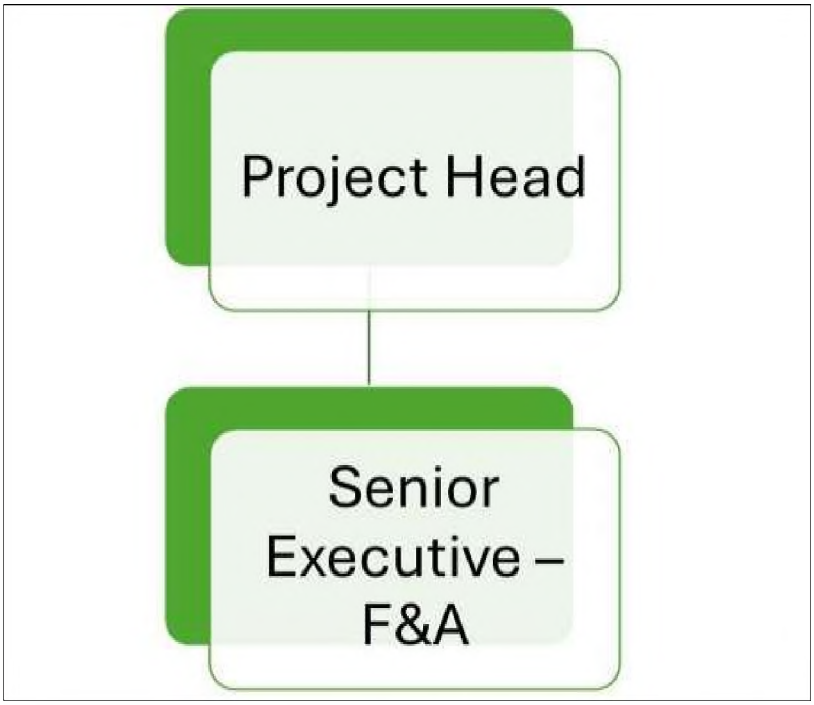




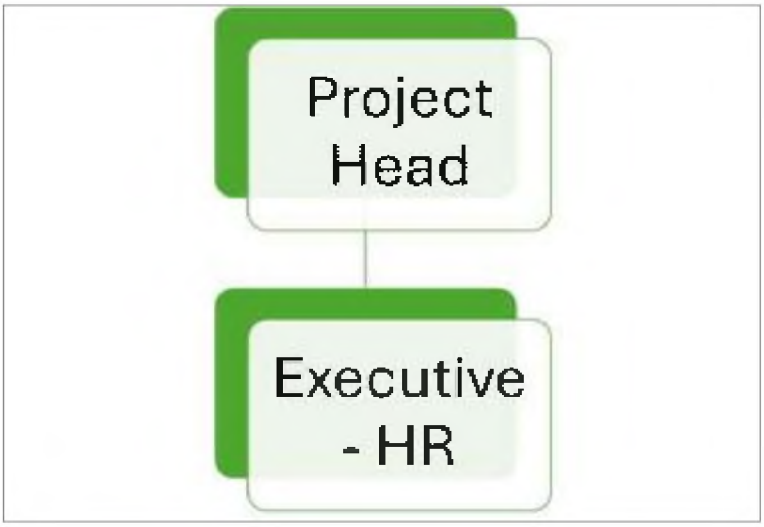
Administration-Site Office

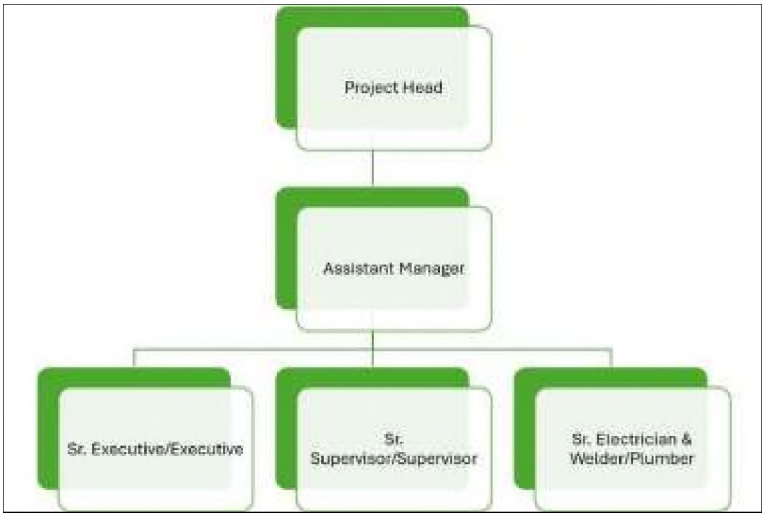


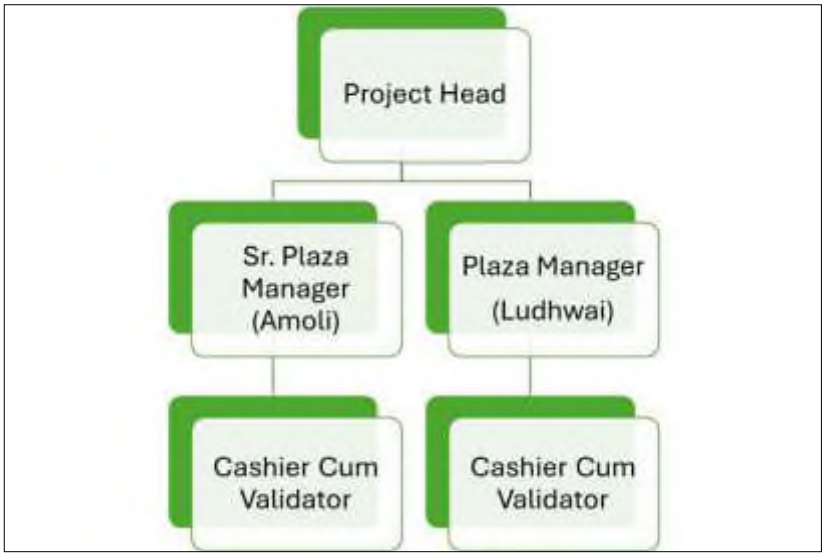
Finance & Accounts – Site office



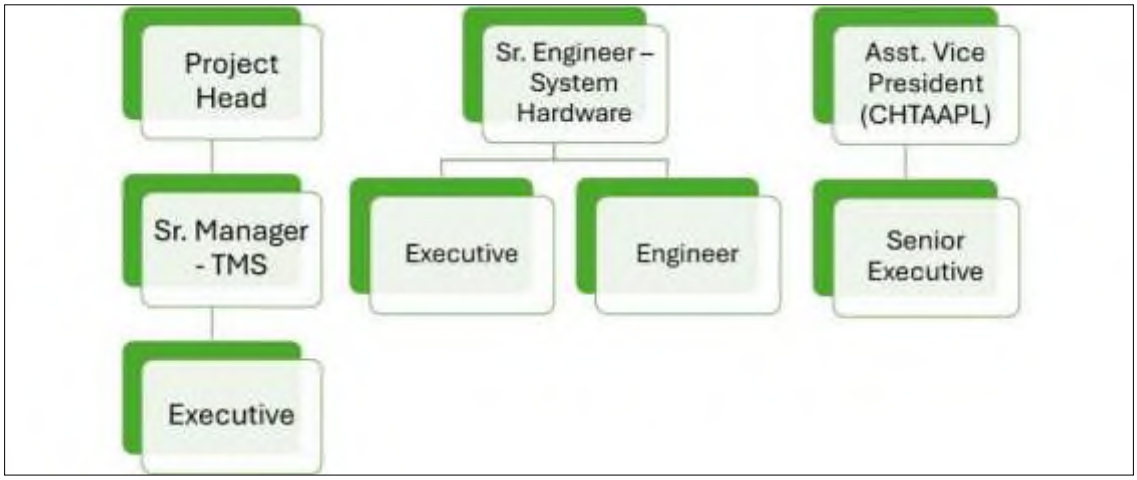
Human and Resources- Site Office







TMS Maintenance – Site Office



MBEL-Manpower Summary

S.NO.	DEPARTMENT	HEAD OFFICE	SITE	TOTAL STRENGTH
1	Administration	1	4	5
2	Finance & Accounts	0	1	1
3	Tax, Treasury & Internal Controls	2	0	2
4	Finance Controlling	1	0	1
5	Human Resource	0	1	1
6	Maintenance	0	9	9
7	Operations	0	11	11
8	TMS Maintenance	0	11	11
9	Secretarial	1	0	1
	Total	5	37	42

3.20.3 Operation

Operation cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses and other miscellaneous expenses. The Concessionaire has provided the expenses incurred towards operation expenses for past years. Necessary assumptions have been made about the expenses of similar types of projects to arrive at the operation cost. The estimates are projected based on the best industry practices and are compared with the operating cost in the vicinity of the project area.

3.20.4 Routine Maintenance

The Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey.

Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

Currently, the entire length of the Project Road is maintained by the Concessionaire.

The Routine Maintenance Cost is presented in the subsequent chapter.

4 PAVEMENT INVESTIGATION AND ASSESSMENT

4.1 General

Presently, the pavement of the Project Road is being maintained by the Concessionaire as per Scope of Work. The Project Road received the Completion Certificate on 9th March 2015.

The project is currently under the Operation and Maintenance stage. The concession period of the project is 25 years from the Appointed Date including a construction period of 36 months.

4.2 Axle Load and VDF

The Concessionaire conducted the axle load survey on Project Road at km. 64+500 (near Ludhawai Toll Plaza) and at km. 98+500 (near Amoli Toll Plaza) from 13th November 2022 to 15th November 2022 and 21st November 2022 to 23rd November 2022 respectively. The summary of Vehicle Damage Factor (VDF) calculated as provided by the Concessionaire is tabulated below.

Table 4-1 Vehicle Damage Factor

Vehicle Category	Vehicle Damage Factor			
	At TP-1 (km. 64+500)		At TP-2 (km. 98+500)	
	LHS	RHS	LHS	RHS
Bus	0.941	1.138	0.977	0.994
LCV	0.412	0.716	0.887	0.706
2-Axle	2.226	2.433	2.673	3.612
3-Axle	3.604	4.641	4.021	6.287
MAV	6.249	15.758	9.247	22.362

4.3 Design Traffic

Traffic in Million Standard Axles (MSA) for the homogeneous section based on the historical traffic data provided by the Concessionaire, current traffic has been used for future projections and the estimated design MSA is computed and presented in subsequent table.

For the estimation of design MSA, Actual Traffic Growth Rates as provided by the Concessionaire were used.

Table 4-2 MSA Calculation

MSA Calculation (TP-1 LHS)			
Year	**MSA**	**Cumulative MSA**	**Remarks**
FY27	4.04	**4.04**	
FY28	4.26	**8.31**	
FY29	4.47	**12.78**	
FY30	4.63	**17.41**	
FY31	4.85	**22.26**	**End of concession period**

MSA Calculation (TP-1 RHS)			
Year	**MSA**	**Cumulative MSA**	**Remarks**
FY27	9.47	**9.47**	
FY28	9.99	**19.46**	
FY29	10.50	**29.96**	
FY30	10.88	**40.83**	
FY31	11.40	**52.24**	**End of concession period**

MSA Calculation (TP-2 LHS)			
Year	**MSA**	**Cumulative MSA**	**Remarks**
FY27	5.80	**5.80**	
FY28	6.11	**11.91**	
FY29	6.42	**18.33**	
FY30	6.65	**24.98**	
FY31	6.97	**31.94**	**End of concession period**

MSA Calculation (TP-2 RHS)			
Year	**MSA**	**Cumulative MSA**	**Remarks**
FY27	13.30	**13.30**	
FY28	14.04	**27.34**	
FY29	14.76	**42.10**	
FY30	15.29	**57.39**	
FY31	16.04	**73.43**	**End of concession period**

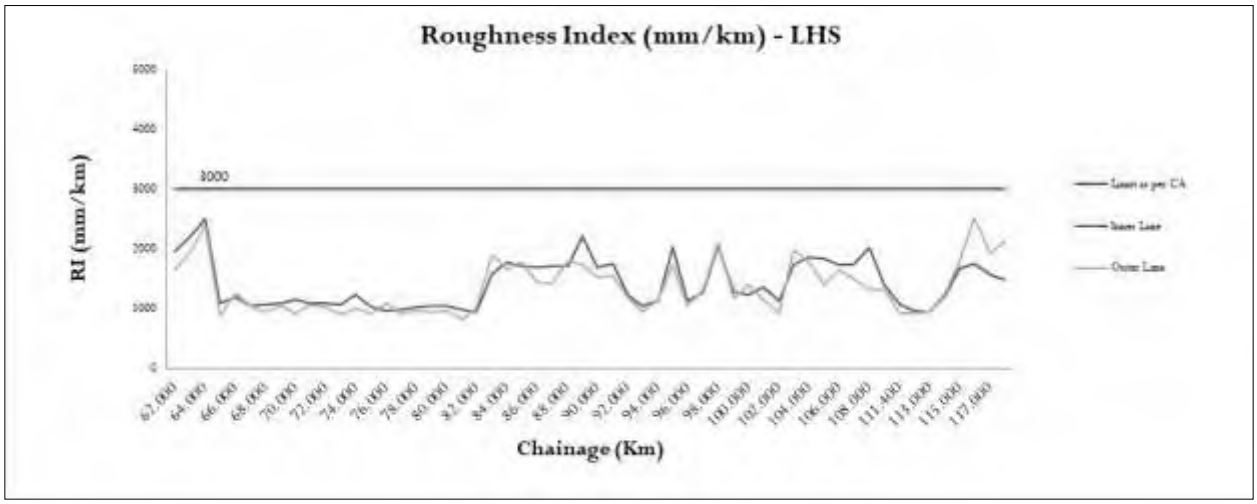
4.4 Network Survey Vehicles (NSV) Survey

The Concessionaire has provided NSV survey data conducted in the month of April 2024. The NSV data is used to assess the riding quality and pavement condition of Project Road. The summary of classification of pavement as per Schedule-L is given in the table below:

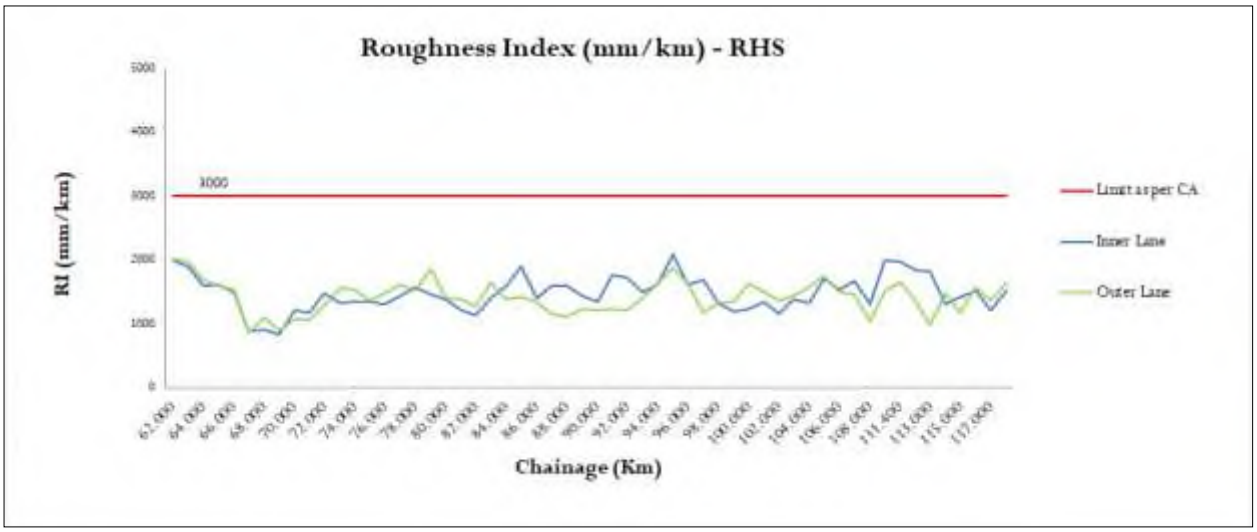
Riding Condition	**Roughness Index Limit (mm/km)**	**Length (km)**			
		LHS		**RHS**	
		Inner	**Outer**	**Inner**	**Outer**
Good	<2000	51.7	53.3	54.2	54.7
Fair	2000-3000	4.00	2.40	1.50	1.00
Poor	>3000	-	-	-	-

From the above table it is observed that the overall condition of pavement is good. At a few stretches the condition is found to be fair.

LHS:



RHS:



4.5 Structural Investigations

An evaluation of existing pavements using Falling Weight Deflectometer (FWD) survey was carried out in the month of September 2024. Summary of FWD Survey report is presented in the table below:

Description	LHS (km)		RHS (km)	
	Inner Lane	Outer lane	Inner Lane	Outer lane
Less than 20 MSA	0.00	0.80	0.80	0.00
20 MSA - 100 MSA	3.20	4.06	3.99	4.78
Greater than 100 MSA	42.58	41.05	41.00	40.85

From the above table, it is concluded that the residual life of the pavement is more than the design life of the Project Road. Hence, immediate major maintenance of the pavement is not required.

The strengthening/ overlay of pavement for project stretch are derived from 15th percentile of corrected E moduli of existing pavement, existing crust thickness etc.

The combination of existing pavement and overlay will be analyzed as a four-layer system to ensure that fatigue and rutting criteria are satisfied for the calculated design traffic in terms of MSA. IITPAVE program is used to compute strain value at bottom of bituminous layer and top of subgrade in order to calculate design life of the proposed overlay. Poisson's ratio values used in overlay analysis from top to bottom of existing pavement layers are 0.5, 0.4 and 0.4 for existing bituminous, existing granular and existing subgrade layers respectively. Elastic modulus of 3000 MPa (VG-40) is used for the new bituminous layer.

4.6 Test pit and Subgrade Investigation

The Concessionaire has carried out the subgrade investigation for Project Road. The results of the same as provided by the Concessionaire are tabulated as below.

Table 4-3 Test Results Summary of Natural Ground Soil Samples

Sr. No.	Name of Road	Location (Km.)	Side (LHS/RHS)	Soil Classification as per IS: 1498	Gradation: Percent by weight passing through the Sieve (IS:2720-IV)						Clay & silt content %	Atterberg Limits [IS :2720-Pt-V]			Modified Proctor Test (IS:2720-Pt-VIII)		Field Density		4-Days Soaked CBR (%)	Free Swell Index (%)	Degree of Compaction (%)
					19.0 mm	10.0 mm	4.75 mm	2.0 mm	425 microns	75 microns		Liquid Limit (LL) %	Plastic Limit (PL) %	Plasticity Index (PI)	Max. dry density gm/cc.	OMC (%)	Field Dry Density (gm/cc)	FMC (%)

4.7 Periodic Maintenance Strategy

Major Maintenance is required in order to comply requirement of Concession Agreement and to maintain performance level as defined in Schedule-L. As per schedule-L of Concession Agreement, periodic maintenance shall be carried out at least once every 5th year from COD and in the last year of concession period.

It is noted that the Concessionaire has carried out 1st major / periodic maintenance in Year 2018 / 19. 2nd cycle of major maintenance is completed in FY 25. The table below shows the major / periodic maintenance cycle throughout the balance concession period for the Project Road. As per Concession Agreement, periodic maintenance shall be carried out in the last year of concession period. Accordingly, major maintenance is proposed in FY 2031 for the entire length. Before carrying out major maintenance, structural evaluation shall be done through surveys and investigation to determine the overlay requirement.

Table 4-6 Major Maintenance Cycle

Sr. No.	Year	Main Carriageway	Service Road
1	FY 2026 to FY2028	-	-
2	FY 2029	30 mm BC (PMB) overlay in 68%, 40 mm BC (PMB) overlay in 32%, and 50 mm DBM (VG-40) overlay in 10% length	30 mm BC (VG-30) overlay in 50% and Micro-surfacing in 50% length
3	FY 2030	-	-
4	FY 2031	30 mm BC (VG-40) overlay for entire length, 50 mm DBM (VG-40) overlay in 5% length	30 mm BC (VG-30) overlay in 50% and Micro-surfacing in 50% length.

The projected cost for periodic / major maintenance is presented in the subsequent chapter.

5 COST ESTIMATES

5.1 General

Based on the assessment carried out in previous chapters, various costs were worked out. The costs are divided into following categories:

I. Balance Works Cost
II. Routine O&M Cost
III. Major Maintenance Cost
IV. Periodic Replacement of TMS system

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and escalation.

5.2 Rate Assumption

Following assumptions are considered for unit rates of various items while estimating the cost:

1. Unit rates of different items (BC, DBM, concrete etc.) are calculated as per the MoRTH Standard Data Book 2019. The input rates for MoRTH standard data book were adopted as below:

a. Manpower and labour: As per applicable minimum wages published by Ministry of Labour & Employment, Government of India.

b. Bitumen: The Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. Same discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.

Therefore, bitumen prices are considered as per the forecast of Client. Current published of bitumen are considered for unit rates calculation for FY 2027. Average 10 years of price of bitumen are considered for unit rates calculation for FY 2028 and onwards, since bitumen prices have been range bound over the last five-six years.

Rate of Polymer content and modification cost were provided by the client to work out BC rate with PMB.

Following rates of bitumen are considered:

Table 5-1 Bitumen Rates - Ex-MI Supply excluding discount and GST

Sr. No.	Supply Location	Applicability of Rates	Product	Current Published Price (16th Feb 26)	Long term price (Avg. last 10 years)
1	Mathura	All States	VG-10	45,102	35,125
2			VG-30	46,402	36,137
3			VG-40	48,962	38,131
4	Panipat	All States	VG-10	45,102	35,125
5			VG-30	46,402	36,137
6			VG-40	48,962	38,131

Sr. No.	Supply Location	Applicability of Rates	Product	Current Published Price (16th Feb 26)	Long term price (Avg. last 10 years)
7	Koyali	All States	VG-10	47,102	37,125
8			VG-30	48,402	38,137
9			VG-40	51,082	40,251
10	Haldia	All States	VG-10	46,602	35,683
11			VG-30	47,402	36,295
12			VG-40	49,962	38,256
13	Barauni	All States	VG-10	47,132	36,213
14			VG-30	48,432	37,325
15			VG-40	50,992	39,286
16	CPCL	Kerala	VG-10	47,402	35,519
17			VG-30	48,402	36,395
18			VG-40	50,762	38,120
19	CPCL	Tamil Nadu	VG-10	47,902	36,019
20			VG-30	48,402	36,395
21			VG-40	50,962	38,320
22	CPCL	Telangana and Andhra Pradesh	VG-10	44,602	32,719
23			VG-30	45,402	33,395
24			VG-40	47,962	35,320
25	CPCL	Karnataka	VG-10	44,602	32,719
26			VG-30	45,402	33,395
27			VG-40	47,962	35,320

c. **Sand and Aggregate:** Market rates are considered from the quarry located nearest to Project Road.

d. **Cement:** Market rates are considered from the nearest local market.

e. **Steel :** Rate of steel is taken from SAIL.

f. **Machinery Hire charges:** Hire charges for the machinery are considered in accordance with applicable PWD SOR.

g. **Actual Rates of items as per work order:** The rates of road marking, road stud, kerb raising, micro surfacing, milling, aggregate rates etc. are considered as per the work order shared by the client.

2. Goods and Service Tax (GST) is considered as 18% as per the latest Government Guidelines.

Summary of Unit Rates worked out using Standard Data Book adopted for major items is given below.

Table 5-2 Summary of Unit Rates

Sr. No.	Item Description	Unit	Rates (FY 28 onwards)
1	Dense Bituminous Macadam (PMB)	Cum	10,302
2	Dense Bituminous Macadam (VG-40)	Cum	8,298
3	Bituminous Concrete (PMB)	Cum	11,989
4	Bituminous Concrete (VG-40)	Cum	9,488
5	Bituminous Concrete (VG-30)	Cum	9,175

Sr. No.	Item Description	Unit	Rates (FY 28 onwards)
6	Milling	Sqm	75
7	Micro-surfacing	Sqm	150
8	Kerb Re-laying	Rmt	270
9	Road Marking-On BC Surface	Sqm	423
10	Road Marking-On Micro-Surface	Sqm	526
11	Road Studs	Nos.	170

5.3 Balance Work Cost

As discussed in the previous chapter, there are no balance works to be executed as per CA. Hence, the balanced work cost is **NIL**.

5.4 Routine O&M Cost

Routine O&M cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance, and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area. Same has been divided into following major heads:

1. Salary and Welfare Expenses
2. Tolling Operations Services
3. Toll Security Services
4. Incident Management & Emergency Services
5. Electricity and Diesel Charges
6. TMS/HTMS/System Expenses
7. Office Operating Expenses
8. Vehicle Running Expenses
9. Professional Fees Expense
10. Community Development
11. Communication Expenses
12. Conveyance Expenses
13. Insurance Expense
14. IE Fees
15. Routine Maintenance Cost (Project Highway)
16. Horticulture & ROW Maintenance
17. Miscellaneous including Contingency

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Operation Cost is presented as below. The detailed working of routine maintenance (Sr. No. 15 of below table) is presented in **Annexure-I**.

Table 5-3 Summary of Operation Cost

Sr. No.	Particulars	Amount (Rs.) (FY 2027)
1	Salary and Welfare Expenses	1,00,80,000
2	Tolling Operations Services	4,86,79,690
3	Toll Security Services	1,08,18,240
4	Incident Management & Emergency Services	2,12,76,228
5	Electricity and Diesel Charges	32,74,928
6	TMS / System Expenses	27,52,500
7	Office Operating Expenses	17,19,150
8	Vehicle Running Expenses	39,60,000
9	Professional Fees Expense	28,65,250
10	Community Development	8,59,575
11	Communication Expenses	5,15,745
12	Conveyance Expenses	5,73,050
13	Insurance Expense	23,49,505
14	IE Fees	40,11,350
15	Routine Maintenance	3,07,92,878
16	Horticulture & ROW Maintenance	1,64,86,408
17	Miscellaneous including Contingency	45,49,408
	Total Cost (Rs.)	**16,55,63,905**
	Total Cost (Cr.)	**16.56**
	Per km Cost (Lakhs)	**28.89**

5.5 Major Maintenance Cost

The summary of Major Maintenance Cost is provided as below. The detailed working of the same is presented in **Annexure-II**.

Sr. No.	Year	Major Maintenance Cost (Cr.)	Remarks
1	FY 2029	70.75	
2	FY 2031	53.46	
	Total	**124.21**	

5.6 Periodic Replacement of TMS /System

Every 5 years, replacement of cost of major TMS system is considered. The same is provided as below.

Sr. No.	Year	ATMS O&M / Replacement Cost (Cr.)	Remarks
1	FY 2030	0.58	
Total Cost (Cr.)		**0.58**	

5.7 Escalation Assumption

Following escalation has been considered for the O&M cost as provided by Client.

Table 5-4 Escalation

Year	Escalation	Year	Escalation
2027	-	**2042**	3.99%
2028	4.86%	**2043**	3.99%
2029	4.44%	**2044**	3.99%
2030	4.24%	**2045**	3.99%
2031	4.13%	**2046**	3.99%
2032	4.08%	**2047**	3.99%
2033	4.01%	**2048**	3.99%
2034	4.00%	**2049**	3.99%
2035	4.03%	**2050**	3.99%
2036	4.01%	**2051**	3.99%
2037	3.98%	**2052**	3.99%
2038	3.98%	**2053**	3.99%
2039	4.00%	**2054**	3.99%
2040	3.99%	**2055**	3.99%
2041	3.99%	**2056**	3.99%

5.8 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summarised yearly for remaining concession period along with escalation as mentioned in clause 5.7.

Escalated O&M Cost (in INR Cr.)

	Year of expense	FY27	FY28	FY29	FY30	FY31
1	Routine O&M Cost					
1.01	Salary and Welfare Expense	1.01	1.06	1.10	1.15	1.20
1.02	Tolling Operations Services	4.87	5.10	5.33	5.56	5.79
1.03	Toll Security Services	1.08	1.13	1.18	1.24	1.29
1.04	Incident Management Services	2.13	2.23	2.33	2.43	2.53
1.05	Electricity and Diesel Charges	0.33	0.34	0.36	0.37	0.39
1.06	TMS/HTMS/System Expenses	0.28	0.29	0.30	0.31	0.33
1.07	Office Operating Expenses	0.17	0.18	0.19	0.20	0.20
1.08	Vehicle Running Expenses	0.40	0.42	0.43	0.45	0.47
1.09	Professional Fees Expense	0.29	0.30	0.31	0.33	0.34
1.10	Community Development	0.09	0.09	0.09	0.10	0.10
1.11	Communication Expenses	0.05	0.05	0.06	0.06	0.06
1.12	Conveyance Expenses	0.06	0.06	0.06	0.07	0.07
1.13	Insurance Expense	0.23	0.25	0.26	0.27	0.28
1.14	IE Fees	0.40	0.42	0.44	0.46	0.48
1.15	Routine Maintenance Cost	3.08	3.23	3.37	3.52	3.66
1.16	Horticulture & ROW Maintenance	1.65	1.73	1.81	1.88	1.96
1.17	Miscellaneous and Contingency	0.45	0.48	0.50	0.52	0.54
	Subtotal of O&M Cost	16.56	17.36	18.13	18.90	19.68
2	Major Maintenance Cost			77.48		59.97
3	Periodic Cost of TMS Replacement	-	-	-	0.66	
	Total Cost	**16.56**	**17.36**	**95.61**	**19.56**	**79.65**

ANNEXURES

ANNEXURE I - ROUTINE MAINTENANCE COST

Routine Maintenance Cost	
Ordinary Repair Cost for Flexible (with GST)	**3,07,92,878**
(Inclusive of GST)	**= 5.37 lakhs per km**

CONVERSION FACTORS									
National Highways / State Highways									
Reference cost taken for Two / four lane (7.0 or 14m or 21m) with 1.5m wide shoulders									
(Refer Chapter 6.17 of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 45)									
Sr. No.	**Description for Flexible Pavement**		**Factor**	**Normal** More than 4500 CVD	**Urban** More than 4500 CVD	**Project Length (km)**		**Per Year Project Maintenance Cost**	
				2,98,907	**3,36,566**	**Normal**	**Urban**	**Normal**	**Urban**
1	Four-lane with divided carriageway	Without paved shoulder	1.53	457328.00	514946.00	-	-	-	-
		Paved shoulder	1.70	508143.00	572163.00	50.10	-	2,54,57,964	-
2	Four-lane with divided carriageway and service lane on either side	Without paved shoulder	2.00	597815.00	673132.00	-	-	-	-
		Paved shoulder	2.20	657596.00	740446.00	-	7.21	-	53,34,913
					TOTAL	**57.305**		**3,07,92,878**	

Ordinary Repairs

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year (Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity**
				More than 4500 CVD
				BT Surface
1	**2**	**3**	**4**	**5**
1	**Maintenance of Carriageway & Paved Shoulders (1.5m wide); B.T. Surface**			
	i) Potholes repair (50 mm deep)	100 % Pothole free	As & when required	1.0%
	Volume (cum)			5.00
	Rs/m^3			12685
	Cost in Rupees			63,425
	ii) Patch repair	100 % Patch less	As & when required	1%
	Area (sqm)			100
	Rs/m^2			507
	Cost in Rupees			50,740
	iii) Sealing (Crack)			
	a) Wider than 3 mm	100 % Crack Less	As & when required	2.5%
	Area (sqm)			250
	Rs/m^2			109
	Cost in Rupees			27,140
	b) Width less than 3 mm	75 % Crack Less	As & when required	2.00%
	Area (sqm)			150
	Rs/m^2			89
	Cost in Rupees			13,275
	iv) Repair of ruts and undulations			
	a) Greater than 20 mm	75%	As & when required	1.50%
	Area (sqm)			112.5
	Rs/m^2			507
	Cost in Rupees			57,083

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity** **More than 4500 CVD** **BT Surface**
1	**2**	**3**	**4**	**5**
	v) Road marking	14%	Once in 7th year & @ Repaired location	23402
	SUB TOTAL			**2,35,065**
2	**Maintenance of earthen Shoulders:**			
	i) Renewal of earthen shoulders	80%	Once in a Year	6306
	ii) Kuccha Drain Maintenance	100%	Twice in a Year	1108
	SUB TOTAL			**7,414**
3	**Maintenance of Cross Drainage works:**			
	i) Repair of floors	100%	Once in a Year	5055
	ii) Repair of parapets	100%	As & when required	2106
	SUB TOTAL			**7,161**
4	**Maintenance of Minor & Major Bridges:**			
	i) Spot painting & protective Coating required on Bearing and greasing of Bearings, railing, structural members, Expansion joints	100%	As & when required	36,950
	ii) Repair of minor washouts, erosion scour and animal holes			
	iii) Sealing Cracks with Cement/ Epoxy Mortar			
	iv) Replacement & Correction of safety barriers, Guard rails and damaged members			
	SUB TOTAL			**36,950**
5	**Miscellaneous Items:**			
	i) Lettering, Painting of Km stones & kerbs, sign boards, hectometre stone etc.		Once in a Year	3695
	ii) Replacement and providing additional retro reflective signage	20%	Covering Total Network in 4-5 Years	7390
	iii) Providing first aid kits, Umbrella, Safety Jackets, Vardi etc.		Once in a Year	1232

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year

1 INTRODUCTION

1.1 Background

Cube Highways Fund Advisors Pvt. Ltd. (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InvIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an Infrastructure Investment Trust under the SEBI InVIT Regulations. Cube Highways Fund Advisors Pvt. Ltd. has appointed **M/s. FP Project Management Consultancy Services Private Limited** (hereinafter referred as "Technical Consultant" or "FPPM") to carry out Technical Due Diligence of Mangloor - Telangana / Maharashtra border section of NH-161 from km. 86+788 to km. 135+751 in the State of Telangana (hereinafter referred as "Project Road").

M/s. DBL Mangloor Highways Pvt. Limited (hereafter known as M/s. Mangloor Highways Pvt. Ltd.) vide COI dated 02.12.2022 (hereinafter referred as "Concessionaire") is a special purpose vehicle (SPV) for operation, maintenance, and transfer of Mangloor to Telangana / Maharashtra border section (Design Chainage from km. 86+788 to km. 135+751) of NH-161 or Project Road under Hybrid Annuity basis. The project was awarded to Concessionaire **M/s**. **DBL Mangloor Highways Pvt. Limited**., a company promoted and incorporated by M/s. Dilip Buildcon Ltd. on 09.05.2018 (Including construction period) by National Highway Authority of India (NHAI). Cube Highway group is a shareholder in the Concessionaire company. The length of project as per CA is 48.963 kms with one toll plaza at Dharmaram at km. 96+073.

Accordingly, the Technical Consultant has undertaken the work of assessment of operation and maintenance (O&M) cost based on site inspections and field investigations. The same is presented in this report.

1.2 Scope of Work

The detailed scope of work for conducting the technical due diligence of Project Road is presented as below:

- A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets
- Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, As-built drawings, O&M manual, COD / PCOD certificate, punch list, previous major maintenance etc.,
- Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, axle load, material investigations etc.,
- Formulation of future major maintenance strategy
- Estimation of any initial expenses to be incurred due to deficiencies observed in diligence
- Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period
- Estimation of Annual Operation expenses along with Systems cost (TMS / ATMS) till the end of concession period
- Review of balance work cost for Project Road including estimation of quantities and item rates

1.3 Our Approach Philosophy

1.3.1 Composition of Team

Our proposed team consists of well-qualified Engineers and other professionals, whose experience covers all the skills and specializations required for undertaking such assignments. All the team personnel proposed are our regular employees and have a long and stable working relationship with our firm.

The Team Leader will coordinate the activities between all the key staff who will work closely together. The key is assisted by various support staff, who report to the respective key staff in their field of expertise. The Team Leader will act as the point of contact for Client Technical Study.

The technical study include review of all the available documents namely:

a) Concession Agreement including Technical Schedules
b) O&M Contract, work order and their provisions
c) Quality of construction based on available data, design, and drawings.
d) Documents on historical expenditure on operation and maintenance
e) O&M cost schedule for the concession period
f) Review of Completion / Provisional Completion along with punch list items
g) Review of recent pavement surveys conducted.
h) Correspondence regarding scope of works and during O&M
i) Recent O&M Report submitted to Authority.
j) Toll operation manual / ATMS related documents

The review of above documents is the first step towards accomplishment of the task. This gives a complete idea of the project and is used as input data for preparation of report after necessary analysis.

1.3.2 Site Visit and Data Collection

A team of experts from various streams has carried out the preliminary site visit to understand the assessment of project assets mainly condition of the pavement and structures.

- The site visit is undertaken for detailed reconnaissance and visual pavement condition assessment.
- The condition assessment of major structures by visual inspection
- The information like material sources and the probable cost is collected for the purpose of cost estimate.

The detailed design / drawings viz. Plan & L-sections, drainage design, structure design, layout drawings for project facilities like toll plaza, bus bay, truck lay-byes, highway lighting facilities etc. are studied. Also, design / drawing and provision pertaining to road furniture are studied.

The information on availability of material in the vicinity is gathered. It has direct impact on cost of maintenance work and balance work.

The basic approach for preparation of cost estimates for operation and maintenance is as per the practice of State PWD / MORT&H in respect of highways and structures.

1.3.3 Data Analysis

Based on the study of the available information and preliminary site visits, the consultants share their preliminary observations with the Client based on the evaluation of the technical data and reports provided by the Client.

1.4 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Company. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyze the same as per the best engineering / industry practices.

The site visit and inspection were carried out between the periods from **09th March 2026** to **10th March 2026**.

The report is organized with the following chapters for easy understanding of various issues.

Chapter 1 **Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for due diligence studies**.**

Chapter 2 **Project Description:** The chapter describes existing project features, and an overview of project development.

Chapter 3 **Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on site visit**.**

Chapter 4 **Pavement Investigation and Assessment:** This chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance.

Chapter 5 **Cost Estimates:** This chapter summarizes the forecast for O&M and major maintenance costs over the remaining concession period.

2 PROJECT DESCRIPTION

2.1 Introduction

National Highways Authority of India signed the Concession Agreement with **M/s. DBL Mangloor Highways Pvt. Limited** (hereafter known as M/s. Mangloor Highways Pvt. Ltd.) is a company promoted by Cube Highway group. The Appointment Date of the project was 12th April 2019. The concession period of the project is 17 years including construction period. The project has received PCOD on 15th December 2021 for the length 47.412 kms out of 48.963 kms. However, presently all work has been completed, and IE has drafted work completion letter to NHAI vide their letter no. MSV/IE(O&M)/PKG II&III/2025/GJW/PIU/504 Dated 05.02.2025 which is under review at NHAI end. Cube Highway group is a shareholder in the Concessionaire company.

2.2 Location

The Project Road is part of National Highway No. 161, of Mangloor - Telangana/ Maharashtra border section in the state of Telangana. The total project length is 48.963 kms as per CA.

The Location Map of the Project Road is presented below:

Figure 2-1 Location Map

Figure 2-2 Start / End of the Project Road (LHS)

Start of the Project Road

End of the Project Road

Figure 2-3 Start / End of Project Road (RHS)

Start of the Project Road

End of the Project Road

2.3 Climate

The climate of the region is marked by heavy rainfall with high humidity in the hot season. The Indian Meteorological Department (IMD) has identified the following four seasons in the region.

Sr. No.	Weather	Month
1	Summer	February to May
2	Monsoon	June to September
3	Post Monsoon	October
4	Winter	November to February
5	Maximum Temperature	38 ^{0}C
6	Minimum Temperature	18 ^{0}C
7	Average annual rainfall	910 mm

2.4 Terrain

The Project Road passes through plain to rolling terrain.

2.5 Abutting Land Use

The following are the various developments that are anticipated in the Four Lanning of Mangloor Telangana / Maharashtra border Section.

- Agriculture is the predominant land use along the Project Road.

- This road reduces the travel time for getting access to Hyderabad, Nanded Sahib, Akola, Nagpur and Shegaon which results in better industrial growth and economy.
- The tourism industry gets a great booster as majority of people using this road, for going to places like Nanded Sahib & Shegaon, a group of temples & Gurudwara etc.,

A lot of commercial establishments along the Project Road in the form of hotels and Snack Parlors may be developed in the coming future.

2.6 Right of Way

The width of the existing Right of Way (ROW) for the Project Road varies from 30.0 m to 60.0 m / 180.0 m.

2.7 Existing Utilities

During widening of the Project Road, various affected utility services were shifted to proposed ROW and presently no utility shifting is balance at site. The different types of utilities found along the road include, electrical poles, telephone poles, OFC Cables, etc.

2.8 Development as per Schedule-B

The Project Road from Mangloor to Telangana / Maharashtra border (km. 86+788 to km. 135+751) has been developed as a four-lane divided carriageway with median width varies from 4.0 m to 12.0 m, service road and other arrangements. The Project Road passes through rural as well as built-up sections.

As per Article 2 of Concession Agreement, the scope of project defined in Schedule-A and Schedule-B, (the **"Scope of the Project"**) shall mean and include, during the Concession Period:

a) Construction of the project on the Site set forth in Schedule-A and as specified in Schedule-B together with provision of project facilities as specified in Schedule-C and in conformity with the Specification and Standards set forth in Schedule-D.
b) Operation and maintenance of the Project in accordance with the provisions of this Agreement.
c) performance and fulfilment of all other obligations of the Concessionaire in accordance with the provisions of this Agreement and matters incidental thereto or necessary for the performance of any or all the obligations of the Concessionaire under this Agreement.

2.9 Bypass and Realignment

There are four Bypass on Project Road. The total length of Bypass is 10.63 kms. Apart from these bypasses, there are four realignments in the Project Road. The bypass constructed along the Project Road as well as realignment is as tabulated below.

Table 2-1 Details of Bypass

Sr. No.	Name of Bypass	Design Chainage (km)		Length (km)
		From	To	
1	Pitlam	89+00	91+300	2.30
2	Pedda Kodapgal	99+350	101+640	2.29
3	Mainur	125+150	126+600	1.45
4	Madnoor	128+710	133+300	4.59
			Total	**10.63**

Table 2-2 Details of Realignment

Sr. No.	Existing Chainage (km)		Design Chainage (km)		Length (km)

3 CONDITION ASSESSMENT OF PROJECT ROAD

3.1 Pavement

The Project Road is four lane divided carriageway and generally has paved carriageway of 8.5 m with earthen shoulder of 1.75 to 2.00 meter on either side. The Project Road has median width varies from 4.0 m to 12.0 m.

The entire stretch of Project Road including service road is constructed with flexible pavement. The pavement type for the Toll Plaza including taper is rigid pavement.

3.1.1 Pavement Condition Survey

Pavement condition survey was carried out from **09th March 2026 to 10th March 2026** through visual inspection for the entire project length. From the visual inspection, it is found that the average pavement condition of the Project Road is Good. The summary of pavement condition survey is presented as below.

Rating	Main carriageway	
	LHS	RHS
Fair/Good	100.00 %	100.00 %
Total	**100.00 %**	**100.00 %**

Some of the photographs taken during the site visit are presented as below.

3.2 Service Road

a) Existing Service Road

The width of service road is found to be 7.0 m and it is constructed in built-up area and adjoining underpasses and flyover locations. The scope of service road as per CA is 9.90 kms as well as slip road is 27.010 kms. However, 1.55 kms of service road has de-scoped by NHAI due to non-availability of ROW. The details of service road are presented as below.

Table 3-1 Details of Service Road

Sr. No.	Design Chainage (km)		Length (km)		Width (m)	Side	Remarks

3.4 Condition Survey of Structure

The inventory of structures including Major Bridges, Minor Bridges, ROB's, Underpasses and Culverts is presented in table as below:

Table 3-3 Summary of Structures

Type of Structure	Total Number of Structures
Major Structures:	
Road Over Bridge (ROB)	-
Flyover	-
Major Bridges (MJB)	01
Minor Bridges (MNB)	09 + 01 (COS)
Vehicular Underpass (VUP)	08 + 01 (COS)
Pedestrian Underpass (PUP/LVUP)	04
Culverts:	
Reconstruction of Box / Slab Culverts	11
Reconstruction of Pipe to Box Culvert	32
New Construction of Box Culvert	45 + 6 (COS)

The detailed condition survey of structures was carried out by visual inspection. The observations and findings are presented in table below:

Table 3-4 Condition Survey of Major Structure

Major Bridge

Sr. No.	Chainage (km)	Side	Span Arrangement (m)	Carriageway Width (m)	Type of Sub-structure	Type of Super-structure	Type of foundation	Remarks
1	108+762	LHS	4 span - 81.88 M length	1 x 16	RCC	RCC Voided Slab	-	Re-Construction - Structure is in sound condition. Expansion Joint, crash barrier and slope protection are in good condition.
		RHS	4 span - 81.88 M length	1 x 16	RCC	Solid slab	-	Re-Construction - Structure is in sound condition. Expansion Joint, crash barrier and slope protection are in good condition.

Minor Bridge

Sr. No.	Design Chainage (km)	Structural Configuration	Structure Type	Span Arrangement (No. x Length)	Total Structure Width (m)	Remarks
1	100+034	New 4-Lane bridge on LHS and RHS	Precast PSC Girder	One Span - Length-38.70m	LHS-14.5m RHS-14.5m	New Bridge - RCC Substructure with Precast PSC Girder Super Structure and Structure is in sound condition. In Bridge opening soil needs to be cleared which is under the Bridge.
2	111+104	New 6-Lane bridge	Box type	Two Span -Total Length-14.23m	LHS-16.0m RHS-16.0m	Re-Construction - RCC box type - Structure is in sound condition. As informed, vegetation is being cleaned on regular basis.
3	117+441	New 6-Lane bridge	Box type	Four Span -Total Length-34.04 m	LHS-16.0m RHS-16.0m	Re-Construction - RCC box type - Structure is in sound condition. As informed, vegetation is being cleaned on regular basis.
4	117+664	New 6-Lane bridge	Box type	Four Span -Total Length-47.20 m	LHS-16.0m RHS-16.0m	Re-Construction - RCC box type - Structure is in sound condition. As informed, vegetation is being cleaned on regular basis.
5	119+950	New 6-Lane bridge	Box type	Four Span -Total Length-34.04 m	LHS-16.0m RHS-16.0m	Re-Construction - RCC box type - Structure is in sound condition. Slope protection is in good condition.

Sr. No.	Design Chainage (km)	Structural Configuration	Structure Type	Span Arrangement (No. x Length)	Total Structure Width (m)	Remarks

3.5 Condition Survey of Culverts

The cross-drainage structures include reconstruction and new construction of box culverts at various locations. There are total 94 Nos. of culverts in which 11 Nos. of reconstruction of box culverts, 32 Nos. of reconstruction of pipe to box culverts, 45 Nos. of new construction of box culverts, and 06 Nos. box culverts (constructed under Change of Scope) along the Project Road. The height of culvert varies from 1.0 m to 3.0 m from bed level. During the condition survey of structure, these culverts were inspected on sample basis.

The project involves strengthening and widening of existing road to four lane divided carriageway with service road on both side and construction of new four lane carriageway at proposed bypass location. The culverts beneath existing alignment are either widened or reconstructed. The structural condition of culverts is generally found in sound condition. The quality of surface concrete of box culverts and slab culverts is found to be satisfactory. The RCC parapet, metal beam crash barrier or RCC railing has been provided at culvert locations which is maintained properly.

Vegetation growth and accumulation of debris at waterway is being removed and cleaned by the Concessionaire on regular basis.

12	Way side Amenities	Nos.	2

3.9 Pavement Marking

Pavement marking for the Project Road is done as per the design standards indicated in Schedule-D. Pavement marking is maintained by the Concessionaire.

Some of the photographs of road marking are presented below:

Figure 3-11 Photographs of Pavement Marking

km. 88+200-LHS

km. 89+00-LHS

km. 116+600-RHS

Traffic Signage / Median Kerb painting / KM Stone

Traffic signs include roadside signs, overhead signs, kerb mounted signs and median signs along the Project Road & Kilometre stone etc, the design for the traffic signs along the Project Road is done as per the design standards indicated in Schedule-D.

The height, lateral clearance, location, and installation are as per relevant clauses of Schedule 'D'. Overhead sign has been installed ahead of major intersections, toll plazas, start / end of Project Road and urban areas as per detailed design requirements.

Kilometre stones, vertical post of sign boards, chevron boards & Median kerb paint are generally in good condition except few locations.

Some of the photographs of sign boards are presented below.

3.11 Highway Lighting / Solar Blinker

Highway Lighting is provided at underpasses, flyovers, toll plaza, truck lay byes, passenger shelters, major and minor junctions, and built-up locations. High mast lighting is provided at toll plaza.

At underpass and flyover locations, highway lighting is provided at the structure locations and at its approaches.

Solar amber blinker signals are provided at median opening and service road, junctions and bus stop locations. These lights are properly maintained and are in good working condition. Some of the photographs of highway lightings are presented below.

3.19 Advance Traffic Management System (ATMS)

Advance Traffic Management System (ATMS) installed for the project road is controlled by the ATMS center near the toll plaza location (km. 96+035). As per Concession agreement ATMS shall conform to ATMS Policy Guidelines (2016) which comprises of the following:

- Automatic Traffic Counter cum Classifier (ATCC)
- Mobile Radio communication system
- Emergency Call Box
- Meteorological Data system
- Variable Message Signboards (VMS)
- CCTV system
- Video Incident Detection System (VIDS)

Status of these systems at site are described below:

3.19.1 Automatic Traffic Counter cum classifier (ATCC)

Automatic Traffic Counter cum Classifiers (ATCC) is installed at km. 95+930.

ATCC

3.19.2 Emergency Call Boxes (ECB)

Emergency Call Boxes are installed along the project length, and all are functional. The same are maintained by the Concessionaire.

km. 93+200

km. 97+400

km. 134+850

3.19.3 MET System

Meteorological sensors comprise of sensors to measure the atmospheric temperature, humidity, pavement surface temperature, visibility and equipment for measuring wind speed and direction and installed at km. 96+035 at Toll Plaza office building in Dharmaram village.

MET

3.19.4 Variable Message Signboards (VMS)

Variable message sign boards are installed in the Project Road. These display specific messages to the users based on the prevailing conditions on the Project Road. The message can be changed at any point of time from the ATMS centre. About 250 customised messages can be stored on the system.

km. 88+250 LHS km. 128+00 RHS

3.19.5 CCTV Surveillance Cameras

Surveillance Cameras are installed along the Project Road which are monitored through the ATMS control room.

Control Room for ATMS at TP

km. 121+350-RHS

3.24 Wayside Amenities

There are two no. of Wayside Amenities (BHS) along the Project Road. Presently, all the which was in the scope of Concessionaire has been completed. The operation of the same is being done by NHAI through external vendors. Some of the photographs are presented below.

Table 3-8 Details of wayside Amenities

Sr. No.	Description	Quantity (Nos.)	Chainage (km)	Side
1	Wayside Amenities	02	113+207	BHS

Figure 3-29 Photograph of Wayside Amenities

km. 113+200-LHS

km. 113+200-RHS

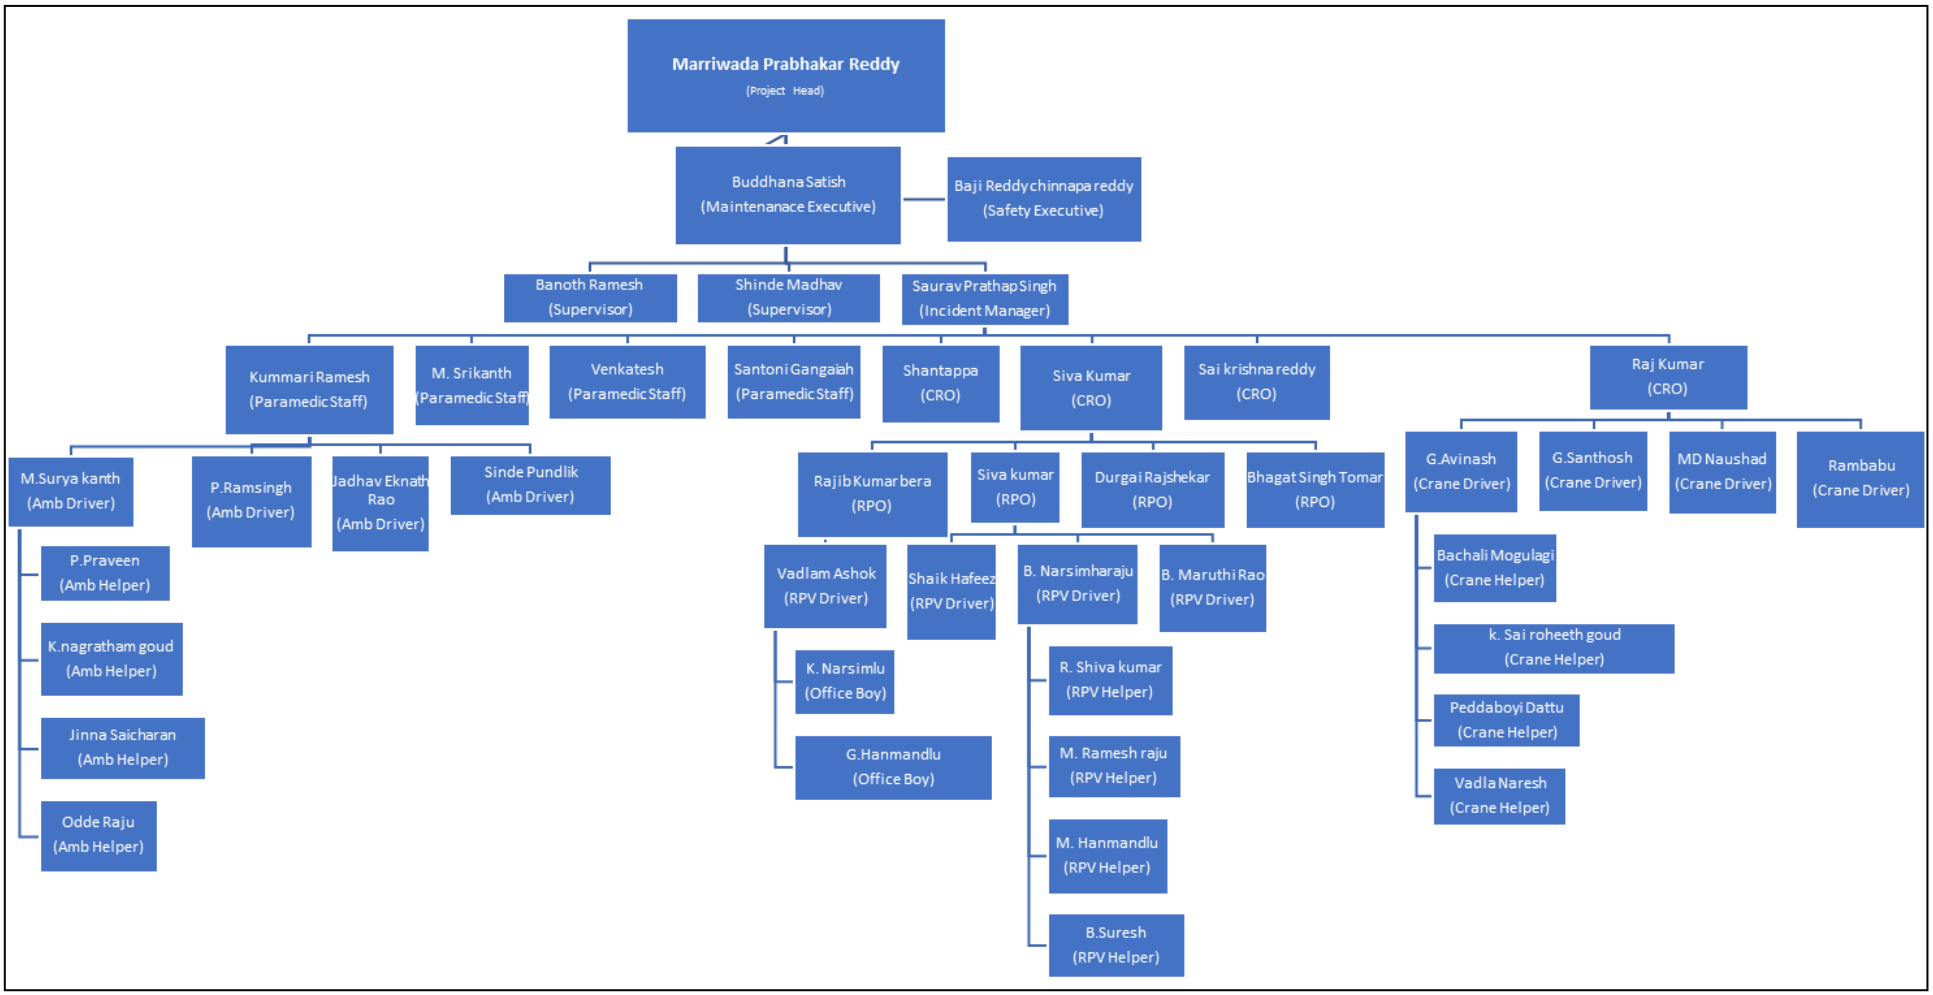
3.25 Balance Work Status

Presently, all work has been completed. IE has issued the completion certificate effecting from 27th October 2025 vide their letter no. MSV/IE (O&M)/Pkg-II&III/2025/MHPL/1005 Dated 10.12.2025.

3.26 Organization Chart

The Concessionaire has prepared the Organization Chart to maintain the site during Operation and maintenance. The same is presented below.

Organization Chart



3.27 Operation

Operation cost is comprised of manpower cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, and other miscellaneous expenses. As the Project is in Annuity mode, the Toll Operation is not in the Scope of Concessionaire. The Concessionaire has provided the expenses occurred towards operation expenses for past years. Necessary assumptions have been made from the expenses of similar types of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area.

The Operation Cost is presented in the subsequent chapter.

3.28 Routine Maintenance

The Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey.

Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Maintenance Cost is presented in the subsequent chapter.

4 PAVEMENT INVESTIGATION AND ASSESSMENT

4.1 General

The project is currently under the Operation and Maintenance stage. The concession period of the project is 17 years from the Appointed / Commencement Date (i.e., 12th April 2019) including construction period of 2 years (730 days).

The project has received Completion Certificate on 27th October 2025.

4.2 Axle Load and VDF

The Concessionaire has conducted the Axle Load Survey on Project Road at km. 96+050 from 21st July 2021 to 22nd July 2021. The summary of Vehicle Damage Factor (VDF) calculated as provided by the Concessionaire is tabulated below.

Table 4-1 Vehicle Damage Factor

Sr. No.	Vehicle Type	Direction	
		LHS (Mangloor-MH border)	RHS (MH border -Mangloor)
1	BUS	0.861	0.951
2	LCV	0.714	0.929
3	2-Axle	3.253	2.968
4	3-Axle	6.127	7.464
5	MAV	9.204	10.958

4.3 Design Traffic

Traffic in Million Standard Axles (MSA) for the homogeneous section based on the historical traffic data provided by the Concessionaire, current traffic has been used for future projections and the estimated design MSA is computed and presented in subsequent table.

For the estimation of design MSA, Actual Traffic Growth Rates as provided by the Concessionaire were used.

Table 4-2 MSA Calculation

MSA Calculations MHPL Project									
Year	4 Lane				6 Lane				Remarks
	MSA (LHS)	Cumulative MSA (LHS)	MSA (RHS)	Cumulative MSA (RHS)	MSA (LHS)	Cumulative MSA (LHS)	MSA (RHS)	Cumulative MSA (RHS)	
2025-26	-	**-**	-	**-**	-	**-**	-	**-**	
2026-27	1.49	**1.49**	1.76	**1.76**	1.20	**1.20**	1.41	**1.41**	
2027-28	1.57	**3.06**	1.85	**3.61**	1.25	**2.45**	1.48	**2.89**	
2028-29	1.65	**4.71**	1.94	**5.55**	1.32	**3.77**	1.55	**4.44**	1st MM cycle
2029-30	1.73	**6.44**	2.04	**7.59**	1.38	**5.15**	1.63	**6.07**	
2030-31	1.81	**8.25**	2.14	**9.73**	1.45	**6.60**	1.71	**7.78**	
2031-32	1.91	**10.16**	2.24	**11.97**	1.52	**8.12**	1.80	**9.58**	
2032-33	2.00	**12.16**	2.36	**14.33**	1.60	**9.72**	1.89	**11.47**	
2033-34	2.10	**14.26**	2.47	**16.80**	1.68	**11.40**	1.98	**13.45**	
2034-35	2.21	**16.47**	2.60	**19.40**	1.76	**13.16**	2.08	**15.53**	
2035-36	2.32	**18.79**	2.73	**22.13**	1.85	**15.01**	2.18	**17.71**	2nd MM cycle

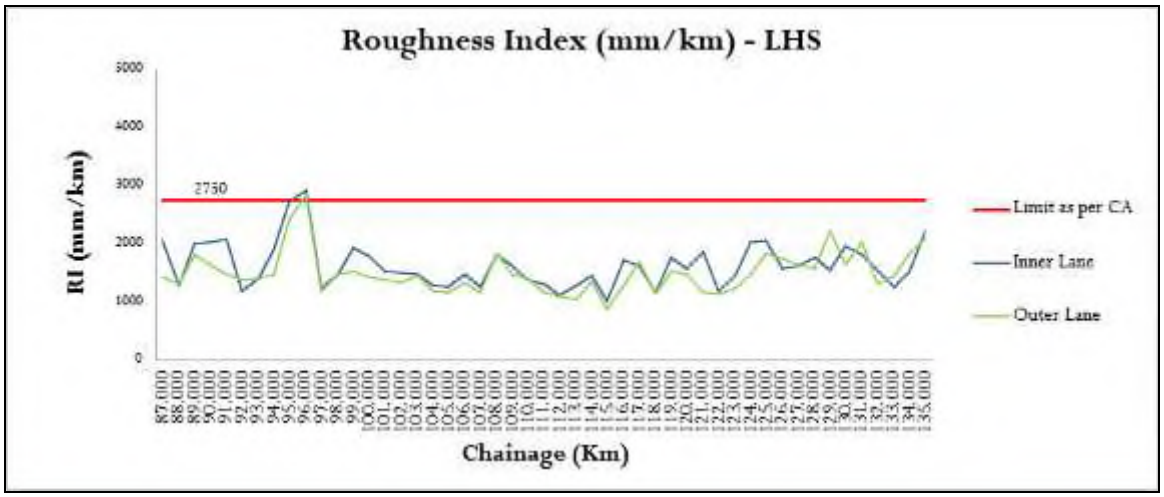
MSA Calculations MHPL Project									
Year	4 Lane				6 Lane				Remarks
	MSA (LHS)	Cumulative MSA (LHS)	MSA (RHS)	Cumulative MSA (RHS)	MSA (LHS)	Cumulative MSA (LHS)	MSA (RHS)	Cumulative MSA (RHS)	
2036-37	2.43	**21.22**	2.87	**25.00**	1.95	**16.96**	2.29	**20.00**	

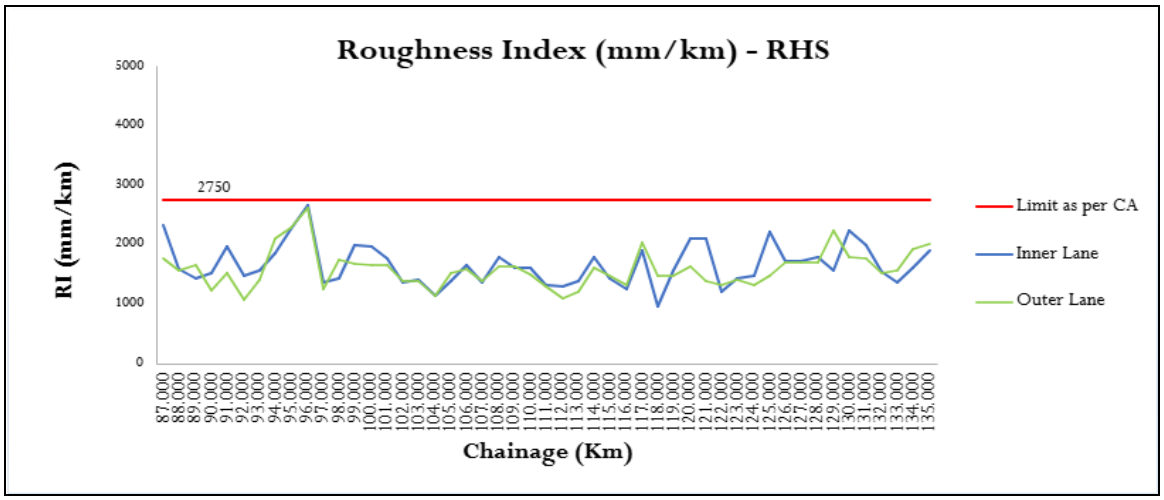
4.4 Network Survey Vehicles (NSV) Survey

The Concessionaire has provided NSV survey data conducted in May 2024. The NSV data is used to assess the riding quality and pavement condition of project road. The summary of Roughness Index is given in table below:

Table 4-3 Roughness Index Summary

Sr. No.	Rating	Roughness Value as per CA limit	Length (km)			
			LHS		RHS	
			Inner Lane	Outer Lane	Inner Lane	Outer Lane
1	Good - Fair	<2750	47.70	47.70	48.70	48.70
2	Poor	>2750	1.00	1.00	-	-





The summary of Rutting of the Project is given in the table below:

Rut Depth (mm)	Length of the Road Effected with Rutting (km)			
	LHS		RHS	
	Inner Lane	Outer Lane	Inner Lane	Outer Lane
<5	25.75	12.75	43.21	32.21
5-10	22.97	33.99	5.75	16.75
>10	0.00	1.00	0.00	0.00
Total Length	48.72	47.74	48.96	48.96

4.5 Structural Investigation

Falling Weight Deflectometer survey was conducted for flexible pavement by the Concessionaire in October 2025. The summary of the FWD survey report is presented in the table below.

Table 4-4 FWD Summary

Remaining life (MSA)	Length (Km)				Remark
	LHS		RHS		
	Inner Edge	Outer Edge	Inner Edge	Outer Edge	
<10	4.00	4.00	10.75	6.00	
10-20	14.75	16.00	20.00	17.00	
20-30	13.50	13.95	12.20	13.95	
>30	16.20	15.00	6.00	12.00	
Total Length	48.45	48.95	48.95	48.95	

From the above table, it is observed that residual life of the pavement is more than the cumulative design MSA up to FY 2030 i.e., up to the 1st Major Maintenance Cycle except 1 kms on RHS. The periodic maintenance of the Project Road is proposed considering the above results.

4.6 Test pit and Subgrade Investigation

The required data / details are yet to be received from the Concessionaire / Client. The same will be updated after receiving the data from Concessionaire / Client.

4.7 Periodic Maintenance Strategy

Unlike the old Concession Agreements where periodicity and threshold limits were clearly described for the major maintenance, the Concession Agreement of this project does not specify the periodicity or the threshold limits for carrying out the full-length periodic maintenance. Schedule-k of the Concession Agreement specifies the threshold limits and the timeline for carrying out repairs to the distresses during the operation period.

The maintenance thus can be carried out as and when required basis and to the compliance of Schedule-K requirement to maintain the road in serviceable condition. Only improvement in Riding Quality is expected if the roughness value exceeds 2750 mm / km.

The project has received PCOD on 15th December 2021 for the length 47.412 kms out of 48.963 kms. Hence, the major maintenance cycle is adjusted accordingly.

The table below shows the major / periodic maintenance cycle throughout the concession period for the Project Road.

Table 4-5 Major Maintenance Cycle

Sr. No.	Year	Main Carriageway	Service Road
1	FY 2026 to FY 2028	-	-
2	FY 2029	Major maintenance with 35 mm BC (VG-40) (60%) + Micro-surfacing (40%) + Milling & 50 mm DBM (2.5%)	Major Maintenance with Micro-surfacing (100%)
3	FY 2030 to FY 2035	-	-
4	FY 2036	Major maintenance with 35 mm BC (VG-40) (40%) + Micro-surfacing (60%) + Milling & 50 mm DBM (2.5%)	Major Maintenance with Micro-surfacing (100%)

**End of concession period as per Concession Agreement is FY 2037.*

The projected cost for periodic / major maintenance is presented in the subsequent chapter.

5 COST ESTIMATE

5.1 General

Based on the assessment carried out in previous chapters, various costs were worked out. The costs are divided into following categories.

I. Balance Works Cost (CAPEX)
II. Balance Repair / Rectification Works
III. Routine O&M Cost
IV. Major Maintenance Cost
V. Periodic Replacement of TMS / ATMS system

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and escalation.

5.2 Rate Assumption

Following assumptions are considered for unit rates of various items while estimating the cost:

1. Unit rates of different items (BC, DBM, Concrete, Road markings etc.) are calculated as per Government of Telangana Common SoR (Road & Bridge Works) 2024-25. The input rates for SoR were adopted as below:
   a. **Manpower and labour:** As per applicable minimum wages published by Sschedule of Rates, Government of Telangana.
   b. **Bitumen:** Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. Same discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.

   Therefore, bitumen prices are considered as per the forecast of Client. Current published of bitumen are considered for unit rates calculation for FY 2027. Average 10 years of price of bitumen are considered for unit rates calculation for FY 2028 and onwards, since bitumen prices have been range bound over the last five-six years. Following rates of bitumen are considered.

Table 5-1 Bitumen Rates - Ex-MI Supply excluding discount and GST.

Supply Location	Applicability of Rates	Product	Current Published Price (16th Feb 26)	Long term price (Avg last 10 years)
Mathura	All States	VG-10	45,102	35,125
		VG-30	46,402	36,137
		VG-40	48,962	38,131
Panipat	All States	VG-10	45,102	35,125
		VG-30	46,402	36,137
		VG-40	48,962	38,131
Koyali	All States	VG-10	47,102	37,125
		VG-30	48,402	38,137
		VG-40	51,082	40,251
Haldia	All States	VG-10	46,602	35,683
		VG-30	47,402	36,295
		VG-40	49,962	38,256
Barauni	All States	VG-10	47,132	36,213
		VG-30	48,432	37,325
		VG-40	50,992	39,286
CPCL	Kerala	VG-10	47,402	35,519

Supply Location	Applicability of Rates	Product	Current Published Price (16th Feb 26)	Long term price (Avg last 10 years)
		VG-30	48,402	36,395
		VG-40	50,762	38,120
CPCL	Tamil Nadu	VG-10	47,902	36,019
		VG-30	48,402	36,395
		VG-40	50,962	38,320
CPCL	Telangana and Andhra Pradesh	VG-10	44,602	32,719
		VG-30	45,402	33,395
		VG-40	47,962	35,320
CPCL	Karnataka	VG-10	44,602	32,719
		VG-30	45,402	33,395
		VG-40	47,962	35,320

c. **Sand and Aggregate:** Market rates are considered from the quarry located nearest to Project Road.

d. **Cement:** Market rates are considered from the nearest local market.

e. **Steel :** Rate of steel is taken from Market rate.

f. **Machinery Hire charges:** Hire charges for the machinery are considered in accordance with applicable PWD SOR.

g. **Actual Rates of items as per work order:** The rates of road marking, road stud, kerb raising, micro surfacing, milling, aggregate rates etc. are considered as per the work order shared by the client.

2. Goods and Service Tax (GST) is considered as 18% as per the latest Government Guidelines.

Summary of Unit Rates worked out using Standard Data Book / rate as per work order adopted for major items is given below.

Table 5-2 Summary of Unit Rates

Sr. No.	Item Description	Unit	Rates (Rs.)
1	Dense Bituminous Macadam (VG-40)	Cum	8,251
2	Bituminous Concrete (VG-40)	Cum	9,416
3	Bituminous Concrete (VG-30)	Cum	8,927
4	Milling	Sqm	92
5	Micro-surfacing	Sqm	155
6	Kerb Re-laying	Rmt	316
7	Road Marking	Sqm	501
8	Road Studs	Nos.	179

5.3 Balance Works Cost (CAPEX)

As discussed in the previous chapter, the cost of balance works as per CA is found to be **NIL**.

5.4 Routine O&M Cost

Routine O&M cost is comprised of manpower cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and

ROW maintenance, routine maintenance, and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area. Same has been divided into following major heads.

1. Salary and Welfare Expenses
2. Tolling Operations Services (Not in Scope)
3. Incident Management Services
4. Electricity and Diesel Charges
5. HTMS Expenses
6. Office Operating Expenses
7. Vehicle Running Expenses
8. Professional Fees Expense
9. Insurance Expense
10. IE Fees
11. Horticulture & ROW Maintenance
12. Routine Maintenance Cost

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Operation and Maintenance cost (Routine O&M) is presented below. The detailed working of routine maintenance (Sr. No. 15 of below table) is presented in **Annexure-I**.

Table 5-3 Summary of Operation Cost

Sr. No.	Particulars	Amount (FY 2026-37)	Remarks
1	Salary and Welfare Expenses	44,85,000	
2	Tolling Operations Services	-	
3	Toll Security Services	12,22,178	
4	Incident Management & Emergency Services	3,19,70,147	
5	Electricity and Diesel Charges	95,47,813	
6	HTMS Expenses	90,10,507	
7	Office Operating Expenses	23,64,913	
8	Vehicle Running Expenses	48,75,000	
9	Professional Fees Expense	95,72,267	
10	Community Development	15,76,609	
11	Communication Expenses	1,40,769	
12	Conveyance Expenses	2,81,537	
13	Insurance Expense	1,12,70,000	
14	IE Fees	23,36,759	
15	Routine Maintenance Cost (Project Road)	1,60,44,180	
16	Horticulture & ROW Maintenance	1,75,40,897	
17	Miscellaneous including Contingency	35,46,140	

Sr. No.	Particulars	Amount (FY 2026-37)	Remarks
	Total Cost (Rs.)	**12,57,84,715**	
	Total Cost (Cr.)	**12.58**	
	Per km Cost (Lakhs)	25.69	

5.5 Major Maintenance Cost

The summary of Major Maintenance Cost is provided as below. The detailed working of the same is presented in **Annexure-II**.

Table 5-4 Summary of Major Maintenance Cost

Sr. No.	Year	Major Maintenance Cost (Cr)	Remarks
1	FY 2026 - FY 2028	-	
2	FY 2029	49.92	
3	FY 2030 -FY 2035	-	
4	FY 2036	43.56	
5	FY 2037	-	
Total Cost (Cr.)		**93.48**	

5.6 Periodic Replacement of TMS / ATMS System

Every 7 years, replacement cost of major TMS / ATMS system is considered. The same is provided as below.

Sr. No.	Year	HTMS O&M / Replacement Cost (Cr)	Remarks
1	FY 2026 - FY 2028	-	
2	FY 2029	3.94	
3	FY 2030 -FY 2035	-	
4	FY 2036	3.94	
5	FY 2037		
Total Cost (Cr.)		**7.88**	

5.7 Escalation Assumption

The following escalation is considered basis discussions with Client and our internal estimates.

Table 5-5 Escalation

Year	Escalation	Year	Escalation
2027	-	**2043**	3.99%
2028	4.86%	**2044**	3.99%
2029	4.44%	**2045**	3.99%
2030	4.24%	**2046**	3.99%
2031	4.13%	**2047**	3.99%
2032	4.08%	**2048**	3.99%
2033	4.01%	**2049**	3.99%
2034	4.00%	**2050**	3.99%
2035	4.03%	**2051**	3.99%
2036	4.01%	**2052**	3.99%
2037	3.98%	**2053**	3.99%
2038	3.98%	**2054**	3.99%
2039	4.00%	**2055**	3.99%
2040	3.99%	**2056**	3.99%
2041	3.99%	**2057**	3.99%

Year	Escalation	Year	Escalation
2042	3.99%	**2058**	3.99%

5.8 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summaries yearly for remaining concession period along with escalation as mentioned in above clause.

Escalated O&M Cost (in INR Cr.)

Year of expense	FY27	FY28	FY29	FY30	FY31	FY32	FY33	FY34	FY35	FY36	FY37
Routine O&M Cost											
Salary and Welfare Expense	0.45	0.47	0.49	0.51	0.53	0.55	0.58	0.60	0.62	0.65	0.68

1 INTRODUCTION

1.1 Background

Cube Highways Fund Advisors Pvt. Ltd. (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InvIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an Infrastructure Investment Trust under the SEBI InVIT Regulations. Cube Highways Fund Advisors Pvt. Ltd. has appointed **M/s. FP Project Management Consultancy Services Private Limited** (hereinafter referred as "Technical Consultant" or "FPPM") to carry out Technical Due Diligence of Madurai to Kanyakumari section (Package-I) km. 0+000 to km. 52+300 in the State of Tamil Nādu (hereinafter referred as "Project Road").

Madurai Kanyakumari Tollway Private Limited (MKTPL) (hereinafter referred as "Concessionaire") is a special purpose vehicle (SPV) for tolling, operation, maintenance, and transfer of Madurai to Kanyakumari Section (from km. 0+000 to km. 52+300) of NH-44. The project was awarded to Concessionaire on 20th October 2020. The length of Project Road is 52.300 kms with one toll plaza at Kappalur Village at km. 18+935.

Accordingly, the Technical Consultant has undertaken the work of assessment of operation and maintenance (O&M) cost based on site inspections and field investigations. The same is presented in this report.

1.2 Scope of Work

The detailed scope of work for conducting the technical due diligence of Project Road is presented as below:

- A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets
- Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, As-built drawings, O&M manual, COD / PCOD certificate, punch list, previous major maintenance etc.
- Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, axle load, material investigations etc.
- Formulation of future major maintenance strategy
- Estimation of any initial expenses to be incurred due to deficiencies observed in diligence
- Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period
- Estimation of Annual Operation expenses along with Systems cost (TMS / HTMS) till the end of concession period
- Review of balance work cost for Project Road including estimation of quantities and item rates

1.3 Our Approach Philosophy

1.3.1 Composition of Team

Our team consists of well-qualified engineers and other professionals, whose experience covers all the skills and specializations required for undertaking such assignments. All the team personnel proposed are our regular employees and have a long and stable working relationship with our firm.

The Team Leader coordinates the activities between all the key staff who work closely together. The key staff is assisted by various support staff, who report to the respective key staff in their field of expertise. The Team Leader is the point of contact for Client on Technical Study.

The technical study includes review of all the available documents namely:

a) Concession Agreement including Technical Schedules
b) O&M Contract, work order and their provisions
c) Quality of construction based on available data, design, and drawings
d) Documents on historical expenditure on operation and maintenance
e) O&M cost schedule for the concession period
f) Review of Completion / Provisional Completion along with punch list items
g) Review of recent pavement surveys conducted
h) Correspondence regarding scope of works and during O&M
i) Recent O&M Report submitted to Authority
j) Toll operation manual / ATMS related documents

The review of above documents is the first step towards accomplishment of the task. This gives a complete idea of the project and is used as input data for preparation of report after necessary analysis.

1.3.2 Site Visit and Data Collection

A team of experts from various streams has carried out the preliminary site visit to understand the assessment of project assets, mainly condition of the pavement and structures.

- The site visit is undertaken for detailed reconnaissance and visual pavement condition assessment.
- The condition assessment of major structures by visual inspection
- The information like material sources and the probable cost is collected for the purpose of cost estimate.

The detailed design / drawings viz. Plan & L-sections, drainage design, structure design, layout drawings for project facilities like toll plaza, bus bay, truck lay-byes, highway lighting facilities etc. are studied. Also, design / drawing and provision pertaining to road furniture are studied.

The information on availability of material in the vicinity is gathered. It has direct impact on cost of maintenance work and balance work.

The basic approach for preparation of cost estimates for operation and maintenance is as per the practice of State PWD / MORT&H in respect of highways and structures.

1.3.3 Data Analysis

Based on the study of the available information and preliminary site visits, the consultants share their preliminary observations with the Client based on the evaluation of the technical data and reports provided by the Client.

1.4 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Company. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyze the same as per the best engineering / industry practices.

The site visit and inspection were carried out on **13th March 2026 and 14th March 2026**.

The report is organized with the following chapters for easy understanding of various issues.

Chapter 1 **Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for due diligence studies.

Chapter 2 **Project Description:** The chapter describes existing project features, overview of project development.

Chapter 3 **Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on site visit.

Chapter 4 **Pavement Investigation and Assessment:** The chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance.

Chapter 5 **Cost Estimates:** The chapter summarizes the forecast for O&M and major maintenance costs over the remaining concession period.

2 PROJECT DESCRIPTION

2.1 Introduction

National Highways Authority of India signed the Concession Agreement with **Madurai Kanyakumari Tollway Private Limited,** is a company promoted by Cube Highways or company a Special Purpose Vehicle (SPV) formed for implementing this project on 27th December 2019. The Appointed Date for the Project Road is 20th October 2020.

The project is being developed under TOT (Toll Operate Transfer) Bundle-3 with a concession period of 30 years from the Appointed Date. The end of the concession period is in the year 2046 as per the traffic report submitted by the Company.

2.2 Location

The Project Road is part of National Highway No. 44 (old NH-7) of Madurai - Kanyakumari section in the state of Tamil Nādu. The total project length is 52.300 kms.

The Location Map of the Project Road is presented below:

Figure 2-1 Location Map

The photographs taken during the site visit are presented below.

Figure 2-2 Start and End of Project Road

Start of Project Road at km. 0+000

End of Project Road at km. 52+300

2.3 Climate
