Revenue reconciliation

6.17 As part of validating the data provided by the Client, as well as our assumptions around toll calculations, we have reconciled the actual reported revenue on a daily level for the Asset against our modelled revenue.

6.18 To reconcile our modelled revenue with reported revenue, we used the FY26YTD (April to February) toll segmentation and MADT of the month, comparing it with the reported revenue for that month. The Steer revenue calculations have been built up from monthly raw traffic data files, containing monthly data and ticket type information; and the toll notifications – all shared by the client.

6.19 As shown in Table 6.6 below, depicts the difference between modelled revenue and the reported revenue is within 1%, which gives us confidence in the historical traffic and revenue data provided by the Client as well as our forecasting assumptions around the toll escalation mechanism. This analysis also validates our segmentation and trip factor assumptions used for forecasting.

Table 6.6: FY26YTD AADC (April –February) Revenue reconciliation summary (INR lakhs)

Vehicle Category	Modelled	Actual	Difference (%) Modelled vs Actual
	FY26YTD	FY26YTD	
Total	31.30	31.37	**(0.2%)**

Source: Steer comparison between modelled and reported revenue for FY26YTD (April to February)

Traffic and Revenue forecasts

6.20 Based on the traffic and revenue-related forecast assumptions discussed above, we have modelled traffic and revenue forecasts for the Asset over its full concession period. Table 6.7 below presents the AADT/PCU and revenue forecast growth rates and CAGRs on this Asset. Further, Appendix C (Detailed forecasts) presents the AADT and revenues for the forecast period.

Table 6.7: Forecast (background plus impacts) AADT for TP1 Pampampallam

Vehicle Type	FY26	FY27	FY30	FY35	FY45
CJV	13,055	14,059	17,265	23,873	43,875

Upside and Downside cases

Upside and Downside scenario assumptions

6.22 We have developed our base case scenario considering a balanced view on the risks associated with input assumptions around GDP growth and traffic growth elasticities. There is always a risk that the outturn values of these inputs will vary as compared to the assumptions taken due to exogenous impacts, e.g. GDP growth could be influenced both positively and negatively by the impact of monsoons, export-import balances, political changes etc.

6.23 Similarly, traffic growth elasticities could be influenced by increased efficiencies achieved by technology, large shifts in commodity prices globally, changes in local manufacturing practices. However, at this stage we consider that the base case represents a central case scenario given the risks of variation of input assumptions.

6.24 Further, network developments are highly dependent on governmental directions, policies, legal and financial measure which might result in early or delayed completion of developments. Therefore, we have included an Upside (optimistic) and a Downside (pessimistic) case. However, at this stage, we consider that the base case represents a central case scenario given the risks of variation of input assumptions

6.25 To account for the possible variations in the growth drivers, we are also presenting an Upside (optimistic) and a Downside (pessimistic) scenario. These scenarios are defined by the following variations from the base assumptions:

Table 6.11: Summary of Macro-economic Assumptions for upside and downside cases

Input	Upside	Downside
Macro Assumptions		
GDP/GSDP	+1% every year	-1% every year
WPI	+1% every year	-1% every year
Elasticities	+ 10%	- 10%

Source: Steer analysis

6.26 Further, network developments are highly dependent on governmental directions, policies, legal and financial measure which might result in early or delayed completion of developments. Therefore, we have included an Upside (optimistic) and a Downside (pessimistic) case. However, at this stage, we consider that the base case represents a central case scenario given the risks of variation of input assumptions.

Impacts-Upside Case

6.27 The upside case impacts included in forecasts are summarised in below.

Table 6.12: Summary of impacts on the Assets

Development	Year of Impact	Change in impact w.r.t base case	Magnitude of impact TP1 Pampampallam
Plakkad – Kozhikode greenfield expressway construction	FY30 - 50% FY31 – 100%	+25% of base case	MAV: 3%
Construction Recovery	FY28 – 50% FY29 – 100%		3A: 2.3% MAV: 6.3%

Source: Steer analysis of OD data;

Impacts-Downside Case

6.28 The downside case impacts included in forecasts are summarised in below.

Table 6.13: Summary of impacts on the Assets

Development	Year of impact	Change in impact w.r.t base case	Magnitude of impact TP1 Pampampallam
Plakkad – Kozhikode greenfield expressway construction	FY30 - 50% FY31 – 100%	-25% of base case	MAV: 2%
Construction Recovery	FY28 – 50% FY29 – 100%		3A: 1.4% MAV: 3.8%

Source: Steer analysis of OD data;

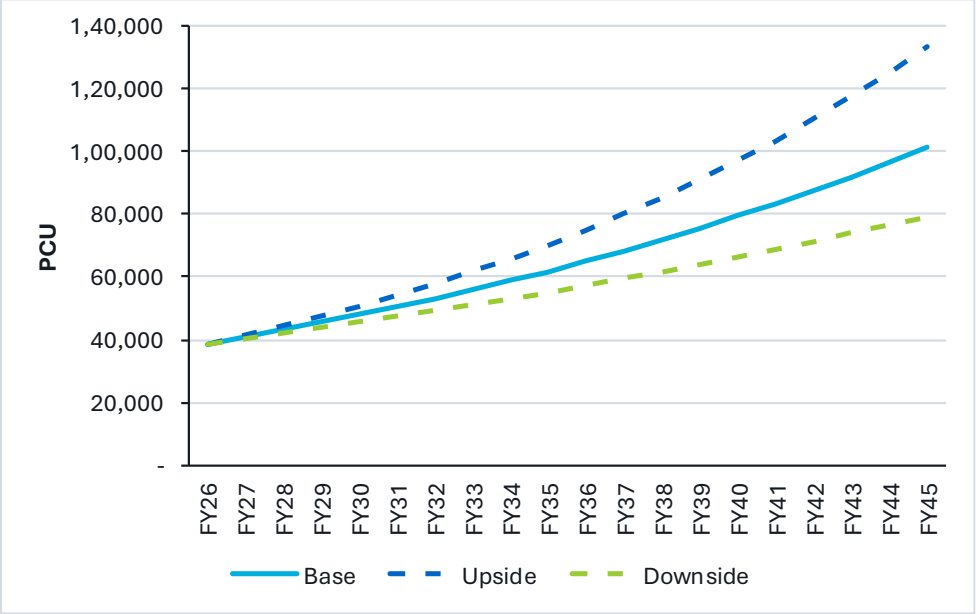
6.29 Based on the above assumptions for upside and downside scenarios, the following table summarizes the upside potential and downside risks associated with the PCU and the revenue for Pampampallam toll plaza at the end of the concession i.e. FY45.

Table 6.14: Upside potential and Downside PCU scenario – FY45

Toll Plaza	Upside Potential	Downside Risk
Pampampallam	31.8%	(21.6%)

Source: Steer Analysis of client data

Figure 6.2: Long-term PCU forecasts for TP Pamapampallam including upside and downside scenarios



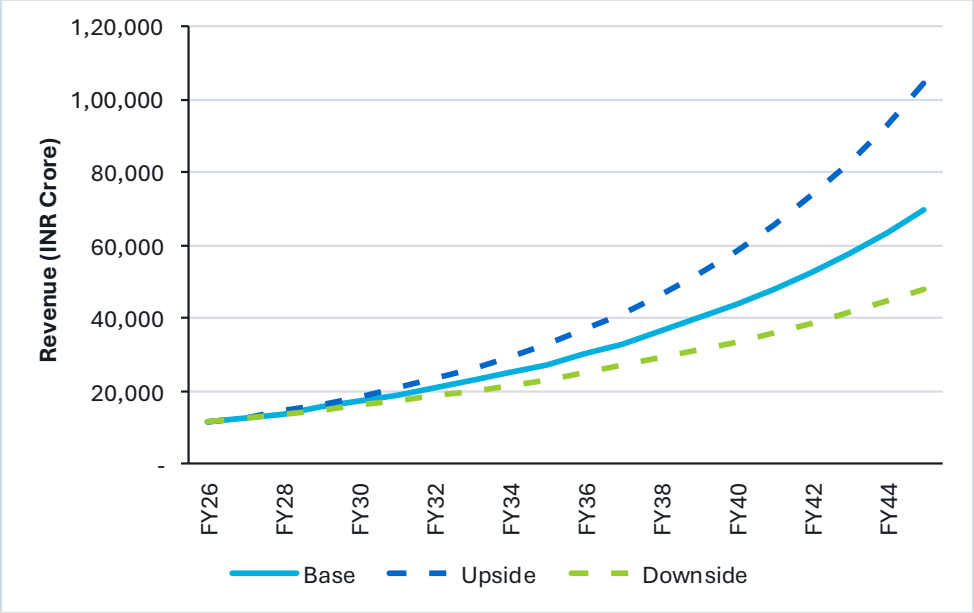
Source: Steer Analysis

Table 6.15: Upside potential and Downside Revenue scenario – FY45

Toll Plaza	Upside Potential	Downside Risk
Pampampallam	50.3%	(30.8%)

Source: Steer Analysis

Figure: 6.3: Long-term revenue forecasts for TP1 including upside and downside scenarios



Source: Steer Analysis

6.30 Revenue projections exhibit variability in both the upside and downside cases, driven by fluctuations in macro-economic factors such as WPI, GDP/GSDP, elasticities and the network impacts.

Summary outlook

6.31 Kerala is largely a consumption driven economy, and the state has significant cement and other construction material demand carried in commercial vehicles due to large scale construction activities undertaken in the State. Given the presence of Cochin international port, and the BPCL refinery at Kochi, POL items move between Coimbatore (Tamil Nadu) and Kochi (Kerala) as well.

6.32 The state's per capita income has historically remained higher than national per capita income levels. As of FY24, this ratio stood at 1.6 times the national benchmark[1], highlighting Kerala's growth story as largely driven by the services sector, (that contributed to 64% of state GSVA in FY24). The tertiary sector's high contribution consists primarily of tourism- and pilgrimage-related traffic, as well as the rapidly growing financial services sector. While the sub-sector of hotels and restaurants has grown at a CAGR of 6.5% between FY12 and FY24, the corresponding growth in the financial services sector has been 6.8%.

6.33 Overall, passenger traffic on the Asset is primarily driven by tourism and leisure travel from nearby states such as Tamil Nadu and Karnataka. After being significantly impacted during FY20 and FY21 due Covid-19 lockdowns across the state and country, passenger traffic rebounded strongly post reopening of the state after easing of Covid-19 restrictions, with tourist arrivals registered at over 2.2 crores in 2024.[4] Bus traffic also returned along with cars during that time, further adding to overall traffic recovery on the Asset post easing of the pandemic-related restrictions.

6.34 Commercial traffic observed on the Asset is driven by demand for construction material in various parts of Kerala where materials are sourced from neighbouring Tamil Nadu. This

movement is also related to POL products moving out of Kochi and into Tamil Nadu and other parts of the country further north and east of the Asset.

6.35 The demand for construction materials has remained strong due to several infrastructure projects that have been taken up in the vicinity of the Asset – the widening of NH66[6], construction of the Lulu Mall in Kottayam[7] and the construction of Government Medical College, Idukki[8]

6.36 Overall, we retain a positive outlook for the Asset as it serves as the primary route for tourism-related travel in Kerela and Tamil Nadu. The positive outlook for the underlying growth drivers on the corridor also include construction activity within the state, which we expect to remain strong over the medium term as major construction activities and infrastructure projects in the state will continue to keep demand buoyant. Finally, the continued focus of the state government on harnessing Kerala's tourism potential also bode well for the Asset and will both directly and indirectly allow for sustained growth on the Asset – both for passenger vehicles, as well as construction related truck volumes

Our findings and estimates in this report are based on our understanding from the site visit, analysis of primary data available both from surveys and the toll management system (both historical and current), macroeconomic assumptions prescribed by Client, feedback from Client meetings and secondary publicly available data. There can be both positive and negative risks associated with assumptions and the forecasts using them as summarised below

Appendices

A Top 10 OD Pairs

A.1 Further to the OD analysis presented in Chapter 3 this appendix presents the top 10 OD pairs at each toll plaza. Please see this data for both CJVs and Bus and, 3 Axles and MAVs combined below.

Table A.1: Top 10 OD pair shares at TP1 Pampampallam: CJVs and Buses

	OD Pair	Share
1.	Palakkad-Coimbatore	26%
2.	Thrissur-Coimbatore	4%
3.	Coimbatore-Cochin	4%
4.	Palakkad-walayar	3%

3.	Thrissur-Coimbatore	4%
4.	Bengaluru-Cochin	4%
5.	Kozhikode-Coimbatore	3%
6.	Chennai-Cochin	2%
7.	Kollam-Coimbatore	2%
8.	Palakkad-Tiruchirapalli	2%
9.	Palakkad-Chennai	2%
10.	Karnataka-Cochin	1%

B Data collection exercise

B.1 To validate and inform various inputs used in our forecasting, we undertook primary data collection on the Asset. OD survey data was collected on behalf of the Client, TVC surveys were commissioned by Steer with a third party. OD data collection typically involves manual data entry by enumerators based on oral surveys with road users crossing toll plazas. TVC data collection involves video-graphic capture of traffic passing crossing the toll plazas, followed by manual counting.

3 days TVC count

C Detailed forecasts

C.1 Further to the summary of forecasts presented in Chapter 6, this appendix presents detailed forecasts.

Traffic forecasts

C.2 This section presents the detailed traffic forecasts for the forecast period until FY38, year of expected close of the concession. The following two tables show the traffic growth rates and AADT, respectively.

Table C.1: Forecasts for (background + impacts) AADT at TP1 Pampampallam

Vehicle Category	CJV	Mini LCV	Bus	LCV	2A	3A	MAV	Total	PCU
FY27	14,059	3,592	1,148	2,327	1,627	563	2,828	26,145	40,731
FY28	15,108	3,756	1,186	2,414	1,708	569	3,024	27,766	43,114
FY29	16,178	3,923	1,223	2,502	1,791	575	3,228	29,420	45,550

Disclaimer

This report has been produced for the sole benefit of Cube Highways Pvt. Ltd ("the Client"). The report may only be relied upon by Approved Addressees in accordance with the terms of our engagement letter. This Report (the "Report") is confidential and disclosed only for information purposes, and it may not be relied upon by any party other than the Client or a Party to a Reliance Letter, and Steer: a) makes no warranty, expressed or implied, with respect to the use of any information or methods disclosed in this Report; and b) assumes no liability with respect to the use of any information or methods disclosed in this document. Any such party by its acceptance or use of this Report releases Steer from any liability for direct, indirect, consequential, or special loss or damage whether arising in contract, warranty, express or implied, tort or otherwise.

The Report is based on standard professional efforts, and information available to us at the time the review took place and is subject to time and budget constraints of the Report's scope of work. This Report, information and statements contained herein, are all based on third party data provided to us, or sourced by us, and Steer has not sought to establish the reliability of the data, except as specifically stated in the Report. Steer bears no responsibility for the results of any actions taken based on third-party data.

Certain forward-looking statements in the Report are estimates based on interpretations or assessments of information available at the time of writing. The Report is thus to be viewed as an assessment that is time-relevant, specifically referring to conditions at the time of the review. Steer undertakes no obligation to update the Report for any reason.

While the estimates contained in the Report are not precise forecasts, they do represent, in our view a reasonable expectation of the future, based on information we have been provided with or sourced. However, the estimates necessarily rely on numerous assumptions and judgements, and circumstances may occur over the timeframe of the project that go counter to these assumptions and judgements and that affect the project's realized revenues. Actual events may differ from those assumed, and events are subject to change. Therefore, Steer makes or provides no warranty, whether implied or otherwise, as to the accuracy of forward-looking information presented. Further, it is important to note that forecasts presented represent long term growth profiles; the results for individual time periods may vary from forecasted values.

Traffic Consultant developed the relationships in the models used to produce the forecasts for the projects based on data available through February 2026. This report does not consider variations in traffic performance due to changing macro and force majeure events such (but not limited to) as global wars, economic uncertainty (high inflation, global recession), and changes in the regulatory environment. The situation remains dynamic and is subject to significant change in the short and medium term. In this challenging context, Traffic Consultant has produced base forecasts with a view on a possible scenario for the traffic forecasts. However, it is important to note that this is only one view, and there continues to remain uncertainty as to the short-term, intermediate or prolonged effects of and responses to such macro-economic/force majeure events. As a result, no assurance can be provided by Traffic Consultant that the scenarios and assumptions Traffic Consultant has identified will prove to be accurate. Given the uncertainty inherent in this scenario, Traffic Consultant advises that all readers of the Report consider the Report in the context of their own assessment of the impact of such events.

TO THE FULLEST EXTENT PERMITTED BY APPLICABLE LAW, THE LIABILITY OF THE TRAFFIC CONSULTANT FOR ANY LOSS, DAMAGE, COST OR EXPENSE SUFFERED OR INCURRED BY ALL PERSONS OR ENTITIES AND FOR ALL CLAIMS RESPECTING ITS WORK PERFORMED IN CONNECTION WITH THE ISSUE OR THE REPORTS IS HEREBY LIMITED IN THE AGGREGATE TO THE AMOUNT OF FEES ACTUALLY PAID BY THE CLIENT TO THE TRAFFIC CONSULTANT IN RESPECT OF THE REPORTS AND CONNECTED SERVICES.

YTD	Year to Date

1 Introduction

The assignment

1.1 The Cube Highways Fund Advisors Private Limited (the "Client") has commissioned Steer Davies Gleave India Private Limited ("Steer") for a traffic due diligence to be carried out on the Lucknow Raebareli Toll Road (hereafter called "Asset"). This report forms part of the annual fair market valuation (FMV) undertaken as part of the "Transit 11 project". This report presents an update of the traffic and revenue forecasts based on primary surveys undertaken in 2026, actual traffic data available up to February 2026 and latest macro-economic assumptions.

1.2 The Asset Lucknow Raebareli consists of the single toll road section with its own special purpose vehicle (SPV). For the purpose of this report, we hereafter call the toll plaza on the Asset as TP1.

- Lucknow Raebareli Tollway Limited: LRTL: TP1 – Dakhina Sekhpur

1.3 Our scope of work for the traffic and revenue forecasts process includes:

Table 1.1: Scope of work and sources of data

Scope of work	Data source
• Review of historical Traffic Management System (TMS) data, Vendor reports and documents	• Provided by client for the period between Oct'20 and Mar '26, with FY26 base AADT and forecasts considering data up to Feb'26
• Historical analysis and forecasts for baseline growth, including; – Background growth, and – Seasonality trends	• Historical toll plaza data provided by Client and benchmarks from Asset in the vicinity wherever long time series historical data was not available
• Validation of revenue reported FY26 YTD	• TMS data provided by the Client • Revenue reconciliation is done using toll plaza traffic and ticket type data to calculate revenue and to reconcile it with toll plaza reported revenue
• Origin Destination (OD) analysis to understand growth drivers: – Zonal influence and Top OD pairs – Commodity distribution – Trip length distribution	• Origin Destination (OD) surveys undertaken by a survey agency appointed by Steer. The surveys were undertaken on 23rd Feb 2026.
• Analysis of upcoming network improvements and other developments, that may have future impacts on traffic	• Secondary research and Steer's in-house experience of working in the vicinity of the Asset. Impact analysis conducted by Steer based on

Scope of work	Data source
	Generalised Journey Cost spreadsheet-based analysis
• Historical revenue analysis and forecasts for revenue estimation, including: – Toll segmentation and trip factors – Overloading shares	• Calculated from historical data provided by the Client
• Final traffic growth forecasts including baseline growth rates and potential future impacts	• Elasticity based base growth and potential impacts from secondary research, Asset historical traffic performance and Steer's in-house experience of working on toll roads on the corridor
• Toll revenue estimation for the entire concession, including toll evolution	• Toll evolution based latest on toll notification published by National Highway Authority of India (NHAI); and the latest Wholesale Price Index (WPI) trends as shared by the client.

Our approach

1.4 Our approach follows well-established practices for forecasting ongoing traffic growth on an existing/brownfield Asset. The analysis has focused on two sets of issues, namely:

- understanding the traffic that is currently using the Asset; and
- identifying how and why that traffic is likely to change in the future.

1.5 To understand the current traffic on the Asset, we have analysed traffic data from multiple independent sources:

- Client-provided secondary data, including:
  - TMS data starting October 2020 to February 2026. The historical traffic and revenue presented in Chapter 3 considers information up to March 2026. This is to present the latest available traffic and revenue information at the time of submission of report. However, the FY26 base traffic and forecasts presented Chapter 5 onwards use data available up to February 2026, with March 2026 estimated.
  - Concession agreement and toll notifications for FY25 and FY26.
  - Previous studies related to traffic and revenue
  - Steer-commissioned OD survey on 23rd Feb 2026 to validate any change in growth drivers and travel patterns as part of earlier commission.
  - Steer-commissioned a three-day TVC survey in 2026 as part of earlier commission
- We undertook revenue reconciliation for FY26 YTD, by building up revenue from the traffic reported by each of the toll plazas and subsequently matching them to the reported revenue for FY26YTD using the prevalent toll rates and reported segmentation/toll-frequencies for FY26YTD. This has been a key part of our analysis to validate the segmentation/toll-frequency assumptions, and the Annual Average Daily Traffic (AADT) reported for each of the toll plazas.

1.6 The estimation of future traffic demand on the Asset was undertaken using:

- Estimating FY26 base year position by applying seasonality correction factors (SCFs) on the 11 months of actual traffic data available (April to February).
- Secondary research to understand plans for new developments and the progress of ongoing developments on the Asset.
- Developing a bespoke growth model for each Asset/plaza/toll class to forecast year-on-year traffic growth from FY26 to the end of concession period.
- Investigating the elasticity of historical traffic growth compared to state (GSDP) and national (GDP) growth. Where historical data is limited, we have benchmarked the Asset against Steer's knowledge base (e.g., similar Asset types in the same state or on the same corridor), to derive appropriate elasticities.
- Applying our elasticities to independent GDP forecasts as provided by the client.
- Identifying and analysing the potential impacts of any relevant changes to the competitive position of each Asset – these include impacts of changes to road network such as expressways and opening of competitive modes of travel.
- Identifying and analysing any other potential impacts on traffic and revenue on each Asset – these include axle load norms, axle shift for heavy goods, FASTag implementation.
- Considering changes in the trends of segmentation over time and making suggestions for changes in exemptions in the future
- Preparing traffic and revenue forecast for the Asset for the complete length of concession. The analysis here includes the specific impacts of network, or other exogenous factors specific to the Asset. We have developed a set of forecasting assumptions for three scenarios: a base case and upside and downside scenarios.

Contents of this report

The report has been divided into the following chapters:

- Chapter 1 introduces the methodology and approach to undertake the traffic and revenue due diligence;
- Chapter 2 describes the key characteristics of the Asset and its surrounding road network, primarily based on site visits;
- Chapter 3 summarises the current and historical traffic on the Asset, including results from the TMS, TVC and OD analysis;
- Chapter 4 presents the socio-economic context of the corridor and the region/state containing the Asset, along with our approach and results on estimating background traffic demand growth; and
- Chapter 5 presents our baseline year forecast and summarises our results on estimating background traffic demand growth
- Chapter 6 summarises our assessment of network impacts and presents concession traffic and revenue forecasts for the Asset along with the assumptions for upside and downside case

2 The Asset

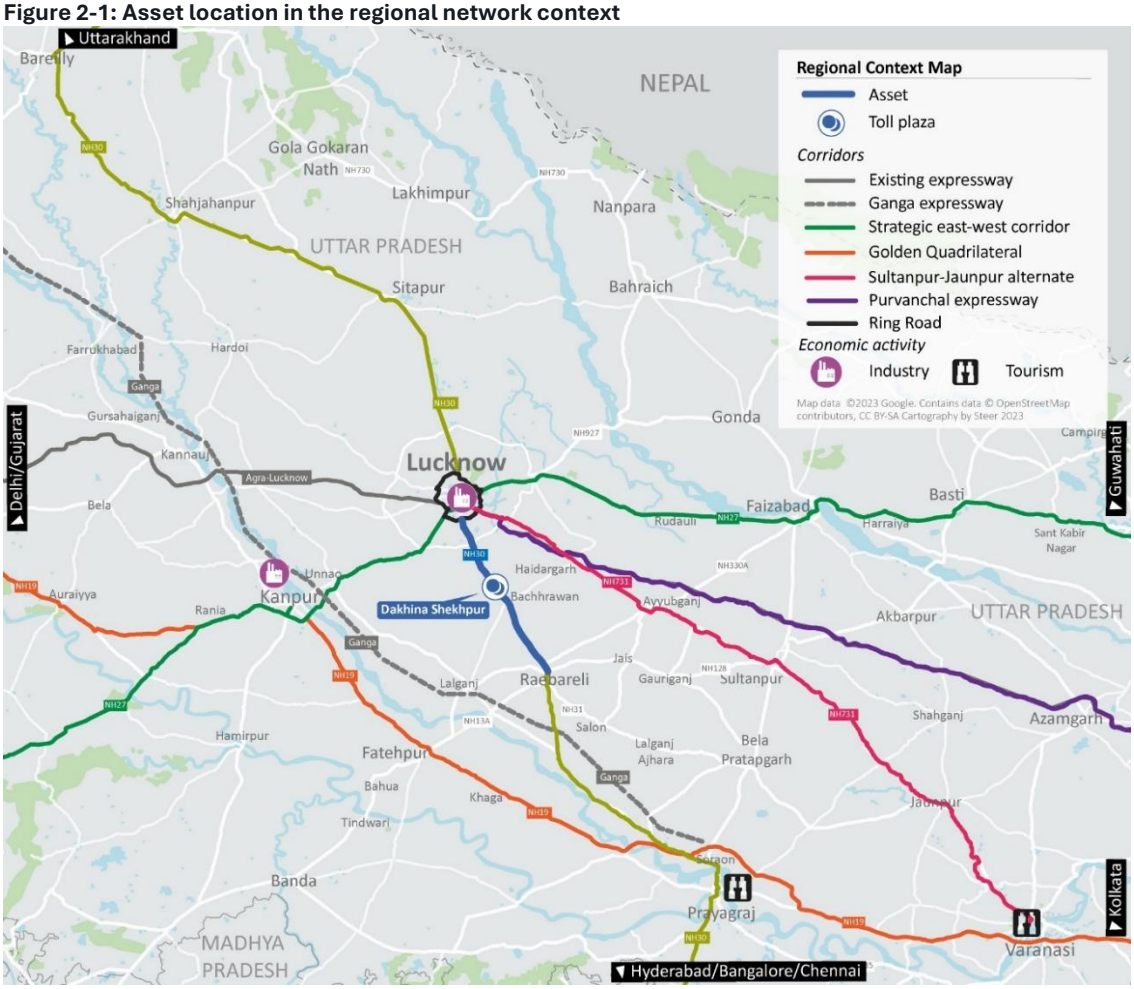
Introduction

2.1 This chapter provides a description of the Asset, based on both primary data (from site visits), and our understanding of the region and network surrounding the Asset. It covers the strategic network context, followed by key economic activities and network developments around the Asset.

Strategic network

2.2 The Asset is situated in the state of Uttar Pradesh, connecting the state capital Lucknow to Raebareli in the south-central part of the state. The following figure shows the regional road network in which the Asset is located.

Figure 2-1: Asset location in the regional network context



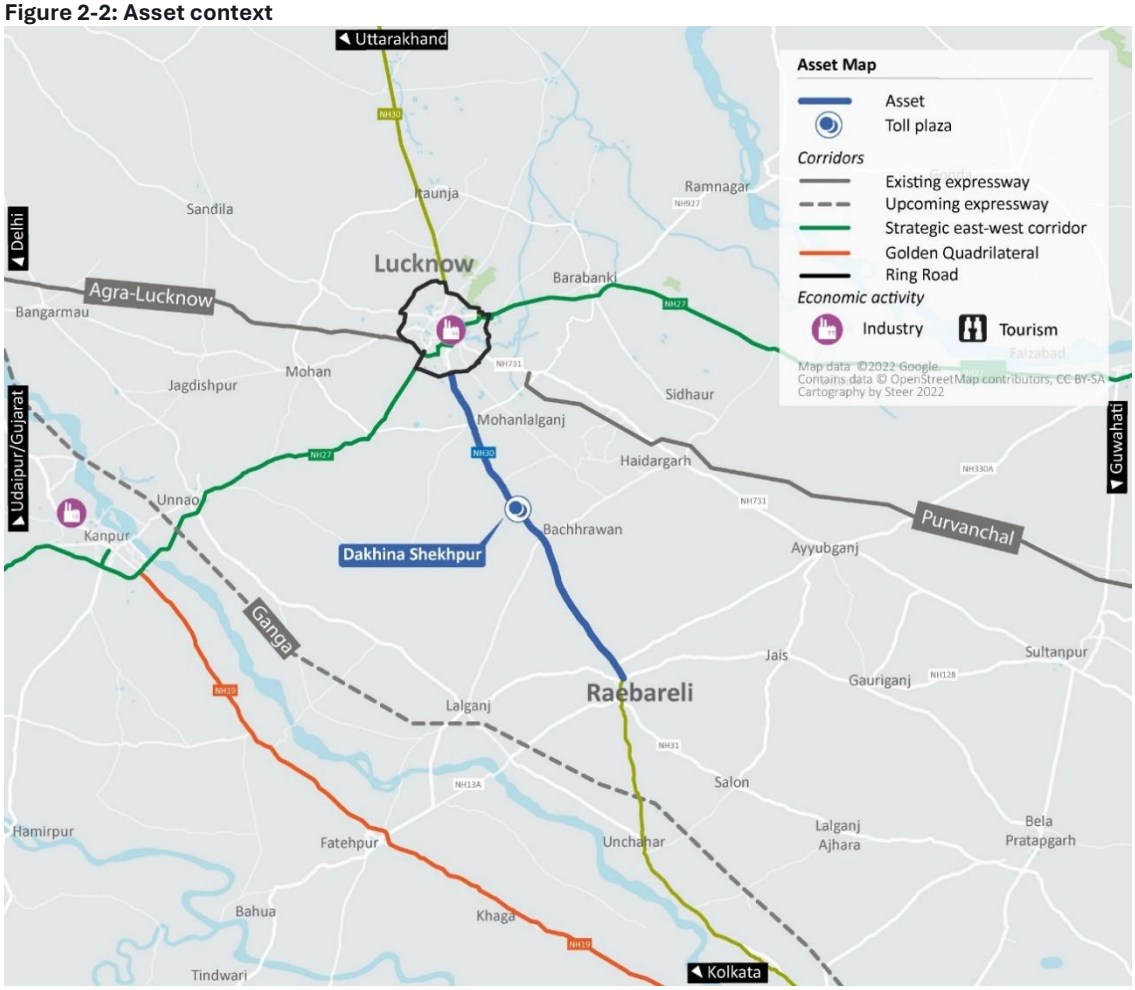
Source: Steer cartography using OpenStreetMap data

2.3 This Asset primarily caters to two different types of movements:

- **Short-distance trips** undertaken majorly by passenger vehicles such as cars for work/business and tourism/pilgrimage purposes wherein the movement is predominantly local between Lucknow, Raebareli, Prayagraj, Varanasi and Mirzapur. Further, LCVs cater to the local demand generated by two large consumption centres – Lucknow and Raebareli. Short-distance trips made by MAVs feeds into the local consumption demand and carries significant amount of Cement from the cement factories (Birla Cement, ACC Cement) in the vicinity.
- **Long-distance trips** undertaken by heavy trucks between Punjab, Haryana, Uttar Pradesh, West Bengal, and Jharkhand, traversing through this route, carrying a mix of commodities such as agriculture/grocery items, metal, cement, petroleum, and manufacturing items.

2.4 This Asset is a 70 km long toll road which forms part of the NH 30 in Uttar Pradesh. It is a four-lane road with one toll plaza, namely, **Dakhina Sekhpur (TP1)** at Km 42.5 (closer to Lucknow). The following figure provides a closer view of the Asset in the context of its immediate surroundings.

Figure 2-2: Asset context



Source: Steer cartography using OpenStreetMap data

Concession and tolling details

2.5 The toll plaza on the Asset has been operational since March 2015, and the client took over its operations in October 2020. There are still 25 years left in the concession period which ends in FY51. The following table presents a summary of the concession.

Table 2.1: Summary of concession

Particulars	Details
State	Uttar Pradesh
Highway and lane configuration	NH 30 four lane
Toll plazas	TP1: Dakhina Sekhpur
Length (km) as per concession agreement, applicable	TP1: 70 km
Commencement of operations	TP1: March 2015
Operated by Client since	October 2020
Concession period	30 years
Last year of concession	FY51

Source: Client data and Concession agreement

Figure 2-3: Typical cross-sections and toll plazas on the Asset

Source: Steer site visit

2.6 Tolls are collected across various vehicle categories as per toll notification and rates as shown in the following table. The toll plaza has dedicated ETC/FASTag lanes for electronic tolling. Like the other National Highway plazas, the Asset has Single, Return, Local Commercial, Local Personal, Monthly and Local Monthly tickets.

Table 2.2: Single toll rates on the Asset (INR), applicable FY26

Type of Vehicle	Single Journey Fee
CJV	120
LCV	190
Bus/Truck	400
3A	435
HCM/EME/MAV	625
OSV	765

Source: NHAI Revision of User Fee Rate w.e.f 01.04.2025

Key economic activities

2.7 Uttar Pradesh remains the most populous state in India, accounting for approximately 17% of the country's total population. This large consumer base continues to be a significant driver of economic activity and a key contributor to the national GDP. The state's real GSDP is estimated to be around INR 36 trillion for FY26 and for FY25 is pegged at INR 30.25 trillion, reflecting robust growth from previous years. Between FY12 and FY25, Uttar Pradesh's real GSDP has grown at a CAGR of 6.1%, indicating a steady upward trajectory. In FY26, the state contributed around 10% to India's national GDP, up from 8.9% in FY25[1]

2.8 Agriculture is the most important and the biggest sector in the state economy followed by the services sector comprising of travel, tourism, real estate, insurance and the finance industry.

2.9 The capital city of Lucknow, which is on one end of the Asset and a major traffic generator, is the main centre of administration, governance, commerce, technology, culture and tourism in the state with the presence of major IT companies, automotive industry, handicrafts sector (which accounts for 60% of the total exports from the state), education sector and research and development institutes. In recent times, it has emerged to become a growing IT hub, wherein the UP government has awarded the IT Special Economic Zone project to HCL Technologies in Lucknow.

2.10 With the vision of the current government to make UP a $1 trillion economy, the capital city Lucknow has received more than 2000 crore of investments to open 1000 acres integrated textile park under PM Mitra Park[2]. In the E-commerce sector, over 400 crore worth of investments from players like Amazon, Flipkart have been made in Lucknow in 2023 largely to create warehousing facilities.[3]

2.11 The fact that the city connects to five national highways and several districts, the Lucknow Outer Ring Road (ORR) recently constructed will ease congestion and improve connectivity.

---

[1] As per data from the Ministry of Statistics and Program Implementation (MoSPI)

[2] PM Mitra Park in Lucknow and Hardoi to provide employment opportunities to skilled manpower of UP : Shri Goyal - India Shipping News

[3] India warehousing: Warehouse leasing in Lucknow on the rise: CBRE - The Economic Times (indiatimes.com)

2.12 Raebareli, situated on the other end of the Asset, is a centrally located city in the state which is well connected to other parts of the state as well as the country, with four national highways traversing through the city. It is home to some of the major industries such as the Rail Coach Factory at Lalganj, National Thermal Power Corporation (NTPC) power plant at Unchahar, where the coal for the plant is supplied from Jharkhand and MP Birla Cement Plant at Raebareli and at Kundanganj.

2.13 The existing cement plants in the region, have the potential to propel growth of the cement industry in the surrounding areas of the Asset. For instance,- MP Birla group has a cement plant in Raebareli with a capacity of over 1.3 million tonnes per annum (MTPA) as per 2023 figures, it has also acquired a plant in Kundanganj to augment the capacity from 1.2 MTPA to 3.6 MTPA.[4,5] ACC limited has a plant in Tikaria at distance of 50 km from Raebareli with plans to further augment capacity. The Asset enables the transport of cement from Varanasi and Prayagraj to the western region of the state and caters to the movement of cement trucks from plants located in Mirzapur, Sonbhadra and Raebareli to their Lucknow regional offices or distributors in Lucknow.

2.14 The Asset plays an integral part in connecting the rest of the country and the state to two of the key cities of great religious importance-- Prayagraj known for the confluence of the rivers Ganga, Yamuna and Saraswati (Triveni Sangam), Magh Mela and Kumbh Mela, and Varanasi known for its temples and famous ghats along river Ganga. Varanasi is also known for commercial activities such as silk sarees and clothing. These two destinations also attract people from other parts of the world.

2.15 Evidently, the Asset is a key enabler of movement of both the passenger and commercial traffic within the state wherein the local car movement makes up for majority of the trips between places such as Lucknow, Raebareli, Bachhrawan, Fatehpur, Varanasi and Lalganj to name a few.

Alternate Routes

2.16 Several network developments have taken place in the recent past which have affected traffic volumes on the Asset. These include phase-wise (1 and 2) completion of Varanasi Ring Road, and six laning of Kanpur – Prayagraj- Varanasi highway (NH19). Further, state highway network in the region went through upgradation. For example, the SH-13 which intersects with the Asset at Bachhrawan was upgraded from a level crossing to a road over-bridge (ROB). This has enabled sand carrying trucks from Banda to easily access areas like Barabanki and Bahraich, which are located to the northeast of the Asset.

2.17 The Raebareli–Unchahar section of NH-30, located south of the project corridor, is has recently undergone upgradation to a 4-lane configuration. The project is part of the NHAI's broader initiative to enhance key stretches of the National Highway network, with the objective of improving regional connectivity, reducing travel time, and facilitating safer and more efficient movement of goods and passengers across UP. This is expected to improve the LOS for long-distance trips. With Rarbareli bypass still incomplete the full

[4] **List of MP Birla Cement Factories in India - best cement in india**

[5] **https://economictimes.indiatimes.com/industry/indl-goods/svs/cement/birla-corp-looks-to-scale-up-cement-capacity-by-over-60-per-cent/articleshow/70672908.cms?from=mdr,** accessed on 24 March 2021

benefit of completion of 4 laning upto Prayagraj has not resulted in immediate increase in traffic volumes.

2.18 Further, as a part of road infrastructure development in the state, India's longest six-lane access-controlled expressway, the Ganga Expressway is set to be open to users by Q1FY27. This expressway will significantly reduce travel time and improve LOS moving from Eastern to Western part of the state. With a section of expressway running parallel to the Asset, we assume share of Asset's traffic to shift once the expressway opens. Hence, an impact of this shift has been assumed in Chapter 6. For the sections including Varanasi- Sultanpur, Purvanchal expressway we assume that the expected shift has already happened. Hence no further impact has been assumed.

3 Traffic description

Introduction

3.1 This chapter outlines the current traffic and revenues on the Asset, as also Steer's analysis of origin-destination (OD) data and traffic count data. This covers data, which was collected as a part of this study, previous studies, as well as data provided by the Client.

3.2 Traffic demand data is generally collected and analysed to understand the vehicle distribution and volume of demand currently using the Asset, while OD data is used to obtain a better understanding of travel patterns, trip lengths, trip purposes and areas of influence in the vicinity of the Asset, as also the commodities being moved by goods vehicles. This analysis, combined with our understanding of the Asset (based on our site visits), enables us to identify the key drivers of demand on the Asset.

3.3 Actual toll plaza data is used as the basis from which the current/base year annual average daily traffic (AADT) is established. This data is typically provided by the Client and independently analysed and validated by Steer using traffic volume count (TVC) information.

3.4 The below sections present historical traffic and revenue information up to March 2026. This is to present the latest available traffic and revenue information at the time of submission of report. However, the FY26 base traffic and forecasts presented Chapter 5 onwards use data available up to February 2026, with March 2026 estimated.

PCU Factor assumption for reporting

3.5 The PCU values have been taken from 'IRC 64:1990- Guidelines for Capacity of Roads in Rural Areas'. For MAV, based on the discussion with the Client, we have referred to the rigid and trailer splits in the latest TVC counts conducted in 2023 for calculating the effective PCU for MAVs. For rigid trailer trucks we have assumed a PCU factor of 3, whereas for trailer trucks we have assumed a PCU factor of 4.5. These factors have been used to arrive at the PCU values presented in the following sections.

Table 3.1: PCU factors

Vehicle Category	PCU Factor
CJV/ Mini LCV	1.0
LCV	1.5
Bus/2A/3A	3.0
MAV*	3.36
OSV	4.5

Source: Steer analysis and IRC64,1990, * Rigid-Trailer PCU

Historical Trends

3.6 The following table explains the historical traffic recorded by vehicle class from October 2020 to February 2026 (as provided by the client). There is lack of long-term historical data

available on the Asset since tolling was started by the client only in October 2020 and both the available years of data, FY21 and FY22 were impacted by COVID-19 related restrictions. Therefore, starting FY23 traffic on the Asset has started to get normalised with similar travel patterns recorded in FY24-25. Q3 and Q4 of FY25 were impacted by MahaKumbh-2025, thereby leading to increase in the traffic on the Asset. FY26 YTD exhibits similar travel pattern as FY24.

3.7 As discussed in chapter 2, the Asset is located between two major cities, with Lucknow being a major traffic generator for the Asset. Thus, the Asset observes healthy proportion of passenger traffic.

Table 3.2: Average Daily Traffic at TP1 Dakhina Sekhpur

Vehicle category	FY21*	FY22	FY23	FY24	FY25	FY26	CAGR FY23-26
CJV	10,832	10,031	10,351	10,747	12,358	12,459	6.4%

Source: Steer analysis of Client data, (FY21* includes 6 months of data from Oct'20 to Mar'21); FY26 AADT represents the full year actual (April to March)

3.8 As per the table above, it can be observed that 2A/3A/MAV traffic on the Asset showed a consistent decline/flatlining trend between FY21-26.

3.9 The increase in CJV and Bus volumes observed in FY25 can be attributed as a temporary increase, due to the Mahakumbh Mela held in January – February 2025. CJV volumes in FY26 continues to growth at a steady rate on month-on-month basis.

3.10 The trend of tollable traffic on the Asset has largely followed that of total traffic where Cars recorded 1.3% growth and Busses recorded 1.8% degrowth in FY26 compared to FY25.

3.11 3A category has declined in the FY21-26 period. The reduction in 3A volume is a result of the declining demand for 3A vehicles, which are being replaced by 2A and MAV's. MAVs offer higher tonnage capacity making them more cost-effective for transporters. While the increase in 2A volume reflects the growing preference for these vehicles due to favourable changes in the legal permissible loads for 2As and their suitability for e-commerce-related freight, particularly high-value, low-volume goods over medium to long distances. This is consistent with our discussion with various transporters and OEMs across the country who are favouring 2A and 5A vehicles for commodity movement due to better unit economics.

3.12 Based on the OD results it is observed that the share of North India/Western UP moving to Eastern UP using the Asset has reduced by ~20%, which has led to fall in traffic in FY23-24. The same is validated by the comparison of trip lengths where the share of 3A and MAV’s travelling over 500kms has reduced by ~20% and ~30% in the latest set of surveys which were carried out. Our observation is that this traffic has shifted to existing alternate routes by virtue of improved connectivity and quality upgradation, including:

- Lucknow – Kanpur - Prayagraj – Varanasi six lane corridor via NH19
- Lucknow – Sultanpur- Varanasi four lane corridor via NH731
- Lucknow – Purvanchal Expressway- Sultanpur- Varanasi via Expressway and NH731

3.13 These sections offer better level of service to truck users. Further the local traffic dependent on cement factories feeding into local construction in the region has also been impacted due to construction completion and covid related disruptions resulting in non-revival of such traffic on the Asset.

3.14 A combination of all the above-mentioned factors has resulted in lower volumes of traffic on the Asset. This has been explained further in Chapter 6 as well.

Historical Revenue

3.15 The CJVs are the biggest revenue contributors on the Asset, with a ~47% share in FY26 followed by MAVs (20% share). Lower per day collection in FY22 compared to FY21 can be attributed to COVID-19 with restricted traffic movements. FY23 and FY24 recorded a similar average per day collection of INR 17 lakhs. A recovery to an AADC of ~INR 19 lakhs daily can be seen in FY25 with AADC increasing in the months of November to March majorly driven by increase in the CJV traffic due to MahaKumbh. FY26 recorded a AADC of INR 19 lakhs.

3.16 The following table shows the reported revenue by vehicle type at each toll plaza for period FY21 to FY26:

Table 3.3: Revenue (in INR Cr) at TP1 Dakhina Sekhpur, and AADC (in INR Lakhs)

	CJV	LCV	Bus	2A	3A	MAV	OSV	Total	AADC	AADC Growth
FY21	13.8	1.6	2.8	2.9	3.4	11.3	-	35.8	21.3	-
FY22	25.9	2.6	5.6	6.7	6.2	19.9	0.0	66.8	18.3	(14.1%)
FY23	29.0	2.3	6.6	6.1	4.7	14.7	0.0	63.5	17.4	(4.9%)
FY24	30.9	2.2	7.2	5.4	3.0	13.2	0.0	62.0	16.9	(2.6%)
FY25	36.7	2.3	8.5	5.4	2.4	13.7	0.0	68.9	18.9	11.5%
FY26	37.4	2.2	8.5	5.8	2.5	13.7	0.0	70.1	19.2	1.8%

Source: Steer analysis of Client data, (FY21* From Oct-20 (last 12 days) to Mar-21; AADC represents Average Annual Daily Collection; FY26 represents full year actual (April to March).

Toll Frequencies

3.17 Toll frequency or segmentation is typically the share of each ticket category recorded for a particular vehicle type. This is based on the toll policy which forms a part of the concession agreement. Each vehicle category has different segmentation. As a part of historical analysis, we calculate the toll frequency for each vehicle category from the monthly data shared by the client. The most common ticket categories observed on a typical National Highway are: Single, Return, Monthly, Local and Exempt. Given the local nature of traffic, some toll plazas offer custom made local passes to attract the local commuters to opt for these passes instead of evading toll.

3.18 The following are the types of tickets being sold at the plazas of the Asset.

Table 3.4: Typical ticket types sold at NHAI plazas

Category	Description
Single	Allows the vehicle to cross the toll plaza once
Return	Allows for a return journey within a day with a 50% discount on the return trip.
Monthly Pass	Discounted single entry ticket for users who undertake multiple trips within a month can buy the monthly pass.
Local Personal	Discounted single entry pass only for private cars of residents within 20km radius of toll plaza
Local Commercial	50% discount on single trips for commercial vehicles registered in the local district. This pass allows single entry only
Exemptions	Officially exempted vehicles like ambulance, police cars, key political personnel etc.

3.19 Further, the toll plazas also record violations which are non-paying users, who are not officially allowed under exemptions category but are forced exemptions. For some Assets, the Exemption and violations are at time reported together.

3.20 Generally, over the period the shares of single/return/monthly tickets tend to stabilise within 2-3 years of Asset operations. Only in the cases where trip patterns are expected to change significantly due to urban expansion is where we expect these shares to change over the period or due to some external events impacting the trip patterns.

3.21 FY21 was impacted due to the mandatory implementation of FASTag as a mode of payment, where users were now paying via an online payment system instead of cash payments at the toll plaza. FY22 traffic and travel patterns were impacted by the second wave of COVID-19 in Q1 and Q2. With FY21 and FY22 being impacted these external events, the segmentation began to stabilise from FY23 onwards and reached steady state starting FY24.

Introduction of Annual pass for CJVs

3.22 The National Highway Authority of India launched the "The FASTag Annual Pass" on August 15, 2025, a prepaid facility that allows private CJVs to travel across designated National Highway and National Expressway toll plazas. The annual pass is worth INR 3,000. The pass is valid for one year or 200 trips, whichever occurs first and is applicable only to private, non-commercial vehicles (Car/Jeep/Vans).

Since this pass has been introduced by NHAI, it is not valid on

- state governed toll plazas on highways
- state governed toll plazas expressways
- Parking areas or other non-NHAI tolling locations

3.23 The pass can be activated via the RajmargYatra app or the NHAI website, and links directly to an existing FASTag.

The Annual Pass aims to:

- Promote cashless and seamless travel on national highways.
- Reduce congestion and improve traffic flow at toll plazas
- Provide cost-effective travel for frequent users of NH/NE toll roads.

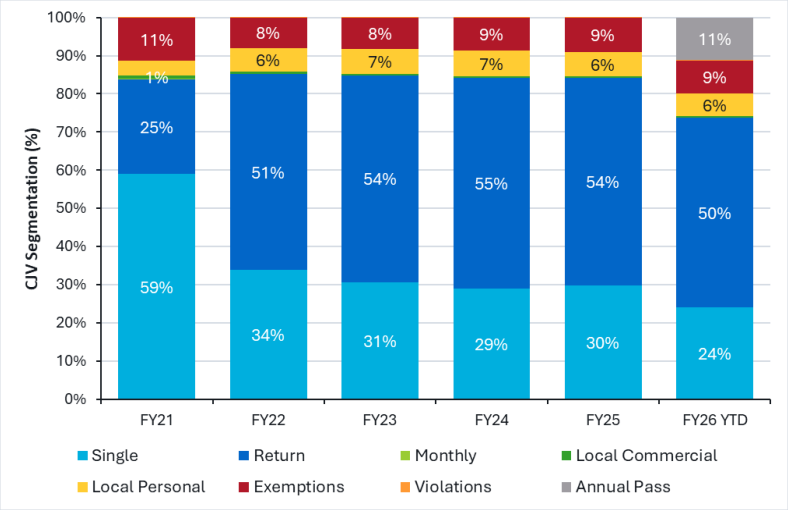
Share of traffic by payment type

3.24 The figures below show the ticket segmentation for CJV and MAV categories. It can be observed that both CJVs are dominated by return journeys whereas MAVs prefer single tickets.

3.25 FY23 onwards there have not been any pandemic related disruptions, or any one-time events which could affect traffic movement on the Asset. Hence, the segmentation as derived from the historical data of FY23 onwards has been considered as the normal segmentation on the Asset for all other vehicle categories except for the CJVs.

3.26 In case of the CJVs which dominate the traffic profile on the Asset the segmentation is computed considering the penetration of Annual Pass. CJV segmentation for FY26 and FY27 is detailed out in "Toll segmentation" section in Chapter 6.

Figure 3-1:Ticket-segmentation for CJV at TP1 Dakhina Sekhpur



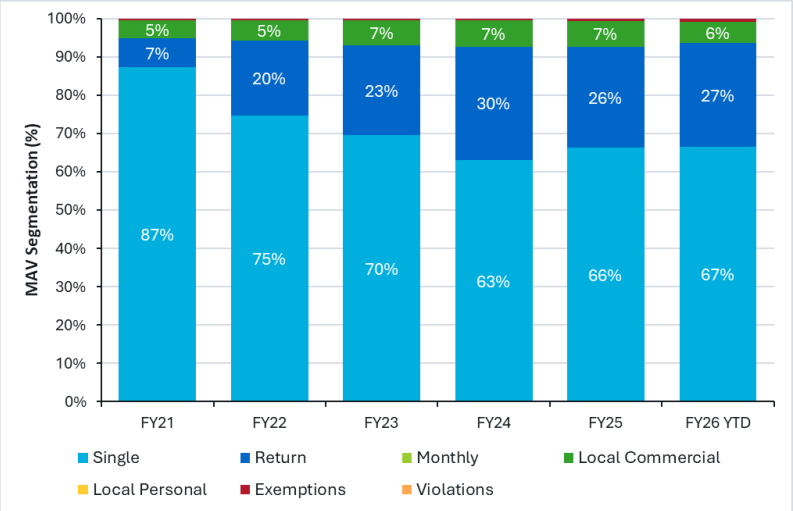
Source: Steer analysis of the Client data (FY21 has data for Oct-20 to Mar-21); FY26YTD includes data till Feb'26

3.27 The share of single journeys on the Asset has exhibited a consistent decline, reducing from 59% in FY21 to 30% in FY25. Correspondingly, the share of return tickets has increased significantly from 25% in FY21 to 54% in FY25. This notable shift in journey segmentation became particularly evident in FY22, primarily driven by the implementation of FASTag in FY21, which enabled 24-hour return ticket to be availed.

3.28 While CJV segmentation stabilised from FY23, the introduction of annual passes in August 2025 has led to a reduction in single and return trips. It may be noted that the share of exemptions and local personal trips have remained at the FY25 levels.

3.29 Given the Asset's proximity to major urban clusters, it caters to a significant volume of daily commuters. This localised movement often results in multiple trips through the toll plaza within the same day, contributing to the higher share of return tickets among CJV users.

Figure 3-2: Ticket-segmentation for MAV at TP1 Dakhina Sekhpur



Source: Steer analysis of the Client data (FY21 has data for Oct-20 to Mar-21); FY26YTD includes data till Feb'26

3.30 For MAVs, approximately 60-70% of all tickets sold on the Asset have been 'Single' tickets, since FY23. This can be attributed to the long-distance traffic observed on the Asset which can also be validated by higher average length of MAVs in the OD results. Around 30% of share of return and local commercial trips can be attributed to proximity of the Asset to the urban cluster of Lucknow.

3.31 FY26YTD segmentation shows that LCVs, 2As and 3As trucks primarily use single tickets (45%, 56% and 46%), while buses overwhelmingly prefer return tickets (92%), reflecting their structured round-trip operations. Return ticket usage is also high for LCVs (53%), 2As (40%) and 3As (51%), indicating frequent round-trip freight movement. Local commercial and exemption categories remain minimal, while monthly and local personal passes see no recorded usage, suggesting that most vehicle movements are intercity rather than local.

Table 3.5: Ticket segmentation for LCV, Bus, 2A and 3A at TP1 Dakhina Sekhpur FY26 YTD

Ticket Category	LCV	Bus	2A	3A
Single	44.9%	6.1%	56.3%	45.6%
Return	53.0%	93.4%	39.6%	51.4%
Local Commercial	0.9%	0.3%	2.8%	1.7%
Monthly	-	-	-	-
Local Personal	-	-	-	-
Violation	0.0%	-	-	-
Exemption	1.2%	0.2%	1.4%	1.3%

Source: Steer analysis of Client data

Data Collection exercise

3.32 As mentioned previously, to validate and inform various inputs used in Steer's forecasting model, we undertook primary data collection on the Asset, comprising the surveys listed in the table below. Both, the OD and TVC surveys were commissioned by Steer to a third party. While the OD data collection typically involves manual data entry by enumerators based on oral surveys with road users crossing toll plazas the TVC data collection involves video-graphic capture of traffic crossing the toll plazas, followed by manual counting.

Table 3.6 Data collection schedule

TP	3-day videography-based TVC			1-day OD survey			
	Start date	End date	Time (hrs)	Start date	Start time	End Date	End Time
TP1 Dakhina Sekhpur	23 Feb 2026	25 Feb 2026	00:00-23:59	23 Feb 2026	0800 hours	24 Feb 2026	0800 hours

Source: Steer analysis

3.33 It should be noted that, in our experience, traffic on national highways shows variation across the week due to the economic activities surrounding each road. To derive a representative TVC count considering daily variations, a three/seven -day traffic counts

are generally recommended. Therefore, to fully understand the impact of this weekly fluctuation on the Asset, we collected three-day counts at the toll plaza.

Key findings of the TVC data analysis

WADT estimates

3.34 Taking an average of the three-day TVC counts (23rd Feb – 25th Feb 2026, 00:00-23:59), we obtained the following weekly average daily traffic (WADT) for each toll plaza. This WADT excludes non-tollable vehicles such as tractors, two-wheelers, bullock-carts, etc., but includes officially exempt vehicles such as police cars, ambulances, emergency response vehicles, government vehicles and other vehicle types officially allowed as 'exempted' under the concession agreement.

Table 3.7 WADT from TVC counts

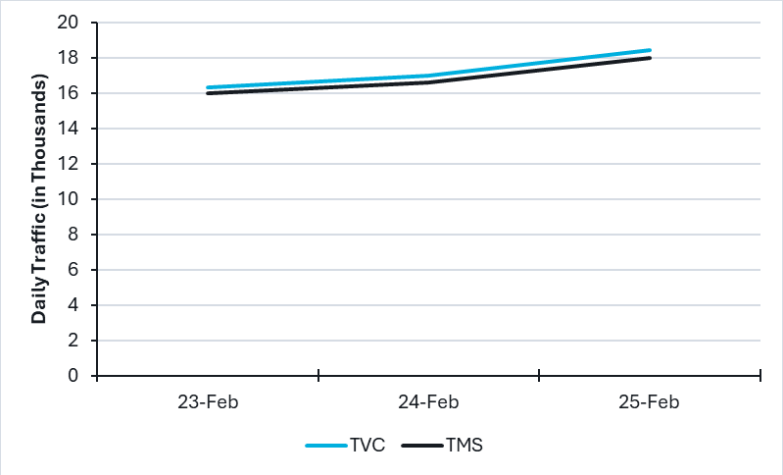
Toll Plaza	CJV	Mini LCV	LCV	Bus	2A	3A	MAV	OSV	Total
Dakhina Sekhpur	12,664	1,617	770	840	383	223	750	-	**17,248**

Source: Steer analysis of TVC data

TVC v/s TMS analysis

3.35 Since we use the TMS data to estimate the base year MADT, we have used our TVC data to validate the TMS data on those days, as provided by the Client. The following figures show the comparison between the daily traffic observed by TVC and TMS for the toll plaza.

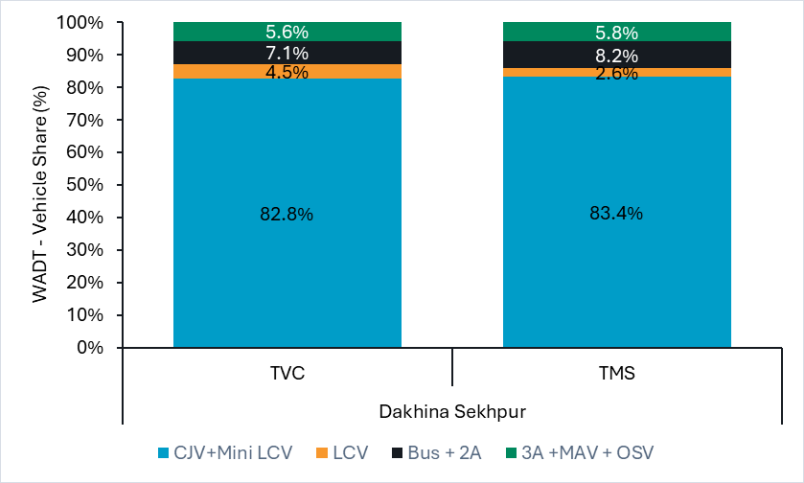
Figure 3-3 :Comparison between TVC and TMS daily traffic data on TP1 Dakhina Sekhpur



Source: Steer analysis of TVC and Client TMS data

3.36 Figure 3-4 below compares the shares of vehicle types at both toll plazas observed by the TVC and TMS data. As can be seen, whilst the share of CJVs and 3A+MAV+OSV is marginally higher for TMS compared to TVC, it is equal for bus/2A and lower for LCV category. This difference can be attributed to common misclassification of vehicle categories.

Figure 3-4: Comparison between vehicle shares from TVC and TMS WADTs



Source: Steer analysis of TVC and Client TMS data

3.37 Considering the variation between the TVC and TMS data is within ~2% Client data has been used to estimate base year traffic.

Key findings of origin-destination analysis

Overview

3.38 Origin-destination (OD) analysis enables the understanding of the nature of traffic movement on the Asset. As mentioned previously, the OD analysis presented here has been based on the data collected on 23rd-24th Feb 2026.

3.39 We have analysed the regional drivers of demand based on the following analyses:

- Zonal influence
- Commodity distribution
- Top OD pairs
- Trip length distribution

3.40 While zonal analysis and the list of top OD pairs help to understand 'where to and from' people and goods travel, commodity distribution sheds light on 'what' goods get transported. Trip length distribution show 'how far' vehicles and people travel, and goods get transported. This set of analyses is generally used to estimate the key drivers of traffic and aid the making of informed forecasting assumptions around traffic demand elasticities, growth drivers and exogenous impacts.

Sample rates

3.41 Sample rates help understand the reliability of OD data. They are calculated by dividing OD samples captured by the traffic counts (based on the TMS data) during the same time. The table below presents the sample rates for key vehicle type aggregations at the toll plaza. We believe that the sample rates of the OD data are reasonable for the analysis required.

Table 3.8: Sample rates for OD data

Vehicle type	TP1 Dakhina Sekhpur
Passenger (CJV+Bus)	41.8%
Goods (LCV+2A+3A+MAV+OSV)	92.9%

Source: Steer analysis of OD data

Zone Categories

3.42 To facilitate better interpretation of key regional drivers of traffic as determined by their OD zones, and influenced by various towns, cities, states and regions in the vicinity of the Asset, we have aggregated zonal data as described in the table below. The methodology behind this aggregation of zones may vary as per the characteristics displayed by the different Assets being studied.

Table 3.9: Zone aggregations for zonal influence analysis

Aggregate Zone	Description
Local	Local zones are those that fall on or very close to the Asset.
IAOI (Immediate Area of Influence)	IAOI zones are the locations which generate traffic and lie within approximately 75-150 km distance from the Asset.
Rest of State	Rest of the cities/Districts in the state that Asset lies in (other than Local/IAOI)
Delhi	Delhi NCR
North India	Uttarakhand, Haryana, Punjab, Jammu and Kashmir
Central India	Madhya Pradesh, Chhattisgarh
West India	Gujarat and Maharashtra
South India	Tamil Nadu, Karnataka, Kerala, Andhra Pradesh
East & Northeast India	West Bengal, Orissa, Jharkhand and Northeast Indian states

Source: Steer analysis

Zonal influence

3.43 The zonal influence is the contribution of the zone or the zonal aggregation to trips by a vehicle type. This section presents the zonal influence[6] at each toll plaza of each Asset, based on zonal aggregation listed in the previous sub-section. It should be noted that zonal influence is analysed on where the trip ends and not trip origination.

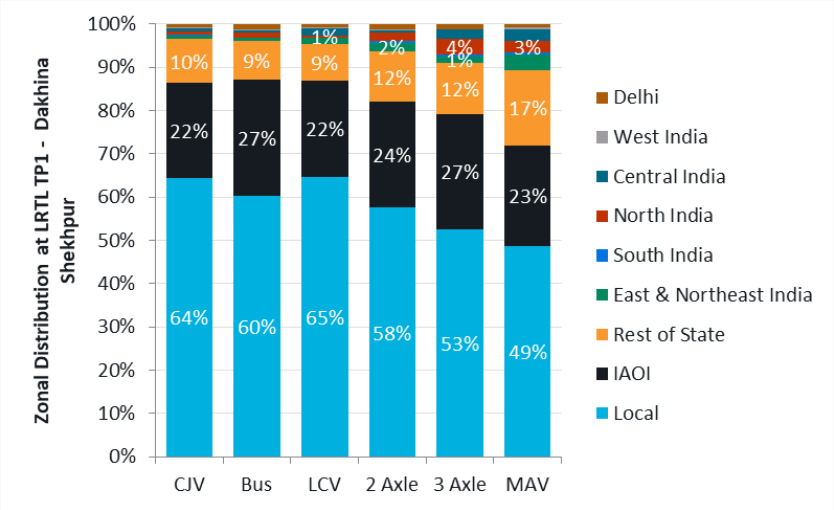
3.44 As can be seen from the figure below, there is a higher share of local trips for both the passenger and commercial vehicles wherein 64% of the influence for CJVs, 53% for 3A and 49% for MAV vehicles are from areas near the Asset. This analysis is in line with our understanding gained from the site visit, wherein a heavy influence on the traffic from the surrounding local areas and rest of the state was observed. Also, the results of the top OD

[6] For example, if out of 100 trips at a toll plaza on an Asset, 10 trips are between Hyderabad and Delhi and 90 trips are between Hyderabad and Chennai, then zonal influence of Hyderabad would be 50% since one end of all trips are at Hyderabad. Likewise, zonal influence of Delhi and Chennai would be 5% and 45%, respectively.

pair analysis, as given in the appendices, show that most of the trips originate and end in local and IAOI areas for Car, Bus and 2A trips, whereas for heavy goods traffic 3A and MAV, regions such as Kolkata, Punjab and Uttarakhand also make it to the Top OD pairs.

3.45 Outside the state of Uttar Pradesh, cities/towns in East & Northeast India such as Bihar, Jharkhand, Assam and West Bengal majorly influence the long-distance heavy goods traffic followed by those in the rest of north India such as Uttarakhand, Himanchal Pradesh, Punjab and Haryana. In short, North to East India is one of the key long-distance movements observed on the Asset, with trucks travelling from Punjab-Haryana-Moradabad-Lucknow to East India.

Figure 3-5: Zonal influence at TP1 Dakhina Sekhpur



Source: Steer analysis of OD data

Internal External analysis

3.46 Internal-External analysis helps in identifying the trips which have both the origin and destination on the Asset (Internal-Internal or I-I), any one end on the Asset (Internal-External or I-E), or neither end on the Asset i.e., through trips (External-External or E-E). 'Internal' zones are those that were analysed as 'local' and 'IAOI' in the zonal influence analysis, i.e., lying on the Asset or in the "immediate area of influence", 'Rest of State' zones are those origins and destinations aggregated as "Rest of State" in the zonal analysis while 'External' zones are all other zones.

3.47 Figure 3.6 below show the distribution of trips based on these categories. Understandably, these reflect the observations seen in the zonal influence presented earlier, at a higher level of aggregation.

3.48 We observed that there is little external traffic of MAV (20%) on the Asset and that 53% of MAV are making I-I trips and 10%. This indicates the local nature of the traffic on the Asset.

Figure 3-6: Internal-external distribution at TP1 Dakhina Sekhpur

	Internal	Rest of State	External
External	8%	4%	1%
Rest of State	10%	3%	1%
Internal	53%	14%	6%

Source: Steer analysis of OD data

Commodity distribution

3.49 We have grouped various commodities into aggregate categories for ease of interpretation, as shown in the table below. The charts in the following sub-section present information in terms of aggregate commodity categories.

Commodity Description	Code	Combined codes used for charts
Agriculture Products / Cash crops (Wheat, Rice, Sugar cane, Maize etc.)	AGR	AGR
Cattle Food / Live Stock (sheep, goat, cow, cattle food etc)	LIV	
Perishable Items (Fruits, vegetables)	PER	GRO
Animal Products/Dairy/Eggs/Fish/Meat/Animals	DFM	
Groceries / Food items (Soap, Salt, Sugar, Pulses, Spices, Biscuits, bread, cool drinks, beer etc.)	GRO	
Building Material / Construction (Cement, Lime, Brick, fly ash, etc)	CNS	CNS
Sand/Clay	SND	
Stone (kota stone, marble, Granite, Aggregate stone etc.)	STN	
Ceramic	CRM	
Petroleum Products (Oil, LPG, CNG, etc.)	PET	PET
Chemicals / Fertilizers (Acids, Fertilizers etc.)	CHM	
Electrical/Manufacturing items (Electronic items, Medicine, Leather, Wine, Rubber/ Tyre, Plastics, Cloth, Paper etc.)	MAN	MAN
Raw Wood, Cork & Wood Products, Furn	WUD	
Machinery / Spare parts	MAC	

Commodity Description	Code	Combined codes used for charts
Automobiles (Finished products, auto parts, Car/bike manufacturing, New Chassis)	AUT	AUT
Basic / Fabricated Metals (Iron, Steel / Metal)	MET	MET
Mining Minerals (Coal, Gypsum, Cobalt etc.)	MIN	
Empty	EMT	EMT
Container	CTR	MSC
Miscellaneous (Parcel, Courier, Household items etc.)	MSC	
Passengers	PAS	
Scrap	SCR	

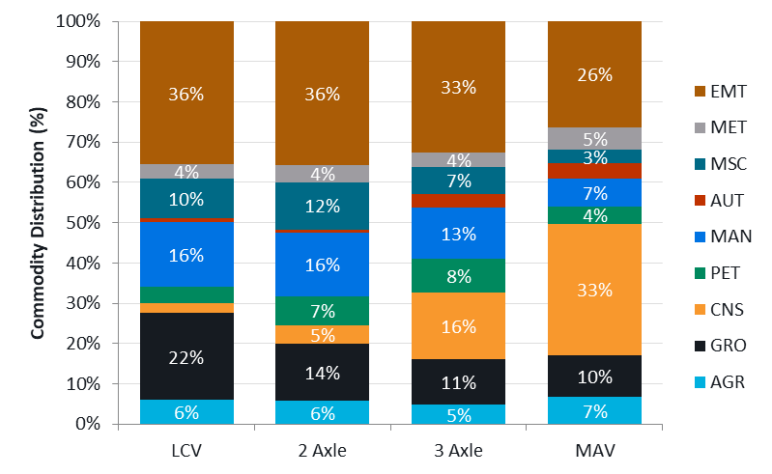
Source: Steer Analysis

3.50 The following figures present the commodity distribution for goods vehicles at the toll plaza, at the total level and also split by direction, towards Lucknow and towards Raebareli. Construction goods were the key commodity category moved by MAV vehicles accounting for 33% of the share followed by agriculture/groceries that formed 17% of the MAV traffic. Manufactured goods like household items was the key commodity being carried by light-goods vehicles accounting for 16% of the 2A and LCV traffic each.

3.51 A high percentage of vehicles moving grocery and miscellaneous items are observed as this Asset connects two major cities in Uttar Pradesh and these cities have a large inherent demand of fast-moving consumer goods. The agricultural and grocery items are carried over both short-distances from and to local places such as Lucknow, Raebareli and Kanpur, and over long-distances such as Uttarakhand, Punjab and Delhi. A similar mix of short and long distances trips are observed for vehicles carrying manufactured goods.

3.52 We observe all vehicle categories except MAV are higher travelling empty. This is because MAV vehicles carrying construction material make up for a 33% share moving towards Lucknow. This higher share of construction in this direction can be probably attributed to cement being transported from the plants near Raebareli to Lucknow. Overall, vehicles moving towards Lucknow seem to carry a more diverse mix of commodities than those travelling in the direction of Raebareli.

Figure 3-7: Commodity distribution at TP1 Dakhina Sekhpur



Source: Steer analysis of OD data

Trip length analysis

3.53 Trip-length distribution provides the distance-based profile of various vehicle types. This aids in validating assumptions around the share of macro-economic drivers, inputs from zonal influence and toll segmentation. For ease of interpretation, we have categorised distances into 5 groups – local (0-100 km), short-distance (100-300 km), medium-distance (300-500 km), long-distance (500-1000 km) and very-long-distance (+1,000 km). The trip distances were derived as driving distances from Google Distance Matrix Tool based on zonal coordinates for OD pairs.[7]

3.54 Supporting the observations made in zonal & internal-external analysis in the previous sections, Figure 3-8 below highlights that about 70% of light goods vehicles like LCVs and 2 Axles travel shorter distances up to 300 kms, largely contributing to the local movements on the Assets.

3.55 Even amongst heavier goods vehicles, 60-67% of the trips made by 3A and MAV are within 300km. It suggests that the Asset is largely local in nature. This is also observed in the internal-external analysis and is also brought out by the average trip lengths as shown in the Table 3.10.

[7] Google Distance API is a tool that is available on a chargeable basis from Google Maps Platform. Link: **https://developers.google.com/maps/documentation/distance-matrix/start**. Travel distance and time information for driving/transit under various congestion scenarios can be extracted through this tool by using macro-enabled Excel, R, etc.

	LCV	2 Axle	3 Axle	MAV
Average trip length (km)	207	277	298	341

Source: Steer analysis of OD data

Conclusions

3.56 In summary, CJVs, and 3A+MAV are the key contributors to the total revenue collected on the Asset. CJV's similarly hold the most significant share of the traffic volumes on the Asset.

3.57 The analysis on ticket-segmentation reflects that for CJVs, return is the most dominant category with 50%, while for MAVs, single is the most dominant category at 67%. Compared to FY22, FY26YTD observed 7-8% shift of MAVs from single to return category which can be attributed to shift of long-distance traffic on alternates.

3.58 The TVC-TMS analysis highlights minor variation between the two datasets wherein at the total level, TVC is approximately 2% higher than the TMS data with the difference being negligible for the larger revenue generating categories (3A, MAV, and OSV combined).

3.59 The OD analysis found that in terms of zonal influence, the passenger and commercial traffic is heavily influenced by local areas such as Lucknow, Raebareli, Prayagraj and Bachhrawan. Further, places in East & Northeast India such as Bihar, Jharkhand, Assam, and West Bengal majorly influence the long-distance heavy goods traffic followed by places in the rest of north India such as Uttarakhand, Himanchal Pradesh, Punjab and Haryana.

3.60 The key commodities transported on the Asset includes grocery products, construction items, minerals, and agricultural commodities by the heavy goods vehicle and grocery/agricultural items by light goods vehicle.

3.61 Overall, across all categories it is seen that majority of the traffic is internal in nature and therefore it can be inferred that the growth of traffic is directly proportional to the growth of state GDP. This is further supported by the top 10 OD pairs for this Asset as well as the trip length distribution which reflect that majority of all traffic covers distances up to 300km. It can also be seen that the average trip length for all goods categories is below 400km, with 99% of MAVs having one end of the trip in the state and only ~1% of trips are through which are external.

3.62 Therefore, analysing the vehicle share on the Asset and understanding the OD analysis, CJVs make up for the highest share of traffic and significantly contributed to the local traffic share. Heavy goods vehicles, although accounting for around only ~15% of the traffic on an average over the months, contributes the most to the total revenue share, wherein construction items, and groceries are the top commodity being transported on the Asset by these vehicles.

4 Socio economic context and traffic growth

Introduction

4.1 The growth of traffic on any existing (brownfield) road depends on, firstly, how fast the background travel demand grows (background growth); and secondly, how successful the roads are in attracting that traffic (traffic capture). Background travel demand is driven by the socio-economic conditions in the region where the Asset is located and the country. These include:

- Changes in factors such as population, economic growth (regional and national) and industrial production; and
- Other local factors such as strategic port growth, and growth in local industries near the Asset.

4.2 In turn, the change in the relative competitive position of the Asset (and thus of the traffic capture they can achieve) derives from how the relative offer for the roads changes, i.e. the service offered, and the tolls charged on the project roads, in comparison to that on competing roads; and whether any competing road facilities are planned.

4.3 In this chapter, we have assessed the trends of the above growth drivers, as indicators of the socio-economic conditions in the regions surrounding the Asset.

Population growth

4.4 We have analysed the key socioeconomic drivers of the background traffic demand in Uttar Pradesh state, where the Asset is located.

National level

4.5 Table 4.1 below the total population in India has grown at a Compound Annual Growth Rate (CAGR) of 1.5% since 2000, decreasing over the years, as shown in the table below. The World Bank forecasts this growth to decrease to 0.6% CAGR by the 2030-45 period.

Table 4.1: CAGR of population in India

Years	CAGR		
	Total Population (m)	Rural Population (m)	Urban Population (m)
1970 - 1985	2.3%	1.9%	3.8%
1985 - 2000	2.0%	1.7%	2.9%
2000 - 2015	1.5%	1.0%	2.6%
2015 – 2030*	1.0%	0.3%	2.3%

Years	CAGR		
	Total Population (m)	Rural Population (m)	Urban Population (m)
2030 – 2045*	0.6%	-0.3%	1.9%

Source: World Bank Data on Health Nutrition and Population Statistics, *forecast population growth.

State level

4.6 Uttar Pradesh represents approximately 17% of the country's population, with the total state population of 237 million, as of FY24. Table 4.2 shows the evolution of population in the state of Uttar Pradesh (containing the Asset), compared to that of the country.

Table 4.2: Population Growth in Uttar Pradesh and India (2012-2024)

State	2012 Population (m)	2024 Population (m)	CAGR (2012 – 2024)
Uttar Pradesh	201	237	**1.4%**
India	1,210	1,395	**1.2%**

Source: MoSPI Estimates

4.7 Due to the complexities of the patterns of urbanisation and migration (which are very difficult to forecast with accuracy), we do not use population growth as a proxy for understanding future travel demand growth on the Asset. The same has been included in this section simply to provide a socio-economic context of the trend in the region in which the Asset is located.

Economic Indicators

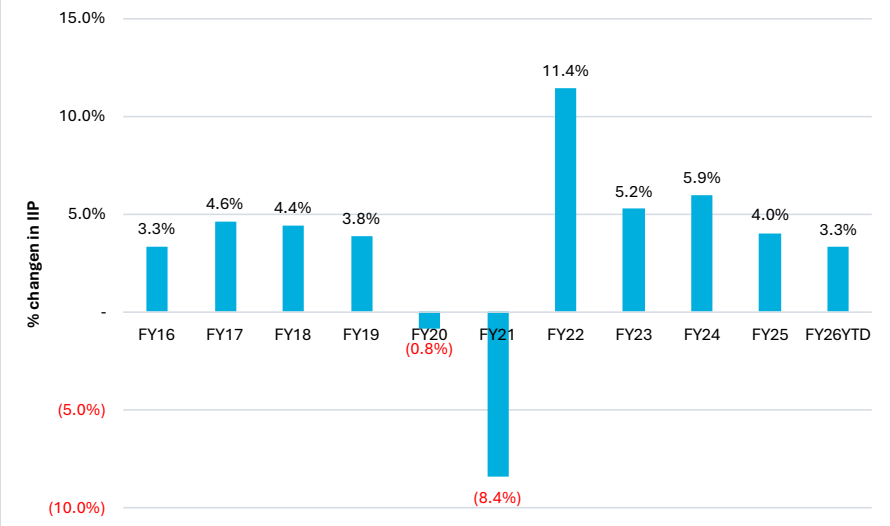
Industrial Production

4.8 The Index of Industrial Production (IIP) is a composite indicator that measures the short-term changes in the volume of production for a basket of industrial products. The IIP data tracks the manufacturing activity in different sectors of an economy, with mining, manufacturing, and electricity being the three broad sectors constituting the IIP.

4.9

4.10 Figure 4.1: below shows that at an annual level, national IIP was growing at an average of 4% per year over the period FY15-19, before the country underwent a liquidity crisis and experienced an overall economic slowdown in FY20. In the aftermath, IIP shrank by over 8% in FY21 due to a decline in economic activity in the wake of global lockdowns introduced to curb the Covid-19 pandemic. Post the immediate recovery in FY22, IIP growth has since stabilised, with FY25 recording 4% and FY26YTD (till February 2026) recording 3.3% growth over FY25.

Figure 4.1: Annual growth – Index of Industrial Production (FY16-FY26YTD)



Source: Ministry of Statistics and Program Implementation (MoSPI). FY26YTD represents data till Feb'26

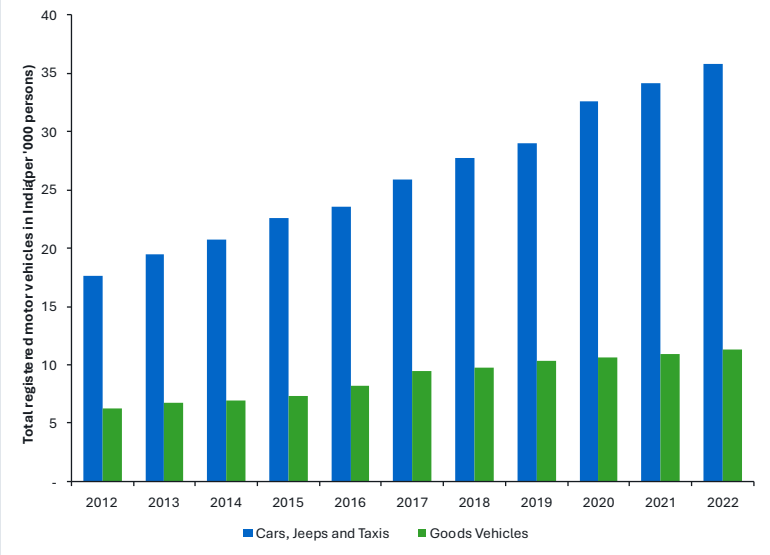
4.11 Since state-level IIP data is not as readily available as national level IIP, we have presented national IIP here to indicate nationwide activity in key industrial sectors like power, manufacturing, and mining, all of which influence long-distance commercial movements across the nation, and not unique to this asset. We however, do not use it to forecast future travel demand growth since long-term forecast for IIP is not available through official sources such as MOSPI, RBI or through multilateral organisations like WB, or the IMF.

Vehicle ownership

4.12 The gap in car ownership between India and developed nations remains substantial – with 36 cars/jeeps/taxis and 11 commercial vehicles per thousand people, as of FY22 (the latest year for which official data is available). However, with increasing per capita income levels, a booming economy and the subsequent increase in demand for mobility, the number of registered vehicles has been on a gradual upward trend.

4.13 Overall, India still stands at a very nascent stage in the vehicle saturation curve, offering huge potential for growth going forward. Between FY12 and FY22, the CAGR for CJV and goods' vehicles registered in India was 8.6% and 7.3% respectively.

Figure 4-2: Total number of registered motor vehicles in India (per 1000 population)

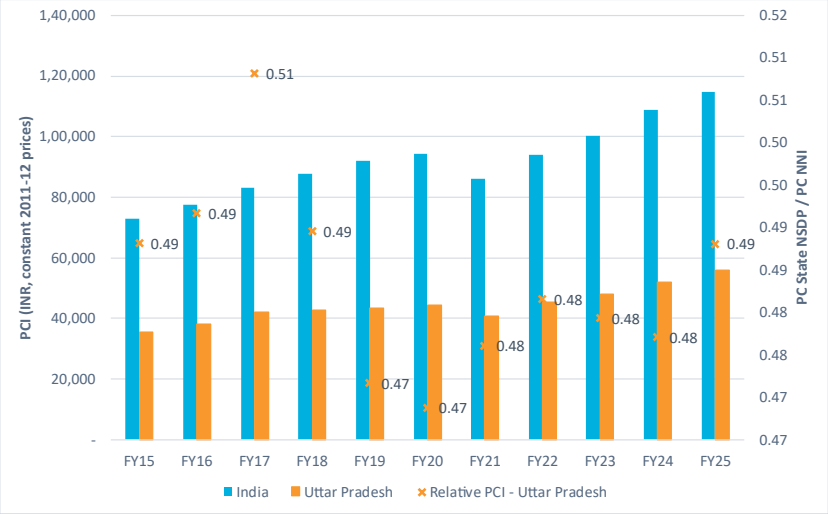


Source: Ministry of Road Transport and Highways (MoRTH)

Per Capita Income (PCI)

4.14 The per capita income of the state where the Assets lies i.e., Uttar Pradesh is lower as compared to the national average. In dollar terms, PCI of just $1,000 per head indicates that the state is at a very early stage of consumption curve. Going forward, we therefore expect local consumption to be strong which would drive the growth in both passenger and commercial traffic.

Figure 4-3: Per Capita Income



Source: Steer Analysis of MoSPI data

4.15 Given that there is dearth of district level PCI data as also non-availability of long-term forecast for PCI we have not used this indicator as a growth driver.

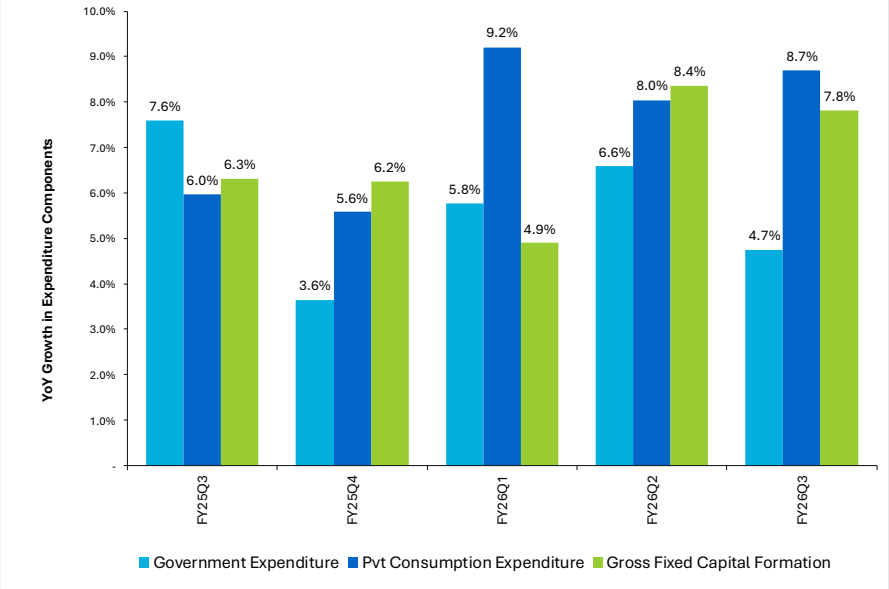
Economic growth

India's Performance

4.16 Despite a slowdown in the economy during H1FY25, the Indian economy has observed strong growth each quarter since FY25Q2, with the latest published estimates for FY26Q3 GDP at 7.8% over FY25Q3. This performance has been driven by strong growth in investment and consumption expenditures and higher consumer optimism for the year ahead[8].

4.17 In Figure 4-4 below, we present quarterly Y-o-Y growth in three major components of GDP – government expenditures, consumption expenditures, and business investment (gross fixed capital expenditure) over the past years (FY25Q3-FY26Q3).

Figure 4-4: YoY Growth in expenditure components of GDP



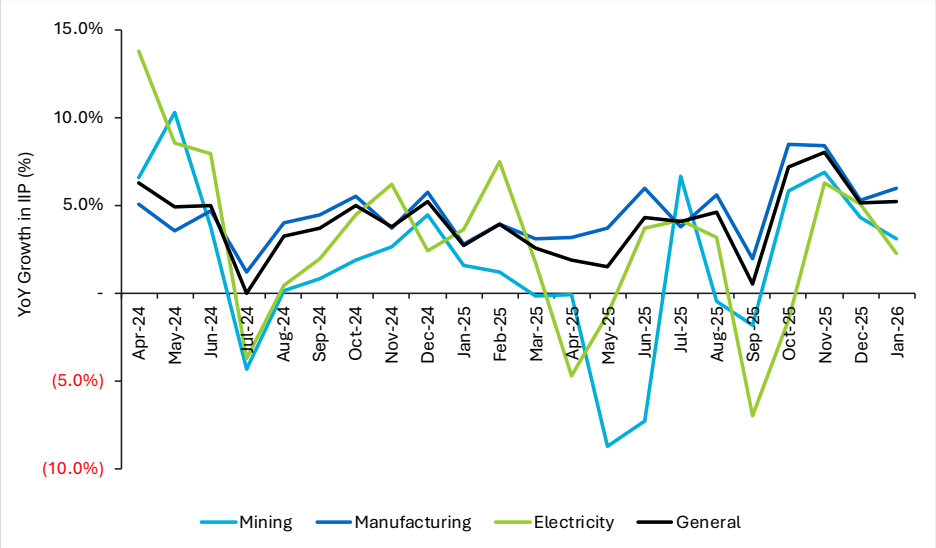
Source: Steer Analysis of MOSPI Data

4.18 While consumption and investment expenditures have continued to show consistent growth over the past two quarters, government expenditures observed a marginal decline in FY25Q4. In FY26Q1, government expenditures rebounded, recording 5.8% growth over FY25Q1 levels.

4.19 Performance across different types of industrial activities (such as Mining, Manufacturing, and Power Generation) directly impact freight movement and commercial traffic volume growth across the country, including on the Asset. In Figure 4-5 below, we present growth trends in IIP – a measure that tracks the performance of the economy across these activities. As of FY26YTD (Apr'25-Feb '26), the Manufacturing sector continues to perform strongly, recording positive y-o-y growth since FY25Q3. While industrial activity across the two other sectors (i.e., Power Generation and Mining) dropped between May and Jun/Jul '25, they have since rebounded and show signs of continued growth going forward.

[8] Gov**ernment of India PIB Release (27th February 2026)**

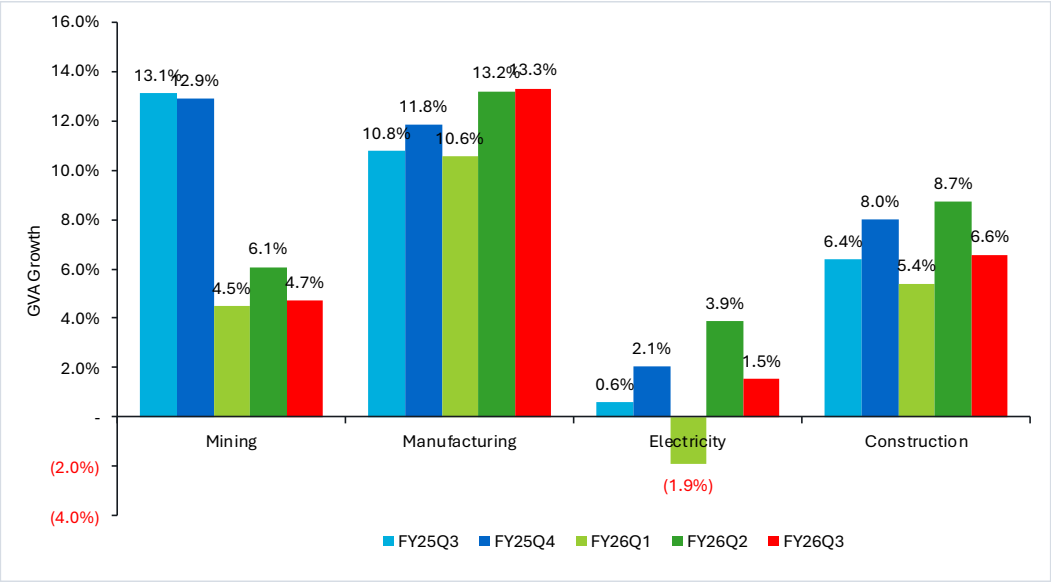
Figure 4-5: Month on Month IIP performance



Source: Steer Analysis of MOSPI Data

4.20 In addition to monthly trends in IIP, Figure 4-6 below presents y-o-y growth of quarterly GVA in four industrial sectors - Mining (& Quarrying), Manufacturing, Electricity (and other Utilities), and Construction. While the Mining and Power sectors observed decline and muted growth in FY26Q1, the Manufacturing and Construction sectors experienced strong growth. Generally, economic growth has remained resilient as of FY26YTD, but performance across industries have varied, impacting economic growth across different regions and on the Asset as well.

Figure 4-6: Industrial components of GVA



Source: Steer Analysis of MOSPI Data

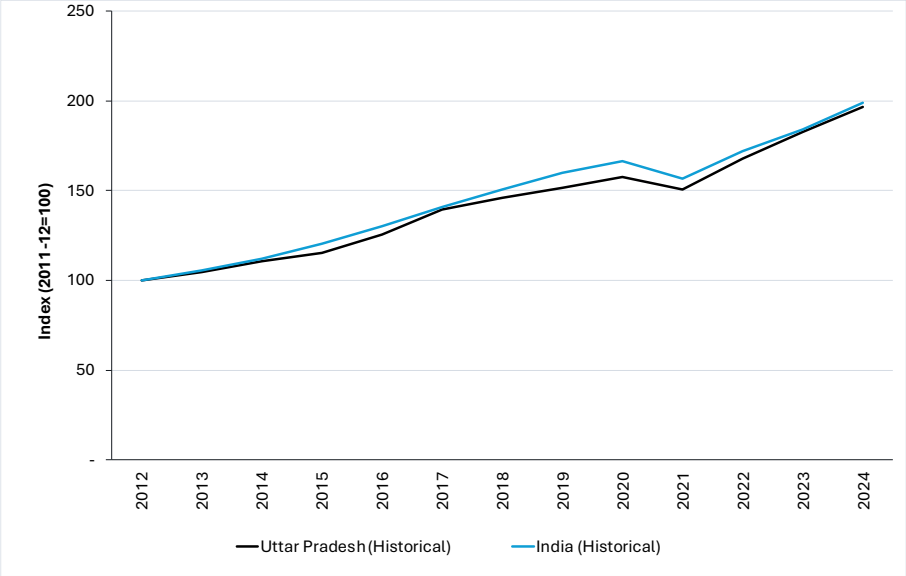
GDP and GSDP Growth

4.21 Over the period FY12-FY24, the Indian economic has grown at a CAGR of approx. 6% aided by growth in the tertiary sector which grew at a CAGR of approx. 6.9% over the same period.

4.22 The economic performance of Uttar Pradesh has been weaker than the country as a whole. The state contributes approximately 8% to India's GDP. In terms of sectoral contribution to the state GDP, tertiary sector has the highest share (47%) followed by secondary (28%) and primary (24%), with the sectoral shares remaining stable over the last few years.

4.23 The Figure 4-7 illustrates the evolution of Uttar Pradesh's GSDP.

Figure 4-7: Evolution of Uttar Pradesh's state GDP and national GDP



Source: Steer Analysis of MOSPI Data

4.24 Uttar Pradesh is the most populous state in India with a population of ~237 million people in FY24. The state has a large pool of skilled, semi-skilled and unskilled labour. Uttar Pradesh is also considered the largest consumer base in the country. The tertiary sector has the highest sectoral contribution to the state GDP followed by the secondary and primary sectors. These shares have remained stable for the past decade.

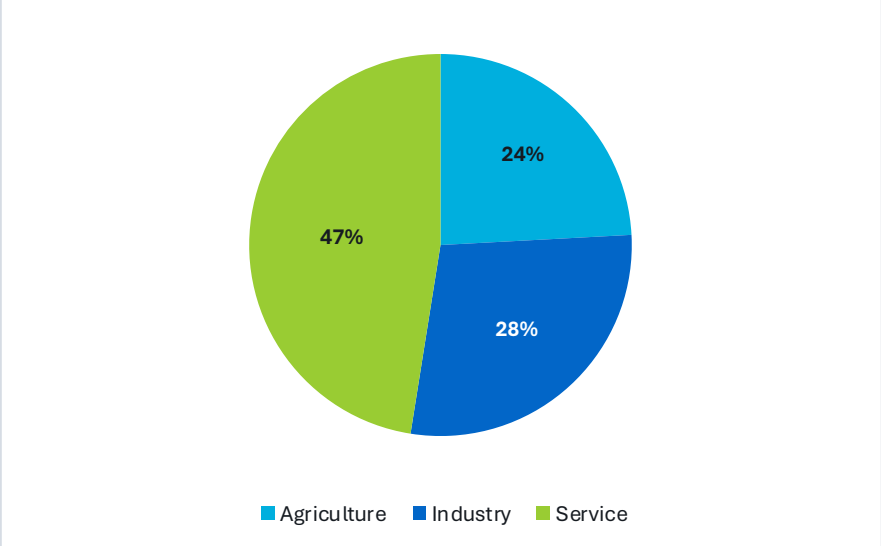
4.25 The tourism and transport sector constitute a majority of the state's tertiary sector. Uttar Pradesh is considered a favoured tourist destination in India, with key tourist attractions being Agra, Varanasi, Mathura and Prayagraj. In 2024, the state attracted the highest domestic tourist arrivals in the country with 649 million visits[9]. The state holds sixth position in the country in foreign tourist arrivals with over 2.3 million.

4.26 In terms of secondary sector, the state has key industrial areas in Khurja (Ceramic); Moradabad (Metals); Meerut, Bareilly, Mirzapur and Lucknow (Handloom & Handicrafts); and Kanpur and Noida (Leather and tannery). The state also has an oil refinery in Mathura, operated by Indian Oil Corporation.

[9] 'Tourist arrivals in U.P. surge by 17 cr in 2024 - Hindustan Times

4.27 Uttar Pradesh has very fertile Gangetic land with a large share of population dependent upon agriculture sector for the livelihood. The key primary industries in the state include food processing, crop production and horticulture. The state is mainly known for production of wheat, sugarcane, potato and mango.

Figure 4-8: Sectoral Distribution of GSDP of Uttar Pradesh for 2024



Source: Steer Analysis of MOSPI Data

4.28 The official historical GDP and GSDP data for India are released by the Ministry of Statistics and Program Implementation (MoSPI). The GDP forecasts for India are available from various reliable sources such as Oxford Economics and Consensus Economics[10], but state-specific GSDP forecasts are not published by any such sources. To derive state GSDP forecasts, we rely on past trends of the relationship between GDP and GSDP, and develop GSDP forecasts as a function of our assumed GDP forecasts[11].

4.29 For any indicator to be used as a growth driver to forecast traffic, a reliable source of historical and forecast data availability for that indicator is the key requirement. Of the key socioeconomic indicators discussed above, GDP was assessed to be the only growth driver for which reliable data is available both in terms of historical and forecast data. Therefore, to forecast traffic, we use GDP/GSDP as our key growth drivers.

Forecasts for growth drivers

4.30 Following the discussion in Chapter 4 on the nature of economic activity in the state of Uttar Pradesh, in this section, we describe the assumptions in relation to forecasts of the key macro-economic drivers of traffic growth. Particularly, we have based our forecast on GDP and GSDP using forecasts of GDP as provided by the Client.

[10] Consensus Economics - Economic Forecasts and Indicators

[11] Assuming that the historical long-term relationship between GSDP and GDP sustains over the short-term, we project future growth in GSDP as a function of our GDP growth forecast. We taper the relationship of GSDP growth to converge to GDP growth gradually over the long-term.

National GDP

4.31 After the last period of economic slowdown in FY11-12, the country experienced an economic downturn again in late FY19 with FY20 having reported a GDP growth of 4% (relative to an average growth rate of 7% per year between FY13 and FY19). India's GDP growth declined as domestic investment and consumption demand were already under stress because of the liquidity crunch before Covid-19. Other factors that contributed to the economic slowdown included reduced growth rates in automobile sales and production, liquidity crunch in credit markets and rising number of Non-Performing Assets (NPAs) within the banking sector, as well as lower manufacturing production and lower rural consumption.[12]

4.32 The Covid19 outbreak had a significant impact on the Indian economy during the first two quarters of FY21 as government mandated lockdowns across the country effectively stalled economic activity and growth. The growth momentum eventually picked up in Q3 of FY21, with a sharp rebound in the economy in FY22 (GDP recorded 9.7% growth over FY21), and has since observed a consistent growth of 7.6% in FY23, 9.2% in FY24. GDP growth remained strong through FY26, with quarterly growth of 7.8% in Q1, 8.4% in Q2 and 7.8% in Q3, while the RBI estimates full-year FY26 growth at 7.6% under the revised GDP series.

4.33 Figure 4-9 below shows client provided GDP projections. The forecast provided by the Client expects the Indian GDP to grow at 6.5% between FY27-FY28 and gradually tapering down to 5.2% by FY51, end of concession. The India GDP growth forecast provided by the Client is broadly in line with other independent forecasts available from reliable sources such as IMF, World Bank and RBI in the medium term.

4.34 By comparing historical trends of regional GSDP growth with the national GDP growth we have established GSDP projections for each state. We assumed that as the Indian economy grows, the states which have historically grown at a faster pace will, over 10 years, see a slowdown in GSDP growth, tending to the national average, whereas the states that have grown slower than the national GDP will begin to pick-up. The GDP-GSDP gap would partially converge by 2040 and fully converge by 2049.

[12] **Data | India's GDP was on a downward slope even before COVID-19 wreaked havoc - The Hindu** (September 2020)

Figure 4-9: GDP-GSDP forecast

5 FY26 Base year AADT and Traffic growth Analysis

Introduction

5.1 In this section, we present our approach, assumptions, and estimates for base year AADT and background traffic growth for each vehicle category on the Asset.

5.2 Traffic growth is commonly related to a variety of macro-economic and industry- or commodity-specific factors (hereafter referred to as 'traffic growth drivers'). These growth drivers are typically identified from the results of the OD data analysis and the site visits that help us appreciate the nature of traffic movement – 'what' travels 'where' and 'why'.

5.3 While comprehensive historical data on the asset is not available, we have access to six years of records. Despite some inconsistencies, this dataset provides a reasonable foundation for analysis. As a result, statistical methods to estimate background growth relationships could not be applied. Instead, we conducted a benchmarking exercise, supported by trip length and origin-destination (OD) analysis, to derive elasticity estimates. These are discussed in detail below.

FY26 Base year AADT estimates

5.4 The base year is the year on which long-term background forecast growth rates are applied to derive year-wise average annual daily traffic (AADT) estimates for forecast years. This is therefore an important aspect of our forecasting approach as traffic and ultimately revenue forecasts for future years are built on top of the base year traffic estimate. We have used FY26 as the base year for AADT estimates for the forecast years.

5.5 As described previously in Chapter 3, to establish the base year (FY26) traffic position, we utilized information from various sources – including from the Client and our context knowledge, to assess a reasonable demand on the corridor.

Methodology

5.6 The base traffic for FY26 has been estimated using 11 months of actual traffic data (April to February). Each toll plaza's seasonality correction factors were applied on the actual MADTs of Apr-25 to Feb-26 to obtain seasonally corrected estimates for FY26 traffic. An average of these estimates was considered to be the FY26 base traffic.

Seasonal Correction Factors

5.7 Traffic on any Asset varies on a month-on-month level. Such variations maybe due to monsoons (typically Jul to Sept) or due to specific festivals in the region. For e.g. It is observed that typically the truck traffic during the first half of the financial year (April-

September) is lower than the annual average. This is mainly because of the peak summer season followed by monsoons affecting the freight movement patterns in larger parts of the country, largely in the July-September period. In addition, there may be other seasonal variations specific to a particular Asset.

5.8 To normalise for these variations across the year to provide an AADT estimate, Seasonality Correction Factors (SCF) are used. SCFs are estimated to convert the monthly traffic numbers to an AADT level while accounting for seasonal variation due to local/national festivals, weather changes and/or temporary external impacts. These are typically estimated using historical data for each plaza and vehicle category over multiple years. An SCF >1 means that the traffic for the month is lower than the annual average and vice-versa.

5.9 The below table present the average of FY23 and FY24 SCF used to estimate the AADT for all categories except 3A and MAV for the Asset.

5.10 In the case of 3A and MAV FY23 SCF are considered since it better represents the actual seasonality of the traffic. FY25 is not considered due to construction activities occurring between Raebareli and Prayagraj thereby affecting the long-distance traffic on the Asset.

Table 5.1: SCF values for TP1 Dakhina Sekhpur

Vehicle Category	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Jan	Feb	Mar
CJV	1.06	0.97	0.96	1.07	1.11	1.11	1.05	0.94	0.92	1.02	0.87	0.98
LCV	0.90	0.89	0.87	1.03	1.15	1.09	1.01	0.97	1.01	1.13	1.02	1.03
Bus	1.04	1.01	0.99	1.01	1.02	1.01	1.00	0.96	0.99	1.07	0.93	0.98
2A	0.96	0.90	0.83	1.05	1.15	1.10	1.03	1.02	0.97	1.08	0.98	1.04
3A	0.77	0.89	0.84	1.14	1.25	1.11	1.15	0.93	0.97	1.01	1.04	1.11
MAV	0.86	0.96	0.90	1.15	1.20	1.22	1.13	0.85	0.86	0.98	1.02	1.06

Source: Steer analysis based on benchmarks

Adopted base estimates

6.1 Based on the above methodology and inputs, the adopted base for the toll plaza has been shown below:

Table 5.2: Adopted base estimates AADT

	FY25	FY26YTD	FY26A	FY26A vs FY25
CJV	12,358	12,457	12,491	1.1%
LCV	404	379	379	(6.3%)
Bus	778	763	765	(1.6%)
2A	444	455	455	2.6%
3A	186	187	184	(1.1%)
MAV	694	671	669	(3.6%)
Total	**14,864**	**14,912**	**14,942**	**0.5%**
PCU	**19,518**	**19,493**	**19,516**	**(0.0%)**

Source: Steer analysis: Steer analysis: FY25 actual full year, FY26YTD includes 11 months (Apr-Feb) of FY26, FY26A is adopted base for FY26

5.11 A comparison between the FY26 adopted estimates and the FY25 actual traffic shows a marginal increase of 0.5% in AADT. In terms of PCU, FY26 estimated traffic is at the same level as FY25.

5.12 The Asset, which serves as a key feeder route to the pilgrimage site of Prayagraj, experienced a temporary spike in traffic across all vehicle categories driven by heightened tourist and pilgrim activity from regions such as Lucknow, Sitapur, and other parts of Uttar Pradesh. The FY26 estimates reflect a return to typical traffic patterns post-event.

5.13 In terms of goods traffic, the degrowth in 2A/3A/MAV traffic (a combined decrease of ~3%, in FY26) is mainly due to several local network improvement activities around the Asset including Purvanchal Expressway, Lucknow – Sultanpur, Varanasi, where some share of traffic has already shifted to these alternate routes from the Asset. Further the Raebareli bypass is still under construction resulting in restriction on commercial traffic movement in peak hours. Therefore, truckers generally avoid daytime movement via the city.

5.14 Given the Asset's enhanced connectivity to Prayagraj, the host city of the Kumbh Mela held every 12 years we anticipate short- to medium-term growth in CJV traffic. Furthermore, with continued government investments and road infrastructure development in Lucknow (as detailed in Chapter 3), both CJV and Goods traffic on the Asset are expected to maintain healthy growth from FY26 onwards.

Estimation of background elasticities

Overview

5.15 For the brownfield Assets, where sufficient historical traffic evolution is available, it is common practice to use regression model analysis to determine the relationship, expressed as elasticity, between traffic growth and key socioeconomic drivers. This relationship is then applied to assumptions of future socio-economic developments to estimate future traffic growth.

5.16 In terms of selection of growth drivers for vehicle types, in general we have assumed state GSDP as the key driving factor for the CJVs and Buses given this traffic is generally driven by the local economies of the cities and state containing the Asset. The heavier commercial vehicles such as generally ply long-distance, and the underlying growth is governed by the general economies of several states or nation as whole.

5.17 Given the nascent stage of India's logistics sector, characterized by a highly fragmented trucking industry (95% of operators owning fewer than five trucks) and low car ownership rates (30-35 per 1000 people), the forecast elasticities are projected to remain constant throughout the concession period. This assumption is grounded in historical trends and a long-term perspective on regional and national growth, suggesting market maturity is still several years away.

5.18 The below table presents the growth drivers identified to model the forecast background traffic growth rates.

Table 5.3: Identified growth drivers to model traffic growth

Vehicle type	GDP India	GSDP Uttar Pradesh
Car	-	100%
LCV	-	100%
Bus	-	100%
2A	100%	
3A	100%	-
MAV	100%	-

Source: Steer

5.19 Further to developing estimates for FY26 AADT, the Asset has operational history between FY22 and FY25, proving us three years of traffic growth on the Asset. The table below summarises the volume growth across each of the vehicle categories. For this comparison we have normalised the FY22 AADT for COVID19 by adopting seasonally corrected H2FY22 as the FY22 normalised (FY22N).

Table 5.4: Passenger and Commercial growth with normalised FY22 – TP Dakhina

	FY22N	FY24	FY25	FY26A	FY22N-26 CAGR
CJV	10,834	10,747	12,358	12,491	3.6%
LCV	585	402	404	379	(10.3%)
Bus	652	689	778	765	4.1%
2A	608	450	444	455	(7.0%)
3A	497	237	186	184	(22.0%)
MAV	1,022	691	694	669	(10.1%)
OSV	-			-	
Total	**14,198**	**13,218**	**14,864**	**14,942**	**1.3%**
PCUs	**20,413**	**17,797**	**19,517**	**19,516**	**(1.1%)**
Passenger	11,486	11,436	13,136	13,256	3.6%
Commercial	2,127	1,378	1,324	1,686	(5.6%)

Source: Steer Analysis; Note; Passenger includes CJV and Bus traffic whereas Commercial includes 2A/3A/MAV traffic

5.20 Asset observed a de-growth of ~1% from FY22N to FY26 at the PCU level. Passenger traffic, which includes CJV and buses, is projected based on the state's GSDP, as the growth is driven by the regional local economy. Meanwhile, commercial traffic (2A/3A/MAV) is growing in relation to GDP, as the Asset lies on the NH30 corridor, which primarily facilitates movement between Delhi, Uttar Pradesh and Jharkhand. Any growth observed on the Asset is influenced by regions along this route.

5.21 Decline in commercial traffic is predominantly a result of lower than anticipated regional development, diversion of long-distance traffic to alternates and delay in construction completion of the Raebareli bypass. As a result, the commercial traffic volumes have remained lower than anticipated.

5.22 With these bottlenecks slowly clearing, it is expected that the growth albeit muted will return to the Asset in commercial vehicles. CJV's on the other hand continue to grow

5.23 The sections below detail out the reasoning for selection of respective growth driver(s) for each vehicle category.

Table 5.5: Elasticity recommendations for the Asset (Lucknow-Raebarelli)

Vehicle Category	Proposed Growth Driver	Elasticity	Comments
CJV	Uttar Pradesh GSDP	1.0	CJV cater to local movement between Lucknow, Raebareli and Allahabad. Strong car growth expected as these populous and big towns grow.
Mini LCV	Uttar Pradesh GSDP	0.4	The Mini LCV contribute largely to the local consumption demand of Lucknow-Raebareli region. These trips are predominantly short distance. Considering this along with our experience across the toll roads in the region, we believe the assumption of 0.4 elasticity with the state GSDP to be appropriate.
Buses	Uttar Pradesh GSDP	0.5	It seems that buses currently are serving local intercity demand. As these cities grow, the buses are also expected to respond to the increasing demand however only at a 0.5 relationship to GSDP.
LCV	Uttar Pradesh GSDP	0.4	LCV/2A contribute to the local consumption demand of Lucknow-Raebareli. The trip lengths of LCV and 2A category (up to 80%) are predominantly short distance <300Km. Which confirms the understanding that the movements cater to local demand. Considering the above observations, and our experience across other toll roads in the region, we believe that elasticities of 0.4 with respect to state GSDP are considered reasonable.
2A	GDP India	0.4	2A/3A/MAVs are primarily long-distance traffic carrying a mix of commodities. Historically, the Asset saw a mix of medium and long-distance trips, with trip lengths for more than 80% of the MAV are more than 300km, signifying local nature of the movement. A small proportion of traffic on the Asset serves as a key connector for long-distance trucks travelling between Punjab, Haryana, Uttar Pradesh, West Bengal and Jharkhand. Therefore, a relation of 0.4 to GDP has been considered to MAVs. 3A's have been declining and we believe 3A to grow slower as compared to MAV as there is an increasing preference to use MAVs for long-distance movements, as discussed in Chapter 3 above.
3A	GDP India	0.1	
MAV	GDP India	0.4

6 Forecast: Network overlays and forecasts

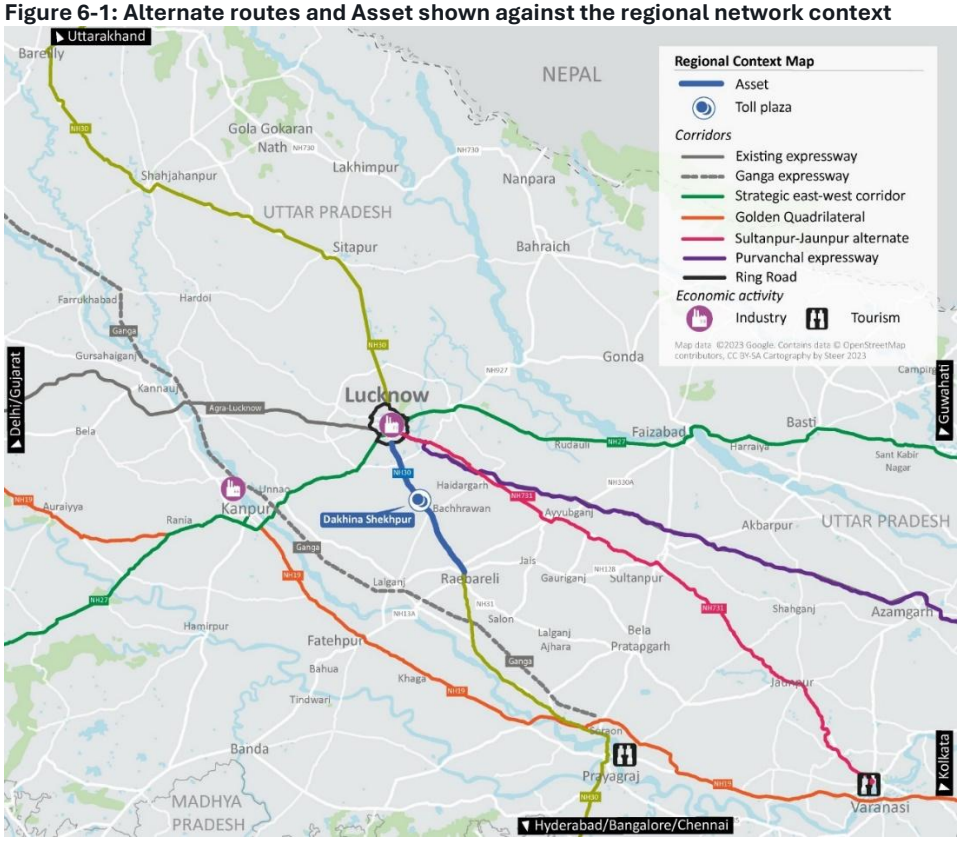
Introduction

6.2 Following the discussion on our forecast of background growth rates in the previous chapter, this chapter first covers the potential network impacts on traffic growth on the Asset. Thereafter, we present our assumptions around toll segmentation, trip factors and evolution of toll rates for the forecast period which are used to forecast revenues as derived from forecast traffic. In the final section, this chapter summarises traffic growth rates for the forecast years.

Analysis of potential network/developmental impacts

6.1 This section details the impacts which we believe would affect traffic on the Asset during the concession period. As discussed in previous Chapters, to assess the impacts on the Asset, whether positive or negative, we have studied developments (alternate roads, feeder roads and regulatory) in the surrounding road network.

Figure 6-1: Alternate routes and Asset shown against the regional network context



Source: Steer cartography using OpenStreetMap data

Ganga Expressway

6.2 A 594km greenfield six-lane expressway is being developed by the Uttar Pradesh Expressways Industrial Development Authority (UPEIDA) connecting Meerut and Prayagraj. The expressway will pass through 12 districts in Uttar Pradesh including Meerut, Shahjahanpur, Kannauj, Unnao, Rae Bareli, Prayagraj etc.

6.3 The benefits will be mostly valued by long and medium distance users which make end to end movements and movement between important districts compared to short distance users. This expressway is expected to be operational by Q1FY27.

6.4 The table below shows the comparison of the key input toll, and time comparison via Asset and alternate.

Table 6.1: Impact of Ganga Expressway

Vehicle category	FY27	FY28 Onwards
Car	(0.6%)	(0.8%)
LCV	(1.1%)	(1.5%)
2A	(0.7%)	(1.0%)
3A	(2.2%)	(3.0%)
MAV	(1.0%)	(1.3%)

Source: Steer analysis; Considering 75% of the full impact will be applicable from FY27, and 100% FY28 onwards

Increase in Passenger Traffic due to Ardha-Kumbh and Maha Kumbh Mela

6.5 The Lucknow-Raebareli Asset acts as a feeder to the important pilgrimage site of Prayagraj. This holy site plays host to the Kumbh Mela every 12 years, which attracts tens of millions of devotees. It also hosts the Ardha-Kumbh every six years after the Kumbh.

6.6 Due to this, the years when these festivals are held, witness increased tourist activities which is reflected in an increase in Car and Bus volumes travelling from Lucknow, Sitapur and other parts of the state and country to Prayagraj.

6.7 The table below shows the impact of the Kumbh Mela on traffic volumes. This impact will recur at six-year intervals for Kumbh and Ardha-Kumbh respectively:

Table 6.2: Increase in Car and Bus traffic due to Kumbh Mela

Vehicle category	FY31 onwards (every 12 years) – Artha Kumbh	FY37 onwards (every 12 years) – Maha Kumbh
CJV	2.1%	4.1%
Buses	2.2%	4.4%

Source: Steer analysis

Revenue forecasting assumptions

6.8 To forecast the revenues for a particular financial year, the traffic forecast for each vehicle type is converted into tickets sold, which is then multiplied with the corresponding toll rate, which grows over the years as defined in the Concession Agreement. While “trip

factors" provide the conversion factor to the former, i.e., traffic (trips) to tickets sold, "toll segmentation" provides the latter i.e., the breakup of trips paying each ticket type. This section discusses assumptions related to trip factors, toll segmentation and toll rates for the forecast period.

Trip factors

6.9 Trip factors are used to calculate the revenue for the trips made on passes such as return, local personal, monthly passes. The trip factors assumed are based on the latest FY25 data available and listed in the table below:

Table 6.3: Trip factors at TP1 Dakhina Sekhpur

Forecast	CJV/MLCV	LCV	Bus	2A	3A	MAV
Single	1	1	1	1	1	1
Return	2	2	2	2	2	2
Monthly	45	45	50	45	45	45
Local Commercial	1	1	1	1	1	1
Local Personal	59	20	20	20	20	20

Source: Steer analysis of Client TMS data

Toll segmentation

6.10 The Ministry of Road Transport & Highways has finalized a compensation formula for existing toll concessionaires to offset revenue loss from the Annual Pass scheme for non-commercial vehicles.[13]

6.11 Across multiple assets, the share of annual pass trips has been rising on a monthly basis since August 5. A corresponding decline in other ticket categories including Single and Return journeys has been observed.

6.12 CJV Segmentation for FY26 has been developed using the pre annual pass segmentation till 14th August 2025, and post-annual pass segmentation from 15th August 2025 till 28th February 2026. The share of annual pass trips in March 2026 has been assumed to be the same as the share of annual pass trips in the last 10 days of February 2026.

6.13 The segmentation for CJVs in FY27 has been assumed to be the same as the estimated March 2026 segmentation as trends suggest that the share of annual pass trips have stabilised. For other vehicle categories we have analysed the historical TMS data split by ticket categories, to understand trends, as shown in Chapter 3. For the traffic and revenue forecast, FY26YTD (Apr- Feb) as discussed in the earlier sections, can be considered a normal period.,In FY26, the share of CJVs using the Annual Pass is projected at 12%, while from FY27, this share is expected to stabilize at 24%.

Table 6.4: Segmentation for forecast years, TP1 Dakhina Sekhpur

Ticket type	CJV FY26	CJV FY27	MLCV	LCV	Bus	2A	3A	MAV
Single	24%	21%	27%	45%	6%	56%	46%	67%

[13] Annual Pass

Ticket type	CJV FY26	CJV FY27	MLCV	LCV	Bus	2A	3A	MAV
Return	49%	42%	57%	53%	93%	40%	51%	27%
Local Commercial	0.5%	0.4%	0.5%	1%	0.3%	3%	2%	6%
Local Personal	6%	5%	6%	-	-	-	-	-
Exemptions	9%	8%	9%	1%	0.2%	1%	1%	1%
Annual Pass	**12%**	**24%**		-	-	-	-	-

Source: Steer analysis of Client TMS data; ticket segmentation for all vehicle categories other than CJVs are from FY26 onwards

6.14 The Annual pass compensation is separately calculated using the formula prescribed by NHAI in the same circular. Following Table 6.5 presents the Annual pass compensation computed for the toll plaza.

Table 6.5: Annual pass compensation for CJVs (in Crore)

Toll Plaza	FY26	FY28	FY33	FY38	FY43	FY51
Dakina Shekpur	4.7	10.7	18.3	30.4	50.8	108.1

Source: Steer Analysis

Toll evolution

6.15 Based on the concession agreement and the gazetted toll notification, we understand that base toll rates increase every year (revision month is April) based on WPI-linked inflation. These are rounded up to the nearest five to estimate the final toll rate charged to users.

6.16 We have used actual toll rates from the FY25 toll notifications and FY26 WPI to validate the modelling of future toll evolution. Increase in WPI was calculated based on the Client's WPI forecasts, as shown in the table below. The upward trend in inflation is expected to continue in the medium term, before gradually tapering to 4.1% in the long term.

Table 6.6: WPI growth forecast assumptions

Financial year	WPI growth (%)
FY26	2.57%
FY27	0.96%
FY28	5.0%
FY29	5.1%
FY30	4.9%
FY31	4.4%
FY32 onwards	4.1%

Source: FY27 onwards WPI print as per client inputs

Revenue reconciliation

6.17 As part of validating the data provided by the Client, as well as our assumptions around toll calculations, we have reconciled the actual reported revenue on a monthly level for the Asset.

6.18 The Steer revenue calculations have been built up from monthly raw traffic data files, containing monthly data and ticket type information; and the toll notifications – all shared by the client. The comparison, as shown in the table below,

Table 6.7: FY26YTD Revenue reconciliation summary

AADC Modelled (INR Lakhs)	AADC Reported (INR Lakhs)	Modelled vs Reported (Difference %)
18.8	18.9	(0.4%)

Source: Steer comparison between modelled and reported revenue

Traffic and Revenue forecasts

6.19 Based on the traffic and revenue-related forecast assumptions discussed above, we have modelled the traffic and revenue forecasts for the forecast period for the Asset. The table below presents the AADT/PCU and revenue forecast growth rates and CAGRs on this Asset. Further, Appendix B presents the AADT and revenues for the forecast period.

Table 6.8: Forecast traffic forecast for TP1 Dakhina Sekhpur

Vehicle Type	FY26	FY28	FY33	FY38	FY43	FY51
CJV	11,049	12,206	16,258	21,610	28,962	42,746
Mini LCV	1,442	1,515	1,703	1,912	2,135	2,522

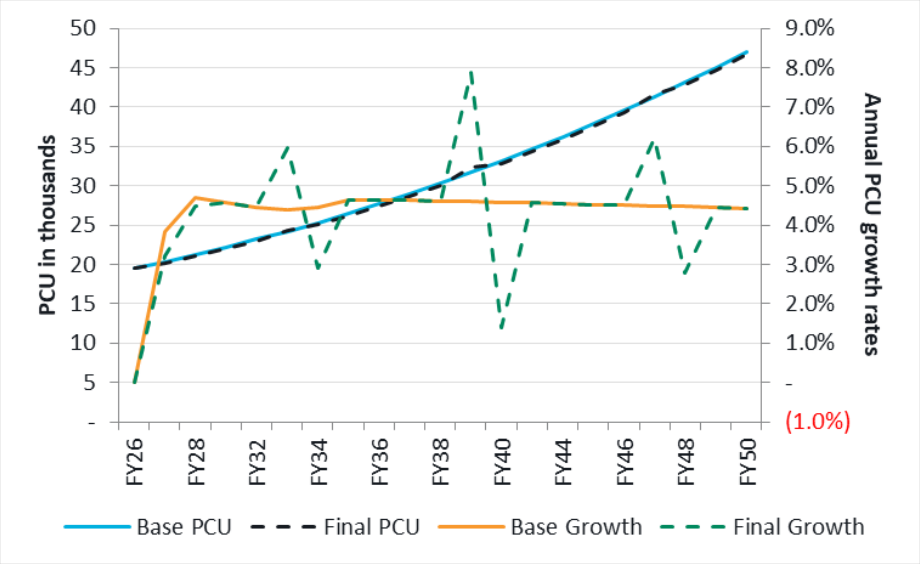
Figure 6-2 Forecast PCUs and growth rates at TP1 Dakhina Sekhpur



Source: Steer analysis

Target revenues and modification of concession period

6.20 As per the concession agreement, the target revenue should be 9.05 Cr for the month of March 2030 first calculation of target revenue and 21.64 Cr for the month of March 2040 for the second calculation of target revenue. The traffic sampling will be undertaken for a continuous period of 7 days during anytime within 15 days prior to the date on the specified year, previous year and following year. The average thereof will be deemed as 'actual revenue.'

6.21 If the target revenue falls short or exceeds by 20% and 30% for extensions 1 and 2 respectively, the concession period shall be deemed to be modified using the laid-out conditions in the concession agreement. The table below presents the summary of the analysis.

Table 6.12: Target Revenues for Extension 1

Asset	Target Month	Target Revenue	Estimated Revenue			Average Revenue	Variation (%)
		Cr	2029	2030	2031		
LR TP1	Mar-30	9.1	7.81	8.51	9.36	8.56	(5.0%)

Source: Steer analysis

Table 6.13: Target Revenues for Extension 2

Asset	Target Month	Target Revenue	Estimated Revenue			Average Revenue	Variation (%)
		Cr	2029	2030	2031		
LR TP1	Mar-40	21.6	18.57	20.28	22.11	20.32	(6.0%)

Source: Steer analysis

6.22 We have used the average AADT forecast for the target year, previous year and following year as a proxy for 'actual traffic.' We have forecast seasonality of March month to adjust for seasonal trends and arrive at March traffic from AADT traffic, which is then segmented according to the forecast toll segmentation and trip factors and multiplied with respective estimated toll rates to get to a monthly revenue collection.

6.23 As seen from the table above, the target revenue forecast for the Asset is lower than the concession agreement target revenue by around 5.0% for target date 1 and 6.0% for target date 2 respectively. As the difference below above the permitted threshold of 20% and 30% for target date 1 and 2 respectively, no change in the length of the concession agreement is expected.

Upside and Downside cases

Upside and Downside scenario assumptions

6.24 We have developed our base case scenario considering a balanced view on the risks associated with input assumptions around GDP growth and traffic growth elasticities. There is always a risk that the outturn values of these inputs will vary as compared to the assumptions taken due to exogenous impacts, e.g. GDP growth could be influenced both positively and negatively by the impact of monsoons, export-import balances, political changes etc.

6.25 Similarly, traffic growth elasticities could be influenced by increased efficiencies achieved by technology, large shifts in commodity prices globally, changes in local manufacturing practices. However, at this stage we consider that the base case represents a central case scenario given the risks of variation of input assumptions.

6.26 To account for the possible variations in the growth drivers, we are also presenting an Upside (optimistic) and a Downside (pessimistic) scenario. These scenarios are defined by the following variations from the base assumptions:

Table 6.14: Summary of Macro-economic Assumptions for upside and downside cases

Input	Upside	Downside
Macro Assumptions		
GDP/GSDP	+1% every year	-1% every year
WPI	+1% every year	-1% every year
Elasticities	+ 10%	- 10%

Source: Steer analysis

6.27 Further, network developments are highly dependent on governmental directions, policies, legal and financial measure which might result in early or delayed completion of developments. Therefore, we have included an Upside (optimistic) and a Downside (pessimistic) case. However, at this stage, we consider that the base case represents a central case scenario given the risks of variation of input assumptions.

Impacts-Upside Case

6.28 The upside case impacts included in forecasts are summarised in below.

Table 6.15: Summary of impacts on the Assets

Development	Year of impact	Change in impact w.r.t base case	Magnitude of impact
Ganga Expressway	FY27*- 75% FY28 – 100%	+25% of base case	CJV: (0.6%) LCV:(1.1%) 2A: (0.7%) 3A: (2.2%) MAV: (1.0%)
Increase in Passenger traffic due to Ardhakumbh and Mahakumbh Mela	FY31&FY43* (30% of the impact for Ardh-Kumbh) FY37&FY49* (60% of the impact for Mahakumbh		CJV: (5.2%) Bus: (5.5%)

Source: Steer analysis; * Same as base case timeline

Impacts-Downside Case

6.29 The downside case impacts included in forecasts are summarised in below.

Table 6.16: Summary of impacts on the Assets

Development	Year of impact	Change in impact w.r.t base case	Magnitude of impact
Ganga Expressway	FY27*- 75% FY28 – 100%	-25% of base case	CJV: (0.9%) LCV:(1.9%) 2A: (1.2%) 3A: (3.7%) MAV: (1.7%)
Increase in Passenger traffic due to Ardhakumbh and Mahakumbh Mela	FY31&FY43* (30% of the impact for Ardh-Kumbh) FY37&FY49 (60% of the impact for Mahakumbh		CJV: (8.6%) Bus: (9.1%)

Source: Steer analysis; * Same as base case timeline

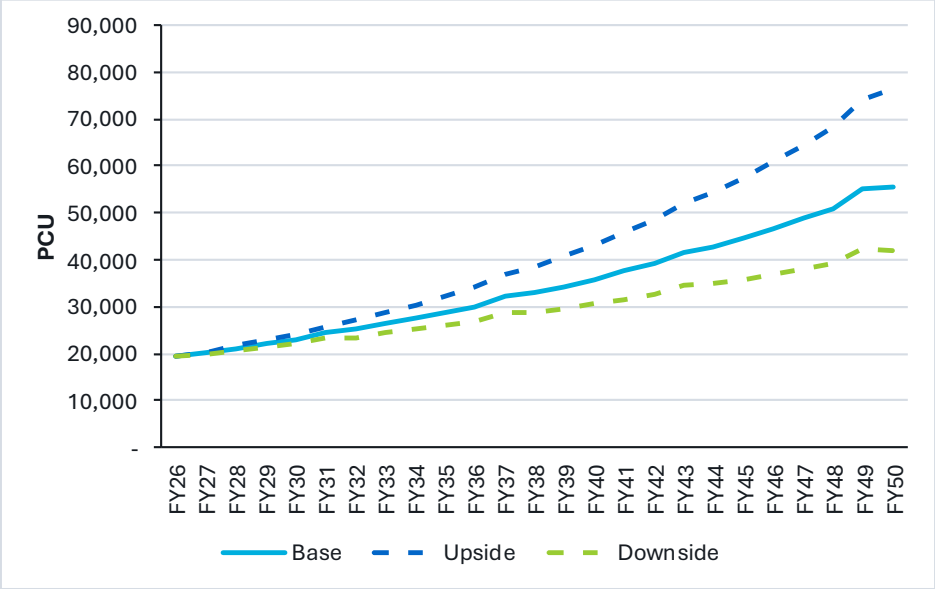
6.30 Based on the above assumptions for upside and downside scenarios, the following table summarizes the upside potential and downside risks associated with the PCU and the revenue for Dakhina Shekpur toll plazas at the end of the concession i.e. FY51.

Table 6.17: Upside potential and Downside PCU scenario – FY51

Toll Plaza	Upside Potential	Downside Risk
Dakhina Shekpur	40.1%	(25.4%)

Source: Steer Analysis of client data

Figure 6.3: Long term PCU forecasts for Dakhina Shekpur TP including upside and downside scenario



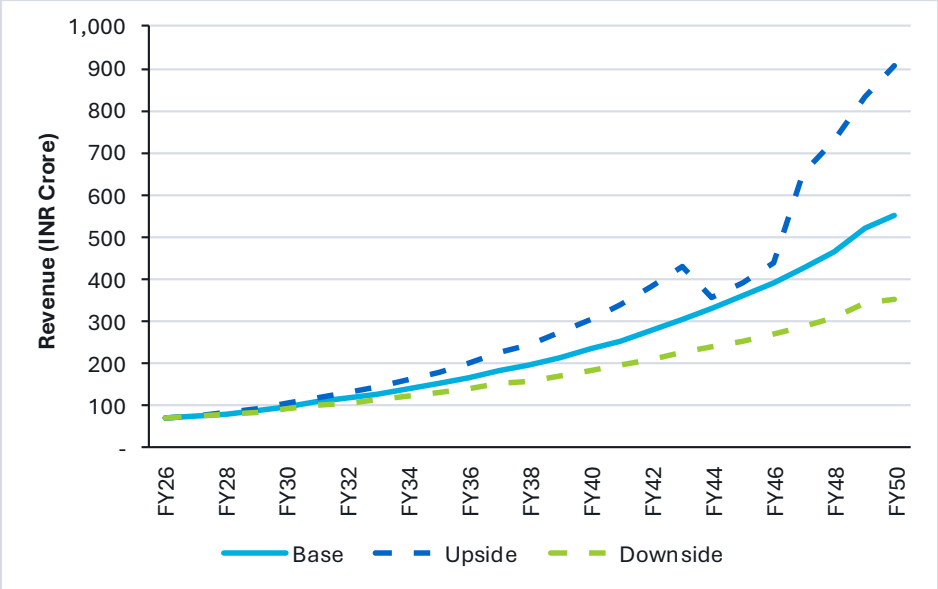
Source: Steer Analysis

Table 6.18: Upside potential and Downside Revenue scenario – FY51

Toll Plaza	Upside Potential	Downside Risk
Dakhina Shekpur	67.3%	(37.7%)

Source: Steer Analysis of client data

Figure 6.4: Long term Revenue forecasts for Dakhina Shekpur TP including upside and downside scenario



Source: Steer Analysis

6.31 Revenue projections exhibit variability in both the upside and downside cases, driven by fluctuations in macro-economic factors such as WPI, GDP/GSDP, elasticities and the network impacts.

Summary outlook

6.32 Passenger movement on the Asset is the largest share of traffic on this Asset. On one side is the state capital of Lucknow and on the other side is the state judicial capital and a major tourism/pilgrim centre of Prayagraj. Cars are expected to see a healthy growth on the Asset following the overall behavioural shift of users with the increasing per capita income.

6.33 The Asset benefits from its strategic location connecting the east-west movement of goods from Uttarakhand and Northern Uttar Pradesh towards South-eastern Uttar Pradesh, Jharkhand, and West Bengal. The 3A/MAV traffic on the Asset is a mix of regional and long-distance traffic carrying a variety of commodities ranging from agricultural products, manufacturing items and minerals. This portion of traffic is assumed to see a strong growth relationship with the national GDP and state GSDP.

6.34 Our findings and estimates in this report are based on our understanding from the site visit, analysis of primary data available both from surveys and the toll management system (both historical and current), macroeconomic assumptions prescribed by the Client, feedback gathered from Client meetings and secondary publicly available data. There can be both positive and negative risks associated with assumptions and the forecasts using them as summarised below:

6.35 Overall, we see a positive outlook for the region and the Asset, given that it serves major urban centres of Lucknow and Prayagraj and eastern Uttar Pradesh as a whole. The underlying growth drivers of the corridor are strong and are expected to deliver long term sustained growth.

Appendices

A Top 10 OD Pairs

A.1 Further to the OD analysis presented in Chapter 3 this appendix presents the top 10 OD pairs at each toll plaza. For both CJVs and MAVs and OSVs the top OD Pairs are combined below:

Table A.1: CJV, Bus and Mini Bus top 10 OD pair shares at TP1 Dakhina Sekhpur

	OD Pair	Share
1.	Raebareli-Lucknow	32%
2.	Lucknow-Prayagraj	13%
3.	Bachhrawan-Lucknow	8%
4.	Bachhrawan-nigoha	3%
5.	Lalganj-Lucknow	2%
6.	Lucknow-Pratapgarh	2%
7.	Mohanlalganj-Raebareli	2%
8.	Lucknow-Fatehpur	2%
9.	Mohanlalganj-Bachhrawan	2%
10.	Lucknow-Lucknow	1%

Source: Steer analysis of OD data

Table A.2: 3A and MAV top 10 OD pair shares at TP1 Dakhina Sekhpur

	OD Pair	Share
1.	Raebareli-Lucknow	15%
2.	Lucknow-Prayagraj	11%
3.	Lucknow-Varanasi	5%
4.	Bachhrawan-Lucknow	4%
5.	kundanganj-Lucknow	4%
6.	Lucknow-Banda	3%
7.	Lalganj-Lucknow	2%
8.	Varanasi-NCT of Delhi	2%
9.	Kanpur-Prayagraj	1%
10.	Lucknow-Pratapgarh	1%

B Data collection exercise

B.1 To validate and inform various inputs used in our forecasting, we undertook primary data collection on the Asset. OD survey data was collected on behalf of the Client, TVC surveys were commissioned by Steer with a third party. OD data collection typically involves manual data entry by enumerators based on oral surveys with road users crossing toll plazas. TVC data collection involves video-graphic capture of traffic passing crossing the toll plazas, followed by manual counting.

3 days TVC count

Table C.1: 3-day TVC counts at TP1 Dakhina Sekhpur

Date	Toll Plaza	Source	CJV	Mini LCV	LCV	Bus	2 Axle	3 Axle	MAV	Total

Disclaimer

This report has been produced for the sole benefit of Cube Highways Pvt. Ltd ("the Client"). The report may only be relied upon by Approved Addressees in accordance with the terms of our engagement letter. This Report (the "Report") is confidential and disclosed only for information purposes, and it may not be relied upon by any party other than the Client or a Party to a Reliance Letter, and Steer: a) makes no warranty, expressed or implied, with respect to the use of any information or methods disclosed in this Report; and b) assumes no liability with respect to the use of any information or methods disclosed in this document. Any such party by its acceptance or use of this Report releases Steer from any liability for direct, indirect, consequential, or special loss or damage whether arising in contract, warranty, express or implied, tort or otherwise.

The Report is based on standard professional efforts, and information available to us at the time the review took place and is subject to time and budget constraints of the Report's scope of work. This Report, information and statements contained herein, are all based on third party data provided to us, or sourced by us, and Steer has not sought to establish the reliability of the data, except as specifically stated in the Report. Steer bears no responsibility for the results of any actions taken on the basis of third-party data. Certain forward-looking statements in the Report are estimates based on interpretations or assessments of information available at the time of writing. The Report is thus to be viewed as an assessment that is time-relevant, specifically referring to conditions at the time of the review. Steer undertakes no obligation to update the Report for any reason. While the estimates contained in the Report are not precise forecasts, they do represent, in our view a reasonable expectation of the future, based on information we have been provided with or sourced. However, the estimates necessarily rely on numerous assumptions and judgements, and circumstances may occur over the timeframe of the project that go counter to these assumptions and judgements and that affect the project's realized revenues. Actual events may differ from those assumed, and events are subject to change. Therefore, Steer makes or provides no warranty, whether implied or otherwise, as to the accuracy of forward-looking information presented. Further, it is important to note that forecasts presented represent long term growth profiles; the results for individual time periods may vary from forecasted values.

Traffic Consultant developed the relationships in the models used to produce the forecasts for the projects based on data available through February 2026. This report does not consider variations in traffic performance due to changing macro and force majeure events such (but not limited to) as global wars, economic uncertainty (high inflation, global recession), and changes in the regulatory environment. The situation remains dynamic and is subject to significant change in the short and medium term. In this challenging context, Traffic Consultant has produced base forecasts with a view on a possible scenario for the traffic forecasts. However, it is important to note that this is only one view, and there continues to remain uncertainty as to the short-term, intermediate or prolonged effects of and responses to such macro-economic/force majeure events. As a result, no assurance can be provided by Traffic Consultant that the scenarios and assumptions Traffic Consultant has identified will prove to be accurate. Given the uncertainty inherent in this scenario, Traffic Consultant advises that all readers of the Report consider the Report in the context of their own assessment of the impact of such events.

TO THE FULLEST EXTENT PERMITTED BY APPLICABLE LAW, THE LIABILITY OF THE TRAFFIC CONSULTANT FOR ANY LOSS, DAMAGE, COST OR EXPENSE SUFFERED OR INCURRED BY ALL PERSONS OR ENTITIES AND FOR ALL CLAIMS RESPECTING ITS WORK PERFORMED IN CONNECTION WITH THE ISSUE OR THE REPORTS IS HEREBY LIMITED IN THE AGGREGATE TO THE AMOUNT OF FEES ACTUALLY PAID BY THE CLIENT TO THE TRAFFIC CONSULTANT IN RESPECT OF THE REPORTS AND CONNECTED SERVICES.

TVC	Traffic Volume Count
WADT	Weekly average daily traffic
YTD	Year to Date

1 Introduction

The assignment

1.1 The Cube Highways Fund Advisors Private Limited (the "Client") has commissioned Steer Davies Gleave India Private Limited ("Steer") for a traffic due diligence to be carried out on the Mahua-Bharatpur Toll Road (hereafter called "Asset"). This report forms part of the annual fair market valuation (FMV) undertaken as part of the "Transit 11 project". This report presents an update of the traffic and revenue forecasts based on actual traffic data available up to February 2026 and latest macro-economic, and network assumptions.

1.2 The Asset Mahua-Bharatpur consists of a single stretch of toll road with two toll plazas. For the purpose of this report, we hereafter call the toll plazas present on the Asset as TP1 and TP2 respectively.

- TP1 – Amoli
- TP2 – Ludhawai

1.3 Our scope of work for the traffic and revenue forecasting process includes:

Table 1.1: Scope of work and sources of data

Scope of work	Data source
• Review of historical Traffic Management System (TMS) data, Origin-Destination (OD) data, Vendor reports and documents	• Provided by client for the period between Apr'09 and Mar '26, with FY26 base AADT and forecasts considering data up to Feb'26
• Historical analysis and forecasts for baseline growth, including; — Background growth, — Seasonality	• Historical toll plaza data provided by Client and benchmarks from Assets in the vicinity wherever long time series historical data was not available
• Validation of Revenue reported in FY26YTD	• TMS data provided by Client • Revenue reconciliation using toll plaza traffic and ticket type data to calculate revenue and reconciling it with toll plaza reported revenue.
• Origin Destination (OD) analysis to understand growth drivers: — Zonal influence and Top OD pairs — Commodity distribution — Trip length distribution	• Origin Destination (OD) surveys undertaken by Steer in 2026 (TP1) and 2023 (TP2) respectively
• Analysis of upcoming network improvements and other developments, that may have future impacts on traffic	• Secondary research and our in-house experience of working in the vicinity of the Asset. Impact analysis to be conducted by Steer based on

Scope of work	Data source
	Generalised Journey Cost spreadsheet-based analysis
• Historical revenue analysis and forecasts for revenue estimation, including — Toll segmentation and trip factors, — Overloading shares,	• Calculated from historical data provided by Client
• Final traffic growth forecasts including baseline growth rates and potential future impacts •	• Elasticity based base growth and potential impacts from secondary research and Steer's in-house experience of working in the vicinity of the Asset
• Toll revenue estimation for the entire concession including toll evolution	• Toll evolution based on toll notification published by National Highway Authority of India (NHAI); and Gross Domestic Product (GDP) & Wholesale Price Index (WPI) trends as shared by the client

Our approach

1.4 Our approach follows well-established practices for forecasting ongoing traffic growth on an existing/brownfield Asset. The analysis focused on two sets of issues, namely:

- understanding the traffic that is currently using the Asset; and
- identifying how and why that traffic is likely to change in the future.

1.5 To understand the current traffic on the Asset, we have analysed traffic data from multiple independent sources:

- Client-provided secondary data, including:
  - TMS data starting April FY09 to February 2026. The historical traffic and revenue presented in Chapter 3 considers information up to March 2026. This is to present the latest available traffic and revenue information at the time of submission of report. However, the FY26 base traffic and forecasts presented Chapter 5 onwards use data available up to February 2026, with March 2026 estimated
  - Concession agreement and toll notifications for FY25 and FY26
  - Previous studies related to traffic and revenue
  - Steer-commissioned OD survey on 18th Feb 2026 at TP1 and on 27th June 2023 at TP2 of the Asset to validate any change in growth drivers and travel patterns.
  - Steer-commissioned TVC survey from 17 – 19th Feb at TP1 and 26th June 2023 to 29th June 2023 at TP2
- We undertook revenue reconciliation for FY26YTD, by building up revenue from the traffic reported by each of the toll plaza and subsequently match it to the reported revenue for FY26 using the prevalent toll rates and reported segmentation/toll-frequencies for FY26, this is a key part of our analysis to validate the segmentation/toll-frequency assumptions and the Annual Average Daily Traffic (AADT) reported for each of the toll plaza.

1.6 The estimation of future traffic demand on the Asset was undertaken through:

- Estimating FY26 base year position by applying seasonality correction factors (SCFs) on the 11 months of actual traffic data available (April to February)
- Secondary research to understand plans for new developments and progress of ongoing developments on the Asset.
- Steer independent primary surveys and site visits to validate our network and contextual understanding.
- Developing a bespoke growth model for each Asset/plaza/toll class to forecast year-on-year traffic growth from FY26 to the end of concession period.
- Investigating the elasticity of historical traffic growth compared to state (GSDP) and national (GDP) growth. Where historical data is limited, we have benchmarked the Asset against our Steer knowledge base (e.g., similar Asset types in the same state or on the same corridor), to derive appropriate elasticities.
- Applying our elasticities to independent GDP forecasts as provided by client.
- Identifying and analysing the potential impacts of any relevant changes to the competitive position of each Asset – these include impacts of changes to road network including expressways and opening of competitive modes of travel.
- Identifying and analysing any other potential impacts to traffic and revenue on each Asset – these include axle load norms, axle shift for heavy goods.
- Considering changes in trends of segmentation over time and making suggestions for changes in exemptions in the future
- Preparing traffic and revenue forecast for the Asset for the complete length of concession. The analysis here includes the specific impacts of network, or other exogenous factors specific to the Asset. We have developed a set of forecasting assumptions for three scenarios: a base case and upside and downside scenarios.

Contents of this report

1.7 The report has been divided into the following chapters, including Chapter 1 providing an introduction:

- Chapter 1 introduces the methodology and approach to undertake the traffic and revenue due diligence;
- Chapter 2 describes the key characteristics of the Asset and its surrounding road network, primarily based on site visits;
- Chapter 3 summarises the current and historical traffic on the Asset, including results from the TMS, TVC and OD analysis;
- Chapter 4 presents the socio-economic context of the corridor and region/state containing the Asset, along with our approach and results on estimating background traffic demand growth; and
- Chapter 5 presents our baseline year forecast and summarises our results on estimating background traffic demand growth
- Chapter 6 summarises our assessment of network impacts and presents concession traffic and revenue forecasts for the Asset along with the assumptions for upside and downside cases

2 The Asset

Introduction

2.1 This chapter provides a description of the Asset, primarily based on primary (site visits) data, our understanding of the region and network surrounding the Asset. We cover the strategic network context, followed by key economic activities and network developments around the Asset.

Strategic network

2.2 The Asset is situated in the state of Rajasthan, connecting Mahua to Bharatpur, near the border of Rajasthan with south-western Uttar Pradesh (UP).

2.3 Figure 2.1 shows the regional road network in which the Asset is located.

Figure 2.1: Asset location in the regional network context

Source: Steer cartography using OpenStreetMap data

2.4 This Asset primarily caters to three different types of strategic movements:

- **Short-distance trips** including tourism and leisure trips between some of the most attractive tourist destinations in India. Such trips are mostly comprising of CJVs which are either local or run between key tourist locations of Agra and Bharatpur at one end and Jaipur on the other.
- **Medium-distance trips** between Rajasthan and Uttar Pradesh connect marble-processing sites of Rajasthan to its consumption sites in Uttar Pradesh. The Asset also transports significant number of manufactured products across the states of UP and Rajasthan.
- **Long-distance trips** between the region consisting of Gujarat and southern Rajasthan, and UP/East India connects ports and industries of western India to major consumption and production centres in North and East India.

2.5 The Asset is a 57.3 km toll road which forms a part of the NH 21 (Jaipur – Agra – Bareilly) in Rajasthan. This is a four-lane road with two toll plazas, namely, Amoli (TP1) at Km 98.5 (closer to Mahua) and Ludhawai (TP2) at Km 64.5 (closer to Bharatpur). Figure 2.2 provides a closer view of the Asset in the context of its immediate surroundings and location of toll plazas.

Figure 2.2: Asset context

Source: Steer cartography using OpenStreetMap data

Concession and tolling details

2.6 The toll plaza on the Asset have been operational since April 2009 and the Client took over the operations in May 2015. There are 6 years left in the concession period with FY32 being the last year of concession period. Table 2.1 presents a summary of the Asset.

Table 2.1: Summary of concession

Particulars	Details
State	Rajasthan
Highway and lane configuration	NH 21 four lane
Toll plazas	• TP1: Amoli • TP2: Ludhawai
Length (km) as per concession agreement, applicable	• TP1: 38.65 Km • TP2: 18.65 Km
Commencement of operations*	May 2009
Operated by Client since	May 2015
Concession period	25 years
Last year of concession	May, 2031 or FY32

Source: Client data

2.7 Figure 2.3 shows a typical cross-section of the Asset and its toll plazas.

Figure 2.3: Typical cross section of the Asset road and toll plazas

Source: Steer site visit

2.8 The tolls on the Asset are collected for the following vehicle category with rates as shown in Table 2.2 below. The toll plazas have dedicated ETC/FASTag lanes for electronic tolling.

Table 2.2: Single toll rates on the Asset (INR), applicable July 2025 to June 2026

Type of Vehicle	Single Journey Fee	
	TP1 Amoli	TP2 Ludhawai
CJV	55	25
LCV	100	45
Bus/Truck	200	95
3A/MAV	320	155
HCM/EME/OSV	320	155

Source: NHAI Revision of User fee

2.9 The Asset currently issues tickets including single, local commercial, local personal and through ticket under NHAI concession. There are no return and monthly tickets issued on the Asset. The local commercial and local personal ticket categories are discounted single entry tickets for trips within 20kms and 10kms respectively. The Asset issues special category of "through ticket" where a user can buy a ticket for both plazas, a common ticket to cross the entire length, this ticket can be bought at either plaza which can be redeemed at another. Further, detailed information on this have been provided in Chapter 3 of the report.

Key Economic activities

2.10 Rajasthan is the largest state in India by area, sharing borders with five major states- Uttar Pradesh, Haryana, Punjab, Madhya Pradesh, and Gujarat. It is rich in natural resources particularly minerals and produces about 57 different minerals.[1] Predominantly an agrarian economy and a major producer of grains, oilseeds and edible oil, Rajasthan has seen a rise in the service sector (transport, storage and communication, financial services, real estate, professional services, public administration and other service) recently wherein the sector contributed to 47.7% to state's GSVA in FY26 followed by agriculture at 26.5% and industries at 25.7%.[2]

Urban centres, business, and tourism

2.11 The state of Rajasthan and its bordering cities in UP (e.g. Agra and Mathura) are known for their tourist destinations. This contributes significantly to high passenger traffic volumes both within cities and on highways. The Bharatpur area with the presence of the Keoladeo Ghana National Park is a major attraction for tourists, known for its birds. The capital city of Jaipur, located on one end of the Asset, is a thriving urban city which is the main centre of administration, governance, culture, education, business and service sector in the state. It is a prominent tourism destination contributing majorly to the flourishing hospitality industry in the state. This reflects in considerable passenger volumes between the three nodes of India's Golden Triangle - Delhi, Jaipur and Agra – observed on the Asset engaged in tourism and related activities. In recent times, the city has also emerged as a promising hub for global outsourcing and IT industry. Jaipur's strategic location on the

[2] Rajasthan State Economic Survey 2025-26

golden quadrilateral connects it with major industrial, agricultural, and cultural centres of Chennai, Kolkata, Delhi, and Mumbai.

Marble, cement, and sand

2.12 The State is also a leading producer of Masonry stone with around 136.1 million tonnes of production in FY24.[3] Areas such as Kishangarh, Kota and Dausa produce stone and sand, apart from being a hub of major marble processing centres, with a history of supplying marble to the rest of India.

2.13 Rajasthan accounts for 70 per cent of the country's stone production. There are 4,920 mining leases in the state[4]. Rajasthan produces 90 percent of the marble and sandstone in the country. In terms of Granite, in FY24 Rajasthan produced more than 10.4 million tonnes compared to 9.3 million tonnes in FY23[5]. This is due to the increased export demand from countries like US, China and Europe.

2.14 Sandmining in India has long faced issues of corruption involving local mafias and a lack of proper implementation of mining policies by the government. In November FY18, when Supreme Court order ruled the requirement of environmental clearances for all sand mines, including those less than five hectares of size, there was a reported drop in traffic carrying construction-related commodities on the Asset, particularly sand. However, in 2020, following the implementation of the Major and Minor Mineral Policy, the mining industry in the state was regularized by imposing a ban on illegal mining activities. Additionally, sand mining leases were reduced to two years, with an improved replenishment cycle. The policy also mandated the use of 25% M-Sand (manufactured sand) as an alternative to riverbed sand for construction activities in Rajasthan.

2.15 After the policy implementation, the combination of reduced legalized sand mining, award of leases, and increasing demand for construction material for local activities led to a continued demand for sand and other construction materials in the region. In terms of lease tenure related to this commodity within the Rajasthan mining policy:

- Sand mining leases- 2 years (re-award of new leases after 2 years): Additionally, to reduce illegal mining and allow for the full replenishment cycle of rivers in the region, the state government has reduced the validity of sand mining leases from the existing five years to two years.
- Aggregate mining leases- 5 years (re-award of new leases after 5 years)

Alternate Routes

2.16 For long-distance trips connecting Gujarat and southern Rajasthan to Uttar Pradesh and other eastward states, there is an alternative route along NH 27 that joins Udaipur and Kanpur via Chittorgarh-Kota-Jhansi. Majority of travel patterns are already well established and the choice between using NH27 vs. NH48 and the Asset for east-west movements has been established over a number of years. However, for a small proportion of traffic on NH27; the route via the Asset is expected to become more

[3] Minor mineral production in Rajasthan

[4] 70% of stone production in India comes from Rajasthan: RIICO Chairman (knnindia.co.in)

[5] Granite production in Rajasthan

attractive as the key feeders of the Asset improve. In Chapter 6, we have discussed how the completion of southern bypass of Agra Ring Road improves the relative level of service on the Asset corridor and has a positive impact. The traffic impact of Jaipur Ring Road is already part of the current volumes appearing on the Asset and no further adjustments have been made to the traffic forecasts.

2.17 During our site visit to the Asset, no major micro-diversions through local roads were observed close to the toll plazas. Chapter 6 provides a discussion and estimation of potential impacts on the Asset.

Delhi-Mumbai Expressway

2.18 The Delhi-Mumbai Expressway is a 1290-KM long greenfield expressway that has been developed to provide an improved 8-lane route to long-distance traffic between North/Western India to Mumbai. The competing movements which may choose to take the DME are as follows:

Traffic originating near Uttar Pradesh and Rajasthan

- Vehicles making trips between Northern Uttar Pradesh i.e Moradabad, Bareilly, Haldwani going towards Jaipur/Alwar/Rajasthan which earlier made the trip via NH21 section of Moradabad- Aligarh- Mathura- Bharatpur- Amoli- Amoli – Mahwa – Laxmangarh – Alwar, now has an alternative available in the form of the DME which provides direct connectivity from Faridabad. The alternative route will materialise as a conjunction of the DME and the Faridabad bypass. It will provide connectivity from Dausa – NE4 – Faridabad bypass at Kaligaon.
- By virtue of the route being supplemented by the Faridabad bypass, traffic destined to Delhi and north will get access to smoother passage by being able to avoid entering the city altogether.

2.19 A few sections of the greenfield expressway have been made operational with Sohna-Dausa-Lalsot section (Feb'23), Madhya Pradesh section (Sep'23), Vadodara-Bharuch section (Feb'24), Lalsot-Sawai-Madhopur section (Feb'24) and the Kota-Bundi Section (Dec'24) already being operationalised.

2.20 An additional spur has been constructed between Bandikui on NE4 and Bagrana on the Jaipur Ring Road (which is located west of TP1). This spur has been operational since July 2025[6]. As a result, a significant part of the increase in volumes observed by virtue of the DME has diverted away from the NH21 corridor. Based on the site observation, the section wise update on the Delhi Mumbai Expressway section is given below:

Table 2.3: Section Wise Delhi Mumbai Expressway status

S. No	Section	Length (in km)	Sub-Section	State	Status	Expected Data of Completion
1	Delhi-Faridabad-KMP	59	Faridabad-KMP	Delhi, Haryana	Operational	Opened Nov'24

[6] **Bandikui-Jaipur Expressway open to public, cuts Delhi-Jaipur travel time to 3 hours| India News**

S. No	Section	Length (in km)	Sub-Section	State	Status	Expected Data of Completion

3 Traffic Description

Introduction

3.1 This chapter outlines the historical and current traffic and revenues on the Asset, as well as our analysis of origin-destination (OD) data and traffic volume count (TVC) data. This includes data collected as a part of this study and previous studies of this Asset, as well as data provided by the Client.

3.2 Traffic demand data is generally collected and analysed to understand the volume and vehicle composition of demand currently using the Asset, while OD data is used to obtain a better understanding of commodity movements, travel patterns, trip lengths, trip purposes and areas of influence in the vicinity of the Asset, as well as the commodities being moved by goods vehicle. This analysis, combined with our understanding of the Asset (based on our site visits), enables us to identify the key drivers of demand, on the Asset.

3.3 Actual toll plaza data is used as the primary basis from which the current/base year annual average daily traffic (AADT) is established. This data is typically provided by the Client and independently analysed and validated by us using traffic volume count (TVC) information.

3.4 The below sections present historical traffic and revenue information up to March 2026. This is to present the latest available traffic and revenue information at the time of submission of report. However, the FY26 base traffic and forecasts presented Chapter 5 onwards use data available up to February 2026, with March 2026 estimated.

PCU factors considered for reporting

3.5 The PCU values have been taken from 'IRC 64:1990- Guidelines for Capacity of Roads in Rural Areas'. For MAV, based on the discussion with the Client, we have referred to the rigid and trailer splits in the latest TVC counts conducted in 2026 for calculating the effective PCU for MAVs. For rigid trailer trucks we have assumed a PCU factor of 3, whereas for trailer trucks we have assumed a PCU factor of 4.5. These factors have been used to arrive at the PCU values presented in the following sections.

Table 3.1: PCU factors

Vehicle Category	PCU Factor
CJV	1.0
Mini LCV	1.0
LCV	1.5
Bus/2A/3A	3.0
MAV	4.05

Vehicle Category	PCU Factor
OSV	4.5

Source: Steer analysis and IRC64,1990

Historical trends

3.6 The following table presents the historical variation in traffic volume at both the Asset plazas, in terms of total AADT, vehicle shares and yearly volume growth. The table below shows the traffic evolution on TP1 and TP2 of recent years (between FY16 and FY26)

Table 3.2: Historical evolution in AADT by vehicle class at TP1 – Amoli

Class	FY16	FY17	FY18	FY19	FY20	FY21	FY22	FY23	FY24	FY25	FY26	CAGR (16-26)
CJV	4,085	3,930	4,125	4,313	4,453	5,023	5,660	7,077	7,417	8,260	8,543	7.7%
LCV	1,069	1,060	1,085	966	867	454	303	295	293	293	286	(12.3%)
Bus/2A	1099	970	1035	1156	1230	1111	1373	1614	1724	1,920	1,946	7.5%
3A/MAV	3,594	3,705	4,229	3,506	3,512	3,640	3,540	3,715	3,852	3,978	4,136	1.4%
Total	**9,847**	**9,665**	**10,474**	**9,941**	**10,062**	**10,229**	**10,875**	**12,701**	**13,286**	**14,451**	**14,910**	**4.2%**
PCU	**23,530**	**23,424**	**25,972**	**23,419**	**23,656**	**23,768**	**24,560**	**27,396**	**28,617**	**30,558**	**31,547**	**3.0%**

Source: Steer analysis of the Client data, FY26 AADT represents the full year actual (April to March); Note: On this toll plaza, we have 3A/MAV combined volumes. However, for PCU calculations, to maintain consistency, we have used the shares derived from the latest TVC on the plaza

Table 3.3: Historical Tollable Traffic Levels at TP1 Amoli

Class	FY16	FY17	FY18	FY19	FY20	FY21	FY22	FY23	FY24	FY25	FY26	CAGR (16-26)

Source: Steer analysis of Client data; FY26 AADT represents the full year actual (April to March)

3.7 As of FY26, the Asset is recording ~29,000 PCUs, with both plazas witnessing similar trends on a PCU as well as vehicle level. In terms of vehicle composition, CJVs are the largest contributors, accounting for over 57% of the traffic at TP1 and 61% at TP2, followed by MAVs with a share of around 30%.

3.8 3A/MAVs maintain significant importance as the second-largest traffic contributor on the Asset, holding a share of 27% at TP1 and 25% at TP2. This dominance in traffic is linked to the state's thriving marble and sand mining activities, which generate substantial demand for goods transportation services. Overall, the combination of historical trends and current insights highlights the dynamic nature of traffic patterns, influenced by infrastructural developments, regulatory changes, and regional economic activities

3.9 In terms of traffic growth, TP1 and TP2 observed a PCU CAGR of 3.0% and 3.6% respectively, between FY16 and FY26. For CJVs, TP1 witnessed a strong 7.7% CAGR between FY16 and FY26, while TP2 recorded a commendable 9.0% CAGR during the same period. This can be largely attributed to the upswing in tourism activity in Rajasthan, coupled with the reopening of popular tourist destinations. Notably, TP2 outpaced TP1 in growth due to its strategic proximity to pilgrimage sites such as Mahendipur Balaji, Mahua, and Agra, which experienced a surge in daily CJV trips. Additionally, TP2's direct connectivity to Morena and Gwalior via NH21 further bolstered the higher traffic volumes observed in this region.

3.10 The growth trajectory for 3A/MAV category has been relatively slower (1.4% CAGR at TP1 and 1.9% CAGR at TP2) over the same period. This stagnant trend is attributed to various factors affecting goods vehicle growth, including the diversion of traffic due to the opening of the Delhi Mumbai Expressway in February 2023 and fluctuations caused by erratic rainfall and holiday seasons like Diwali, particularly evident in lower October traffic volumes.

3.11 On MBEL, 2A and Buses have the same toll rates. (INR 200 and INR 95 for TP1 and TP2 respectively for a single ticket in FY26) and so do 3A and MAV (INR 320 and INR 155 for TP1 and TP2 respectively for a single ticket in FY26). Although 2A and Buses share the same toll rate, the current TMS reports them as separate categories. In contrast, 3A and MAV are combined into a single category. However, post FASTag implementation there

has been a reclassification of Buses and 2As which are now tolled basis their vehicle mapping. To accurately assess the historical growth of these categories and adjust for any discrepancies due to this reclassification, we have combined the 2A and Bus categories for our analysis.

3.12 To further validate individual growth of each category (Bus/2A/3A/MAV), we conducted independent counts at various points in time to ensure the true representation of individual volumes for the asset. The results of the split are presented in the 'Key findings of the TVC data analysis' section of Chapter 3 of the report. Therefore, the split that we have derived from our counts is the split we are using in our projection to forecast the growth of each individual category for this Asset.

Historical Revenue

3.13 Table 3.6 below presents the reported historical revenue on the Asset.

Table 3.6: Historical revenue evolution (in INR crores) and AADC (in INR Lakh) :

	FY16	FY17	FY18	FY19	FY20	FY21	FY22	FY23	FY24	FY25	FY26	FY16 –FY26
Amoli												
Total	**31.9**	**31.5**	**41.0**	**39.1**	**42.8**	**44.0**	**53.5**	**62.7**	**68.6**	**74.2**	**77.3**	
AADC	8.7	8.6	11.2	10.7	11.7	12.1	14.6	17.2	18.7	20.3	21.2	9.3%
Ludhawai												
Total	**20.8**	**26.5**	**31.1**	**28.7**	**28.4**	**21.6**	**27.1**	**31.7**	**34.3**	**36.8**	**38.5**	
AADC	5.7	7.3	8.5	7.9	7.8	5.9	7.4	8.7	9.4	10.1	10.6	6.4%
Asset (Cr)	**52.7**	**58.0**	**72.1**	**67.8**	**71.3**	**65.6**	**80.7**	**94.4**	**102.9**	**111.0**	**115.8**	**8.2%**

Source: Steer analysis of the Client data, FY26 includes data till Mar'26

3.14 The revenue collection for the Asset has increased from INR 52.7 Cr in FY16 to INR 115.8Cr in FY26, witnessing a CAGR of 8.2%. Similarly, daily collection on the Asset has increased from INR 25.9 lakh in FY23 to INR 31.8 lakh in FY26. This growth can be attributed to various factors, including increased tourism activity in Rajasthan and re-opening of tourist places which led to positive revenue increase on the Asset. Positive tick in revenue prior FY23 is due to post-pandemic recovery, as discussed earlier.

3.15 Furthermore, an increase in overloading revenue has contributed to higher revenue receipts from FY22 onwards. In FY26, the daily overloading collection at Amoli is INR 0.91 lakhs, while at Ludhawai, it stands at INR 0.44 lakhs.

Toll Frequencies

3.16 Toll frequency or segmentation is typically the share of each ticket category recorded for a particular vehicle type. Each vehicle category has different segmentation. As a part of historical analysis, we calculate the toll frequency for each vehicle category from the monthly data shared by the client. The most common ticket categories observed on a typical National Highway concession are: Single, Return, Monthly, Local and Exempt. Given the local nature of traffic, some Assets offer custom made local passes to attract the local commuters to opt for these category passes instead of evading toll. Brief description of different ticket-types is given in the subsequent table.

3.17 Understanding the toll frequency gives insights into the nature of traffic. CJVs generally have higher shares of return passes or monthly passes, while heavy trucks mostly have single tickets since they travel long distance. However, this varies from Asset to Asset or even toll plaza to toll plaza. The Asset catering to short distance local traffic generally observes high share of return or other local monthly passes while the Asset catering to strategic long-distance traffic generally observes high share of single ticket traffic. The same can be verified through OD data where the vehicle category with high single ticket shares would have longer trip length with one of their trip end outside the Asset state. Other reasons for high single shares include the absence of return, local passes, through in and through-out tickets issued on the Asset. This is especially post- FASTag implementation where the user is allowed to pay at each toll plaza.

3.18 However, on this Asset since return and monthly passes are not available, 90% of the tickets issued are single. Primarily, the traffic which is not eligible for local personal and commercial passes have single ticket as the only option, which explains high share of single traffic on the Asset, as discussed in the next section.

3.19 The following are the types of tickets being sold at the plazas of the Asset.

Table 3.7: Typical ticket types sold at NHAI plazas

Category	Description
Single	Allows the vehicle to cross the toll plaza once
Local Personal	Discounted monthly pass only for private cars of residents within 20km radius of toll plaza
Local Commercial	50% discount on single trips for commercial vehicles registered in the local district
Exemptions	Officially exempted vehicles like ambulance, police cars, key political personnel etc.
Through traffic	Allows vehicle to buy ticket one plaza of the Asset and get redeemed at another and vice versa

Introduction of Annual pass for CJVs

3.20 The National Highway Authority of India launched the “The FASTag Annual Pass” on August 15, 2025, a prepaid facility that allows private CJVs to travel across designated National Highway and National Expressway toll plazas. The annual pass is worth INR 3,000. The pass is valid for one year or 200 trips, whichever occurs first and is applicable only to private, non-commercial vehicles (Car/Jeep/Vans).

Since this pass has been introduced by NHAI, it is not valid on

- state governed toll plazas on highways
- state governed toll plazas expressways
- Parking areas or other non-NHAI tolling locations

3.21 The pass can be activated via the RajmargYatra app or the NHAI website, and links directly to an existing FASTag.

The Annual Pass aims to:

- Promote cashless and seamless travel on national highways.

- Reduce congestion and improve traffic flow at tolls
- Provide cost-effective travel for frequent users of NH/NE toll roads

FASTag implementation

3.22 Government of India has introduced (and more recently, mandated) Electronic Toll Collection (ETC) across National Highways in India, collected via "FASTag". The timeline of ETC implementation is presented in the following table.

Table 3.8: Timeline of national ETC implementation

Date	ETC Development
2014	FASTag system set up as a pilot on the Ahmedabad to Mumbai stretch of the Golden Quadrilateral, in November 2014 it was also implemented on the Delhi to Mumbai stretch of the Quadrilateral.
December 2019	FASTag is made mandatory on all National Highways with only one lane on either side keep as a Cash lane, cash users entering ETC lanes were charged double the toll.
February 2021	FASTag is made mandatory for all vehicles at every toll plaza in the country starting 15th Feb 2021

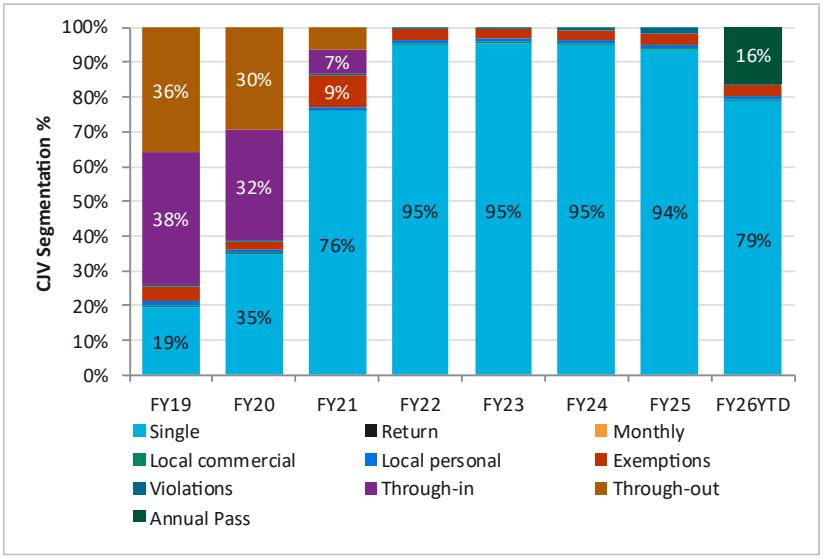
Source: NHAI.gov.in and Wikipedia

3.23 As we can see from Table 3.8 above most of the categories of vehicle types across the toll plaza are reporting more than 95% FASTag penetration, with CJV's also reporting more than 90% proportions. These high penetration levels improve the overall service levels of the toll plaza and reduces the transaction time.

Segmentation

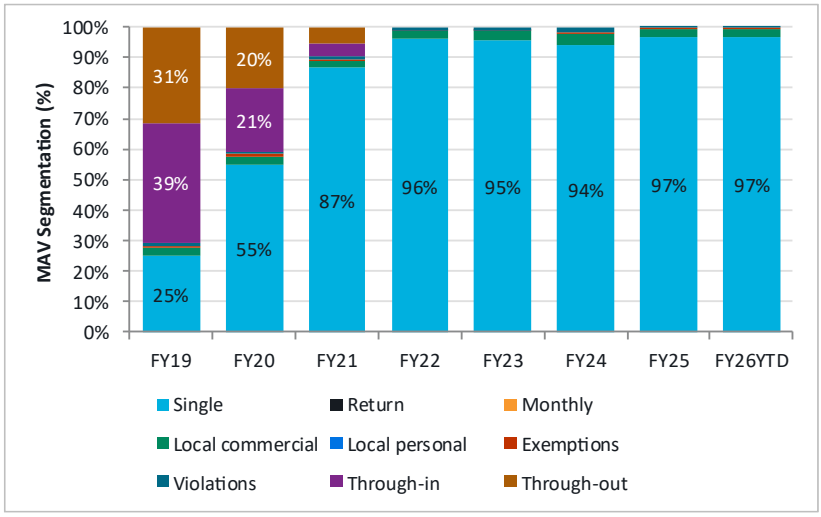
3.24 The following figures provide the toll segmentation for the historical years at TP1 Amoli and TP2 Ludhawai for CJV and MAV while the table provides the same for the remaining vehicle types.

Figure 3.1 Ticket-segmentation for CJV at TP1 Amoli



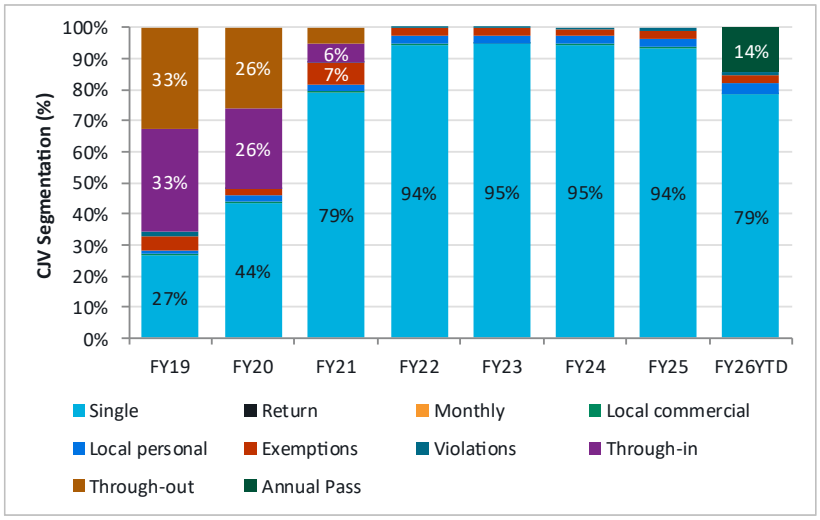
Source: Steer analysis of the Client data, FY26 YTD includes data till February'26; Segmentation does not include return trips

Figure 3.2 Ticket-segmentation for MAV at TP1 Amoli



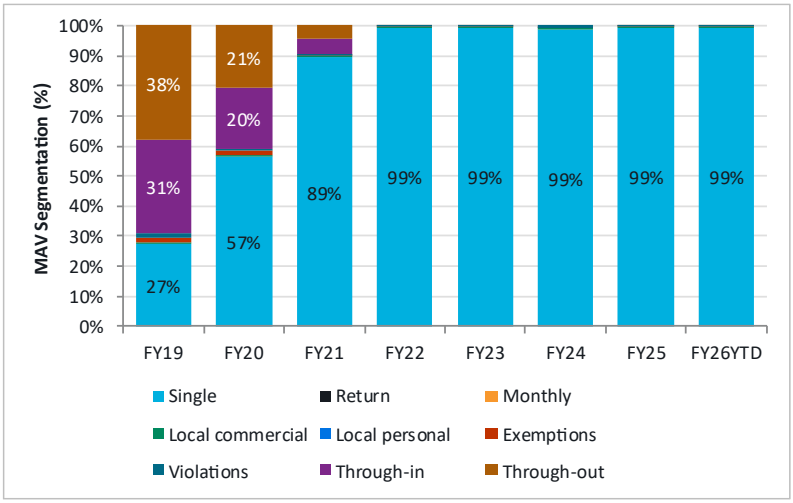
Source: Steer analysis of the Client data, * FY26 YTD includes data till February'26; Segmentation does not include return trips

Figure 3.3 Ticket-segmentation for CJV at TP2 Ludhawai



Source: Steer analysis of the Client data, FY26 YTD includes data till February '25; Segmentation does not include return trips

Figure 3.4 Ticket Segmentation for MAV at TP2 Ludhawai



Source: Steer analysis of the Client data, * FY26 YTD includes data till February'26; Segmentation does not include return trips

3.25 CJV segmentation observed on the Asset remained stable between FY22 and FY25, with the share of single trips observed to be in the range of 94%-95% for both TP1 and TP2. However, the introduction of annual passes for CJVs in August 2025 by the NHAI has led to the respective shares being 79% as of February 2026. The rapid adoption of the pass can be seen by the 16% and 14% shares observed at TP1 and TP2 respectively, as of FY26YTD.

3.26 It is important to note that the Asset does not offer a return ticket option, which explains the disproportionately high proportion of single-ticket transactions in the toll segmentation. Also, the CJVs plying on the Asset are doing short-medium distanced movement within 300kms also in the Figure 3.17 and Figure 3.18 below. Major share of these CJV trips originate outside 10kms of the Asset making them non-valid for a discounted local pass. This is in line with the Asset being a major tourist driven corridor fetching passenger from other surrounding regions.

Table 3.9: Historical ticket segmentation at TP1 Amoli (LCVs)

	FY19	FY20	FY21	FY22	FY23	FY24	FY25	FY26YTD

Overloading

3.27 The Asset being a part of NHAI concession follows the NHAI Overloading policy released in 2016 which bans the overloading of commercial vehicle on any NHAI toll plaza. In case of non-compliance, overloaded vehicles on the Asset are charged twice the toll fee they would otherwise pay for a Single ticket at the toll plaza.

3.28 The plaza currently charges overloading under single and local commercial category. These shares are determined using the total single journey traffic and total local commercial traffic. The table shows the share of overloaded vehicles paying twice the Single journey toll fee on each toll plaza upto FY26YTD. FY25 reported a lower percentage of overloading shares as compared to FY24. This can be a result of strict regulatory implementation of less overloading and the rainfall impact for most of the year on construction traffic which did not appear on the Asset.

Table 3.15: Overloading shares for FY19 - FY26

Class	TP1 Amoli							TP2 Ludhawai

Data Collection exercise

Overview

3.29 To validate and inform our forecasts, we collected primary data on the Asset through the surveys listed in Table 3-11 below. OD survey data was collected on behalf of the Client, TVC surveys were commissioned by Steer with a third party. OD data collection typically involves manual data entry by enumerators based on oral surveys with road users crossing toll plazas, which Steer also commissioned with a third party. TVC data collection involves video-graphic capture of traffic passing crossing the toll plazas, followed by manual counting.

Table 3.16: Data collection schedule

TP	3-day videography-based TVC			1-day OD survey	
	Start date	End date	Time (hrs)	Start date	Start time
TP1	17th Feb 2026	19 Feb 2026	0000-2359	17th Feb 2026	0900 hours
TP2	26 Jun 2023	29 Jun 2023	0000-2359	26 June 2023	27 June 2023

2Source: Steer analysis

3.30 It should be noted that, in our experience, traffic on national highways shows variation across the week due to the economic activities surrounding each road. To derive a representative TVC count considering daily variation, three-day traffic counts are generally recommended, and hence, in order to fully understand the impact of this weekly fluctuation on the Asset, we collected three-day counts at each toll plaza.

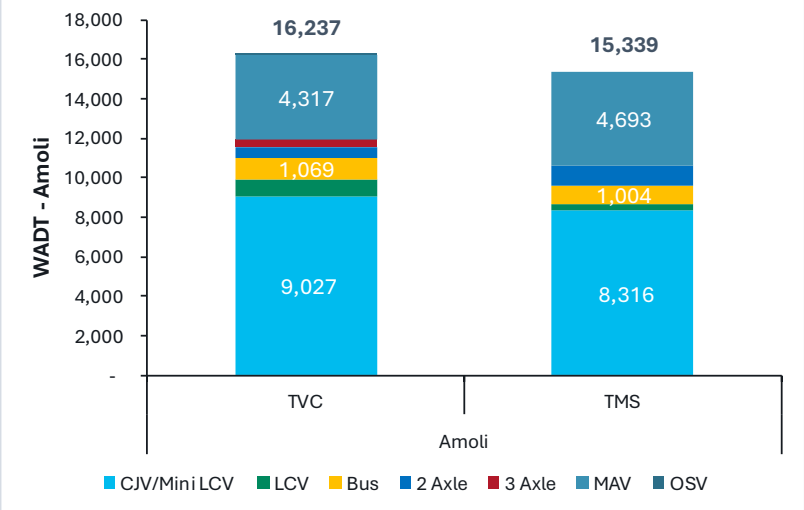
3.31 Please also note that current OD survey data was available only at Amoli toll plaza and not Ludhawai. Since Amoli and Ludhawai toll plazas show similar traffic profiles, as observed both from the historical data and our site visits, the OD findings seen at Amoli can be applied to Ludhwai as well.

Key findings of the TVC data analysis

TVC vs TMS comparison

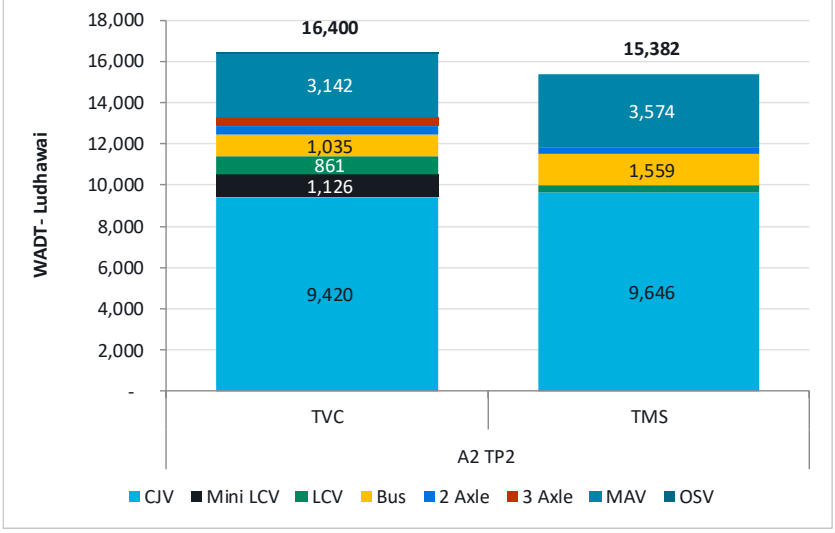
3.32 Taking an average of the seven-day TVC counts (17th Feb – 19th Feb 2026 , 0000-2359 hours) for TP1 and (26th Jun– 29th Jun 2023, 0000-2359 hours), we obtained the following weekly average daily traffic(WADT) for each toll plaza. This WADT excludes non-toll able vehicle such as tractors, two-wheelers, bullock-carts, etc., but includes officially exempt vehicles such as police cars, ambulances, emergency response vehicle, government vehicle and other vehicle types officially allowed as 'exempted' under the concession agreement.

Figure 3.5 TVC WADT- TP1



Source: Steer analysis of TVC data

Figure 3.6 TVC WADT- TP2

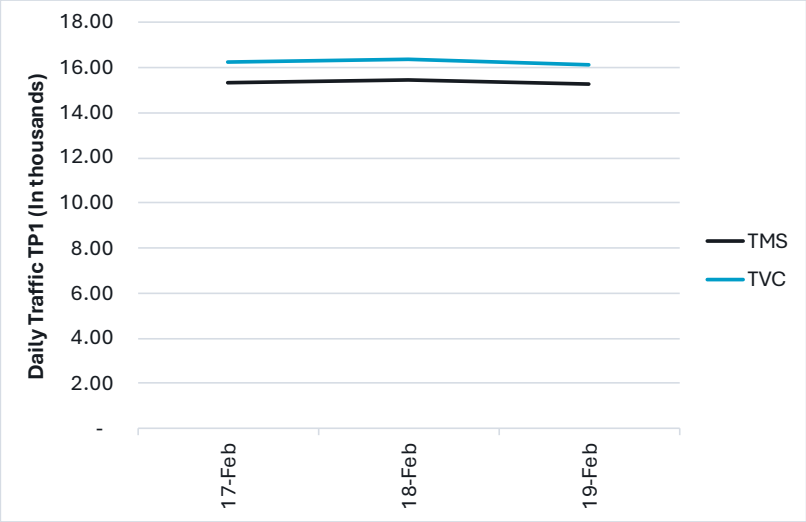


Source: Steer analysis of TVC data

3.33 As we use the TMS data to estimate the base year AADT, we have used our TVC data to validate the TMS data on those specific days, as provided by the Client.

3.34 The following figures show the comparison between the daily traffic observed by TVC and TMS for the two toll plazas. As shown in Figure 3.7 and Figure 3.8 below, the TVC and TMS overall are within the acceptable range of variation.[9]

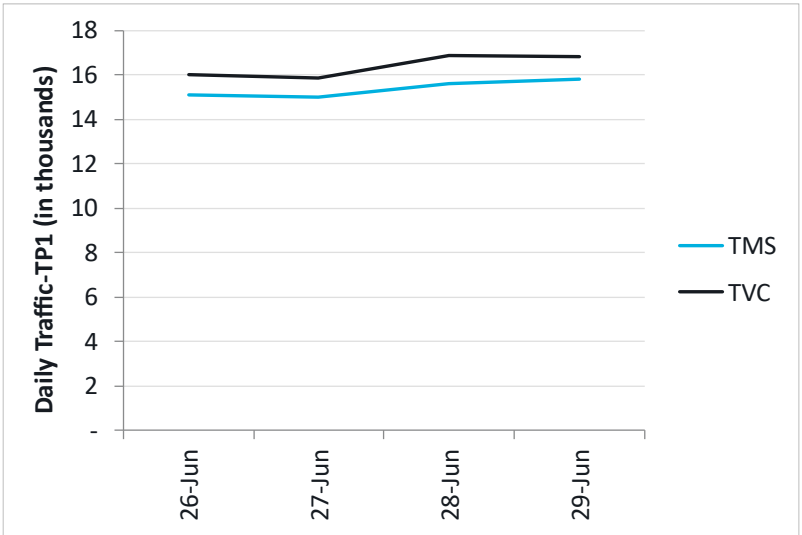
Figure 3.7: Comparison between TVC and TMS daily traffic data on TP1 Amoli (2026)



Source: Steer analysis of TVC and Client TMS data

[9] One of the reasons for the difference between TVC and TMS is the different time slots being considered. TMS data provided ranges from 0600 hrs to 0559 hrs whereas TVC data ranges from 0000 hrs to 1159 hrs.

Figure 3.8: Comparison between TVC and TMS daily traffic data on TP2 Ludhawai (2023)



Source: Steer analysis of TVC and Client TMS data

3.35 Figure 3.9 and Figure 3.10 below compare the shares of vehicle types at both plazas, between TVC and TMS data. It can be observed from the figure below, while shares of CJVs are higher for TVC compared to TMS, it is vice-versa for other vehicle categories. This difference can be attributed to common misclassification of vehicle categories as well as the TMS not recording a portion of the local mini LCVs.

Figure 3.9 Comparison between vehicle shares from TVC and TMS WADTs- TP1

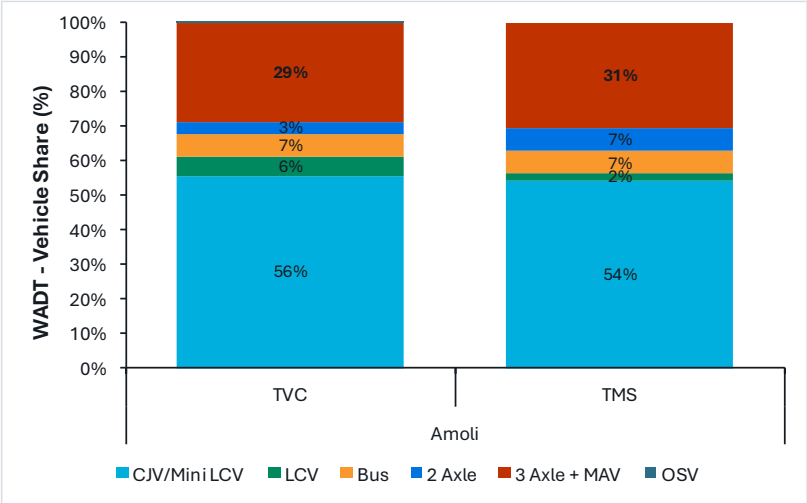


Figure 3.10 Comparison between vehicle shares from TVC and TMS WADTs- TP2

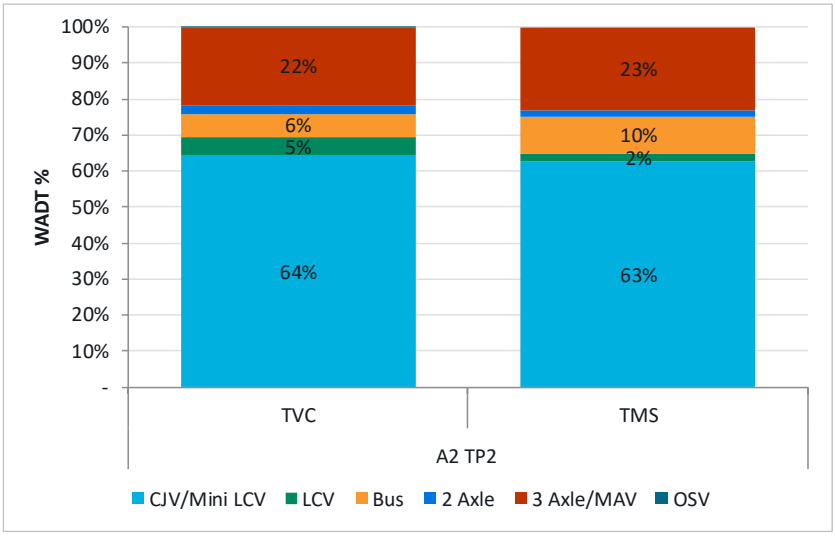

Source: Steer analysis of TVC and Client TMS data

3.36 Considering the smaller variation between the TVC and TMS data for the largest revenue generator 3A+MAVs, and an approximate match in the traffic volumes, the Client data has been used to estimate base year traffic.

Key findings of origin-destination analysis

Overview

3.37 Origin-destination (OD) analysis enables the understanding of the nature of traffic movement on the Asset. The OD analysis presented here is based on data collected on behalf of the Client in February 2026 at TP1 and June 2023 at TP2. More recent OD surveys were not undertaken as this Asset has a long operational history and we did not believe material changes in these patterns would have occurred in this period.

3.38 We have analysed the regional drivers of demand based on the following analysis:

1. Zonal influence
2. Commodity distribution
3. Top OD pairs
4. Trip length distribution

3.39 While zonal analysis and the list of top OD pairs help us to understand ‘where’ people and goods travel, commodity distribution sheds light on ‘what’ goods get transported on this Asset. Trip length distribution show ‘how far’ vehicles and people travel, and goods get transported. This set of analysis is generally used to estimate key drivers of traffic and aid making informed forecasting assumptions related to traffic demand elasticities, growth drivers and exogenous impacts.

Sample rates

3.40 Sample rates help understand the reliability of OD data. They are calculated by dividing OD samples captured by the traffic counts (based on the TVC data) during the corresponding time period. Table 3.17 below presents the sample rates for key vehicle

type aggregations at TP1 Amoli. We believe that the sample rates of the OD data are reasonable for the analysis required.

Table 3.17: Sample rates for OD data

Vehicle type	TP2 Amoli
Passenger (CJV+Bus)	13%
Goods (LCV+2A+3A+MAV)	42%

Source: Steer analysis of OD data

Zone categories

3.41 To facilitate better understanding of key regional traffic drivers as determined by their OD zones, and influenced by various towns, cities, states and regions in the vicinity of the Asset, we have aggregated zonal data as described in Table 3.18 below. The methodology behind this aggregation of zones may vary as per the characteristics displayed by the different Assets being studied.

Table 3.18: Zone aggregations for zonal influence analysis

Aggregate Zone	Description
Local	Local zones are those that fall on or very close to the Asset.
IAOI (Immediate Area of Influence)	IAOI zones are the locations which generate traffic and lie within approximately 75-150 km distance from the Asset.
Rest of Rajasthan	Rest of the cities/Districts in the state that Asset lies in (other than Local/IAOI)
Rest of Uttar Pradesh	Uttar Pradesh (excluding parts of Uttar Pradesh which are a part of IAOI Agra, Mathura)
Rest of North India	Uttarakhand, Haryana, Punjab, Jammu and Kashmir
Central NCR	Delhi State, including New Delhi
Gujarat & Maharashtra	Gujarat and Maharashtra (including Mumbai)
Central India	Madhya Pradesh, Chhattisgarh
South India	Tamil Nadu, Karnataka, Kerala, Andhra Pradesh
East & Northeast India	West Bengal, Orissa, Jharkhand and Northeast Indian states
Outside India	Nepal, Bhutan, Bangladesh

Source: Steer analysis

Zonal influence

3.42 The zonal influence is the contribution of the zone or the zonal aggregation to trips by a vehicle type. This section presents the zonal influence at TP1 Amoli, aggregated based on zonal aggregation listed in the previous sub-section. Please note that zonal influence is analysed based on trip ends and not trips. [10]

[10] For example, if out of 100 trips at a toll plaza on an Asset, 10 trips are between Hyderabad and Delhi and 90 trips are between Hyderabad and Chennai, then zonal influence of Hyderabad would be 50% since one end of all trips are at Hyderabad. Likewise, zonal influence of Delhi and Chennai would be 5% and 45%, respectively.

3.43 As can be seen from Figure 3.11 and Figure 3.12 below that the influence of local + IAOI zones (trip ends in the Asset's proximity) has the highest share across vehicle types. In terms of CJVs, TP1 and TP2 have a 52% and 70% share of such trips, while for MAVs, the corresponding figures are 31% and 32%.

3.44 In terms of MAVs, a substantial share of influence is also observed from Uttar Pradesh (15% at TP1 and 12% at TP2); Gujarat & Maharashtra (11% & 18% respectively) as well as East & Northeast India (5% and 10% respectively)

Figure 3.11: Zonal influence at TP1 Amoli

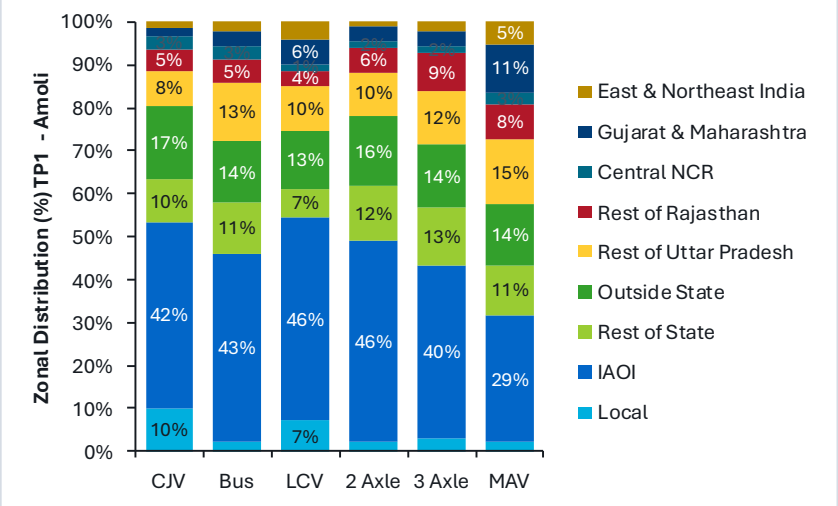

Figure 3.12: Zonal influence at TP2 Ludhawai

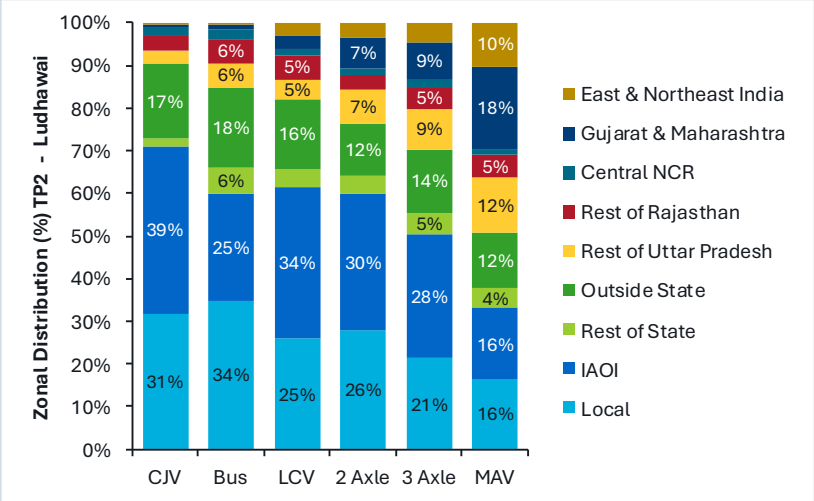

Source: Steer analysis of OD data

Internal External analysis

3.45 Internal-External analysis helps in identifying the trips which have both the origin and destination on or near the Asset i.e local/IAOI zones (Internal-Internal or I-I), any one end on the Asset (Internal-External or I-E), or neither end on the Asset i.e. through trips (External-External or E-E). RoS here represents areas within the state which are neither local or IAOI. 'Internal' zones are those that were analysed as 'local' and 'IAOI' in the zonal influence analysis, i.e. lying on the Asset, while 'External' zones are areas lying outside the state.

3.46 Figure 3.13 and Figure 3.14 show the distribution of trips based on these categories, for MAVs specifically. Understandably, these reflect the observations seen in the zonal influence presented earlier, at a higher level of aggregation but at a trip level.

Figure 3.13: Internal-external distribution at TP1 Amoli

	Internal	Rest of State	External
External	17%	6%	35%
Rest of State	1%	0%	9%
Internal	13%	2%	17%

Figure 3.14: Internal-external distribution at TP2 Ludhawai

	Internal	Rest of State	External
External	16%	13%	19%
Rest of State	4%	1%	17%
Internal	12%	3%	15%

Source: Steer analysis of OD data

3.47 We see that TP1 Amoli has about 35% of E-E trips for MAVs even though there is limited economic activity in the vicinity of the Asset, since the traffic on this Asset is largely non divertible due to absence of any other viable alternate roads. TP2 , on the other hand, has a lower share of external-external trips (19%) as per the last survey.

Commodity distribution

3.48 We have grouped various commodities into aggregate categories for ease of interpretation, as shown in the table below. The charts in the following sub-section present information in terms of aggregate commodity categories.

Table 3.19: Aggregate commodity categories

Commodity Description	Code	Combined codes used for charts
Agriculture Products / Cash crops (Wheat, Rice, Sugar cane,Maize etc.)	AGR	AGR

Cattle Food / Live Stock (sheep, ghoat, cow,cattle food etc)	LIV	
Perishable Items (Fruits, vegetables)	PER	GRO
Animal Products/Dairy/Eggs/Fish/Meat/Animals	DFM	
Groceries / Food items (Soap, Salt, Sugar, Pulses, Spices, Biscuits, bread,cool drinks, beer etc.)	GRO	
Building Material / Construction (Cement, Lime, Brick, fly ash, etc)	CNS	CNS
Sand/Clay	SND	
Stone (kota stone, marble, Granite, Aggregate stone etc.)	STN	
Ceramic	CRM	
Petroleum Products (Oil, LPG, CNG, etc.)	PET	PET
Chemicals / Fertilizers (Acids,Fertilizers etc.)	CHM	
Electrical/Manufacturing items (Electronic items, Medicine, Leather, Wine, Rubber/ Tyre, Plastics, Cloth, Paper etc.)	MAN	MAN
Raw Wood,Cork & Wood Products, Furn	WUD	
Machinery / Spare parts	MAC	
Automobiles (Finished products, auto parts, Car/bike manufacturing, New Chassis)	AUT	AUT
Basic / Fabricated Metals (Iron, Steel / Metal)	MET	MET
Mining Minerals (Coal, Gypsum, Cobalt etc.)	MIN	
Empty	EMT	EMT
Container	CTR	MSC
Miscellaneous (Parcel, Courier, House hold items etc.)	MSC	
Passengers	PAS	
Scrap	SCR	

Source: Steer analysis

3.49 Figure 3.16 and Figure 3.16 below present the commodity distribution for goods vehicles at both toll plazas, at the total level. Construction products are observed to have the highest shares (24% for MAVs at TP1 and 17% at TP2). It majorly comprises of marble being transported from mining hubs within Rajasthan such as Kota, Kishangarh towards Uttar Pradesh, Bihar, Odisha etc.

3.50 15-17% shares of miscellaneous items (that include couriers, parcels, and other consumer goods) indicate the prevalence of urban demand centres connected by the Asset, and the increasing penetration of e-commerce in cities across the country.

Figure 3.15: Commodity distribution at TP1

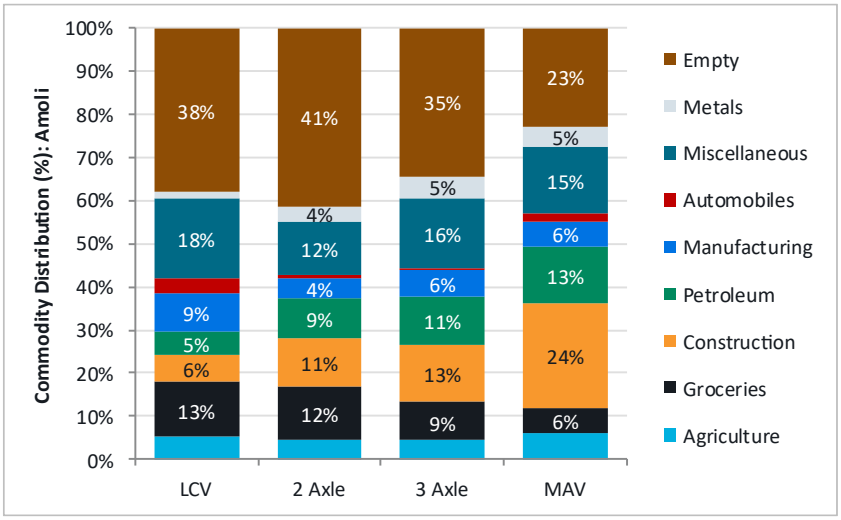

Figure 3.16: Commodity distribution at TP2

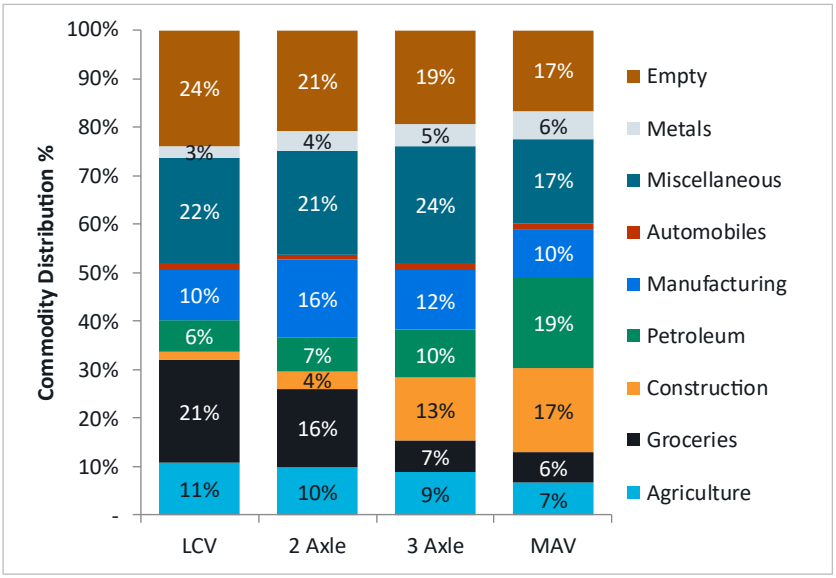

Source: Steer analysis of OD data

Trip length analysis

3.51 Trip-length distribution provides the distance-based profile of various vehicle categories. This helps to validate assumptions around the share of macro-economic drivers, inputs from zonal influence and toll segmentation. For ease of interpretation, we have categorised distances into 5 groups – local (0-65km), short-distance (65-300 km), medium-distance (300-500 km), long-distance (500-1000 km) and very-long-distance (1,000 – 5,000 km). The trip distances were derived as driving distances from Google Distance Matrix Tool based on zonal coordinates for OD pairs.[11]

[11] Google Distance API is a tool that is available on a chargeable basis from Google Maps Platform. Link: **https://developers.google.com/maps/documentation/distance-matrix/start**. Travel distance and time information for driving/transit under various congestion scenarios can be extracted through this tool by using macro-enabled Excel, R, etc.

Figure 3.17: Trip length distribution, TP1 Amoli

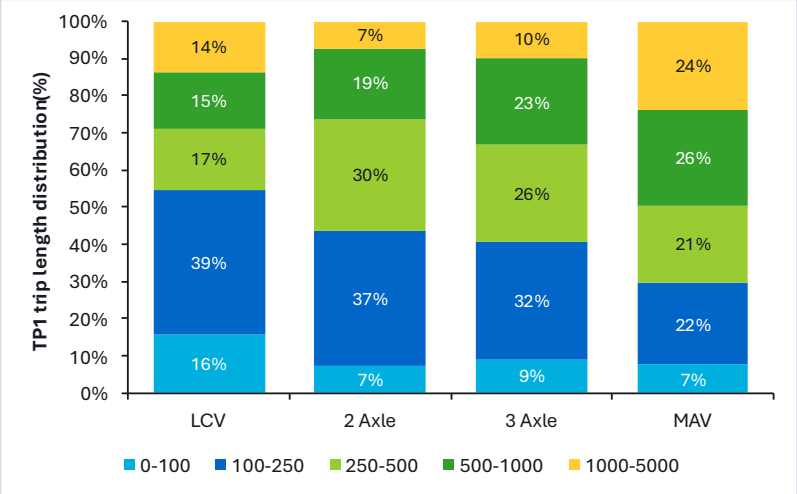

Figure 3.18: Trip length distribution, TP2 Ludhawai

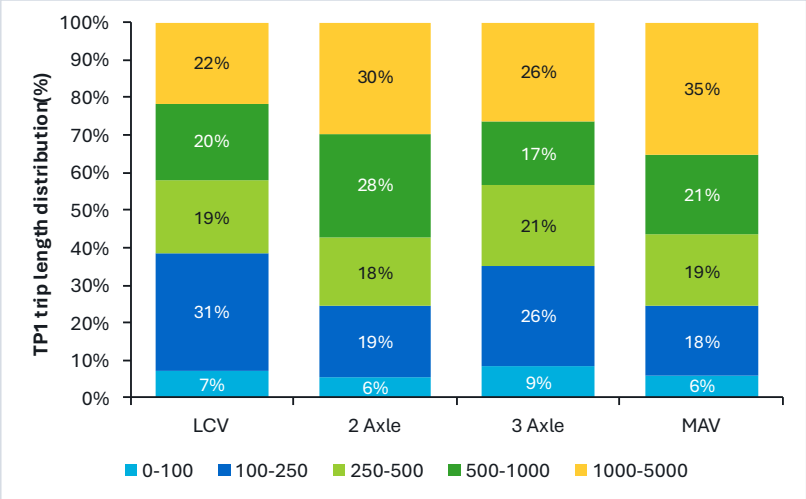


Source: Steer analysis of OD data

3.52 As seen in Figure 3.17 and Figure 3.18 above, a significant share of trips across vehicle categories are less than 500km in length. These shares are observed to be higher on TP1 Amoli, due to its relative proximity to Jaipur.

3.53 On the other hand, over half of MAV trips at both plazas are seen to be longer than 500 km in length due to long distance movements between Gujarat at one end and Uttar Pradesh, east and north-eastern India at the other end. These findings are in line with the zonal influence and top OD pairs observed on the Asset as well.

Conclusions

3.54 In FY26, TP1 Amoli witnessed a total AADT of 14,910 and TP2 had a corresponding figure of 16,497. Looking at the vehicle shares of this Asset, the dominant vehicle class is CJV, holding 57% of vehicle share at TP1 and 61% at TP2 in FY26. Further, MAVs at TP1 has a higher share (22% compared to 15% at TP2).

3.55 The TVC counts does show some variation on the TMS, at the total level TMS is 5.9% lower than TVC at TP1, and 3% lower than TVC at TP2. However, the differences are small for

larger revenue generating categories (3A, MAV and OSV combined), being 0.5% and 1.4% at TP1 and TP2 respectively, which gives us confidence in the data moving forward

3.56 Key takeaways from the zonal distribution analysis include the dominant influence of IAOI and local trips, particularly for CJVs which is largely influenced by the demand centre of Jaipur. Construction materials and household/consumer products hold the greatest commodity shares, along with substantial shares for petroleum and manufactured goods.

3.57 The overall characteristic of the Asset is strategic is nature connecting several key urban and economic activity centres of Jaipur, Agra, Bharatpur in immediate vicinity with wider generators and attractors of south Rajasthan, Gujrat, Maharashtra to Uttar Pradesh and Delhi NCR also being connected by the Asset. Urban population and tourism linked growth is seen as an added advantage for CJV and Bus traffic.

4 Socio Economic Context

Introduction

4.1 The growth of traffic on existing (brownfield) roads depends on, firstly, how fast the background travel demand grows (background growth); and secondly, how successful the Asset is in attracting that traffic (traffic capture). Background travel demand is driven by the socio-economic conditions of the region where the Asset is located and conditions on a national scale. These include:

- Changes in factors such as population, economic growth (regional and national) and industrial production; and
- Other local factors such as strategic port growth, and growth in local industries near the Assets.

4.2 In turn, the change in the competitive position of the Asset (and thus of the traffic capture it will achieve) derives from how the service offered and the prices charged on the Asset change in comparison to competing roads; and whether any new competing road facilities are available.

4.3 In this chapter, we assess the socio-economic indicators relevant to traffic growth on the Asset.

Population growth

4.4 We have analysed the key socioeconomic drivers of the background traffic demand in the state of Rajasthan where the Asset is located.

National Level

4.5 The total population in India has grown at a Compound Annual Growth Rate (CAGR) of 1.5% since 2000, decreasing over the years, as shown in Table 4.1 below. The World Bank forecasts this growth to decrease to 0.6% CAGR by the 2030-45 period.

Table 4.1: CAGR of population in India

Years	CAGR		
	Total Population (m)	Rural Population (m)	Urban Population (m)
1970 - 1985	2.3%	1.9%	3.8%
1985 - 2000	2.0%	1.7%	2.9%
2000 - 2015	1.5%	1.0%	2.6%
2015 – 2030*	1.0%	0.3%	2.3%
2030 – 2045*	0.6%	-0.3%	1.9%

Source: World Bank Data on Health Nutrition and Population Statistics, *forecast population growth

State Level

4.6 Table 4.2 shows the evolution of population in the state of Rajasthan (containing the Asset), compared to that of the country. Overall, as can be seen, the trend observed at the country level is also noticeable at the state level, namely, a move towards urban agglomeration with the growth in rural population being slower than that of urban population. Further, Rajasthan has grown at a rate which is slightly higher than the country average, in the decade between 2001 and 2011.

Table 4.2: Population Growth in India (2001 – 2011)

State	2001 Population (m)			2011 Population (m)			CAGR (2001 – 2011)		
	Total	Rural	Urban	Total	Rural	Urban	Total	Rural	Urban
Rajasthan	56.5	43.3	13.2	68.5	51.5	17.0	2.0%	1.8%	2.6%
India	1,028	742	286	1,210	833	377	1.6%	1.2%	2.8%

Source: National Institution for Transforming India (NITI Aayog) – Census Data

4.7 Due to the complexities of patterns of urbanisation, and the very dynamic nature of local population migration (which are very difficult to forecast with accuracy), we do not use population growth as a proxy for understanding future travel demand growth on the Asset. It has been included in this section simply to provide the underlying socio-economic context of the state/trends in the regions in which the Asset is located.

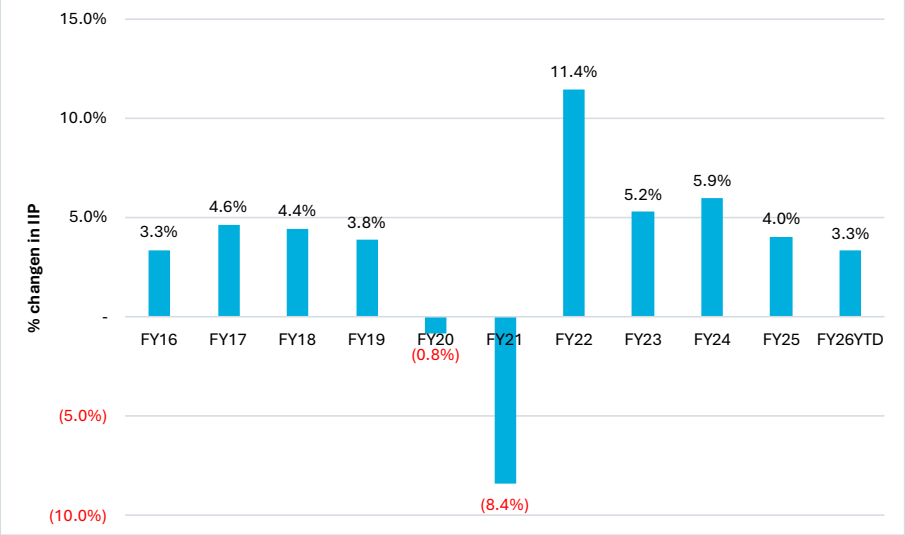
Economic Indicators

Industrial Production

4.8 The Index of Industrial Production (IIP) is a composite indicator that measures the short-term changes in the volume of production for a basket of industrial products. The IIP data tracks the manufacturing activity in different sectors of an economy, with mining, manufacturing, and electricity being the three broad sectors constituting the IIP.

4.9 At an annual level, national IIP was growing at an average of 4% per year over the period FY15-19, before the country underwent a liquidity crisis and experienced an overall economic slowdown in FY20 (as presented in Figure 4.1 below). In the aftermath, IIP shrank by over 8% in FY21 due to a decline in economic activity in the wake of global lockdowns introduced to curb the Covid-19 pandemic. Post the immediate recovery in FY22, IIP growth has since stabilised, with FY25 recording 4%, and FY26YTD (till February 2026) recording 3.3% growth over FY25.

Figure 4.1: Annual growth – Index of Industrial Production (FY16-FY26YTD)



Source: Ministry of Statistics and Program Implementation (MoSPI). FY26YTD represents data till Feb'26

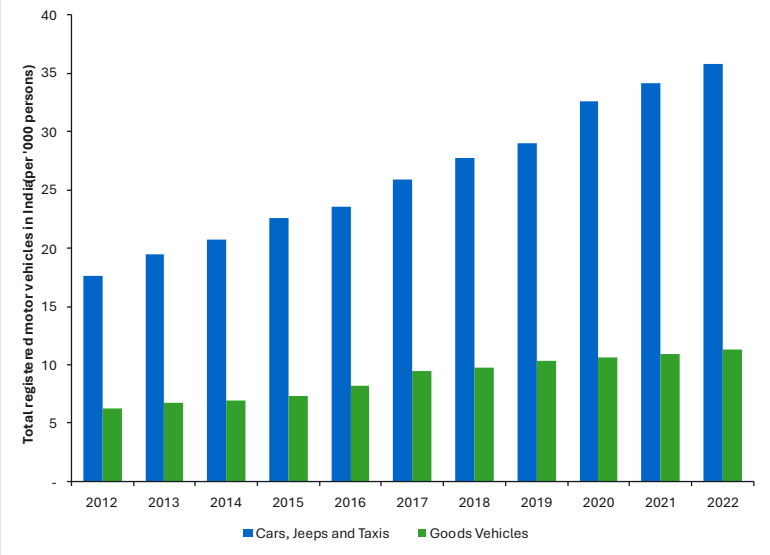
4.10 Since state-level IIP data is not as readily available as national level IIP, we have presented national IIP here to indicate nationwide activity in key industrial sectors like power, manufacturing, and mining, all of which influence long-distance commercial movements across the nation, and not unique to this asset. We, however, do not use it to forecast future travel demand growth since long-term forecast for IIP is not available through official sources such as MOSPI, RBI or through multilateral organisations like WB, or the IMF.

Vehicle Ownership

4.11 The gap in car ownership between India and developed nations remains substantial – with 36 cars/jeeps/taxis and 11 commercial vehicles per thousand people, as of FY22 (the latest year for which official data is available). However, with increasing per capita income levels, a booming economy and the subsequent increase in demand for mobility, the number of registered vehicles has been on a gradual upward trend

4.12 Overall, India still stands at a very nascent stage in the vehicle saturation curve, offering huge potential for growth going forward. Between FY12 and FY22, the CAGR for CJV and goods' vehicles registered in India was 8.6% and 7.3% respectively.

Figure 4.2: Total number of registered motor vehicles in India (per 1000 population

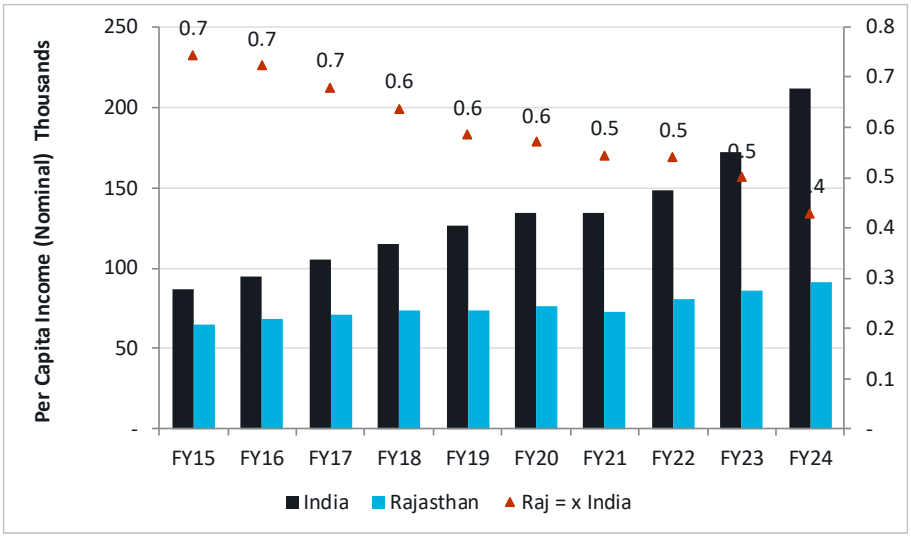


Source: Ministry of Road Transport and Highways (MoRTH)

Per Capita Income (PCI)

4.13 The per capita income of the state where the Asset lies, i.e., Rajasthan has been lower than the national average, trending at 50-60% of the national per capita income in the recent years. This level of income suggests that the asset is influenced by both Delhi and north and Uttar Pradesh, both of which have exhibited faster growth than Rajasthan's statewide trends in recent years and are expected to continue on this trajectory. Going forward, we therefore expect local consumption to be strong which would drive the growth in both passenger and commercial traffic.

Figure 4.3: Per Capita Income



Source: Steer analysis of MoSPI data

4.14 However, given the difficulty in obtaining granular district level PCI data it is not advisable to use this as a growth driver. Also, the long-term forecast for PCI is not available we therefore refrain from using it to forecast traffic.

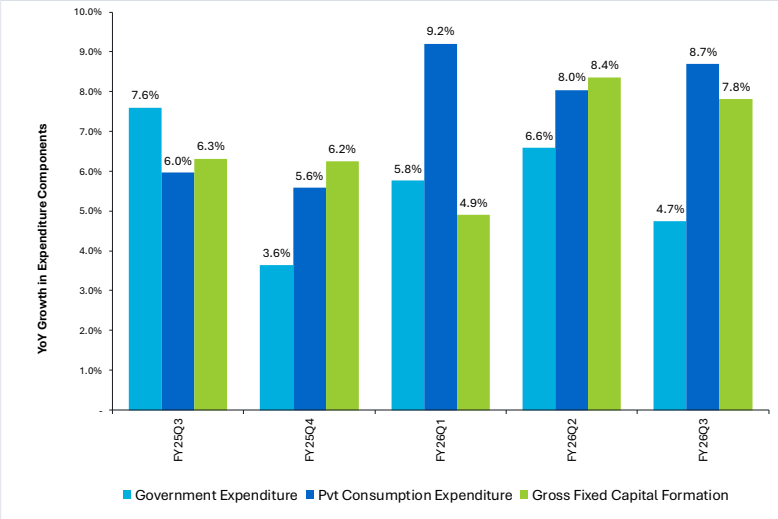
Economic growth

India's Performance

4.15 Despite a slowdown in the economy during H1FY25, the Indian economy has observed strong growth each quarter since FY25Q2, with the latest published estimates for FY26Q3 GDP at 7.8% over FY25Q3. This performance has been driven by strong growth in investment and consumption expenditures and higher consumer optimism for the year ahead[12].

4.16 The figure below, we present quarterly Y-o-Y growth in three major components of GDP – government expenditures, consumption expenditures, and business investment (gross fixed capital expenditure) over the past year (FY25Q3-FY26Q3).

Figure 4.4: YoY growth in expenditure components of GDP



Source: Steer Analysis of MOSPI Data

4.17 While consumption and investment expenditures have continued to show consistent growth over the past two quarters, government expenditures observed a marginal decline in FY25Q4. In FY26Q1, government expenditures rebounded, recording 5.8% growth over FY25Q1 levels.

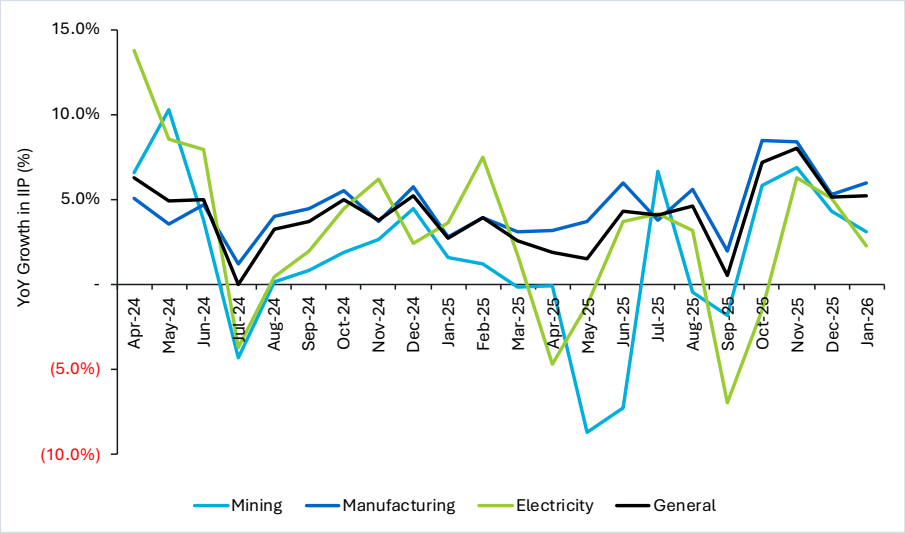
4.18 Performance across different types of industrial activities (such as Mining, Manufacturing, and Power Generation) directly impact freight movement and commercial traffic volume growth across the country, including on the Asset. In the figure below, we present growth trends in IIP – a measure that tracks the performance of the economy across these activities. As of FY26YTD (Apr'25-Feb '26), the Manufacturing sector continues to perform strongly, recording positive y-o-y growth since FY25Q3. While industrial activity across the two other sectors (i.e., Power Generation and Mining) dropped between May and Jun/Jul '25, they have since rebounded and show signs of continued growth going forward.

4.19 In addition to monthly trends in IIP, the figure below presents y-o-y growth of quarterly GVA in four industrial sectors - Mining (& Quarrying), Manufacturing, Electricity (and other Utilities), and Construction. While the Mining and Power sectors observed decline and

[12] Government of India PIB Release (27th February 2026)

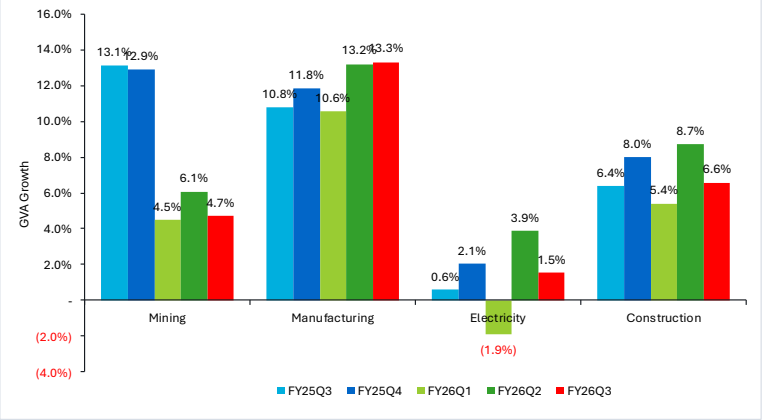
muted growth in FY26Q1, the Manufacturing and Construction sectors experienced strong growth. While overall economic growth has remained resilient as of FY26YTD, performance across industries have varied, impacting economic growth across different regions and on the Asset as well.

Figure 4.5: Month on Month IIP performance



Source: Steer Analysis of MOSPI Data

Figure 4.6: Industrial components of GVA



Source: Steer Analysis of MOSPI Data

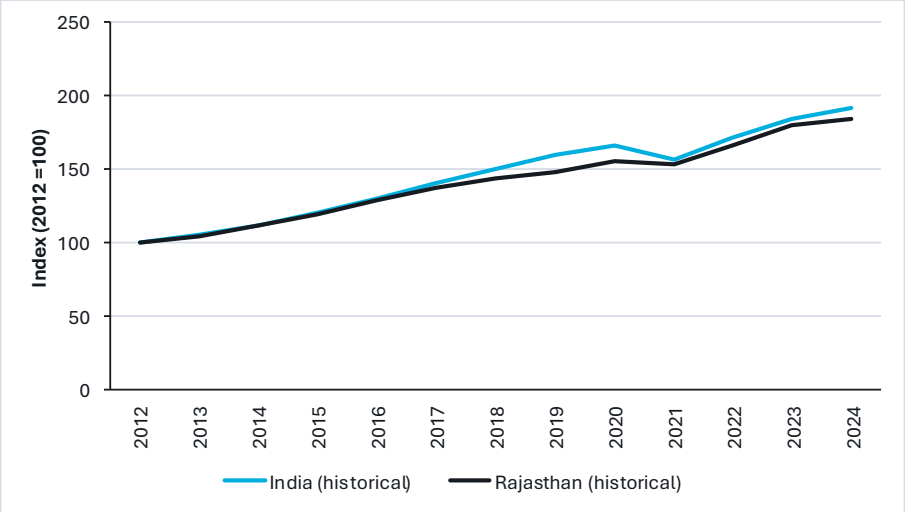
GDP and GSDP Growth

4.20 Over the period FY12-FY24, the Indian economic has grown at a CAGR of approx. 6% aided by growth in the tertiary sector which grew at a CAGR of approx. 6.9% over the same period. The economic growth of Rajasthan (state GSDP) has been somewhat slower than the country overall for the past 5 years but it seems to have caught up with the national rate since the COVID19 pandemic. [13]

[13] GSDP is the Gross State Domestic Product i.e., the GDP equivalent for a particular state, it is the final value of goods and services produced by a particular state

4.21 The Asset, lies in the state of Rajasthan. The state contributes approximately 5% to India's GDP. The following figures illustrates the evolution of India and Rajasthan GDP.

Figure 4.7: Evolution of Rajasthan's state GDP and national GDP; FY12-24



Source: Ministry of Statistics and Program Implementation (MoSPI)

Economic activity in the state

4.22 Rajasthan, the largest (area-wise) state in India, is in the north-western part of the country. In terms of sectoral contribution to the state GDP, tertiary sector has the highest share followed by primary and secondary, with the shares remaining stable during the last five years.

4.23 The tourism and transport sector constitutes a major share of the state's tertiary sector. Rajasthan is considered a favoured tourist destination in India, with key tourist attractions being Jaipur, Jodhpur, Jaisalmer, Bharatpur and Udaipur. In 2018, the state attracted over 50 million domestic tourist arrivals in the country whereas, in terms of foreign tourist arrivals it holds fifth position with over 1.7 million tourist visiting state every year. [14]

4.24 In terms of secondary sector, the state has key industrial areas in Kishangarh (marble); Manesar (automobile), Pali and Jodhpur (textiles), Chittorgah - Neemuch (cement), Kota (stone). Rajasthan is one of the largest mineral producing states in India and the sole producer of lead and zinc ores in the country. The state has one of the largest limestone reserves, making it a hub for cement industries. In terms of agricultural produce, the state is largely known for its production of wheat, cotton, cereals and pulses.

Forecasts for growth drivers

4.25 Following the discussion in Chapter 4 on the nature of economic activity in the state of Rajasthan, in this section, we describe the assumptions in relation to forecasts of the key macro-economic drivers of traffic growth. We have based our forecast on GDP and GSDP using forecasts of GDP as provided by the Client.

[14] http://tourism.gov.in/sites/default/files/Other/India%20Tourism%20Statistics%20at%20a%20Glance%202019.pdf

National GDP

4.26 After the last period of economic slowdown in FY11-12, the country experienced an economic downturn again in late FY19 with FY20 having reported a GDP growth of 4% (relative to an average growth rate of 7% per year between FY13 and FY19). India's GDP growth declined as domestic investment and consumption demand were already under stress because of the liquidity crunch before Covid-19. Other factors that contributed to the economic slowdown included reduced growth rates in automobile sales and production, liquidity crunch in credit markets and rising number of Non-Performing Assets (NPAs) within the banking sector, as well as lower manufacturing production and lower rural consumption.[15]

4.27 The Covid19 outbreak had a significant impact on the Indian economy during the first two quarters of FY21 as government mandated lockdowns across the country effectively stalled economic activity and growth. The growth momentum eventually picked up in Q3 of FY21, with a sharp rebound in the economy in FY22 (GDP recorded 9.7% growth over FY21), and has since observed a consistent growth of 7.6% in FY23, 9.2% in FY24 and 6.5% in FY25.

4.28 Figure 4.8 below shows client provided GDP projections for India. The forecast provided by the Client expects the India GDP to grow at 6.5% between FY27-FY28 and gradually tapering down to 4.1% by FY32, end of concession. The India GDP growth forecast provided by the Client is broadly in line with other independent forecasts available from reliable sources such as IMF, World Bank and RBI in the medium term.

4.29 Over the near term, Rajasthan's GSDP growth assumes to continue outpacing the national GDP throughout the concession period. We believe this is a realistic position based on the current and future development plans of local and state governments

4.30 There are significant investments expected to take place as part of the state's plan and Rajasthan is expected to receive a significant proportion of these investments, given its leading position in industrial investments. Higher than expected GSDP growth rate across the concession period could be achieved if such investments were realised as they are expected to give an additional boost to Rajasthan's state economy.

4.31 In the long term, we believe that as other smaller state economies of India catch up with the national economic growth, the gap between growth rates of larger state economies, such as Gujarat, Maharashtra and Karnataka, and the national GDP growth rate will start reducing.

5 FY26 Base Year AADT and Traffic growth analysis

Introduction

5.1 In this chapter, we present our approach, assumptions and results for base (or background) traffic growth for each vehicle category on the Asset.

5.2 Traffic growth is commonly related to a variety of macro-economic and industry- or commodity-specific factors (hereafter referred to as 'traffic growth drivers'). These growth drivers are typically identified from the results of the OD data analysis and the site visits that help us appreciate the nature of traffic movement – 'what' travels 'where' and 'why'.

5.3 To understand the historical traffic trends in relation to these growth drivers, we carry out regression analysis to determine the historical relationship between each traffic belonging to each major vehicle category and its macroeconomic growth driver at each toll plaza. The dynamics of traffic demand is the dependent variable while the dynamics of one or more identified growth drivers are the independent or explanatory variables.

5.4 Typically, passenger and light commercial vehicles like cars, buses, LCVs and 2-axle trucks grow in line with the GSDP of the state where the toll road is located. Heavy vehicle traffic like 3-axle trucks and MAVs grow in line with the national GDP. This could be because most light vehicles tend to travel shorter distances within the state, whereas a significant proportion of heavy vehicles carry commodities for long-distances across the country. These commodities also tend to be part of industry ecosystems whose demand-supply relationships are scattered across the country and therefore relate more with GDP growth.

FY26 Base year AADT estimates

5.5 The base year is the year on which long-term background forecast growth rates are applied to derive year-wise average annual daily traffic (AADT) estimates for forecast years. This is therefore an important aspect of our forecasting approach as traffic and ultimately revenue forecasts for future years are built on top of the base year traffic estimate. We have used FY26 as the base year for AADT estimates for the forecast years.

5.6 As described previously in Chapter 3, to establish the base year (FY26) traffic position, we utilized information from various sources – including from the Client and our context knowledge, to assess a reasonable demand on the corridor.

Methodology

5.7 The base traffic for FY26 has been estimated using 11 months of actual traffic data (April to February). Each toll plaza's seasonality correction factors were applied on the actual

MADTs of Apr-25 to Feb-26 to obtain seasonally corrected estimates for FY26 traffic. An average of these estimates was considered to be the FY26 base traffic.

Seasonal Correction Factors

5.8 Traffic on any Asset varies on a month-on-month level. Such variations maybe due to monsoons (typically Jul to Sept) or due to festivals in the region. For e.g. It is observed that typically the truck traffic during the first half of the financial year (April-September) is generally lower than the annual average, mainly because of peak summer season followed by monsoons affecting the freight movement patterns in large parts of the country in the July-September period. In addition to these there may be other seasonal variations specific to the Asset.

5.9 In order to normalise for these variations across the year to provide an AADT estimate, Seasonality Correction Factors (SCF) are used. SCFs are estimated to convert the monthly traffic numbers to an AADT level while accounting for seasonal variation due to local/national festivals, weather changes and/or temporary external impacts. These are typically estimated using historical data for each plaza and vehicle category over multiple years. An SCF >1 means that the traffic for the month is lower than the annual average and vice-versa.

5.10 To achieve this, we studied the seasonality between monthly average daily traffic (MADT) – We have analysed the seasonality trends between monthly average daily traffic (MADT) and AADT for data during the historical years of tolling (as described in Chapter 3, section 3.19), excluding the years that were impacted by specific events. This averaged seasonality trend is then applied to the monthly traffic to obtain AADT as mentioned in the previous sections.

5.11 The seasonality factors assumed for individual vehicle types are shown in the table below.

Table 5.1: Seasonality correction factors for TP1 Amoli

	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Jan	Feb	Mar
CJV	0.98	1.02	0.95	1.02	1.03	1.12	1.14	0.94	0.93	1.06	0.98	0.91
LCV	0.99	1.01	0.96	1.09	1.15	1.14	1.03	1.00	0.98	1.02	0.84	0.97
Bus/2A	1.06	1.01	1.00	1.08	1.10	1.04	0.99	0.93	0.98	1.04	0.89	0.93
3A/MAV	1.09	1.03	1.05	1.07	1.12	1.06	1.01	1.03	0.91	0.95	0.87	0.92

Table 5.2: Seasonality correction factors for TP2 Ludhawai

	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Jan	Feb	Mar
CJV	0.98	1.00	0.95	1.04	1.03	1.12	1.13	0.94	0.94	1.04	0.95	0.94
LCV	0.99	1.05	0.99	1.05	1.11	1.09	1.05	0.96	0.95	0.98	0.86	1.05
Bus/2A	1.06	1.02	0.99	1.08	1.09	1.04	1.00	0.94	0.99	1.04	0.88	0.94
3A/MAV	1.09	1.03	1.04	1.06	1.12	1.05	1.01	1.03	0.92	0.95	0.87	0.92

Source: Steer analysis of Client historical TMS data

Adopted FY26 base estimates

5.12 Based on the above methodology and inputs, the adopted base for both toll plazas has been shown below:

Table 5.3 Adopted base estimates - TP1 Amoli

	FY25	FY26YTD	FY26A	FY26A vs FY25
CJV	8,262	8,469	8,573	3.8%
LCV	293	286	291	(0.6%)
Bus/2A	1,919	1,936	1,956	2.0%
3A/MAV	3,977	4,127	4,177	5.0%
Total	**14,451**	**14,819**	**14,997**	**3.8%**
PCUs	**30,077**	**31,064**	**31,433**	**4.5%**

Source: Steer analysis: FY25 actual full year, FY26YTD includes 11 months of FY26, FY26A is adopted base for FY26. Note: On this toll plaza, we have 3A/MAV combined volumes. However, for PCU calculations, to maintain consistency, we have used the shares derived from the latest TVC on the plaza

Table 5.4: Adopted base estimates- TP2 Ludhawai

	FY25	FY26YTD	FY26A	FY26A vs FY25
CJV	9,557	9,994	10,070	5.4%
LCV	310	300	302	(2.5%)
Bus/2A	1,994	1,989	2,009	0.7%
3A/MAV	3,976	4,128	4,172	4.9%
Total	**15,836**	**16,412**	**16,552**	**4.5%**
PCUs	**31,618**	**32,770**	**33,081**	**4.6%**

Source: Steer analysis: FY25 actual full year, FY26YTD includes 11 months of FY26, FY26A is adopted base for FY26. Note: On this toll plaza, we have 3A/MAV combined volumes. However, for PCU calculations, to maintain consistency, we have used the shares derived from the latest TVC on the plaza

5.13 From the above tables it can be ascertained that TP1 and TP2 are expected to grow by 4.0% and 4.2% in PCU terms respectively, in FY26. This growth on both toll plazas is being driven off a robust growth profile observed in 3A/MAVs. This can be attributed to the overall growth of the urban centres in close vicinity of the Asset including increased economic activity helping commercial traffic growth.

5.14 We have combined Bus and 2A volumes for our base estimation because as mentioned before, TMS reports discrepancies in the data. Therefore, the split that we have derived from our counts is the split we are using in our projection to forecast the growth of each individual category for this Asset.

Estimation of background elasticities

5.15 Elasticities, in the case of traffic growth are the relationships between traffic and growth drivers. Multiplied with forecasts of growth drivers like GDP or GSDP, they provide the forecasts of background traffic growth rates.

5.16 Table 5.5 presents the growth drivers identified to model the forecast background traffic growth rates.

Table 5.5: Identified growth drivers to model traffic growth

Vehicle type	GDP India	GSDP Rajasthan

Car		100%
LCV		100%
Bus		100%
2A	100%	
3A	100%	
MAV	100%	

Source: Steer analysis of Client data

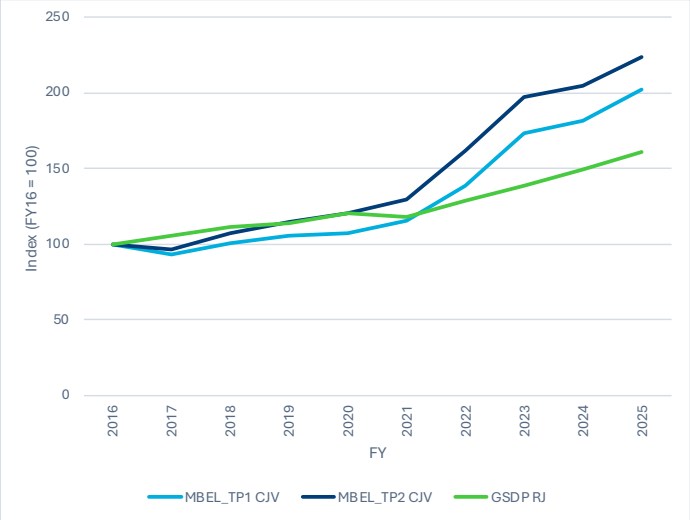
5.17 The TMS data for the Asset reports 3A and MAV together where Bus and 2A reported separately, hence splits were required to understand the 3A and MAV growth pattern. For this Asset Car, Bus and LCV do more regional movement as validate from OD trip length and zonal analysis hence the growth of this vehicle category is more influenced by Rajasthan GSDP. Whereas 2A, 3A and MAV carry heavy commodities like construction material and agricultural products from Rajasthan across states and internationally hence more linked to GDP growth.

5.18 For the purpose of regression analysis we have considered the period of FY16-24. FY16 and before were chequered period for the Asset with combination of illegal mining and overloading ban. The commercial traffic did not witness significant negative impact on volumes except for first nation-wide lockdown in March and April 2021. Hence we have considered FY21 and FY22 for the regression analysis.

CJV

5.19 It was observed from the OD data that CJVs primarily cater to regional movements between Jaipur, Bharatpur, Agra and other towns in the vicinity of the Asset. We have therefore assumed Rajasthan GSDP to be the growth driver for modelling growth of CJV traffic. Figure 5.1 shows the relationship between indexed values of CJV traffic and Rajasthan GSDP at TP1 Amoli and TP2 Ludhawai. CJV traffic on TP1 has shown 8.1% growth from FY16-25 while for the same period TP2 recorded 9.4%.

Figure 5.1: Relationship between CJV traffic and Rajasthan GSDP



Source: Steer analysis of Client TMS data and publicly available GDP/GSDP data

5.20 Generally, we would expect that in fast-growing economies with relatively low car ownership levels, car traffic growth rates are often in line with or are slightly higher than growth in GSDP/GDP (i.e. suggesting elasticities at or just above 1.0). Further, the opening

of the Delhi Mumbai section upto Lalsot has had a significant impact on Car traffic on the corridor on both toll plazas adding additional impetus to car growth. This has also increased the influence of tourism related movement on the Asset, due to the significant volumes contributed by DME onto the corridor and hence it is expected that car growth will remain robust on the Asset. In addition, there is an expected increase in car ownership proportion of overall population as the economy grows.

5.21 Taking note of the positive outlook for passenger traffic on the tourism-driven Asset we have assumed a forecast background elasticity of 1.10 with respect to Rajasthan GSDP for CJV at both the toll plazas.

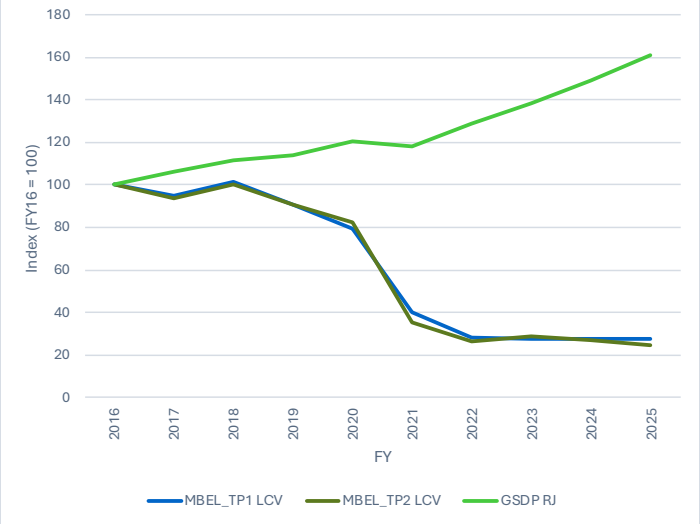
LCV, Bus, 2A

5.22 Compared to heavy vehicles such as 3A and MAV, LCV, Buses and 2As are used for more regional movements within the state – Rajasthan in this case as seen in the OD data analysis. More than 80% of LCVs and Buses and 70% of 2As have one trip end in Rajasthan. We have therefore taken GSDP of Rajasthan would be a more appropriate growth driver to model growth of Bus+LCV+2A traffic. Figure 5.2 shows the relationship between indexed values of Bus+LCV+2A combined traffic and Rajasthan's GSDP.

5.23 Between 2016 and 2025, the growth rate of Bus+2A+LCV remained flat. During this time period, it was noticed that disaggregate traffic for LCVs rose slower than traffic for Buses and 2As. This could be attributable to a variety of factors, one of which is the reclassification of LCVs and 2As, which has been seen as a prevalent tendency across the country's toll highways. However, beginning in 2022, the combined volume of Bus+LCV+2A has begun to show indications of recovery, as shown in Figure 5.2 below.

5.24 Bus growth tends to be largely supply-driven in many parts of the country, with new buses being bought and deployed by the government at different intervals of time. Based on our experience across the country, buses on inter-urban and tourism corridors show elasticities of 0.4 to 0.6 with respect to the GSDP. Based on the regression results and benchmarks, we have therefore assumed an elasticity of 0.5 with respect to GSDP Rajasthan.

Figure 5.2: Relationship between LCV+Bus+2A combined traffic and Rajasthan GSDP



Source: Steer analysis of Client TMS data and publicly available GDP/GSDP data

5.25 Based on the results of the regression, analysis of historical trends on the Asset, as well as our previous experience on benchmark Assets the elasticity assumption for LCVs is 0.3 on both TPs, and for Bus and 2A which have witnessed relatively stronger growth is 0.5 and 0.6 respectively for both toll plazas.

3A/MAV Trucks

5.26 Compared to lighter trucks like LCV and 2A, 3A and MAV have more national or long-distance movements covering several states. Given that manufacturing-related commodities tend to take prominence in the commodity distribution resulting in traffic growth in 3A and MAV to be dependent on industry demand-supply ecosystems spread across the country, therefore we have taken GDP as the growth driver to model the traffic growth in 3A and MAV. Figure 5.3 shows the relationship between indexed values of 3A+MAV combined traffic and India's GDP.

5.27 Historically, 3A+MAV combined traffic grew positively in the FY16-18 period at 8% at TP1 Amoli and 12% at TP2, before losing volumes in FY19 and FY20. However, for the recent period of FY16-25 TP1 Amoli witnessed CAGR of 1.1% and TP2 Ludhawai observed 1.6% growth. This is shown in the figure below:

Figure 5.3: Relationship between 3A+MAV combined traffic and India GDP

Source: Steer analysis of Client TMS data and publicly available GDP data

5.28 Major reasons associated with this slower growth is:

- Implementation of stringent sand mining policy 2020 in Rajasthan which reduced the illegal sand mining and associated 3A and MAV traffic (FY18-20) in the region
- Completion of Jaipur Ring Road improvising access of regions beyond Jaipur.
- Completion of Dausa to Lalsot section of DME. 3A/MAV volumes remained steady in the third quarter of FY23 on TP1 Amoli. This might be linked to the introduction of the DME in Feb 2023, which has provided an alternate route for traffic between Uttar Pradesh/Moradabad/Bareilly and Rajasthan/Jaipur/Alwar.

5.29 We believe 3A to grow slower as compared to MAV due to a shifting preference seen for MAVs from 3As for long-distance movements. This could be because MAVs have higher load capacity which generate economies of scale and therefore lower costs. However, it

is unlikely that 3A trucks will disappear from the market completely as there are best suited for certain commodities or movements.

5.30 Based on the above points, we have assumed elasticities of 0.40 and 0.85 for 3A and MAV trucks respectively, with respect to India GDP growth.

Forecasts for background elasticities

5.31 Table 5.6 presents a summary of the results of the regression analysis carried out on the historical toll plaza data and the macroeconomic (GDP/GDSP) growth, along with the assumed forecast elasticities for background traffic growth.

5.32 The forecast elasticities are assumed to remain constant over the concession period as the logistics sector in still in early stages of development in India (95% of trucks still owned by operators owning less than 5 trucks). Car ownership levels are still around 30-35 per 1000 people, and it is likely to take a few years before the market reaches maturity. These trends are based on a long-term understanding of historical relationships and an overall outlook on the growth of the region and the country.

Table 5.6: Derived elasticities from regression analysis and assumed forecast elasticities for background growth

Vehicle type	Growth driver	History		Forecast	
		Derived elasticity	Years considered	Assumed forecast elasticity	Evolution of elasticity
TP1					
Car	GSDP Rajasthan	1.50	FY16-25	1.10	No change
LCV*	GSDP Rajasthan	<0.10	FY16-25 *(LCV+2A+Bus)*	0.30	No change
Bus*	GSDP Rajasthan			0.60	No change
2A*	GDP			0.80	No change
3A*	GDP	0.20	FY16-25 *(3A+MAV)*	0.10	No change
MAV*	GDP			0.85	No change
TP2					
Car	GSDP Rajasthan	1.73	FY16-25	1.10	No change
LCV*	GSDP Rajasthan	<0.1	FY16-25 *(LCV+2A+Bus)*	0.30	No change
Bus*	GSDP Rajasthan			0.60	No change
2A*	GDP			0.80	No change
3A*	GDP	0.29	FY16-25 *(3A+MAV)*	0.10	No change
MAV*	GDP			0.85	No change

Source: Steer analysis of Client data; regression was run on LCV-2A-Bus (against GSDP), and 3A-MAV (with GDP) combined. *The results of the regressions yielded insignificant results based on the tstat values of the outputs of the regression.

6 Forecasts: Network overlays and forecasts

Introduction

6.1 Following the discussion on our forecast of background growth rates in the previous chapter, this chapter first covers the potential network impacts on traffic growth on the Asset. Thereafter, we present our assumptions around toll segmentation, trip factors and evolution of toll rates for the forecast period which are used to forecast revenues as derived from forecast traffic. In the final section, this chapter summarises traffic growth rates for the forecast years. Table 6.1 lists key intermediate and final outputs that have presented in chapter 3, 5 and 6.

Table 6.1: Key intermediate and final outputs in the forecast

Forecast	Final outputs	Intermediate outputs	Inputs	Chapter
Traffic	Base year AADT	ADT, SCF estimate for base year	Historical SCF and year-to-date AADT	Chapter 3, 5
	Background traffic growth	Background forecast elasticity	Historical elasticities with respect to growth drivers	Chapter 3,5, Appendix C
		Forecasts for growth drivers	Historical performance of growth drivers along with Client's GDP line	Chapter 4,5, Appendix C
	Impact growth rates and staging	Impacts	Asset vs alternate route costs for ongoing/upcoming network and other developments	Chapters 2,6
Revenue	Annual/daily revenue forecasts	Forecast toll segmentation: Trip frequencies and trip factors	Historical trip frequencies	Chapter 3,6
			Historical trip factors	Chapter 6
		Future toll rates	Toll evolution	Chapter 6

Source: Steer analysis

6.2 All traffic is presented as AADT for vehicle category at each plaza, for financial years (April-March). All revenue is presented in Rupees (nominal terms). Though FY32 is the last year of concession, we have developed our forecasts until FY34 for the Client's reference in the Appendices.

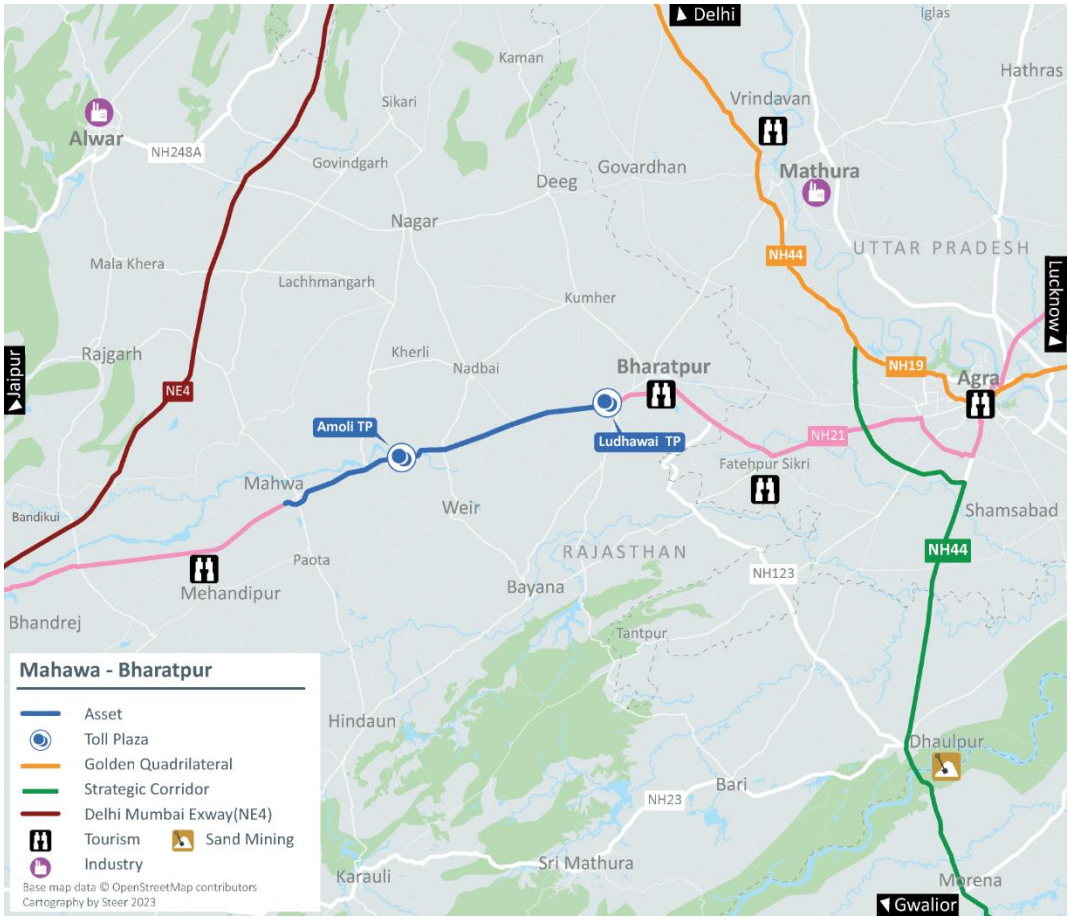
Analysis of potential network/developmental impacts

Summary of alternate routes and planned changes

6.3 The section below details the impacts which we believe would affect traffic on the Asset during the concession period. As discussed earlier in chapter 2, in order to assess the impacts on the Asset, whether positive or negative, we have studied developments (alternate roads, feeder roads and regulatory) in the surrounding road network.

6.4 The map below shows the road network surrounding the Asset.

Figure 6.1: Alternate routes and Asset route shown against the regional network context



Source: Steer analysis and cartography Recovery of traffic as observed in Q3 FY23Ease

6.5 Apart from the recovery of traffic as observed in Q3 FY23, network developments include the construction of and Agra Ring Road. Table 6.2 presents the upcoming network/other developments, corresponding alternate/feeder routes, year of completion and indicative direction of impact on the Asset.

Table 6.2: List of network/other developments

S. No.	Development	Route affected	Year of impact	Impact (+/-)	Toll plaza
1.	Delhi- Mumbai Expressway	Delhi-Jaipur connection through the expressway via Dausa interchange is expected to provide faster connectivity and improved level of service	FY27 onwards	-ve	TP1 & TP2
2.	Construction of Agra-Gwalior Expressway	Additional construction material required for the Agra-Gwalior Expressway will be sourced from Alwar and transported via MBEL Asset	FY27 onwards	+ve	TP1 & TP2

Source: Steer analysis.

Impact assessment for network/other developments

6.6 As seen in the previous sub-section, the assessed impacts primarily fall into either the category of road network developments or development in other modes of transport. Under network developments, changes in the road network could be either brownfield (upgrade to existing road) or greenfield (development of new road). We typically assess impacts of the changes in costs and travel time on routes in these networks using binary logit models that compare generalised journey costs (GJC) between Asset and alternate routes. Under other developments, we typically use historical occurrences of the future event and benchmark observations from regional reference Assets. However, each case is dealt individually in its own network or industry context.

6.7 The subsections below include a narrative of each of the improvements, as listed in the table above, and impacts associated from each of these. While this section deals with impacts that have been considered in our forecasts, Appendices A (Queries) and C (Other Impacts) present Steer's responses to the Client on queries and on the list of impacts from the scope of works part of this commission.

Delhi- Mumbai Expressway

6.8 NHAI is building a greenfield expressway connecting Delhi and Mumbai. The Delhi-Mumbai Expressway (DME) will connect Delhi to Mumbai with a dual carriageway with six lanes per direction. At 1350km long, it will drastically reduce travel length and times from Delhi to Mumbai. With this alignment, it is expected that once it's completed in FY26.

6.9 The benefits will also be most valued by long distance users which can make end to end trips. However, this Asset is expected to have minimal impact as it caters to more east-west movement. We have assumed that the impact will be realised over two years, starting FY27.

Table 6.3 Impact due to Delhi Mumbai Expressway, TP1 Amoli

Construction of Agra-Gwalior Expressway

6.10 Additional construction material required for the Agra-Gwalior Expressway will be transported through the MBEL Asset, which will further increase MAV traffic from FY27 onwards. However, we assume that this impact will taper off by FY29, as the expressway construction is expected to be completed by then. The phasing of the impact will see 80% of the impact in FY27, and 100% of the impact playing out in FY28 and FY29.

Table 6.5: Completion of Agra-Gwalior Construction

Impact	TP1 Amoli		TP2 Ludhwai	
	FY27 (80%)	FY28 (100%)	FY27 (80%)	FY28 (100%)
MAV	1.1%	1.4%	1.1%	1.4%

Source: Steer analysis of OD data, Client TMS data and publicly available information

Revenue forecasting assumptions

6.11 To forecast the revenues for a particular year, the traffic forecast for each vehicle type is converted into tickets sold, which is then multiplied with the corresponding toll rate, which grows over the years as defined in the Concession Agreement. While “trip factors” provide the conversion factor to the former, i.e. traffic (trips) to tickets sold, “toll segmentation” provides the latter i.e. the breakup of trips paying each ticket type. This section discusses assumptions related to trip factors, toll segmentation and toll rates for the forecast period.

Trip factors

6.12 Trip factors are used to calculate the revenue for the trips made on passes such as return, local personal, monthly passes. The trip factors assumed are based on the latest FY24 data available and listed in the table below:

Table 6.6: Trip factors on Asset

Forecast	CJV/Mini LCV	LCV	Bus	2A	3A	MAV
Single	1	1	1	1	1	1
Monthly	45	45	50	45	45	45

Forecast	CJV/Mini LCV	LCV	Bus	2A	3A	MAV
Local commercial	1	1	1	1	1	1

Source: Steer analysis of Client TMS data

Toll segmentation

6.13 The Ministry of Road Transport & Highways has finalized a compensation formula for existing toll concessionaires to offset revenue loss from the Annual Pass scheme for non-commercial vehicles[16].

6.14 Across multiple assets, the share of annual pass trips has been rising on a monthly basis since August 5. A corresponding decline in other ticket categories including Single and Return journeys has been observed.

6.15 CJV Segmentation for FY26 has been developed using the pre annual pass segmentation till 14th August 2025, and post-annual pass segmentation from 15th August 2025 till 28th February 2026. The share of annual pass trips in March 2026 has been assumed to be the same as the share of annual pass trips in the last 10 days of February 2026.

6.16 The segmentation for CJVs in FY27 has been assumed to be the same as the estimated March 2026 segmentation as trends suggest that the share of annual pass trips have stabilised.

6.17 For other vehicle categories we have analysed the historical TMS data split by ticket categories, to understand trends, as shown in Chapter 3. For the traffic and revenue forecast, FY26YTD (Apr- Feb) as discussed in the earlier sections, can be considered a normal period.

6.18 The table below provides the toll segmentation assumed for the period of forecast. We believe with FASTag penetration stabilising and reaching upto 100% in MAVs and minimal impact of COVID-19 during these months, FY26YTD segmentation provides us with stable toll segmentation which can be used for the forecast years.

Table 6.7: Forecast toll segmentation, FY26 onwards at TP1 Amoli

Ticket Category	CJV (FY26)	CJV (FY27)	Mini LCV	LCV	Bus	2A	3A/MAV
Single	79%	63%	94%	98%	98%	98%	97%
Local commercial	0%	0%	0%	1%	1%	1%	3%
Local personal	1%	1%	1%	-	-	-	-
Exemptions	3%	3%	3%	1%	1%	1%	0%
Violations	1%	1%	1%	0%	0%	0%	0%
Annual pass	16%	32%	-	-	-	-	-

Ticket category	CJV (FY26)	CJV (FY27)	Mini LCV	LCV	Bus	2A	3A/MAV
Single	79%	64%	93%	96%	99%	99%	99%
Local commercial	0%	0%	0%	3%	0%	0%	0%
Local personal	3%	3%	3%	-	-	-	-
Exemptions	3%	3%	3%	1%	1%	1%	0%
Violations	1%	1%	1%	0%	0%	0%	0%
Annual pass	14%	29%	-	-	-	-	-

Source: Steer analysis of Client TMS data

6.19 There is no other toll category being charged, apart from the official list in the gazetted NHAI Revision of User fee rate w.e.f. 01.07.2022. This set of toll segmentation assumes that further changes in toll categories, unless specific discounts are offered, which is unlikely.

6.20 The Annual pass compensation is separately calculated using the formula prescribed by NHAI in the same circular. Following Table 6.6 presents the Annual pass compensation computed for the toll plaza.

Table 6.9: Annual pass compensation for CJVs (in Crore)

Toll Plaza	FY26	FY27	FY28	FY29	FY30	FY31	FY32
Amoli	2.5	5.3	6.2	6.6	7.6	8.7	9.3
Ludhawai	1.2	2.6	2.8	3.5	3.8	4.0	5.0

Source: Steer Analysis

Overloading

6.21 Overloaded vehicles on the Asset are charged twice the toll fee they would otherwise pay for their ticket type at the toll plaza. We have assumed that the FY26YTD overloading shares would continue in the forecast years. The table shows the assumptions for share of overloaded vehicles that are considered to pay twice the toll fee of the respective toll segmentation category, due to overloading.

Table 6.10: Overloading assumptions for forecast years FY26 onwards under various ticket categories

Vehicle type	Single	Local Commercial
TP1 Amoli		
LCV	2.5%	0.0%
Bus	0.6%	0.0%

Toll evolution

6.22 Based on the concession agreement and the gazetted toll notification, we understand that base toll rates increase every year (revision month is July) based on WPI-linked inflation (as of March). These are rounded up to the nearest five to estimate the final toll rate charged to users.

6.23 We have used actual toll rates from the FY25 toll notifications and latest print WPI for the month of March'25 for FY26 to validate the modelling of future toll evolution. Increase in WPI was calculated based on the Client's WPI forecasts, as shown in Table 6.11 below. The upward trend in inflation is expected to continue in the medium term, before gradually tapering to 4.1% by FY32.

6.24 These forecasts provided by the Client. The WPI forecasts available from other independent forecasting agencies may vary from this assumption and could be lower or higher than that provided by the Client.

Table 6.11: WPI growth forecast assumptions

Financial year	WPI growth (%)
FY26	2.05%
FY27	2.4%
FY28	5.0%
FY29	5.1%
FY30	4.9%
FY31	4.4%
FY32	4.1%

Source: FY26 as per actual WPI March print. FY27 onwards WPI print as per client

Revenue reconciliation

6.25 As part of validating the data provided by the Client, as well as our assumptions around toll calculations, we have reconciled the actual reported revenue on a daily level for the Asset. To reconcile we have used the FY26YTD segmentation, FY26YTD AADT and compared it with the reported revenue for the year. The exercise was undertaken at an annual level. The comparison, as shown in Table 6.12 below, depicts the modelled revenue vs the reported revenue difference, and the difference lies within 0.1%, this gives us the confidence in the assumptions around segmentation and trip factors for future forecast purposes.

Table 6.12: Revenue reconciliation summary for FY26

TP	Steer modelled revenue (INR lakh)	Reported revenue (INR lakh)	Difference (%)
TP1 Amoli	16.6	16.6	0.1%
TP2 Ludhawai	8.18	8.19	0.2%

Source: Steer comparison between modelled and reported revenue for FY26YTD

Traffic and Revenue forecasts

6.26 Based on the traffic and revenue-related forecast assumptions discussed above, we have modelled the traffic and revenue for the forecast period for the Asset. The table below presents the AADT/PCU and revenue forecast numbers and CAGRs on this Asset for both TP1 Amoli and TP2 Ludhawai. Further, Appendix B presents the AADT and revenues for the forecast period. Detailed forecast is tabled in Annexure C of the report.

Table 6.13: Traffic forecasts (with impacts) AADT forecast for TP1 Amoli

Upside and Downside cases

Upside and Downside scenario assumptions

6.27 We have developed our base case scenario considering a balanced view on the risks associated with input assumptions around GDP growth and traffic growth elasticities. There is always a risk that the outturn values of these inputs will vary as compared to the assumptions taken due to exogenous impacts, e.g. GDP growth could be influenced both positively and negatively by the impact of monsoons, export-import balances, political changes etc.

6.28 Similarly, traffic growth elasticities could be influenced by increased efficiencies achieved by technology, large shifts in commodity prices globally, changes in local manufacturing practices. However, at this stage we consider that the base case represents a central case scenario given the risks of variation of input assumptions.

6.29 To account for the possible variations in the growth drivers, we are also presenting an Upside (optimistic) and a Downside (pessimistic) scenario. These scenarios are defined by the following variations from the base assumptions:

Table 6.21: Summary of Macro-economic Assumptions for upside and downside cases

Input	Upside	Downside
Macro Assumptions		
GDP/GSDP	+1% every year	-1% every year
WPI	+1% every year	-1% every year
Elasticities	+ 10%	- 10%

Source: Steer analysis

6.30 Further, network developments are highly dependent on governmental directions, policies, legal and financial measure which might result in early or delayed completion of developments. Therefore, we have included an Upside (optimistic) and a Downside (pessimistic) case. However, at this stage, we consider that the base case represents a central case scenario given the risks of variation of input assumptions.

Impacts-Upside Case

6.31 The upside case impacts included in forecasts are summarised in below.

Table 6.22: Summary of impacts on the Assets

Development	Year of impact	Change in impact w.r.t base case	Magnitude of impact	
			TP1 Amoli	TP2 Ludhawai
Delhi- Mumbai Expressway	FY27*	+25% of base case	2A: (0.3%) 3A: (0.1%) MAV: (0.3%)	2A: (0.3%) 3A: (0.1%) MAV: (0.3%)
Completion of Agra-Gwalior Construction	FY27*		MAV: 1.7%	MAV: 1.8%

Summary outlook

6.34 Passenger traffic on the Asset is driven by local movements connecting key urban centers of Jaipur, Agra, Alwar, and Bharatpur. Tourism and leisure travel between Jaipur at one end and Bharatpur and Agra at the other also contributes to passenger and bus movements, as the Asset is part of the Golden Triangle corridor (Delhi NCR, Agra, Jaipur). Even though the recent pandemic impacted passenger and tourism-related traffic, the trend of increased use of personal vehicles has led to a good recovery of car traffic in recent months.

6.35 Goods traffic are driven by agriculture commodities, construction-related traffic including stone and sand, apart from a good spread of consumption-related commodities meeting urban demand. With the lifting of sandmining ban the Asset has seen a small recovery in MAVs. The recovery in recent months has shown underlying strength in the traffic growth drivers along the Asset corridor which is expected to continue driving growth on this corridor. While the impact of the Dausa-Lalsot road and Jaipur Ring Road have started to materialize, the opening of the Bandikui spur in July 2025 is expected to have a further negative impact on the Asset.

6.36 Our findings and estimates in this report are based on our understanding from the site visit, analysis of primary data available both from surveys (including OD surveys from June February 2026 at TP1 and June 2023 at TP2) and the toll management system (both historical and current, up to February 2026), macroeconomic assumptions prescribed by the Client, feedback from Client meetings, and secondary publicly available data. There can be both positive and negative risks associated with assumptions and the forecasts using them as summarized.

6.37 Overall, we see a positive outlook for the region and the Asset, given that it serves major urban centres of Jaipur, Agra, Bharatpur, Alwar and Delhi NCR. It is also the primary route

on the tourism corridor connecting Jaipur with Bharatpur and Agra. The underlying growth drivers of the corridor are strong and are expected to deliver long term sustained growth.

Appendices

A Developments in sand-mining

A.1 This appendix provides a chronological account of developments – policy, regulatory and judicial – in sand-mining applicable across India and particularly in Rajasthan. Please note that this list is not exhaustive and is meant to gain a high-level understanding of the issues surrounding sand-mining that affect movement of sand on the Asset.

Table A.1: History of policy and regulatory changes, and court judgements affecting sand-mining

Event	Timeline
National	
Recommendations of MoEF core group	2010
SC ruling - Orders MoEF to formulate guidelines for sustainable sand-mining	Feb FY12
MoEFCC Sustainable Sand Mining Management Guidelines - Calls for site-specific surveys by district administration - Environmental clearance mandatory for all sand mines - DEAC and DEIAA committees for less than 5 hectare mines Stop of mining during monsoon months (June-September)	Mar FY16
Amendment of EIA Notification 2006 - EI clearance mandatory for all small-scale sand mines Treat cluster mines within 500 m as single mine	May FY17
SC ban on sand-mining; prohibits 82 large sand-mining lease holders	Nov FY18
SC refuses to remove ban	Jan, Aug FY19
Rajasthan	
Mining policy	2015
NGT: Even existing licence holders need to get environmental clearance	Jan FY15
Not clear if manufactured sand can meet demand and quality needs	FY19
"Mining ban give rise to sand mafia"	Oct FY19
SC stays Rajasthan HC order that allowed sand-mining at mines with issued LoIs	May FY20
Manufactured sand policy being considered and licences for small plots being allowed	Sept FY19, Jul FY20
Replenishment study of sand mines to be taken up	Aug FY20
Rajasthan HC asks PS (RJ) to issue compounding fee on vehicle – apply consistent approach	Sept FY20
Rajasthan M-sand policy announced	2020
Revised M-sand policy and 27 monitoring teams deployed across the state	2024

8.	Ajmer-Mathura	1.0%
9.	Aligarh-Jaipur	1.0%
10.	Bharatpur-Bhusawar	0.9%

C Data collection exercise

C.1 In order to validate and inform various inputs used in our forecasting, we undertook primary data collection on the Asset. OD survey data was collected on behalf of the Client, TVC surveys were commissioned by Steer with a third party. OD data collection typically involves manual data entry by enumerators based on oral surveys with road users crossing toll plazas. TVC data collection involves video-graphic capture of traffic passing crossing the toll plazas, followed by manual counting.

TVC counts

D Detailed forecasts

D.1 Further to the summary of forecasts presented in Chapter 6, this appendix presents detailed forecasts.

Traffic forecasts (with Impacts)

D.2 This section presents the detailed traffic forecasts for the forecast period until FY32, year of expected close of the concession. The following two tables show the traffic growth rates and AADT, respectively.

Table D.1: Traffic forecasts (base + impacts) traffic – TP1 Amoli

	CJV	Mini LCV	LCV	Bus	2A	3A	MAV	Total	PCU
FY27	8,222	946	297	1,457	581	335	4,083	**15,921**	**33,255**
FY28	8,805	995	302	1,513	611	337	4,317	**16,880**	**35,106**
FY29	9,410	1,045	308	1,570	641	339	4,544	**17,856**	**36,955**
FY30	10,035	1,095	313	1,627	672	341	4,709	**18,792**	**38,575**
FY31	10,691	1,147	319	1,685	703	343	4,944	**19,832**	**40,518**
FY32	11,389	1,202	325	1,745	736	345	5,192	**20,933**	**42,567**

Table D.2: Traffic forecasts (base + impacts) traffic – TP2 Ludhawai

	CJV	Mini LCV	LCV	Bus	2A	3A	MAV	Total	PCU
FY27	9,658	1,112	308	1,496	596	338	4,075	**17,582**	**35,013**
FY28	10,342	1,169	314	1,553	627	340	4,309	**18,654**	**36,979**
FY29	11,053	1,227	320	1,612	658	342	4,535	**19,747**	**38,948**
FY30	11,787	1,286	325	1,670	689	344	4,699	**20,802**	**40,691**
FY31	12,557	1,348	331	1,730	722	346	4,934	**21,968**	**42,764**
FY32	13,378	1,412	337	1,791	756	348	5,181	**23,203**	**44,949**

Revenue forecasts (with Impacts)

D.3 The following table presents the year-wise annual revenue forecasts for the forecast period until FY32.

Table D.3: Forecasts revenue (INR crores) – TP1 Amoli

	CJV	Mini LCV	LCV	Bus	2A	3A	MAV	Total
FY27	15.8	1.8	1.1	10.8	4.4	3.9	50.6	**88.3**
FY28	18.2	2.0	1.2	11.7	4.9	4.2	56.5	**98.6**
FY29	21.1	2.3	1.2	12.7	5.3	4.4	62.1	**109.0**
FY30	22.7	2.5	1.4	13.9	5.9	4.7	67.7	**118.7**
FY31	25.8	2.7	1.4	15.1	6.5	4.9	74.1	**130.5**
FY32	27.9	2.9	1.5	16.3	7.1	5.2	81.7	**142.6**

Source: Steer analysis

Table D.4: Forecasts revenue (INR crores) – TP2 Ludhawai

	CJV	Mini LCV	LCV	Bus	2A	3A	MAV	Total
FY27	8.3	0.9	0.5	5.4	2.2	2.0	25.0	**44.3**
FY28	10.4	1.2	0.6	5.9	2.4	2.0	27.3	**49.7**
FY29	11.4	1.3	0.6	6.4	2.7	2.1	30.2	**54.6**
FY30	12.1	1.3	0.6	6.9	2.9	2.3	33.1	**59.3**
FY31	12.9	1.4	0.7	7.4	3.2	2.4	36.0	**64.0**
FY32	15.7	1.6	0.7	8.1	3.5	2.5	39.7	**71.8**

Disclaimer

This report has been produced for the sole benefit of Cube Highways Pvt. Ltd. This Report (the "Report") is confidential and disclosed only for information purposes, and it may not be relied upon by any party other than the Client or a Party to a Reliance Letter, and Steer: a) makes no warranty, expressed or implied, with respect to the use of any information or methods disclosed in this Report; and b) assumes no liability with respect to the use of any information or methods disclosed in this document. Any such party by its acceptance or use of this Report releases Steer from any liability for direct, indirect, consequential, or special loss or damage whether arising in contract, warranty, express or implied, tort or otherwise.

The Report is based on standard professional efforts, and information available to us at the time the review took place and is subject to time and budget constraints of the Report's scope of work. This Report, information and statements contained herein, are all based on third party data provided to us, or sourced by us, and Steer has not sought to establish the reliability of the data, except as specifically stated in the Report. Steer bears no responsibility for the results of any actions taken based on the third-party data.

Certain forward-looking statements in the Report are estimates based on interpretations or assessments of information available at the time of writing. The Report is thus to be viewed as an assessment that is time-relevant, specifically referring to conditions at the time of the review. Steer undertakes no obligation to update the Report for any reason.

While the estimates contained in the Report are not precise forecasts, they do represent, in our view a reasonable expectation of the future, based on information we have been provided with or sourced. However, the estimates necessarily rely on numerous assumptions and judgements, and circumstances may occur over the timeframe of the project that go counter to these assumptions and judgements and that affect the project's realized revenues. Actual events may differ from those assumed, and events are subject to change. Therefore, Steer makes or provides no warranty, whether implied or otherwise, as to the accuracy of forward-looking information presented. Further, it is important to note that forecasts presented represent long-term growth profiles; the results for individual time periods may vary from forecasted values.

Traffic Consultant developed the relationships in the models used to produce the forecasts for the projects based on data available through February 2026. This report does not consider variations in traffic performance due to changing macro and force majeure events such (but not limited to) as global wars, economic uncertainty (high inflation, global recession), and changes in the regulatory environment. The situation remains dynamic and is subject to significant change in the short and medium term. In this challenging context, Traffic Consultant has produced base forecasts with a view on a possible scenario for the traffic forecasts. However, it is important to note that this is only one view, and there continues to remain uncertainty as to the short-term, intermediate or prolonged effects of and responses to such macro-economic/force majeure events. As a result, no assurance can be provided by Traffic Consultant that the scenarios and assumptions Traffic Consultant has identified will prove to be accurate. Given the uncertainty inherent in this scenario, Traffic Consultant advises that all readers of the Report consider the Report in the context of their own assessment of the impact of such events.

TO THE FULLEST EXTENT PERMITTED BY APPLICABLE LAW, THE LIABILITY OF THE TRAFFIC CONSULTANT FOR ANY LOSS, DAMAGE, COST OR EXPENSE SUFFERED OR INCURRED BY ALL PERSONS OR ENTITIES AND FOR ALL CLAIMS RESPECTING ITS WORK PERFORMED IN CONNECTION WITH THE ISSUE OR THE REPORTS IS HEREBY LIMITED IN THE AGGREGATE TO THE AMOUNT OF FEES ACTUALLY PAID BY THE CLIENT TO THE TRAFFIC CONSULTANT IN RESPECT OF THE REPORTS AND CONNECTED SERVICES.

WADT	Weekly average daily traffic
YTD	Year to Date

1 Introduction

The assignment

1.1 The Cube Highways Fund Advisors Private Limited (the "Client") has commissioned Steer Davies Gleave India Private Limited ("Steer") for a traffic due diligence to be carried out on the Madurai-Kanyakumari Tollway Road (hereafter called "Asset"). This report forms part of the annual fair market valuation (FMV) undertaken as part of the "Transit 11 project". This report presents an update of the traffic and revenue forecasts based on actual traffic data available up to February 2026 and latest macro-economic assumptions.

1.2 The Asset Madurai-Kanyakumari consists of four toll road sections, each of which has a separate special purpose vehicle (SPV). For this report, we hereafter call the four SPVs together as Asset and toll plazas on each section as TP1-TP4.

- Madurai Kanyakumari Tollways Limited: MKTL: TP1 – Kappalur
- Kanyakumari Etturvattam Tollways Limited: KETL: TP2 – Etturvattam
- Salaipudhur Madurai Tollways Limited: SMTL: TP3 – Salaipudhur
- Nanguneri Kanyakumari Tollways Limited: NKTL: TP4 – Nanguneri

1.3 Our scope of work for the traffic and revenue forecasting process includes:

Table 1.1: Scope of work and sources of data

Scope of work	Data source
• Review of historical Traffic Management System (TMS) data, Vendor reports and documents	• Provided by client for the period between Oct'20 and Mar '26, with FY26 base AADT and forecasts considering data up to Feb'26.
• Historical analysis and forecasts for baseline growth, including; – Background growth, and – Seasonality trends	• Historical data provided by the Client and benchmarking using plazas in the vicinity or of similar nature of the Asset has been done wherever sufficient data was unavailable
• Validation of revenue reported in FY26YTD	• TMS data provided by Client • Revenue reconciliation using toll plaza traffic and ticket type data to calculate revenue and reconciling it with toll plaza reported revenue
• Origin Destination (OD) analysis to understand growth drivers: – Zonal influence and Top OD pairs – Commodity distribution – Trip length distribution	• Origin Destination (OD) surveys undertaken by Steer. Surveys were undertaken on TP1 and TP2 in 2023 and 2021 respectively. On TP3 and TP4 surveys were conducted for this Study in February 2026.

Scope of work	Data source
• Analysis of upcoming network improvements and other developments, that may have future impacts on traffic	• Secondary research and our in-house experience of working in the vicinity of the Asset. Impact analysis to be conducted by Steer based on Generalised Journey Cost spreadsheet-based analysis
• Historical revenue analysis and forecasts for revenue estimation, including – Toll segmentation and trip factors, – Overloading shares	• Calculated from historical data provided by Client
• Final traffic growth forecasts including baseline growth rates and potential future impacts	• Elasticity based base growth and potential impacts from secondary research and Steer's in-house experience of working in the vicinity of the Asset
• Toll revenue estimation for the entire concession, including toll evolution	• Toll evolution based on latest toll notification published by National Highway Authority of India (NHAI); and latest Wholesale Price Index (WPI) trends as shared by the client

Our approach

1.4 Our approach follows well-established practices for forecasting ongoing traffic growth on an existing/brownfield Asset. The analysis has essentially focused on two sets of issues, namely:

- understanding the traffic that is currently using the Asset; and
- identifying how and why that traffic is likely to change in the future.

1.5 To understand the current traffic on the Asset, we have analysed traffic data from multiple independent sources as given below:

- Client-provided secondary data, including:
  - TMS data starting October 2020 to February 2026. The historical traffic and revenue presented in Chapter 3 considers information up to March 2026. This is to present the latest available traffic and revenue information at the time of submission of report. However, the FY26 base traffic and forecasts presented Chapter 5 onwards use data available up to February 2026, with March 2026 estimated.
  - Concession agreement and toll notifications for FY25 and FY26.
  - Previous studies related to traffic and revenue.
- In the previous studies of 2023 and 2021, Steer-commissioned OD surveys on TP1 Kappalur and TP2 Etturvattam to validate any change in growth drivers and travel patterns. Survey on TP1 was conducted on 28th August 2023 and on TP2 on 1st July 2023.
- In this Study, Steer commissioned OD and TVC surveys on TP3 Salaipudhur and TP4 Nanguneri to observe the change in travel patterns and growth drivers. OD survey on TP3 was conducted on 23rd February 2026 and on TP4 on 24th February 2026.
- TVC surveys on TP3 and TP4 was conducted from 23rd Feb'26 to 25th Feb'26.
- We undertook revenue reconciliation for FY26 YTD, by building up revenue from the traffic reported by each of the toll plazas and subsequently matching them to the

reported revenue for FY26YTD using the prevalent toll rates and reported segmentation/toll-frequencies for FY26YTD. This has been a key part of our analysis to validate the segmentation/toll-frequency assumptions, and the Annual Average Daily Traffic (AADT) reported for each of the toll plazas.

1.6 The estimation of future traffic demand on the Asset was undertaken through:

- Estimating the FY26 base year position. The FY25 AADT was calculated using the monthly traffic data for FY25. The FY25 AADT thus computed was then grown with elasticity linked GDP/GSDP growth to arrive at the FY26 expected traffic. To determine the estimates for FY26, the expected FY26 traffic was validated against the 11 months of actual FY26 traffic (Apr to Feb) and necessary adjustments were made where required.
- Secondary research to understand plans for new developments and progress of ongoing developments on the Asset.
- Steer independent primary surveys and site visits to validate our network and contextual understanding.
- Developing a bespoke growth model for each Asset/plaza/toll class to forecast year-on-year traffic growth from FY26 to the end of concession period.
- Investigating the elasticity of historical traffic growth compared to state (GSDP) and national (GDP) growth. Where historical data is limited, we have benchmarked the Asset against our Steer knowledge base (e.g., similar Asset types in the same state or on the same corridor), to derive appropriate elasticities.
- Applying our elasticities to independent GDP forecasts as provided by client.
- Identifying and analysing the potential impacts of any relevant changes to the competitive position of each Asset – these include impacts of changes to road network including expressways and opening of competitive modes of travel.
- Identifying and analysing any other potential impacts to traffic and revenue on each Asset – these include axle load norms, axle shift for heavy goods, FASTag implementation.
- Considering changes in trends of segmentation over time and making suggestions for changes in exemptions in the future
- Preparing traffic and revenue forecast for the Asset for the complete length of the concession. We have developed a set of forecasting assumptions for three scenarios: a base case and upside and downside scenarios.

Contents of this report

1.7 The report has been divided into the following chapters, including Chapter 1 providing an introduction:

- Chapter 1 introduces the methodology and approach to undertake the traffic and revenue due diligence;
- Chapter 2 describes the key characteristics of the Asset and its surrounding road network, primarily based on site visits;
- Chapter 3 summarises the current and historical traffic on the Asset, including results from the TMS, TVC and OD analyses;
- Chapter 4 presents the socio-economic context of the corridor and region/state containing the Asset, along with our approach and results on estimating background traffic demand growth; and

- Chapter 5 presents our baseline year forecast and summarises our results on estimating background traffic demand growth
- Chapter 6 summarises our assessment of network impacts and presents concession traffic and revenue forecasts for the Asset along with the assumptions for upside and downside cases.

2 The Asset

Introduction

2.1 This chapter provides a description of the Asset, based on both primary data (from site visits), and our understanding of the region and network surrounding the Asset. We cover the strategic network context, followed by key economic activities and network developments around the Asset.

Strategic network

2.2 The Asset is situated in the state of Tamil Nadu, connecting Madurai, and northern Tamil Nadu and states north of Tamil Nadu with the cities and towns in southern Tamil Nadu and Thiruvananthapuram in Kerala. The following figure shows the regional road network in which the Asset is located.

Figure 2-1: Asset location in the regional network context

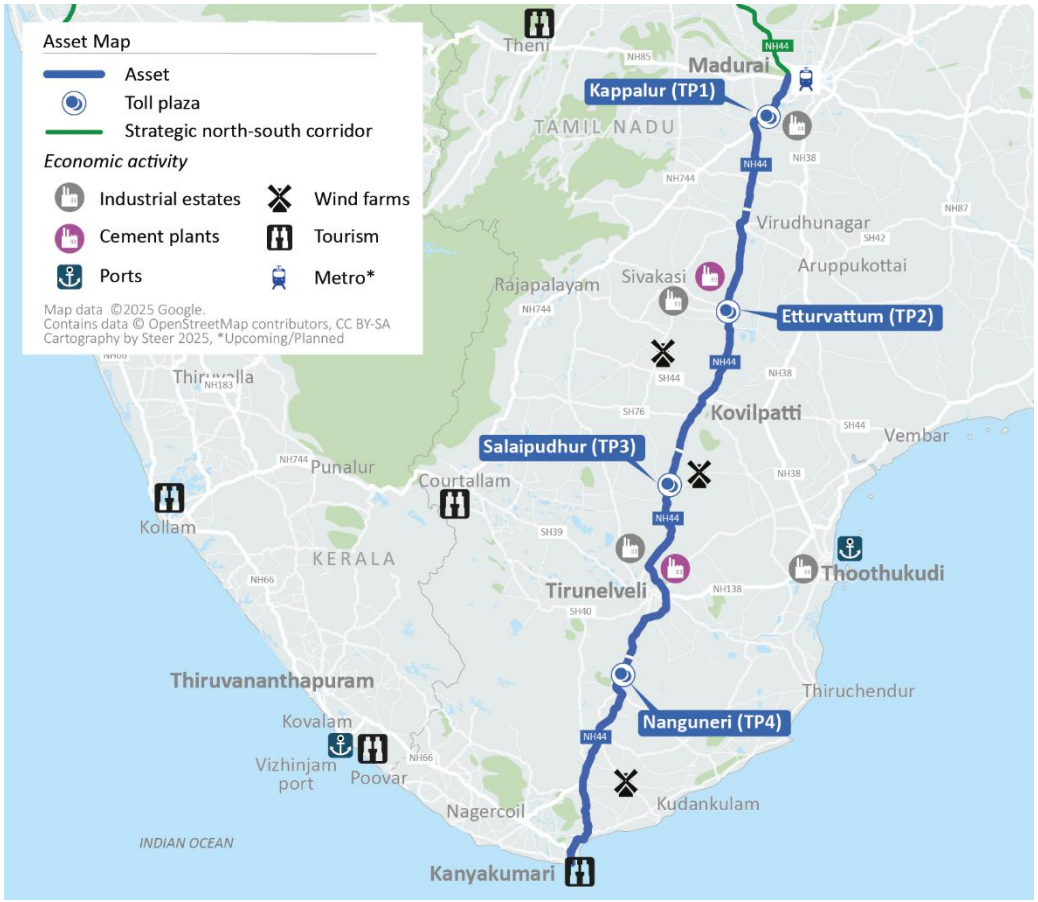
Source: Steer cartography

2.3 This Asset primarily caters to three different types of strategic movements:

- **Long-distance trips** between North India and Southern states like Andhra Pradesh, Telangana and Karnataka at one end and southern Tamil Nadu and Thiruvananthapuram at the other end.
- **Medium-distance trips** between Chennai and Bangalore at one end and southern parts of Tamil Nadu and Thiruvananthapuram at the other end.
- **Short-distance trips** between cities and towns in southern Tamil Nadu including Madurai, Thirumangalam, Tuticorin, Virudhunagar, Sivakasi, Kovilpatti, Tirunelveli and Thiruvananthapuram.

2.4 The Asset is a 243-km toll road which lies on NH44 in Tamil Nadu. It is a four-lane road with four toll plazas. The following figure provides a closer view of the Asset in the context of its immediate surroundings.

Figure 2-2: Asset context



Source: Steer cartography using OpenStreetMap data

Concession and tolling details

2.5 The three southern toll plazas (TP2: Etturvattam, TP3: Salaipudhur and TP4: Nanguneri) on the Asset have been operational since FY12 while the northernmost toll plaza (TP1 Kappalur) has been operational since FY11. The Client took over operations of the Asset in October 2020.

2.6 The following table provides a key metrics of the Asset that have their chainage from KM 0.0 to KM 243.470 of NH44.

Table 2.1: Asset description and key metrics

Asset	Particulars
State	Tamil Nadu
Highway and lane configuration	NH 44 four-lane
Toll plazas	• SPV 1: TP1: Kappalur • SPV 2: TP2: Etturvattam • SPV 3: TP3: Salaipudhur • SPV 4: TP4: Nanguneri
Road Length (km) as per concession agreement	• TP1: 52.30km • TP2: 64.20km • TP3: 63.50km • TP4: 63.47km
Commencement of operations	• TP1: Sep 2012 • TP2: 15 2011 • TP3: 23 2011 • TP4: 23 2011
Operated by Client since	October 2020
Concession period	30 years
Last year of concession	FY51

Source: Client data

2.7 The figure below shows a typical cross-section of the Asset and its toll plazas.

Figure 2-3: TP2 Etturvattam, RAMCO Cement Plant and India Cement Plant

Source: Steer site visits

2.8 Tolls are collected for the vehicle categories and rates as shown in the following table. The toll plazas have dedicated ETC/FASTag lanes for electronic tolling.

2.9 Due to general elections in India from Apr-May'24, the toll rates on the national highways across the country were changed in June 2024 onwards, instead of April 2024. For FY26 the toll rates changed from Apr'25 across most of the national highways in India including the Asset. It is understood that the revised toll rates issued in October 2025 using the updated inflation linking factor have not been implemented at the Asset. The following table summarizes the toll rates applicable for FY26.

Table 2.2: Single toll rates on the Asset (INR), applicable for FY26

Type of Vehicle	Single Journey Fee			
	TP1 Kappalur	TP2 Etturvattam	TP3 Salaipudhur	TP4 Nanguneri
CJV	105	105	130	115
LCV	170	170	205	185
Bus/Truck	355	355	435	390
3A	385	390	475	425
MAV/HCM/EME	555	560	680	610
OSV	675	680	830	740

Source: NHAI Revision of User fee rate w.e.f. 01.04.2025

Key economic activities

2.10 Of the four plazas, TP1 Kappalur has the highest urban influence, with the toll plaza being in the suburbs of Madurai. It is situated between Madurai city and the municipality of Thirumangalam. The Asset is in a highly urbanised region of Tamil Nadu, with densities peaking at either ends of the Asset cluster – i.e., near Madurai and Kanyakumari. Demand is driven by a consumption-based economy with major economic activities surrounding cement manufacturing, container terminal, textile plants, wind power and industrial estates like State Industries Promotion Corporation of Tamil Nadu Limited (SIPCOT).

Cement

2.11 The toll plazas TP2: Etturvattam and TP3: Salaipudhur have two large cement plants close to them, namely Ramco Cements at RR Nagar (near Virudhunagar) and India Cements at Sankarnagar (north of Tirunelveli). Both are Chennai based cement companies which cater to most of the local residential and infrastructure development demand and some in surrounding states like Kerela and Andhra Pradesh.

2.12 The India Cements factory, set up in 1949 and located just north of Tirunelveli on the Asset, has an annual production capacity of 4.7 million tonnes, as per FY23 report.[1] Limestone is one of the main raw materials for cement manufacture and Nanjankulam Limestone Mines, located nearby, is one of the captive limestone mines of the Sankar Nagar factory. Besides, the Ramco Cements factory at RR Nagar in Virudhunagar is another large cement plant which grew from an annual capacity of 2 to 3.9million.

[1] The Ramco Cements Limited (RAMCOCEM) Q4 FY23 Earnings Concall Transcript | AlphaStreet

Industrial estates

2.13 The southern Tamil Nadu region in the immediate area of influence of the Asset and hosts several industrial estates including at Kappalur (Madurai), Gangaikondan (Tirunelveli) and Nanguneri. While Kappalur and Gangaikondan are already operational, the Nanguneri SEZ (Special Economic Zones) already has land allotted but is not operational yet. As per the latest information, Tamil Nadu state Government is planning to acquire 1000 acres from private developers for Nanguneri SEZ (Special Economic Zones). [2]

2.14 The Tamil Nadu Small Industries Corporation (SIDCO) industrial estate at Kappalur, located on the southern part of the Madurai bypass, is a 700-acre facility established in 1974. It has 400 units related to food processing, fabrication, textile and hardware industries and employs over 15,000 people until 2024.[3] The SIPCOT (State Industries Promotion Corporation of Tamil Nadu Limited) at Gangaikondan houses units like the LPG storage godowns of the Indian Oil Corporation, South India Bottling Company, ATC Tyres Private Limited, Nova Carbon Company and Bosch Limited.

2.15 The industrial city of Tuticorin and the surrounding region hosts the Tuticorin Port which is one of the 12 'major' ports of the country and has two container terminals.[4] There are several power plants including the Tuticorin Thermal Power Station and private ones like the captive Sterlite Industries plant. Other industries include salt pans, oil mills, chemical factories and export-based businesses.

2.16 The Asset also lies on the Chennai-Kanyakumari Industrial Corridor (CKIC) which covers 23 districts and aims to promote port-based economic development. The project aims to promote balanced regional growth and development of the southern districts. Six industrial nodes have been identified as part of the Comprehensive Development Plan of which Madurai-Dindigul-Virudhunagar-Theni and Thoothukudi-Tirunelveli have been prioritised as part of Phase-I.[5]

2.17 Based on the site observations and the latest reports it was found that India's biggest mega textile park under PM Mitra is under development in Virudhunagar and is expected to get completed by end of 2027 along the Asset on NH44 closer TP2 Etturvattam plaza. [6]

Wind power

2.18 Tamil Nadu is the top producer of wind energy in the country with an installed capacity of about 8.7 GW across Coimbatore, Tiruppur, Tirunelveli, Thoothukudi and Kanyakumari districts[7].

2.19 Though the Madurai and Tirunelveli region were traditionally agricultural regions, with older wind farms primarily located in the southern Tirunelveli/Kanyakumari region,

[7] Wind energy generation picks up in T.N., consumption expected to peak at 100 million units a day this year - The Hindu

commissioning of wind farms in other parts of these southern districts and even western districts like Coimbatore have expanded the wind energy business. Ettaiyapuram town near Thoothukudi is a major producer and storage for wind pillar and mills. Player including Sembcorp Energy India produce these mills there.

Urban consumption centres

2.20 Given the highly urbanised nature of the region including cities like Madurai, Tirunelveli and Trivandrum, and towns like Virudhunagar, Kovilpatti and Tuticorin, there is a lot of consumption-related retail activity in the region. A lot of this regional consumption demand is met by LCVs and 2As, apart from 3As. MAVs primarily serve long-distance traffic part of the strategic movement from and to northern states.

2.21 The cities and towns in the region are culturally connected and show leisure-based car and bus travel not only between cities and towns in the southern districts but also to and from Chennai. Tourism includes both pilgrimage and leisure travel. Destinations like Rameswaram and Kanyakumari are renowned pilgrimage destinations while other cities that have religious destinations include Madurai and Tirunelveli. Leisure destinations in the immediate vicinity of the Asset are Courtallam, Cape Comorin and Manjolai Estates in Tenkasi, Kanyakumari and Tirunelvei districts.

2.22 Besides the urban centres mentioned above, the Asset also serves as the highway link between southern Tamil Nadu and Kerala. Hill stations (Thekkady, Kodaikanal and Munnar), beaches in Kerala are popular tourist destinations for domestic tourists from Tamil Nadu. Besides, Thiruvananthapuram and Kanyakumari districts are culturally connected and show inter-urban passenger movements.

Alternate routes

2.23 As seen on the map in the earlier section, the Asset lie at the southern end of NH 44, the traditional north-south corridor connecting North India with South India terminating at Kanyakumari.

2.24 For the three types of movements observed on the Asset – long-distance, medium-distance and short-distance trips – that were explained earlier in this chapter, this section introduces potential alternate routes available for diversion.

- **Long-distance:** There is no long-distance alternate to the Asset. NH 66 - the long-distance north-south corridor along the coast connecting Mumbai with Kanyakumari, does not directly compete with the Asset as it passes through highly urban and congested areas in Kerala. The Asset is the primary link between Tamil Nadu and states north of Tamil Nadu at one end and the southern districts of Tamil Nadu including Madurai, Virudhunagar, Tirunelveli, Kanyakumari and Thiruvananthapuram (Kerala) at the other end.
- **Medium-distance**: There are two major medium-distance alternatives available.
  - The Madurai-Tuticorin Expressway (MTEL) on NH 38 connects Madurai more directly with Tuticorin (2.5 hours, 150 km) compared to the Asset through Kovilpatti (3 hours, 170 km). Port traffic between the northern Tamil Nadu hinterland and the Tuticorin Port primarily use this route. However, due to current 4-lane expansion of NH38 under Chennai-Kanyakumari by National Highway Authority of India (NHAI), the section is under construction. With that, our Asset

has continued to gain some traffic. Since, the shift of traffic volume is insignificant hence no impact is considered in Chapter 6.[8]

- The NH 744 route between Madurai and Kollam, through Rajapalayam, is another competitive alternate for road users having Courtallam and Kollam district (Kerala) as destinations. Chapter 6 presents the analysis of potential impact due to the planned upgrade of NH 744 in the future. While four-laning is in progress, OD analysis suggests that there is negligible inscope traffic between Madurai and Kollam passing the Asset toll plazas. Accordingly, no impact has been considered for the completion of NH 744.
- **Micro-diversion**: There are local roads that help road users bypass the toll plazas. While some of these movements have already been contained and the issues being addressed, two alternates had significant amount of traffic. We believe that this new level of traffic is expected to continue in the forecast period other than the increase in construction activity observed around Kanyakumari. A base correction for this has been elaborated in Chapter 6.

3 Traffic Description

Introduction

3.1 This chapter outlines the current traffic and revenue on the Asset, as well as our analysis of origin-destination (OD) data and traffic count data. This encompasses data, which was collected as a part of this study, as well as data provided by the Client.

3.2 Traffic demand data is generally collected and analysed to understand the volume and vehicle composition of demand currently using the Asset, while OD data is used to obtain; a) better understanding of travel patterns, trip lengths, trip purposes and areas of influence in the vicinity of the Asset, and b) the commodities being moved by goods vehicles. Combined with our understanding of the Asset (based on our site visits), this analysis enables us to identify the key drivers of demand on the Asset.

3.3 Actual toll plaza data is used as the basis from which the current/base year annual average daily traffic (AADT) is established. This data is typically provided by the Client and independently analysed and validated by us using traffic volume count (TVC) information.

3.4 The below sections present historical traffic and revenue information up to March 2026. This is to present the latest available traffic and revenue information at the time of submission of report. However, the FY26 base traffic and forecasts presented Chapter 5 onwards use data available up to February 2026, with March 2026 estimated.

PCU Factor assumption

3.5 The PCU values have been taken from 'IRC 64:1990- Guidelines for Capacity of Roads in Rural Areas'. For MAV, based on the discussion with the Client, we have referred to the rigid and trailer splits in the latest TVC counts conducted in 2026 on TP3 Salaipudhur and TP4 Nanguneri for calculating the effective PCU for MAVs. For rigid trailer trucks we have assumed a PCU factor of 3, whereas for trailer trucks we have assumed a PCU factor of 4.5. These factors have been used to arrive at the PCU values presented in the following sections.

Table 3.1: PCU factors

Vehicle Category	PCU Factor
CJV/ Mini LCV	1.0
LCV	1.5
Bus	3.0
2A	3.0
3A	3.0
MAV*	3.4

Vehicle Category	PCU Factor
OSV	4.5

Source: Steer analysis, * Rigid-Trailer PCU

Historical trends

3.6 The following table illustrates the traffic data over the period of 5 years from October 2020 – March 2026 (provided by the Client) at a plaza level. There is lack of long-term historical data available on the Asset since tolling was started by the client only in October 2020 and both the available years of data, FY21 and FY22 were impacted by COVID-19 related restrictions. Therefore, starting FY23 traffic on the Asset has started to get normalised with similar travel patterns recorded in FY24 and FY26.

3.7 Table 3.2 and Table 3.3 below depict the historical total and tollable traffic levels at TP1 Kappalur.

Table 3.2: Historical Traffic Levels at TP1 Kappalur

Vehicle category	FY21*	FY22	FY23	FY24	FY25	FY26	CAGR FY23-26
CJV	17,121	17,720	18,200	19,245	20,236	22,464	7.3%

Tollable PCU	**27,342**	**25,393**	**29,805**	**32,107**	**33,899**	**39,103**	**9.1%**

Source: Steer analysis of Client data, (FY21* includes 6 months of data from Oct'20 to Mar'21); FY26 AADT represents the full year actual (April to March); Tollable traffic excludes exemption and violation; exemption in buses reduced starting Sept25.

3.8 Passenger traffic at the TP1 Kappalur (CJV/Buses) has shown a consistently increasing trend since the pandemic-impacted year of FY22. CJVs have witnessed a ~7% CAGR from FY23 to FY26. Overall, for the period between FY23 to FY26, the toll plaza had an AADT growth of 6% and a PCU growth of 4.9%. The buses on the plaza have shown a slight degrowth in the initial months of FY26 due to ongoing court case between the NHAI and TNSRTC.

3.9 In terms of the vehicle share, the dominant category at the toll plaza is CJVs – having a 74% share, as of FY26. This is due to the proximity of the Asset to the consumption centres of Madurai and Thirumangalam. Goods vehicles (2A/3A/MAV combined) have a 10% share at the toll plaza, and their volume is the highest amongst the four toll plazas on the Asset, due to the presence of electronic and manufacturing industries in Madurai

3.10 Tollable traffic at the toll plaza showed a higher growth compared to the total (tollable + non-tollable) traffic for FY23 to FY26. TP1 Kappalur recorded a CAGR of 9.1% tollable PCU growth which is 8.4% in case of total traffic.

3.11 Higher tollable PCU growth is majorly driven by Cars and 2A - which reflects reducing exemptions and violations in these categories.

3.12 Table 3.4 and Table 3.5 presents the historical traffic profile on Etturvattam toll plaza.

Table 3.4: Historical Traffic Levels at TP2 Etturvattam

Vehicle category	FY21	FY22	FY23	FY24	FY25	FY26	CAGR FY23-26

3.13 At TP2 Etturvatam, CJVs have historically had the highest share of traffic – like TP1 Kappalur. In FY26, the CJV volume was ~10,000, which was approximately 70% of the total traffic observed at the toll plaza. The rationale for high shares of CJV traffic can be attributed to the presence of the large urban settlements and pilgrim sites on the Asset. With increasing tourism activities post COVID-19, the period between FY23 to FY256 witnessed a healthy CAGR in CJVs (9.5%) and Bus (8.5%) traffic on the plaza.

3.14 With the strong presence of industrials units of cement and textile close to TP2, the plaza observes healthy share of commercial traffic (14%). In March 2023, India's first PM Mitra textile park opened in Virudhunagar close to TP2, which is key traffic generator. The opening of the new textile park drove the increase in associated commercial traffic in FY24 (10.4%, compared to FY23). The high volumes of goods vehicles can be explained by the presence of cement plants in the vicinity of the toll plaza (Ramco and India Cement Plants).

3.15 Considering only the tollable traffic (which excludes violations and exemptions), TP2 Etturvatam has observed a higher PCU growth compared to the overall traffic in FY26. TP2 Etturvattam had recorded 9% tollable PCU CAGR which is 7.4% in case of total traffic for the period FY23 to FY26.

3.16 Between FY23-FY26 CJVs have witnessed a higher tollable CAGR rate by 9.9% growth and 19.2% growth in buses.

3.17 Table 3.6 and Table 3.7 below present the historical traffic profile on Salaipudhur toll plaza.

Table 3.6: Historical Traffic Levels at TP3 Salaipudhur

Vehicle category	FY21	FY22	FY23	FY24	FY25	FY26	CAGR FY23-26

Source: Steer analysis of Client data, (FY21* includes 6 months of data from Oct'20 to Mar'21); FY26 AADT represents the full year actual (April to March); Tollable traffic excludes exemption and violation; exemption in buses reduced starting Sept25.

3.18 Consistent with the trend observed at TPs 1 and 2, CJVs remain the dominant category (having a 70% share in FY25) with trips generated from/to Madurai, Tirunelveli, Kovilpatti and tourism trips towards Kanyakumari as well.

3.19 In terms of volume, CJVs were ranging at ~7800 volume in FY24 on this plaza which reached ~8400 in FY25 and have continued to increase at ~9500 in FY26. This constant rise in volumes has been due to the increased tourism influence of Kanyakumari, Tirunelveli and Madurai.

3.20 Compared to the total (tollable + non-tollable) traffic, the tollable traffic at TP3 Salaipudhur recorded an 9.8% tollable PCU growth from FY23 to FY26. On the other hand, this PCU growth is 8.4% in case of total traffic.

3.21 Higher tollable PCU growth is majorly driven by buses, which observed a 19.6% increase, as compared to a 9.8% increase in overall bus traffic.

3.22 Table 3.8 and Table 3.9 below presents the historical traffic profile on Nanguneri toll plaza.

Table 3.8: Historical Traffic Levels at TP4 Nanguneri

Vehicle category	FY21	FY22	FY23	FY24	FY25	FY26	CAGR FY23-26

Tollable PCU	**15,996**	**14,193**	**17,449**	**18,294**	**18,820**	**21,724**	**7.6%**

Source: Steer analysis of Client data, (FY21* includes 6 months of data from Oct'20 to Mar'21); FY26 AADT represents the full year actual (April to March); Tollable traffic excludes exemption and violation; exemption in buses reduced starting Sept25.

3.23 TP4 Nanguneri has also witnessed a healthy growth in FY25 when compared with FY24 due to increased tourism activities between the hubs of Madurai, Tirunelveli and Kanyakumari. Goods traffic on this Asset, comprising 2A/3A/MAVs, is driven by trips generated to/from Tirunelveli, Kanyakumari and Tuticorin. One of the 12 major ports in India – the V.O Chidambaranar port, is in Tuticorin.

3.24 3A category has largely remained flat historically across all the toll plazas. The reduction in 3A volume is a result of the declining demand for 3A vehicles, which are being replaced by MAV's. MAVs offer higher tonnage capacity making them more cost-effective for transporters. This is consistent with our discussion with various transporters and OEMs across the country who are favouring 5A vehicles for commodity movement due to better unit economics.

3.25 In line with the observation at the other toll plazas on the Asset, when comparing the tollable with the total (tollable + non-tollable) traffic, TP4 Nanguneri has observed a higher PCU growth in FY26 when compared with FY25. TP4 Nanguneri recorded a 7.6% tollable PCU growth, which is higher than that of 5.5% in case of total traffic for FY23-FY26 period.

3.26 A notable development across all the 4 TPs in FY26 has been the uptick in the tollable traffic observed in the bus segment during August and September of FY26 which can be attributed to the resumption of toll payments by Tamil Nadu State Transport Corporation (TNSTC) buses following the Madras High Court's intervention earlier in July 2025.[9] In this case, the Court had directed toll operators under the Madurai–Kanyakumari Tollway and related concessions to bar TNSTC buses from accessing four key toll plazas—Kappalur, Etturavattam, Salaipudhur, and Nanguneri

3.27 Subsequent compliance and settlement discussions led to the reinstatement of toll payments by the state transport undertakings, resulting in the observed increase in tollable transactions for buses across these plazas during the recent months.

3.28 This increase in tollable traffic has resulted in increased revenue collection which is discussed in the section below.

Historical Revenue

3.29 The following tables show the revenue (in INR Lakhs) by each vehicle type at the toll plaza at an annual level and at daily level.

Table 3.10: Total Revenue (in INR Cr) and AADC (in INR Lakhs) by vehicle type at TP1 Kappalur

FY	CJV	LCV	Bus	2A	3A	MAV	OSV	Total	AADC	AADC Growth

3.30 Tables above present, the revenue on the Madurai - Kanyakumari section. It can be inferred from the data that major contributor to the revenue on the Asset is the CJV category which has a share ranging from 35% to 41% of overall revenue across the Asset followed by MAVs which contribute between 16-20% of the overall revenue in case of TP1, TP3 and TP4 whereas for the TP2 the MAV revenue share is around 22%.

Toll Frequencies

3.1 Toll frequency or segmentation is typically the share of each ticket category recorded for a particular vehicle type. This is based on the toll policy which forms a part of the concession agreement. Each vehicle category has different segmentation. As a part of historical analysis, we calculate the toll frequency for each vehicle category from the monthly data shared by the client. The most common ticket categories observed on a typical National Highway are: Single, Return, Monthly, Local and Exempt. Given the local nature of traffic, some toll plazas offer custom made local passes to attract the local commuters to opt for these passes instead of evading toll.

3.2 The following are the types of tickets being sold at the plazas of the Asset.

Table 3.14: Typical ticket types sold at NHAI plazas

Category	Description
Single	Allows the vehicle to cross the toll plaza once
Return	Allows for a return journey within a day with a 50% discount on the return trip.
Monthly Pass	Discounted single entry ticket for users who undertake multiple trips within a month can buy the monthly pass.
Local Personal	Discounted single entry pass only for private cars of residents within 20km radius of toll plaza
Local Commercial	50% discount on single trips for commercial vehicles registered in the local district. This pass allows single entry only
Exemptions	Officially exempted vehicles like ambulance, police cars, key political personnel etc.

3.3 Further, the toll plazas also record violations which are non-paying users, who are not officially allowed under exemptions category but are forced exemptions. For some Assets, the Exemption and violations are at time reported together.

3.4 Generally, over the period the shares of single/return/monthly tickets tend to stabilise within 2-3 years of Asset operations. Only in the cases where trip patterns are expected to change significantly due to urban expansion is where we expect these shares to change over the period or due to some external events impacting the trip patterns.

3.5 Further, FY21 was impacted due to the mandatory implementation of FASTag as a mode of payment, where users were now paying via an online payment system instead of cash payments at the toll plaza. Additionally, in FY22 traffic and travel patterns were impacted by the second wave of COVID-19 in Q1 and Q2. With FY21 and FY22 being impacted these external events, the segmentation began to stabilise from FY23 onwards and reached steady state starting FY24.

Introduction of Annual pass for CJVs

3.6 The National Highway Authority of India launched the “The FASTag Annual Pass” on August 15, 2025, a prepaid facility that allows private CJVs to travel across designated National Highway and National Expressway toll plazas. The annual pass is worth INR 3,000. The pass is valid for one year or 200 trips, whichever occurs first and is applicable only to private, non-commercial vehicles (Car/Jeep/Vans).

Since this pass has been introduced by NHAI, it is not valid on

- state governed toll plazas on highways
- state governed toll plazas expressways
- Parking areas or other non-NHAI tolling locations

3.7 The pass can be activated via the RajmargYatra app or the NHAI website, and links directly to an existing FASTag.

The Annual Pass aims to:

- Promote cashless and seamless travel on national highways.
- Reduce congestion and improve traffic flow at toll plazas.
- Provide cost-effective travel for frequent users of NH/NE toll roads.

Share of traffic by payment type

3.8 Since the Asset is located closer to the urban clusters, it caters to a considerable number of daily commuters using the Asset. Generally, the local movement results in multiple CJV trips though the plaza, leading to higher share of return ticket for CJVs. On TP1, the level of exemptions is influenced by higher share of local traffic on the plaza.

3.9 The share of exemptions for CJVs has been stable across all toll plazas, since the reduction in FY22. A high share of non-tollable exempted traffic in buses is seen across the Asset, because of the local nature of the bus traffic. A major reduction can be seen in the exemption category because of the strict implementation of FASTag and this exempted non-paying category traffic has been converted into the Monthly passes and local commercial tickets. However, a large proportion of buses continue to not pay on each of the toll plazas.

3.10 Across the toll plazas, the CJV segmentation shares have largely been consistent from FY23 - FY26. On the other hand, MAVs have exhibited similar trends when compared with previous years where single is dominant ticket category.

3.11 The figure below shows ticket segmentation for CJV and MAV categories for TP1 Kappalur.

Figure 3-1: Ticket segmentation for CJV at TP1

Data Collection exercise

3.16 As mentioned earlier, to validate and inform various inputs used in our forecasting, we undertook primary data collection on the Asset, comprising the surveys listed below. OD data collection typically involves manual data entry by enumerators based on oral surveys with road users crossing toll plazas, which Steer commissioned with a third party. TVC data collection involves video-graphic capture of traffic passing crossing the toll plazas, followed by manual as well as software-based counting. As part of the current study, OD surveys were undertaken on two toll plazas TP3 and TP4 to understand the change in travel patterns on the Asset. The TVC surveys and OD surveys on TP1 and TP2 were undertaken in 2021 as part of the earlier commission.

Table 3.19: Data collection exercise

Asset	7-day and 3-day videography-based TVC			1-day OD survey			
	Start date	End date	Time (hrs)	Start date	Start time	End Date	End Time
TP1 Kappalur	18 Jan 2021	24 Jan 2021	0000-2359	28 Aug 2023	0900 hours	29 Aug 2023	0900 hours
TP2 Etturvattam	18 Jan 2021	24 Jan 2021	0000-2359	21 Jan 2021	0900 hours	22 Jan 2021	0900 hours
TP3 Salaipudhur	23rd Feb 2026	25th Feb 2026	0000-2359	23rd Feb 2026	0900 hours	24th Feb 2026	0900 hours
TP4 Nanguneri	23rd Feb 2026	25th Feb 2026	0000-2359	24th Feb 2026	0900 hours	25th Feb 2026	0900 hours

Source: Steer analysis

3.17 It should be noted that, in our experience, traffic on national highways shows variation across the week due to the economic activities surrounding each road. To derive a representative TVC count considering daily variation, three-day to seven-day traffic counts are generally recommended, and hence, in order to fully understand the impact of this weekly fluctuation on the Asset, we collected counts at each toll plaza.

Key findings of the TVC data analysis

WADT estimates

3.18 Taking an average of the three/seven-day TVC counts conducted, we obtained the following weekly average daily traffic (WADT) for each toll plaza. This WADT excludes non-tollable vehicles such as tractors, two-wheelers, bullock-carts, etc., but includes officially exempt vehicles such as police cars, ambulances, emergency response vehicles, government vehicles and other vehicle types officially allowed as 'exempted' under the concession agreement.

Table 3.20: WADT from TVC counts

Toll Plaza	CJV	Mini LCV	LCV	Bus	2A	3A	MAV	Total
TP1 Kappalur	16,703	2,189	2,628	3,414	1,072	613	791	27,409
TP2 Etturvattam	7,526	806	1,391	1,172	638	306	699	12,538
TP3 Salaipudhur	6,640	1,297	1,496	1,170	715	334	829	12,484
TP4 Nanguneri	8,793	1,476	1,633	1,368	645	344	739	14,998

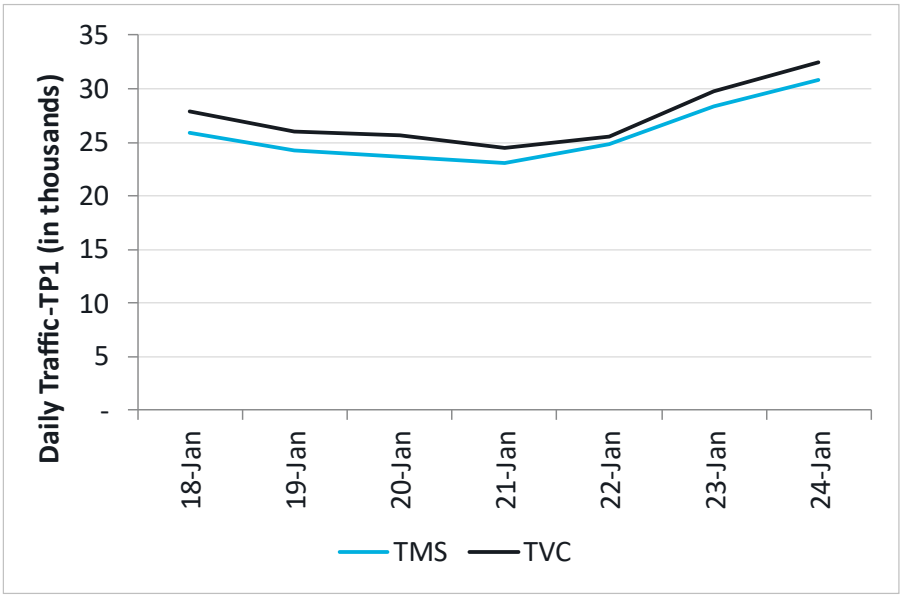
Source: Steer analysis of TVC data

TVC v/s TMS analysis

3.19 As we use the TMS data to estimate the base year AADT, we have used our TVC data to validate the TMS data on those days, as provided by the Client.

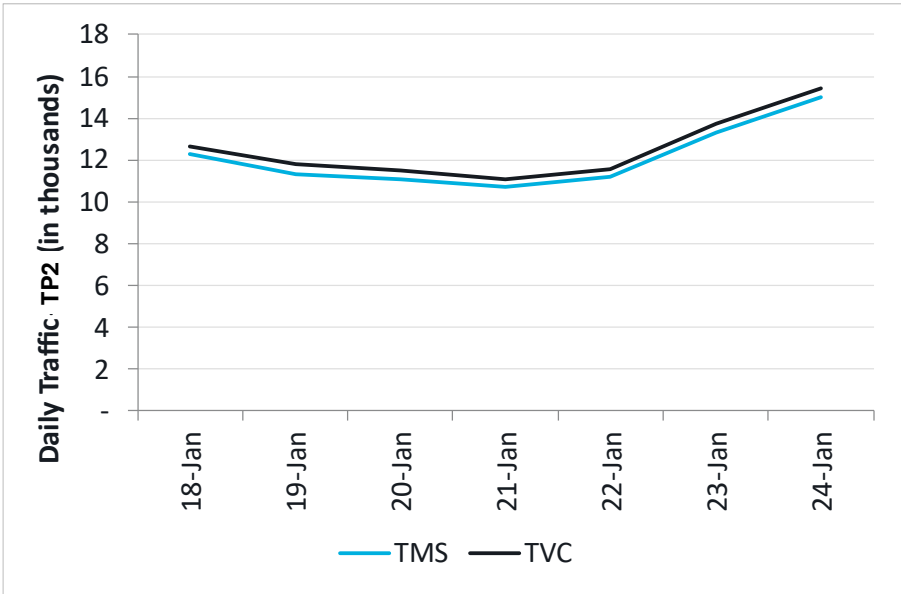
3.20 The following figures show the comparison between the daily traffic observed by TVC and TMS for the four toll plazas. As can be seen from the figures, the overall difference between TVC and TMS over the week for the four toll plazas is within the acceptable range of variation.

Figure 3-9: Comparison between TVC and TMS daily traffic data on TP1 (2021)



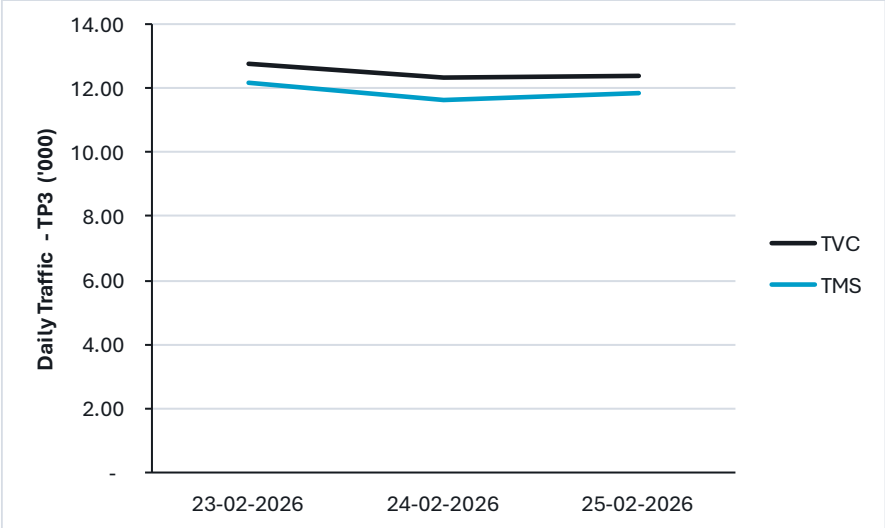
Source: Steer analysis of TVC and Client TMS data

Figure 3-10: Comparison between TVC and TMS daily traffic data on TP2 (2021)



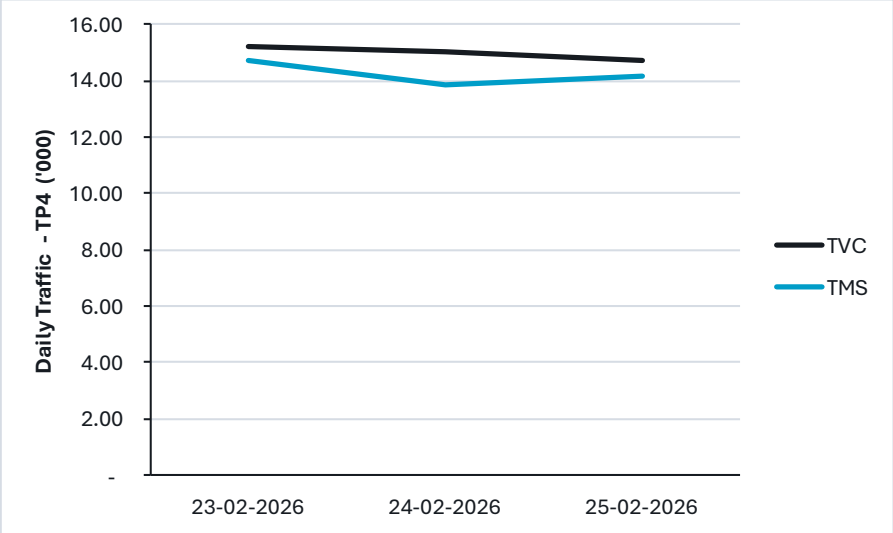
Source: Steer analysis of TVC and Client TMS data

Figure 3-11: Comparison between TVC and TMS daily traffic data on TP3



Source: Steer analysis of TVC and Client TMS data

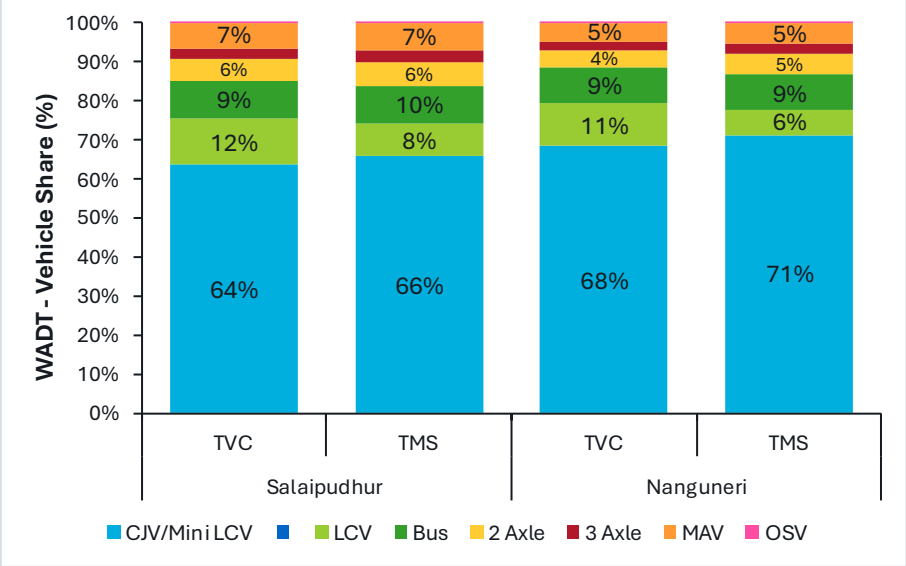
Figure 3-12: Comparison between TVC and TMS daily traffic data on TP4



Source: Steer analysis of TVC and Client TMS data

3.21 The figure below compares the shares of vehicle types at four toll plazas observed by the TVC and TMS data. As can be seen, whilst the share of CJVs and 3A+MAV+OSV is marginally higher for TMS compared to TVC, it is equal for Bus/2A and lower for LCV category. This difference can be attributed to common misclassification of vehicle categories.

Figure 3-13: Comparison between vehicle shares from TVC and TMS WADTs



Source: Steer analysis of TVC and Client TMS data

3.22 Considering the smaller variation between the TVC and TMS data for the largest revenue generator 3A+MAVs, and an overall match in the traffic volumes, our TVC-TMS analysis gives us confidence that the base year traffic calculated using the Client data forms a reliable base year traffic estimate.

Key findings of origin-destination analysis

Overview

3.23 Origin-destination (OD) analysis enables the understanding of the nature of traffic movement on the Asset. As mentioned previously, the OD analysis presented here has been based on the data collected on 23rd Feb and 24th Feb 2026 for TP3: Salaipudhur and TP4: Nanguneri respectively and surveys performed in previous studies for TP1: Kappalur and TP2: Etturvattam.

3.24 We have analysed the regional drivers of demand based on the following analyses:

- Zonal influence
- Commodity distribution
- Top OD pairs
- Trip length distribution

3.25 While zonal analysis and the list of top OD pairs help to understand 'where' people and goods travel, commodity distribution sheds light on 'what' goods get transported. Trip length distribution shows 'how far' vehicles and people travel, and goods get transported. This set of analyses is generally used to estimate the key drivers of traffic and aid the making of informed forecasting assumptions around traffic demand elasticities, growth drivers and exogenous impacts.

Sample rates

3.26 Sample rates help understand the reliability of OD data. They are calculated by dividing OD samples captured by the traffic counts (based on the TMS data) during the same time period. The table below presents the sample rates for passenger and goods vehicle type aggregations at the toll plaza. We believe that the sample rates of the OD data are reasonable for the analysis required.

Table 3.21: Sample rates for OD data

Vehicle type	TP1 Kappalur	TP2 Etturvattam	TP3 Salaipudhur	TP4 Nanguneri
Passenger (CJV+Bus)	43%	27%*	22%	18%
Goods (LCV+2A+3A+MAV)	78%	31%*	77%	56%

Source: Steer analysis of OD data, *The surveys took place during the COVID-19 pandemic due to which the vehicles were reluctant to stop and answer the enumerators leading to lower sample rate.

Zone Categories

3.27 To facilitate better interpretation of key regional drivers of traffic as determined by their OD zones, and influenced by various towns, cities, states and regions in the vicinity of the Asset, we have aggregated zonal data as described in the table below. The methodology behind this aggregation of zones may vary as per the characteristics displayed by the different Asset being studied.

Table 3.22: Zone aggregations for zonal influence analysis

Aggregate Zone	Description
Local	Local zones are those that fall on or very close to the Asset.
IAOI (Immediate Area of Influence)	IAOI zones are the locations which generate traffic and lie within approximately 75-150 km distance from the Asset.
Rest of Tamil Nadu (TN)	Rest of the cities/Districts in the state that Asset lies in (other than Local/IAOI)
Kerala	Kerala
Karnataka	Karnataka
AP & Telangana	Andhra Pradesh and Telangana
North India	Uttarakhand, Haryana, Punjab, Jammu and Kashmir etc
West India	Gujarat and Maharashtra
East & Northeast India	West Bengal, Orissa, Jharkhand and Northeast Indian states
Central India	Madhya Pradesh

Source: Steer analysis

Zonal Influence

3.28 The zonal influence is the contribution of the zone or the zonal aggregation to trips by a vehicle type. This section presents the zonal influence[10] at each toll plaza of each Asset, based on zonal aggregation listed in the previous sub-section. it should be noted that zonal influence is analysed on trip ends and not trips.

3.29 It is seen that the local, IAOI, and Rest of TN zonal shares - constitute the majority of zonal influence for all vehicle types – with more than 95% for CJVs to about 85% for MAVs. As expected, heavier vehicles have more movement to/from the rest of the state and country. This analysis is further supported by the top 10 OD pairs, given in the appendix which show that the majority of the trips originate and end in areas which are in either of the three zonal categories mentioned above.

3.30 As can be seen from the following figures, at TP1 Kappalur (Figure 3-14), there is a higher share of Rest of State trips for both the passenger and commercial vehicles wherein Local and IAOI zones combined such as Madurai, Tirumangalam, Virudhunagar etc have the greatest influence on CJV, Buses, with around 50-55% of the total share. These shares decrease with axle numbers, indicating that majority of the local movement is led by smaller vehicles. There is also a significant influence on the heavy goods traffic from areas in rest of the state like Tirunelveli, Chennai, Kanyakumari and Coimbatore with 55% and 53% influence on 3A and MAV traffic respectively.

[10] For example, if out of 100 trips at a toll plaza on an Asset, 10 trips are between Hyderabad and Delhi and 90 trips are between Hyderabad and Chennai, then zonal influence of Hyderabad would be 50% since one end of all trips are at Hyderabad. Likewise, zonal influence of Delhi and Chennai would be 5% and 45%, respectively.

3.31 Going from Kappalur towards Nanguneri (Figure 3-17), the local zones have decreasing influence while IAOI and rest of Tamil Nadu zones have increasing influence. This is understandable given that the southern stretch of the Asset has more urban villages and towns located further away from the highway. For example, at TP2 Etturvattam (Figure 3-15) and TP3 Salaipudhur (Figure 3-16), more than 50% of the zonal influence across all vehicle categories are from areas in the rest of the state and at TP4 Nanguneri (Figure 3-17), majority of the influence on traffic is from Rest of State zones across categories with 72% and 64% influence on 3A and MAV traffic respectively.

3.32 Outside Tamil Nadu, areas in Kerala such as Thiruvananthapuram has the highest influence of about 5-6% on traffic across all toll plazas because the Asset connects the southern part of Tamil Nadu to Kerala, wherein Thiruvananthapuram and Kanyakumari districts are culturally and economically connected cities with inter-urban traffic movements.

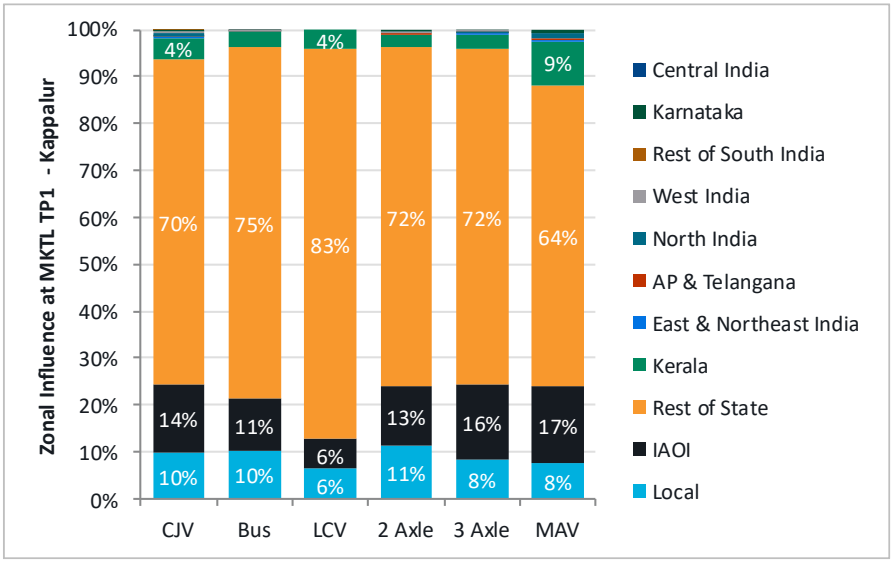
Figure 3-17: Zonal influence at TP4 Nanguneri



Source: Steer analysis of OD data

Internal External analysis

3.33 Internal-External analysis helps in identifying the trips which have both the origin and destination on or near the Asset i.e local/IAOI zones (Internal-Internal or I-I), any one end on the Asset (Internal-External or I-E), or neither end on the Asset i.e. through trips (External-External or E-E). RoS here represents areas within the state which are neither local or IAOI. 'Internal' zones are those that were analysed as 'local' and 'IAOI' in the zonal influence analysis, i.e. lying on the Asset, while 'External' zones are areas lying outside the state.

3.34 The figures below shows the distribution of trips based on these categories. Understandably, these reflect the observations seen in the zonal influence presented earlier, at a higher level of aggregation.

3.35 In line with our understanding from zonal influence analysis above and site visits, it is seen that a significant number of trips either originate and end internally i.e., within local or IAOI zones or have at least one end of the trip in rest of state with very less external to external movement of traffic on the Asset across all toll plazas.

Figure 3-18: Internal-external distribution at TP1 Kappalur

	Internal	Rest of State	External
External	4%	8%	2%
Rest of State	15%	27%	5%
Internal	11%	24%	4%

Source: Steer analysis of OD data

Figure 3-19: Internal-external distribution at TP2 Etturvattam

	Internal	Rest of State	External
External	2%	10%	0%
Rest of State	9%	33%	4%
Internal	13%	21%	7%

Source: Steer analysis of OD data

3.36 At TP1 Kappalur (Figure 3-18), more than 50% of the passenger trips are Internal-Internal with this share decreasing for the goods vehicle traffic wherein the majority of the trips originate in and are destined towards areas in the rest of the state like Chennai,

Coimbatore, Tirunelveli etc. This share is even higher at TP2 Etturvattam (Figure 3-19) wherein RoS-RoS trips are the highest across all vehicle categories. At TP3 Salaipudhur (Figure 3-20) and TP4 Nanguneri (Figure 3-21), apart from the high I-I movement seen especially in passenger traffic, the goods vehicle traffic sees a high number of trips originating from RoS and ending at internal areas near the Asset

Figure 3-20: Internal-external distribution at TP3 Salaipudhur

	Internal	Rest of State	External
External	1%	4%	0%
RoS	19%	28%	2%
Internal	8%	30%	7%

Source: Steer analysis of OD data

Figure 3-21: Internal-external distribution at TP4 Nanguneri

	Internal	Rest of State	External
External	5%	10%	0%
Rest of State	16%	40%	3%
Internal	1%	20%	5%

Source: Steer analysis of OD data

Commodity distribution

3.37 We have grouped various commodities into aggregate categories for ease of interpretation, as shown in the table below. The charts in the following sub-section present information in terms of aggregate commodity categories.

Commodity Description	Code	Combined codes used for charts
Agriculture Products / Cash crops (Wheat, Rice, Sugar cane,Maize etc.)	AGR	AGR
Cattle Food / Live Stock (sheep, ghoat, cow,cattle food etc)	LIV	
Perishable Items (Fruits, vegetables)	PER	GRO
Animal Products/Dairy/Eggs/Fish/Meat/Animals	DFM	
Groceries / Food items (Soap, Salt, Sugar, Pulses, Spices, Biscuits, bread,cool drinks, beer etc.)	GRO	
Building Material / Construction (Cement, Lime, Brick, fly ash, etc)	CNS	CNS
Sand/Clay	SND	
Stone (kota stone, marble, Granite, Aggregate stone etc.)	STN	
Ceramic	CRM	
Petroleum Products (Oil, LPG, CNG, etc.)	PET	PET
Chemicals / Fertilizers (Acids,Fertilizers etc.)	CHM	
Electrical/Manufacturing items (Electronic items, Medicine, Leather, Wine, Rubber/ Tyre, Plastics, Cloth, Paper etc.)	MAN	MAN
Raw Wood,Cork & Wood Products, Furn	WUD	
Machinery / Spare parts	MAC	
Automobiles (Finished products, auto parts, Car/bike manufacturing, New Chassis)	AUT	AUT
Basic / Fabricated Metals (Iron, Steel / Metal)	MET	MET
Mining Minerals (Coal, Gypsum, Cobalt etc.)	MIN	
Empty	EMT	EMT
Container	CTR	MSC
Miscellaneous (Parcel, Courier, House hold items etc.)	MSC	
Passengers	PAS	
Scrap	SCR	

Source: Steer analysis

3.38 The commodity analysis from the OD data shows that overall manufacturing items is the main commodity item being carried on the Asset across all toll plazas followed by agricultural and grocery items. Also, construction goods seem to be a key commodity that is carried by MAVs especially at TP3 Salaipudhur wherein about 33% of the MAVs transported construction material including cement on the Asset. The high commodity share of manufacturing items could be attributed to the presence of several industrial estates along the Asset such as the Tamil Nadu Small Industries Corporation (SIDCO) industrial estate at Kappalur, industrial city of Tuticorin and an industrial estate in Gangaikondan, Tirunelveli.

3.39 At TP1 Kappalur (Figure 3-22), manufacturing items such as medicines, machine parts, paint etc is key commodity carried by both light and heavy goods vehicle making up for

~10-20% share across all vehicle categories. Direction wise, it is seen that a significantly higher share (13%) of MAV carry construction goods in the direction of Tirunelveli compared to those moving towards Madurai which could be attributed to the presence of India Cements plant just north of Tirunelveli and Ramco Cements near Virudhunagar. Also 22% of MAV carry manufactured good towards Tirunelveli, which is much higher than the proportion (13%) in the opposite direction. This difference is attributable to the presence of the warehouses and SIDCO industrial estate in the vicinity of TP1 Kappalur. This also stems from the connectivity provided to the Thoothukudi port from Tiruneveli.

3.40 At TP2 Etturvattam (Figure 3-23), grocery items such as biscuits, juice, sweets and other household items make up for the top commodity item that is carried by both the light and heavy goods vehicle with a 17% share for MAV and 22% share for 3A traffic, given the proximity of highly urbanised cities such as Madurai, Virudhunagar, Tirunelveli making up for the regional consumption demand. Direction wise, a relatively higher share of MAVs (more than 30%) moving towards Kanyakumari carried cement compared to those moving in the direction of Madurai.

3.41 At TP3 Salaipudhur (Figure 3-24), petroleum products are at the top of the commodity mix for 3A and MAV traffic, along with a major share of 3A and MAV traffic is dedicated towards carrying construction materials given the proximity of the toll plaza to cement plants nearby. Direction wise, there is a higher share of light good vehicles carrying agriculture and grocery items in the direction of Madurai to Kanyakumari with around 19% of the MAV carrying construction goods. A considerable share of empty vehicles is observed travelling towards Kanyakumari to Madurai, given the regional and short- to medium-distance movement of commodities.

3.42 At TP4 Nanguneri (Figure 3-25), agriculture items are the top commodity category for light good vehicles whereas manufacturing items, cement and construction items make up for a high share in the overall commodity mix for 3A and MAV traffic. Direction wise, there is a relatively higher share of heavy goods traffic carrying cement, agriculture items and construction material in the direction of Kanyakumari and a very high share of empty light and heavy goods vehicle moving in the direction of Madurai.

Trip length analysis

3.43 Trip-length distribution provides the distance-based profile of various vehicle types. This aids in validating assumptions around the share of macro-economic drivers, inputs from zonal influence and toll segmentation. For ease of interpretation, we have categorised distances into 5 groups – local (0-100km), short-distance (100 - 300 km), medium-distance (300 – 500 km), long-distance (500-1000 km), and very-long distance (+1000 km). The trip distances were derived as driving distances from Google Distance Matrix Tool based on zonal coordinates for OD pairs.[11]

3.44 Supporting the observations made in zonal & internal-external analysis in the previous sections, the figure below highlights, contributing to local movements on the Asset. The major proportion of the heavy goods traffic covers longer distances of 300-500 km and 500-1000 km to places such as Tirunelveli, Chennai, Coimbatore etc. Across all the plazas, 6-9% of MAV travel long distance over 1000kms.

[11] Google Distance API is a tool that is available on a chargeable basis from Google Maps Platform. Link: **https://developers.google.com/maps/documentation/distance-matrix/start**. Travel distance and time information for driving/transit under various congestion scenarios can be extracted through this tool by using macro-enabled Excel, R, etc.

Conclusions

3.45 Traffic on the Asset is dominated by CJVs which make up approximately 70% of the total vehicle composition at every plaza, with the rest dominated by buses, 2As and LCVs – the last two being the dominant goods vehicle type carrying regional movement of goods on the Asset. Heavy goods vehicles (3As and MAVs) make up a small but considerable share of the total traffic.

3.46 CJVs, having the highest share in vehicle proposition, and contribute the maximum in the revenue as well. Across all the plazas, CJVs make up around 45% of the total revenue with MAVs contributing to 16-21% to the total share (Historical Revenue)

3.47 In terms of ticket segmentation, the share of single journeys has reduced across the categories as the share of return journey tickets increased. For MAVs, Single tickets have remained dominant on the asset – with TP1 holding a share of ~78% in FY26YTD, TP2 with a share of 60%, TP3 with a share of 61%. At TP4, the share of single tickets has remained stable at 41%, with return tickets dominating at 57% in FY26YTD. The proportion of exemptions has remained similar historically at each plaza. The Asset observes 4%-12% exemptions for CJVs, with the highest of ~12% being at TP1 Kappalur due to its proximity from urban cluster Madurai having high local influence.

3.48 As a part of previous study, the TVC data shows minor variation on the TMS data, where at a total level, the TVC data is approximately 3% higher than the TMS data. This gives us confidence that the base year traffic calculated using the Client traffic data forms a reliable base year traffic estimate.

3.49 The OD analysis found that in terms of zonal influence, at TP1 Kappalur, local and IAOI zones have the greatest influence on CJV, Buses and LCV and as we towards the southern part of the Asset (to Nanguneri), the local zones have decreasing influence while IAOI and rest of Tamil Nadu zones have major influence on the traffic, especially the heavy goods vehicles. Outside Tamil Nadu, Thiruvananthapuram in Kerala has the most significant influence given its cultural connection with Kanyakumari and the resultant inter-urban traffic movements.

3.50 The key commodity transported on the Asset across all four toll plazas is manufacturing items such as medicines, machine parts, electronics etc followed by agricultural and

grocery items. Also, MAV's carrying cement make up for a very high share of traffic on the Asset especially at TP3 Salaipudhur given the proximity to cement plants such as India Cements plant just north of Tirunelveli and Ramco Cements near Virudhunagar.

3.51 The internal and external distribution highlights that majority of trips either originate and end internally i.e within local or IAOI zones or have at least one end of the trip in RoS with very less E-E movement of traffic on the Asset across all toll plazas. This is further supported by the trip length distribution analysis which shows that between 60-70% of the passenger traffic travel shorter distances of up to 300 km, contributing to local movements on the Asset whereas most of the heavy goods vehicle travel longer distances of 300-500km and 500-1000 km to places such as Tirunelveli, Chennai, Coimbatore etc with very few longer external movements to places such as Mumbai, Uttar Pradesh and Hyderabad. Overall, the OD analysis shows that the Asset has significant inter-urban traffic and regional economies of wind, cement and industrial estates providing captive traffic.

3.52 To understand the overall change in the growth drivers and travel pattern, we compared our 2023 OD results with one conducted in 2021 as a part of previous studies. It was observed that currently on TP1, the share of empty across 2A, 3A and MAV have reduced by ~5-10%. While the share of miscellaneous items parcels courier and automobiles have witnessed increase at TP1. Similar trends are observed on TP2. Other commodities including construction, manufacturing, agriculture and groceries have similar shares. Same is validated through zonal analysis where the share of local trips across vehicles categories have shifted ~5-10% from Outside Tamil Nadu share.

4 Socio economic context and traffic growth

Introduction

4.1 The growth of traffic on existing (brownfield) roads depends on, firstly, how fast the background travel demand grows (background growth); and secondly, how successful the roads are in attracting that traffic (traffic capture). Background travel demand is driven by the socio-economic conditions in the region where the Asset is located and the country. These include:

- Changes in factors such as population, economic growth (regional and national) and industrial production; and
- Other local factors such as strategic port growth, and growth in local industries near the Asset.

4.2 In turn, the change in the relative competitive position of the Asset (and thus of the traffic capture they can achieve) derives from how the relative offer for the roads changes, i.e. the service offered, and the tolls charged on the project roads, in comparison to that on competing roads; and whether any competing road facilities are planned.

4.3 In this chapter, we have assessed the trends of the above growth drivers, as indicators of the socio-economic conditions in the regions surrounding the Asset.

Population growth

4.4 We have analysed the key socioeconomic drivers of the background traffic demand in Tamil Nadu state, where the Asset is located.

National level

4.5 Table 4.1 below shows that the total population in India has grown at a Compound Annual Growth Rate (CAGR) of 1.5% since 2000, decreasing over the years, as shown in the table below. The World Bank forecasts this growth to decrease to 0.6% CAGR by the 2030-45 period.

Table 4.1: CAGR of population in India

	CAGR		
Years	**Total Population (m)**	**Rural Population (m)**	**Urban Population (m)**
1970 – 1985	2.3%	1.9%	3.8%
1985 – 2000	2.0%	1.7%	2.9%
2000 – 2015	1.5%	1.0%	2.6%

Years	CAGR		
	Total Population (m)	Rural Population (m)	Urban Population (m)
2015 – 2030*	1.0%	0.3%	2.3%
2030 – 2045*	0.6%	-0.3%	1.9%

Source: World Bank Data on Health Nutrition and Population Statistics, *forecast population growth.

State level

4.6 Table 4.2 shows the evolution of population in Tamil Nadu state, compared to that of the country. The CAGR of population in Tamil Nadu has been considerably slower vis-à-vis that of India.

Table 4.2: Population Growth in Tamil Nadu and India (2012 – 2024)

State	2012 Population (m)	2024 Population (m)	CAGR (2012 – 2024)
Tamil Nadu	72.43	76.93	**0.5%**
India	1210	1,395	**1.2%**

Source: Ministry of Statistics and Program Implementation estimates

4.7 Due to the complexities of the patterns in which urbanisation takes place, and the very dynamic nature of local population migration (which are very difficult to forecast with accuracy), we do not use population growth as a proxy for understanding future travel demand growth on the Asset. It has been included in this section simply to provide a socio-economic context of the state/trends in the regions in which the Asset is located.

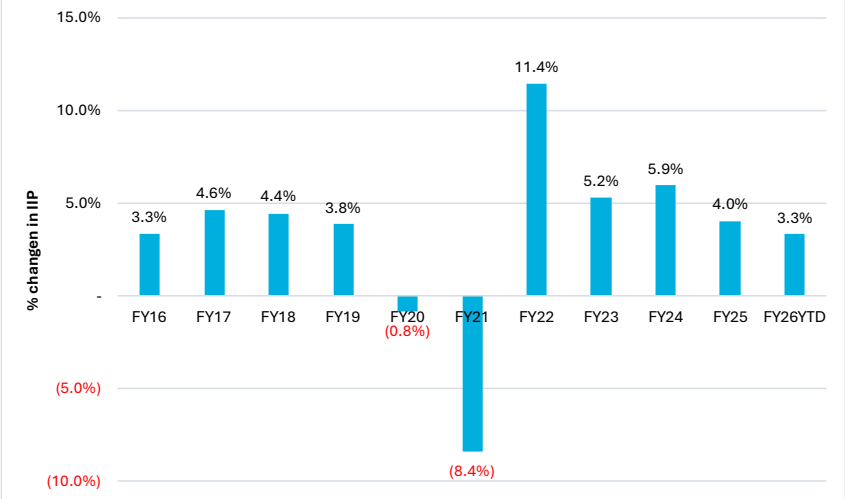
Economic Indicators

Industrial Production

4.8 The Index of Industrial Production (IIP) is a composite indicator that measures the short-term changes in the volume of production for a basket of industrial products. The IIP data tracks the manufacturing activity in different sectors of an economy, with mining, manufacturing, and electricity being the three broad sectors constituting the IIP.

4.9 The figure below shows that at an annual level, national IIP was growing at an average of 4% per year over the period FY15-19, before the country underwent a liquidity crisis and experienced an overall economic slowdown in FY20. In the aftermath, IIP shrank by over 8% in FY21 due to a decline in economic activity in the wake of global lockdowns introduced to curb the Covid-19 pandemic. Post the immediate recovery in FY22, IIP growth has since stabilised, with FY25 recording 4%, and FY26YTD (till February 2026) recording 3.3% growth over FY25.

Figure 4-1: Annual growth - Index of Industrial Production



Source: Steer Analysis of MoSPI

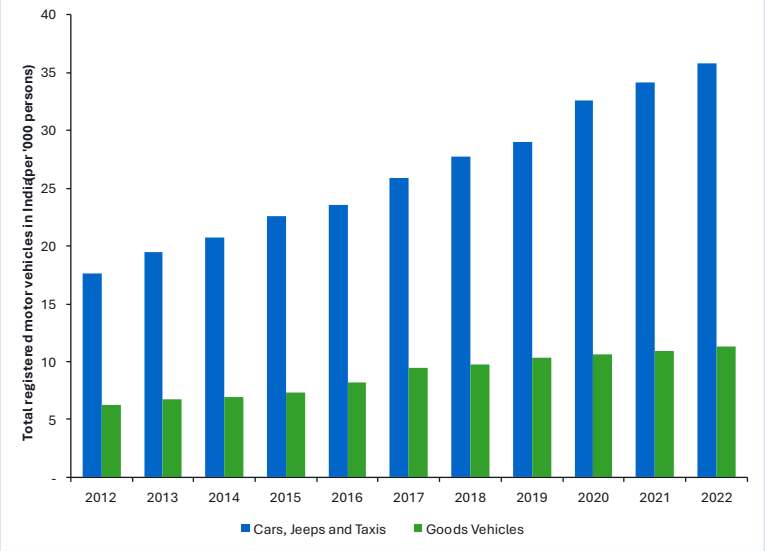
4.10 Since state-level IIP data is not as readily available as national level IIP, we have presented national IIP here to indicate nationwide activity in key industrial sectors like power, manufacturing, and mining, all of which influence long-distance commercial movements across the nation, and not unique to this asset. We however, do not use it to forecast future travel demand growth since long-term forecast for IIP is not available through official sources such as MOSPI, RBI or through multilateral organisations like WB, or the IMF.

Vehicle ownership

4.11 The gap in car ownership between India and developed nations remains substantial – with 36 cars/jeeps/taxis and 11 commercial vehicles per thousand people, as of FY22 (the latest year for which official data is available). However, with increasing per capita income levels, a booming economy and the subsequent increase in demand for mobility, the number of registered vehicles has been on a gradual upward trend

A.1 Overall, India still stands at a very nascent stage in the vehicle saturation curve, offering huge potential for growth going forward. Between FY12 and FY22, the CAGR for CJV and goods' vehicles registered in India was 8.6% and 7.3% respectively

Figure 4-2: Total number of registered motor vehicles in India (per 1000 population



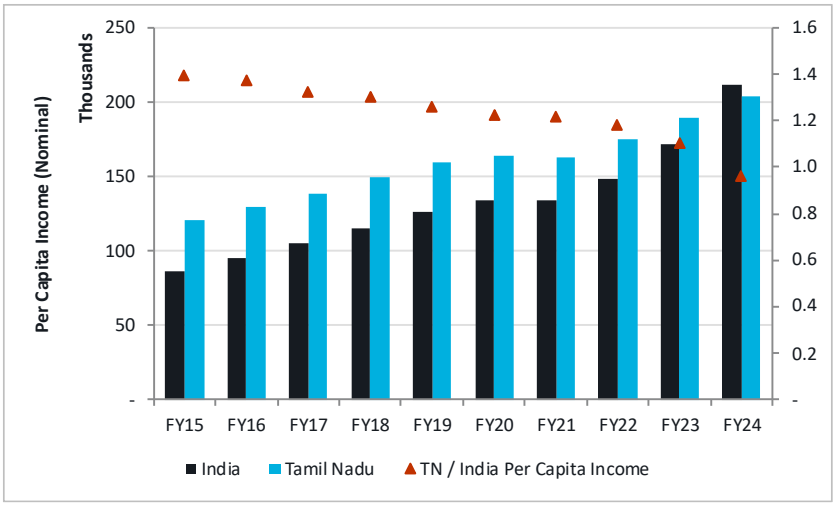
Source: Ministry of Road Transport and Highways (MoRTH)

Per Capita Income (PCI)

4.12 The per capita income of the state where the Assets lies i.e., Tamil Nadu is similar as compared to the national average, however in dollar terms, PCI of just $2,000 per head indicates that the state is at a very early stage of consumption curve. Going forward, we therefore expect local consumption to be strong which would drive the growth in both passenger and commercial traffic.

4.13 However, given the difficulty in obtaining granular district level PCI data it is not advisable to use this as a growth driver. Also, the long-term forecast for PCI is not available we therefore refrain from using it to forecast traffic.

Figure 4-3: Per capita income



Source: Ministry of Statistics and Program Implementation (MoSPI)

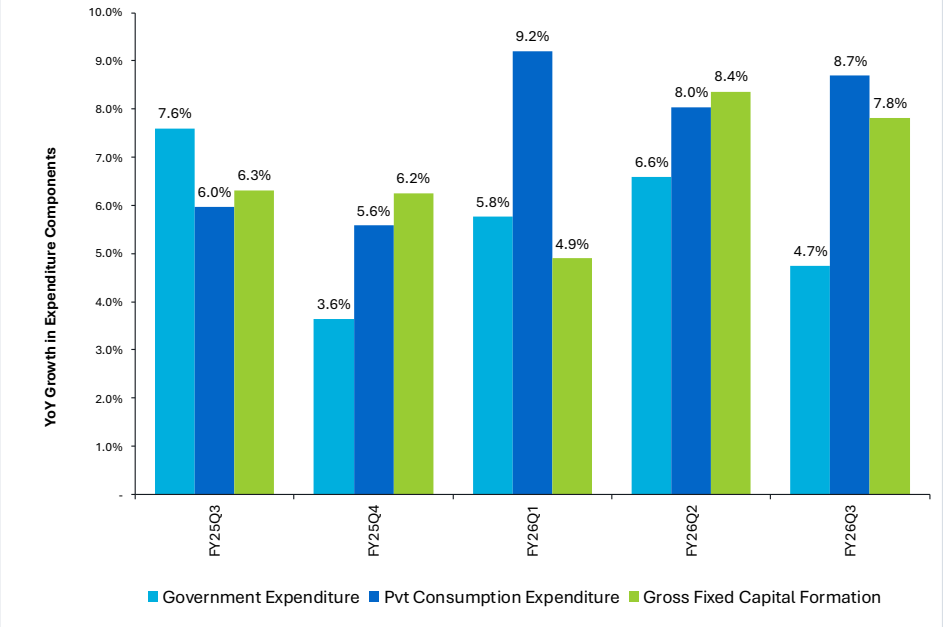
Economic growth

India's Performance

4.14 Despite a slowdown in the economy during H1FY25, the Indian economy has observed strong growth each quarter since FY25Q2, with the latest published estimates for FY26Q3 GDP at 7.8% over FY25Q3. This performance has been driven by strong growth in investment and consumption expenditures and higher consumer optimism for the year ahead[12].

4.15 The figure below, we present quarterly Y-o-Y growth in three major components of GDP – government expenditures, consumption expenditures, and business investment (gross fixed capital expenditure) over the past year (FY25Q3-FY26Q3).

Figure 4-4: YoY growth in expenditure components of GDP



Source: Steer Analysis of MOSPI Data

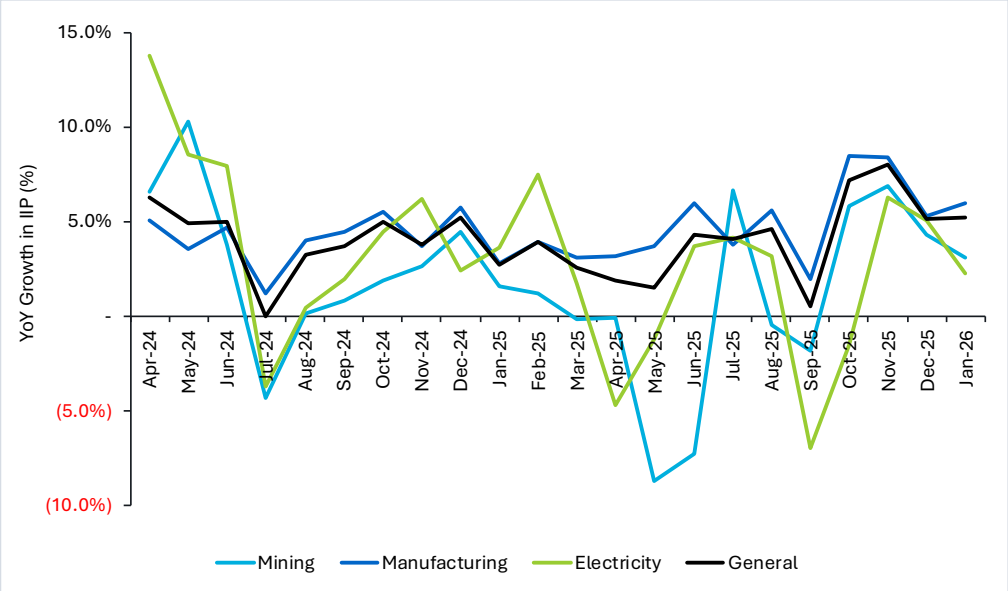
4.16 While consumption and investment expenditures have continued to show consistent growth over the past two quarters, government expenditures observed a marginal decline in FY25Q4. In FY26Q1, government expenditures rebounded, recording 5.8% growth over FY25Q1 levels.

4.17 Performance across different types of industrial activities (such as Mining, Manufacturing, and Power Generation) directly impact freight movement and commercial traffic volume growth across the country, including on the Asset. In the figure below, we present growth trends in IIP – a measure that tracks the performance of the economy across these activities. As of FY26YTD (Apr'25-Feb '26), the Manufacturing sector continues to perform strongly, recording positive y-o-y growth since FY25Q3. While industrial activity across the

[12] Gov**ernment of India PIB Release (27th February 2026)**

two other sectors (i.e., Power Generation and Mining) dropped between May and Jun/Jul '25, they have since rebounded and show signs of continued growth going forward.

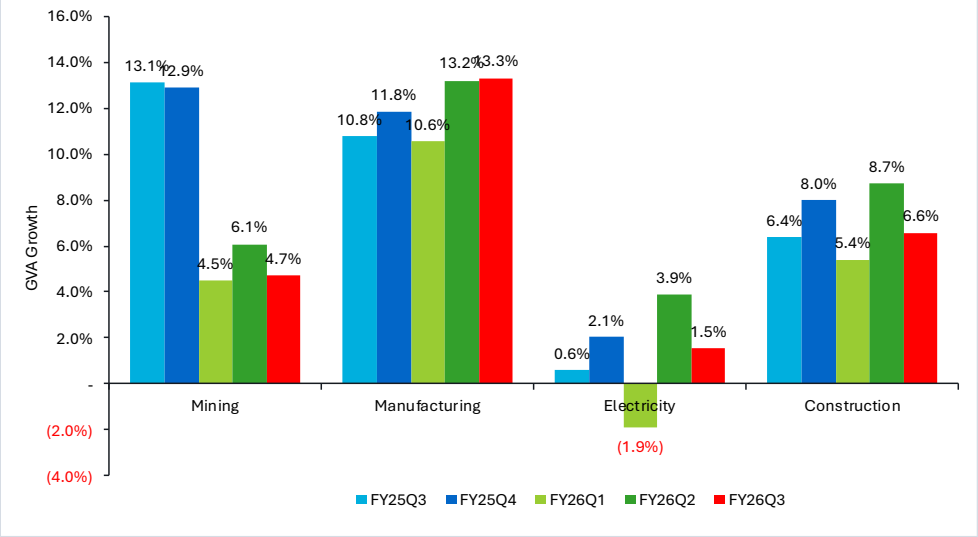
Figure 4-5: Month on Month IIP performance



Source: Steer Analysis of MOSPI Data

4.18 In addition to monthly trends in IIP, the figure below presents y-o-y growth of quarterly GVA in four industrial sectors - Mining (& Quarrying), Manufacturing, Electricity (and other Utilities), and Construction. While the Mining and Power sectors observed decline and muted growth in FY26Q1, the Manufacturing and Construction sectors experienced strong growth. While overall economic growth has remained resilient as of FY26YTD, performance across industries have varied, impacting economic growth across different regions and on the Asset as well.

Figure 4-6: Industrial components of GVA



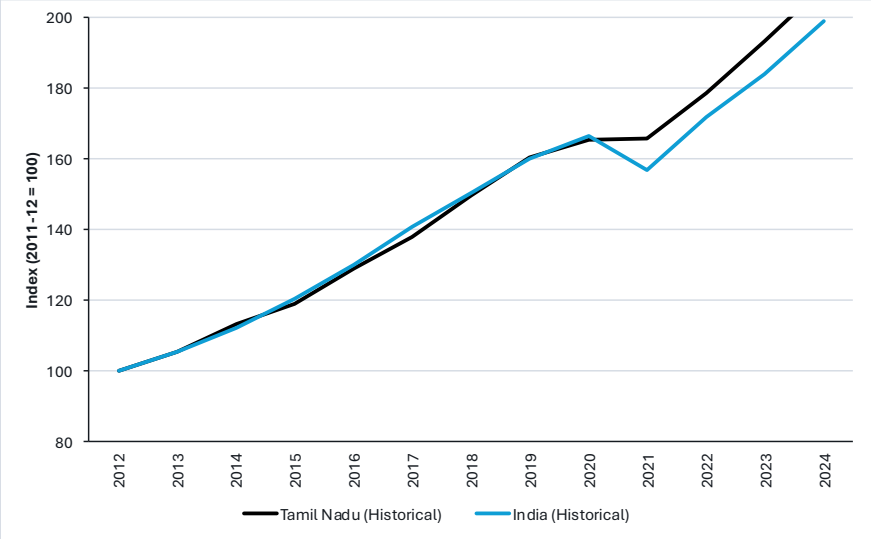
Source: Steer Analysis of MOSPI Data

GDP and GSDP Growth

4.19 Over the period FY12-FY24, the Indian economic has grown at a CAGR of approx. 6% aided by growth in the tertiary sector which grew at a CAGR of approx. 6.9% over the same period. The economic growth of Tamil Nadu (state GSDP)[13] been faster than the country overall. Tamil Nadu's GSDP CAGR was 6.3% between FY12-24. Tamil Nadu approximately contributes 9% to the India's GDP. In terms of per capita income, Tamil Nadu has a higher per capita income than the country.

4.20 The Asset Madurai-Kanyakumari, lie in the state of Tamil Nadu. Tamil Nadu's state GSDP has historically grown at a rate that is equal or slightly lower than the national trend. The following figures illustrates the evolution of Tamil Nadu's GSDP during FY12-24.

Figure 4-7: Evolution of Tamil Nadu's state GDP and National GDP, FY12-24



Source: Steer Analysis of MOSPI Data)

4.21 The official historical GDP and GSDP data for India are released by the Ministry of Statistics and Program Implementation (MoSPI). The GDP forecasts for India are available from various reliable sources such as Oxford Economics and Consensus Economics[14], but state-specific GSDP forecasts are not published by any such sources. To derive state GSDP forecasts, we rely on past trends of the relationship between GDP and GSDP and develop GSDP forecasts as a function of our assumed GDP forecasts[15].

4.22 For any indicator to be used as a growth driver to forecast traffic, a reliable source of historical and forecast data availability for that indicator is the key requirement. Of the key socioeconomic indicators discussed above, GDP was assessed to be the only growth driver for which reliable data is available both in terms of historical and forecast data.

---

[13] GSDP is the Gross State Domestic Product i.e., the GDP equivalent for a particular state, it is the final value of goods and services produced by a particular state

[14] **Consensus Economics - Economic Forecasts and Indicators**

[15] Assuming that the historical long-term relationship between GSDP and GDP sustains over the short-term, we project future growth in GSDP as a function of our GDP growth forecast. We taper the relationship of GSDP growth to converge to GDP growth gradually over the long-term.

Therefore, to forecast traffic, we use GDP/GSDP as our key growth drivers.

Forecasts for growth drivers

4.23 Following the discussion in Chapter 2 on the nature of economic activity in the state of Tamil Nadu, in this section, we describe the assumptions in relation to forecasts of the key macro-economic drivers of traffic growth. Particularly, we have based our forecast on GDP and GSDP projections provided by the Client.

National GDP

4.24 After the last period of economic slowdown in FY11-12, the country experienced an economic downturn again in late FY19 with FY20 having reported a GDP growth of 4% (relative to an average growth rate of 7% per year between FY13 and FY19). India's GDP growth declined as domestic investment and consumption demand were already under stress because of the liquidity crunch before Covid-19. Other factors that contributed to the economic slowdown included reduced growth rates in automobile sales and production, liquidity crunch in credit markets and rising number of Non-Performing Assets (NPAs) within the banking sector, as well as lower manufacturing production and lower rural consumption.[16]

4.25 The Covid19 outbreak had a significant impact on the Indian economy during the first two quarters of FY21 as government mandated lockdowns across the country effectively stalled economic activity and growth. The growth momentum eventually picked up in Q3 of FY21, with a sharp rebound in the economy in FY22 (GDP recorded 9.7% growth over FY21) and has since observed a consistent growth of 7.6% in FY23, 9.2% in FY24 and 6.5% in FY25 (as per the SAE) before slowing down over the past year due to several domestic and external factors.

4.26 Figure 4-8 below shows Client-provided GDP projections for India. The forecast provided by the Client expects the Indian GDP to grow at 6.3% between FY27-FY30 and gradually tapers down to 5.2% by FY51, end of concession. The India GDP growth forecast provided by the Client is broadly in line with other independent forecasts available from reliable sources such as IMF, World Bank and RBI in the medium term.

4.27 The GDP-GSDP lines are expected to converge by FY38. The chart below shows the forecast growth lines for GDP and Tamil Nadu GSDP.

5 FY26 Base Year AADT and Traffic growth Analysis

Introduction

5.1 In this section, we present our approach, assumptions, and results for base (or background) traffic growth for each vehicle category on the Asset.

5.2 Traffic growth is commonly related to a variety of macro-economic and industry- or commodity-specific factors (hereafter referred to as 'traffic growth drivers'). These growth drivers are typically identified from the results of the OD data analysis and the site visits that help us appreciate the nature of traffic movement – 'what' travels 'where' and 'why'.

5.3 While comprehensive historical data on the asset is not available, we have access to six years of records. Despite some inconsistencies, this dataset provides a reasonable foundation for analysis. As a result, statistical methods to estimate background growth relationships could not be applied. Instead, we conducted a benchmarking exercise, supported by trip length and origin-destination (OD) analysis, to derive elasticity estimates. These are discussed in detail below.

FY26 Base year AADT estimates

5.4 The base year is the year on which long-term background forecast growth rates are applied to derive year-wise average annual daily traffic (AADT) estimates for forecast years. This is therefore an important aspect of our forecasting approach as traffic and ultimately revenue forecasts for future years are built on top of the base year traffic estimate. We have used FY26 as the base year for AADT estimates for the forecast years.

5.5 As described previously in Chapter 3, to establish the base year (FY26) traffic position, we utilised information from various sources – including from the Client and our context knowledge, to assess a reasonable demand on the corridor.

Methodology

5.6 The base traffic for FY26 has been estimated using 11 months of actual traffic data (April to February). Each toll plaza's seasonality correction factors were applied on the actual MADTs of Apr-25 to Feb-26 to obtain seasonally corrected estimates for FY26 traffic. An average of these estimates was considered to be the FY26 base traffic.

Seasonal Correction Factors

5.7 Traffic on any Asset varies on a month-on-month level. Such variations maybe due to monsoons (typically Jul to Sept) or due to festivals in the region. For e.g. It is observed that typically the truck traffic during the first half of the financial year (April-September) is generally lower than the annual average, mainly because of peak summer season

followed by monsoons affecting the freight movement patterns in large parts of the country in the July-September period. In addition to these there may be other seasonal variations specific to the Asset.

5.8 In order to normalise for these variations across the year to provide an AADT estimate, Seasonality Correction Factors (SCF) are used. SCFs are estimated to convert the monthly traffic numbers to an AADT level while accounting for seasonal variation due to local/national festivals, weather changes and/or temporary external impacts. These are typically estimated using historical data for each plaza and vehicle category over multiple years. An SCF >1 means that the traffic for the month is lower than the annual average and vice-versa.

5.9 The below tables present the average of FY23, FY24 and FY25 SCFs used to estimate the AADT for the four toll plazas.

Table 5.1: SCF factors for TP1 Kappalur

Vehicle Category	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Jan	Feb	Mar

Total	**14,173**	**15,724**	**15,625**	**10.2%**
PCUs	**20,352**	**22,509**	**22,427**	**10.2%**

Source: Steer analysis: Steer analysis; FY25 actual full year, FY26YTD includes 11 months of FY26, FY26A is adopted base for FY26

5.10 The above tables depict that the FY26A estimates over the full year FY25 AADT show a 5.9%, 7.3%, 9.3% and 10.2% PCU growth for TP1 (Table 5.5), TP2 (Table 5.6), TP3 (Table 5.7) and TP4 (Table 5.8) respectively. This is driven by passenger traffic on the Asset (CJV /Buses), as well as MAVs.

5.11 Considering only CJVs, their volume in FY26A is approximately ~10-12% above the FY25 AADT across all the four plazas. As previously discussed in Chapters 2 and 3, commercial traffic on the Asset is driven by the proximity to the urban centres of Madurai,

Thirumangalam, Tirunelveli and Kovilpatti (which are expected to continue driving consumption demand) and the tourist hub of Kanyakumari.

5.12 In terms of MAVs, the FY26A volumes are above the FY25 AADT by approximately 6%, 9%, 8% and 22% for TP1, TP2, TP3 and TP4 respectively. TP1 Kappalur is the nearest to the electronic and manufacturing hub of Madurai; TP2 is located close to India's first textile park in Virudhunagar; while trips at TP3 and TP4 are generated to/from the V.O.C Port in Tuticorin. MAV growth at TP3 (8%) is expected to be driven by the solar power plant in Gangakodian, to be constructed near Salaipudhur toll plaza[17]. These underlying economic factors have driven the growth of commercial vehicles on the Asset. Traffic on TP4 witnessed high growth on account of increased construction activity around Kanyakumari.

Estimation of background elasticities

Overview

5.13 For brownfield Asset, where sufficient historical traffic evolution is available, it is common practice to use regression model analysis to determine the relationship, expressed as elasticity, between traffic growth and key socioeconomic drivers. This relationship is then applied to assumptions of future socio-economic evolution to estimate future traffic growth.

5.14 As for the Asset under consideration, a consistent historical trend was not available. Therefore, we undertook a benchmark in order to estimate our forecast elasticities, Sources used included our understanding of the Asset, the elasticities used during the bid for TOT3 package by the client and the subsequent lender study that was undertaken by the Client. We have also undertaken a regional benchmarking against Asset having similar traffic profiles, which give us reasonable confidence the relationships proposed.

5.15 In terms of selection of growth drivers for vehicle types, in general we have assumed state GSDP as the key driving factor for the passenger traffic given this traffic is generally driven by the local economies of the cities and state containing the Asset. The heavier commercial vehicles generally ply long-distance, and the underlying growth is governed by the general economies of several states or nation as whole.

5.16 Given the nascent stage of India's logistics sector, characterized by a highly fragmented trucking industry (95% of operators owning fewer than five trucks) and low car ownership rates (30-35 per 1000 people), the forecast elasticities are projected to remain constant throughout the concession period. This assumption is grounded in historical trends and a long-term perspective on regional and national growth, suggesting market maturity is still several years away.

5.17 Table 5.9 presents the growth drivers identified to model the forecast background traffic growth rates.

5.18 Further to developing estimates for FY25 AADT, the Asset has operational history between FY22 and FY25, proving us three years of traffic growth on the Asset. The table below summarises the volume growth across each of the vehicle categories. For this comparison we have normalised the FY22 AADT for COVID19 by adopting seasonally corrected H2FY22 as the FY22 normalised (FY22N).

Table 5.10: Passenger and Commercial growth with normalised FY22 – MK TP1

	FY22N	FY24	FY25	FY26A	FY22N-26 CAGR
CJV	17,720	19,245	20,236	22,571	6.2%

Source: Steer Analysis; Note; Passenger includes CJV and Bus traffic whereas Commercial includes 2A/3A/MAV traffic

5.19 The growth rates at a PCU level between FY22N and FY26A has been 4.3%, 6.7%, 7.6% and 6.0% at TP1, TP2, TP3 and TP4 respectively.

5.20 The sections below detail out the reasoning for selection of respective growth driver(s) for each vehicle category. We have looked at the last 3-4 years historical growth on the Asset across each vehicle category based on which we have arrived at the growth assumption of the Asset.

5.21 In recent historical traffic performance across national highway corridors, a notable trend has emerged: there is a discernible shift in axle preference towards 2As and MAVs, resulting in a dampening effect on the growth of 3As. This trend is mirrored in the Assets FY23 and FY24 performance as well, which has been discussed in detail in the subsequent sections. Because of these evolving axle preferences, it has been assumed that the relationship between 3As and GDP will be relatively muted, whereas 2As and MAVs are expected to grow more closely in line with the country's GDP.

Table 5.14: Elasticity recommendations for the Asset

Vehicle Category	Proposed	Growth Driver	Comments
CJV	TP1, 2 and 3: 1.1 TP4: 1.0	GSDP Tamil Nadu	Primarily inter-urban/local movements between Madurai, Tirunelveli, Virudhunagar, Sivakasi, Nagercoil/KK. Since Madurai has higher urban density, we grow TP1, 2 and 3 Kappalur at higher elasticity of 1.1 compared to 1.0 at TP4. The elasticity of 1.1 at TP1, 2, and 3 are tapered to 1.0 by FY30.
Mini LCV	TP1-4: 0.7	GSDP Tamil Nadu	Primarily inter-urban/local movements between Madurai, Tirunelveli, Virudhunagar, Sivakasi, Nagercoil/KK. Due to an increasing proportion of MLCVs being observed since historical TVCs, an elasticity of 0.7 has been considered.
Buses	TP1-4: 0.4	GSDP Tamil Nadu	Mix of public and private inter-city buses, with a higher share of public buses at TP1 Kappalur. Tamil Nadu has a high volume of mofussil and intercity buses serving public transport demand. As the cities and towns grow and become more urbanised, the buses are also expected to respond to the increasing demand however at a 0.4 relationship to GSDP. This is higher than low bus-volume regions in other parts of the country.
LCV	TP1-4: 0.5	GSDP Tamil Nadu	LCVs and 2As are the major goods vehicle types and are expected to have the highest growth amongst goods vehicle types. As discussed in Chapter 3, the trip lengths of LCV and 2A category (more than 50%) are predominantly short distance, confirming the understanding that the movements cater to regional demand. Considering the above observations, and our experience across other toll roads in the region, we believe that elasticities of 0.5 with respect to state GSDP are considered reasonable.
2A	TP1-4: 0.5	GSDP Tamil Nadu	

Vehicle Category	Proposed	Growth Driver	Comments
3A	TP1-4: 0.3	GSDP Tamil Nadu	3As and MAVs cater to both regional and long-distance movement of a wide range of consumption-based commodities. Most of the traffic is within 1000km and more than 85% of trips are within the State. Given TN is an industrialised state, and the region is particularly more developed and has consumption-driven traffic, we have considered elasticities of 0.3 for 3As at all toll plazas, 0.7 for MAVs at TP1 and 0.6 for MAVs at TP 2, 3 and 4
MAV	TP1: 0.7 TP2, 3 and 4: 0.6	GSDP Tamil Nadu

6 Forecast: Network overlays and forecasts

Introduction

6.1 Following the discussion on our forecast of background growth rates in the previous chapter, this chapter first covers the forecasting assumptions around base year AADT and potential network impacts on traffic growth on the Asset. Thereafter, we present our assumptions around toll segmentation, trip factors and evolution of toll rates for the forecast period which are used to forecast revenues as derived from forecast traffic. In the final section, this chapter summarises traffic growth rates for the forecast years.

Analysis of potential network/developmental impacts

6.2 This section details the impacts which we believe would affect traffic on the Asset during the concession period. As discussed in previous Chapters, to assess the impacts on the Asset, whether positive or negative, we have studied developments (alternate roads, feeder roads and regulatory) in the surrounding road network.

6 laning LOS improvement

6.3 As per the concession agreement as soon as the Asset hits 40,000 PCUs the Asset is eligible for capacity augmentation. The PCU level need to be maintained above the 40,000 levels for 3 consecutive years and 2 years will be earmarked for DPR preparation. After that a three-year period is factored in for construction, during which the Year 1 of construction toll rates will be maintained at 75% and will remain flat at 75%. After the construction is over the toll rates will be calculated as normal, as they should have been in that year.

6.4 The improvement in Level of Service (LOS) is observed exclusively at Toll Plazas TP1 and TP4. Capacity thresholds at these locations are projected to be exceeded in FY25 and FY39, respectively. Based on the forecast and the methodology outlined above, the LOS improvements are expected to take effect from FY33 for TP1 and FY47 for TP4.

6.5 A comparison of generalised journey costs (GJC) provides how different elements of cost and time affect traffic. This comparison was done for both light and heavy vehicles. Lower GJCs correspond to higher induced traffic. Based on Steer's studies and research in India, we have found that for every 1% reduction in the GJCs, the traffic increases by a factor of 0.3. We then applied the difference of GJCs to the elasticity of 0.3 to get net influence on the traffic.

6.6 The improvement in travel costs or GJC is translated into the impact on share of local + IAOI OD movements. Therefore, the GJC influence is applied on the corresponding shares of local traffic, which were extracted from OD data.

6.7 Table 6.1 and Table 6.2 show the extent of the LOS impact and the expected timelines of the impact on the Asset.

Table 6.1: Impact of 6 laning LOS improvement for TP1 Kappalur

Vizhinjam port traffic

6.8 With the Vizhinjam Port becoming operational, we expect it to positively influence goods movement in the region, especially along major highways. One clear sign of this could be a rise in commercial vehicle traffic at the MK4 toll plaza, as more trucks and freight vehicles use this route. This road connects Kerala and Tamil Nadu, making it an important link for cargo transport. The improved access and connections provided by the port are likely to boost trade and transport needs in the area, which in turn could lead to higher traffic on the plaza.

6.9 Table 6.3 shows the impact of the Vizhinjam port traffic at TP4 Nanguneri

Table 6.3 Impact of Vizhinjam port traffic for TP4 Nanguneri

Vehicle category	FY28	FY29 onwards

Revenue forecasting assumptions

6.10 To forecast the revenues for a particular financial year, the traffic forecast for each vehicle type is converted into tickets sold, which is then multiplied with the corresponding toll rate, which grows over the years as defined in the Concession Agreement. While “trip factors” provide the conversion factor to the former, i.e. traffic (trips) to tickets sold, “toll segmentation” provides the latter i.e. the breakup of trips paying each ticket type. This section discusses assumptions related to trip factors, toll segmentation and toll rates for the forecast period.

Trip factors

6.11 Trip factors are used to calculate the revenue for the trips made on passes such as return, local personal, monthly passes. The trip factors assumed are based on the latest FY25 data available and listed in the table below:

Table 6.4: Trip factors for the forecast years for TP1 Kappalur

Vehicle category	CJV/ Mini LCV	LCV	Bus	2A	3A	MAV	OSV
Single	1	1	1	1	1	1	1

Toll segmentation

6.12 The Ministry of Road Transport & Highways has finalized a compensation formula for existing toll concessionaires to offset revenue loss from the Annual Pass scheme for non-commercial vehicles.[18]

6.13 Across multiple assets, the share of annual pass trips has been rising on a monthly basis since August 5. A corresponding decline in other ticket categories including Single and Return journeys has been observed.

6.14 CJV Segmentation for FY26 has been developed using the pre annual pass segmentation till 14th August 2025, and post-annual pass segmentation from 15th August 2025 till 28th February 2026. The share of annual pass trips in March 2026 has been assumed to be the same as the share of annual pass trips in the last 10 days of February 2026.

6.15 The segmentation for CJVs in FY27 has been assumed to be the same as the estimated March 2026 segmentation as trends suggest that the share of annual pass trips have stabilised. In July 2025, the Madras High Court ruled that TNSTC buses on the Madurai–Kanyakumari route must pay toll dues and penalties. This led to a shift in how buses are segmented on the asset. Since the judgment came mid-FY26, segmentation for FY26 has been adjusted using actual data from April to February. The segmentation for March 2026 was assumed to be the same as the average of August 2025 to February 2026. From FY27 onwards, the average segmentation from August 2025 to February 2026 is considered as the stable baseline across all toll plazas.

6.16 For other vehicle categories we have analysed the historical TMS data split by ticket categories, to understand trends, as highlighted in Chapter 3. For the traffic and revenue forecast of other vehicle categories, FY26YTD (Apr- Feb) as discussed in the earlier sections, can be considered a normal period. Therefore, we believe the FY26YTD segmentation is representative of the travel patterns on the Asset and the same has been assumed for forecast years as well. This is presented below.

6.17 The table below provides the toll segmentation assumed for the period of forecast.

Table 6.8: Segmentation for forecast years, TP1 Kappalur

Ticket type	CJV FY26	CJV FY27	Mini LCV	Bus FY26	Bus FY27	LCV	2A	3A	MAV

Toll evolution

6.19 Based on the concession agreement and the gazetted toll notification, we understand that base toll rates increase every year (revision month is April) based on WPI-linked inflation. These are rounded up to the nearest five to estimate the final toll rate charged to users.

6.20 We have used actual toll rates from the FY26 toll notification and FY27 WPI to validate the modelling of future toll evolution. Increase in WPI was calculated based on the Client's WPI forecasts, as shown in the table below. These forecasts provided by the Client expect the Indian WPI to grow at an average of 4.2% between FY25-FY51. The WPI forecasts available from other independent forecasting agencies may vary from this assumption and could be lower or higher than that provided by the client.

Table 6.13: WPI growth forecast assumptions

Financial year	WPI growth (%)
FY26	2.57%
FY27	0.96%
FY28	5.0%
FY29	5.1%
FY30	4.9%
FY31	4.4%
FY32 onwards	4.1%

Source: Client inputs used for WPI FY28 onwards.

Revenue reconciliation

6.21 As part of validating the data provided by the Client, as well as our assumptions around toll calculations, we have reconciled the actual reported revenue on a monthly level for the Asset. To reconcile we have used the FY26YTD segmentation, FY26YTD AADT and compared it with the reported revenue for the year. The exercise was undertaken at an annual level.

6.22 The comparison, as shown in Table 6.14 below, depicts the modelled revenue vs the reported revenue difference, and the difference lies within 1%, this gives us the confidence in the assumptions around segmentation and trip factors for future forecast purposes.

Table 6.14: FY26YTD Revenue reconciliation summary (INR Lakhs)

Asset	Modelled	Actual	Difference (%)
	FY26YTD	FY26YTD	
TP1: Kappalur	19.3	19.5	0.9%
TP2: Etturvattam	12.7	12.8	1.0%
TP3: Salaipudhur	13.2	13.4	1.0%
TP4: Nanguneri	11.2	11.3	0.3%

Source: Steer comparison between modelled and reported revenue, FY26YTD (Apr'25 to Jan'26)

Traffic and Revenue forecasts

6.23 Based on the traffic and revenue-related forecast assumptions discussed above, we have modelled the traffic and revenue forecasts for the forecast period for the Asset. The table below presents the AADT/PCU and revenue forecast growth rates and CAGRs on this Asset. Further, Appendix B (Detailed forecasts) presents the AADT and revenues for the forecast period.

Table 6.15: Traffic forecast (With Impacts) for TP1 Kappalur

Vehicle Type	FY26	FY28	FY33	FY38	FY43	FY51
CJV	19,956	22,599	31,186	41,915	55,214	83,296

6.24 As presented in the tables above, traffic CAGRs (PCUs) for the traffic forecast (with impacts) on the Asset over the concession period is ranging between 4-5% and corresponding revenue CAGR is around 9-10% over all the Asset.

6.25 This growth is majorly driven by:

- CJVs, as discussed in the historical section, this Asset has a dominant share of CJVs because the Asset lie on the urban corridor. It is expected to grow strongly with a presence of the well-established road network with stabilised travel patterns and the growth of the Buses and CJVs will be driven by the inter-urban relationships, and the presence of tourism hotspots present in the vicinity of the Asset.
- Goods vehicle, as per the forecasts, is interdependent on the growth of regional economy, which is based on the presence of Cement Industries, wind power farms, growth of the port city of Tuticorin, industrial estates (SIDCO) and the movement of Fast-Moving Consumer Goods (FMCG) and groceries on the Madurai-Kanyakumari corridor.

6.26 The peak in forecast PCUs for TP1 Kappalur in FY33 and TP4 Nanguneri in FY46 is due to the impact of 6 laning LOS improvement.

Target revenues and modification of concession period

6.27 As per the concession agreement, the target revenue for individual toll plazas should be as shown in the table below for the first calculation of target revenue and the second calculation of target revenue in March 2030 and March 2040 respectively. The traffic sampling will be undertaken for a continuous period of 7 days during anytime within 15 days prior to the date on the specified year, previous year and following year. The average thereof will be deemed as 'actual revenue.'

6.28 If the target revenue falls short or exceeds by 20% and 30% for extensions 1 and 2 respectively, the concession period shall be deemed to be modified using the laid-out conditions in the concession agreement. The table below presents the summary of the analysis.

Table 6.31: Target Revenues for Extension 1

Asset	Target Month	Target Revenue	Estimated Revenue			Average Revenue	Variation (%)
		Cr	2029	2030	2031		
TP1	Mar-30	12.2	15.3	12.7	13.27	13.8	13.0%
TP2	Mar-30	9.9	8.9	9.8	10.60	9.8	(1.4%)
TP3	Mar-30	9.8	9.3	10.3	11.17	10.3	4.2%
TP4	Mar-30	12.0	9.0	9.9	10.85	9.9	(17.2%)

Source: Steer analysis

Table 6.32: Target Revenues for Extension 2

Asset	Target Month	Target Revenue	Estimated Revenue			Average Revenue	Variation (%)
		Cr	2039	2040	2041		
TP1	Mar-40	22.8	37.5	41.0	44.5	41.0	79.9%
TP2	Mar-40	22.7	21.1	23.0	25.1	23.1	1.6%
TP3	Mar-40	22.7	22.1	24.3	26.4	24.3	6.8%
TP4	Mar-40	28.2	21.9	24.0	26.0	24.0	(15.0%)

Source: Steer analysis

6.29 We have used the average AADT forecast for target year, previous year and following year as a proxy for 'actual traffic.' We have forecast seasonality of March month to adjust for seasonal trends and arrive at March traffic from AADT traffic, which is then segmented according to the forecast toll segmentation and trip factors and multiplied with respective estimated toll rates to get to a monthly revenue collection.

6.30 As seen from the table above, the target revenue forecast for the TP1 and the estimated target revenue, difference lies above the threshold value of 30% at second target date. As per the concession agreement, for every 1% excess target revenue, the concession period shall be decreased by 1.5%, with a capping at 20%. Therefore, for the excess traffic on the toll plazas, the concession period, originally 30 years, is expected to be decreased by 6 years from FY51, potentially reducing the last date of concession to FY45 for TP1. For TP2-4 there is no change in concession period expected as the difference in estimated and target revenues lie within the threshold range as stipulated by the concession agreement.

Upside and Downside cases

Upside and Downside scenario assumptions

6.31 We have developed our base case scenario considering a balanced view on the risks associated with input assumptions around GDP growth and traffic growth elasticities. There is always a risk that the outturn values of these inputs will vary as compared to the assumptions taken due to exogenous impacts, e.g. GDP growth could be influenced both positively and negatively by the impact of monsoons, export-import balances, political changes etc.

6.32 Similarly, traffic growth elasticities could be influenced by increased efficiencies achieved by technology, large shifts in commodity prices globally, changes in local manufacturing practices. However, at this stage we consider that the base case represents a central case scenario given the risks of variation of input assumptions.

6.33 To account for the possible variations in the growth drivers, we are also presenting an Upside (optimistic) and a Downside (pessimistic) scenario. These scenarios are defined by the following variations from the base assumptions, as described in Table 6.33:

Table 6.33: Summary of Macro-economic Assumptions for upside and downside cases

Input	Upside	Downside
Macro Assumptions		
GDP/GSDP	+1% every year	-1% every year
WPI	+1% every year	-1% every year
Elasticities	+ 10%	- 10%

Source: Steer analysis

6.34 Further, network developments are highly dependent on governmental directions, policies, legal and financial measure which might result in early or delayed completion of developments. Therefore, we have included an Upside (optimistic) and a Downside (pessimistic) case. However, at this stage, we consider that the base case represents a central case scenario given the risks of variation of input assumptions

Impacts-Upside Case

6.35 The upside case impacts included in forecasts are summarised in below.

Table 6.34: Summary of impacts on the Assets

Development	Year of impact	Change in impact w.r.t base case	Magnitude of impact

6.37 Based on the above assumptions for upside and downside scenarios, the following table summarizes the upside potential and downside risks associated with the PCU and the revenue for Kappalur, Etthurvatham, Salaipudhur and Nanguneri toll plazas at the end of the concession i.e. FY51.

Table 6.36: Upside potential and Downside PCU scenario – FY51

Toll Plaza	Upside Potential	Downside Risk
Kappalur	39.3%	(25.1%)
Etthurvatham	37.2%	(24.0%)
Salaipudhur	37.5%	(24.1%)
Nanguneri	39.4%	(25.2%)

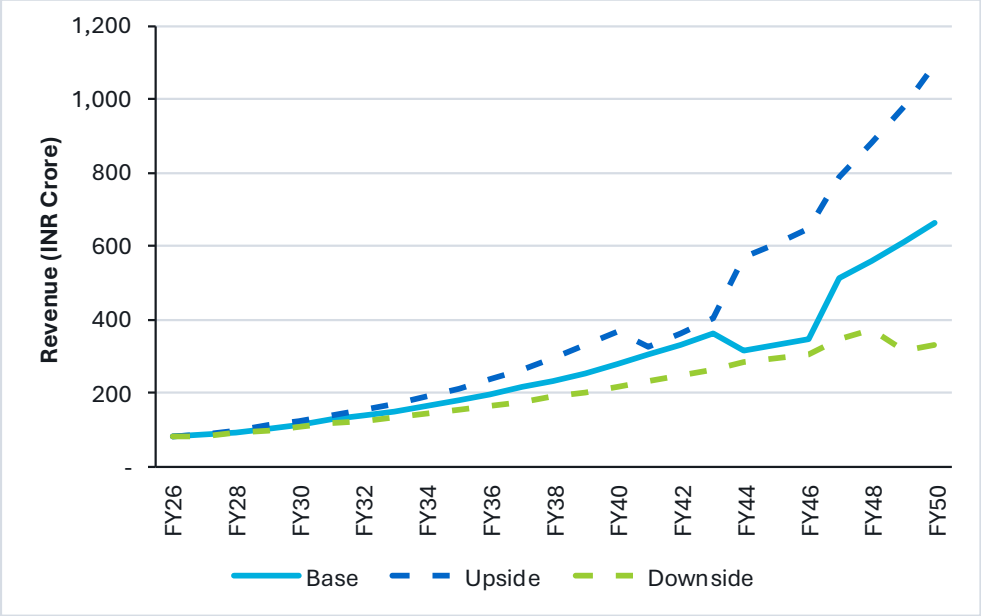
Figure 6.9: Long-term revenue forecasts for TP4 including upside and downside scenarios



Source: Steer Analysis

6.38 Revenue projections exhibit variability in both the upside and downside cases, driven by fluctuations in macro-economic factors such as WPI, GDP/GSDP, elasticities and the network impacts.

Summary outlook

6.39 Passenger traffic on the Asset is largely inter-urban driven by business, tourism and leisure travel between the cities of Madurai, Tirunelveli, Nagercoil, Thiruvananthapuram, Kanyakumari and towns in the southern Tamil Nadu (TN) region.

6.40 Goods traffic serve the regional industries of wind power and cement, apart from consumption-based movements feeding demand from urban areas. While wind farms are concentrated in the Tirunelveli and Kanyakumari regions, two large operational cement plants are located on the Asset between Virudhunagar and Tirunelveli.

6.41 The Chennai-Kanykumari section of the East Coast Industrial Corridor is planned with nodes in Madurai and Tuticorin and expected to directly support growth in the region and traffic on the Asset.

6.42 Located in the urbanised and industrialised state of TN, the four-lane Asset highway is part of a well-established road network with stable travel patterns and potential for steady growth.

6.43 Consequent to the expected steady growth on the Asset, TP1 Kappalur and TP4 Nanguneri closer to the cities of Madurai and Tirunelveli are expected to cross capacity for four-lane roads during the concession period.

6.44 With six-lane upgrades for these sections by FY33 and FY48 respectively, the Asset is expected to offer additional capacity and therefore see an improvement in level of service, leading to a considerable additional travel demand.

6.45 Upgrade of the feeder section between Nagercoil/Kanyakumari and Thiruvananthapuram of the NH 66 highway is expected to again lead to improved levels of service for inter-

urban travel and induce more car trips. Upgrade and tolling of the alternate NH 744 highway may lead to a small negative diversion impact for heavy vehicles currently using the Asset.

6.46 Our findings and estimates in this report are based on multiple factors; our understanding from the site visit, analysis of primary data available both from surveys and the toll management system (both historical and current), macroeconomic assumptions prescribed by Client, feedback from Client meetings and secondary publicly available data. However, we perceive that there can be risks associated with assumptions and the forecasts which are covered in Upside and Downside Forecast section of the report above.

6.47 Overall, we see a positive outlook for the Asset given the well-established road network, which is driven by inter-urban business, leisure and tourism travel in cars and buses, along with the industrial development of cement and electronic items which will drive the growth of goods vehicle on the Asset.

Appendices

B Top 10 OD Pairs

Further to the OD analysis presented in Chapter 3 this appendix presents the top 10 OD pairs at each toll plaza. Please see this data for both CJVs and MAVs and OSVs combined below.

TP1 Kappalur

Table A.1: CJV, Bus and Mini Bus top 10 OD pair shares at TP1 Kappalur

	OD Pair	Share
1.	Madurai-Tirumangalam	9.6%
2.	Madurai-Tirunelveli	7.0%
3.	Madurai-Tenkasi	6.6%
4.	Madurai-Virudunagar	4.0%
5.	Madurai-Sivakasi	4.0%
6.	Madurai-Kanyakumari	3.1%
7.	Madurai-Rajapalayam	2.6%
8.	Madurai-Kappalur	2.4%
9.	Madurai-Manapad	1.9%
10.	Madurai-Nagercoil	1.8%

C Detailed forecasts

Further to the summary of forecasts presented in Chapter 6, this appendix presents detailed forecasts.

Traffic forecasts

This section presents the detailed traffic forecasts for the forecast period until FY51, year of expected close of the concession. The following two tables show the AADT and traffic growth, respectively.

Table C.1: Traffic Forecast (with impacts) over horizon years at TP1 Kappalur

Year	CJV	Mini LCV	Buses	LCV	2A	3A	MAV	AADT	PCUs
FY27	21,098	2,742	3,231	1,842	1,405	589	1,085	31,994	45,978
FY28	22,599	2,874	3,320	1,905	1,453	601	1,137	33,890	48,328
FY29	24,121	3,006	3,407	1,968	1,501	612	1,189	35,808	50,699
FY30	25,656	3,140	3,494	2,031	1,549	624	1,242	37,739	53,080

Disclaimer

This report has been produced for the sole benefit of Cube Highways Pvt. Ltd ("the Client"). The report may only be relied upon by Approved Addressees in accordance with the terms of our engagement letter. This Report (the "Report") is confidential and disclosed only for information purposes, and it may not be relied upon by any party other than the Client or a Party to a Reliance Letter, and Steer: a) makes no warranty, expressed or implied, with respect to the use of any information or methods disclosed in this Report; and b) assumes no liability with respect to the use of any information or methods disclosed in this document. Any such party by its acceptance or use of this Report releases Steer from any liability for direct, indirect, consequential, or special loss or damage whether arising in contract, warranty, express or implied, tort or otherwise.

The Report is based on standard professional efforts, and information available to us at the time the review took place and is subject to time and budget constraints of the Report's scope of work. This Report, information and statements contained herein, are all based on third party data provided to us, or sourced by us, and Steer has not sought to establish the reliability of the data, except as specifically stated in the Report. Steer bears no responsibility for the results of any actions taken on the basis of third-party data. Certain forward-looking statements in the Report are estimates based on interpretations or assessments of information available at the time of writing. The Report is thus to be viewed as an assessment that is time-relevant, specifically referring to conditions at the time of the review. Steer undertakes no obligation to update the Report for any reason. While the estimates contained in the Report are not precise forecasts, they do represent, in our view a reasonable expectation of the future, based on information we have been provided with or sourced. However, the estimates necessarily rely on numerous assumptions and judgements, and circumstances may occur over the timeframe of the project that go counter to these assumptions and judgements and that affect the project's realized revenues. Actual events may differ from those assumed, and events are subject to change. Therefore, Steer makes or provides no warranty, whether implied or otherwise, as to the accuracy of forward-looking information presented. Further, it is important to note that forecasts presented represent long term growth profiles; the results for individual time periods may vary from forecasted values.

Traffic Consultant developed the relationships in the models used to produce the forecasts for the projects based on data available through February 2026. This report does not consider variations in traffic performance due to changing macro and force majeure events such (but not limited to) as global wars, economic uncertainty (high inflation, global recession), and changes in the regulatory environment. The situation remains dynamic and is subject to significant change in the short and medium term. In this challenging context, Traffic Consultant has produced base forecasts with a view on a possible scenario for the traffic forecasts. However, it is important to note that this is only one view, and there continues to remain uncertainty as to the short-term, intermediate or prolonged effects of and responses to such macro-economic/force majeure events. As a result, no assurance can be provided by Traffic Consultant that the scenarios and assumptions Traffic Consultant has identified will prove to be accurate. Given the uncertainty inherent in this scenario, Traffic Consultant advises that all readers of the Report consider the Report in the context of their own assessment of the impact of such events.

TO THE FULLEST EXTENT PERMITTED BY APPLICABLE LAW, THE LIABILITY OF THE TRAFFIC CONSULTANT FOR ANY LOSS, DAMAGE, COST OR EXPENSE SUFFERED OR INCURRED BY ALL PERSONS OR ENTITIES AND FOR ALL CLAIMS RESPECTING ITS WORK PERFORMED IN CONNECTION WITH THE ISSUE OR THE REPORTS IS HEREBY LIMITED IN THE AGGREGATE TO THE AMOUNT OF FEES ACTUALLY PAID BY THE CLIENT TO THE TRAFFIC CONSULTANT IN RESPECT OF THE REPORTS AND CONNECTED SERVICES.

Glossary Items

Acronym	Meaning
2A/ Truck	2 Axle/ Truck
3A	3 Axle
AADT	Annual Average Daily Traffic
BOT	Build Operate Transfer
CAGR	Compound Annual Growth Rate
CJV	Cars / Jeeps / Vans
COD	Commercial Operations Date
DPR	Detailed Project Report
ETC	Electronic Toll Collection, also referred to as FASTag
FY	Financial Year
GDP	Gross Domestic Product
GSDP	Gross State Domestic Product
HAM	Hybrid Annuity Model
HCM/ EME	Heavy Commercial Vehicles/ Earth Moving Machinery
IE reports	Independent Engineers' reports
INR	Indian Rupees
km	Kilometer
LCV/ LGV	Light Commercial Vehicles/ Light Goods Vehicle
LMV	Light motor vehicles
MADT	Monthly average daily traffic
MAV	Multi Axle Vehicle
NH	National Highway
NHAI	National Highways Authority of India
NSDP	National State Domestic Production
OD	Origin Destination
OSV	Oversized vehicles
PCU	Passenger Car Unit; it is a measure of standard vehicle unit to convert all vehicle classes to a single unit by using PCU factors to compute total traffic on an Asset.
Q1	Quarter 1 of financial year, from April to June
Q2	Quarter 2 of financial year, from July to September
Q3	Quarter 3 of financial year, from October to December
Q4	Quarter 4 of financial year, from January to March

Acronym	Meaning
RNP	Registered Number Plate
SCF	Seasonality Correction Factor
SH	State Highway
T&R	Traffic and Revenue
TMS	Traffic Management System
TVC	Traffic Volume Count
WADT	Weekly average daily traffic
YTD	Year to Date

1 Introduction

The assignment

1.1 The Cube Highways Fund Advisors Private Limited (the "Client") has commissioned Steer Davies Gleave India Private Limited ("Steer") for a traffic due diligence to be carried out on Narketpally-Addanki-Medarametla Expressway Ltd. (or 'NAMEL', hereafter called 'Asset'). This report forms part of the annual fair market valuation (FMV) undertaken as part of the "Transit 11 project". This report presents an update of the traffic and revenue forecasts based on actual traffic data available up to February 2026 and latest macro-economic assumptions.

1.2 The Asset consists of a single stretch of toll road with three toll plazas. For the purpose of this report, we hereafter call the toll plazas present on the Asset as TP1, TP2 and TP3 respectively as:

- TP1 – Madgulapally
- TP2 – Thummalacheruvu
- TP3 – Elchuru

1.3 Our scope of work for the traffic and revenue forecasting process includes:

Table 1.1: Scope of work and sources of data

Scope of work	Data source
• Review of historical Traffic Management System (TMS) data, Vendor reports and documents	• Provided by client for the period between Oct'20 and Mar '26, with FY26 base AADT and forecasts considering data up to Feb'26
• Historical analysis and forecasts for baseline growth, including; — Background growth, and — Seasonality trends	• Historical data provided by the Client and benchmarking using plazas in the vicinity or of similar nature of the Asset has been done wherever sufficient data was unavailable.
• Validation of revenue reported in FY26YTD	• TMS data provided by Client • Revenue reconciliation using toll plaza traffic and ticket type data to calculate revenue and reconciling it with toll plaza reported revenue
• Origin Destination (OD) analysis to understand growth drivers: — Zonal influence and Top OD pairs — Commodity distribution — Trip length distribution	• Origin Destination (OD) surveys undertaken by Steer in 2026. The latest surveys were undertaken in 2026 on TP1 and TP3. Additional surveys were conducted in 2025 at TP2 Thummalacheruvu only.

Scope of work	Data source
• Analysis of upcoming network improvements and other developments, that may have future impacts on traffic	• Secondary research and our in-house experience of working in the vicinity of the Asset. Impact analysis conducted by Steer based on Generalised Journey Cost spreadsheet-based analysis
• Historical revenue analysis and forecasts for revenue estimation, including — Toll segmentation and trip factors, — Overloading shares	• Calculated from historical data provided by Client
• Final traffic growth forecasts including baseline growth rates and potential future impacts	• Elasticity based base growth and potential impacts from secondary research and Steer's in-house experience of working in the vicinity of the Asset
• Toll revenue estimation for the entire concession, including toll evolution	• Toll evolution based on latest toll notification published by the Government of Telangana – Roads and Buildings Department and latest actual Wholesale Price Index (WPI) trends as shared by the Client. • Assumptions of WPI forecasts and future tolling length changes provided by Client • Revenues estimated as a product of traffic forecasts and toll evolution

Our approach

1.4 Our approach follows well-established practices for forecasting ongoing traffic growth on an existing/brownfield Asset. The analysis focused on two sets of issues, namely:

1. Understanding the traffic that is currently using the Asset; and
2. Identifying how and why that traffic is likely to change in the future.

1.5 To understand the current traffic on the Asset, we have analysed traffic data from multiple independent sources:

- Client-provided secondary data, including:
  - TMS data starting March 2014 to February 2026. The historical traffic and revenue presented in Chapter 3 considers information up to March 2026. This is to present the latest available traffic and revenue information at the time of submission of report. However, the FY26 base traffic and forecasts presented Chapter 5 onwards use data available up to February 2026, with March 2026 estimated.
  - Concession agreement and toll notifications for FY25 and FY26
  - Previous studies related to traffic and revenue
  - Steer-commissioned OD surveys on TP1 and TP3 on 13th February 2026 and 18th February 2026 respectively. Previously surveys were conducted on TP2 on 22nd January 2025 on the Asset.
  - Steer-commissioned three-day TVC survey between 14th – 19th February 2026 on TP1 and TP3 . Previously conducted surveys between 23rd January and 25th January 2025 on TP2.

- We undertook revenue reconciliation for FY26YTD, by building up revenue from the traffic reported by the toll plaza and subsequently matched it to the reported revenue for FY26YTD using the prevailing toll rates and reported segmentation/toll-frequencies for FY26YTD, this is a key part of our analysis to validate the segmentation/toll-frequency assumptions and the Annual Average Daily Traffic (AADT) reported for each of the toll plaza.

1.6 The estimation of future traffic demand on the Asset was undertaken through:

- Estimating FY26 base year position by applying seasonality correction factors (SCFs) on the 11 months of actual traffic data available (April to February).
- Secondary research to understand plans for new developments and progress of ongoing developments on the Asset.
- Steer independent primary surveys and site visits to validate our network and contextual understanding.
- Developing a bespoke growth model for each Asset/plaza/toll class to forecast year-on-year traffic growth from FY26 to the end of concession period.
- Investigating the elasticity of historical traffic growth compared to state (GSDP) and national (GDP) growth. Where historical data is limited, we have benchmarked the Asset against our Steer knowledge base (e.g., similar Asset types in the same state or on the same corridor), to derive appropriate elasticities.
- Applying our elasticities to independent GDP forecasts as provided by Client.
- Identifying and analysing the potential impacts of any relevant changes to the competitive position of each Asset – these include impacts of changes to road network including expressways and opening of competitive modes of travel.
- Identifying and analysing any other potential impacts to traffic and revenue on each Asset – these include axle load norms, axle shift for heavy goods, FASTag implementation.
- Considering changes in trends of segmentation over time and making suggestions for changes in exemptions in the future.
- Preparing traffic and revenue forecast for the Asset for the complete length of concession. The analysis here includes the specific impacts of network, or other exogenous factors specific to the Asset. We have developed a set of forecasting assumptions for three scenarios: a base case and upside and downside scenarios.

Contents of this Report

1.7 The report has been divided into six chapters, including Chapter 1 providing an introduction:

- Chapter 1 introduces the methodology and approach to undertake the traffic and revenue due diligence;
- Chapter 2 describes the key characteristics of the Asset and its surrounding road network, primarily based on site visits;
- Chapter 3 summarises the current and historical traffic on the Asset, including results from the TMS, TVC and OD analysis;
- Chapter 4 presents the socio-economic context of the corridor and region/state containing the Asset, along with our approach and results on estimating background traffic demand growth;

- Chapter 5 presents our baseline year forecast and summarises our results on estimating background traffic demand growth; and
- Chapter 6 summarises our assessment of network impacts and presents concession traffic and revenue forecasts for the Asset along with the assumptions for upside and downside cases

2 The Asset

Introduction

2.1 This chapter provides a description of the Asset, based on both primary data (from site visits), and our understanding of the region and network surrounding the Asset. We cover the strategic network context, followed by key economic activities and network developments around the Asset.

Strategic network

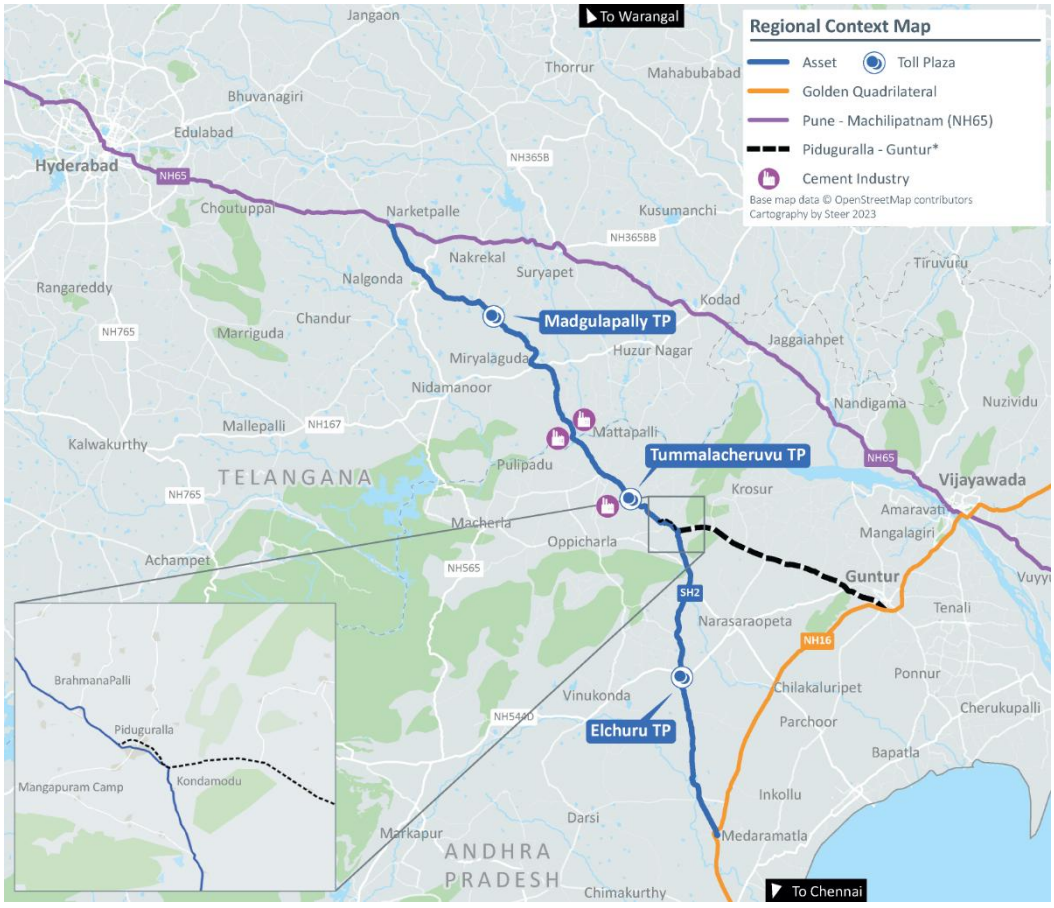
2.2 The Asset is an interstate route connecting southeastern Telangana with northern Andhra Pradesh. It connects the towns of Narketpally (Nalagonda district, Telangana) and Medarametla (Bapatla district, Andhra Pradesh). Figure 2.1 below shows the regional road network in which the Asset is located.

Figure 2.1: Asset location in India context

Source: Steer cartography using OpenStreetMap data

2.3 The Asset is a 212.5-km four-lane toll road which forms a part of the state highway SH-2 (New SH36 in Andhra Pradesh (AP)). There are three toll plazas, namely, Madgulapally (also spelled as "Madugulapally") (TP1), Tummalacheruvu (also spelled as "Thummalacheruvu") (TP2), and Elchuru (TP3) in the increasing order of their distance from Hyderabad. Figure 2.2 below provides a closer view of the Asset in the context of its immediate surroundings.

Figure 2.2: Asset context



Source: Steer cartography

2.4 The Asset caters to three different types of movements, by virtue of its strategic location on various corridors:

Long-distance

- NH44-SH2-NH16 long-distance corridor connecting North India (including Delhi, Haryana, Punjab, and Uttarakhand) with Chennai
- NH65-SH2-NH16 long-distance corridor connecting Mumbai with Chennai
- NH52-SH2-NH16 long distance corridor connecting Gujarat and Rajasthan with Chennai

Medium distance

- SH2-NH16 medium-distance corridor connecting Chennai/Hyderabad, and cement production sites
- SH2: Medium-distance corridor connecting Hyderabad with Vijayawada and Guntur.

Short distance

- SH2: Short-distance trips between Hyderabad and Rest of Telangana/Andhra Pradesh.

Concession and tolling details

2.5 The toll plazas have been operational since April 2014 (FY15), and the Client took over operations in FY19. The concession period runs until FY40. Table 2.2 below summarises key aspects of the concession.

Table 2.1: Summary of concession

	Particulars
State	Andhra Pradesh - Telangana
Highway and lane configuration	SH2 four-lane
Toll plazas	• TP1: Madgulapally (Madugulapally) • TP2: Tummalacheruvu (Thummalacheruvu) • TP3: Elchuru
Length (km) as per concession agreement, applicable	• TP1: 70.61Km • TP2: 63.88Km* • TP3: 69.32Km
Commencement of operations	TP1, TP2 & TP3: April 2014
Implementation of FASTag	TP1: August 2021, TP2 & TP3: October 2021
Operated by Client since	October 2018 (FY19)
Concession period	21 years
Last year of concession	FY40

Source: Concession agreement, FY25 toll notification; *excluding 5.79Km of net bypass length

2.6 Tolls on the Asset are collected for the following vehicle categories with rates as shown in Table 2.2 below. The toll plazas have dedicated ETC/FASTag lanes for electronic tolling.

2.7 Table 2.2 below presents the Single toll rate charged at the toll plazas. Apart from single tickets, the typical NHAI ticket categories like return, monthly, local personal and local commercial passes are also available on the Asset. Tolls are revised every alternate year on this Asset.

Table 2.2: Single toll rates on NAMEPL (INR) – FY26

Type of Vehicle	TP1	TP2	TP3
CJV	77	77	76
LCV/ Minibus	154	153	152
Bus/Truck	309	307	303
3A/MAV	772	767	759

Type of Vehicle	TP1	TP2	TP3
HCM/EME/OSV	772	767	759

Source: Government of Telangana Roads and Buildings Department Revision of User Fee Rate

2.8 Steer conducted a site visit to the Assets to oversee ongoing traffic surveys and gain a comprehensive understanding of the adjacent transportation network. Figure 2.3 below illustrates the Assets' toll plazas as observed during the site visit, accompanied by a visual representation of the Assets' road infrastructure. The pictures displayed clockwise show TP2, TP3, TP1 and the Asset's road infrastructure.

Figure 2.3: Typical cross section of the Asset and toll plaza (Clockwise)

Source: Steer site visit

Economic activities

2.9 The Asset is located between Hyderabad and Vijayawada-Guntur region and Chennai region on the other side. Chennai, Hyderabad, and the Guntur–Vijayawada region are key economic centres in southern India, each with distinct industrial strengths.

2.10 Chennai has strategically cultivated a strong economic profile, moving beyond traditional perceptions to become a prime business destination in India. Its long-term industrial policy has fostered a significant economic powerhouse, particularly in the state of Tamil Nadu. The city benefits from a well-educated workforce, making it a major outsourcing hub for international banks and insurers, and has seen substantial growth in its electronics manufacturing sector. This robust development has also led to a relatively affluent population, making it a key testing ground for fast-moving consumer goods.

Chennai is also a major automobile manufacturing hub and excels in software services, hardware production, financial services, and port-based trade[1]. Guntur and Vijayawada, in Andhra Pradesh, are known for agriculture-driven commerce—especially chili exports—and have strong industrial bases in textiles, cement, and tobacco processing[2]. Hyderabad has emerged as a global centre for IT and pharmaceuticals, housing tech giants like Microsoft and Google, along with major pharma players such as Dr. Reddy's Laboratories and Aurobindo Pharma[3].

2.11 According to the Telangana Socio Economic Outlook 2024[4], the state is ranked 12th in country if terms of population, and 11th in terms of its area. Owing to various initiatives taken by the State government, the state's economy has shown steady growth since inception, which is expected to continue with news around the state and its neighbour (Andhra Pradesh) both anticipating extensive investment in healthcare, port infrastructure, last mile connectivity and private employment.

2.12 Amaravati, the planned capital of Andhra Pradesh, is witnessing renewed development momentum with the launch of a ₹65,000 crore capital city project aimed at transforming the region into a modern administrative and civic hub. The initiative includes the construction of the Legislative Assembly and High Court within 24 months, along with the Secretariat and other infrastructure in phased timelines. This revival, driven by the state government's renewed focus, aims to build a "people's capital" with robust amenities in housing, education, healthcare, and transport[5].

2.13 The Asset is characterised by cement factories situated along its alignment, in proximity to TP2 facilitating movement in both directions; towards Hyderabad, and towards Chennai/Guntur. Since their establishment, the India Cements plant and the Penna Cements plant supply cement for construction projects in the region, with the Asset providing critical access to nearby consumption centres such as Hyderabad, Piduguralla, Nalgonda, Addanki, Guntur as well as the demand generated by Krishnapatnam port in the south[6]. Additionally, in 2024, Shree Cement Limited, a prominent Indian cement manufacturer, commenced operations at its newly established integrated cement plant in Dachepalli village, Guntur district, Andhra Pradesh. This facility, completed six months ahead of its projected timeline with an investment exceeding Rs 2,500 crore, possesses an annual cement production capacity of 3 million tons[7].

2.14 Paddy farming is extensively laid out along the Asset route, predominantly found closer to TP1. The agricultural movement observed on the Asset majorly consists of rice being transported from rice mills on the Asset, from where they're moved to areas in Nalgonda,

Miryalguda, Piduguralla, Guntur, etc. Apart from agriculture-linked traffic, the Asset also observes a significant share of manufacturing movement which includes automobiles from North India destined to Chennai/Krishnapatnam port, e-commerce products, and electronic appliances[8].

Alternate routes

2.15 Further to the previous section on the strategic network context of the Asset, this section provides details on alternate routes that have been considered in our network analysis.

2.16 The main competitor for long-distance traffic on the Asset is the under-construction 1,271 km four-six lane access-controlled Surat- Solapur- Chennai Expressway. The Indian government is rapidly progressing on the Surat-Solapur-Chennai (SCE) expressway project, which will pass through Nasik, Ahmednagar, Solapur, Kalaburgi, Kurnool, Kadappa, and Tirupati. The Surat-Solapur section will be a new greenfield alignment, while the rest will involve upgrading existing two-lane roads to four lanes. The upcoming expressway once operational[9] is expected to reduce the travel time between Surat and Chennai resulting in diversion of some long-distance traffic from the Asset.

2.17 The Hyderabad Regional Ring Road is a 330+ km long planned highway that will be outside the existing Outer Ring Road (ORR) that will connect various towns and growth centres around Hyderabad as a bypass route for through traffic crossing the region on long-distance routes. The RRR will enable long-distance vehicles to access southern regions without entering Hyderabad, saving time and avoiding congestion. It will allow traffic to enter the Asset from the north via the Pragnapur-Chottupal route, whereby traffic on NH44 will get direct access to Narketpalle without experiencing congestion along dense urban networks around Hyderabad. The Hyderabad Regional Ring Road (RRR) is currently under development[10] and is expected to benefit the Asset once completed and operational.

2.18 The existing 217 km segment between Hyderabad and Nandyal (NH167k) is being upgraded to a 4-lane section. This project is broken into three phases, with the middle section being a greenfield upgrade. Once completed, this segment will most likely provide vehicles starting in Hyderabad or north of it with alternative route to Chennai via Kurnool-Kadapa route. The incorporation of this impact has been taken alongside the impact of the HORR, the details of which are provided in Chapter 6 below.

2.19 Under the Bharatmala Pariyojna Project, the National Highways Authority of India (NHAI) is undertaking the development of the 457-kilometer Nagpur – Vijayawada Expressway as an Economic Corridor[11]. This project encompasses the widening of existing alignments and the creation of a new greenfield section connecting Warangal and Vijayawada in the state of Andhra Pradesh.

2.20 The above-mentioned network developments and their impacts have been discussed in detail in Chapter 6 of the report.

3 Traffic description

Introduction

3.1 This chapter outlines the current traffic and revenue trends on the Asset basis TMS traffic data provided by the Client, and analyses of origin-destination (OD) survey data as well as TVC traffic count data as collected by Steer commissioned surveys as part of this study.

3.2 Traffic demand data is generally collected and analysed to understand the volume and vehicle composition of demand currently using the Asset, while OD data is used to obtain a better understanding of travel patterns, trip lengths, trip purposes and areas of influence in the vicinity of the Asset, as also the commodities being moved by goods vehicles. This analysis, combined with our understanding of the Asset (based on our site visits), enables us to identify the key drivers of demand on the Asset.

3.3 Actual toll plaza data is used as the basis from which the current/base year Monthly Average Daily Traffic (MADT) is established. This data is typically provided by the Client and independently analysed and validated by us using Traffic Volume Count (TVC) information.

3.4 The below sections present historical traffic and revenue information up to March 2026. This is to present the latest available traffic and revenue information at the time of submission of report. However, the FY26 base traffic and forecasts presented Chapter 5 onwards use data available up to February 2026, with March 2026 estimated.

PCU factor assumption

3.5 The PCU values have been taken from 'IRC 64:1990- Guidelines for Capacity of Roads in Rural Areas'[12]. For MAVs, based on the discussion with the Client, we have referred to the rigid and trailer splits in the TVC counts for calculating the effective PCU for MAVs. For rigid trailer trucks we have assumed a PCU factor of 3, whereas for trailer trucks we have assumed a PCU factor of 4.5, as defined in IRC 64:1990[12]. The PCU factors used in our analyses are presented in Table 3.1 below.

Table 3.1: PCU Factors

Vehicle Category	PCU Factor
CJV	1.0
Mini LCV	1.0
LCV	1.5
Bus	3.0

[12] IRC 064: Guidelines for Capacity of Roads in Rural Areas

Vehicle Category	PCU Factor
2A	3.0
3A	3.0
MAV*	3.3
OSV	4.5

Source: Steer analysis, * Rigid-Trailer PCU

Historical Trends

3.6 Between FY18-FY26, all three toll plazas on the Asset have observed robust traffic growth. This growth, primarily driven by CJVs, MAVs, and 2As, can be attributed to two key factors: heightened construction activity fuelled by capital expenditure (CAPEX) in Telangana[13] and Andhra Pradesh[14], leading to increased truck traffic; and a rise in passenger traffic across all three plazas due to the Asset's strategic location between developing urban centres such as the Hyderabad and Guntur/Vijayawada regions. The Asset observed decline in traffic volumes in FY21 due to the Impact of the COVID-19 Pandemic. However, recovery of traffic post FY21 was strong and has sustained since then, further adding to the robust growth observed on the Asset over the same period (FY18-26).

3.7 Additionally, we observe flat to marginal decline in LCV and 3A volumes on the Asset over the same period, which can be attributed to shifting axle preferences amongst long-distance commercial transporters - a trend we have consistently observed on multiple Assets across the country, and not unique to this asset

3.8 Table 3.2 and Table 3.3 below show the historical variation in total and tollable traffic volume at the Madgupally toll plaza (TP1).

Table 3.2: Historical evolution in AADT by vehicle class at TP1 Madgulapally

Vehicle Type	FY18	FY19	FY20	FY21	FY22	FY23	FY24	FY25	FY26	CAGR FY18-26

Source: Steer analysis of Client data, FY26 AADT represents the full year actual (April to March) .

3.9 As can be seen in Table 3.2 above, TP1 has witnessed a PCU CAGR of 6.7% from FY18-26. This growth is primarily driven by growth in CJVs, 2As, and MAVs.

3.10 In FY26, CJVs constituted approximately 60% of the total traffic at TP1, followed by 3A+MAVs in total traffic (AADT), which represented approximately 19% of the traffic during the same period. The substantial volume of CJVs is primarily attributed to passenger movement from Guntur to Hyderabad and Dachepalli for purposes including employment, healthcare, and education. As seen in Table 3.2 above, CJVs have grown at a CAGR of 8.8% between FY18-26 indicating the increase of use of the Asset as a means of commute between key hubs such as Guntur, Chennai, Ongole and Hyderabad.

3.11 From FY18 to FY26, MAV and 2A volumes at TP1 grew at CAGR 8.8% and CAGR 11.8% respectively. A significant portion of the commercial traffic on TP1 comprises manufactured goods, including automobile components and electronics, moving between Chennai-Hyderabad and between North India and the industrial hubs of near Chennai.

3.12 MAVs observed at TP1 also include those carrying cement from local cement plants between TP1 and TP2 and are destined for Hyderabad (and beyond). 2-Axle and MAV growth is further aided by a shift in preference from 3A trucks to MAVs and 2As, a trend observed at an Asset as well as national level due to the alternatives providing better economic value in goods transportation.

Table 3.4: Historical evolution in AADT by vehicle class at TP2 Tummalacheru

Vehicle Type	FY18	FY19	FY20	FY21	FY22	FY23	FY24	FY25	FY26	CAGR FY18-26

3.13 TP2 achieved a PCU CAGR of 4.6% between FY18 and FY26, with CJV and 2A being key contributors to overall traffic growth at TP2. Growth in 2A and MAV traffic at TP2 is also due to construction material demand (particularly, cement) in and around Hyderabad, Chennai, and the Guntur/Vijaywada wider region, leading to increased truck traffic, alongside passenger growth directed towards Chennai and Hyderabad.

3.14 In FY20, TP2 observed decline in traffic due to the ban on sand mining near the Krishna River[15], which previously formed a significant portion of the Asset's truck traffic. Since the ban, and stricter enforcement to curb illegal mining and movement of sand between Andhra Pradesh and Telangana, sand as a commodity observed on the Asset has diminished. Several Roads and Transport Authority (RTA) checkpoints are also stationed between TP1 and TP2 to prevent sand transit.

3.15 Despite the impact of the FY20 sand mining ban on commercial traffic growth on the Asset, TP2 continues to observe the highest truck volumes among the three toll plazas on the Asset, primarily due to its proximity to major existing cement manufacturing facilities, including India Cements and Penna Cements, and the development of new cement plants in Hyderabad and near Guntur[16]. The regional industrial profile and continued capacity augmentation through new developments have collectively driven strong growth of

[15] Govt. bans sandmining - The Hindu

[16] Shree Cement inaugurates three MTPA plant in Andhra Pradesh - The Economic Times

commercial traffic on the Asset and at particularly at TP2, where MAVs have grown at a CAGR 4.4% between FY18 to FY26.

3.16 Table 3.6 and Table 3.7 below present the historical variation in traffic volume at the TP3:

Table 3.6: Historical evolution in AADT by vehicle class at TP3 Elchuru

Vehicle Type	FY18	FY19	FY20	FY21	FY22	FY23	FY24	FY25	FY26	CAGR FY18-26

Source: Steer analysis of Client data, FY26 AADT represents the full year actual (April to March).

3.17 When compared to TP1 and TP2, TP3 has historically observed lower traffic volumes. This is because a major portion of traffic originating from Hyderabad is bound for Guntur and appears only on TP1 and TP2; this is evidenced by our OD survey analysis outputs at TP1 and TP2 (refer to Appendix B) and based on our site visit observations. The Guntur bound traffic does not appear on TP3, as it diverts after appearing on TP2 from Pidgurulla via SH21 to reach Guntur, leading to relatively lower volumes that cross TP3 on their way further south.

3.18 TP3 saw volumes declines for commercial vehicles in FY20 because of the sand-mining prohibition, and again in FY21 due to the impact of the COVID-19 pandemic – similar to

trends observed at TP1 and TP2. In FY22, traffic at TP3 rebounded as construction activity in the region recovered. Between FY18 and FY26, PCU grew by CAGR 5.9%.

3.19 3A volumes at all three plazas on the Asset have declined over the period FY18-26. This reduction in 3A volumes can be attributed to transporters increasingly opting for 2A and MAV vehicles in place of 3As. MAVs offer a greater tonnage capacity, enhancing their cost-effectiveness for freight transport, while growth in 2A vehicle volumes reflect a rising preference for these vehicles, driven by favourable adjustments in legal permissible loads and their suitability for e-commerce-related freight, particularly for high-value, low-volume goods transported over medium to long distances. This trend aligns with insights gained from discussions with various transporters and OEMs nationwide, who are increasingly favouring 2A and MAV vehicles for commodity movement due to their superior unit economics.

Historical Revenue

3.20 Table 3.8 below presents the reported historical revenue of the Asset.

Table 3.8: Historical revenue evolution (in INR Crores) and AADC (in INR Lakhs) for the Asset

Asset	FY18	FY19	FY20	FY21	FY22	FY23	FY24	FY25	FY26	CAGR FY18-26
Revenue (INR Crore)	158.3	186.8	180.6	144.5	198.1	254.4	268.9	301.2	347.8	10.3%

Source: Steer analysis of Client data, FY26 AADT represents the full year actual (April to March).

3.21 With increase in traffic across plazas and vehicle categories, the Asset recorded an average daily collection of INR 95 lakh in FY26, compared to INR 83 lakh in FY25. Overall, the revenue of the Asset grew at CAGR 10.3% between FY18 and FY26.

3.22 Every alternate year observes a greater jump in revenue than the year-on-year increases due to the tolling regime followed on the Asset, wherein toll rates on the Asset are revised once every two years.

Toll Frequencies

3.23 Toll frequency or segmentation is typically the share of each ticket category recorded for a particular vehicle type. This is based on the toll policy which forms a part of the concession agreement. Each vehicle category has different segmentation. As a part of historical analysis, we calculate the toll frequency for each vehicle category from the monthly data shared by the Client. The most common ticket categories observed on a typical National Highway concession are: Single, Return, Monthly, Local and Exempt. Given the local nature of traffic, some toll plazas offer custom made local passes to attract the local commuters to opt for these category passes instead of evading toll.

3.24 Understanding the toll frequency gives insights into the nature of traffic. CJVs generally have higher shares of return passes or local monthly passes because they travel for short to medium distances, while heavy trucks mostly have single tickets since they travel long

distance. However, this distribution varies from asset to asset or even toll plaza to toll plaza. An asset catering to short distance local traffic generally observes high share of return or other local monthly passes while another that caters more to strategic long-distance traffic generally observes high share of single ticket traffic.

3.25 Since the Asset is a state highway that runs between AP and TL states, the "Daily Pass" ticket is the equivalent of a "Return Journey" ticket charged at national highways. This ticket allows users to make more than two trips (within a 24-hour period) at the price of 1.5x of a Single Journey ticket and is thus different from the NHAI "Return" ticket which only permits a user to make two trips within the same time. The data collection and compilation on the Asset is done in such a way that all users who purchase a Daily Pass ticket but make more than two trips per day are classified as "Return 2". This category generates no additional revenue and was processed similarly to the "Return" ticket in our analysis. In this context, Table 3.9 below shows the different types of tickets being sold at all three plazas on the Asset, including the wider definition of the "Return" ticket.

Table 3.9: Typical ticket types sold at plazas

Category	Description
Single	Allows the vehicle to cross the toll plaza once
Return	Allows the vehicle to cross the plaza twice (or more than twice) in a day at discounted rates.
Monthly Pass	Discounted ticket for all road users issued at toll plaza who intend to undertake multiple single trips using the toll plaza. 50 trips are allowed on a discounted rate to be used within 30 days of issue.
Local Personal	Discounted single entry pass only for private cars of residents within 20km radius of toll plaza
Local Commercial	50% discount on single trips for commercial vehicles registered in the local district. This pass allows single entry only
Exemptions	Officially exempted vehicles like ambulance, police cars, key political personnel etc

3.26 On the Asset, a user can buy the ticket for crossing all three plazas at one plaza, via cash. However, since FASTag was implemented on the Asset (starting August 2021 on TP1, and 26th October 2021 on TP2 and TP3) there was a change in how these ticket categories were being recorded via these two modes of payment.

3.27 Generally, shares of single/return/monthly tickets tend to stabilise within 2-3 years of Asset operations. Only in the cases where trip patterns are expected to change significantly due to urban expansion is where we expect these shares to change over the period or due to some external events impacting the trip patterns. During the calendar year 2021, for instance, two key events impacted the traffic patterns throughout the country: the COVID-19 pandemic, and FASTag implementation.

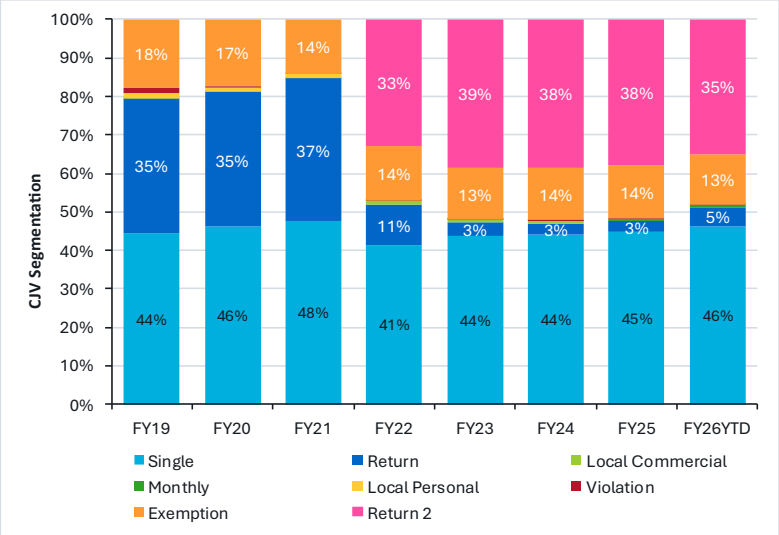
Share of traffic by payment type

3.28 As the Asset is a part of State highway which is under Andhra Pradesh Roads Development Corporation, FASTag is not mandatory on the Asset and separate lanes are provided for FASTag users. Across all three toll plazas, the Asset has 92-95% ETC penetration rate as of FY26YTD, with the remaining share of transactions still being

facilitated via cash. This is because the Asset is a state-highway which does not mandate the use of FASTag for all vehicles.

3.29 Figure 3.1 through Figure 3.6 below show the toll segmentation for the historical years at all the toll plazas for CJVs and MAVs.

Figure 3.1: Ticket-segmentation for CJV at TP1



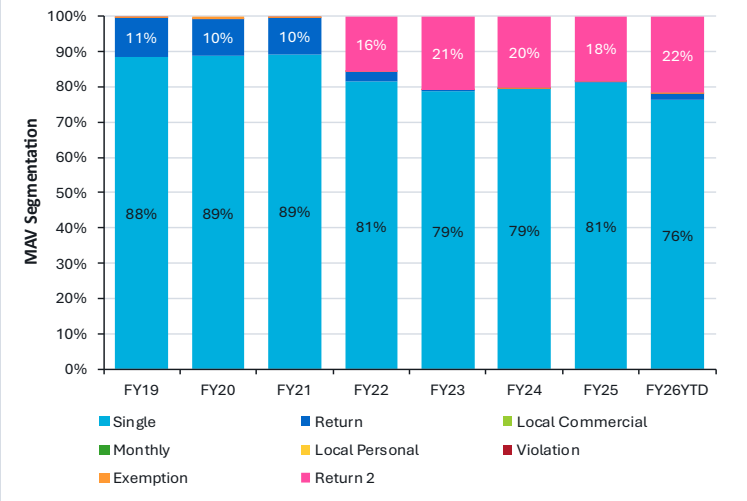
Source: Steer analysis of Client data, FY26YTD includes data till Feb'26.

3.30 From Figure 3.1 above, we see that ticket segmentation trends for CJVs at TP1 have stabilised post FY23. The ticket segmentation for CJVs in FY26YTD is characterised by a high share of Single and Return (including the "Return 2") tickets at approximately 46% and 40% (respectively). The high share of return tickets is dominated by a large share of short distance trips observed on the Asset at TP1 for CJVs[17]. A modest share of 13% of CJV trips at TP1 were Exemptions as of FY26YTD – stable since FY21 but lower than observed in FY19.

3.31 As shown in Figure 3.2 below, most MAVs crossing TP1 purchase single journey tickets (76% in FY26YTD) and the remainder (22%) purchase return tickets. This pattern is supported by the results of the OD analysis, which reveal a large share of long-distance travel and a corresponding share of short/medium distance traffic to locations such as Nalgonda, Miryalguda, and Pidugurulla, among others (see Figure 3.21).

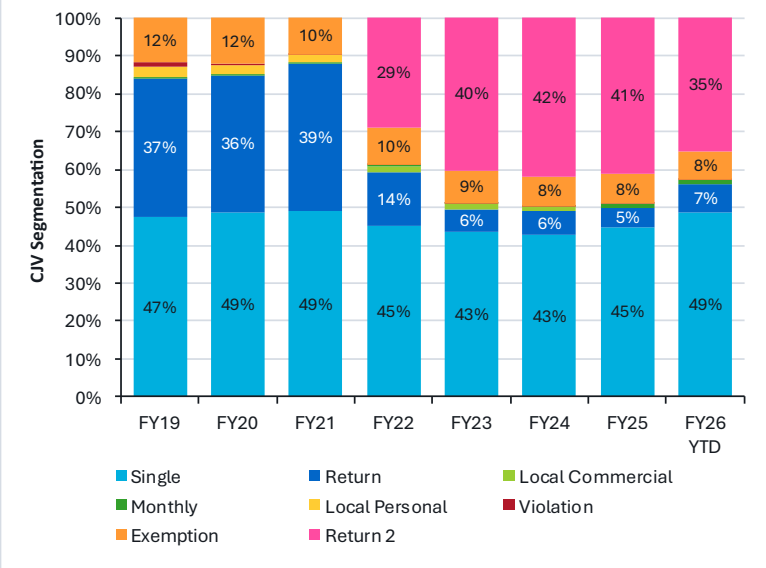
[17] Source: Steer Analysis of Origin-Destination Survey Data

Figure 3.2: Ticket-segmentation for MAV at TP1



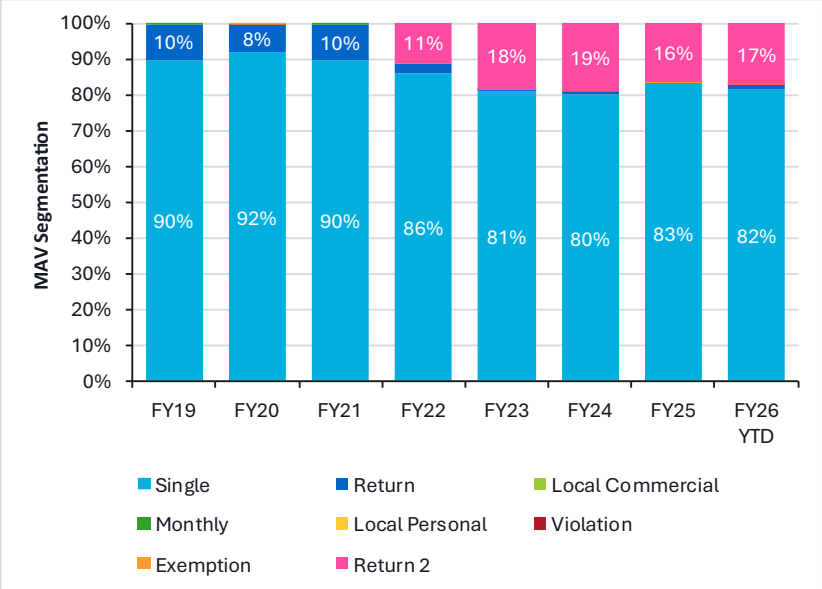
Source: Steer analysis of Client data, FY26YTD includes data till Feb'26.

Figure 3.3: Ticket-segmentation for CJV at TP2



Source: Steer analysis of Client data, FY26YTD includes data till Feb'26.

Figure 3.4: Ticket-segmentation for MAV at TP2

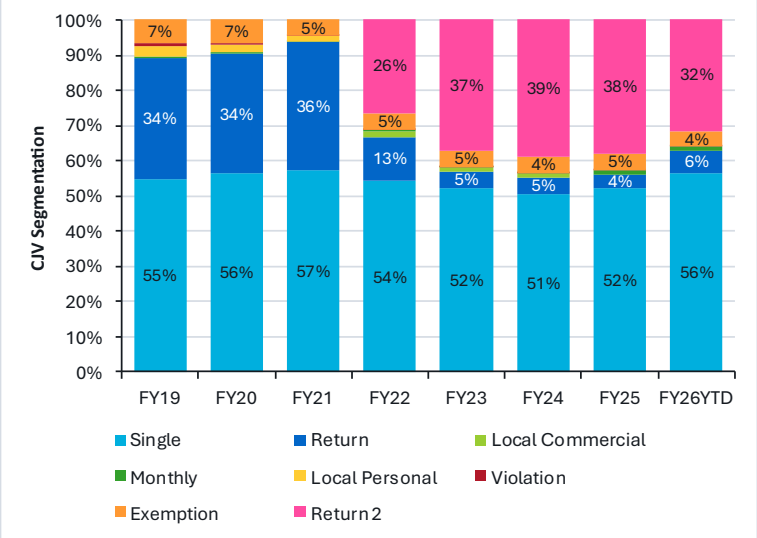


Source: Steer analysis of Client data, FY26YTD includes data till Feb'26.

3.32 As seen in Figure 3.3 above, CJVs on TP2 exhibit similar travel patterns as those at TP1. The share of CJV Exemptions at TP2 has reduced from 12% in FY19 to 8% as of FY26YTD. CJVs are characterised by an almost equal split between Single and Return Journey tickets. As mentioned before, the high share of return tickets is an indication of CJVs primarily making short distance trips[17], wherein 50% of CJVs are making trips shorter than 300 kms. Some of the commonly travelled hubs include Guntur, Hyderabad, Mirayalguda, Nalgonda and Dachepalli.

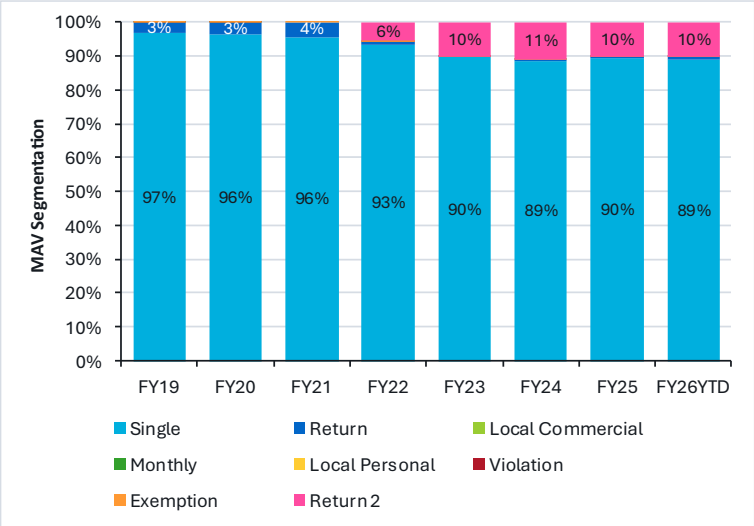
3.33 Most MAVs (83% in FY25) pay for single trips on TP2, with the balance purchasing return tickets. This pattern is corroborated by the results of the OD analysis, which reveal a substantial share of long-distance travel between hubs such as Chennai, Hyderabad, Mumbai, Delhi and Khammam, verifying the ticket segmentation trends determined from the Client's historical data (see Figure 3.22).

Figure 3.5: Ticket-segmentation for CJV at TP3



Source: Steer analysis of Client data, FY26YTD includes data till Feb'26.

Figure 3.6: Ticket-segmentation for MAV at TP3



Source: Steer analysis of Client data, FY26YTD includes data till Feb'26.

3.34 On TP3, as of FY25, around 52% of CJV users paid for single tickets and approx. 41% bought return tickets. These shares have remained relatively steady over the years indicating that travel patterns of CJVs at TP3 appear to have stabilised by now.

3.35 For MAVs at TP3, the share of single tickets is the highest among all three toll plazas on the Asset, as most of the MAV traffic on this plaza is through-traffic travelling from Hyderabad city to Ongole, Nellore, and onwards to Chennai. Because of the long-haul travel pattern of MAVs on this plaza, the single journey ticket share is relatively high for MAVs, ranging between 82% and 90%, as of FY25YTD.

3.36 Table 3.10, Table 3.11 and Table 3.12 below depicts the FY26YTD segmentation for LCV, Bus, 2A, 3A and OSV category for TP1, TP2 and TP3 respectively.

Data collection and validation

Overview

3.37 As mentioned previously, to validate and inform various inputs used in our earlier forecasting, we undertook OD data collection on the Asset in this study, comprising the surveys listed in Table 3.13 below. While TVC surveys were commissioned by Steer by contracting a third party in the study, OD data collection typically involves manual data entry by enumerators based on oral surveys with road users crossing toll plazas, which Steer also commissioned with a third party. TVC data is comprehensive; where collection involves video-graphic capture of traffic passing crossing the toll plazas, followed by manual counting. OD surveys were conducted for TP2 in 2025.

Table 3.13: Data collection schedule

TP	3-day videography-based TVC			1-day OD survey
	Start date	End date	Time (hrs)	Survey Date
TP1	14th February 2026	16th February 2026	0000-2359	13th February 2026
TP2	22nd January 2025	24th January 2025	0000-2359	22nd January 2025
TP3	17th February 2026	19th February 2026	0000-2359	18th February 2026

Source: Steer analysis

3.38 In our experience, traffic on national highways shows variation across the week due to the economic activities surrounding each road. To derive a representative TVC count considering daily variation, three-day to seven-day traffic counts are generally recommended, and hence, to fully understand the impact of this weekly fluctuation on the Asset, we collected three-day counts at the toll plaza.

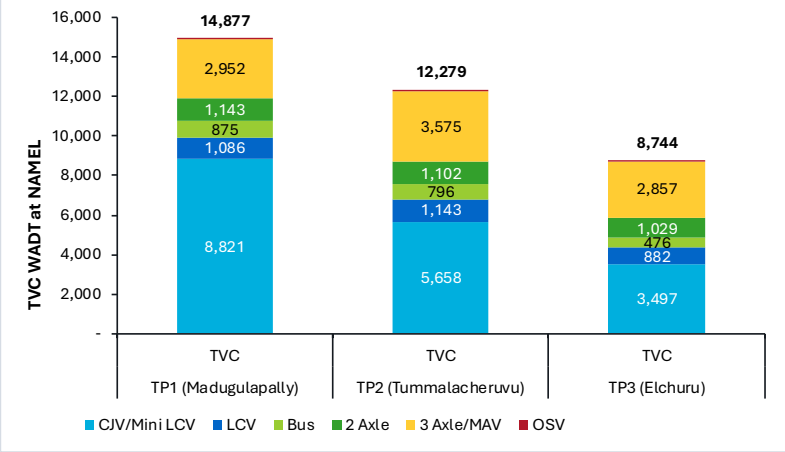
Key findings of the TVC data analysis

WADT estimates

3.39 Taking an average of the three-day TVC counts (22rd Jan – 24th Jan 2025 for TP2, 14th Feb – 16th Feb 2026 for TP1 and 17th Feb – 19th Feb 2026 TP3), we obtained estimates of weekly average daily traffic (WADT) by vehicle category for each of the three toll plazas on the Asset. This WADT excludes non-tollable vehicles such as tractors, two-wheelers, bullock-carts, etc., but includes officially exempt vehicles such as police cars, ambulances, emergency response vehicles, government vehicles and other vehicle types officially allowed as 'exempted' under the concession agreement.

3.40 As shown in Figure 3.7 below, at TP1 and TP2, CJVs accounted for the largest share of all vehicles crossing the plazas, followed by MAVs and LCVs. In the case of TP3, both CJVs and MAVs accounted for almost equal shares of total traffic (between 2,500-2,600 vehicles each). As discussed previously, this difference in volumes between TP1, TP2, and TP3 is due to the Pidugurulla diversion that connects Hyderabad and Vijayawada-Guntur region through the Asset, and the cement plants near TP2.

Figure 3.7: WADT at TP1, TP2 and TP3



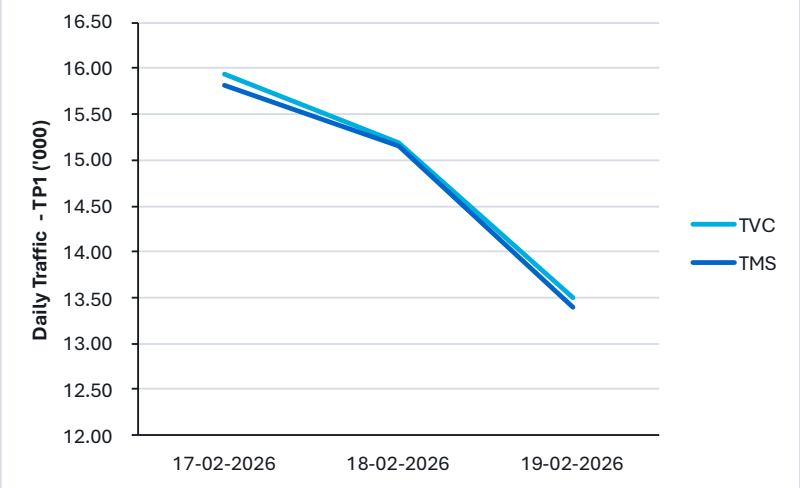
Source: Steer analysis of Steer-commissioned TVC data. TP2 TVC count reflects latest TVC count done in Jan 2025 and TP1 and TP3 counts reflect TVC counts done in Feb 2026.

TVC v/s TMS analysis

3.41 As we use the TMS data to estimate the base year AADT, we have used our TVC data to validate the TMS data on those particular days, as supplied by the Client.

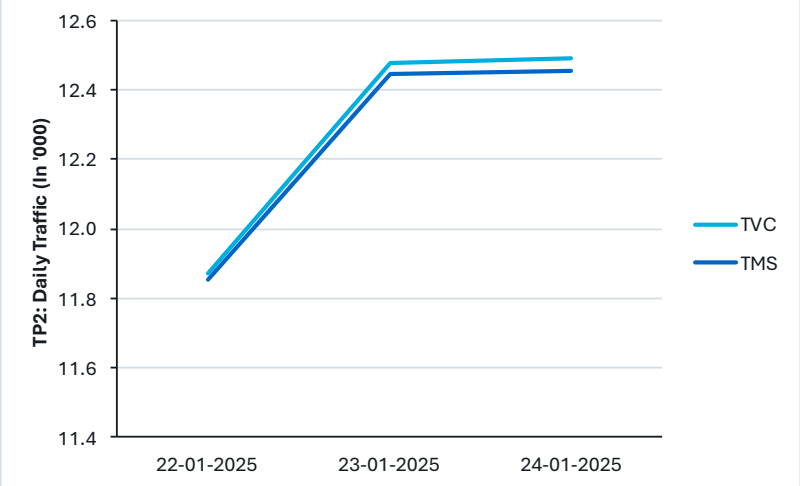
3.42 Figure 3.8, Figure 3.9 and Figure 3.10 below shows the comparison between daily volumes in tollable traffic derived from TVC and TMS data for all three toll plazas. This shows a good fit at the aggregate level at all the plazas with an absolute delta of 0.1% on TP2, and 0.5% on TP2 and TP3.

Figure 3.8: Comparison between TVC and TMS daily traffic data on TP1 (2026)



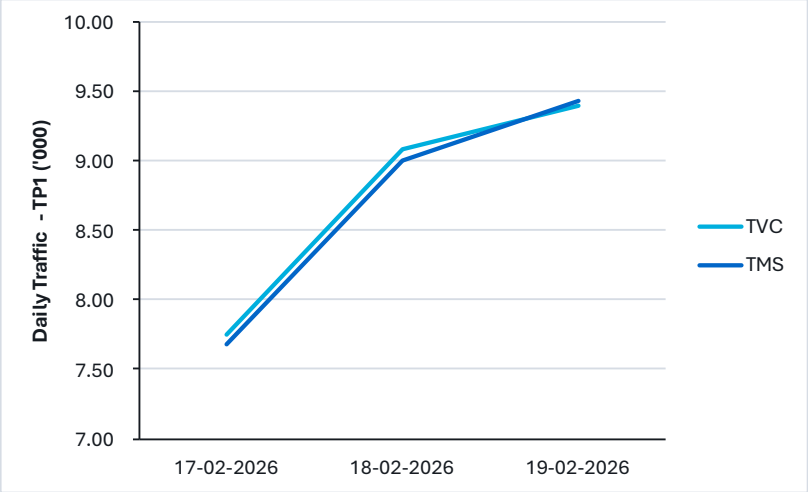
Source: Steer analysis of Steer-commissioned TVC and Client TMS data

Figure 3.9: Comparison between TVC and TMS daily traffic data on TP2 (2025)



Source: Steer analysis of TVC and client TMS data

Figure 3.10: Comparison between TVC and TMS daily traffic on TP3 (2026)

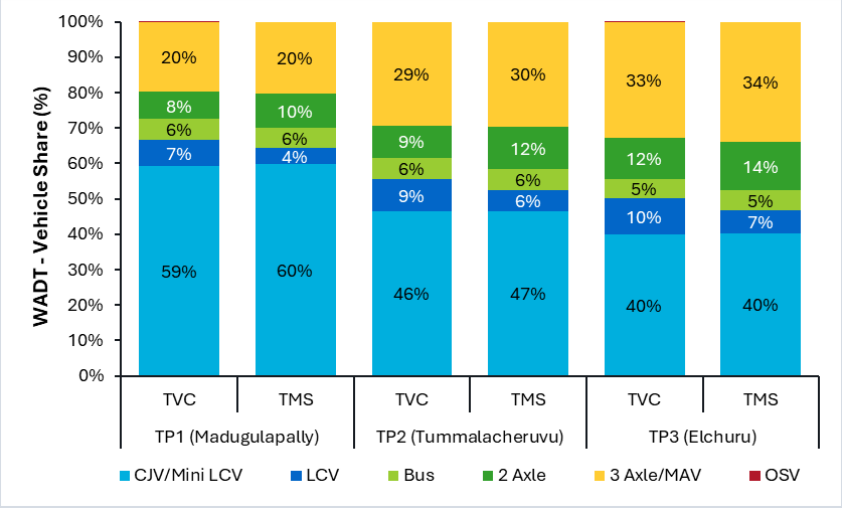


Source: Steer analysis of TVC and client TMS data

3.43 Figure 3.11 below compares the share of traffic by vehicle type at each toll plaza, as recorded between the TVC and TMS data. At aggregated levels (aggregated in such a way due to common misclassification between these groups), there is minimal variation between the TVC and TMS count data. In all cases, the TVC and TMS vehicle shares differ from each other by a small margin - between 0-1.0%.

3.44 There is common misclassification between the LCV and 2A categories, and therefore, these have been combined in our analysis. Apart from classification issues, differences can be attributed to reporting system for exempted vehicles at the toll plazas, along with the technical differences between the two independent traffic counting systems.

Figure 3.11 Comparison between vehicle shares from TVC and TMS WADTs



Source: Steer analysis of TVC and client TMS data

Table 3.14: Difference in vehicle counts when combined

Vehicle type	TP1 (2026)			TP2 (2025)			TP3 (2026)		
	TVC	TMS	TMS vs TVC (%)	TVC	TMS	TMS vs TVC (%)	TVC	TMS	TMS vs TVC (%)
CJV+LCV+ 2A+Bus	11,924	11,795	**1.1%**	8,698	8,614	**1%**	5,885	5,750	**2.3%**
3A+MAV+OSV	2,950	2,990	**(1.3%)**	3,581	3,638	**(1.6%)**	2,859	2,952	**(3.1%)**
Total	**14,874**	**14,785**	**0.6%**	**12,279**	**12,252**	**0.1%**	**8,744**	**8,702**	**0.5%**

Source: Steer analysis of TVC and client TMS data; TP2 TVC counts reflect updated 2025 counts whereas TP1 and TP3 counts reflect 2026 TVC counts

3.45 Given an overall match in the traffic volumes, TVC-TMS analysis gives us the confidence that the base year traffic calculated using the Client data forms a reliable base year traffic estimate. We therefore consider the Client TMS data to estimate the base year AADT.

Key findings of origin-destination analysis

Overview

3.46 Origin-destination (OD) analysis enables the understanding of the nature of traffic movement on the Asset. The OD analysis presented here is based on data collected on behalf of the Client in February 2026 for TP1 and TP3 and based on latest data collected in January 2025 for TP2.

3.47 We have analysed the regional drivers of demand based on the following OD analyses on the data as provided by the Client:

- Zonal influence
- Commodity distribution
- Top OD pairs
- Trip length distribution

3.48 While top OD pairs and zonal influence help us understand ‘where’ people and goods travel, the commodity distribution sheds light on ‘which’ goods are transported. Trip length distribution analysis further indicates ‘how far’ vehicles and people travel. This set of analyses is generally used to estimate the key drivers of traffic and aids the making of informed forecasting assumptions around traffic demand elasticities, growth drivers and exogenous impacts.

Sample rates

3.49 Sample rates help understand the reliability of OD data. They are calculated by dividing OD samples by the TVC counts observed on the same date for each vehicle category at the toll plaza. Table 3.15 below presents the sample rates for goods and passenger category at the toll plaza. We believe that the sample rates of the OD data are reasonable for the analysis required.

Table 3.15: Sample rates for OD data

Vehicle Category	TP1 (2026)	TP2 (2025)	TP3 (2026)
Passenger (CJV+Bus)	15%	47%	33%
Goods (LCV+2A+3A+MAV)	70%	54%	73%

Source: Steer analysis of OD data

Zone categories

3.50 To facilitate better interpretation of key regional drivers of traffic as determined by their OD zones, and influenced by various towns, cities, states and regions in the vicinity of the Asset, we have aggregated zonal data as described in the Table 3.16 below. The methodology behind this aggregation of zones may vary as per the characteristics displayed by the different Assets being studied.

Table 3.16: Zone aggregations for zonal influence analysis

Aggregate Zone	Description
Local	Local zones are those that fall on or very close to the Asset.
Immediate area of influence (IAOI)	IAOI zones are the locations which generate traffic and lie within approximately 75-150 km distance from the Asset.
Rest of Telangana	Rest of the cities/Districts in Telangana other than Local/IAOI
Rest of Andhra Pradesh	Rest of the cities/Districts in Andhra Pradesh other than Local/IAOI
Rest of South India	Tamil Nadu, Karnataka, Kerala, Puducherry
West India	Maharashtra, Gujarat, Rajasthan
North India	Jammu & Kashmir, Punjab, Himachal Pradesh, Haryana, Delhi, Uttar Pradesh, Uttarakhand
Central India	Madhya Pradesh, Chhattisgarh
East & Northeast India	Bhar, Jharkhand, Odisha, West Bengal, Northeast Indian states
Outside India	Nepal, Bhutan

Source: Steer analysis

Zonal influence

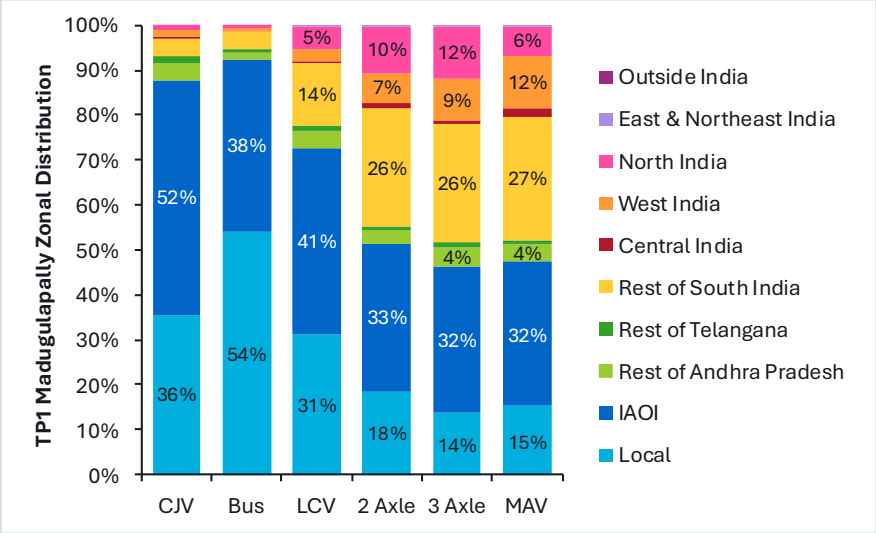
3.51 The zonal influence is the contribution of a zone or the zonal aggregation to trips by a vehicle type. This section presents the zonal influence at each toll plaza of the Asset, aggregated based on zonal aggregation listed in Table 3.16 above. Please note that zonal influence is analysed on trip ends and not trips.

3.52 Figure 3.12, Figure 3.13 and Figure 3.14 below present the zonal influence by vehicle type at all three toll plazas on the Asset. At all the three toll plazas, the zone category with the highest influence is IAOI, across the vehicle categories.

3.53 At TP1, we see that unlike the other two plazas, local trips also have major influence, especially among CJV and Bus. This is because the TP1 (Madgulapally) is located near the major urban agglomeration of Hyderabad. The CJV traffic on the corridor caters to the local demand connecting key towns of Nalgonda, Miryalguda, Guntur, Pidugurlla, and others. Among the goods vehicles we see the Rest of South India accounts for a high share, with influence on MAV trips at 23 - 34% of all MAV trips crossing the plaza. This is

because the Asset is a major access road to Chennai, which is a major port and manufacturing hub. 6 - 12% of MAV traffic is also influenced by West India. North India also shows significant influence – at 10% and 12% respectively for 2As and 3As observed at TP1.

Figure 3.12: Zonal influence at TP1

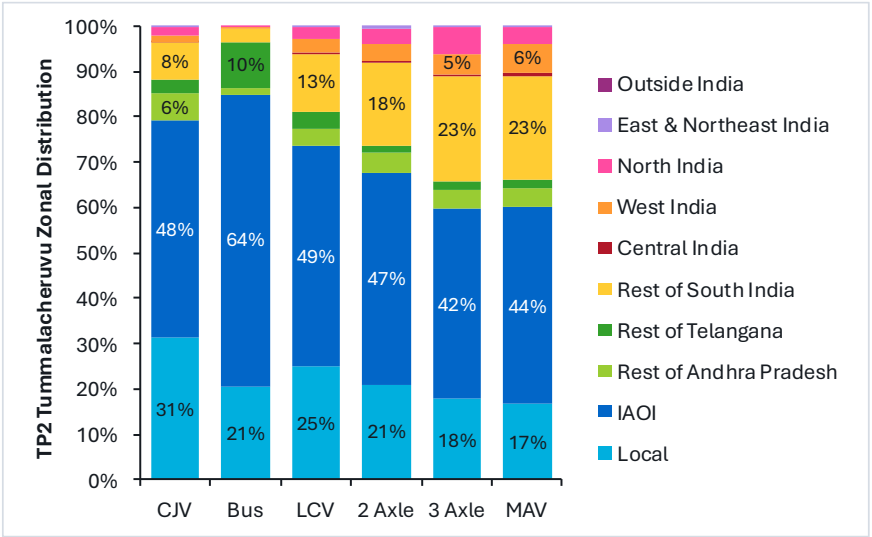


Source: Steer analysis of OD data

3.54 LCVs and 2A trucks serve a relatively more local market, connecting the industrial nodes on the Assets and regions of Pidgurulla, Addanki, and Miryalguda, the same is also validated through the high zonal influence of the state in these categories.

3.55 At TP2, both IAOI and Rest of Andhra Pradesh have a high influence. This is because the toll plaza is located near several cement plants, which generate significant truck volumes appearing on the Asset. These cement plants cater to demand from both distant centres like Chennai, as well as centres in rest of the state like Guntur. 4% of the MAV traffic is influenced by the Rest of Andhra Pradesh, whereas the Rest of South India shows an influence of 23% on all MAV trips observed at TP2.

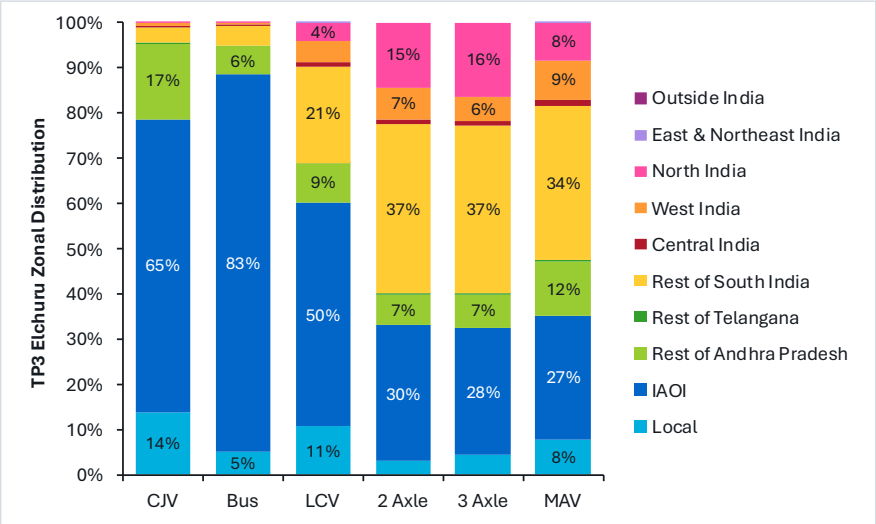
Figure 3.13: Zonal influence at TP2 (2025)



Source: Steer analysis of OD data

3.56 The zonal distribution at TP3 is somewhat similar to that of TP1. The Rest of South India influence ranges from 33 - 37% among goods vehicles, which is primarily dominated by Tamil Nadu, with trips going towards Chennai. The Rest of Andhra Pradesh's influence on MAV trips at TP3 is at 12%.

Figure 3.14: Zonal influence at TP3



Source: Steer analysis of OD data

Internal-External analysis

3.57 Internal-External analysis helps in identifying the trips which have both the origin and destination on or near the Asset i.e., local/IAOI zones (Internal-Internal or I-I), any one end on the Asset (Internal-External or I-E), or neither end on the Asset i.e., through trips (External-External or E-E). RoS here represents areas within the state (Telangana and Andhra Pradesh for the Asset under consideration) which are neither local nor IAOI. 'Internal' zones are those that were analysed as 'local' and 'IAOI' in the zonal influence analysis, i.e., lying on the Asset, while 'External' zones are areas lying outside the state.

Figure 3.15 Internal-external distribution at TP1

	Internal	Rest of State	External
External	13%	1%	32%
Rest of State	3%	1%	2%
Internal	30%	2%	16%

Source: Steer analysis of OD data

3.58 Figure 3.15, Figure 3.16 and Figure 3.17 show the distribution of trips based on these categories specifically for MAV. Understandably, these reflect the observations made in the zonal influence analyses presented earlier, at a higher level of aggregation, but at a trip level.

Figure 3.16: Internal-external distribution at TP2 (2025)

	Internal	Rest of State	External
External	17%	1%	14%
Rest of State	3%	1%	2%
Internal	38%	4%	20%

Source: Steer analysis of OD data

3.59 At TP1, we see that the external zone influenced trips form a majority, ~64% of MAV trips have at least one end lying in a zone External to the Asset. We also see that the highest share is of E-E trips (32%). This confirms our assertion that the Asset is a major route for through-trips, connecting areas in both the north and west of the country with the southeastern regions like coastal Andhra Pradesh and Tamil Nadu.

3.60 TP2 sees the highest share of MAV trips between internal zones, i.e., I-I (38%). This is because these MAVs are largely influenced by the presence of several cement production units in the vicinity which supply to consumption centres like Hyderabad, Guntur etc. which are located within the “Internal” zones to the Asset.

3.61 At TP3 as well we see that the largest proportion of trips are influenced by External zones (~65%) among the MAVs. This reiterates that the Asset serves as a major route for through-traffic which travels long distances.

Figure 3.17: Internal-external distribution at TP3

	Internal	Rest of State	External
External	16%	1%	23%
Rest of State	9%	0%	1%
Internal	19%	7%	24%

Source: Steer analysis of Client OD data

Commodity distribution

3.62 We have grouped various commodities into aggregate categories for ease of interpretation, as shown in Table 3.17 below. The charts in the following sub-section present information in terms of these aggregate commodity categories.

Table 3.17: Aggregate commodity categories

Commodity Description	Code	Combined codes used for charts
Agriculture Products / Cash crops (Wheat, Rice, Sugar cane,Maize etc.)	AGR	AGR
Cattle Food / Live Stock (sheep, ghoat, cow,cattle food etc)	LIV	
Perishable Items (Fruits, vegetables)	PER	GRO
Animal Products/Dairy/Eggs/Fish/Meat/Animals	DFM	
Groceries / Food items (Soap, Salt, Sugar, Pulses, Spices, Biscuits, bread,cool drinks, beer etc.)	GRO	
Fly ash	FAS	CNS
Sand	SND	
Bricks	BRC	
Granite	GRN	
Stone (kota stone, Aggregate stone etc.)	STN	
Ceramic	CRM	
Petroleum Products (Oil, LPG, CNG, etc.)	PET	PET
Chemicals / Fertilizers (Acids,Fertilizers etc.)	CHM	
Electrical/Manufacturing items (Electronic items, Medicine, Leather, Wine, Rubber/ Tyre, Plastics, Cloth, Paper etc.)	MAN	MAN
Machinery / Spare parts	MAC	
Raw Wood,Cork & Wood Products, Furn	WUD	
Subadul wood	SBW	
Automobiles (Finished products, auto parts, Car/bike manufacturing)	AUT	AUT
Parcel and Courier including Delhivery, Amzon, flipkart etc	PAR	MSC
Miscellaneous (House hold items, any other commodties different then mentioned in list etc.)	MSC	
Container	CTR	
Passengers	PAS	
Scrap	SCR	
Coal	COAL	MET
Mining Minerals (Gypsum, Cobalt etc.)	MIN	
Basic / Fabricated Metals (Iron, Steel / Metal)	MET	
Empty	EMT	EMT
Cement	CMT	CMT

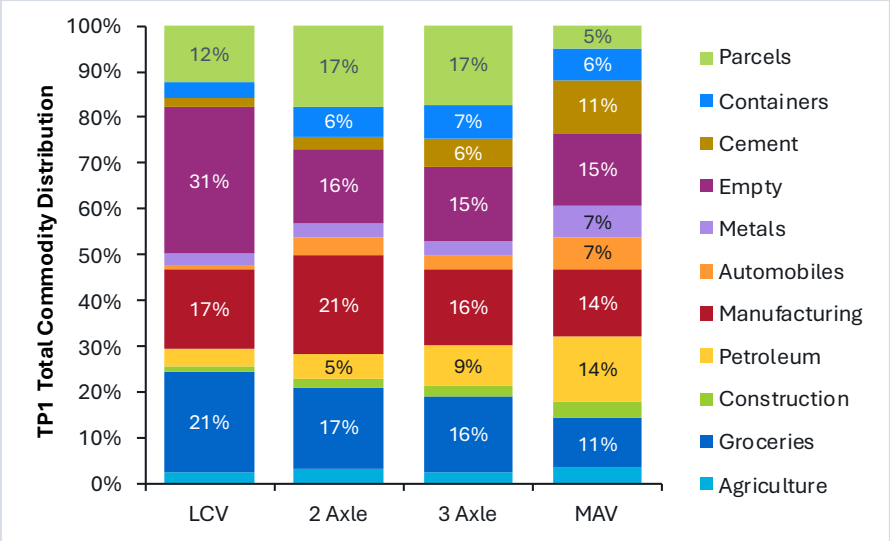
Source: Steer analysis

3.63 Figure 3.18, Figure 3.19 and Figure 3.20 below present the commodity distribution for goods vehicles at the three toll plazas.

3.64 At TP1, manufactured goods, specifically machine parts and electrical items, constituted the primary commodity transported by all goods vehicle categories. For Multi-Axle Vehicles (MAVs), this was followed by cement (11%), and equally by automobiles, and metals(7%).

3.65 Looking at the commodity distribution on TP1 by direction, we observe that only 7% of MAVs carry cement towards Addanki as compared to 18% carrying the same towards Nalgonda. This difference is attributable to the presence of cement plants located in the area between TP1 and TP2. Thus, the trucks carrying cement from the plants to areas such as Hyderabad appear at TP1 travelling towards Nalgonda.

Figure 3.18: Commodity distribution at TP1 (Total)



Source: Steer analysis of OD data

3.66 As also observed during our site visits, we see that manufactured products, agricultural and grocery items make up the top two aggregate categories at TP1. manufactured products and miscellaneous products form the top two categories at TP3. Groceries also find a consistently high share in the commodity distribution across the three toll plazas, especially at TP2 (ranging between 17% to 35% across vehicle categories).

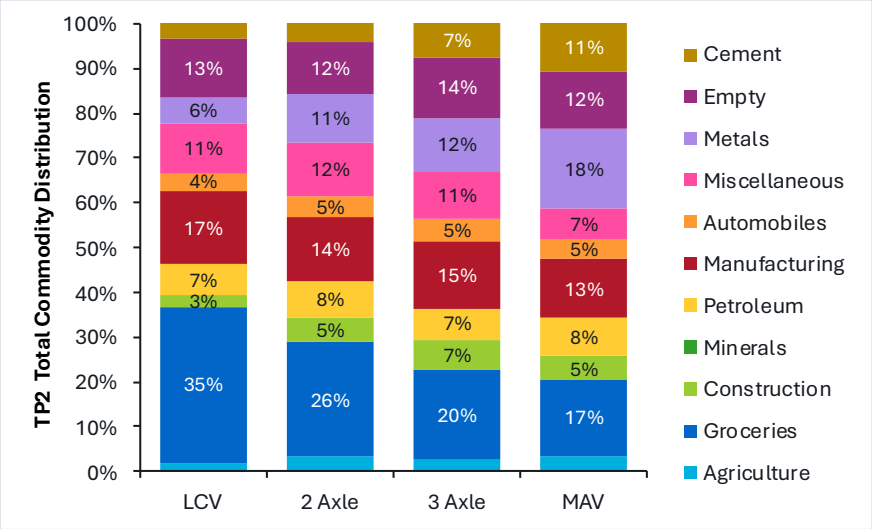
3.67 The high share of manufactured products can be attributed to the presence of automobile parts manufacturing units in Sriperumbudur and other industries that have been setup in Telangana and AP. Presence of several warehouses for logistics companies and e-commerce ventures also increase the share of manufactured goods/miscellaneous categories.

3.68 Cement shows a 11-14% share for MAVs across the three toll plazas on the Asset. Most of these cement carrying trucks originate in the areas surrounding TP2 which forms a local cement manufacturing cluster near the Asset. The robust demand for cement and

associated construction materials in Andhra Pradesh and Telangana is a direct result of the region's development initiatives and extensive infrastructure development[18][19].

3.69 At TP2 the key differences are a higher share of cement carrying MAVs going towards Addanki (16% compared to 5% towards Nalgonda) while metals show a reverse directionality (25% towards Nalgonda against 12% towards Addanki).

Figure 3.19: Commodity distribution at TP2 (Total)



Source: Steer analysis of OD data

3.70 A similar trend in differences exists at TP3, with mining materials accounting for higher share of total commodities that travel towards Nalgonda, and cement accounting for a higher share of total commodities travelling towards Chennai.

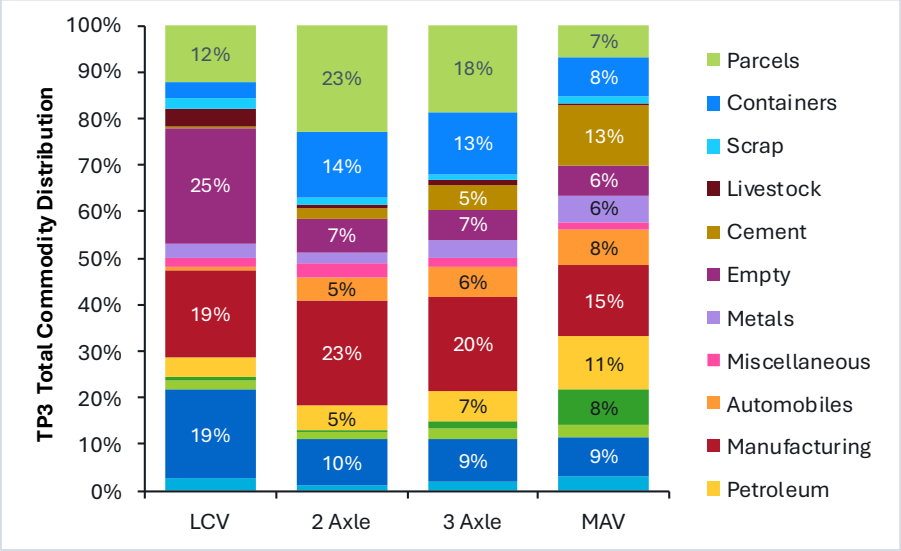
Figure 3.20: Commodity distribution at TP3 (Total)



Source: Steer analysis of OD data

Trip length analysis

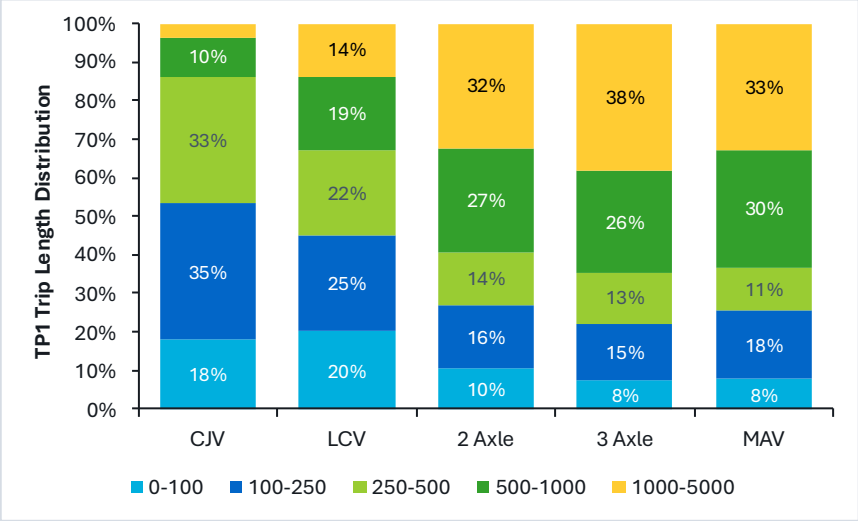
3.71 Trip-length distribution provides the distance-based trip profile of each vehicle category observed at each of the toll plazas on the Asset. This analysis aids in validating our assumptions on the share of macro-economic drivers for forecasting background traffic growth on the Asset, our analysis outputs from the zonal influence analysis, as well as the toll segmentation analysis outputs from our historical traffic data analyses. The trip distances were derived as driving distances from Google Distance Matrix Tool[20] based on zonal coordinates for OD pairs. For the ease of interpretation, we have categorised distances into 5 groups:

- Local (0-100km)
- Short-distance (100-250 km)
- Medium-distance (250-500 km)
- Long-distance (500-1000 km) and
- Very-long-distance (1,000 – 5,000 km)

3.72 As presented in Figure 3.21, Figure 3.22 and Figure 3.23 below, for LCVs, the largest share of trips at TP1 and TP2 are local or short-distance (35-45%). Whereas the largest share of TP3 LCV trips is of long-distance (500-1000km).

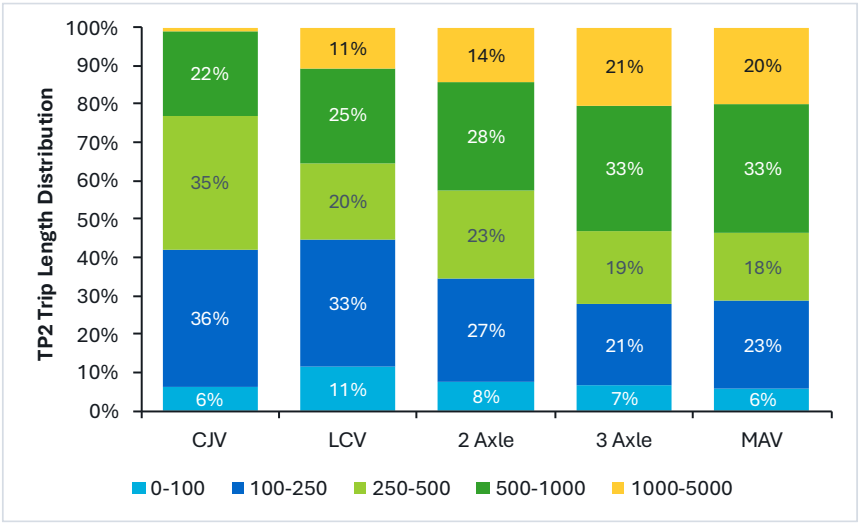
[20] Google Distance API is a tool that is available on a chargeable basis from Google Maps Platform. Link: https://developers.google.com/maps/documentation/distance-matrix/start. Travel distance and time information for driving under various scenarios can be extracted using macro-enabled Excel, R, etc.

Figure 3.21: Trip length distribution TP1



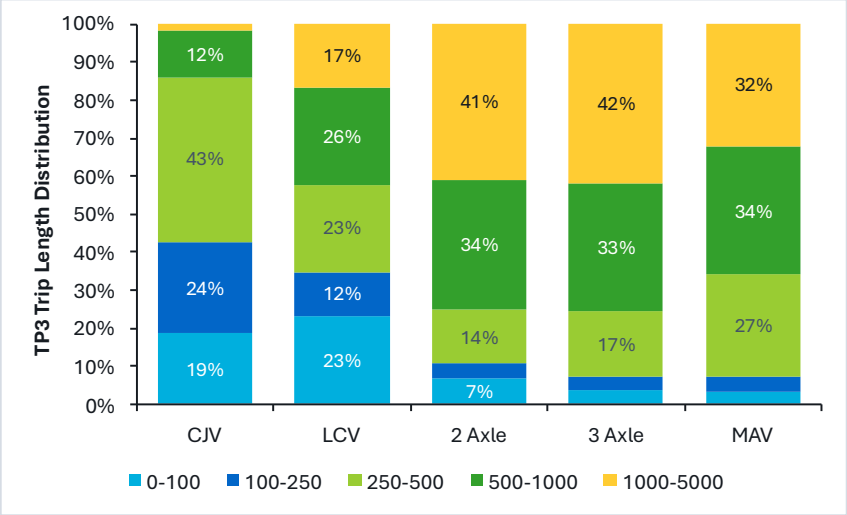
Source: Steer analysis of OD data

Figure 3.22: Trip length distribution TP2 (2025)



Source: Steer analysis of OD data

Figure 3.23: Trip length distribution TP3



Source: Steer analysis of OD data

3.73 Long-distance movement is observed at all three toll plazas, with MAVs accounting for a considerable share of trucks travelling over 500 km. Trips on TP1 and TP3 have a higher proportion of very long-distance (>1000km) trips. While TP2 also exhibits a significant proportion of long-distance Multi-Axle Vehicle (MAV) trips, this share is lower than at TP1 and TP3. This can be attributed to the influence of the Guntur/Vijayawada region, as well as the proximity of cement plants, which serve as frequent origins or destinations for trucks utilizing the Asset.

Conclusions

3.74 In summary, CJVs account for the largest share of traffic across all three toll plazas on the Asset, with TP1 and TP2 exhibiting the highest shares, while TP3 share of CJVs are similar to its share of MAVs. MAVs on the Asset account for significant share of total traffic observed at each of the three plazas as well ranging from 15% of total traffic at TP1 to 25% of total traffic at TP3.

3.75 Historically across the period FY18-FY26 the toll plazas have grown by the following PCU CAGRs; TP1 at 6.7%, TP2 at 4.6% and TP3 at 5.9%. These strong growth trends can be attributed to regional industrial activities (primarily driven by the cement industry in proximity of the Asset) and strong urban-rural linkages supported by this corridor.

3.76 Ticket segmentation reveals that for CJVs, return tickets form a significant share, reflecting patterns of commuter and short-haul regional travel. For MAVs, single tickets are clearly dominant, making up nearly 70-75% of tickets issued, consistent with their use for long-distance goods movement.

3.77 TVC and TMS data correlation shows high system reliability, with variation within acceptable margins, reaffirming confidence in the tolling infrastructure and its capacity to capture accurate traffic volumes.

3.78 OD analysis indicates that TP1 and TP2 see a higher proportion of regional and short-distance trips by CJVs, highlighting their utility for local commuting. In contrast, TP3 has a higher incidence of long-distance freight, especially from Rest of South India and Central India, prominently carried by MAVs.

3.79 Manufactured products, cement, and agricultural goods emerge as the key commodities transported via the Asset, with cement particularly significant at TP2 and TP3 due to the Assets proximity to cement clusters as discussed in Chapter 2. The trip length analysis supports this—while LCVs show a larger share of sub-500 km trips, MAVs at all three toll plazas consistently dominate in the 500 km+ trip segment.

4 Socio-economic context

Introduction

4.1 The growth of traffic on existing (brownfield) roads depends on, firstly, how fast the background travel demand grows (background growth); and secondly, how successful the roads are in attracting that traffic (traffic capture). Background travel demand is driven by the socio-economic conditions in the region where the Asset is located and the country. These include:

- Changes in factors such as population, economic growth (regional and national) and industrial production; and
- Other local factors such as strategic port growth, and growth in local industries near the Asset.

4.2 In turn, the change in the relative competitive position of the Asset (and thus of the traffic capture they can achieve) is a function of the relative costs, and benefits offered by the Asset to that of other competing roads. These costs and benefits can be in terms of actual monetary costs, time savings, or via other less tangible but important aspects suggest as the Asset's safety features and offered reliability in travel times.

4.3 In this chapter, we assess and present trends in the above socio-economic growth drivers that we believe influence the background traffic growth of the Asset. This includes an analysis of regional economic data trends relative to nationwide benchmarks. For the impact of competing roads (existing or planned) on the Asset, Chapter 6 presents a more detailed view on how we believe traffic growth on the Asset may be affected.

Population growth

4.4 For this study, we have analysed the key socioeconomic drivers of the background traffic demand in the states of Telangana and Andhra Pradesh, given that the Asset is located within, and is influenced by wider regional economic factors in both these states.

National level

4.5 The total population in India has grown at a CAGR of 1.5% between 2000 and 2015, decreasing over the years, as shown in Table 4.1 below. The World Bank forecasts this growth to decrease to 0.6% CAGR by the 2030-45 period[21].

[21] World Bank Data on Health Nutrition and Population

Table 4.1: CAGR of population in India

Years	CAGR		
	Total Population (m)	Rural Population (m)	Urban Population (m)
1970 - 1985	2.3%	1.9%	3.8%
1985 - 2000	2.0%	1.7%	2.9%
2000 - 2015	1.5%	1.0%	2.6%
2015 – 2030*	1.0%	0.3%	2.3%
2030 – 2045*	0.6%	-0.3%	1.9%

Source: World Bank Data on Health Nutrition and Population Statistics, *forecast population growth

State Level

4.6 Table 4.2 below shows the evolution of population in Andhra Pradesh and Telangana compared to that of the country. As Table 4.2 shows, the populations of both Andhra Pradesh and Telangana have grown at a slower pace, compared to that of India. As of FY24, Andhra Pradesh holds a 3.8% share in India's population, while Telangana has a 2.7% share.

Table 4.2: Population Growth in India (2012 – 2024)

State	2012 Population (m)	2024 Population (m)	CAGR (2012 – 2024)
Andhra Pradesh	49.3	53.2	**0.7%**
Telangana	35.7	38.2	**0.6%**
India	1,210	1,395	**1.2%**

Source: Ministry of Statistics and Program Implementation estimates

4.7 Due to the complexities of the patterns in which urbanisation takes place, and the very dynamic nature of local population migration (which are very difficult to forecast with accuracy), we do not use population growth as a proxy for understanding future travel demand growth on the Asset. It has been included in this section simply to provide socio-economic context of population growth in the region where the Asset is located.

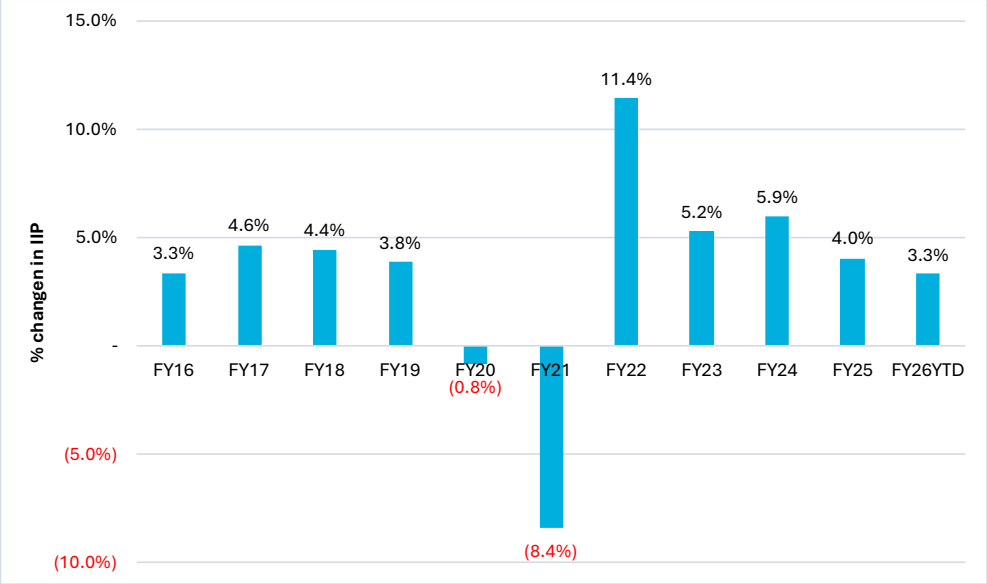
Economic Indicators

Industrial Production

4.1 The Index of Industrial Production (IIP) is a composite indicator that measures the short-term changes in the volume of production for a basket of industrial products. The IIP data tracks the manufacturing activity in different sectors of an economy, with mining, manufacturing, and electricity being the three broad sectors constituting the IIP.

4.2 The figure below shows that at an annual level, national IIP was growing at an average of 4% per year over the period FY15-19, before the country underwent a liquidity crisis and experienced an overall economic slowdown in FY20. In the aftermath, IIP shrank by over 8% in FY21 due to a decline in economic activity in the wake of global lockdowns introduced to curb the Covid-19 pandemic. Post the immediate recovery in FY22, IIP growth has since stabilised, with FY25 recording 4%, and FY26YTD (till February 2026) recording 3.3% growth over FY25.

Figure 4.1: Annual growth – Index of Industrial Production



Source: Ministry of Statistics and Program Implementation (MoSPI)

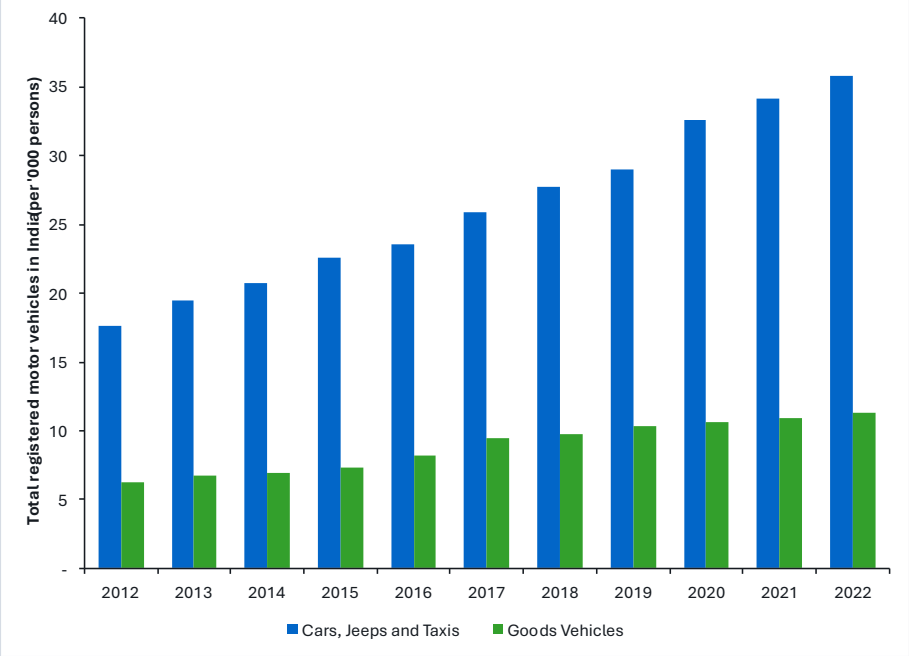
4.3 Since state-level IIP data is not as readily available as national level IIP, we have presented national IIP here to indicate nationwide activity in key industrial sectors like power, manufacturing, and mining, all of which influence long-distance commercial movements across the nation. We, however, do not use it to forecast future travel demand growth since long-term forecasts for IIP is not available through official sources such as MOSPI, RBI or through multilateral organisations like WB, or the IMF.

Vehicle ownership

4.4 The gap in car ownership between India and developed nations remains substantial – with 36 cars/jeeps/taxis and 11 commercial vehicles per thousand people, as of FY22 (the latest year for which official data is available). However, with increasing per capita income levels, a booming economy and the subsequent increase in demand for mobility, the number of registered vehicles has been on a gradual upward trend

4.5 Overall, India still stands at a very nascent stage in the vehicle saturation curve, offering huge potential for growth going forward. Between FY12 and FY22, the CAGR for CJV and goods' vehicles registered in India was 8.6% and 7.3% respectively

Figure 4.2: Total number of registered motor vehicles in India (per 1000 population)

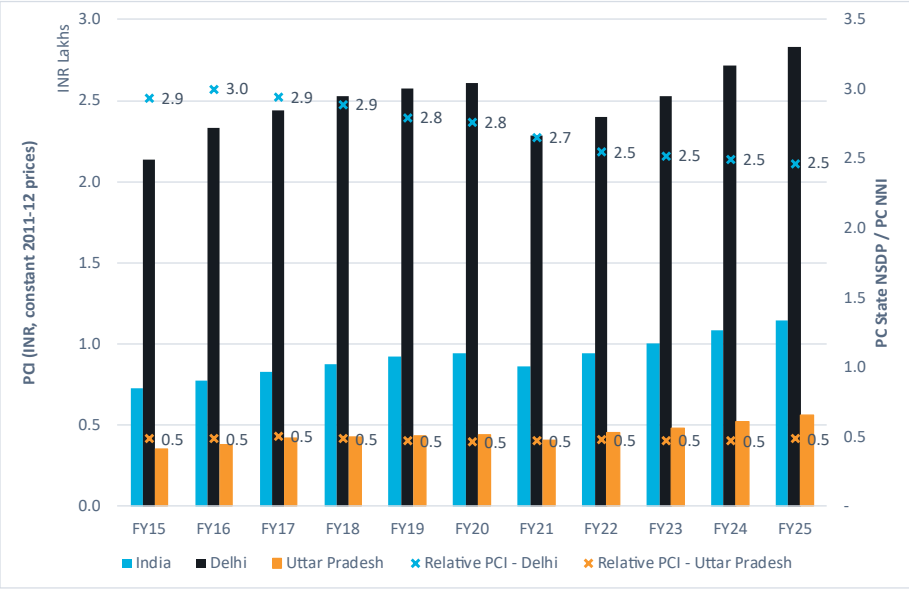


Source: Ministry of Road Transport and Highways (MoRTH)

Per Capita Income (PCI)

4.6 As per the latest data from MOSPI and as can be referred to in Figure 4.3, in FY25, Telangana's per capita income at current prices was ₹1,92,128, while Andhra Pradesh's was ₹ 1,41,609. In comparison, India's per capita income for the same period stood at ₹1,14,710. This indicates that Telangana's per capita income was approximately 67.5% higher than the national average, and Andhra Pradesh's was about 23.4% higher. These figures highlight the relatively stronger economic performance of both states compared to the national average, and their robust regional economic profiles.

Figure 4.3: Per Capita Income



Source: Steer Analysis of Ministry of Statistics and Program Implementation (MoSPI) Data

4.7 Given the difficulty in obtaining up-to-date district level PCI data for different states in India, we have not presented district level PCI data as part of our analysis above. Though per capita income is a statistically robust metric to base background traffic growth on, the unavailability of long-term forecasts of PCI precludes its use in forecasting future traffic growth. We therefore do not use PCI as a growth driver in our background traffic growth forecasts.

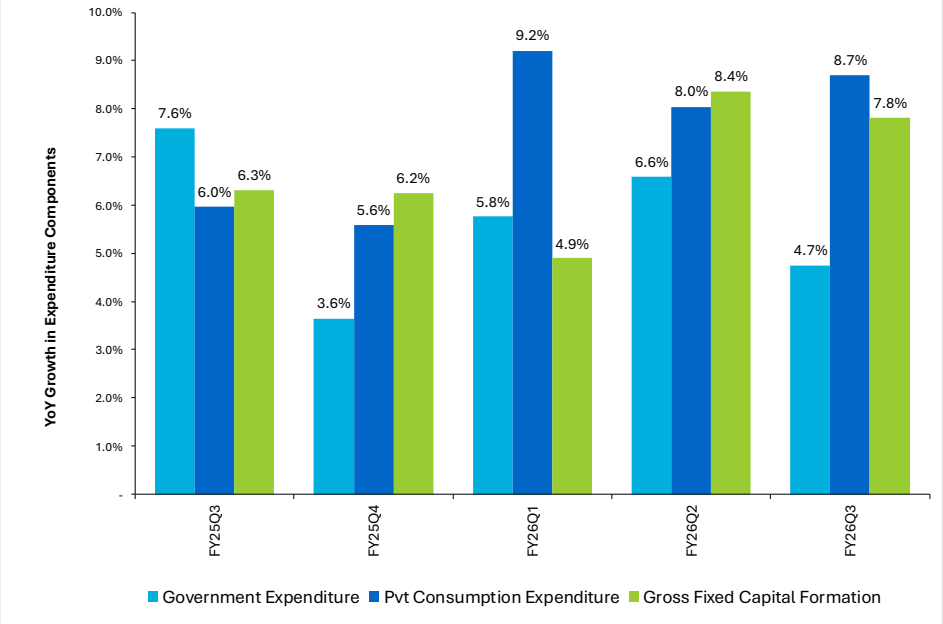
Economic growth

India's Performance

4.8 Despite a slowdown in the economy during H1FY25, the Indian economy has observed strong growth each quarter since FY25Q2, with the latest published estimates for FY26Q3 GDP at 7.8% over FY25Q3. This performance has been driven by strong growth in investment and consumption expenditures and higher consumer optimism for the year ahead [22]

4.9 The figure below, we present quarterly Y-o-Y growth in three major components of GDP – government expenditures, consumption expenditures, and business investment (gross fixed capital expenditure) over the past year (FY25Q3-FY26Q3).

Figure 4.4: YoY growth in expenditure components of GDP



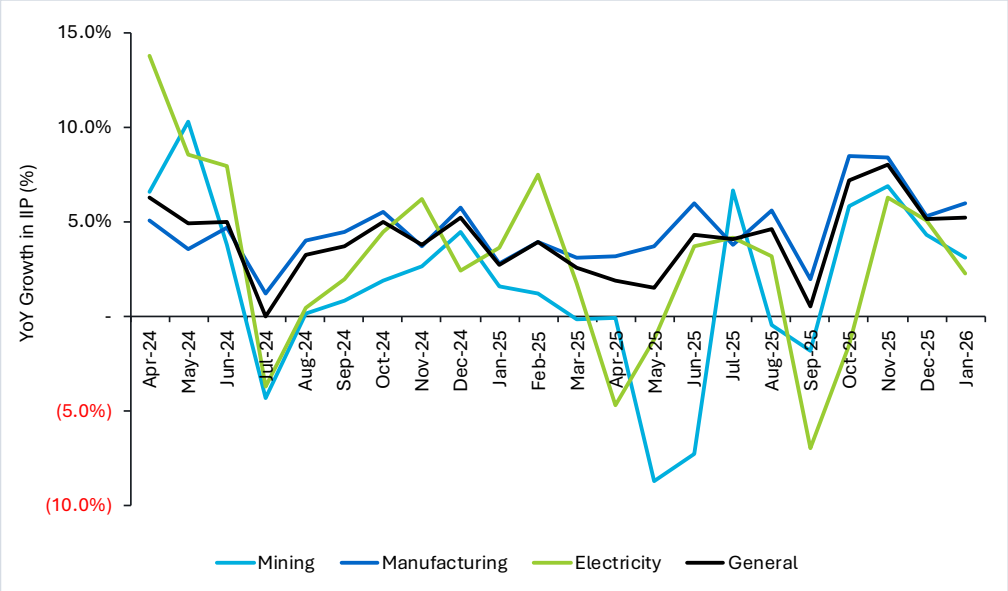
Source: Steer Analysis of MOSPI Data

4.10 While consumption and investment expenditures have continued to show consistent growth over the past two quarters, government expenditures observed a marginal decline in FY25Q4. In FY26Q1, government expenditures rebounded, recording 5.8% growth over FY25Q1 levels.

[22] Press Note on New Series of GDP Estimates

4.11 Performance across different types of industrial activities (such as Mining, Manufacturing, and Power Generation) directly impact freight movement and commercial traffic volume growth across the country, including on the Asset. In the figure below, we present growth trends in IIP – a measure that tracks the performance of the economy across these activities. As of FY26YTD (Apr'25-Feb '26), the Manufacturing sector continues to perform strongly, recording positive y-o-y growth since FY25Q3. While industrial activity across the two other sectors (i.e., Power Generation and Mining) dropped between May and Jun/Jul '25, they have since rebounded and show signs of continued growth going forward.

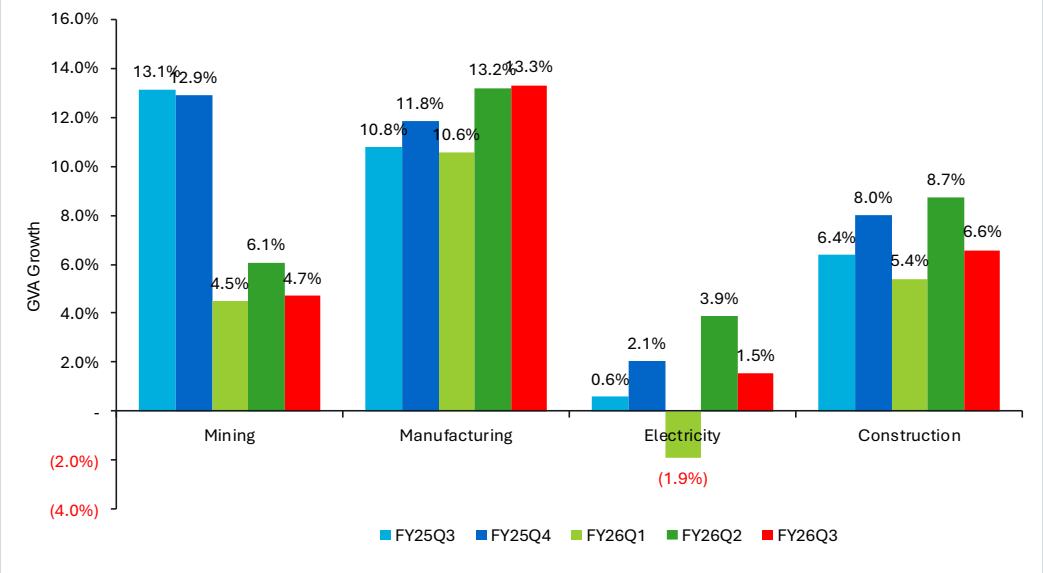
Figure 4.5: Month on Month IIP performance



Source: Steer Analysis of MOSPI Data

4.12 In addition to monthly trends in IIP, the figure below presents y-o-y growth of quarterly GVA in four industrial sectors - Mining (& Quarrying), Manufacturing, Electricity (and other Utilities), and Construction. While the Mining and Power sectors observed decline and muted growth in FY26Q1, the Manufacturing and Construction sectors experienced strong growth. While overall economic growth has remained resilient as of FY26YTD, performance across industries have varied, impacting economic growth across different regions and on the Asset as well.

Figure 4.6: Industrial components of GVA

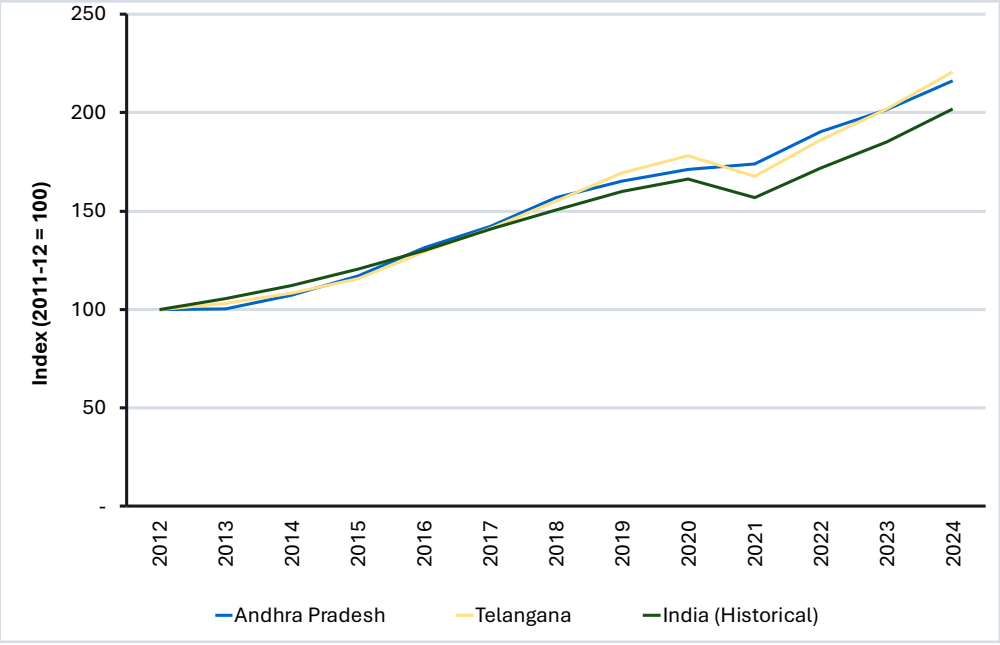


Source: Steer Analysis of MOSPI Data

GDP and GSDP Growth

4.13 The Indian economy has grown at a CAGR of 5.9% during FY12-24, aided by a strong growth in the services/tertiary sector. The economic performance of Andhra Pradesh and Telangana was weaker than the national average till FY15. However, as can be seen in Figure 4.7 below, GSDP growth of Andhra Pradesh and Telangana have outpaced national GDP growth since FY17. In FY19, Andhra Pradesh and Telangana showcased an impressive growth of 11.0% and 10.5% respectively, compared to 6.6% growth in GDP in the same period. Both the states contributed close to 4.7% and 4.5% each to the national GDP in FY24, highlighting their vital role as contributors to the country's total GDP.

Figure 4.7: Evolution of Andhra Pradesh's state GDP and national GDP



Source: Ministry of Statistics and Program Implementation (MoSPI); The years on the x-axis correspond to financial years (e.g., 2012 represents FY 2011-12).

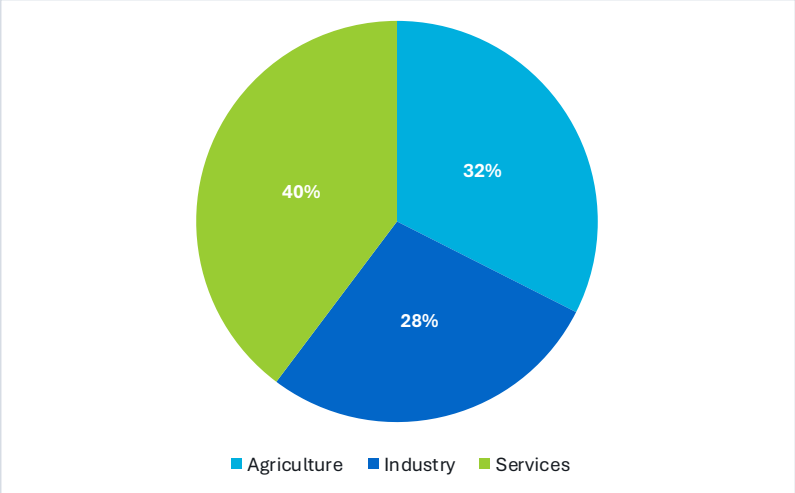
Economic activity in the state

Andhra Pradesh

4.14 As seen in Figure 4.8 below, in terms of sectoral contribution to the state GSDP, the tertiary sector (40%) has the highest share followed by the primary (32%) and secondary (28%) in FY24. As per the Socio-Economic Survey 2024–25, the Gross State Domestic Product (GSDP) of Andhra Pradesh at current prices is estimated at ₹16.06 lakh crore for the year 2024–25, reflecting a robust growth rate of 12.94% over the previous year. This expansion has been driven by balanced growth across agriculture (₹5.19 lakh crore, 15.86% growth), industry (₹3.41 lakh crore, 6.71% growth), and services (₹6.11 lakh crore, 11.70% growth). The state's per capita income for 2024–25 is projected at ₹2,68,653, significantly higher than the national average of ₹2,00,162, indicating improving living standards[23].

4.15 Andhra Pradesh has experienced rapid industrialization with the onset of major industries such as oil, petrochemical, construction (cement) and minerals sector. The state houses several cement plants such as Ramco Cements Limited, Ultratech Cement Limited, Zuari Cement Limited and Dalmia Cement (Bharat) Ltd. The state also has one of the major ports of India in the city of Visakhapatnam and two private ports in Krishnapatnam and Gangavaram. The city Vishakhapatnam also serves as a major industrial centre of the eastern coast, with several public sector undertakings (PSUs) set up. These include the Vishakhapatnam steel plant run by Rashtriya Ispat Nigam Limited (RINL), an oil refinery owned by Hindustan Petroleum, Hindustan Shipyards, as well as several defence industries as Vishakhapatnam serves as a major base for the Indian Navy.

Figure 4.8: Sectoral contribution to Andhra Pradesh GSDP (FY24)



Source: Steer Analysis of Ministry of Statistics and Program Implementation (MoSPI) Data

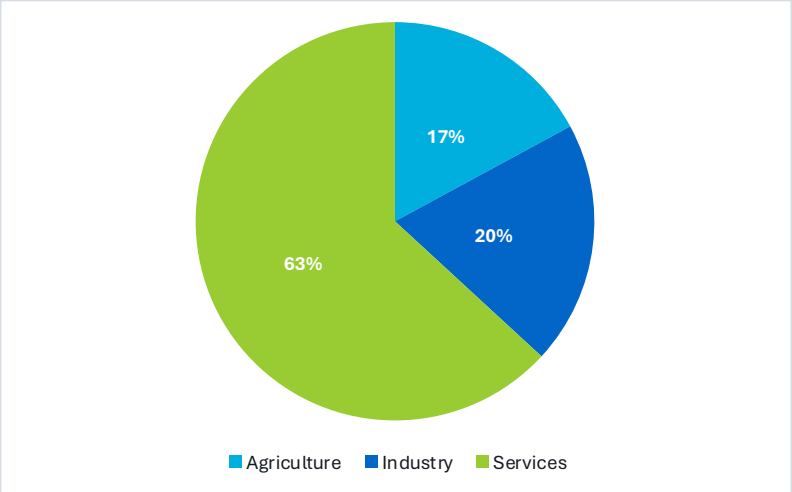
[23] AP Finance

Telangana

4.16 The state of Telangana was formed in June 2014 post the split of erstwhile Andhra Pradesh. The earlier capital city of the united state, Hyderabad, is now part of Telangana. The capital city of Hyderabad is considered a hub for information technology and pharmaceutical sectors. As seen in Figure 4.9 below, in terms of sectoral contribution to the state GSDP, the contribution of the services sector is highest (~63%) as of FY24.

4.17 In 2023–24, Telangana's Gross State Domestic Product (GSDP) at current prices was estimated at ₹14.64 lakh crore, marking an impressive growth of 11.9% over the previous year—outpacing the national growth rate of 9.1%. This growth was primarily driven by the Services sector, which contributed a significant 63% to the state's GSVA, followed by the Industrial sector at 20%, and the Agriculture and Allied sector at 17%. Key growth drivers included information technology, trade, transport, communication, and financial services, highlighting Telangana's shift toward a dynamic, service-oriented economy underpinned by proactive governance and infrastructure development.[24]

Figure 4.9: Sectoral contribution to Telangana GSDP (FY24)



Source: Steer Analysis of Ministry of Statistics and Program Implementation (MoSPI) Data

Forecasts for growth drivers

4.18 In the following section we describe our assumptions in relation to forecasts of the key macro-economic drivers of traffic growth.

National GDP

4.19 After the last period of economic slowdown in FY11-12, the country experienced an economic downturn again in late FY19 with FY20 having reported a GDP growth of 4% (relative to an average growth rate of 7% per year between FY13 and FY19). India's GDP growth declined as domestic investment and consumption demand were already under stress because of the liquidity crunch before COVID-19. Other factors that contributed to the economic slowdown included reduced growth rates in automobile sales and production, liquidity crunch in credit markets and rising number of Non-Performing

[24] tgdps.telangana.gov.in/seo-2024.pdf

Assets (NPAs) within the banking sector, as well as lower manufacturing production and lower rural consumption.[25]

4.20 The COVID-19 outbreak had a significant impact on the Indian economy during the first two quarters of FY21 as government mandated lockdowns across the country effectively stalled economic activity and growth. The growth momentum eventually picked up in Q3 of FY21, with a sharp rebound in the economy in FY22 (GDP recorded 9.7% growth over FY21) and has since observed a consistent growth of 7.6% in FY23, 9.2% in FY24.

4.21 Figure 4.10 below shows Client-provided GDP projections for India. The forecast provided expects national GDP to grow at 6.5% between FY26-FY28 and gradually tapering down to 5.2% by FY50. The India GDP growth forecast is broadly in line with other independent forecasts available from reliable sources such as IMF, World Bank and RBI in the medium term.

4.22 Based on client projections, the Gross State Domestic Product (GSDP) in both Andhra Pradesh and Telangana is expected to outpace the national growth rate in the near to medium term. However, over the long term, we anticipate their GSDP growth will gradually align with the national average as their economies and industrial systems mature and additional growth potential diminishes.

4.23 Figure 4.10 shows the forecast growth lines for GSDP of Telangana and Andhra Pradesh with the national GDP.

Figure 4.10: GDP-GSDP forecast

[25] **Data | India's GDP was on a downward slope even before COVID-19 wreaked havoc - The Hindu** (September 2020)

5 FY26 base year AADT and traffic growth analysis

Introduction

5.1 In this section, we present our approach, assumptions, and estimates for base year AADT and background traffic growth for each vehicle category on the Asset.

5.2 Traffic growth is commonly related to a variety of macro-economic and industry- or commodity-specific factors (hereafter referred to as 'traffic growth drivers'). These growth drivers are typically identified from the results of the OD data analysis and the site visits that help us appreciate the nature of traffic movement – 'what' travels 'where' and 'why'.

As part of this study, we undertook regression analyses to estimate background growth relationships between traffic and the underlying growth drivers. However, our results indicated that estimating statistically robust elasticity coefficients was not possible with the given data. We therefore undertook a detailed benchmarking exercise, coupled with trip length and OD data analyses to estimate the background growth elasticities. These are discussed in detail below.

FY26 Base year AADT estimates

5.3 The base year is the year on which long-term background forecast growth rates are applied to derive year-wise average annual daily traffic (AADT) estimates for forecast years. This is therefore an important aspect of our forecasting approach as traffic and ultimately revenue forecasts for future years are built on top of the base year traffic estimate. We have used FY26 as the base year for AADT estimates for the forecast years.

5.4 As described previously in Chapter 3, to establish the base year (FY26) traffic position, we utilised information from various sources – including from the Client, and our contextual knowledge, to assess a reasonable estimate of current demand on the corridor.

Methodology

5.5 The base traffic for FY26 has been estimated using 11 months of actual traffic data (April to February). Each toll plaza's seasonality correction factors were applied on the actual MADTs of Apr-25 to Feb-26 to obtain seasonally corrected estimates for FY26 traffic. An average of these estimates was considered to be the FY26 base traffic.

Seasonality Correction factors

5.6 Traffic on any Asset varies on a month-on-month level. Such variations maybe due to monsoons (typically Jul to Sept) or due to festivals in the region. E.g. we observe truck

traffic during the first half of the financial year (April-September) is generally lower than the annual average, mainly because of the peak summer season followed by monsoons that affect freight movement patterns in large parts of the country in the July-September period. In addition to these, there may be other seasonal variations specific to the Asset.

5.7 To normalize for these types of variations across the year to provide an AADT estimate, Seasonality Correction Factors (SCF) are used. SCFs are estimated to convert the monthly traffic numbers to an AADT level while accounting for seasonal variation due to local/national festivals, weather changes and/or temporary external impacts. These are typically estimated using historical data for each plaza, by vehicle category, and over multiple years. An SCF >1 means that the traffic for the month is lower than the annual average and vice-versa.

5.8 Table 5.1 below presents the average of FY24 and FY25 SCF used to estimate the AADT for the Asset.

Table 5.1: SCF for TP1 Madgulapally

Adopted base estimates

5.9 Based on the above methodology and inputs, the adopted base for all the three toll plazas has been shown below.

Table 5.4: Adopted AADT, TP1 Madgulapally

Vehicle category	FY25	FY26YTD	FY26A	FY26A vs FY25
CJV	7,464	8,190	8,276	10.9%
LCV	633	669	672	6.2%
Bus	790	849	845	7.0%
2A	1,215	1,319	1,334	9.9%
3A	646	660	664	2.8%
MAV	1,784	2,106	2,102	17.8%
Total	**12,530**	**13,793**	**13,894**	**10.9%**
PCUs	**22,250**	**24,629**	**24,751**	**11.2%**

Steer analysis: FY25 actual full year, FY26YTD includes 11 months (Apr-Feb) of FY25 and FY26, FY26A is estimated base for FY26

Table 5.5: Adopted AADT, TP2 Tummalacheruvu

Vehicle category	FY25	FY26YTD	FY26A	FY26A vs FY25
CJV	6,438	7,073	7,144	11.0%
LCV	615	641	647	5.1%
Bus	739	780	778	5.3%
2A	1,191	1,292	1,308	9.8%
3A	680	686	683	0.5%
MAV	2,528	2,746	2,765	9.4%
Total	**12,191**	**13,218**	**13,324**	**9.3%**
PCUs	**23,531**	**25,370**	**25,545**	**8.6%**

Steer analysis: FY25 actual full year, FY26YTD includes 11 months (Apr-Feb) of FY25 and FY26, FY26A is estimated base for FY26

Table 5.6: Adopted AADT, TP3 Elchuru

Vehicle category	FY25	FY26YTD	FY26A	FY26A vs FY25
CJV	3,330	3,685	3,698	11.0%
LCV	452	505	508	12.3%
Bus	395	440	443	12.0%
2A	931	1,015	1,027	10.4%
3A	570	611	608	6.5%

Vehicle category	FY25	FY26YTD	FY26A	FY26A vs FY25
MAV	1,912	2,144	2,166	13.3%
Total	**7,590**	**8,401**	**8,449**	**11.3%**
PCUs	**15,828**	**17,517**	**17,638**	**11.4%**

Steer analysis: FY25 actual full year, FY26YTD includes 11 months (Apr-Feb) of FY25 and FY26, FY26A is estimated base for FY26

5.10 From the above tables we observe that all three TPs exhibit similar trends at a PCU level when comparing FY26A values with FY25 AADT. Positive growth at a PCU level is expected on all three toll plazas with the highest at TP3 (11.4%), followed by TP1 (11.2%) and TP2 (8.6%). The growth is expected to be driven primarily by an increase in CJVs, 2As, and MAVs due to growth in inter-city personal travel between the urban centres along the Asset alignment, Hyderabad and Guntur/Vijayawada regions, as well as construction activity linked commercial transportation of cement from the cement clusters near the Asset to surrounding nearby consumption centres as well as destinations further away.

5.11 On TP1, MAV growth is significantly influenced by its strategic connectivity for freight traffic between the key economic centres of Hyderabad and Chennai. A substantial portion of this commercial traffic involves the transportation of manufactured goods, including automobile components moving between North India and Chennai. Furthermore, cement truck movement towards Hyderabad contributes to the growth in commercial traffic at TP1 as well. The growth of 2A and MAV traffic on TP2 is driven by increasing consumption demand from regions such as Guntur, Chennai, and Hyderabad. TP3, despite having lower MAV volume, experiences growth driven by robust long-distance commercial traffic (specifically between North India and Chennai). This was further aided by truck volumes transporting construction materials from northern cement clusters along the Asset to consumption centers in Ongole, Nellore, Chennai, and other parts of South India.

5.12 2A growth has been robust at all three plazas. While 3A volumes have declined on TP2 and TP3, TP1 has observed growth, owing to higher volume of construction/mining-related traffic traveling towards Nalgonda.

Estimation of background elasticities

5.13 Elasticities, in the case of traffic growth, are the relationships between traffic growth and the growth in growth drivers of traffic. Multiplied with forecasts of growth drivers like GDP or GSDP, they provide the forecasts of background traffic growth rates.

5.14 In terms of selecting growth drivers for different vehicle types, we have assumed state GSDP as the key growth driver for the CJVs and Buses given that this type of traffic is generally driven by local economic activity in cities and the state containing the Asset.

5.15 For the heavier commercial vehicles such as 2As, 3As, and MAVs (that generally ply long-distance routes), we assume national GDP as the key growth driver of traffic as growth in these types of commercial vehicles is influenced by nationwide economic cycles and inter-state market dynamics that are better captured by GDP growth trends of a much larger geographic extent than the immediate state(s) within which the Asset is located.

5.16 Table 5.7 below presents the growth drivers identified to model the forecast background traffic growth rates.

Table 5.7: Identified growth drivers to model traffic growth

Vehicle type	GDP India	GSDP AP	GSDP Telangana
Car		50% (All plazas)	50% (All plazas)
LCV		50% (All plazas)	50% (All plazas)
Bus		50% (All plazas)	50% (All plazas)
2A	100% (All plazas)		
3A	100% (All plazas)		
MAV	100% (All plazas)		

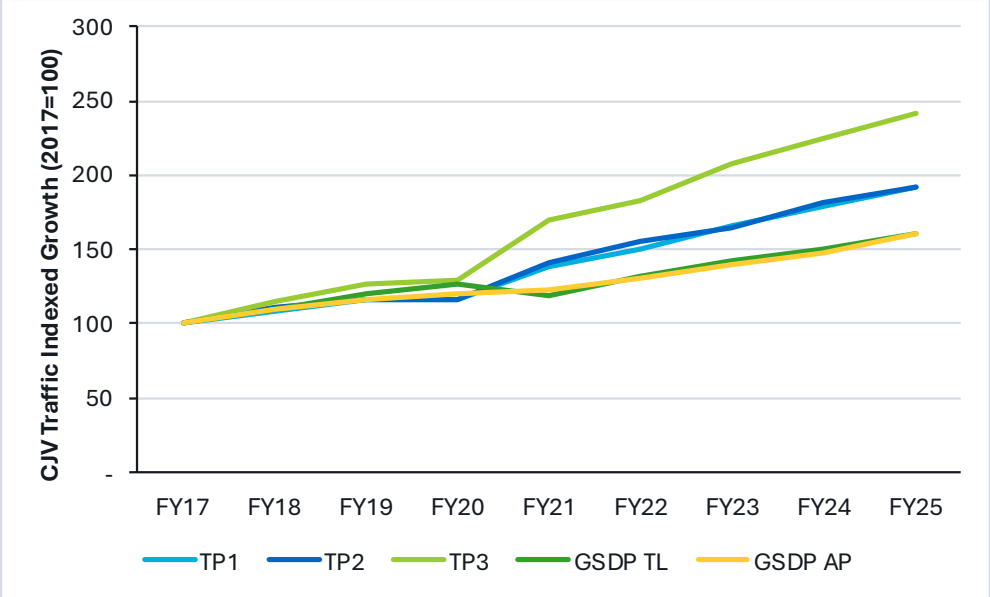
Source: Steer analysis of OD data

5.17 The recent historical period of tolling has had significant variations in traffic growth between years for certain vehicle types, impacts due to the effect of COVID-19 pandemic and the ban on illegal sandmining[15], especially for commercial vehicles. Therefore, only a few unaffected years were available for the regression analysis. This is one of the reasons for differences between the derived and assumed elasticities.

CJV

5.18 We see from the OD data that the CJVs on the Asset primarily cater to regional movements between Hyderabad, Guntur, Ongole and other towns lying on or near the Asset. We have therefore taken average GSDP growth rate between AP and Telangana to be the growth driver to model the growth of CJV traffic. Figure 5.1 below shows the relationship between indexed values of CJV traffic and AP and Telangana GSDP.

Figure 5.1: Relationship between CJV traffic and AP-Telangana GSDP



Source: Steer analysis of Client TMS data and publicly available GDP/GSDP data

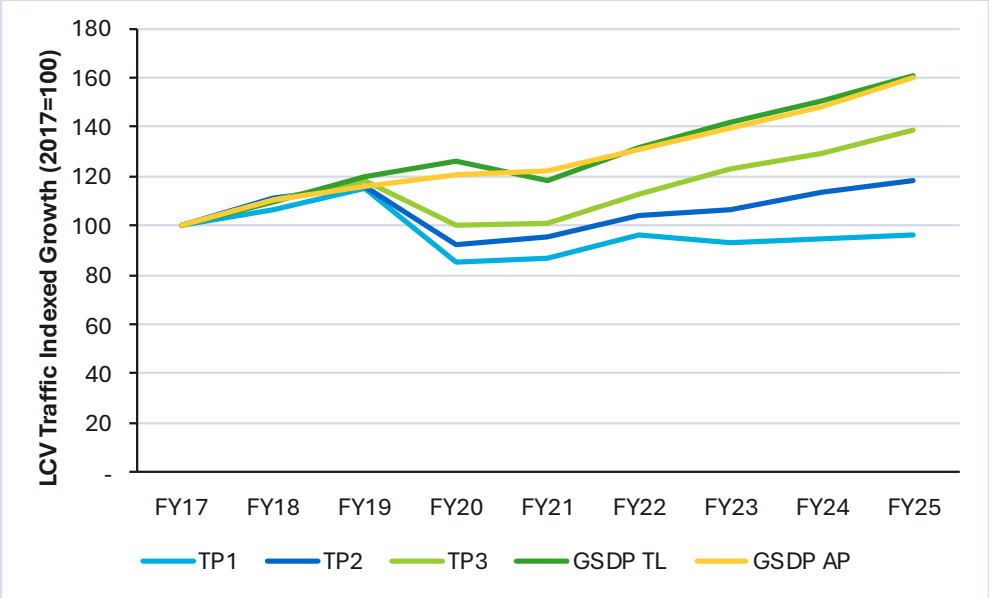
5.19 Generally, we would expect that in fast-growing economies with relatively low car ownership levels, car traffic growth rates are often in line with or slightly higher than growth in GSDP/GDP (i.e., suggesting elasticities at or just above 1.0). Further, there is an expected increase in car ownership proportion of overall population as the economy grows. This assumption is very contextual and subject to change as there are changes in economic policies of government and overall economic stability nationally and globally.

5.20 Historically, the CJV traffic on the Asset has shown strong growth throughout with the FY18-FY25 period showing over 10% CAGR in the category. The regression analysis suggests that between FY17 and FY25 traffic has grown with a background growth elasticity of approximately 1.5 (TP1), 1.5 (TP2) and 2.03 (TP3) with respect to GSDP of Telangana and Andhra Pradesh. Taking note of the positive outlook for passenger traffic on the Asset, driven by improved connectivity for business and leisure trips, and a benchmark toll road in the region, we have assumed a forecast background elasticity of 1.1 for CJVs on all plazas going forward.

LCV

5.21 In comparison to heavier commercial vehicles such as 3As and MAVs, LCVs have more regional movements within the state (i.e., AP and Telangana in this case) as seen in the OD data analyses above. More than 55% and up to approx. 80% of LCVs have trip ends in either Andhra Pradesh or Telangana. We have therefore taken GSDP of AP-Telangana to be the growth driver to model growth of LCV traffic on the Asset. Figure 5.2 below shows the relationship between indexed values of LCV traffic and AP-Telangana GSDP.

Figure 5.2: Relationship between LCV and AP-Telangana GSDP



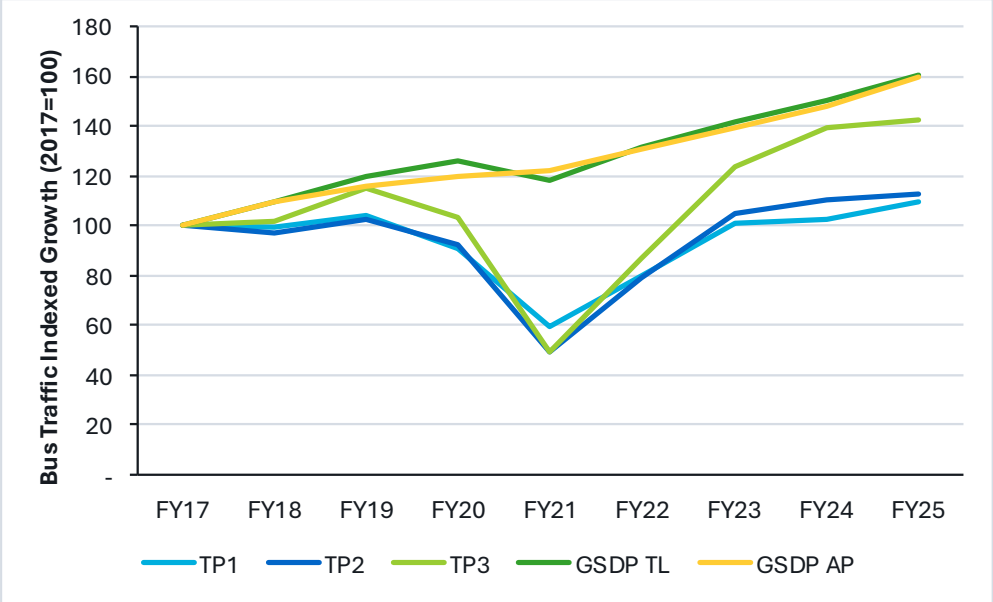
Source: Steer analysis of Client TMS data and publicly available GDP/GSDP data

5.22 Regression analysis suggests that when observing growth between FY17 and FY25, LCV showed an elasticity of 1.37 (TP1), 1.39 (TP2) and 1.39 (TP3) with respect to GSDP AP-Telangana.

Bus

5.23 Figure 5.3 shows the relationship between indexed values of bus traffic and AP-Telangana GSDP.

Figure 5.3: Relationship between Bus traffic and AP-Telangana GSDP



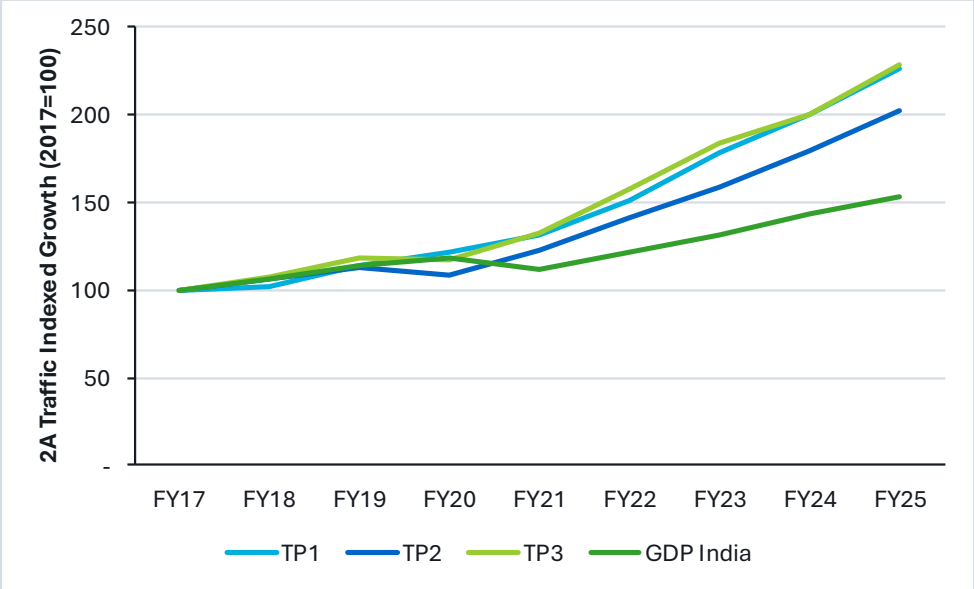
Source: Steer analysis of Client TMS data and publicly available GDP/GSDP data

5.24 Bus growth tends to be largely supply-driven in many parts of the country, with new buses being bought and deployed by the government at intervals of time. Based on our experience across the country, buses on inter-urban corridors in South India show moderate elasticities of 0.4 to 0.6. Despite a sharp drop in FY21 due to COVID-19, the regression results show elasticities in the range of 0.2 on the Asset. Based on the regression results and considering benchmarks, we have therefore assumed an elasticity of 0.4 at TP1 and 0.6 at TP2 and TP3, with respect to GSDP of AP-Telangana in our model.

2A

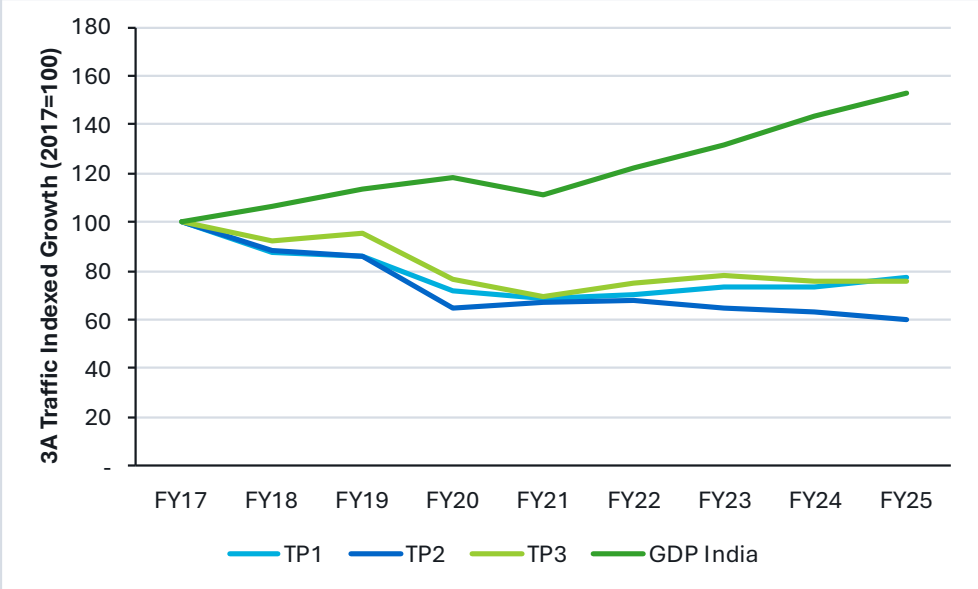
5.25 2A, 3A and MAV trucks have more national or long-distance movements covering several states. Given that manufacturing-related commodities tend to take prominence in their commodity distribution, traffic growth in commercial vehicles are dependent on industry demand-supply ecosystems spread across the country. We have therefore taken GDP as the key growth driver to model the traffic growth in 2As. Figure 5.4, Figure 5.5 and Figure 5.6 show the relationship between indexed values of 2A, 3A and MAV traffic respectively and India's GDP.

Figure 5.4: Relationship between 2A and India GDP



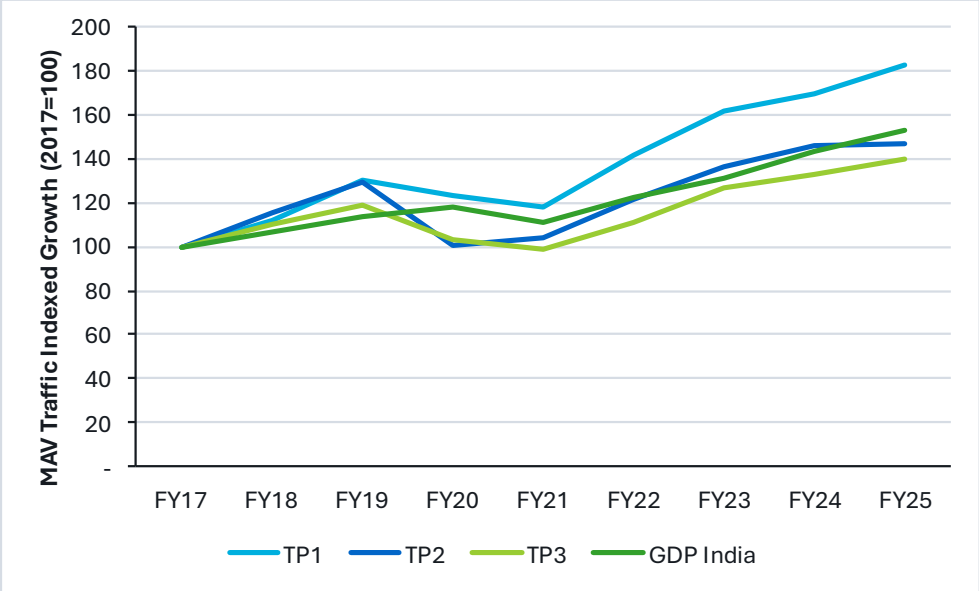
Source: Steer analysis of Client TMS data and publicly available GDP/GSDP data

Figure 5.5: Relationship between 3A combined traffic and India's GDP



Source: Steer analysis of Client TMS data and publicly available GDP/GSDP data

Figure 5.6: Relationship between MAV combined traffic and India's GDP



Source: Steer analysis of Client TMS data and publicly available GDP/GSDP data

5.26 Regression analysis suggests that when observing growth between FY17 and FY25, LCV showed an elasticity of 2.15 (TP1), 1.78 (TP2) and 2.11 (TP3) with respect to GSDP AP-Telangana. However, in our model we have assumed an elasticity of 0.80 going forward for 2A Trucks.

5.27 Historically, though 3A+MAV combined traffic experienced declines in FY21, they have exhibited strong growth since FY22. Analysis of historical data shows strong MAV growth on the Asset contrasting with flat or negative 3A traffic in recent years. We project slower 3A growth than MAVs due to an ongoing shift of 3-axle traffic towards MAVs, as discussed in paragraph 3.7. This preference for MAVs in long-distance transport is driven by their greater load capacity, leading to economies of scale and reduced costs. However, 3A trucks are not expected to disappear entirely, as specific goods or transport needs will likely continue to favour them.

5.28 Based on the above points, as well as the indicative results obtained from the regression analyses, we have assumed elasticities of 0.20 and 0.90 for 3A and MAV trucks (respectively), with respect to India GDP growth.

Forecasts for background elasticities

5.29 Table 5.8 below presents a summary of the results of the regression analysis carried out on the historical toll plaza data and the macroeconomic (GDP/GDSP) growth, along with the assumed forecast elasticities for background traffic growth.

Table 5.8: Derived elasticities from regression analysis and assumed forecast elasticities for background growth

Vehicle type	Growth driver	History		Forecast	
		Derived elasticity	Years considered	Assumed forecast elasticity	Evolution of elasticity
TP1 Madgulapally					
CJV	GSDP AP-Telangana	1.50	FY17 to FY25	1.10	Reducing from 1.1 to 1.0 FY30 onwards

6 Forecast: Network overlays and forecasts

Introduction

6.1 Following the discussion on our forecast of background growth rates in the previous chapter, this chapter first covers the forecasting assumptions around the base year AADT. Thereafter, we present our assumptions around potential network impacts on traffic growth, Asset toll segmentation, trip factors and evolution of toll rates for the forecast period which are used to forecast revenues as derived from forecast traffic. In the final section, this chapter summarises traffic growth rates for the forecast years.

Analysis of network/developmental impacts

6.2 This section details the network-related, or other developmental impacts which we believe would affect traffic growth on the Asset during the concession period. To assess these types of impacts on the Asset, whether positive or negative, we have reviewed existing and planned network-related developments (e.g., alternate roads, feeder roads) as well as other commercial developments in the Asset's vicinity and surrounding road network. Figure 6.1 below shows the road network surrounding the Asset.

Figure 6.1: Alternate routes and Asset route shown against the regional network context

Source: Steer analysis and cartography

Impact of Surat-Solapur-Chennai Expressway

6.3 The Surat-Solapur-Chennai expressway is progressing in its development (**refer to paragraph 2.16**). This expressway, once completed, will pass through 6 major states, including Gujarat, Maharashtra, Karnataka, Andhra Pradesh, Telangana and Tamil Nadu.

6.4 Two sections; Surat-Ahmednagar, and Akkalkot-Mahbubnagar, are planned as greenfield alignments, while the rest of the corridor includes brownfield upgrades of existing national highways. The impact of this network development has been split into two separate impacts in our analysis, based on in-scope markets for long-distance traffic currently observed on the Asset. This distinction is done on the following basis on the Traffic destined to Chennai, originating from areas in Solapur and west of Solapur.

6.5 **For in-scope market (Solapur/west to Chennai),** the proposed upgrades of Solapur bypass on NH50, along with the upgrade of Solapur-Kurnool-Kadapa-Tirupati-Chennai sections of the proposed expressway will improve the route's overall attractiveness for traffic generating from Solapur/west and Chennai/nearby regions.

6.6 No official information is available to definitively say when this project will be completed. However, different sources suggest the project may be completed by the mid of 2026 i.e., FY27Q2. We believe a more realistic timeline for its completion is FY28 given the size and complexity of this project.

6.7 Based on our GJC-based diversion analysis, we estimate a negative diversion on the Asset route once the expressway will be completed and opened to the public, as summarised by Table 6.1 below.

Table 6.1: Impact due to greenfield Surat-Chennai expressway (Solapur/West)

Impact of Nagpur Vijayawada Expressway

6.8 As discussed in Chapter 2, the 457 km long Nagpur – Vijayawada Expressway is being developed by National Highways Authority of India (NHAI) under the Bharatmala Pariyojana Project. While unofficial external sources suggest operationalization by FY29, the project's considerable scale and complexity lead us to incorporate a more conservative estimate. Accordingly, we have assumed project completion by FY30.

6.9 The proposed alignment of the same is shown in Figure 6.2 below.

Figure 6.2: Impact due to Nagpur Vijayawada Expressway

Source: Steer analysis and cartography

6.10 The establishment of the proposed Nagpur-Vijayawada expressway will introduce a new competitive route for north-south (NH-44) traffic generated from Nagpur and North and South of the Asset on NH-16 currently part of the Asset's long-distance demand. We believe, the development of this expressway is anticipated to negatively impact the Asset's traffic. Based on our GJC-based diversion analysis, we have estimated a negative diversion on the Asset route, summarised by the Table 6.2 below.

Impact of Hyderabad Regional Ring Road

6.11 The Hyderabad Regional Ring Road (RRR), a planned 330+ km highway situated outside the existing Outer Ring Road (ORR), aims to streamline long-distance traffic flow around Hyderabad. By connecting key towns and growth centres, it will serve as a crucial bypass, allowing vehicles to access southern regions efficiently, thereby reducing travel time and alleviating congestion.

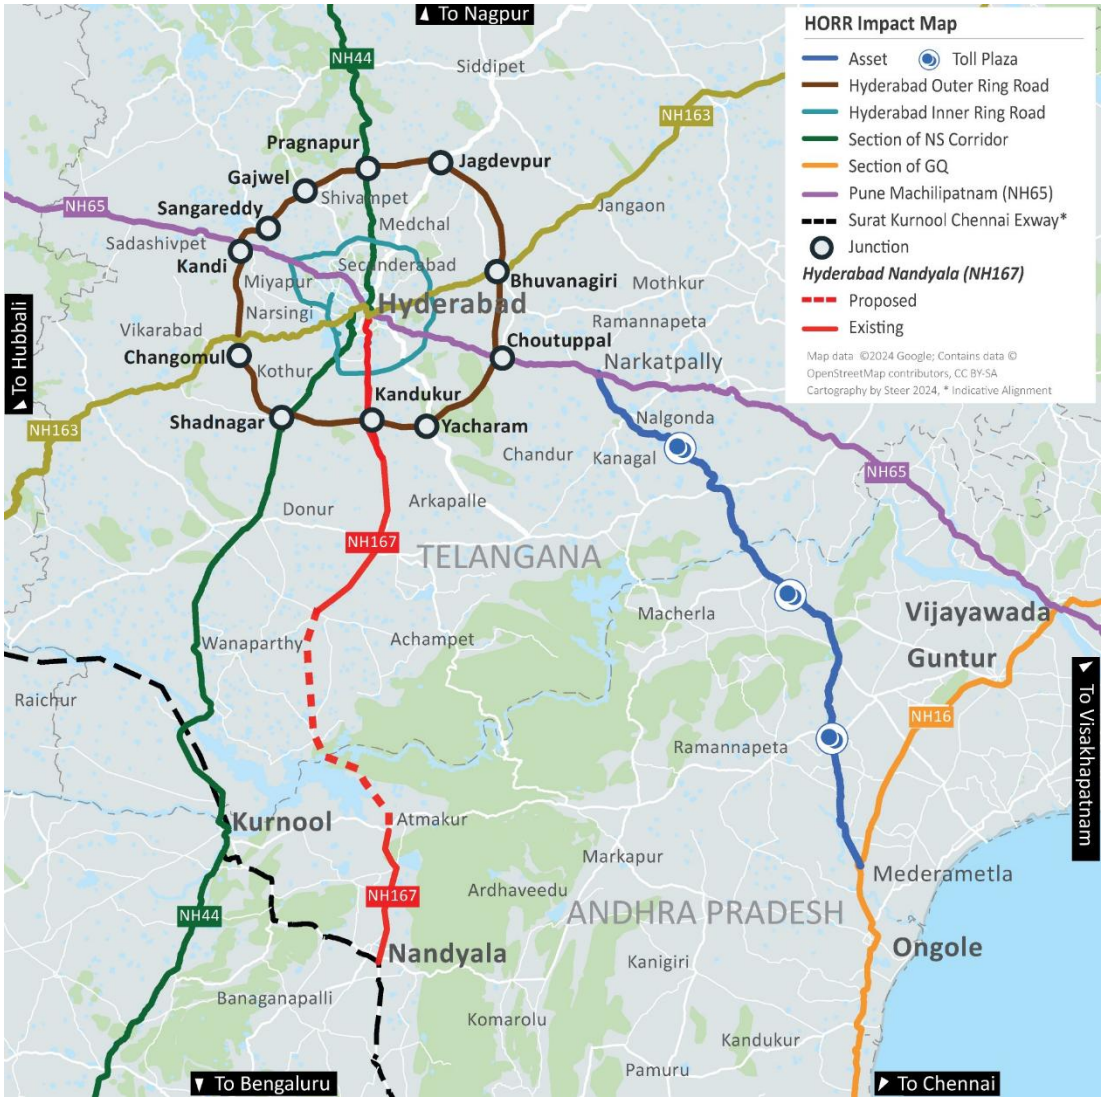
6.12 This expressway is projected to be developed in two parts, as follows:

- The northern section, which is around 164 km long and will connect Sangareddy, Narsapur, Toopran, Gajwel, Yadadri, Pragnapur, Bhongir, and Choutuppal.
- The southern half will connect Choutuppal, Ibrahimpatnam, Kandukur, Amangal, Chevella, Shankarpally, and Sangareddy.

6.13 As per the latest updates, the northern section of the Hyderabad Regional Ring Road has received environmental clearance and is presently in the bidding stage, while the Detailed Project Report for the southern section is under preparation[26]. The project is being carried out under a PPP model. The proposed alignment of the same is shown in Figure 6.3 below.

[26] Rs 34,367 Crore Hyderabad Regional Ring Road: Northern Section Gets Environmental Clearance; DPR For Southern Stretch In Progress

Figure 6.3: Impact due to RRR



Source: Steer analysis and cartography

6.14 We expect the RRR will positively impact traffic growth on the Asset from FY31 onwards (i.e., post it's assumed completion date). This can be explained as follows:

1. For this development, the in-scope traffic includes traffic moving from Hyderabad/North and Chennai/south which are currently using the Asset. This proportion represents traffic that is originating north of Hyderabad and is bound to regions between Chennai and Ongole.
2. Assuming some traffic shifts to the Nagpur–Vijayawada Expressway upon its expected FY29 completion, we anticipate a portion to return to the Asset by FY31 once the RRR is operational. That traffic will choose either to remain on the Nagpur–Vijayawada Expressway, or to use the RRR up to Chottupal, rejoin the Asset, and continue south toward Ongole.
3. Since the RRR will provide improved LoS on this route (i.e., enabling vehicles to avoid entering Hyderabad to access the NAM Asset), we believe an incremental proportion of 2As, 3As, and MAVs (~2.5%) will return to the Asset post the completion of the RRR.

6.15 Based on our GJC-based diversion analysis, we estimated a positive diversion on the Asset route, summarised by the Table 6.3 below.

Table 6.3: Impact due to RRR

Vehicle type	FY31	FY33 onwards
Staging	*80%*	*100%*
	TP1	
2A	3.0%	3.8%
3A	1.5%	1.9%
MAV	2.0%	2.5%
	TP2	
2A	3.1%	3.8%
3A	1.5%	1.8%
MAV	1.5%	1.9%
	TP3	
2A	3.9%	4.9%
3A	1.6%	2.1%
MAV	2.0%	2.4%

Source: Steer analysis of OD data, client TMS data and publicly available information

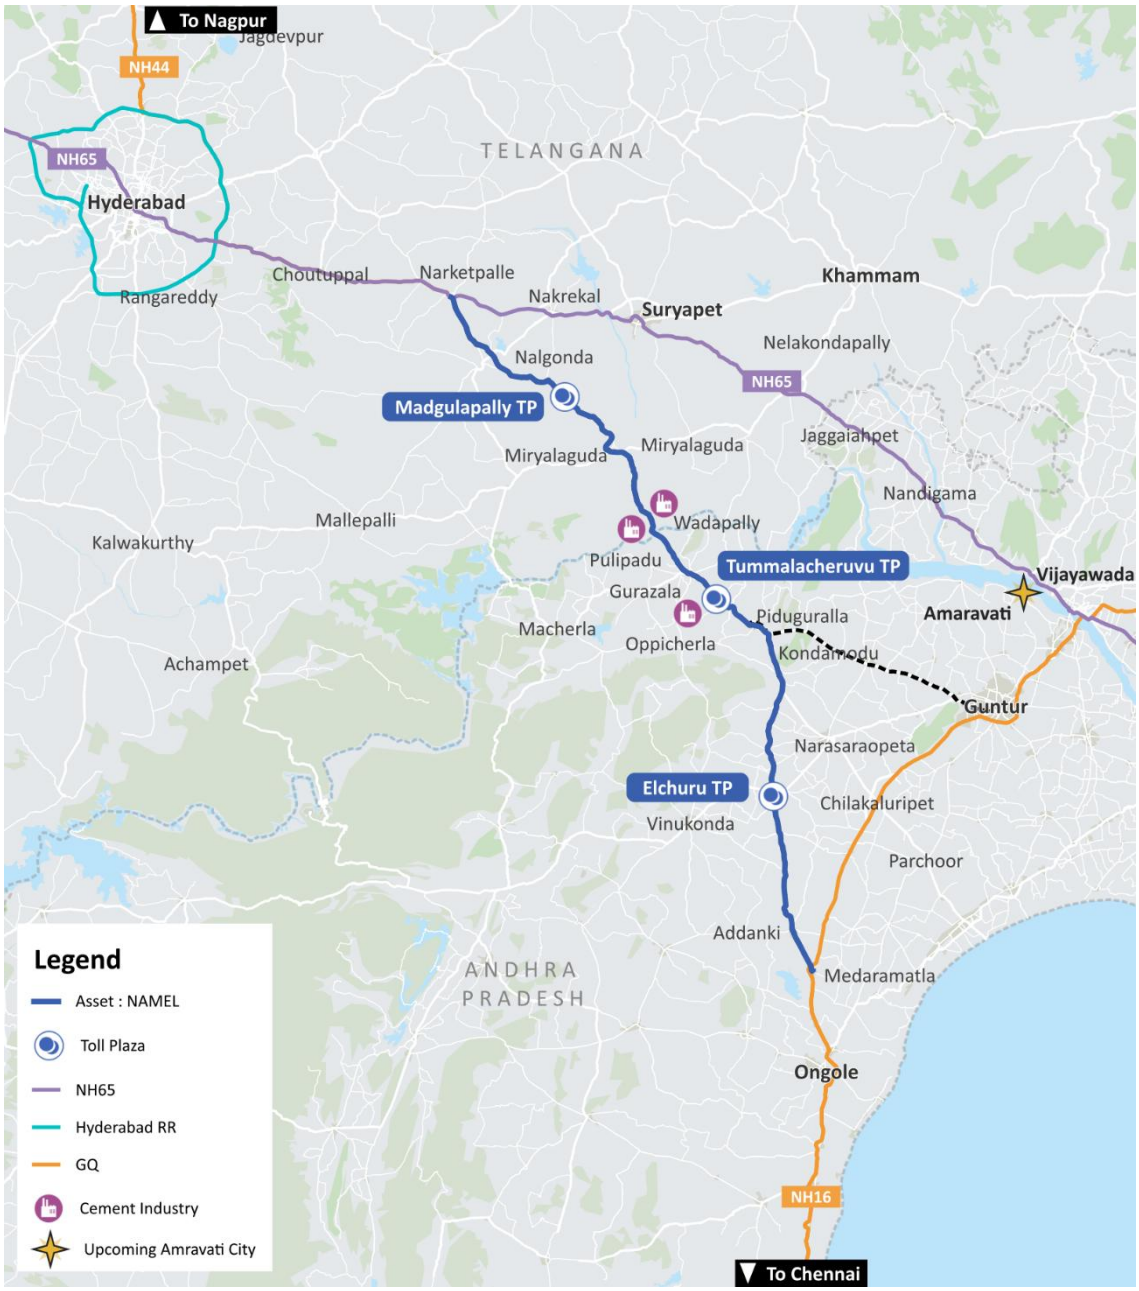
6.16 Additionally, the upgradation of the NH167K is also underway. NHAI is also developing Kalvakurthi to Karivena greenfield section. The existing 2-lane sections between Hyderabad to Kalvakuthi and Atmakur-Nandyal will be upgraded to 4-lane configuration, which includes a greenfield upgrade of the middle section of the development near Krishna River (close to Boravelle). Our current study does not factor in the NH167K development due to the unavailability of detailed information regarding its alignment and anticipated completion date. While this new route could influence traffic on the Asset and potentially serve as an alternative for traffic heading south from north of Hyderabad, any such impact is considered to overlap with the effects of the Nagpur–Vijayawada Expressway, which we have already accounted for in our forecasts.

Impact of Amaravati-Led Induced Demand

6.17 Following the Andhra Pradesh-Telangana state division, Amaravati is being established as the new administrative capital of Andhra Pradesh. The city's master plan includes a 217 sq km urban area with state-of-the-art infrastructure such as broad arterial roads, dedicated zones for governance, education, and finance, and smart city features like underground utility corridors and high-speed public transport. The government has relaunched construction with a massive ₹43,000 crore investment, targeting key projects including the High Court, Secretariat, Assembly, and residences for government officials. The city is also expected to host economic hubs to attract industries and global investors, supported by a land pooling model that integrates local farmers into the development

process. Amaravati aims to become a global capital city with sustainable urban planning and robust economic infrastructure.[27]

Figure 6.4: Impact of Amaravati Induced Demand



Source: Steer analysis and cartography

6.18 The development of the city is projected to influence the Asset in the following ways:

- Proximity to cement clusters suggests that these clusters will likely serve the construction needs of the developing city, a factor relevant to the Asset, particularly TP2.

[27] Amaravati Capital City Project revived: CM Chandrababu Naidu's global vision greenfield capital city's construction relaunched - India Today

- Upon completion, the city is expected to generate increased travel demand, which will positively impact traffic volumes on the Asset.

6.19 Based on our analysis, we estimated a positive impact on the Asset route, summarised by the Table 6.4 below.

Table 6.4: Impact due to Amaravati Induced Demand

Vehicle type	FY28	FY29 onwards
Staging	*80%*	*100%*

Revenue forecasting assumptions

6.20 To forecast the revenues for a particular financial year, the traffic forecast for each vehicle type is converted into tickets sold, which is then multiplied with the corresponding toll rate, which grows over the years as defined in the Concession Agreement. While "trip factors" provide the conversion factor to the former, i.e., traffic (trips) to tickets sold, "toll segmentation" provides the latter i.e., the breakup of trips paying each ticket type. This section discusses assumptions related to trip factors, toll segmentation and toll rates for the forecast period.

Toll evolution

6.21 Based on the concession agreement and the gazetted toll notification, we understand that base toll rates increase every two years (revision month is March) based on WPI-linked inflation. These are rounded up to the nearest five decimals to estimate the final toll rate charged to users.

6.22 We have used actual toll rates from the FY26 toll notifications and FY27 WPI to validate the modelling of future toll evolution of the Asset (and its individual toll plazas). WPI-linked toll growth was calculated based on the Client's WPI forecasts, as shown in the Table 6.5 below. These forecasts provided by the Client expect the Indian WPI to grow at an average of 4.2% between FY25-FY51. The WPI forecasts available from other independent forecasting agencies may vary from this assumption and could be lower or higher than that provided by the client.

Table 6.5: WPI growth forecast assumptions

Financial year	WPI growth (%)
FY26	2.57%
FY27	0.96%
FY28	5.0%
FY29	5.1%
FY30	4.9%
FY31	4.4%
FY32 onwards	4.1%

Source: FY27 onwards WPI print as per client inputs

Toll segmentation and trip factors

6.23 We have analysed the historical TMS data split by ticket categories, to understand toll segmentation trends, as presented in Chapter 3. As per the historical analysis we observed that the ticket segmentation of the Asset had progressively stabilised over FY22-FY25YTD period after two external events resulted in large variations prior to FY22 i.e., the COVID-19 pandemic and FASTag implementation. Therefore, the FY25YTD ticket segmentation provide us with a stable toll segmentation which can be used for forecasting purposes.

6.24 For the traffic and revenue forecast, we assume that the ticket segmentation observed in FY26 YTD—specifically April 2025 to February 2026 —provides a reasonable assumption for long-term average segmentation. Our future toll segmentation profiles by vehicle type and across all three toll plazas on the Asset are presented in Table 6.6 through Table 6.8 below.

Table 6.6: Toll segmentation for the forecast years for TP-1

Ticket Type	CJV/MLCV	LCV	Bus	2A	3A	MAV

6.25 Trip factors are used to calculate the revenue for the trips made on passes such as return, local personal, monthly passes. The trip factors assumed are based on the latest FY25YTD data available and listed in the Table 6.9, Table 6.10 and Table 6.11 below:

Table 6.9: Trip factors for the forecast years at TP 1

	CJV/MLCV	LCV	Bus	2A	3A	MAV

Local personal	45	45	45	45	45	45
Return 2	2	2	2	2	2	2

Source: Steer analysis of Client TMS data

6.26 Please note that the category Exemptions as reported in the TMS data includes local cars that are exempt from paying on this Asset. This assumes that further changes in toll categories, unless specific discounts are offered, are unlikely. For trips through ETC, especially the return trips, the trip factors input into the model calculations is 2.

Revenue reconciliation

6.27 As part of validating the data provided by the Client, as well as our assumptions around toll calculations, we have reconciled the actual reported revenue on a monthly level for the Asset. To reconcile we have used the FY26YTD segmentation, FY26YTD ADT and compared it with the reported revenue for the year. The exercise was undertaken at an annual level. The comparison, as shown in Table 6.12 below, depicts the modelled revenue vs the reported revenue difference, and the difference lies within 2%, this gives us the confidence in the assumptions around segmentation and trip factors for future forecast purposes.

Table 6.12: FY26 Revenue reconciliation summary (INR Lakhs)

Asset	Modelled	Actual	Difference (%)
	FY26YTD	FY26YTD	
TP1	28.4	28.1	1.0%
TP2	33.2	33.1	0.4%
TP3	25.6	25.6	0.1%

Traffic and Revenue forecasts

6.28 Based on the traffic and revenue-related forecast assumptions discussed above, we have modelled the traffic and revenue forecasts for the concession length of the Asset. The tables below present the AADT/PCU and revenue forecast growth rates and CAGRs on this Asset. Further, Appendix A presents the detailed AADT and revenue forecasts for the Asset over the full concession period.

Upside and Downside cases

Upside and Downside scenario assumptions

6.29 We have developed our base case scenario considering a balanced view on the risks associated with input assumptions around GDP growth and traffic growth elasticities. There is always a risk that the outturn values of these inputs will vary as compared to the assumptions taken due to exogenous impacts, e.g. GDP growth could be influenced both positively and negatively by the impact of monsoons, export-import balances, political changes etc.

6.30 Similarly, traffic growth elasticities could be influenced by increased efficiencies achieved by technology, large shifts in commodity prices globally, changes in local manufacturing practices. However, at this stage we consider that the base case represents a central case scenario given the risks of variation of input assumptions.

6.31 To account for the possible variations in the growth drivers, we are also presenting an Upside (optimistic) and a Downside (pessimistic) scenario. These scenarios are defined by the following variations from the base assumptions:

Table 6.25: Summary of Macro-economic Assumptions for upside and downside cases

Input	Upside	Downside
Macro Assumptions		
GDP/GSDP	+1% every year	-1% every year

6.32 Further, network developments are highly dependent on governmental directions, policies, legal and financial measure which might result in early or delayed completion of developments. Therefore, we have included an Upside (optimistic) and a Downside (pessimistic) case. However, at this stage, we consider that the base case represents a central case scenario given the risks of variation of input assumptions.

Impacts-Upside Case

6.33 The upside case impacts included in forecasts are summarised in Table 6.26 below.

Table 6.26: Summary of impacts on the Assets

	Year of Impact		Magnitude of impact		
			TP1 Madgullapally	TP2 Tummalacheruvu	TP3 Elchuru
Surat Chennai Expressway	FY28 (25%), FY30 (100%)	+25% of base case	CJV: (0.2%) LCV: (3.5%) 2A: (3.6%) 3A: (4.5%) MAV: (5.5%)	CJV: (0.3%) LCV: (3.6%) 2A: (3.6%) 3A: (4.4%) MAV: (4.1%)	CJV: (0.6%) LCV: (4.6%) 2A: (4.6%) 3A: (5.0%) MAV: (5.3%)

Upside and Downside Case Forecasts

6.35 Table 6.28 below presents the difference between the Upside and Downside Case forecasts relative to the Base Case forecasts in FY40 (i.e., the concession end year) for all three Asset toll plazas. **Error! Reference source not found.** through **Error! Reference source not found.** below plot the Upside and Downside Case forecasts relative to the Base Case forecasts for each Asset toll plaza over the full concession period (FY26-FY40).

Table 6.28: Percentage Difference Upside and Downside Case Forecasts vs. Base Case Forecasts - FY40

Case	Measure	TP1 Madugulapally	TP2 Thummalacheruvu	TP3 Elchuru
Upside Case	Traffic (PCU)	26.5%	26.5%	28.2%
Downside Case		(19.1%)	(19.1%)	(20.2%)
Upside Case	Revenue	43.0%	42.3%	44.5%
Downside Case		(28.5%)	(28.2%)	(29.4%)

Summary outlook

6.36 Overall, passenger traffic on the Asset has a mix of regional movement between Hyderabad, Chennai, Ongole and other urban/semi-urban locations lying along the Asset alignment. Goods traffic on the Asset are driven by regional industries such as cement clusters near the Asset as well as manufacturing plants further away (such as automotive manufacturers in Tamil Nadu). There is also significant short to medium-distance movement of trucks carrying agricultural goods such as rice, chillis and tobacco.

6.37 The states of Andhra Pradesh and Telangana have both shown great focus on enhancing their respective industrial sectors while also establishing themselves as key IT hubs to foster a favourable environment for start-ups and tech-driven businesses (as observed in Hyderabad in Telangana, and as is intended for the city of Amravati in Andhra Pradesh). Several other investments in sectors like textiles, petrochemicals and food processing have also been made to boost economic growth in these states.

6.38 The two states have also invested heavily in strategic infrastructure development aimed at boosting trade and commerce by improving connectivity via roads and ports[28][29][30]. All these events are expected to positively influence traffic growth on the Asset going forward.

6.39 The impacts considered while forecasting include the onset of the Surat-Solapur-Chennai expressway, the Nagpur-Vijayawada expressway, combined net impact of the Hyderabad Regional Ring Road in conjunction with the NH167k upgrade between Hyderabad and Nandyal, and finally, the demand induced by Amaravati super city development in AP.

6.40 The forecasts overall translate to stable PCU growth rate CAGRs of 4.5%, 4.6% and 4.2% per year at TP1, TP2 and TP3 (respectively) between FY26 and FY40, and we expect these growth rates to sustain over the long-term after considering all network related impacts in and around the Asset's surrounding road network. Hence, reflecting the robustness of the underlying growth drivers of travel demand on the Asset.

B Top OD Pairs

B.1 Further to the OD analysis presented in Chapter 3 this appendix presents the top 10 OD pairs at each toll plaza. Please see this data for both CJVs and MAVs and OSVs combined below.

TP1

Table B.1: CJV and Bus top 10 OD pair shares at TP1

	OD Pair	Share
1.	Tipararthi-Nalgonda-Narketpalle - Mirayalguda	25.8%
2.	Hyderabad City - Mirayalguda	19.8%
3.	Guntur - Hyderabad City	10.6%
4.	Ongole - Hyderabad City	4.3%
5.	Chennai City - Hyderabad City	4.1%
6.	Krishnapatnam port - Hyderabad City	2.1%
7.	Bapatla-Chirala - Hyderabad City	2.1%
8.	Guntur - Tipararthi-Nalgonda-Narketpalle	2.0%
9.	Vijayawada South City - Hyderabad City	1.8%
10.	Guttikonda-Janapadu-Pidiguralla-Anupalem - Hyderabad City	1.5%

C Data Collection Exercise

C.1 In order to validate and inform various inputs used in our forecasting, we undertook primary data collection on the Asset. OD survey data was collected on behalf of the Client, TVC surveys were commissioned by Steer with a third party. OD data collection typically involves manual data entry by enumerators based on oral surveys with road users crossing toll plazas. TVC data collection involves video-graphic capture of traffic passing crossing the toll plazas, followed by manual counting.

3-day TVC counts

Table C.1: TVC counts at TP1

Date	CJV	Mini LCV	LCV	Bus	2 Axle	3 Axle	MAV	OSV	Total
17-02-2026	8,067	1,161	1,222	965	1,261	708	2,548	2	15,934
18-02-2026	7,868	810	1,192	824	1,261	703	2,536	2	15,196
19-02-2026	7,785	771	843	835	907	531	1,819	-	13,491

Disclaimer

This report has been produced for the sole benefit of Cube Highways Pte. Ltd ("the Client"). The report may only be relied upon by Approved Addressees in accordance with the terms of our engagement letter. This Report (the "Report") is confidential and disclosed only for information purposes, and it may not be relied upon by any party other than the Client or a Party to a Reliance Letter, and Steer: a) makes no warranty, expressed or implied, with respect to the use of any information or methods disclosed in this Report; and b) assumes no liability with respect to the use of any information or methods disclosed in this document. Any such party by its acceptance or use of this Report releases Steer from any liability for direct, indirect, consequential, or special loss or damage whether arising in contract, warranty, express or implied, tort or otherwise.

The Report is based on standard professional efforts, and information available to us at the time the review took place and is subject to time and budget constraints of the Report's scope of work. This Report, information and statements contained herein, are all based on third party data provided to us, or sourced by us, and Steer has not sought to establish the reliability of the data, except as specifically stated in the Report. Steer bears no responsibility for the results of any actions taken on the basis of third-party data.

Certain forward-looking statements in the Report are estimates based on interpretations or assessments of information available at the time of writing. The Report is thus to be viewed as an assessment that is time-relevant, specifically referring to conditions at the time of the review. Steer undertakes no obligation to update the Report for any reason.

While the estimates contained in the Report are not precise forecasts, they do represent, in our view a reasonable expectation of the future, based on information we have been provided with or sourced. However, the estimates necessarily rely on numerous assumptions and judgements, and circumstances may occur over the timeframe of the project that go counter to these assumptions and judgements and that affect the project's realized revenues. Actual events may differ from those assumed, and events are subject to change. Therefore, Steer makes or provides no warranty, whether implied or otherwise, as to the accuracy of forward-looking information presented. Further, it is important to note that forecasts presented represent long term growth profiles; the results for individual time periods may vary from forecasted values.

Traffic Consultant developed the relationships in the models used to produce the forecasts for the projects based on data available through February 2026. This report does not consider variations in traffic performance due to changing macro and force majeure events such (but not limited to) as global wars, economic uncertainty (high inflation, global recession), and changes in the regulatory environment. The situation remains dynamic and is subject to significant change in the short and medium term. In this challenging context, Traffic Consultant has produced base forecasts with a view on a possible scenario for the traffic forecasts. However, it is important to note that this is only one view, and there continues to remain uncertainty as to the short-term, intermediate or prolonged effects of and responses to such macro-economic/force majeure events. As a result, no assurance can be provided by Traffic Consultant that the scenarios and assumptions Traffic Consultant has identified will prove to be accurate. Given the uncertainty inherent in this scenario, Traffic Consultant advises that all readers of the Report consider the Report in the context of their own assessment of the impact of such events.

TO THE FULLEST EXTENT PERMITTED BY APPLICABLE LAW, THE LIABILITY OF THE TRAFFIC CONSULTANT FOR ANY LOSS, DAMAGE, COST OR EXPENSE SUFFERED OR INCURRED BY ALL PERSONS OR ENTITIES AND FOR ALL CLAIMS RESPECTING ITS WORK PERFORMED IN CONNECTION WITH THE ISSUE OR THE REPORTS IS HEREBY LIMITED IN THE AGGREGATE TO THE AMOUNT OF FEES ACTUALLY PAID BY THE CLIENT TO THE TRAFFIC CONSULTANT IN RESPECT OF THE REPORTS AND CONNECTED SERVICES.

SH	State Highway
T&R	Traffic and Revenue
TMS	Traffic Management System
TVC	Traffic Volume Count
WADT	Weekly average daily traffic
YTD	Year to Date

1 Introduction

The assignment

1.1 The Cube Highways Fund Advisors Private Limited (the "Client") has commissioned Steer Davies Gleave India Private Limited ("Steer") for a traffic due diligence to be carried out on the Nelamangala-Devihalli Toll Road (hereafter called "Asset"). This report forms part of the annual fair market valuation (FMV) undertaken as part of the "Transit 11 project". This report presents an update of the traffic and revenue forecasts based on actual traffic data available up to February 2026 and latest macro-economic assumptions.

1.2 The Asset Nelamangala-Devihalli consists of a single toll road section with two toll plazas. For this report, we hereafter call both the toll road sections and the toll plazas together as Asset and name the toll plazas as TP1 and TP2 respectively as follows:

- TP1 – Doddakarenahalli (Nelamangala)
- TP2 – Karabylu

1.3 Our scope of work for the traffic and revenue forecasting process includes:

Table 1.1: Scope of work and sources of data

Scope of work	Data source
• Review of historical Traffic Management System (TMS) data, Vendor reports and documents	• Provided by client for the period between FY13 and Mar'26, with FY26 base AADT and forecasts considering data up to Feb'26
• Historical analysis and forecasts for baseline growth, including; — Background growth, and — Seasonality trends	• Historical data provided by the Client and benchmarking using plazas in the vicinity or of similar nature of the Asset has been done wherever sufficient data was unavailable.
• Validation of revenue reported in FY26YTD	• TMS data provided by Client • Revenue reconciliation using toll plaza traffic and ticket type data to calculate revenue and reconciling it with toll plaza reported revenue
• Origin Destination (OD) analysis to understand growth drivers: — Zonal influence and Top OD pairs — Commodity distribution — Trip length distribution	• Origin Destination (OD) surveys undertaken by Steer in 2023 (TP1) and 2026 (TP2) respectively.
• Analysis of upcoming network improvements and other	• Secondary research and our in-house experience of working in the vicinity of the Asset. Impact analysis to be

Scope of work	Data source
developments, that may have future impacts on traffic	conducted by Steer based on Generalised Journey Cost spreadsheet-based analysis
• Historical revenue analysis and forecasts for revenue estimation, including — Toll segmentation and trip factors, — Overloading shares	• Calculated from historical data provided by Client
• Final traffic growth forecasts including baseline growth rates and potential future impacts	• Elasticity based base growth and potential impacts from secondary research, Asset historical traffic performance and Steer's in-house experience of working on toll roads on the corridor • Gross Domestic Product (GDP) forecast assumptions provided by Client
• Toll revenue estimation for the entire concession, including toll evolution	• Toll evolution based on latest toll notification published by National Highway Authority of India (NHAI) and latest actual Wholesale Price Index (WPI) trends as shared by the Client. • Assumptions of WPI forecasts and future tolling length changes provided by Client • Revenues estimated as a product of traffic forecasts and toll evolution

Our approach

1.4 Our approach follows well-established practices for forecasting ongoing traffic growth on an existing/brownfield Asset. The analysis has essentially focused on two sets of issues, namely:

- Understanding the traffic that is currently using the Asset; and
- Identifying how and why that traffic is likely to change in the future.

1.5 To understand the current traffic on the Asset, we have analysed traffic data from multiple independent sources and Client-provided secondary data, including:

- TMS data pertaining from July 2012 to February 2026. The historical traffic and revenue presented in Chapter 3 considers information up to March 2026. This is to present the latest available traffic and revenue information at the time of submission of report. However, the FY26 base traffic and forecasts presented Chapter 5 onwards use data available up to February 2026, with March 2026 estimated
- Concession agreement and toll notifications for FY25 and FY26
- Previous studies related to traffic and revenue
- Bid documents and studies by lenders
- As part of study in earlier commission Steer-conducted OD survey on 3rd July 2023 at TP1 Nelamangala to validate any change in growth drivers and travel patterns. The OD survey on TP2 Karabylu had been undertaken on 6th March 2026.

- Steer-commissioned 3-day TVC survey from 1st July to 3rd July 2023 at TP1 Nelamangala on behalf of the Client to validate TMS data independently. Whereas on TP2 Karabylu three-day TVC survey was conducted between 6th to 8th March 2026 as part of study.
- We undertook revenue reconciliation for FY26YTD, by building up revenue from the traffic reported by the toll plaza and subsequently matched it to the reported revenue for FY26 using the prevalent toll rates and reported segmentation/toll-frequencies for FY26, this is a key part of our analysis to validate the segmentation/toll-frequency assumptions and the Annual Average Daily Traffic (AADT) reported for each of the toll plaza.

1.6 The estimation of future traffic demand on the Asset was undertaken through:

- Estimating FY26 base year position by applying seasonality correction factors (SCFs) on the 11 months of actual traffic data available (April to February).
- Secondary research to understand plans for new developments and progress of ongoing developments on the Asset.
- Steer independent primary surveys and site visits to validate our network and contextual understanding.
- Developing a bespoke growth model for each Asset/plaza/toll class to forecast year-on-year traffic growth from FY26 to the end of concession period.
- Investigating the elasticity of historical traffic growth compared to state (GSDP) and national (GDP) growth. Where historical data is limited, we have benchmarked the Asset against our Steer knowledge base (e.g., similar Asset types in the same state or on the same corridor), to derive appropriate elasticities.
- Applying our elasticities to independent GDP forecasts as provided by Client.
- Identifying and analysing the potential impacts of any relevant changes to the competitive position of each Asset – these include impacts of changes to road network including expressways and opening of competitive modes of travel.
- Identifying and analysing any other potential impacts to traffic and revenue on each Asset – these include axle load norms, axle shift for heavy goods, FASTag implementation.
- Considering changes in trends of segmentation over time and making suggestions for changes in exemptions in the future
- Preparing traffic and revenue forecast for the Asset for the complete length of concession. The analysis here includes the specific impacts of network, or other exogenous factors specific to the Asset. We have developed a set of forecasting assumptions for three scenarios: a base case and upside and downside scenarios.

Contents of this report

1.7 The report has been divided into the following chapters, including Chapter 1 providing an introduction:

1. Chapter 1 introduces the methodology and approach to undertake the traffic and revenue due diligence;
2. Chapter 2 describes the key characteristics of the Asset and its surrounding road network, primarily based on site visits;
3. Chapter 3 summarises the current and historical traffic on the Asset, including results from the TMS, TVC and OD analyses;

4. Chapter 4 presents the socio-economic context of the corridor and region/state containing the Asset, along with our approach and results on estimating background traffic demand growth; and
5. Chapter 5 presents our baseline year forecast and summarises our results on estimating background traffic demand growth
6. Chapter 6 summarises our assessment of network impacts and presents concession traffic and revenue forecasts for the Asset along with the assumptions for upside and downside cases.

2 The Asset

Introduction

2.1 This chapter provides description of the Asset, based on both primary data (from site visits), and our understanding of the region and network surrounding the Asset. We cover the strategic network context, followed by key economic activities and network developments around the Asset.

Strategic network

2.2 The Asset is situated in the southern state of Karnataka connecting the city of Bengaluru to Mangaluru via NH75. It is one of the three sections making this corridor, the other two being Devihalli-Hassan Tollway Limited (DHTL) and Hassan-Mangaluru highway. Figure 2-1 below shows the regional road network in which the Asset is located.

Figure 2-1: Asset location in the regional road network

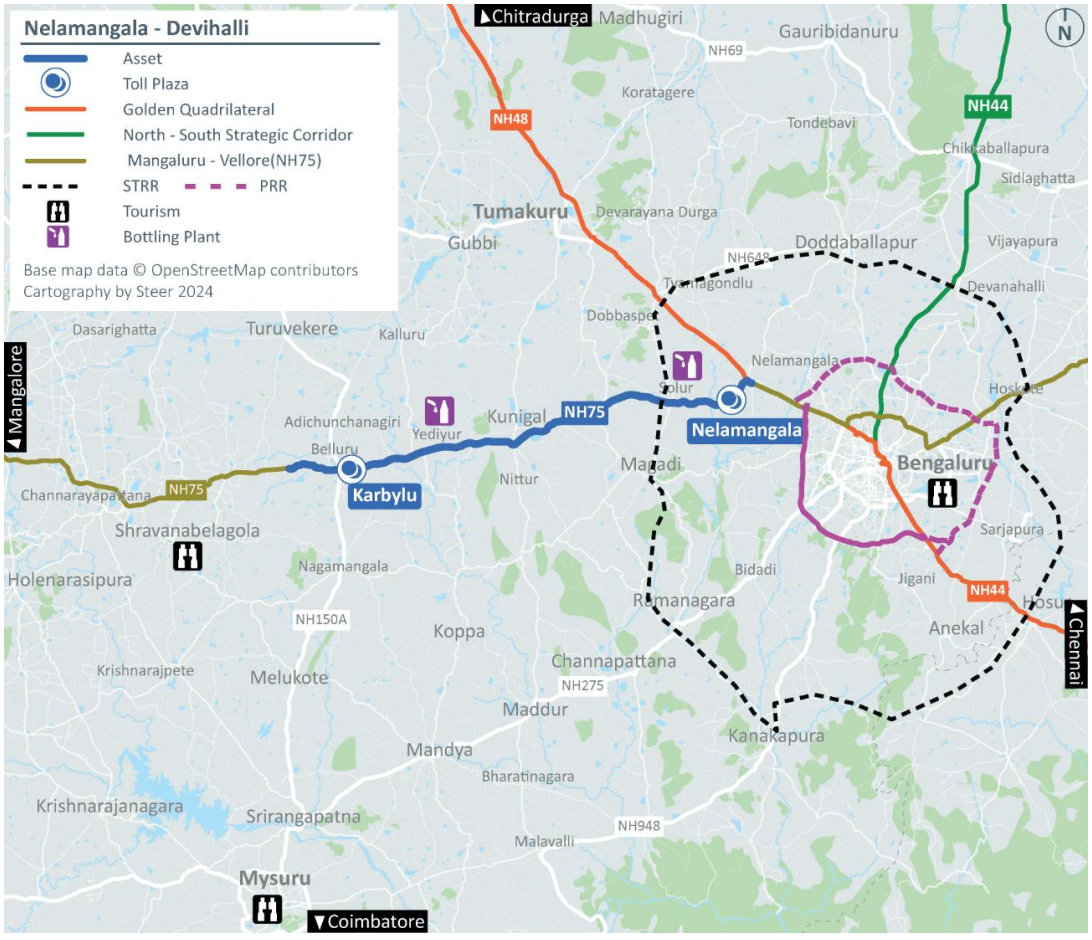
Source: Steer cartography using OpenStreetMap data

2.3 The Asset primarily caters to the following types of movements, by virtue of its strategic location:

- **Medium-distance movements** between **Bengaluru and Mangaluru** primarily for leisure and tourism. The CJVs contribute around 80% on an average to the total traffic on the Asset. This is driven by the large number of tourist destinations along the Asset and close to the Asset which drives the car growth such as Bengaluru, Mangaluru, Madikeri, Coorg, etc.
- Work and leisure trips between local cities, towns, and villages like Nelamangala, Hassan, nearby tourist spots, and Bengaluru city.
- Petroleum-related traffic:
  - Between ports and refineries in Mangaluru and Kochi and liquified petroleum gas (LPG) bottling plants lying on the Asset, viz Hindustan Petroleum Corporation Limited (HPCL) plant at Yediyur and Bharat Petroleum Corporation Limited (BPCL) plant at Solur.
  - Between the bottling plants and the neighbouring consumption centres like Bengaluru.

2.4 The Asset is an 80.26-km toll road which forms a part of NH75 in Karnataka. This is a four-lane road with two toll plazas, namely, Doddakarenahalli/Nelamangala (TP1 closer to Bengaluru) and Karabylu (TP2 closer to Devihalli). Figure 2-2 below provides a closer view of the Asset in the context of its immediate surroundings.

Figure 2-2: Asset context



Source: Steer cartography using OpenStreetMap data

Concession and tolling details

2.5 The toll plazas on the Asset have been operational since June 2012. There are 7 years left in the concession period with FY33 being the last year of concession. Table 2.1 below provides a summary of the Asset concession details.

Table 2.1: Concession details

Particulars	Details
State	Karnataka
Highway	NH 75 4-lane
Toll Plaza	TP1: Doddakarenahalli TP2: Karabylu
Length (km)	TP1: 40.13 km TP2: 40.13 km
Commencement of operations*	TP1: July 2012 TP2: July 2012
Concession period	20 years
Last year of concession	FY33

2.6 Source: Concession agreement

2.7 Figure 2-3 below shows a typical cross-section of the Asset and its toll plaza.

Figure 2-3: Typical cross section of the Asset and toll plaza

Source: Steer site visit

2.8 Tolls on the Asset are collected as per the rates presented in Table 2.2 below. The toll plazas have dedicated ETC/FASTag lanes for electronic tolling.

2.9 Apart from single tickets, the typical NHAI ticket categories like return, monthly, local personal and local commercial passes are also available on the Asset.

Table 2.2: Single toll rates on the Asset (INR), applicable September 2025 to August 2026

Type of Vehicle	Single Journey Fee (INR)	
	TP1 Doddakarenahalli	TP2 Karabylu
CJV	60	60
LCV	100	100
Bus/Truck	205	205
3A/MAV/OSV	325	325

Source: NHAI Revision of User fee Rate w.e.f 01.09.2025

2.11 Apart from the (Concession Agreement) CA-prescribed toll categories mentioned above, the toll plaza management charges a small number of school buses at an agreed monthly amount.

Key economic activities

2.12 Bengaluru is both the capital and the largest city of Karnataka. The Asset, passing through several districts, is located just outside and to the west of the Bengaluru urban district. The industrial town of Nelamangala, at the Asset's eastern end, has several large-scale industries.

2.13 The Asset serves various tourist locations between Bengaluru and Mangaluru such as Madikeri, Coorg and temple tourism spots between the two cities. While Bengaluru earlier known as the 'Garden City' has been popular for its lakes, gardens, and pleasant weather; Mangaluru, on the western Indian coast, is known for its beaches and cuisine. Mangaluru is also the headquarters of the Dakshina Kannada district. Apart from Shravanabelagola, a major Jain pilgrimage centre near Channarayapattana, there are several temple locations in Dakshina Kannada district. Madikeri district, also known as Coorg or Kodagu, is a popular hill destination and coffee-growing region.

2.14 The Asset has two major LPG bottling plants, Solur and Yediyur, in close vicinity. Solur is present near TP1 whereas Yediyur is present near TP2. As urbanisation increases along the corridor, growth of household products and goods including the demand for LPG will also grow and continue to benefit the asset over time.

Key Network Developments

2.15 In close proximity to the Asset, the proposed construction of the Satellite Town Ring Road (4-6L) access-controlled expressway is currently underway. Designed to function as a broader bypass, it will facilitate smoother and faster movement of long-distance traffic

that does not need to enter the city. This network development has been covered in detail in Chapter 6. [1]

2.16 There are no alternate long-distance or medium-distance routes that pose a threat to the Asset. Also, during our site visit to the Asset, no major micro-diversions through local roads were observed close to the toll plazas. Chapter 6 provides a discussion and estimation of potential impacts on the Asset.

3 Traffic Description

Introduction

3.1 This chapter presents historical and current traffic and revenue trends on the Asset, as well as our analysis of origin-destination (OD) survey data and traffic count data. This covers data which was collected as a part of this study and in previous studies, as well as data provided by the Client.

3.2 Traffic demand data is generally collected and analysed to understand the volume and vehicle composition of demand currently using the Asset, while OD data is used to obtain a better understanding of travel patterns, trip lengths, trip purposes and areas of influence in the vicinity of the Asset, as well as the commodities being moved by goods vehicles. This analysis, combined with our understanding of the Asset (based on our site visits), enables us to identify the key drivers of demand on the Asset.

3.3 Actual toll plaza data is used as the basis from which the current/base year Monthly Average Daily Traffic (MADT) is established. This data is typically provided by the Client and independently analysed and validated by us using Traffic Volume Count (TVC) information.

3.4 The below sections present historical traffic and revenue information up to March 2026. This is to present the latest available traffic and revenue information at the time of submission of report. However, the FY26 base traffic and forecasts presented Chapter 5 onwards use data available up to February 2026, with March 2026 estimated.

PCU factor assumptions for reporting

3.5 The PCU values have been taken from 'IRC 64:1990- Guidelines for Capacity of Roads in Rural Areas'. For MAV, based on the discussion with the Client, we have referred to the rigid and trailer splits in the latest TVC counts conducted in 2026 for calculating the effective PCU for MAVs. For rigid trailer trucks we have assumed a PCU factor of 3, whereas for trailer trucks we have assumed a PCU factor of 4.5. These factors have been used to arrive at the PCU values presented in the following sections.

Table 3-1: PCU factors

Vehicle Category	PCU Factor
CJV/Mini LCV	1.0
LCV	1.5
Bus/2A	3.0
3A	3.0
MAV*	3.35
OSV	4.5

Source: Steer analysis and IRC64,1990; MAV PCU factor has been arrived using the split between rigid and trailer trucks

Historical trends

3.6 Table 3.1 through Table 3.4 below present the historical traffic evolution for each of the Asset toll plazas.

Table 3.1: Historical evolution in AADT by vehicle class at TP1- Doddakarenahalli

Vehicle	FY18	FY19	FY20	FY21	FY22	FY23	FY24	FY25	FY26	CAGR-FY22 - 26 (%)

3.7 On the Asset, Doddakarenahalli toll plaza recorded ~39,400 PCUs in FY26 and Karabylu toll plaza at ~30,350 PCUs.

3.8 In terms of vehicle composition, CJVs are the biggest contributor on the Asset. As discussed in Chapter 2, the Asset caters to large volume of tourism-oriented traffic travelling from Bengaluru to tourism centres such as Coorg, Madikeri, and Shravanabelagola which contribute towards the CJV traffic on the Asset. These shares are slightly higher at TP1 which is closer to the urban centre of Bengaluru.

3.9 The CJV traffic on the Asset was impacted during FY20 and FY21 due to Covid-19. Passenger traffic showed signs of recovery post-FY21 and has exhibited stable growth since then. Between FY22 and FY26, overall traffic grew at a PCU CAGR of 10.1% and 9.7% at TP1 and TP2 respectively. This growth across both TPs was driven by robust increases observed in both the Bus/2A categories, followed by CJVs and MAVs.

3.10 Share of MAVs on the Asset has historically remained at about 4-5% of total traffic. Majority of these MAVs carry LPG cylinders from the Hindustan Petroleum Corporation Limited (HPCL) bottling plant at Solur and Bharat Petroleum Corporation Limited (BPCL) bottling plant at Yediyur. Commercial traffic volumes (2A/3A/MAV) at TP2 (Karabylu) observed declines in the early months of FY25 (June-August 2024) as long-distance movements from (or to) Mangaluru along the NH75 were disrupted due to a Landslip near Doddatapale (further west of TP2). TP1 also observed declines but to a lesser extent as traffic volumes observed at TP1 are dominated more by urban activity of Bangaluru city and outside. Periodic landslides every 1-2 years have historically disrupted traffic flows on the NH75, partially due to prolonged roadworks along the Shiradi Ghat section of the highway. These periodic disruptions are expected to continue going forward.

3.11 The increasing number of CJVs observed on this Asset can be directly linked to the growth of the city of Bengaluru both in terms of population and per capita income levels. As mentioned previously, this corridor is primarily used for social, leisure and tourism

activities, the growth in local economy and local tourism has led to strong growth in the CJV traffic. The growth in CJVs in FY22 and FY23 is also attributed to Mini LCV now being correctly tolled in CJVs post FASTag implementation, which were earlier accounted in LCVs.

3.12 The flat or negative growth trend in LCVs between FY22 and FY26 can be partially attributed to changes in vehicle classification of Mini LCVs under FASTag implementation, where Mini LCVs that were earlier classified as LCVs are now classified as CJVs. Flat growth in LCVs as of FY26 is indicative of a stabilisation of these trends and a return to trend growth, and future growth in LCVs are expected to follow underlying trends in the regional economy more closely.

Historical Revenue

3.13 Table 3.5 and Table 3.6 below present the revenue (in INR Lakhs) by each vehicle type at each toll plaza for FY19-FY26 at an annual and daily level.

Table 3.5: Revenue (INR Crore) by vehicle type at TP1 Doddakarenahalli, and AADC (annual average daily collection) in INR Lakhs

	CJV	LCV	Bus	2A	3A/MAV	Total	AADC	Growth %
FY19	13.6	5.9	6.7	3.1	5.8	35.10	9.62	
FY20	15.5	6.2	6.5	3.2	7.8	39.20	10.74	**11.7%**
FY21	17.0	5.4	4.0	2.6	6.5	35.60	9.75	**(9.2%)**
FY22	24.7	2.8	4.6	3.2	8.7	44.10	12.08	**23.9%**
FY23	27.8	3.0	5.6	3.9	9.3	49.60	13.59	**12.5%**
FY24	31.0	3.0	6.6	5.0	10.7	56.30	15.42	**13.5%**
FY25	33.5	3.2	7.5	5.2	10.8	60.20	16.50	**7.1%**
FY26	34.4	3.3	8.1	5.4	10.7	61.90	17.0	**2.8%**

Source: Steer analysis of the Client data; AADC represents Average Annual Daily Collection in INR Lakhs; FY26 represents the full year actual (April to March);

Table 3.6: Revenue (INR Crore) by vehicle type at TP2 Karabylu, and AADC (annual average daily collection)

	CJV	LCV	Bus	2A	3A/MAV	Total	AADC	Growth %
FY19	11.9	4.3	4.0	2.7	5.3	28.20	7.73	
FY20	13.3	4.8	4.5	2.7	7.3	32.60	8.93	**15.6%**
FY21	11.4	4.2	2.5	5.6	5.3	29.10	7.97	**(10.7%)**
FY22	20.4	2.2	4.1	2.7	8.6	38.10	10.44	**30.9%**
FY23	22.5	2.3	4.6	3.3	9.0	41.70	11.42	**9.4%**
FY24	24.6	2.3	5.9	4.2	11.2	48.20	13.21	**15.6%**
FY25	26.8	2.5	6.7	4.4	11.7	52.04	14.26	**8.3%**
FY26	27.9	2.7	7.2	4.5	11.6	53.9	14.8	**3.6%**

Source: Steer analysis of the Client data; AADC represents Average Annual Daily Collection in INR Lakhs; FY26 represents the full year actual (April to March);

3.14 From the above table it can be observed that TP1 generates higher daily collection for the Asset. This is due to higher volumes of CJV, LCV and MAV traffic on TP1 given its proximity to Bengaluru.

Toll Frequencies

3.15 Toll frequency or segmentation is typically the share of each ticket category recorded for a particular vehicle type. This is based on the toll policy which forms a part of the concession agreement. Each vehicle category has different segmentation. As a part of historical analysis, we calculate the toll frequency for each vehicle category from the monthly data shared by the Client. The most common ticket categories observed on a typical National Highway concession are: Single, Return, Monthly, Local and Exempt. Given the local nature of traffic, some toll plazas offer custom made local passes to attract the local commuters to opt for these category passes instead of evading toll.

3.16 Understanding the toll frequency gives insights into the nature of traffic. CJVs generally have higher shares of return passes or local monthly passes because they travel for short to medium distances, while heavy trucks mostly have single tickets since they travel long distance. CJVs and buses also tend to have a higher share of exemption/violations than other commercial vehicle categories as their tolls are higher and tend to contribute the most to the Asset's total revenue. However, this varies from Asset to Asset or even toll plaza to toll plaza. The Asset catering to short distance local traffic generally observes high share of return or other local monthly passes while the Asset catering to strategic long-distance traffic generally observes high share of single ticket traffic.

3.17 Table 3.7 below presents the different types of tickets being sold at both the Asset plazas.

Table 3.7: Typical ticket types sold at NHAI plazas

Category	Description
Single	Allows the vehicle to cross the toll plaza once
Return	Allows the vehicle to take two trips within a day with second trip at 50% of single fee.
Local Personal	Discounted single entry monthly pass only for private cars of residents within 20km radius of toll plaza
Local Commercial	50% discount on single trips for commercial vehicles registered in the local district. The pass allows single entry only.
Monthly	For all vehicle categories which charges the user 1/3rd the fee of 50 Single trips
Exemptions	Officially exempted vehicles like ambulance, police cars, key political personnel etc.

3.18 Further, the toll plazas also record violations which are non-paying users, who are not officially allowed under exemptions category but are forced exemptions. For the Asset, the segmentation discussed below reports Exemption and violations together

3.19 As a general pattern, the shares of single/return/monthly tickets tend to stabilise within 2-3 years of the commencement of Asset operations. Only in the cases where trip patterns are expected to change significantly due to urban expansion is where we expect these

shares to change over the period or due to some external events impacting the trip patterns. During FY20 and FY21, however, two key events impacted the traffic patterns throughout the country: COVID-19 and FASTag implementation.

Introduction of Annual pass for CJVs

3.20 The National Highway Authority of India launched the "The FASTag Annual Pass" on August 15, 2025, a prepaid facility that allows private CJVs to travel across designated National Highway and National Expressway toll plazas. The annual pass is worth INR 3,000. The pass is valid for one year or 200 trips, whichever occurs first and is applicable only to private, non-commercial vehicles (Car/Jeep/Vans).

Since this pass has been introduced by NHAI, it is not valid on

- state governed toll plazas on highways
- state governed toll plazas expressways
- Parking areas or other non-NHAI tolling locations

3.21 The pass can be activated via the RajmargYatra app or the NHAI website, and links directly to an existing FASTag.

The Annual Pass aims to:

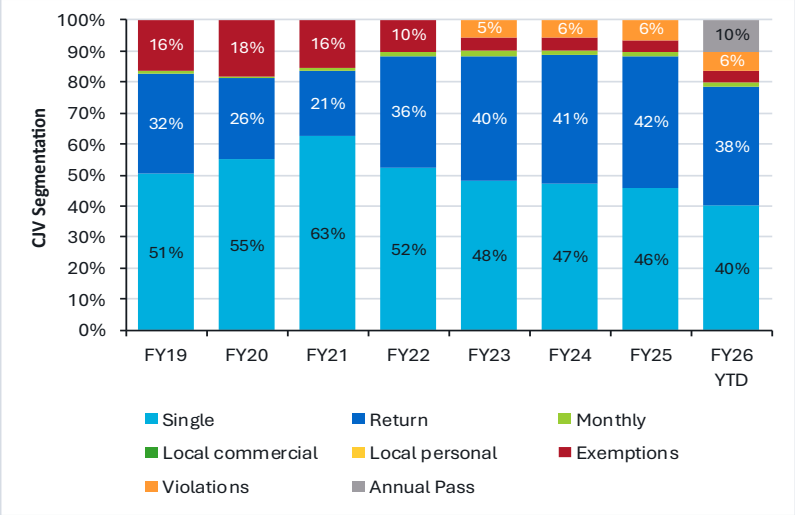
- Promote cashless and seamless travel on national highways.
- Reduce congestion and improve traffic flow at tolls
- Provide cost-effective travel for frequent users of NH/NE toll roads

Share of traffic by payment type

3.22 Figure 3-1 through Figure 3-4 below present toll segmentation for the historical years at TP1 Doddakarenahalli and TP2 Karabylu for CJVs and MAVs. Table 3.8 and Table 3.9 below provide the same for the remaining vehicle types. FY21 was a partial year in terms of operation of the toll plazas. Further, there was a change in ticket patterns due to the mandatory implementation of FASTag as a mode of payment (share of single tickets increased in FY21). FY22 was also impacted by 2nd wave of COVID-19 in Q1 and Q2 of FY22. Hence during this period travel patterns were also disrupted. With FY21 and FY22 being Covid-19 impacted it is assumed that segmentation of FY23 onwards is normal. The figures below show ticket segmentation for CJV and MAV categories.

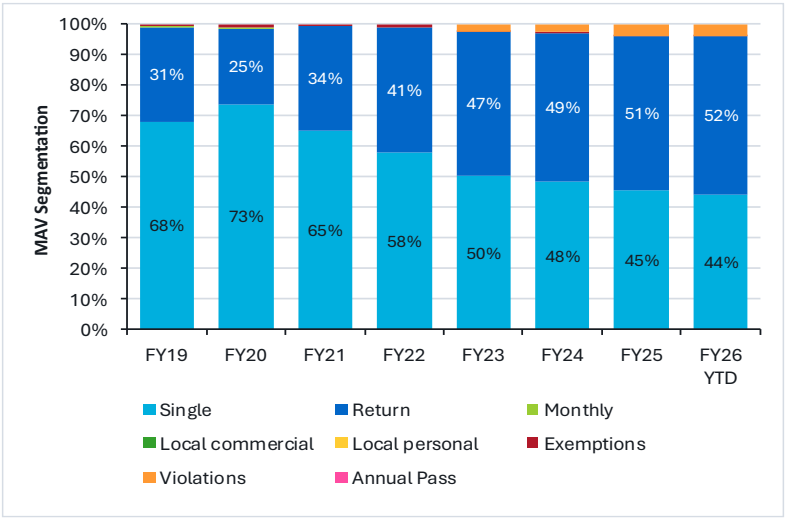
3.23 The introduction of annual passes for private CJVs from 15 August 2025 has impacted the ticket segmentation of CJVs. Nearly, 10% at TP1 and 11% at TP2 of CJVs have adopted annual pass. While exemptions and violation trips have remained at the same levels as FY25, it can be observed that the share of single and return trips have reduced.

Figure 3-1: Ticket-segmentation for CJV, TP1 Doddakarenahalli



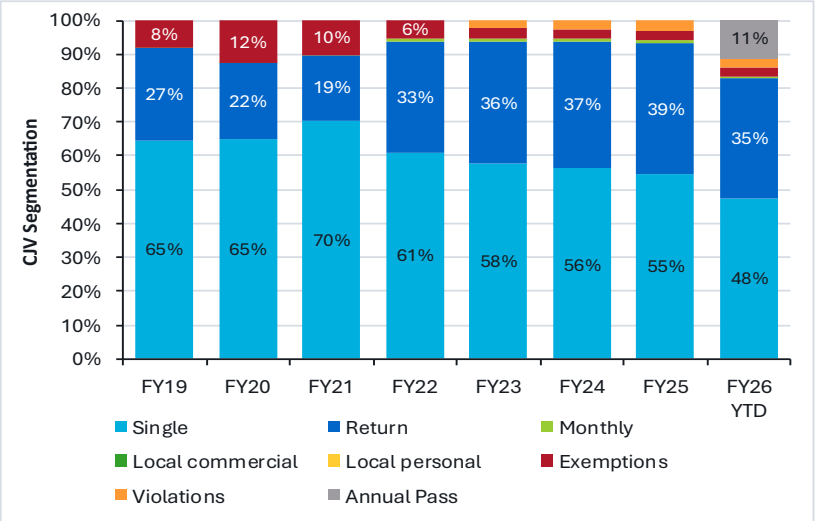
Source: Steer analysis of the Client data. FY26 Segmentation is representative of Client data up till Feb'26.

Figure 3-2: Ticket-segmentation for MAV, TP1 Doddakarenahalli



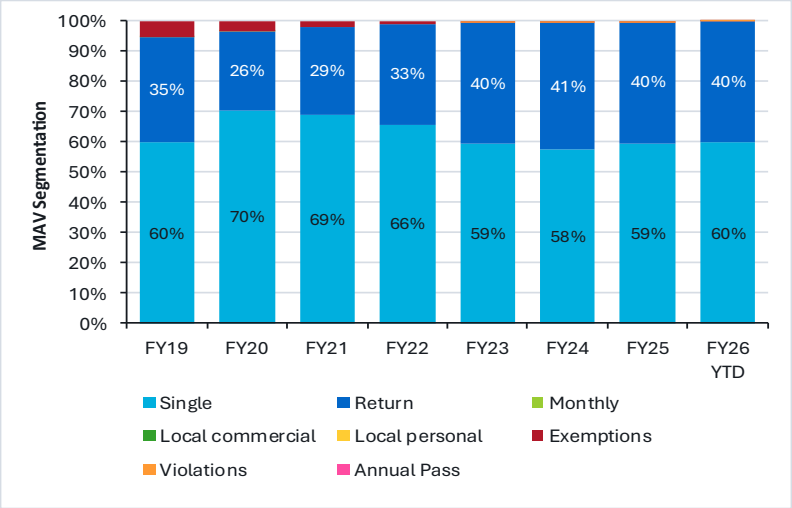
Source: Steer analysis of the Client. FY26 Segmentation is representative of Client data up till Feb'26.

Figure 3-3: Ticket-segmentation for CJV, TP2 Karabylu



Source: Steer analysis of the Client data. FY26 Segmentation is representative of Client data up till Feb'26.

Figure 3-4: Ticket Segmentation for MAV, TP2 Karabylu



Source: Steer analysis of the Client data. FY26 Segmentation is representative of Client data up till Feb'26.

3.24 For CJVs, the dominant ticket type at both plazas is 'Single' tickets (nearly 40% at TP1 and just under 48% at TP2), due to the high share of tourism-related traffic, wherein the commuters generally travel for couple of days, not making users eligible for a return ticket within 24 hours.

3.25 The share of exemptions observed on this Asset is in line with our observations on similar urban Assets across the region. The share of exemptions is higher on TP1 due to its urban nature. With increasing ETC penetration on the Asset, the combined share of exemptions and violations on the Asset has dropped significantly compared to FY22 levels. This is likely because of better management and operation of traffic system post FASTag implementation.

3.26 MAVs also show a high share of 'Single' ticket type (44% at TP1 and 60% at TP2), showing the significance of medium-distance traffic. The remaining shares for MAVs are primarily held by 'Return' tickets. Since TP1 of the Asset caters to more local traffic feeding the

local industries as verified from the OD data in chapter 3 therefore the share of return tickets is higher on TP1 of the Asset and has been growing FY22 onwards. In case of MAVs, both the plazas report negligible exemptions.

3.27 Refer below to the table for FY26YTD (Apr'25 – Feb'26) segmentation for LCV, Bus, 2A and 3A /MAV category at TP1 Doddakarenahalli and T2 Karabylu

Table 3.8: Historical ticket segmentation at TP1 Doddakarenahalli

Ticket	LCV	Bus	2A	3A/MAV
Single	26%	41%	28%	44%
Return	68%	53%	53%	52%
Monthly	2%	-	15%	-
Local commercial	1%	6%	1%	-
Exemptions	-	-	-	-
Violations	3%	0%	4%	4%

Ticket	LCV	Bus	2A	3A
Single	44%	45%	48%	60%
Return	52%	48%	45%	40%
Monthly	1%	-	4%	-
Local commercial	1%	7%	0%	-
Exemptions	-	-	-	-
Violations	2%	0%	2%	0%

Source: Steer analysis of the Client data till Feb'26.

Overloading

3.28 The Asset being a part of NHAI concession follows the NHAI Overloading policy released in 2016 which bans the overloading of commercial vehicle on any NHAI toll plaza. In case of non-compliance, overloaded vehicles on the Asset are charged twice the toll fee they would otherwise pay for a Single ticket at the toll plaza. The Asset currently doesn't report overloading under any ticket category.

Data Collection exercise

3.29 To validate and inform various inputs used in our forecasting, we undertook primary data collection on the Asset comprising the surveys listed in the table below. OD survey data was collected on behalf of the Client, TVC surveys were commissioned by Steer with a third party. OD data collection typically involves manual data entry by enumerators based on oral surveys with road users crossing toll plazas. TVC data collection involves video graphic capture of traffic passing crossing the toll plazas, followed by manual counting.

Table 3.10: Data collection schedule

Toll Plaza	3-day videography based TVC			1 day OD survey	
	Start date	End date	Time (hrs)	Start date	Time (hrs)
TP1 Doddakarenahalli	1st Jul 2023	3rd Jul 2023	0000-2359	3rd July 2023	08:00
TP2 Karabylu	6th Mar 2026	8 Mar 2026	0000-2359	6th Mar 2026	08:00

Source: Data collection plan as followed for collecting independent survey data

3.30 It should be noted that, in our experience, traffic on national highways shows variation across the week due to the economic activities surrounding each road. To derive a representative TVC count considering daily variation, three-day to seven-day traffic counts are generally recommended, and hence, in order to fully understand the impact of this weekly fluctuation on the Asset, we collected three-day counts at each toll plaza.

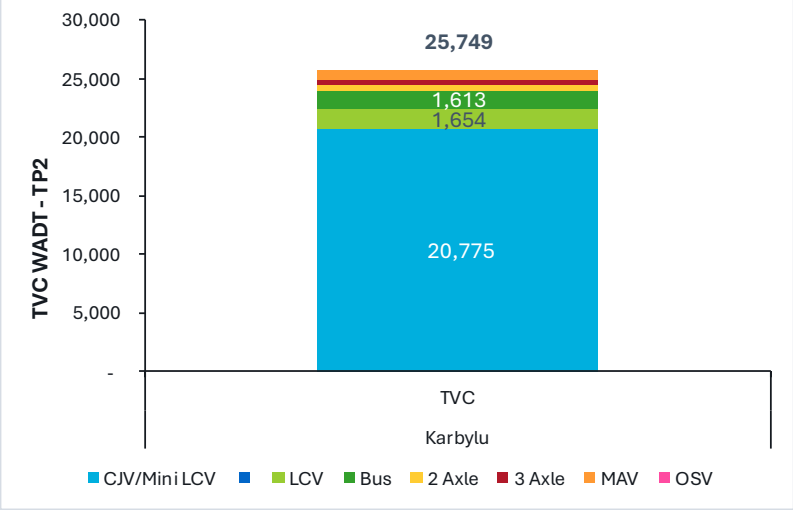
Key findings of the TVC data analysis

WADT estimates

3.31 For Doddakarenahalli, the average of a three-day TVC survey conducted between (1st July – 3rd July 2023, 0000-2359) was used, and for Karabylu an average of the three-day TVC counts (6th -8th Mar 2026, 0000-2359) was used, to obtain the following average daily traffic (WADT) for each toll plaza. This WADT excludes non-tollable vehicle such as tractors, two-wheelers, bullock-carts, etc., but includes officially exempt vehicles such as police cars, ambulances, emergency response vehicle, government vehicle and other vehicle types officially allowed as 'exempted' under the concession agreement.

3.32 From Figure 3-5 below, we see that both toll plazas exhibit similar characteristics in terms of vehicle shares. CJVs form major share on both TPs, where they account for ~80% of the total traffic, followed by LCVs which constitute ~8-10% of the remaining shares.

Figure 3-5: TVC WADT



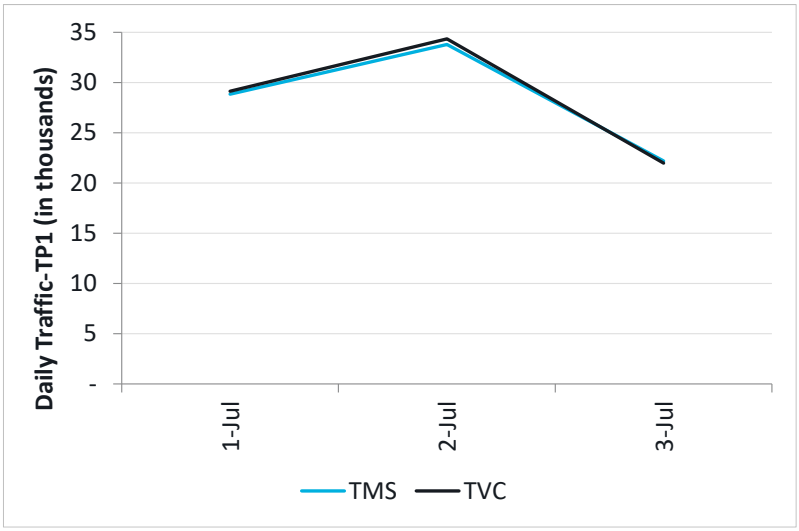
Source: Steer analysis of TVC data

TVC v/s TMS analysis

3.33 We used our TVC data to validate the toll plaza data for the same days, as supplied by the Client via their toll management system (TMS). This TMS data was then used as the base data, for our forecasting model.

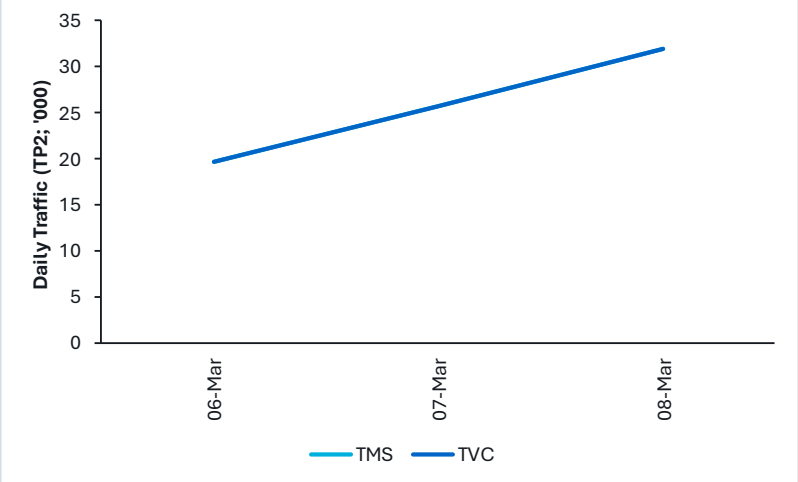
3.34 Figure 3-6 and Figure 3-7 below show the comparison between daily traffic data and shares of vehicle categories in TVC and TMS for the two toll plazas. As can be seen both TP1 Doddakarenahalli and TP2 Karabylu show a good fit between the TVC and TMS. The minor difference on two days of the seven-day period at TP2 is within the acceptable range of variation.

Figure 3-6: Comparison between TVC and TMS daily traffic data on TP1 Doddakarenahalli



Source: Steer analysis of TVC and Client TMS data

Figure 3-7: Comparison between TVC and TMS daily traffic data on TP2 Karabylu

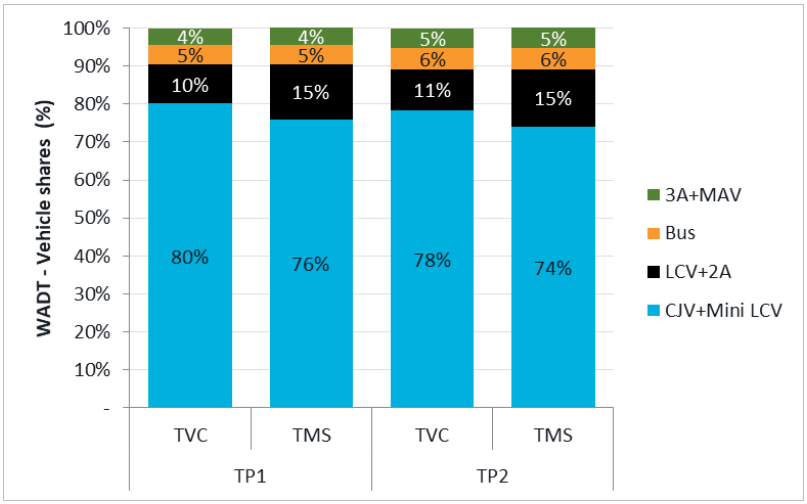


Source: Steer analysis of TVC and Client TMS data

3.35 Figure 3-8 below compares the shares of vehicle types at both plazas, between TVC and TMS data. We see that while most vehicle categories show similar shares, the CJV shares show differences between TMS and TVC. This difference is mostly compensated by the shares of LCVs showing the reverse. This reciprocal mismatch between CJV and LCVs can

be attributed to common misclassification of vehicle categories especially the Mini LCVs. Other vehicle class shares hold consistent across the TVC and TMS.

Figure 3-8 Comparison between vehicle shares from TVC and TMS WADTs



Source: Steer analysis of TVC and Client TMS data

Table 3.11: Difference in vehicle counts when combined

Vehicle type	TP1 Doddakarenahalli			TP2 Karabylu		
	TVC	TMS	TVC vs TMS (%)	TVC	TMS	TVC vs TMS (%)
CJV+Mini LCV	21,705	19,463	8.3%	20,775	21,247	(2.2%)
Bus	1,341	1,290	4.0%	1,613	1,532	5.3%
LCV+2A	2,731	3,748	(27.1%)	2,186	1,762	(24.1%)
3A+MAV+OSV	1,171	1,146	(2.1%)	1,176	1,229	(4.3%)
Total	**26,319**	**25,646**	**(2.6%)**	**25,749**	**25,769**	**(0.1%)**

Key findings of origin-destination analysis

Overview

3.36 Origin-destination (OD) analysis enables the understanding of the nature of traffic movement on the Asset. The OD analysis presented here is based on data collected on behalf of the Client in February 2026. More recent OD surveys were not undertaken as this Asset has a long operational history, and we did not believe material changes in these patterns would have occurred in this period.

3.37 We have analysed the regional drivers of demand based on the following analyses:

- Zonal influence
- Commodity distribution
- Top OD pairs
- Trip length distribution

3.38 While zonal analysis and the list of top OD pairs help us to understand 'where' people and goods travel, commodity distribution sheds light on 'what' goods get transported. Trip length distribution show 'how far' vehicles and people travel, and goods get transported. This set of analyses is generally used to estimate the key drivers of traffic and aid the making of informed forecasting assumptions around traffic demand elasticities, growth drivers and exogenous impacts.

Sample rates

3.39 Sample rates help understand the reliability of OD data. They are calculated by dividing OD samples captured by the traffic counts (based on the TVC data) during the same time period. Table 3.12 below presents the sample rates for key vehicle type aggregations at both the toll plazas. We believe that the sample rates of the OD data are reasonable. Lower sample share for Cars and LCV on the Asset is due to reduced stopping time of vehicles at the plaza post implementation of FASTag which has affected the sample rate.

Table 3.12: Sample rates for OD data

Vehicle type	TP1 Doddakarenahalli	TP2 Karabylu
Car	31%	15%
Bus	69%	50%
LCV	42%	51%
3A Truck / MAV	92%	87%

Source: Steer analysis of OD data

Zone categories

3.40 To facilitate better interpretation of key regional drivers of traffic as determined by their OD zones, and influenced by various towns, cities, states, and regions in the vicinity of the Asset, we have aggregated zonal data as described in Table 3.13 below. The methodology behind this aggregation of zones may vary as per the characteristics displayed by the different Assets being studied.

Table 3.13: Zone aggregations for zonal influence analysis

Aggregate Zone	Description
Local	Local zones are those that fall on or very close to the Asset.
IAOI	IAOI zones are the locations which generate traffic and lie within approximately 75-150 km distance from the Asset.
Rest of State	Rest of the cities/Districts in the state that Asset lies in.
Tamil Nadu	Tamil Nadu
Telangana	Telangana
Andhra Pradesh	Andhra Pradesh
Kerala	Kerala
Central India	Madhya Pradesh, Chhattisgarh
West India	Maharashtra, Goa, Gujarat
East and Northeast India	West Bengal, Odisha, Jharkhand, Bihar, and Northeast Indian States
North India	Uttar Pradesh, Rajasthan, and other North Indian states

Aggregate Zone	Description
Outside India	Nepal, Bhutan, Bangladesh

Source: Steer analysis

Zonal influence

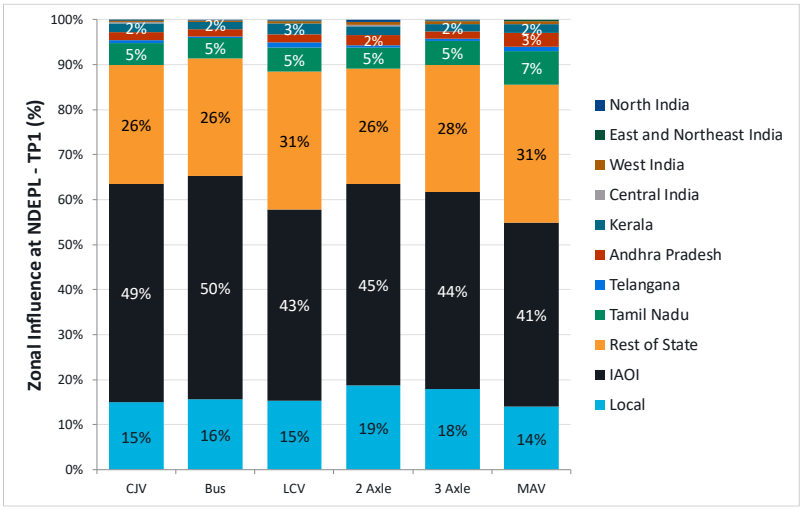
3.41 The zonal influence is the contribution of the zone or the zonal aggregation to trips by a vehicle type. This section presents the zonal influence[2] at each toll plaza of each Asset, aggregated based on zonal aggregation listed in the previous sub-section. Please note that zonal influence is analysed on trip ends and not trips.

3.42 Figure 3-9 and Figure 3-10 below present the zonal influence on various vehicle types on the toll plaza. We can see that 'IAOI', (including locations such as Bengaluru, Hassan, Mandya, etc) trips make up the largest share for all vehicle types. We find high shares of local and IAOI zonal influence. Combined with the internal-external distribution (presented in the next section, showing high I-ROS and ROS-I shares), we see that understandably, trips with one end at various locations in Bengaluru district dominate the traffic profile. These reflect in the IAOI zonal influence.

3.43 At TP1 Doddakarenahalli, the highest share of trips can be attributed to IAOI with a share of 40%-50%. Local trips, i.e., trips with their origins along or very near the Asset (including areas like Kunigal, Solur etc), have 15-19% share across categories and 'Rest of State', which includes locations such as Mysore, Mangaluru, Bellary etc which don't fall in either the local or IAOI categories; has about 26-31% share each across all vehicle categories. Tamil Nadu has a share of 5% across categories which rises to 7% for MAVs.

3.44 These trips which are being made between local and IAOI zones for heavy trucks are majorly concentrated in the regions between Bengaluru, Hassan, and Devihalli. Either the origin point, or the destination for most local/IAOI trips are the aforementioned regions.

Figure 3-9: Zonal influence, TP1 Doddakarenahalli

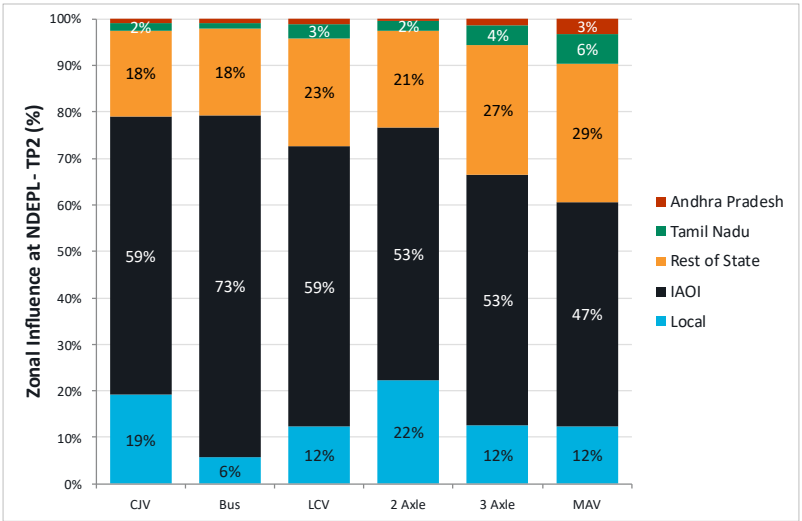


[2] For example, if out of 100 trips at a toll plaza on an Asset, 10 trips are between Hyderabad and Delhi and 90 trips are between Hyderabad and Chennai, then zonal influence of Hyderabad is 50% since one trip end of all trips are at Hyderabad. Likewise, zonal influence of Delhi and Chennai would be 5% and 45%, respectively.

Source: Steer analysis of OD data

3.45 For TP2 Karabylu, IAOI retains the highest proportion on zone influence across all vehicle types, ranging between 47%-73%. This is closely followed by 'Rest of Karnataka' trips, especially for heavy vehicles. Compared to TP1, the share of local trips is comparatively similar across the vehicle categories.

Figure 3-10: Zonal influence, TP2 Karabylu



Source: Steer analysis of OD data

Internal External analysis

3.46 Internal-External analysis helps in identifying the trips which have both the origin and destination on or near the Asset i.e. local/IAOI zones (Internal-Internal or I-I), any one end on the Asset (Internal-External or I-E), or neither end on the Asset i.e., through trips (External-External or E-E). RoS here represents areas within the state which are neither local nor IAOI. 'Internal' zones are those that were analysed as 'local' and 'IAOI' in the zonal influence analysis, i.e., lying on the Asset, while 'External' zones are areas lying outside the state.

3.47 Figure 3-11 and Figure 3-12 below show the distribution of trips based on these categories. Understandably, these reflect the observations seen in the zonal influence presented earlier, at a higher level of aggregation but at a trip level.

Figure 3-11: Internal-external distribution, TP1 Doddakarenahalli

	Internal	Rest of State	External
External	6%	6%	2%
Rest of State	12%	5%	7%
Internal	30%	26%	6%

Source: Steer analysis of OD data

Figure 3-12 Internal-external distribution, TP2 Karabylu

	Internal	Rest of State	External
External	5%	4%	0%
Rest of State	15%	3%	10%
Internal	35%	23%	4%

Source: Steer analysis of OD data

3.48 As can be seen from the charts above, the I-I distribution makes up the major share for heavy vehicles. This is followed by the trips which have one end of the trip in rest of the state, this includes places like Bengaluru, Mangaluru and Hassan and other end on the Asset.

Commodity distribution

3.49 We have grouped various commodities into aggregate categories for ease of interpretation, as shown in the table below. The charts in the following sub-section present information in terms of aggregate commodity categories.

Table 3.14: Aggregate commodity categories

Commodity Description	Code	Combined codes used for charts
Agriculture Products / Cash crops (Wheat, Rice, Sugar cane, Maize etc.)	AGR	AGR
Cattle Food / Livestock (sheep, goat, cow, cattle food etc)	LIV	
Perishable Items (Fruits, vegetables)	PER	GRO
Animal Products/Dairy/Eggs/Fish/Meat/Animals	DFM	
Groceries / Food items (Soap, Salt, Sugar, Pulses, Spices, Biscuits, bread, cool drinks, beer etc.)	GRO	
Building Material / Construction (Cement, Lime, Brick, fly ash, etc)	CNS	CNS
Sand/Clay	SND	
Stone (kota stone, marble, Granite, Aggregate stone etc.)	STN	
Ceramic	CRM	
Petroleum Products (Oil, LPG, CNG, etc.)	PET	PET
Chemicals / Fertilizers (Acids, Fertilizers etc.)	CHM	
Electrical/Manufacturing items (Electronic items, Medicine, Leather, Wine, Rubber/ Tyre, Plastics, Cloth, Paper etc.)	MAN	MAN
Raw Wood, Cork & Wood Products, Furn	WUD	
Machinery / Spare parts	MAC	
Automobiles (Finished products, auto parts, Car/bike manufacturing, New Chassis)	AUT	AUT
Basic / Fabricated Metals (Iron, Steel / Metal)	MET	MET
Mining Minerals (Coal, Gypsum, Cobalt etc.)	MIN	
Empty	EMT	EMT
Container	CTR	MSC
Miscellaneous (Parcel, Courier, Household items etc.)	MSC	
Passengers	PAS	
Scrap	SCR	

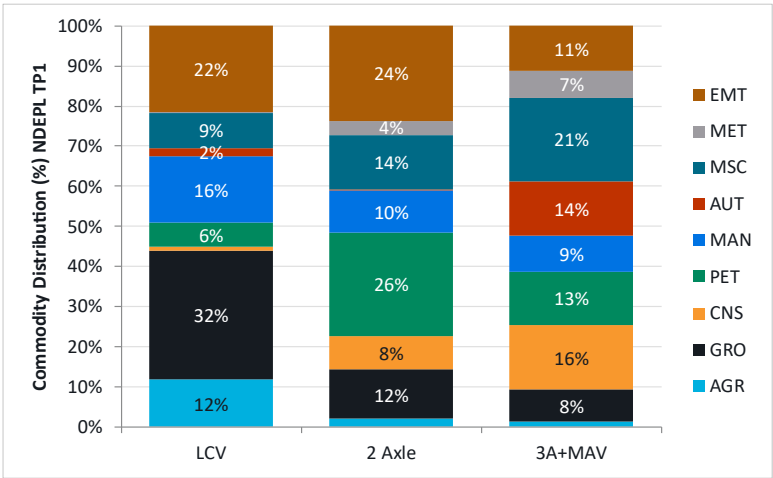
Source: Steer analysis

3.50 Figure 3-13 and Figure 3-14 below present the commodity distribution for goods vehicles at this toll plaza. These help in identifying the mix of goods carried on the Asset and in turn, the potential growth drivers.

3.51 As observed during our site visits, we see that a significant number of vehicles are bullet tankers carrying petroleum from port and oil refineries in Mangaluru to bottling plants at Yediyur and Solur, and trucks that carry bottled petroleum products. These lie very close to the Asset, leading to the high proportion of petroleum (up to 26% for 2As and 13% for 3A+MAV at TP1, and up to 15% for 2As and 30% for 3A+MAV at TP2) in the commodity distribution.

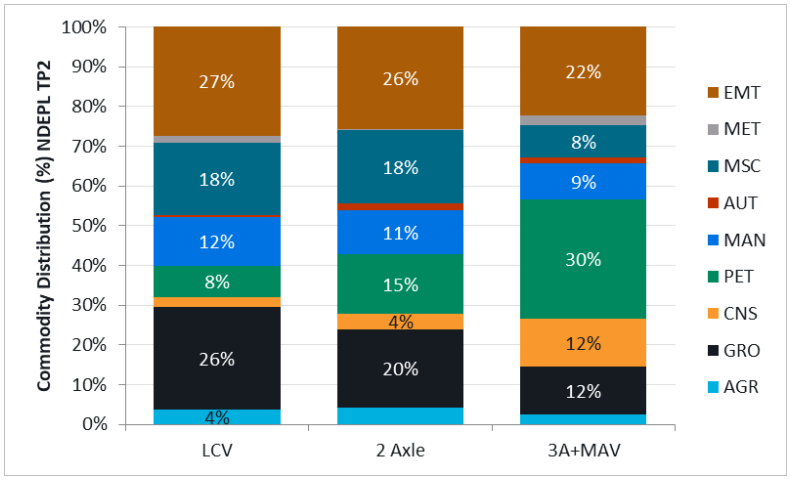
3.52 A major segment of the 3A+ MAVs 14% at TP1 is carrying automobiles and related products. This is due to the presence of the electric vehicle manufacturing cluster around Hosur to the southeast of the Asset. On TP2, a significant proportion of 3A+MAV is carrying groceries and construction materials at 12% each.

Figure 3-13: Commodity distribution, TP1 Doddakarenahalli (Total)



Source: Steer analysis of OD data

Figure 3-14: Commodity distribution, TP2 Karabylu



Source: Steer analysis of OD data

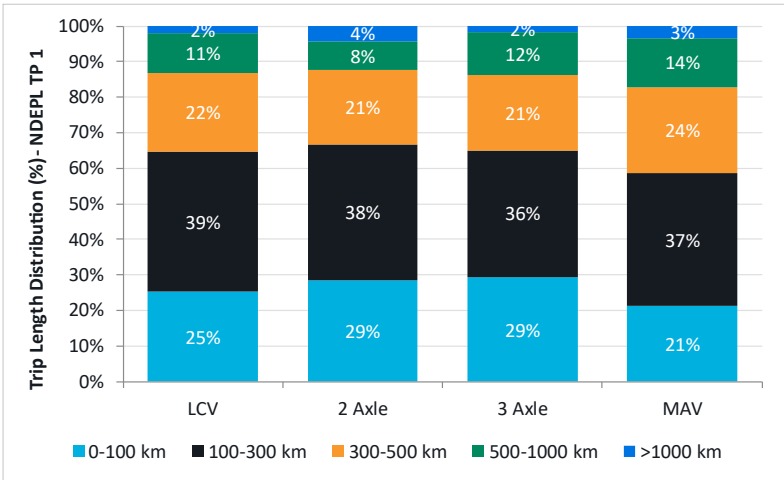
Trip length analysis

3.53 Trip-length distribution provides the distance-based profile of various vehicle types. This helps to validate assumptions around the share of macro-economic drivers, inputs from zonal influence and toll segmentation. For ease of interpretation, we have categorised distances into groups –local (0 -100km), short-distance (100-300 km), medium-distance (300-500 km), long-distance (500-1000 km) and very-long-distance (+1,000 km). The trip

distances were derived as driving distances from Google Distance Matrix Tool based on zonal coordinates for OD pairs.[3]

3.54 Figure 3-15 and Figure 3-16 below present the distribution of trip distances for various vehicle categories at the toll plazas on the Asset.

Figure 3-15: Trip length distribution, TP1 Doddakarenahalli



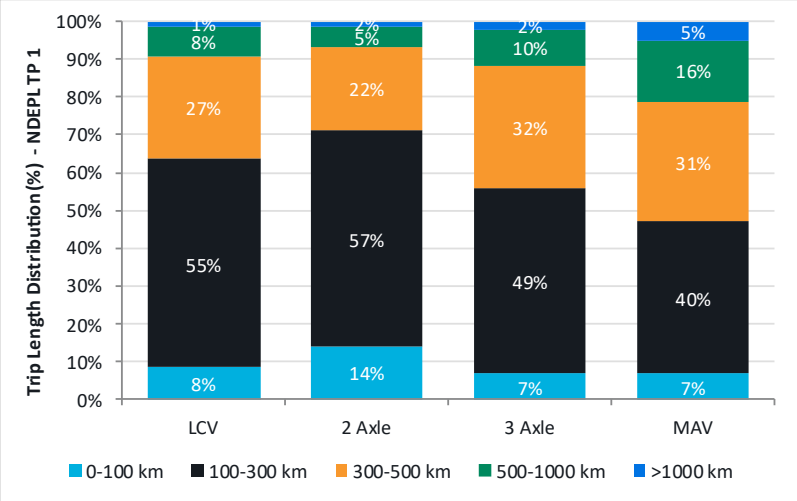
Source: Steer analysis of OD data

3.55 As shown in Figure 3-15 above, TP1 (Doddakarenahalli) has a high share of vehicles covering 100-300 km (~35-39%). The same trend is visible at TP2 for LCV/2A/3As (40%-57%). However, 3A / MAV trips covering longer distances (300-500km) also have significant share in the respective category. As previously discussed, the Asset serves mostly short/medium distance traffic between Bengaluru (as one of its major activity centres) and Mangaluru or Hassan being the other main activity centre. The higher proportion of shorter trips (<300 km) at TP1 reflects its proximity to Bengaluru and Nelamangala.

3.56 As we move towards heavy vehicle categories, the trip distances increase. However, the strategic location of the Asset in the east-west direction in the southern Indian peninsular region limits trips to being medium-distance (<500 km). Therefore, MAVs do not show high shares of long-distance traffic (14% on TP1and 16% on TP2 in the '500-1000 km' category) as observed on other assets located on strategic corridors across the country.

[3] Google Distance API is a tool that is available on a chargeable basis from Google Maps Platform. Link: **https://developers.google.com/maps/documentation/distance-matrix/start**. Travel distance and time information for driving/transit under various congestion scenarios can be extracted through this tool by using macro-enabled Excel, R, etc.

Figure 3-16: Trip length distribution, TP2 Karabylu



Source: Steer analysis of OD data

Conclusions

3.57 In FY25 and FY26, the Asset's AADT at TP1 Doddakarenahalli reached approximately 26,454 and 29,780 respectively while TP2 Karabylu recorded around 19,934 and 22,592 respectively. At both toll plazas in FY26, CJVs remained the dominant vehicle class, contributing roughly 80–82% of total traffic. Buses are the second-largest category, accounting for about 6–7%, followed by MAVs, which represent 3.9% at TP1 and 5.0% at TP2.

3.58 Since FY22, following the stabilization of pandemic-related impacts, traffic volumes on the Asset have shown robust recovery, supported by economic growth along the corridor. At a PCU level, the Asset has delivered strong growth from FY22 to FY26, with PCU CAGRs of ~10.1% at TP1 Doddakarenahalli and ~9.7% at TP2 Karabylu. This trend underscores sustained improvement in traffic performance and capacity utilization.

3.59 Whilst overall the TVC counts are similar to the TMS data, TMS is consistently 1-2% lower than TVC counts. This difference is well within the acceptable ranges and ensures that the systems used by the toll plazas are robust in nature and are able to capture the traffic correctly.

3.60 The OD analysis found that in terms of zonal influence, IAOI retains the highest proportion on zone influence across all vehicle types. This is followed by 'Rest of Karnataka' trips (note the higher share of 'Rest of Karnataka' at TP2). Looking at local trips, the share is 5%-10% lower at TP2 compared to TP1 share across the vehicle categories. Key commodities transported on the Asset include Petroleum products, which is expected given the location of the Asset relative to the Mangaluru and the petroleum bottling plants at Yediyur and Solur. Manufactured products and agriculture products also hold a considerable share of commercial traffic at both plazas (9-16% at TP1 and 9-12% at TP2.)

3.61 When considering the internal – external analysis, I-I, I-ROS and ROS-I distribution makes up the major share for both light and heavy vehicles. The trip length analysis has found that the Asset predominantly serves short/medium distance traffic, with trips under 300km having a share of 60-65% (across all vehicle categories) at TP1, and 47-65% for LCV/2A/3A traffic at TP2. MAVs at TP2 are observed to traverse comparatively longer

distances – with 31% of such trips between 300-500km. The high share of I-I and short/medium distance traffic is considered to be the captive traffic which will remain sticky to the Asset.

3.62 Overall, the historical analysis, the TVC counts and the OD survey data point to the highly tourism and car-dominated nature of the Asset with regional movement of goods traffic, with petroleum being a major regional industry.

4 Socio-economic context and traffic growth

Introduction

4.1 The growth of traffic on existing (brownfield) roads depends on, firstly, how fast the background travel demand grows (background growth); and secondly, how successful the Asset is in attracting that traffic (traffic capture). Background travel demand is driven by the socio-economic conditions of the region where the Asset is located and conditions on a national scale. These include:

1. Changes in factors such as population, economic growth (regional and national) and industrial production; and,
2. Other local factors such as strategic port growth, and growth in local industries near the Assets.

4.2 In turn, the change in the competitive position of the Asset (and thus of the traffic capture it will achieve) derives from how the service offered and the prices charged on the Asset change in comparison to competing roads; and whether any new competing road facilities are available. In this chapter, we assess the socio-economic and macro-economic indicators relevant to traffic growth on the Asset.

Population growth

4.3 We have analysed the key socioeconomic drivers of the background traffic demand in the state of Karnataka, where the Asset is located.

National Level

4.4 The total population in India has grown at a Compound Annual Growth Rate (CAGR) of 1.5% since 2000, decreasing over the years, as shown in Table 4.1 below. The World Bank forecasts this growth to decrease to 0.6% CAGR by the 2030-45 period.

Table 4.1: CAGR of population in India

Years	CAGR		
	Total Population (m)	Rural Population (m)	Urban Population (m)
1970 – 1985	2.3%	1.9%	3.8%
1985 – 2000	2.0%	1.7%	2.9%
2000 – 2015	1.5%	1.0%	2.6%
2015 – 2030*	1.0%	0.3%	2.3%
2030 – 2045*	0.6%	-0.3%	1.9%

Source: World Bank Data on Health Nutrition and Population Statistics, *forecast population growth

State Level

4.5 Table 4.2 below shows the evolution of population in the state of Karnataka (containing the Asset), compared to that of the country. Karnataka's has grown at a rate slower than that witnessed across India – between FY12-24, Karnataka's population grew at a 0.8% CAGR, compared to 1.2% for India.

Table 4.2: Population Growth in Karnataka and India (FY12 – FY24)

State	FY12 Population (m)	FY24 Population (m)	CAGR (FY12 – FY24)
Karnataka	61.5	67.9	**0.8%**
India	1,210	1,395	**1.2%**

Source: MoSPI estimates

4.6 Due to the complexities of urbanisation, and the dynamic nature of local population migration (both of which are very difficult to forecast with accuracy), we do not use population growth as a proxy for understanding future travel demand growth on the Asset. It has been included in this section simply to provide the underlying socio-economic context of the state/trends in the regions in which the Asset is located.

Economic Indicators

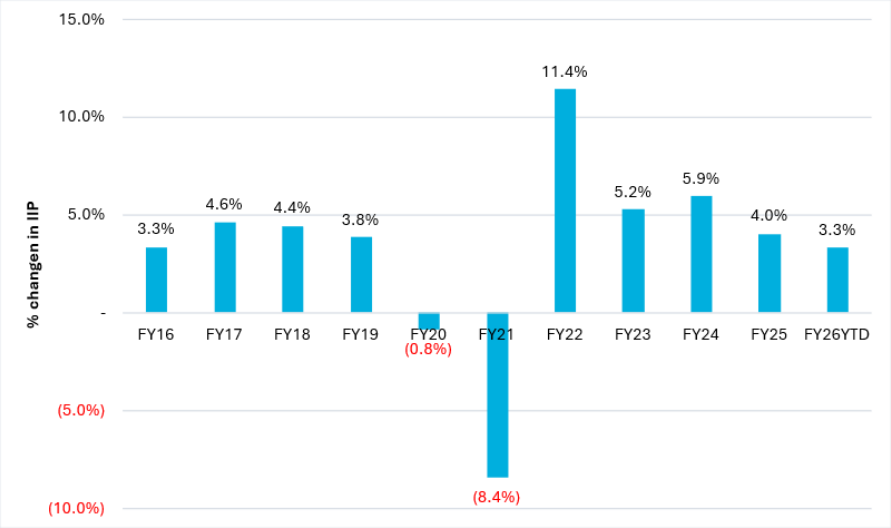
Industrial Production

4.7 The Index of Industrial Production (IIP) is a composite indicator that measures the short-term changes in the volume of production for a basket of industrial products. The IIP data tracks the manufacturing activity in different sectors of an economy, with mining, manufacturing, and electricity being the three broad sectors constituting the IIP.

4.8 Figure 4-1 below shows that at an annual level, national IIP was growing at an average of 4% per year over the period FY15-19, before the country underwent a liquidity crisis and experienced an overall economic slowdown in FY20. In the aftermath, IIP shrank by over 8% in FY21 due to a decline in economic activity in the wake of global lockdowns introduced to curb the Covid-19 pandemic. Post the immediate recovery in FY22, IIP growth has since stabilised, with FY25 recording 4% and FY26YTD (till February 2026) recording 3.3% growth over FY25 .

4.9 Since state-level IIP data is not as readily available as national level IIP, we have presented national IIP here to indicate nationwide activity in key industrial sectors like power, manufacturing, and mining, all of which influence long-distance commercial movements across the nation, and not unique to this asset. However, we do not use it to forecast future travel demand growth since long-term forecast for IIP is not available through official sources such as MOSPI, RBI or through multilateral organisations like WB, or the IMF.

Figure 4-1: Annual growth – Index of Industrial Production (FY16-FY26YTD)



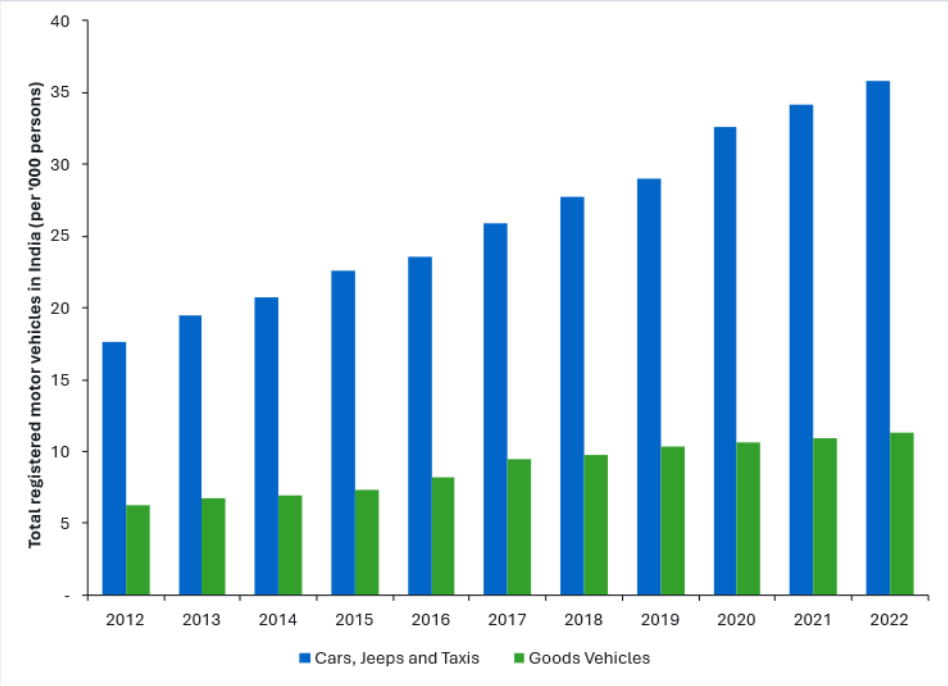
Source: Ministry of Statistics and Program Implementation (MoSPI), FY26YTD represents data till Feb'26

Vehicle Ownership

4.10 The gap in car ownership between India and developed nations remains substantial – with 36 cars/jeeps/taxis and 11 commercial vehicles per thousand people, as of FY22 (the latest year for which official data is available). However, with increasing per capita income levels, a booming economy and the subsequent increase in demand for mobility, the number of registered vehicles has been on a gradual upward trend.

4.11 Overall, India still stands at a very nascent stage in the vehicle saturation curve, offering huge potential for growth going forward. Between FY12 and FY22, the CAGR for CJV and goods' vehicles registered in India was 8.6% and 7.3% respectively.

Figure 4-2: Total number of registered motor vehicles in India (per 1000 population)



Source: Ministry of Road Transport and Highways (MoRTH)

Per Capita Income (PCI)

4.12 As per the latest MOSPI data presented in Figure 4-3, Karnataka's per capita income (PCI) in FY25, at constant 2011–12 prices, stood at around ₹2,00,000, compared to the national average of approximately ₹1,12,000. This implies that Karnataka's PCI was nearly 1.78 times the national level.

4.13 This highlights the relatively stronger economic performance of the state compared to the national average, indicating sustained economic and traffic growth. Going forward, we expect local consumption to be strong which would drive the growth in both passenger and commercial traffic.

Figure 4-3: Per Capita Income

Source: Ministry of Statistics and Program Implementation (MoSPI)

4.14 However, given the difficulty in obtaining granular district level PCI data it is not advisable to use this as a growth driver. Also, since long-term forecasts for PCI are not available, we therefore refrain from using it to forecast traffic.

Economic growth

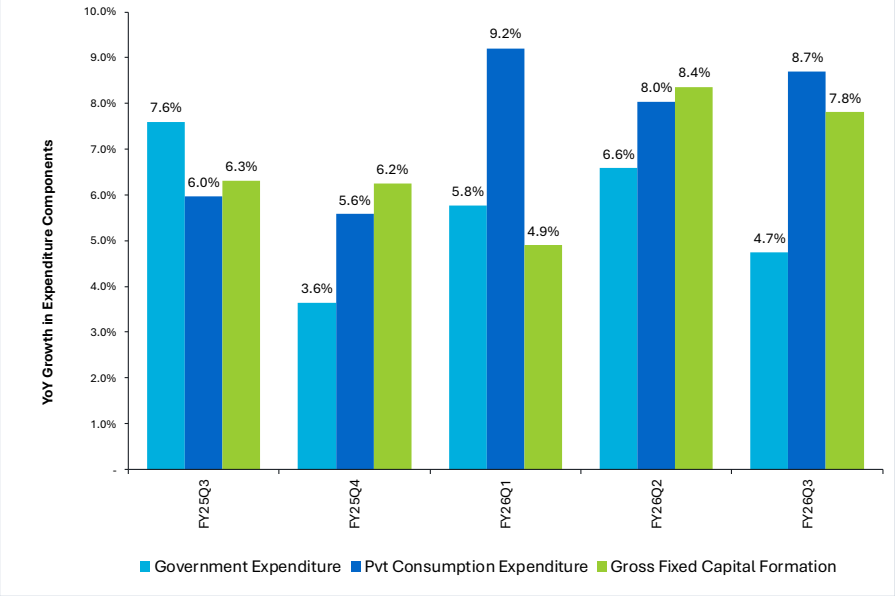
India's Performance

4.15 Despite a slowdown in the economy during H1FY25, the Indian economy has observed strong growth each quarter since FY25Q2, with the latest published estimates for FY26Q3 GDP at 7.8% over FY25Q3. This performance has been driven by strong growth in investment and consumption expenditures and higher consumer optimism for the year ahead[4].

[4] Gov**ernment of India PIB Release (27th February 2026)**

4.16 In Figure 4-4 below, we present quarterly Y-o-Y growth in three major components of GDP – government expenditures, consumption expenditures, and business investment (gross fixed capital expenditure) over the past years (FY25Q3-FY26Q3).

Figure 4-4: YoY Growth in expenditure components of GDP

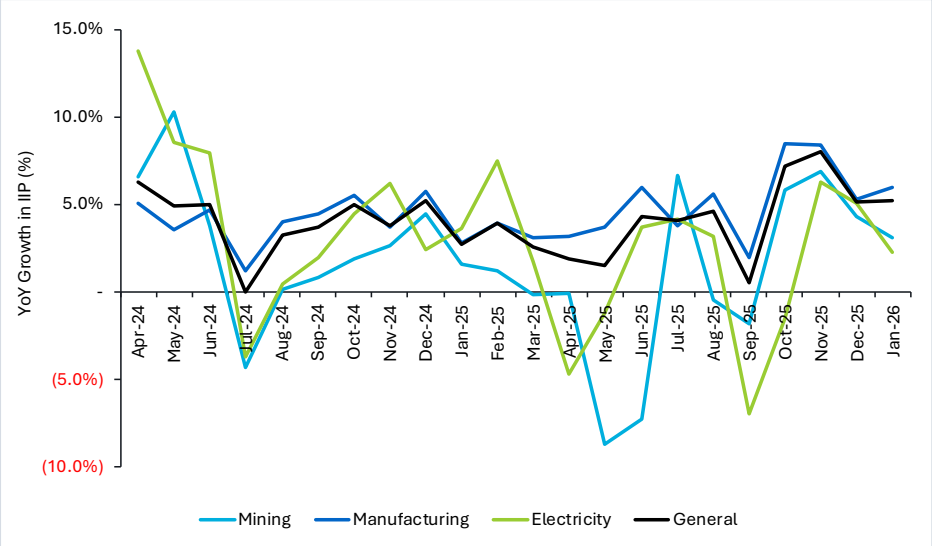


Source: Steer Analysis of MOSPI Data

4.17 While consumption and investment expenditures have continued to show consistent growth over the past two quarters, government expenditures observed a marginal decline in FY25Q4. In FY26Q1, government expenditures rebounded, recording 5.8% growth over FY25Q1 levels.

4.18 Performance across different types of industrial activities (such as Mining, Manufacturing, and Power Generation) directly impact freight movement and commercial traffic volume growth across the country, including on the Asset. In Figure 4-5 below, we present growth trends in IIP – a measure that tracks the performance of the economy across these activities. As of FY26YTD (Apr-Feb'26), the Manufacturing sector continues to perform strongly, recording positive y-o-y growth since FY25Q3. While industrial activity across the two other sectors (i.e., Power Generation and Mining) dropped between May and Jun/Jul '25, they have since rebounded and show signs of continued growth going forward.

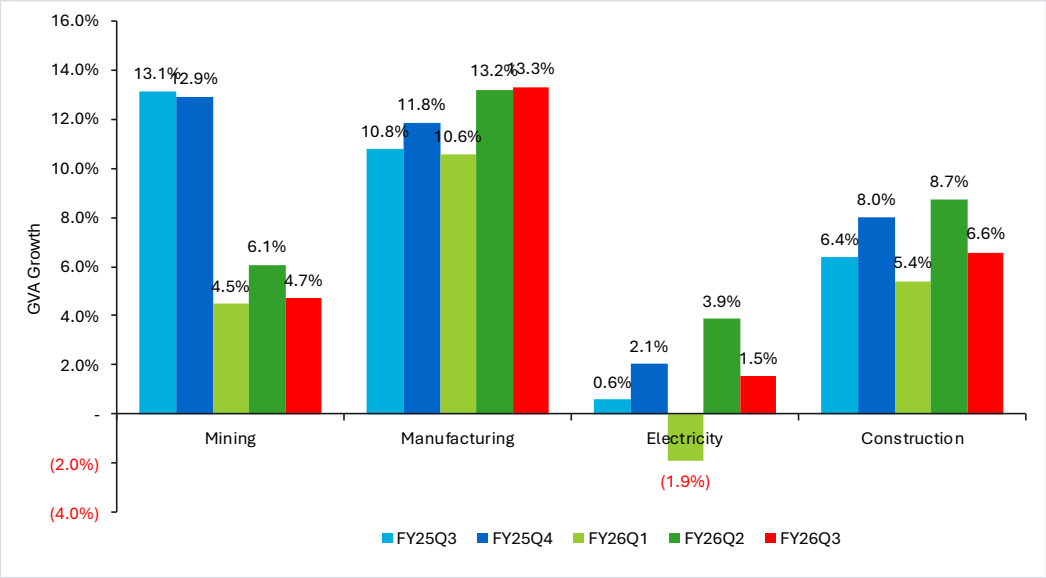
Figure 4-5: Month on Month IIP performance



Source: Steer Analysis of MOSPI Data

4.19 In addition to monthly trends in IIP, Figure 4-6 below presents y-o-y growth of quarterly GVA in four industrial sectors - Mining (& Quarrying), Manufacturing, Electricity (and other Utilities), and Construction. While the Mining and Power sectors observed decline and muted growth in FY26Q1, the Manufacturing and Construction sectors experienced strong growth. Generally, economic growth has remained resilient as of FY26YTD, but performance across industries have varied, impacting economic growth across different regions and on the Asset as well.

Figure 4-6: Industrial components of GVA



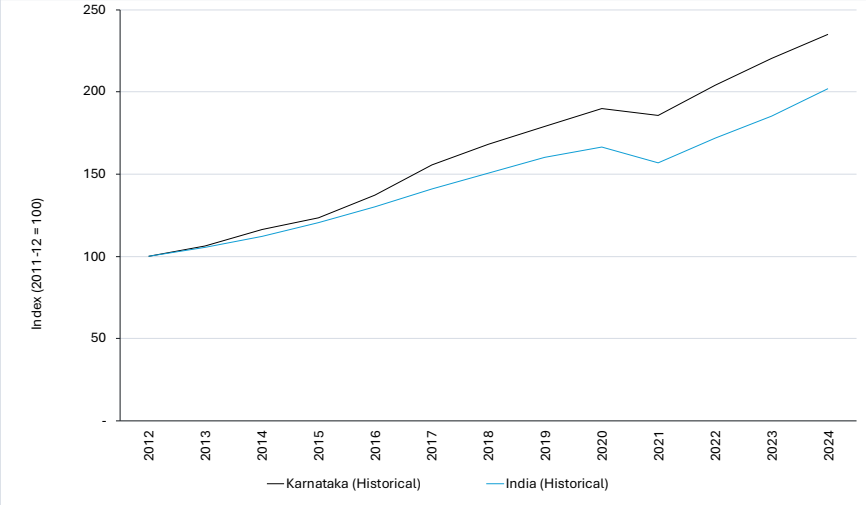
Source: Steer Analysis of MOSPI Data

GDP and GSDP Growth

4.20 Over the period FY12-FY24, National Real GDP (at 2011-12 constant prices) has grown at 5.9% per year, aided by a strong growth in the services/tertiary sector. The economic growth of Karnataka has been stronger than the country overall; between the same FY12-24 period, the state's GSDP grew at a 7.4% CAGR.

4.21 Karnataka contributed approximately 8.2% of India's GDP in FY24 but accounted for 4.9% of its total population – highlighting its relative significance in contributing to nationwide economic growth. Figure 4-7 below compares historical growth of Karnataka's GSDP relative to national GDP growth over the period FY12-FY24.

Figure 4-7: Evolution of Karnataka's state GDP and national GDP



Source: Steer Analysis of MOSPI Data

4.22 Karnataka is the information and technology (IT) hub of India and home to one of the largest technology clusters in the world - Bengaluru. The city contributes to nearly one-third of the state GSDP as of FY24 and houses several major industrial sectors including automobiles, aerospace, textiles, heavy machinery, agriculture and food processing[5].

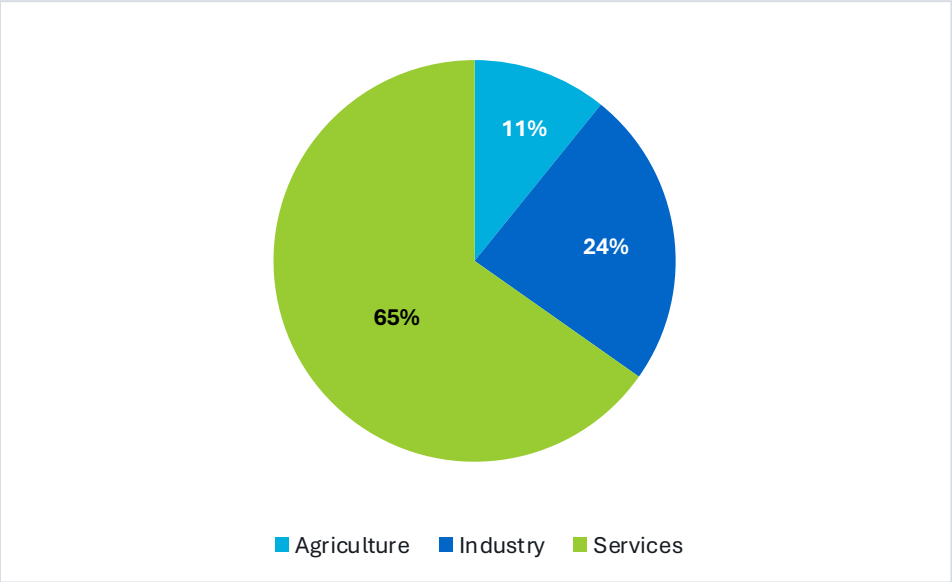
4.23 As shown in Figure 4-7 above, over the past decade, the state of Karnataka followed the same upwards economic growth trend observed at the national level, but at a faster rate. The growth of Karnataka can be attributed to the boom in IT services sector in the region and policies encouraging the establishment of research and development facilities. Apart from the IT sector, automobile, aerospace, textiles, biotechnology, and heavy engineering industries also contribute to the state's growth. Karnataka also houses one of the 13 major ports in India, the Mangaluru port.

4.24 In terms of the secondary sector, the state has key industrial areas in Hubli-Dharwad, Belgaum and Bengaluru (automobile cluster), Mangaluru and Udupi (petrochemical), Bellary, Koppal, Raichur (steel and iron ore) and Belgaum and Bengaluru (aerospace). The state also has a major port in Mangaluru, which is known for import of crude and petroleum products.

[5] **Bengaluru, Karnataka: India Investment Brief**

4.25 As seen in Figure 4-8 below, in terms of sectoral contribution, the services sector is the biggest contributor to the state's GSVA (65%), followed by secondary (24%) and primary sector (11%), as of FY24. Karnataka's GSDP CAGR was 7.4% between FY12-24 and its relative share to the national GDP was around 8.2% in FY24[6]

Figure 4-8: Sectoral contribution to Karnataka's GSDP in FY24



Source: Steer Analysis of MOSPI Data

4.26 The official historical GDP and GSDP data for India are released by the Ministry of Statistics and Program Implementation (MoSPI. The GDP forecasts for India are available from various reliable sources such as Oxford and Consensus, but the GSDP forecasts for the same are not published. However, using the past trends of the relationship between GDP and GSDP, we can develop reasonable GSDP forecasts. Therefore, in our view, GDP is the best source of growth driver for long term traffic forecasts.

4.27 For any indicator to be used as a growth driver to forecast traffic, a reliable source of historical and forecast data availability for that indicator is the key requirement. Of the key socioeconomic indicators discussed above, GDP was assessed to be the only growth driver for which reliable data is available both in terms of historical and forecast data. Therefore, to forecast traffic, we use GDP/GSDP as our key growth drivers.

Forecasts for growth drivers

4.28 Following the discussion in Chapter 4 on the nature of economic activity in the state of Karnataka, in this section, we describe the assumptions in relation to forecasts of the key macro-economic drivers of traffic growth on the Asset.

4.29 We have based our forecasts of GSDP for Karnataka using forecasts of GDP based on the forecasts of the GDP of India as provided by the Client.

[6] GSVA/NSVA by economic activities | Ministry of Statistics and Program Implementation | Government Of India

National GDP

4.30 After the last period of economic slowdown in FY11-12, the country experienced an economic downturn again in late FY19 with FY20 having reported a GDP growth of 4% (relative to an average growth rate of 7% per year between FY13 and FY19). India's GDP growth declined as domestic investment and consumption demand were already under stress because of the liquidity crunch before Covid-19. Other factors that contributed to the economic slowdown included reduced growth rates in automobile sales and production, liquidity crunch in credit markets and rising number of Non-Performing Assets (NPAs) within the banking sector, as well as lower manufacturing production and lower rural consumption.[7]

4.31 The Covid19 outbreak had a significant impact on the Indian economy during the first two quarters of FY21 as government mandated lockdowns across the country effectively stalled economic activity and growth. The growth momentum eventually picked up in Q3 of FY21, with a sharp rebound in the economy in FY22 (GDP recorded 9.7% growth over FY21) and has since observed a consistent growth of 7.6% in FY23, 9.2% in FY24. GDP growth remained strong through FY26, with quarterly growth of 7.8% in Q1, 8.4% in Q2 and 7.8% in Q3, while the RBI estimates full-year FY26 growth at 7.6% under the revised GDP series.

4.32 Figure 4-9 below shows Client-provided GDP projections for India. The forecast expects the Indian GDP to grow at 6.3% between FY27-FY30 and 5.5% between FY31-FY44, gradually tapering down to 5.2% by FY50. The GDP growth forecast is broadly in line with other independent forecasts available from reliable sources such as IMF, World Bank and RBI[8] in the medium term

4.33 State economic policies in combination with its fast-growing urban centres such as Bangalore are expected to keep statewide economic growth buoyant. Thus, over the short and medium term, we have assumed KA GSDP to continue growing above national GDP growth, with gradual convergence with the latter in the long-term.

[7] **Data | India's GDP was on a downward slope even before COVID-19 wreaked havoc - The Hindu** (September 2020)

5 FY26 Base year AADT and Traffic growth Analysis

Introduction

5.1 In this chapter, we present our approach, assumptions, and results for base (or background) traffic growth for each vehicle category on the Asset.

5.2 Traffic growth is commonly related to a variety of macro-economic and industry- or commodity-specific factors (hereafter referred to as 'traffic growth drivers'). These growth drivers are typically identified from the results of the OD data analysis and the site visits that help us appreciate the nature of traffic movement – 'what' travels 'where' and 'why'.

5.3 We carry out regression analyses to determine the historical relationship between traffic growth by vehicle category and growth in the underlying economic drivers. In this specification, traffic volumes form the dependent variable, and the underlying economic driver forms the independent (or "explanatory") variables.

5.4 Typically, passenger and light commercial vehicle traffic like cars, buses, LCVs and 2-axle trucks grow in line with the GSDP of the state in which the toll road is located. Heavy vehicle traffic like 3-axle trucks and MAVs grow in line with the national GDP. This is because most light vehicles tend to travel shorter distances within the state, whereas a significant proportion of heavy vehicles carry commodities for long-distances across the country. These commodities also tend to be part of industry ecosystems whose demand-supply relationships are scattered across the country and are thus related more with GDP growth.

FY26 Base year AADT estimates

5.5 The base year is the year on which long-term background forecast growth rates are applied to derive year-wise average annual daily traffic (AADT) estimates for forecast years. This is therefore an important aspect of our forecasting approach as traffic and ultimately revenue forecasts for future years are built on top of the base year traffic estimate. We have used FY26 as the base year for AADT estimates for the forecast years.

5.6 As described previously in Chapter 3, to establish the base year (FY26) traffic position, we utilised information from various sources – including from the Client and our context knowledge, to assess a reasonable demand on the corridor.

Methodology

5.7 The base traffic for FY26 has been estimated using 11 months of actual traffic data (April to February). Each toll plaza's seasonality correction factors were applied on the actual

MADTs of Apr-25 to Feb-26 to obtain seasonally corrected estimates for FY26 traffic. An average of these estimates was considered to be the FY26 base traffic.

Seasonality Correction factors

5.8 Traffic on any Asset varies on a month-on-month level. Such variations maybe due to monsoons (typically Jul to Sept) or due to festivals in the region. For e.g. It is observed that typically the truck traffic during the first half of the financial year (April-September) is generally lower than the annual average, mainly because of peak summer season followed by monsoons affecting the freight movement patterns in large parts of the country in the July-September period. In addition to these there may be other seasonal variations specific to the Asset.

5.9 In order to normalise for these variations across the year to provide an AADT estimate, Seasonality Correction Factors (SCF) are used. SCFs are estimated to convert the monthly traffic numbers to an AADT level while accounting for seasonal variation due to local/national festivals, weather changes and/or temporary external impacts. These are typically estimated using historical data for each plaza and vehicle category over multiple years. An SCF >1 means that the traffic for the month is lower than the annual average and vice-versa.

5.10 To achieve this, we studied the seasonality between monthly average daily traffic (MADT) – We have analysed the seasonality trends between monthly average daily traffic (MADT) and AADT for data during the historical years of tolling (as described in Chapter 3) excluding the years that were impacted by specific events. This averaged seasonality trend is then applied to the monthly traffic to obtain AADT as mentioned in the previous sections.

5.11 Table 5.1 and Table 5.2 below present the average of FY24 and FY25 SCFs used to arrive at the FY26 base estimates.

Table 5.1: Seasonality correction factors for TP1 – Doddakarenahalli

SCF	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Jan	Feb	Mar
CJV	0.94	0.90	1.01	1.16	1.12	1.08	0.95	0.95	0.94	1.06	0.99	0.99

Adopted base estimates

5.12 Based on the above methodology and inputs, the adopted base traffic positions for both the Asset toll plazas are shown in Table 5.3 and Table 5.4 below:

Table 5.3: Adopted AADT for FY26, Doddakarenahalli

	FY25	FY26YTD	FY26A	FY26A vs FY25
CJV	21,415	23,731	23,790	11.1%
LCV	1,204	1,245	1,258	4.5%
Bus	1,698	1,815	1,820	7.2%
2A	1,000	1,069	1,072	7.2%
3A/MAV	1,137	1,123	1,130	(0.6%)
TOTAL	**26,454**	**28,983**	**29,069**	**9.9%**
PCU	**35,969**	**37,905**	**38,032**	**8.8%**

Source: Steer analysis: FY25 is actual full year data. FY26YTD includes 11 months of FY26; FY26A is adopted base for FY26

Table 5.4: Adopted AADT for FY26, Karabylu toll plaza

	FY25	FY26YTD	FY26A	FY26A vs FY25
CJV	15,861	17,931	17,882	12.7%
LCV	835	901	908	8.8%
Bus	1,382	1,490	1,493	8.1%
2A	729	751	756	3.7%
3A/MAV	1,127	1,098	1,103	(2.2%)
TOTAL	**19,934**	**22,172**	**22,143**	**11.1%**
PCU	**27,070**	**29,583**	**29,584**	**9.3%**

Source: Steer analysis: FY25 is actual full year data. FY26YTD includes 11 months of FY26; FY26A is adopted base for FY26

5.13 As we can see from the above tables, FY26A AADT and PCU estimates are 9.9% and 8.9% above full year FY25 for TP1, and 11.1% and 9.1% at TP2 (respectively). TP1 has strong influence of growing Bengaluru economy hence it's growing at a healthy rate. Similar trends are observed at TP2. Both TPs show a muted growth profile for 3A/MAVs, which we believe is largely driven off a negative variance observed in 3As on account of evolving axle-preferences.

Estimation of background elasticities

5.14 Elasticities, in the case of traffic growth, are the relationships between traffic growth and the growth in underlying economic drivers of traffic. Multiplied with forecasts of growth drivers like GDP or GSDP, they provide forecasts of background traffic growth rates.

5.15 The TMS data for the Asset reports Bus and 2A separately whereas 3A and MAV volumes are reported together. Therefore, to understand the growth pattern of the vehicle category separately recent TVC splits of 2026 were used. Following the brief note on historical trends shown in Chapter 3, we now delve deeper into results of the historical growth analysis for each major vehicle type. For this Asset Car, LCV and Bus do more regional movement as validated from OD trip length and zonal analysis hence the growth of this vehicle category is more influenced by Karnataka GSDP. Whereas 2A, 3A and MAV carry heavy commodities like construction material, containers, metals and miscellaneous products within Karnataka, Tamil Nadu, and other parts of the country.

5.16 Table 5.5 below presents the growth drivers identified to model the forecast background traffic growth rates.

Table 5.5: Split between individual vehicle types, 2026

Toll plaza	Vehicle type (for growth)	Share (%)
Doddakarenahalli & Karabylu	3A	23%
	MAV	77%

Source: Steer analysis of independent TVC data

5.17 Table 5.6 below presents the growth drivers identified to model the forecast background traffic growth rates.

Table 5.6: Identified growth drivers to model traffic growth

Vehicle type	GSDP Karnataka	GDP India
Car	100%	
LCV	100%	
Bus	100%	
2A		100%
3A		100%
MAV		100%

Source: Steer analysis of Client data

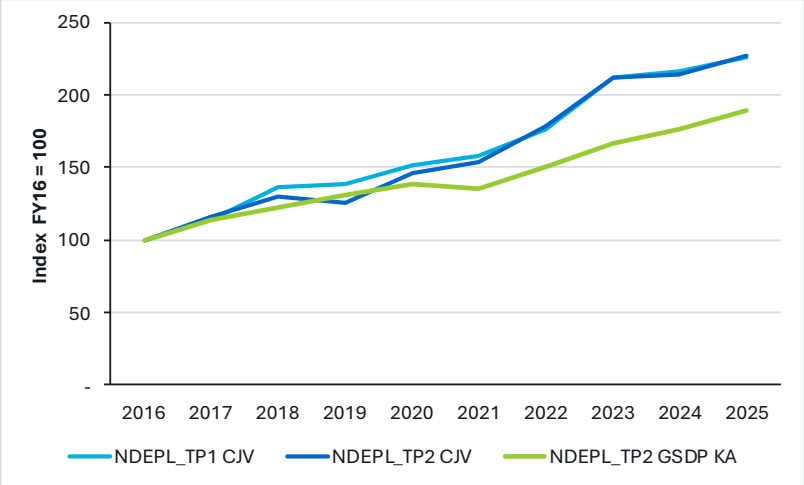
5.18 For the purpose of regression analysis, we have considered the period of FY16-25 Though there were combination of activities including construction on the Hassan-Mangaluru section of the corridor and the introduction of the petroleum pipeline between the Mangaluru Port and HPCL bottling plant at Yediyur in FY16-24 period, these episodes didn't impact traffic volumes significantly hence have been considered in regression analysis.

CJV

5.19 We see from the OD data that the CJVs primarily cater to regional movements between Bengaluru, Hassan, Mangaluru, Kunigal and other towns lying on the Asset. We have

therefore taken Karnataka GSDP to be the growth driver to model the growth of CJV traffic. Figure 5-1 below shows the relationship between indexed values of CJV traffic and Karnataka GSDP at TP1 Doddakarenahalli and TP2 Karabylu.

Figure 5-1: Relationship between CJV traffic and Karnataka GSDP



Source: Steer analysis of Client TMS data and publicly available GSDP data

5.20 Generally, we would expect that in fast-growing economies with relatively low car ownership levels, car traffic growth rates are often in line with or slightly higher than growth in GSDP/GDP (i.e. suggesting elasticities at or just above 1.0). Further, there is an expected increase in car ownership proportion of overall population as the economy grows. This assumption is very contextual and subject to change as there are changes in economic policies of government and overall economic stability nationally and globally.

5.21 Historically, for the period of FY16-25, Car growth on TP1 (9.6%) and TP2 (9.6%) is similar while the GSDP growth for the same period is 7.3%. This is with the Asset connecting high urban centres Bengaluru and Mangaluru and feeding tourism driven Mysore traffic as well. Considering the positive outlook for passenger traffic on the tourism-driven Asset, proximity to the fast-growing Bengaluru urban agglomeration we have assumed a forecast background elasticity starting of 1.2 at TP1 and 1.1 TP2 for CJV.

5.22 We have assumed the elasticity of CJV growth to the underlying regional economy to reduce with time at TP1 and TP2, going from 1.20 in FY26 to 1.1 in FY31and beyond at TP1 and at TP2 it is reduced from 1.1 in FY26 to 1.0 by FY31 onwards.

LCV, 2A

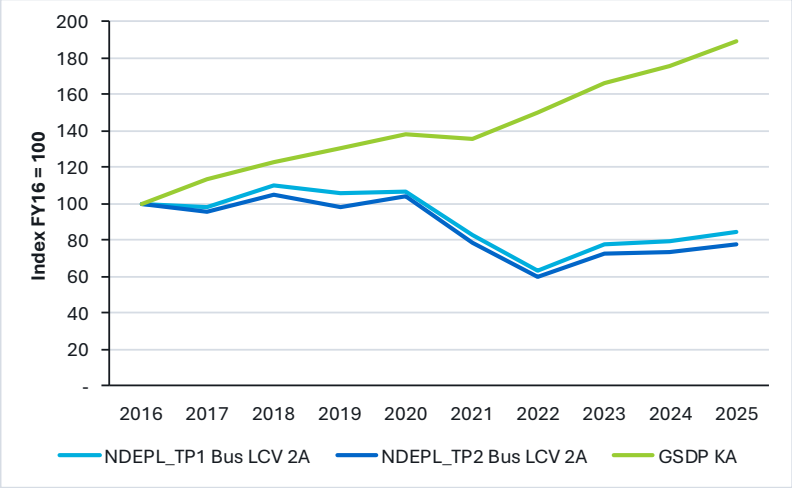
5.23 Compared to heavy vehicles like 3A and MAV, LCV, 2A and Bus have more regional movements within the state – Karnataka in this case, as seen in the OD data analysis. More than 85% of LCVs, 2A and Bus have both trip ends within Karnataka. We have therefore taken GSDP of Karnataka to be the growth driver to model growth of LCV+2A traffic.

5.24 For the period of FY16-25, combined LCV, Bus and 2A show a degrowth of 1.9% on TP1 and 2.8% on TP2 against growing GSDP. This is because at a vehicle category, LCV are historically dropping more than 7% across both toll plazas. This is with shift from LCV to 2A to carry excess tonnage benefit and a mis-categorisation of 2A, Bus and LCV in reporting system.

5.25 Bus growth tends to be largely supply-driven in many parts of the country, with new buses being bought and deployed by the government at intervals of time. Based on our experience across the country, buses on inter-urban and tourism corridors show elasticities of 0.4 to 0.6 with respect to the GSDP.

5.26 Figure 5-2 below show the relationship between indexed values of LCV+2A+Bus combined traffic India GDP and Karnataka's GSDP.

Figure 5-2: Relationship between LCV+Bus+2A combined traffic and Karnataka GSDP

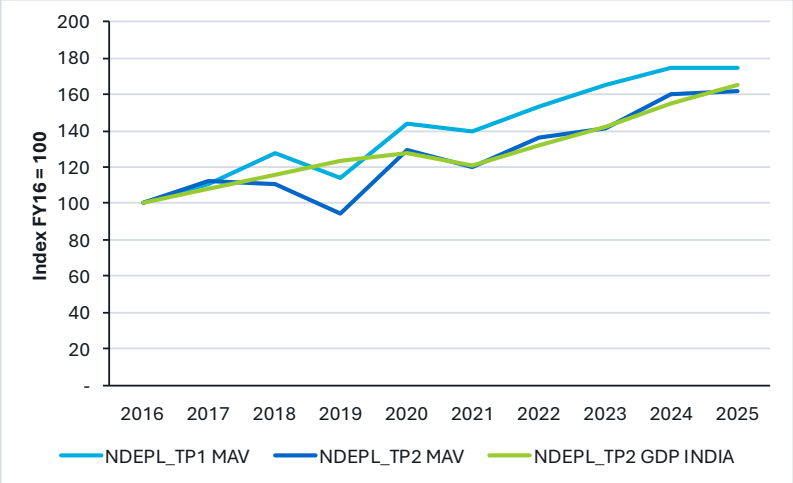


Source: Steer analysis of Client TMS data and publicly available GSDP data

3A/MAV Trucks

5.27 Compared to lighter trucks like LCV and 2A, 3A and MAV have more national or long-distance movements covering several states. Given that manufacturing-related commodities tend to take prominence in their commodity distribution which means that traffic growth in 3A and MAV is dependent on industry demand-supply ecosystems spread across the country, we have taken GDP as the growth driver to model the traffic growth in 3A and MAV. Figure 5-3 below shows the relationship between indexed values of 3A+MAV combined traffic and India's GDP.

Figure 5-3: Relationship between 3A+MAV combined traffic and India's GDP



Source: Steer analysis of Client TMS data and publicly available GDP/GSDP data

5.28 For the period of FY16-25, we observe CAGR 6.4% growth at TP1 and CAGR of 5.4% at TP2 against CAGR of 5.6% GDP growth in the same period. With the shift from 3A to MAV, the growth of 3A has been lower compared to MAV.

Forecasts for background elasticities

5.29 Table 5.7 below presents a summary of the results of the regression analysis carried out on the historical toll plaza data and the macroeconomic (GDP/GDSP) growth, along with the assumed forecast elasticities for background traffic growth.

5.30 Given the nascent stage of India's logistics sector, characterized by a highly fragmented trucking industry (95% of operators owning fewer than five trucks) and low car ownership rates (30-35 per 1000 people), the forecast elasticities for 2A/3A vehicles have been kept constant throughout the concession period, while that of MAVs has been marginally increased in FY27, being brought back to 0.7 from FY30 onwards.

5.31 In terms of passenger traffic, the CJV elasticity at TP1 Doddakarenahalli and TP2 Karabylu has been tapered down to 1.0 by FY31. This assumption is grounded in historical trends and a long-term perspective on regional and national growth, suggesting market maturity is still several years away.

Table 5.7: Derived elasticities from regression analysis and assumed forecast elasticities for background growth

6 Forecasts: Network overlays and forecasts

Introduction

6.1 Following the discussion on estimated and assumed forecast background growth rates in the previous chapter, this chapter first deals with the forecasting assumptions around base year AADT and potential impacts on traffic growth on the Asset. Later, it also presents the assumed toll segmentation, trip factors and evolution of toll rates for the forecast period which are used to estimate the forecast revenue based on the forecast traffic. In the final section, the chapter summarises the traffic growth rates for the forecast years. The following table lists key intermediate and final outputs that have presented in chapter 3, 5 and 6.

Analysis of potential network/developmental impacts

Summary of alternate routes and planned changes

6.2 The section below details the impacts which we believe would affect traffic on the Asset during the concession period. As discussed earlier in Chapter 2, in order to assess the impacts on the Asset, whether positive or negative, we have studied developments (alternate roads, feeder roads and regulatory) in the surrounding road network.

6.3 Figure 6-1 below shows the road network surrounding the Asset.

Figure 6-1: Alternate routes and Asset shown against the regional network context

Source: Steer analysis and cartography

6.4 Past network developments on the corridor include the construction and improvement of the Shiradi Ghat section on the Hassan-Mangaluru Road. Upcoming developments include potential construction of Satellite Ring Road around Bengaluru. Table 6.1 below presents the upcoming network developments, corresponding feeder routes, year of completion and direction of impact on the Asset.

Table 6.1: List of network/other developments

S. No.	Development	Route affected	Year	Impact (+/-)
1.	Satellite Town Ring Road (STRR) around Bengaluru (Solur to Dobbaspet spur)	Trips between TN/Hyderabad and Coastal Karnataka (TP1 only)	FY27 onwards	-ve
2	Peripheral Ring Road – LOS improvement		FY30 onwards	+ve

Source: Steer analysis

Impact assessment for network/other developments

6.5 The subsections below include a narrative of each of the improvements, as listed in the table above, and impacts associated from each of these. Please note that all traffic volumes for impacts were estimated as impact rates applied on FY26 Base AADT.

Satellite Town Ring Road (STRR) around Bengaluru

6.6 STRR is an under construction 4-6 lane access-controlled expressway around Bengaluru and will provide a larger bypass for long distance traffic. This will serve as bypass around Bengaluru city and increases the speed of freight movement and traffic handling capacity for the long-distance traffic which does not have anything to do with Bengaluru City.

6.7 STRR involves the realignment of NH648 and can be accessed from Dobbaspet. Currently, the Dobbaspet- Doddaballapur- Devanahalli- Hoskote section of the STRR is completed and operational with tolling in place. The remaining two sections of the Obalapur-Mudugadapalli corridor are the last sections of the STRR and includes the Solur to Dobbaspet spur on the western side of Bengaluru city. Our analysis considers the impact of the currently operational sections of the STRR as well as the impact the completion of the Solur-Dobbaspet spur will have on the Asset.

6.8 The impact of STRR will be applicable to only TP1 as this expressway provides a direct bypass option to Industrial clusters at Dobbaspet- Doddaballapur, can access Kempegowde International Airport and NH44 (Hyderabad highway) through Devanahalli Exit and STRR provides a direct connection to the upcoming Bengaluru- Chennai Expressway which originates from Hoskote.

6.9 Based on the GJC approach we estimate the impact of STRR (due to both the current operational sections as well as the future completion of the Solur-Dobbaspet spur) as shown in Table 6.2 below.

Table 6.2 :Impact of STRR (Dobbaspet- Hoskote section) at TP01

Vehicle type	FY27	FY28 Onwards
Staging	*50%*	*100%*
CJV	(1.4%)	(2.8%)
2A	(1.5%)	(3.0%)
3A	(1.7%)	(3.4%)
MAV	(1.8%)	(3.6%)

Source: Steer analysis of Client OD data, Client TMS data and publicly available information.

Peripheral Ring Road – LOS improvement

6.10 he Peripheral Ring Road (PRR) is a proposed 65 km, 100-meter-wide expressway circumventing Bengaluru, intended to connect Tumakuru Road (NH 48) in the northwest to Hosur Road (NH 44) in the southeast. Once completed, the PRR will form an intermediate bypass around the city connecting major radial highways such as NH 75 (Old Madras Road), NH 648, and NH 44. The facility is designed to reduce the volume of through and inter-city traffic currently forced to enter the Outer Ring Road network and Bengaluru's arterial roads.

6.11 The PRR will serve as a high-capacity, access-controlled corridor facilitating smoother traffic distribution across the city's periphery. This is expected to divert part of the intra-metropolitan freight and passenger traffic away from NH 75 towards peripheral routes. By providing alternative connectivity between industrial zones in Hoskote, Tumakuru Road, and Hosur Road, the PRR will indirectly reduce congestion levels on NH 75, particularly

within the sections intersecting the eastern and southeastern parts of Bengaluru's urban limits.

6.12 The expected impact of the Peripheral Ring Road on NH 75 traffic is assessed to be moderately positive, given that it will complement the diversionary benefits currently provided by the Satellite Town Ring Road. While the PRR's influence will be more localized to Bengaluru's outer periphery rather than long-haul freight routes, its operationalization will likely result in marginally higher travel speeds and improved traffic flow on NH 75 due to redistribution of commuter and logistics trips that currently use the highway for orbital movement.

Table 6.3: Impact of Peripheral Ring Road at TP1 and TP2

Vehicle type	TP1	TP2
Staging	*FY30 onwards*	*FY30 onwards*
CJV	0.5%	0.4%

Revenue forecasting assumptions

6.14 To forecast the revenues for a forecast year, the traffic forecast for each vehicle type is converted into tickets sold, which is then multiplied with the corresponding toll rate. While toll segmentation provides the breakup of trips paying each ticket type, trip factors provide the conversion factor to convert from traffic (trips) to tickets sold. This section discusses assumptions related to toll segmentation, trip factors and toll rates for the forecast period.

Toll evolution

6.15 Based on the concession agreement and the gazetted toll notification, we understand that base toll rates increase every year (revision month is September) based on WPI-linked inflation. These are rounded up to the nearest five decimals to estimate the final toll rate charged to users.

6.16 We have used actual toll rates from the FY25 toll notifications and FY26 WPI to validate the modelling of future toll evolution. Increase in WPI was calculated based on the Client's WPI forecasts, as shown in the table below.

6.17 These forecasts provided by the Client expect the WPI to grow at an average of 4.0% between FY25-FY51. The WPI forecasts available from other independent forecasting agencies may vary from this assumption and could be lower or higher than that provided by the client.

Table 6.5: WPI growth forecast assumptions

Financial year	WPI growth (%)
FY26	2.3%
FY27	0.7%
FY28	5.0%
FY29	5.1%
FY30	4.9%
FY31	4.4%
FY32 onwards	4.1%

Source: FY28 onwards WPI as per client inputs

Table 6.6: Toll estimation overview

Toll fee escalation	Revision date	Nearest rounding
Linked to 100% WPI increase	September	5

Source: Concession agreement and toll notification

Toll segmentation and trip factors

6.18 The Ministry of Road Transport & Highways has finalized a compensation formula for existing toll concessionaires to offset revenue loss from the Annual Pass scheme for non-commercial vehicles[9].

6.19 Across multiple assets, the share of annual pass trips has been rising on a monthly basis since August 5. A corresponding decline in other ticket categories including Single and Return journeys has been observed.

6.20 The segmentation for CJVs in FY27 has been assumed to be the same as the estimated March 2026 segmentation as trends suggest that the share of annual pass trips have stabilised. For other vehicle categories we have analysed the historical TMS data split by ticket categories, to understand trends, as shown in Chapter 3. For the traffic and revenue forecast, FY26YTD (Apr- Feb) as discussed in the earlier sections, can be considered a normal period.

6.21 The Annual pass compensation is separately calculated using the formula prescribed by NHAI in the same circular. Following Table 6.6 presents the Annual pass compensation computed for the toll plaza.

Table 6.11: Annual Pass Compensation for CJV (in Crores)

Toll Plaza	FY26	FY28	FY33	FY38	FY43	FY50
Doddakarenahalli	4.6	11.9	20.6	34.1	56.2	113.2
Karabylu	3.9	10.2	17.2	27.6	44.2	85.9

Source: Steer Analysis

Revenue reconciliation

6.22 As part of validating the data provided by the Client, as well as our assumptions around toll calculations, we have reconciled the actual reported revenue on a monthly level for the Asset. To reconcile we have used the segmentation and AADT for the period of FY26 (Apr-Aug) and compared it with the reported revenue over the same period.

6.23 The comparison, as shown in Table 6.11 below, shows that our modelled revenue is within a variation of 1.0% from the reported revenue over the selected period of reconciliation (excluding buses). This gives us confidence that the revenues estimated using the traffic data in our forecasts are accurately representing the revenues being reported from the Asset.

Table 6.11: Revenue reconciliation summary for Apr-Jun FY26 AADC

Toll Plaza	Steer modelled revenue (INR lakhs)	Reported revenue (INR lakhs)	Difference (%)
Doddakarenahalli	16.9	16.9	**0.3%**
Karabylu	14.7	14.7	**0.3%**

Source: Steer comparison between modelled and reported revenue

Traffic and Revenue forecasts

6.24 Based on the traffic and revenue-related forecast assumptions discussed above, we have modelled the traffic and revenue forecasts for the forecast period for the Asset. Table 6.12, Table 6.13, Table 6.16, and Table 6.17 below present the AADT/PCU forecast growth rates and CAGRs on this Asset. Further, Appendix C presents the detailed AADT and revenues for the forecast period.

6.25 For MAV, based on the discussion with Client, for forecasting purposes, we have referred to the Rigid and Trailer trucks splits in the TVC counts for calculating the effective PCU for MAV trucks. For Rigid trailer trucks we have assumed a PCU factor of 3, whereas for Trailer trucks we have assumed a PCU factor of 4.5.

6.26 As presented in Table 6.13 and Table 6.17 above, at TP1 and TP2, FY26-33 PCU CAGRs (inclusive of impacts) are 5.5% and 5.3% respectively. While the background growth is

primarily driven by car growth followed by 3A/MAVs, the opening of the Bengaluru STRR Solur-Dobaspet spur is expected to impact traffic growth over the medium term, after which growth is expected to stabilise and remain stable over the long-term.

Upside and Downside cases

Upside and Downside scenario assumptions

6.27 We have developed our base case scenario considering a balanced view on the risks associated with input assumptions around GDP growth and traffic growth elasticities. There is always a risk that the outturn values of these inputs will vary as compared to the assumptions taken due to exogenous impacts, e.g. GDP growth could be influenced both

positively and negatively by the impact of monsoons, export-import balances, political changes etc.

6.28 Similarly, traffic growth elasticities could be influenced by increased efficiencies achieved by technology, large shifts in commodity prices globally, changes in local manufacturing practices. However, at this stage we consider that the base case represents a central case scenario given the risks of variation of input assumptions.

6.29 Further, network developments are highly dependent on governmental directions, policies, legal and financial measure which might result in early or delayed completion of developments. Therefore, we have included an Upside (optimistic) and a Downside (pessimistic) case. However, at this stage, we consider that the base case represents a central case scenario given the risks of variation of input assumptions

6.30 To account for the possible variations in the growth drivers, we are also presenting an Upside (optimistic) and a Downside (pessimistic) scenario. These scenarios are defined by the following variations from the base assumptions:

Table 6.20: Summary of Macro-economic Assumptions for upside and downside cases

Input	Upside	Downside
Macro Assumptions		
GDP/GSDP	+1% every year	-1% every year
WPI	+1% every year	-1% every year
Elasticities	+ 10%	- 10%

Source: Steer analysis

Impacts-Upside Case

6.31 The upside case impacts included in forecasts are summarised in below.

Table 6.21: Summary of impacts on the Assets

Development	Year of Impact	Change in impact w.r.t base case	Magnitude of impact	
			TP1	TP2
Satellite Ring Road	FY27 (50%), FY28 onwards (100%)	+25% of base case	CJV: (2.1%) 2A: (2.3%) 3A: (2.5%) MAV: (2.7%)	N/A
Peripheral Ring Road – LOS improvement	FY 30 Onwards		CJV: 0.64%	CJV: 0.55%

Source: Steer analysis of OD data

Impacts-Downside Case

6.32 The downside case impacts included in forecasts are summarised in below.

Table 6.22: Summary of impacts on the Assets

Development	Year of Impact	Change in impact w.r.t base case	Magnitude of impact	
			TP1	TP2
Satellite Ring Road	FY27 (50%), FY28 onwards (100%)	+25% of base case	CJV: (3.5%) 2A: (3.8%) 3A: (4.2%) MAV: (4.5%)	N/A
Peripheral Ring Road – LOS improvement	FY 30 Onwards		CJV: 0.51%	CJV: 0.43%

Source: Steer analysis of OD data

Upside and Downside Case Forecasts

6.33 Table 6.23 below presents the difference between the Upside and Downside Case forecasts relative to the Base Case forecasts in FY33 (i.e., the concession end year) for both Asset toll plazas. The figures below plot the Upside and Downside Case forecasts relative to the Base Case forecasts for each Asset toll plaza over the full concession period (FY26-FY33).

Table 6.23: Percentage Difference Upside and Downside Case Forecasts vs. Base Case Forecasts – FY33

Case	Measure	TP1 Neelamangala	TP2 Karabylu
Upside Case	Traffic (PCU)	11.7%	10.1%
Downside Case		(9.5%)	(8.2%)
Upside Case	Revenue	18.9%	16.9%
Downside Case		(14.8%)	(13.6%)

Summary outlook

6.34 The Asset is a part of a well-established east-west corridor (NH75) that connects two major cities in Karnataka (Mangaluru and Bengaluru). In general, the Asset's value to the regional economy, and particularly for passenger traffic is defined by the critical link it provides in connecting Bengaluru city to regional activity centres further west of the city and towards Mangaluru. This includes local and regional movements connecting key urban centres of the Bengaluru Metro region with Mangaluru, Udupi and Hassan.

6.35 The Asset also serves as the key gateway and primary route to reach Mangaluru on the western coast of Karnataka - known for its temples, hills and beaches, and popular visitor sites for tourism, business and leisure travellers. It is also the headquarters of the Dakshin Kannada district, which is home to several prominent temple locations including Shravanabelagola. Thus, statewide growth in both services and tourism are expected to positively influence passenger traffic growth on the Asset.

6.36 Commercial traffic plying the Asset carry consumption-based agro-related commodities in light goods vehicles while bullet tankers carry petroleum-related products. Two bottling plants, BPCL (Solur) and HPCL (Yediyur) located on the Asset, as well as the Mangaluru port/petroleum refinery are key (trip) generators in the Asset's region of influence. Given the commodities being carried on the Asset are essential in nature and largely serve the growing urban consumption demand of the Bengaluru Metro region, we believe future growth in commercial traffic on the Asset will follow from expanding urbanisation trends.

6.37 The upgradation of the Bengaluru airport, development of new enterprises nearby, and Bengaluru's overall economic development have all contributed to traffic growth on the Asset and continues to support our growth outlook for the Asset. Ongoing improvements to the Shiradi Ghat section of the NH75 and plans to construct Gundya-Sakleshpur tunnel

between Hassan and Mangaluru also bode well for the future level of service of the corridor.

6.38 Our positive outlook for the region is driven by historically robust growth in Karnataka's economy (GSDP CAGR of 7.4% per year) between FY12-24 which we believe to sustain going forward. Continued growth in the regional economy, specifically in service-based sectors such as tourism and IT, and goods-production sectors such as petroleum, agriculture, and consumption-based goods is expected to drive long-term growth in both passenger and commercial traffic on the Asset.

Appendices

A Top 10 OD Pairs

A.1 Further to the OD analysis presented in Chapter 3 this appendix presents the top 10 OD pairs at each toll plaza. Please see this data for both CJVs and MAVs and OSVs combined below.

B Data collection exercise

B.1 In order to validate and inform various inputs used in our forecasting, we undertook primary data collection on the Asset. OD survey data was collected on behalf of the Client, TVC surveys were commissioned by Steer with a third party. OD data collection typically involves manual data entry by enumerators based on oral surveys with road users crossing toll plazas. TVC data collection involves video-graphic capture of traffic passing crossing the toll plazas, followed by manual counting.

3/7-day TVC counts

Table B.1: TVC counts at TP1

INDEPENDENT AUDITOR'S REPORT

To the Board of Directors,
Cube Highways Fund Advisors Private Limited (the "Investment Manager")
(Acting in capacity as the Investment Manager of Cube Highways Trust (the "Trust"))
Report on the Audit of the Consolidated Financial Statements

Opinion

We have audited the accompanying consolidated financial statements of Cube Highways Trust (the "Trust") and its subsidiaries, (the Trust and its subsidiaries together referred to as the "Group"), which comprise the Consolidated Balance Sheet as at March 31, 2026, the Consolidated Statement of Profit and Loss (including Other Comprehensive Income), the Consolidated Statement of Cash Flows, the Consolidated Statement of Changes in Unitholders' Equity and the Statement of Net Distributable Cash Flows of the Trust and each of the subsidiaries for the year ended on that date, and notes to the consolidated financial statements, including a summary of the material accounting policies and other explanatory information (together hereinafter referred as the "Consolidated Financial Statements").

In our opinion and to the best of our information and according to the explanations given to us and based on the consideration of reports of other auditors on separate audited financial statements of the subsidiaries referred to in the Other Matters section below, the aforesaid Consolidated Financial Statements are presented in accordance with the requirements of Securities and Exchange Board of India (Infrastructure Investment Trusts) Regulations, 2014 as amended (the "SEBI InvIT Regulations") and give a true and fair view in conformity with the Indian Accounting Standards, prescribed under section 133 of the Companies Act 2013, as amended and other accounting principles generally accepted in India, to the extent not inconsistent with the SEBI InvIT Regulations, of the consolidated state of affairs of the Group as at March 31, 2026, and its consolidated profit including consolidated other comprehensive income, consolidated cash flows, consolidated changes in unitholders' equity and Statement of Net Distributable Cash Flows of the Trust and of each of the subsidiaries for the year ended March 31, 2026.

Basis for Opinion

We conducted our audit of the Consolidated Financial Statements in accordance with the Standards on Auditing ("SAs"), issued by the Institute of Chartered Accountants of India (the "ICAI"). Our responsibilities under those Standards are further described in the 'Auditor's Responsibility for the Audit of the Consolidated Financial Statements' section of our report. We are independent of the Group in accordance with the Code of Ethics issued by the ICAI together with the ethical requirements that are relevant to our audit of the Consolidated Financial Statements under the provisions of the SEBI InvIT Regulations, and we have fulfilled our other ethical responsibilities in accordance with these requirements and the ICAI's Code of Ethics. We believe that the audit evidence obtained by us and the audit evidence obtained by the other auditors in terms of their reports referred to in Other Matters section below is sufficient and appropriate to provide a basis for our audit opinion on the Consolidated Financial Statements.

Emphasis of Matter

We draw attention to Note 19(a)(v) of the Consolidated Financial Statements, which describes the presentation of "Unit Capital" as "Equity" to comply with the SEBI InvIT Regulations. Our opinion is not modified in respect of this matter.

Key Audit Matter

Key audit matters are those matters that, in our professional judgement, were of most significance in our audit of the Consolidated Financial Statements of the current period. These matters were addressed in the context of our audit of the Consolidated Financial Statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters. We have determined the matters described below to be the key audit matters to be communicated in our report.

Key Audit Matter	Auditor's Response
A) Impairment of Rights under Service Concession arrangement (Intangibles Assets) and Receivables under Service Concession arrangement The Group through its subsidiaries have right to collect toll or annuity under the Service Concession Arrangements (SCA) entered into by respective subsidiaries having net carrying value in amounting to Rs. 271,617.63 million (Net of impairment) as at March 31, 2026. As per the requirement of Ind AS 36 "Impairment of assets", the Management of the Investment Manager regularly reviews whether there are any indicators of impairment of rights under SCA and receivables under SCA, and where impairment indicators exist, the Management of the Investment Manager estimates the recoverable amounts of the assets, basis value in use. The recoverable amount of the aforesaid assets is determined by the Management of the Investment Manager on the basis of valuation report of the independent valuer, using discounted cash flow method which involves significant management judgement in respect of various key assumptions used as inputs such as determination of future cash flows, traffic estimates, assessment of the variation in concession period in certain subsidiaries considered on account of target traffic/ target revenue at the Target date as per the terms of respective SCA subject to approvals from the authorities, discount rates, revenue growth rate, inflation rate and other economic factors. The determination of value in use involve judgement due to inherent high estimation uncertainty in the underlying assumptions. Considering complexity and significant management judgements, impairment assessment of these assets are considered as a key audit matter.	Principal audit procedures performed included the following: • We obtained an understanding of the Group's process to identify indicators of impairment of Rights under Service Concession Arrangement (Intangibles Assets) and Receivables under Service Concession Arrangement, and process for determination of recoverable amounts of these assets on the basis of valuation report of the independent valuer, including involvement of independent valuer and other management experts. • We assessed competence, capability and objectivity of independent valuer and other management experts involved in the process by the Management. • We obtained and read the valuation report of the independent valuer used by the Group to determine the recoverable amounts. • We reviewed the reasonableness of the valuation methodology and assumptions (including those provided by the Management of the Investment Manager) used by the independent valuer in determining the recoverable amounts. • We assessed the reliability of management's cashflow forecast through the review of actual performance against previous forecasts including the considerations due to current economic and market factors. • We assessed the reasonableness of the Management's assessment of the expected variations to the concession period including the matters under

Key Audit Matter	Auditor's Response
Refer Notes 2(III)(d)(10), 2(III)(d)(11) and 2(III)(x) for material accounting policies and Notes 6, 9, 16 and 62 to the Consolidated Financial Statements for the year ended March 31,2026.	arbitration with reference to the terms of the relevant concession agreements, the methodology followed by the Group and the legal advice obtained by the Management in respect of such matters, as applicable. • In performing the above procedures, we involved our internal specialists, who assessed the reasonableness of (i) management's forecast of revenue which mainly included traffic growth, revenue projections based on the independent experts' traffic study reports and inflation factor for assessing user toll fee and (ii) discount rate used in valuation, by challenging underlying assumptions used in such estimates and the methodology to determine the recoverable amounts. • We tested the arithmetical accuracy of the data used in determination of recoverable amounts and also of computation of impairment loss. • We evaluated the appropriateness and adequacy of disclosures made by the Management of the Investment Manager.
B) Computation and disclosures relating to Statement of Net Assets at Fair Value and Statement of Total Returns at Fair Value as per SEBI InvIT Regulations In accordance with the SEBI InvIT Regulations, the Group discloses Statement of Net Assets at Fair Value and Statement of Total Returns at Fair Value, carried out by the independent valuer appointed by the Trust. As at March 31, 2026, fair value of total assets was Rs. 378,024.37 million; out of which fair value of investments in subsidiaries is Rs. 368,417.57 million representing 97.46% of the fair value of total assets. The fair value of investments in subsidiaries is determined by the Management of the Investment Manager on the basis of valuation report of the independent valuer, using discounted cash flow method which involves significant management judgement in respect of various key assumptions used as inputs such as determination of future cash flows, traffic estimates, assessment of the variation in concession period in certain subsidiaries considered on account of target traffic/ target revenue at the Target date as per the terms of respective SCA subject to approvals from the authorities, revenue growth rate, discount rates, inflation rates and other economic factors. The determination of fair value involve judgement due to inherent high estimation uncertainty in the underlying assumptions.	Principal audit procedures performed included the following: • We read the requirements of the SEBI InvIT Regulations for disclosures relating to Statement of Net Assets at Fair Value and Statement of Total Returns at Fair Value. • We obtained understanding of the Trust's process for preparation of Statement of Net Assets at Fair Value and Statement of Total Returns at Fair Value as per the SEBI InvIT Regulations and the assumptions used by the Management of the Investment Manager including involvement of the independent valuer and other management experts. • We assessed competence, capability and objectivity of the independent valuer and other management experts involved in the process by the Management. • We obtained and read the valuation report of the independent valuer used by the Trust to determine fair value. • We reviewed the reasonableness of the valuation methodology and assumptions (including those provided by the Management of the Investment Manager)

Key Audit Matter	Auditor's Response
Considering the importance of disclosure required under the SEBI InvIT Regulations, significant judgement involved in determination of fair values due to inherent uncertainty and complexity of the assumptions used in determination of fair values, this matter is considered as a key audit matter. Refer Note 2(III)(d)(2) for material accounting policy, Notes 57 and 58 for Statement of Net Assets at Fair Value and Statement of Total Returns at Fair Value in the Consolidated Financial Statements for the year ended March 31,2026.	used by the independent valuer in determining the fair valuation. • We assessed the reliability of management's cashflow forecast through the review of actual performance against previous forecasts including the considerations due to current economic and market factors. • We assessed the reasonableness of the Management's assessment of the expected variations to the concession period including the matters under arbitration with reference to the terms of the relevant concession agreements, the methodology followed by the Trust and the legal advice obtained by the Management in respect of such matters, as applicable. • In performing the above procedures, we involved our internal specialists, who assessed the reasonableness of (i) management's forecast of revenue which mainly included traffic growth, revenue projections based on the independent experts' traffic study reports and inflation factor for assessing user toll fee and (ii) discount rate used in valuation, by challenging underlying assumptions used in such estimates and the methodology to determine the fair value. • We tested the arithmetical accuracy of the data used in determination of fair value and also of computation of Net Assets at Fair Value and Total Returns at Fair Value. • We evaluated the appropriateness and adequacy of disclosures made by the Management of the Investment Manager for compliance with the relevant requirements of the SEBI InvIT Regulations.
C) Provision for Periodic Major Maintenance (MM) expenses In accordance with Ind AS 37 "Provisions, contingent liabilities and contingent assets", the Group estimates and provides for contractual obligations as per Service Concession Arrangement (SCA) with National Highways Authority of India ("NHAI")/ State Authorities to restore the infrastructure to a specified level of serviceability at periodic intervals during the SCA period or before it is handed over to NHAI. The Group has Provision for Periodic Major Maintenance (MM) expenses amounting to Rs.8,792.66 million outstanding as at March 31, 2026. The MM expense estimate is based on maintenance strategy/ methodology prepared by the	Principal audit procedures performed included the following: • We assessed the appropriateness of the accounting policy followed by the Group for accounting obligations towards Periodic Major Maintenance (MM) expense with reference to requirements as per the applicable accounting standards. • Obtained an understanding and evaluated the Management process of estimating provision for MM expense including involvement of management experts. • We assessed competence, capability and objectivity of independent experts involved in the process by the Management.

Key Audit Matter	Auditor's Response
management in accordance with the requirements of SCA and after taking into account road survey reports issued by an independent expert. These estimates are further corroborated through purchase orders/ work orders placed or to be placed by the management generally close to the maintenance execution period. The projected MM expense is periodically reviewed and updated for factors such as new information and past experience. As the estimated cost is based on the various assumptions such as current infrastructure (road, pavements, etc.) condition, inflation in material cost, government policies etc., the Management is required to apply judgement over these factors for estimating the provision for MM expenses. Considering the high inherent estimation uncertainty in measurement of Provision for Periodic Major Maintenance expense and amount involved, this matter is considered as a key audit matter. Refer Notes 2(III)(d)(6) and 2(III)(y) for material accounting policy and Notes 23, 29 and 48 (a) to the Consolidated Financial Statements for the year ended March 31,2026.	• We evaluated reasonableness of the method, assumptions and judgements used by the management. It included evaluation of: a) Subsidiaries' contractual obligation to restore infrastructure at specified level of serviceability as per the respective SCA. Corroborating the quantities from the bill of quantity as per technical report issued by the independent expert prepared based on MM strategy using the road survey reports issued by the field expert. b) Current prevailing or forecasted rates of materials and services, and inflation adjustments thereupon. c) Discount rate used for determining the present value of the projected MM expenditure. d) Appropriateness of above inputs used in estimation of MM expenses by comparing them with the previous completed MM cycle. • We have tested the arithmetical accuracy, where required, involved in the above estimation. • We assessed and validated the adequacy and appropriateness of the disclosures made by the Management of the Investment Manager in the Consolidated Financial Statements.

Responsibilities of the Management and Board of Directors of the Investment Manager for the Consolidated Financial Statements

The Board of Directors of the Investment Manager (the "Board") is responsible for the preparation of these Consolidated Financial Statements that give a true and fair view of the consolidated financial position of the Group as at March 31, 2026, consolidated financial performance including other comprehensive income, consolidated cash flows, consolidated changes in unitholder's equity, net distributable cash flows of the Trust and each of the subsidiaries for the year ended March 31, 2026, and other financial information of the Group in accordance with the SEBI InvIT Regulations, including the Indian Accounting Standards specified under section 133 of the Companies Act 2013, as amended, and other accounting principles generally accepted in India, to the extent not inconsistent with the SEBI InvIT Regulations.

The Board and the respective Board of Directors of the subsidiaries included in the Group are responsible for maintenance of adequate accounting records in accordance with the provisions of the Companies Act, 2013, as applicable, for safeguarding the assets of the Group and for preventing and detecting frauds and other irregularities; selection and application of appropriate accounting policies; making judgments and estimates that are reasonable and prudent; and the design, implementation and maintenance of adequate internal controls, that were operating effectively for ensuring the accuracy and completeness of the accounting records, relevant to the preparation and presentation of the Consolidated Financial Statements that give a true and fair view and are free

from material misstatement, whether due to fraud or error which have been used for the purpose of preparation of the Consolidated Financial Statements by the Board, as aforesaid.

In preparing the Consolidated Financial Statements, the respective Management, the Board and the respective Board of Directors of the subsidiaries included in the Group are responsible for assessing the ability of the Trust and respective entities to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Board and the respective Board of Directors of the subsidiaries included in the Group either intend to liquidate their respective entities or to cease operations, or has no realistic alternative but to do so.

The Board and the respective Board of Directors of the subsidiaries included in the Group are also responsible for overseeing the financial reporting process of the Group.

Auditor's Responsibility for the Audit of the Consolidated Financial Statements

Our objectives are to obtain reasonable assurance about whether the Consolidated Financial Statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with SAs will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these Consolidated Financial Statements.

As part of an audit in accordance with SAs, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the Consolidated Financial Statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.

- Obtain an understanding of internal controls relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of such internal controls.

- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the Board.

- Conclude on the appropriateness of the Board's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the ability of the Group to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the Consolidated Financial Statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Group to cease to continue as a going concern.

- Evaluate the overall presentation, structure and content of the Consolidated Financial Statements, including the disclosures, and whether the Consolidated Financial Statements represent the underlying transactions and events in a manner that achieves fair presentation.

- Obtain sufficient appropriate audit evidence regarding the financial information of the entities within the Group to express an opinion on the Consolidated Financial Statements. We are responsible for the direction, supervision and performance of the audit of financial information of such entities included in the Consolidated Financial Statements of which we are the independent auditors. For the other entities included in the Consolidated Financial Statements, which have been audited by the other auditors, such other auditors remain responsible for the direction, supervision and performance of the audits carried out by them. We remain solely responsible for our audit opinion.

Materiality is the magnitude of misstatements in the Consolidated Financial Statements that, individually or in aggregate, makes it probable that the economic decisions of a reasonably knowledgeable user of the Consolidated Financial Statements may be influenced. We consider quantitative materiality and qualitative factors in (i) planning the scope of our audit work and in evaluating the results of our work; and (ii) to evaluate the effect of any identified misstatements in the Consolidated Financial Statements.

We communicate with those charged with governance of the Trust and such other entities included in the Consolidated Financial Statements of which we are the independent auditors regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide those charged with governance with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.

From the matters communicated with those charged with governance, we determine those matters that were of most significance in the audit of the Consolidated Financial Statements of the current period and are therefore key audit matters. We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

We have performed procedures in accordance with regulation 13(2)(e) of the SEBI InvIT Regulations, as amended, to the extent applicable.

Other Matters

a). The Consolidated Financial Statements include audited financial statements of 4 subsidiaries, whose financial statements reflect total assets of Rs. 47,969.98 million as at March 31, 2026, total revenues of Rs.7,769.92 million, and net cash outflows amounting to Rs.4,895.58 million, for the year ended on that date, as considered in the Consolidated Financial Statements, which have been audited by their respective other auditors. These other auditor's report on the financial statements of these entities have been furnished to us by the Management and our opinion on the Consolidated Financial Statements, in so far as it relates to the amounts and disclosures included in respect of these entities, and our report in terms of the SEBI InvIT Regulations, in so far as it relates to the these entities is based solely on the reports of such auditors and the procedures performed by us as stated above.

b). The Trust had prepared a separate set of annual consolidated financial statements as at and for the year ended March 31, 2026, in accordance with the requirements of Securities and Exchange Board of India (Infrastructure Investment Trusts) Regulations, 2014 as amended (the SEBI InvIT Regulations) and in conformity with the Indian Accounting Standards prescribed under section 133 of the Companies Act 2013, as amended and other accounting principles generally accepted in India, to the extent not inconsistent with the SEBI InvIT Regulations. These consolidated financial statements were approved by the Board of Directors of Investment

Manager in their meeting held on May 22, 2026 on which we had issued audit report dated May 22, 2026 which expressed an unmodified opinion.

c). The comparative Consolidated Financial Statements as at and for the years ended March 31, 2025 and 2024 were approved by the Board of Directors of the Investment Manager in their meeting held on May 28, 2025 and May 22, 2024 on which we had issued audit reports dated May 28, 2025 and May 22, 2024 respectively which expressed an unmodified opinion on those Consolidated Financial Statements for the respective years. The Management of Investment Manager has made additional disclosures and changes to presentation (to the extent applicable) in such comparative consolidated financial information to comply with the SEBI Master Circular SEBI/HO/DDHS-PoD2/P/CIR/2025/102 dated July 11, 2025 (Refer note 2(I) of the Consolidated Financial Statements), which have been audited by us and in so far it relates to the disclosure and changes to presentation for the entities audited by other auditors and referred below, our reporting is solely based on the reports of such other auditors.

The audit reports on the consolidated financial statements for the respective years were unmodified and includes following explanatory paragraphs:

i) As at and for the year ended March 31, 2025

1) Emphasis of Matter Paragraph:

We draw attention to Note 20 (v) of the consolidated financial statements, which describes the presentation of "Unit Capital" as "Equity" to comply with the SEBI InvIT Regulations. Our opinion is not modified in respect of this matter.

Note 20(v) as described above is reproduced as Note 19(a)(v) of the accompanying Consolidated Financial Statements.

2) Other Matter Paragraph:

We did not audit the standalone financial statements of 2 subsidiaries, whose financial information reflect total assets of Rs. 19,837.90 million as at March 31, 2025, total revenues of Rs. 1,983.96 million, total comprehensive income of Rs. 14.40 million and net cash inflows amounting to Rs. 784.99 million for the year ended on that date, as considered in the consolidated financial statements. These financial have been audited by other auditors whose reports have been furnished to us by the Investment Manager and our opinion and conclusion on the consolidated financial information, in so far as it relates to the amounts and disclosures included in respect of these subsidiaries are based solely on the reports of the other auditors. Our opinion on the consolidated financial statements above and our report on Other Legal and Regulatory Requirements below, is not modified in respect of the above matters with respect to our reliance on the work done and the reports of the other auditors.

ii) As at and for the year ended March 31, 2024

1) Emphasis of Matter Paragraph:
We draw attention to Note 20 of the consolidated financial statements, which describes the presentation of "Unit Capital" as "Equity" to comply with the SEBI InvIT Regulations. Our opinion is not modified in respect of this matter.

Note 20 as described above is reproduced as Note 19(a)(v) of the accompanying Consolidated Financial Statements.

2) Other Matter Paragraph:
We did not audit the standalone financial statements of 2 subsidiaries, whose financial information reflect total assets of Rs. 26,795.34 million as at March 31, 2024, total revenues of Rs. 7,338.73 million, total comprehensive loss of Rs. 344.19 million and net cash inflows amounting to Rs. 1,928.51 million for the year ended on that date, as considered in the

consolidated financial statements. These financial have been audited by other auditors whose reports have been furnished to us by the Investment Manager and our opinion and conclusion on the consolidated financial information, in so far as it relates to the amounts and disclosures included in respect of these subsidiaries are based solely on the reports of the other auditors. Our opinion on the consolidated financial statements above and our report on Other Legal and Regulatory Requirements below, is not modified in respect of the above matters with respect to our reliance on the work done and the reports of the other auditors.

Our opinion on the Consolidated Financial Statements and our report on Other Legal and Regulatory Requirements below, is not modified in respect of the above matters.

Report on Other Legal and Regulatory Requirements

As required by the SEBI InvIT Regulations, based on our audit and on the consideration of report of other auditors on the financial statements mentioned in "Other Matters" section above, we report that:

a) We have sought and obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purpose of our audit.

b) The Consolidated Balance Sheet, the Consolidated Statement of Profit and Loss (including Other Comprehensive Income) are in agreement with the books of account of the Trust.

c) In our opinion, the aforesaid Consolidated Financial Statements comply with the SEBI InvIT Regulations, Indian Accounting Standards prescribed under section 133 of the Companies Act 2013, as amended and other accounting principles generally accepted in India, to the extent not inconsistent with the SEBI InvIT Regulations.

d) In our opinion and to the best of our information and according to the explanations given to us, the Consolidated Statement of Net Assets at Fair Value as at March 31, 2026 and Consolidated Statement of Total Returns at Fair Value for the year ended March 31, 2026 have been prepared in accordance with the requirements of the SEBI InvIT Regulations.

Distribution during the quarter ended September 30, 2024	(974.15)
Distribution during the quarter ended December 31, 2024	(947.46)
Distribution during the quarter ended March 31, 2025	(2,415.35)
Balance as at March 31, 2025	**(6,840.23)**
Balance as at April 01, 2023	-
Distribution during the year	-
Balance as at March 31, 2024	**-**

Notes:

(i) The distributions made by the Trust to its unitholders are based on the Net Distributable Cash Flows (NDCFs) of the Trust under the InvIT Regulations. Refer Note 63 for distribution made during the respective periods.

(ii) The Trust had reduced the Retained Earnings (under Other Equity) for the amount of NDCF in the nature of repayment of capital in past periods. In terms of Clause 4.2.8(b) of the SEBI Master Circular SEBI/HO/DDHS-PoD-2/P/CIR/2025/102 dated July 11, 2025, the Trust is required to regroup the figures for Retained Earnings (under Other Equity) for prior periods presented in the Consolidated Financial Statements and to disclose the same as a separate line item on the face of Consolidated Balance Sheet. Accordingly the Trust has regrouped Rs. 6,840.23 million as at March 31, 2025 from Retained earnings to Distribution-Repayment of Capital.

The above Consolidated Statement of Changes in Unit Holder's Equity should be read in conjunction with the accompanying notes 1 to 74

E. Cash and cash equivalents at the beginning of the year	8,163.86	2,415.24	-
Cash and cash equivalents acquired on asset acquisition (Refer Note 50)	4,877.55	1,469.49	6,285.17
Cash and cash equivalents at the end of the year (D+E) (Refer reconciliation below)	**4,791.79**	**8,163.86**	**2,415.24**
Reconciliation of cash and cash equivalents as per Consolidated Statement of Cash Flows			
Cash and cash equivalents comprise of following:			
Cash and cash equivalents [Refer note 14]	5,190.21	8,467.08	2,416.84
Less: Earmarked balances [Refer note 14]	(398.42)	(303.22)	(1.60)
As per Consolidated Statement of Cash Flows	**4,791.79**	**8,163.86**	**2,415.24**

Notes:

(i) The above Consolidated Statement of Cash Flows has been prepared under the 'Indirect Method' as set out in Ind AS 7, 'Statement of Cash Flows'.

(ii) During the year ended March 31, 2026, there was reclassification of 9.62 million (March 31, 2025 : 44.10 million, March 31, 2024: Nil) Subordinate Units to Ordinary Units and extinguishment of 27.87 million (March 31, 2025 : 75.90 million, March 31, 2024: Nil) Subordinate Units. These transactions being the non-cash transactions have been excluded from Consolidated Statement of Cash Flows.

(iii) The working capital changes and other adjustments exclude those arising on the date of asset acquisitions.

(iv) The Trust has issued units in exchange for equity interest in 18 SPVs (Refer note 19(a)(i)) during the year ended March 31, 2024. The same has not been reflected in Consolidated Statement of Cash Flow since these were non-cash transaction.

This space has been intentionally left blank

Statement of Net Distributable Cash Flows for year ended March 31, 2026
(All amounts in Rs. million unless otherwise stated)

Disclosures as required by chapter 4 to the SEBI Master Circular No. SEBI/HO/DDHS-PoD-2/P/CIR/2025/102 dated July 11, 2025

Statement of Net Distributable Cash Flows - Cube Highways Trust

Particulars	Year ended	
	March 31, 2026 (Audited)	March 31, 2025 (Audited)
Cashflows from operating activities of the Trust	**(844.02)**	**(628.18)**
(+) Cash flows received from SPV's/ Investment entities which represent distributions of NDCF computed as per relevant framework (Refer note i)	35,672.57	26,536.85
(+) Treasury income / income from investing activities of the Trust (interest income received from FD, any investment entities as defined in Regulation 18(5), tax refund, any other income in the nature of interest, profit on sale of Mutual funds, investments, assets etc., dividend income etc., excluding any Ind AS adjustments. Further clarified that these amounts will be considered on a cash receipt basis) (refer note iii)	(2.97)	98.05
(+) Proceeds from sale of infrastructure investments, infrastructure assets or shares of SPVs/Holdcos or Investment Entity adjusted for the following • Applicable capital gains and other taxes • Related debts settled or due to be settled from sale proceeds • Directly attributable transaction costs • Proceeds reinvested or planned to be reinvested as per Regulation 18(7) of InvIT Regulations or any other relevant provisions of the InvIT Regulations	-	-
(+) Proceeds from sale of infrastructure investments, infrastructure assets or sale of shares of SPVs/ Hold cos or Investment Entity not distributed pursuant to an earlier plan to re-invest as per Regulation 18(7) of InvIT Regulations or any other relevant provisions of the InvIT Regulations, if such proceeds are not intended to be invested subsequently	-	-
(-) Finance cost on Borrowings, excluding amortisation of any transaction costs as per Profit and Loss account of the Trust	(13,602.78)	(10,593.82)
(-) Debt repayment at Trust level (to include principal repayments as per scheduled EMI's except if refinanced through new debt including overdraft facilities and to exclude any debt repayments / debt refinanced through new debt in any form or funds raised through issuance of units)	(4,840.12)	(4,139.09)
(-) any reserve required to be created under the terms of, or pursuant to the obligations arising in accordance with, any: (i). loan agreement entered with financial institution, or (ii). terms and conditions, covenants or any other stipulations applicable to debt securities issued by the Trust or any of its SPVs/ HoldCos, or (iii). terms and conditions, covenants or any other stipulations applicable to external commercial borrowings availed by the Trust or any of its SPVs/ HoldCos, or (iv). agreement pursuant to which the Trust operates or owns the infrastructure asset, or generates revenue or cashflows from such asset (such as, concession agreement, transmission services agreement, power purchase agreement, lease agreement, and any other agreement of a like nature, by whatever name called); or (v). statutory, judicial, regulatory, or governmental stipulations; or	(126.16)	(450.00)
(-) any capital expenditure on existing assets owned / leased by the InvIT, to the extent not funded by debt / equity or from contractual reserves created in the earlier years	-	-
NDCF at Trust Level	**16,256.52**	**10,823.81**

Distribution made out of opening cash	**2,257.61**	**3855.13**
Total amount distributable	18,514.13	14,678.94
Total distribution for the year	**18,507.84**	**14,678.92**

Notes:

i) This includes Rs. 4,106.38 million received from SPVs after March 31, 2026 but before the date of the Board meeting for adoption of the Financial Statement for the year ended March 31, 2026 i.e. May 22, 2026, and excludes Rs. 3,171.92 million received from SPVs during the current financial year which was already considered for computation of NDCF for the quarter ended March 31, 2025.

ii) Subsequent to the year ended March 31, 2026, the Board of Directors of the Investment Manager in its meeting dated May 22, 2026 approved a distribution of Rs. 3.57 per unit aggregating Rs. 4,798.33 million for the quarter ended March 31, 2026. The distribution is subsequently paid.

iii) Unrealised gain on overnight mutual funds considered as "Cash and cash equivalents" is excluded from treasury income as the same is recognised on receipt basis for purpose of NDCF calculation.

iv) In accordance with the SEBI circular no SEBI/HO/DDHS-PoD-2/P/CIR/2024/44 dated May 15, 2024, the framework for computation of Net Distributable cash flows ("NDCF") is revised with effect from April 01, 2024. Accordingly, NDCF for the periods on or before March 31, 2024 was calculated and presented as per the earlier framework.

Cube Highways Trust

Statement of Net Distributable Cash Flows for year ended March 31, 2026
(All amounts in Rs. million unless otherwise stated)

Disclosures as required by chapter 3 to the Master Circular No. SEBI/HO/DDHS-PoD-2/P/CIR/2023/115 dated July 06, 2023

Statement of Net Distributable Cash Flows (NDCFs) of the Cube Highways Trust-Contd.

Particulars	**For the year ended March 31, 2024**
Cash flows received from the SPVs in the form of:	
-Interest (net of applicable taxes, if any)	15,558.12
-Dividend (net of applicable taxes, if any)	1,513.26
-Repayment of the debt issued to the SPVs by the Trust or redemption of debentures issued by the SPVs to the Trust	3,054.20
Add: Proceeds from the SPVs for any capital reduction / buy back / redemption subject to Applicable Laws (net of applicable Taxes, if any)	-
Add: Proceeds from sale or transfer or liquidation or redemption or otherwise realization of investments, assets or shares of/interest in SPVs (net of applicable taxes and / or directly attributable transaction costs , if any)	-
Add: Proceeds from sale of assets of the SPVs not distributed pursuant to an earlier plan to re-invest, if such proceeds are not intended to be invested subsequently	-
Add: Any other income accruing at the Trust level and not captured above, including but not limited to interest / return on surplus cash invested by the Trust	119.75
Total cash inflow at the Trust level (A)	**20,245.33**
Less: Any payment of fees, interest and expense incurred at the Trust level, including but not limited to the Investment Manager fees, security trustee fees, annual fees for traffic, technical and other studies and fees for annual valuation.	(8,696.53)
Less: Any capital expenditure at any SPV level where sufficient cash is not available	-
Less: Costs/retention associated with sale of assets of the SPVs, including transaction costs paid on sale of the assets of the SPVs	-
Add: Additional borrowings (including debentures / other securities) adjusted for the following:[1]	1,46,176.98
· any prepayment of borrowings if deemed necessary by the Investment Manager;	-
· any identified end use as specified in the lender agreement or as deemed necessary by the Investment Manager.	-
Less: Repayment of external debt	(3,069.92)
Less: Income tax (if applicable) at the Standalone Trust Level (including capital gains taxes on sale of assets / share in SPVs / other investments) (net of any tax refunds)	(51.17)
Less: Related debts settled or due to be settled from sale proceeds of SPVs	-
Less: Investment in shares or debentures of SPVs or other similar investments or lending to SPVs [2]	(1,43,842.92)
Less: Proceeds reinvested or planned to be reinvested in accordance with Regulation 18(7)(a) of the InvIT Regulations	-
Less: Net cash set aside (i) to comply with reserve requirements under the loan agreements (including but not limited to DSRA and MMRA) adjusted for amount released from DSRA/MMRA or any other reserve in lieu of providing bank guarantee, and/or (ii) on a prudential basis for repayments of borrowings etc., as appropriate.	-
Less: Any cash reserve deemed necessary by the IM Board for expenses which may be due but for which there may not be commensurate cash available by the date such expenses become due	-
Less: Any other adjustment to be undertaken by the Investment Manager to ensure that there is no double counting of the same item for the above calculations	-
Total Adjustments (B)	**(9,483.56)**
Net Distributable Cash Flows (C) = (A+B) [3]	**10,761.77**

Notes:

(1) Includes proceeds from issue of Ordinary Unit Capital (net of issue expenses) and excludes processing costs.
(2) Includes Subordinate loan of Rs. 3,083.20 million being given to NKTPL (SPV) for maintaining Debt Service Reserve Account (DSRA) at InvIT level.
(3) The difference between SPV level NDCF and Trust level NDCF is primarily on account of utilization of opening cash at the SPV level.

The above Statement of Net Distributable Cash Flows (NDCFs) should be read in conjunction with the accompanying notes 1 to 74

• any decrease/increase in carrying amount of an asset or a liability recognised in Statement of Profit and Loss on measurement of the asset or the liability at fair value;	(2.50)	(6.45)	3.28	0.29	(9.71)	(20.92)
• interest cost as per effective interest rate method (difference between accrued and actual paid)	-	-	-	-	-	-
• deferred tax, lease rents recognised on a straight line basis;	(202.90)	-	-	-	-	89.87
• unwinding of interest cost on interest free loan or other debentures;(3)	15.56	18.83	36.53	0.99	5.18	6.68
• portion reserve for major maintenance which has not been accounted for in Statement of Profit and Loss;	-	-	-	-	-	-
• reserve for debenture/ loan redemption.	-	-	-	-	-	-
• others	3.79	4.65	(12.27)	0.23	(2.74)	(20.68)
Less: Net cash set aside (i) to comply with reserve requirements under the loan agreements (including but not limited to DSRA and MMRA) or as decided by the IM Board from time to time, adjusted for amount released from DSRA/MMRA or any other reserve in lieu of providing bank guarantee, and/or	-	-	-	-	-	-
(ii) on a prudential basis for repayments of borrowings etc., as appropriate.	-	-	-	-	-	-
Add/Less: Other adjustments, including but not limited to net changes in security deposits, working capital, deferred / prepaid income or deferred / prepaid expenditure, at the SPV.	(117.00)	(47.23)	(818.80)	(265.11)	(82.26)	(1,633.28)
Less: Any cash reserve deemed necessary by the board of directors of the Investment manager ("IM Board") for expenses which may be due in the next financial year but for which there may not be commensurate cash available by the date such expenses become due	-	-	(1,000.00)	-	-	(100.00)
Less: Any other adjustment to be undertaken by the Investment Manager to ensure that there is no double counting of the same item for the above calculations	-	-	1,653.10	-	-	-
Total Adjustments (B)	**248.02**	**1,041.13**	**2,796.81**	**633.43**	**2,526.31**	**2,785.79**
Net Distributable Cash Flows (C) = (A +B)*	**1,466.27**	**1,181.49**	**2,527.09**	**505.79**	**1,683.17**	**2,174.83**

*The difference between SPV level NDCF and Trust level NDCF is primarily on account of utilization of opening cash at the SPV level.

(1) Excludes Investments in mutual funds and loss/ gain thereon representing temporary investments.
(2) Includes payment of interest accrued on these borrowings.
(3) Includes unwinding of interest on provisions.

The above Statement of Net Distributable Cash Flows (NDCFs) should be read in conjunction with the accompanying notes 1 to 74

Cube Highways Trust
Notes forming part of Consolidated Financial Statements for the year ended March 31, 2026

1. Group Information

(i) The Consolidated Financial Statements comprise financial statements of the Cube Highways Trust and its subsidiaries (referred as "SPVs").

Cube Highways and Transportation Assets Advisors Private Limited ("Settlor") set up Cube Highways Trust (the "Trust") by way of the Original Trust Deed dated December 7, 2021 as a contributory irrevocable trust under the provisions of the Indian Trusts Act, 1882. The registered office address of the Trust is B-376, UGF, Nirman Vihar, New Delhi 110092.

On April 5, 2022, the Trust got registered as an infrastructure investment trust under the Securities and Exchange Board of India (Infrastructure Investment Trusts) Regulations, 2014, having registration number IN/InvIT/22-23/0022. The Original Trust Deed was amended and restated by way of the Trust Deed dated July 8, 2022, which was subsequently further amended and restated by the Trust Deed dated March 11, 2024. The Trustee to the Trust is Axis Trustee Services Limited (the "Trustee"). The Investment Manager for the Trust is Cube Highways Fund Advisors Private Limited (the "Investment Manager"). The Trust got its units listed on National Stock Exchange (NSE) and Bombay Stock Exchange (BSE) w.e.f. April 19, 2023.

The objective of the Trust is to carry on the activities of an infrastructure investment trust, as permissible under the InvIT Regulations. The Trust has been formed to invest in infrastructure assets primarily being in the road sector in India. As at 31 March 2026, the Trust has made investments in 27 road assets (31 March 2025: 25 road Assets and 31 March 2024: 18 road Assets) through special purpose vehicles ("SPVs"/subsidiaries). All the road projects are implemented, operated, and held through these SPVs. The SPVs have entered into concession agreements with the National Highways Authority of India ("NHAI") or the State Authorities under different models, including Design, Build, Finance, Operate and Transfer (DBFOT), Toll Operate Transfer (TOT), Build Operate and Transfer Annuity (BOT Annuity) and Hybrid Annuity Model (HAM). These concession agreements govern the development, operation, maintenance, and transfer of the respective road infrastructure assets in accordance with terms specified therein.

(ii) The Trust acquired the following SPVs/ subsidiaries, which have entered into concession agreements with NHAI or State Authorities on Design, Build, Finance, Operate and Transfer (DBFOT) or Toll Operate Transfer (TOT) or Build Operate and Transfer Annuity (BOT Annuity) or Hybrid Annuity Model (HAM):

Sr. No.	Name of SPVs	Date of incorporation	Date of acquisition	Principal activity	Principal place of business	Percentage of Shareholding acquired by the Trust
1	Western UP Tollway Private Limited (WUPTPL) (formerly known as Western UP Tollway Limited)	20-Apr-05	17-Apr-23	Construction, operation & maintenance of toll roads including toll collection	Uttar Pradesh	100%

Note: SPVs at Sr.No. 19 to 24 are hereafter being collectively referred as "HAM SPVs".

The above SPVs have been considered for the preparation of these Consolidated Financial Statements. Since the Trust has acquired various SPVs at different dates as detailed above, the Consolidated Financial Statements for the year ended March 31, 2026 are not comparable with the previous periods as included in the Consolidated Financial Statements.

2. Basis of preparation and material accounting policies

I. Basis of preparation

The Consolidated Financial Statements of the Trust Group comprising of the Consolidated Balance Sheet as at March 31, 2026, the Consolidated Statement of Profit and Loss (including Other Comprehensive Income), the Consolidated Statement of Cash Flows, the Consolidated Statement of Changes in Unitholders' Equity, the Statement of Net Distributable Cash Flows (NDCFs) of the Trust and each of its subsidiaries for the year then ended (together referred to as the "Consolidated Financial Statements") and a summary of material accounting policies and other explanatory notes to the Consolidated Financial Statements.

The Consolidated Financial Statements also include the following comparative information:

- Consolidated Balance Sheets as at March 31, 2025 and March 31, 2024
- Consolidated Statements of Profit and Loss (including Other Comprehensive Income) for the years ended March 31, 2025 and March 31, 2024.
- Consolidated Statements of Cash Flows for the years ended March 31, 2025 and March 31, 2024.
- Consolidated Statements of Net Distributable Cash Flows (NDCF) of the Trust and its subsidiaries for the years ended March 31, 2025 and March 31, 2024.

These Consolidated Financial Statements have been prepared in accordance with Indian Accounting Standard, prescribed under section 133 of the Companies Act 2013 (as amended) ("Ind AS") to the extent not inconsistent with the Securities and Exchange Board of India (Infrastructure Investment Trusts) Regulations, 2014, as amended (the "SEBI InvIT Regulations" or "InvIT Regulations") (Refer note 19(a)(v) of Consolidated Financial Statements on presentation of "Unit capital" as "Equity" instead of compound financial instruments under Ind AS 32- Financial Instruments: Presentation), other relevant provisions relating to disclosures required as per of the SEBI InvIT Regulations, including Chapter 3 of the SEBI InvIT Master Circular SEBI/HO/DDHS-PoD-2/P/CIR/2025/102 dated July 11, 2025 for Infrastructure Investment Trusts (InvITs) ("Master Circular") and other accounting principles generally accepted in India.

The comparative Consolidated Financial Statements as at and for the years ended March 31, 2025 and March 31, 2024 were approved by the Board of Directors of the Investment Manager in their meeting held on May 28, 2025 and May 22, 2024 on which auditors had issued unmodified opinion on those Consolidated Financial Statements vide their audit reports dated May 28, 2025, and May 22, 2024 respectively. The Management of the Investment Manager has made additional disclosures and regrouped/rearranged the comparative Consolidated Financial Statements to comply with the requirements of the Master Circular read with Schedule III, Division II, of the Companies Act, 2013. Accordingly, comparative figures for the years ended March 31, 2025 and March 31, 2024, relating to (i) realised/unrealised gains on mutual funds and interest on fixed deposits, and (ii) legal and professional fees, investment management fees, project management fees, trustee fees, custodian fees, insurance expenses, audit fees, and valuation expenses, which were previously presented on the face of the Statement of Profit and Loss, have been regrouped under "Other Income" (Note 31) and "Other Expenses" (Note 35), respectively, in these Consolidated Financial Statements.

Such regrouping and rearrangement of comparative information has no impact on the total income, total expenses, profit for the year, total comprehensive income, net assets/equity or cash flows as previously reported.

The Trust had prepared a separate set of annual consolidated financial statements as at and for the year ended March 31, 2026, in accordance with the requirements of Securities and Exchange Board of India (Infrastructure Investment Trusts) Regulations, 2014 as amended (the SEBI InvIT Regulations) and in conformity with the Indian Accounting Standards prescribed under section 133 of the Companies Act 2013, as amended and other accounting principles generally accepted in India, to the extent not inconsistent with the SEBI InvIT Regulations. These consolidated financial statements were approved by the Board of Directors of Investment Manager in their meeting held on May 22, 2026.

Accounting policies have been consistently applied except where a newly issued accounting standard is initially adopted or a revision to an existing accounting standard requires a change in the accounting policy hitherto in use.

The Consolidated Financial Statements of the Trust Group have been prepared on a going concern basis in accordance with the accounting principles generally accepted in India. However, the Consolidated Financial Statements include the financial statements of two Special Purpose Vehicles (SPVs), namely APEPL and WUPTPL, whose concession periods are scheduled to expire within the ensuing 12 months. While these entities will continue as legal entities, their principal revenue-generating operations will cease upon expiry of the concession period, and no material revenue is expected thereafter. Accordingly, the financial statements of these SPVs have been prepared on a non-going concern basis and have been consolidated on that basis. These SPVs are not material to the Trust Group, and accordingly, the preparation of their financial statements on a non-going concern basis does not have a material impact on the overall Consolidated Financial Statements of the Trust Group.

The Consolidated Financial Statements have been prepared on a historical cost basis, applying uniform accounting policies for like transactions and other events in similar circumstances, except for certain financial instruments and contingent consideration, which are measured at fair value at the end of each reporting period, as described in the relevant accounting policies. The Consolidated Financial Statements are presented in India Rupees which is also the functional currency of the Trust Group, and all values are rounded to the nearest million, unless otherwise stated.

Impact of the initial application of new and amended IND AS that are effective from current year:

Ministry of Corporate Affairs ("MCA") notifies new standards or amendments to the existing standards under Companies (Indian Accounting Standards) Rules as issued from time to time.

In May 2025, MCA notified amendments to Ind AS 21 - The Effects of Changes in Foreign Exchange Rates, applicable w.e.f. April 1, 2025. The Trust Group has reviewed the amendment and based on its evaluation has determined that it does not have any impact in its consolidated financial statements.

In August 2025, MCA notified the following amendments to:

1. Ind AS 1, Presentation of Financial Statements, applicable w.e.f April 1, 2025 - The amendment relates to classification of liabilities as current or non -current and non-current liabilities with covenants. In the context of classifying a liability as current, it removes the requirement of existence of a right to defer settlement for at least 12 months after the reporting date and instead requires that the said right should exist on the reporting date and have substance. The amendment also introduces guidance on classification of liabilities with covenants. The Group has no impact of these amendments in its classification criteria of current and non-current liabilities.

2. Ind AS 7, Statement of Cash Flows and Ind AS 107, Financial Instruments - Disclosures, applicable w.e.f April 1, 2025 – The amendment in Ind AS 7 requires to inform users of financial statements of the existence of supplier finance arrangements and explain the nature of the arrangements, the carrying amount of liabilities and the range of payment due dates. Ind AS 107 has been amended to add supplier finance arrangements as a factor that may cause concentration of liquidity risk. The Group has reviewed the amendment and based on its evaluation has determined that it does not have any impact in its consolidated financial statements.

3. Ind AS 12, International Tax Reform – Pillar Two Model Rules applicable immediately - The amendments provide a temporary mandatory relief from deferred tax accounting for top-up tax and disclose that they have applied the relief. This relief is immediate and applies retrospectively. The amendments also require companies to provide new disclosures to compensate for potential loss of information resulting from the relief. Such disclosures are to be provided for annual reporting periods beginning on or after April 1, 2025. The Group has reviewed the amendment and based on its evaluation has determined that it does not have any impact in its consolidated financial statements.

II. Statement of Compliance

The Consolidated Financial Statements have been prepared in accordance with the Indian Accounting Standard as defined in Rule 2(1)(a) of the Companies (Indian Accounting Standards) Rules, 2015, as

amended, presentation and disclosure requirements of Division II of Schedule III and other accounting principles generally accepted in India to the extent not inconsistent with the SEBI InvIT Regulations as more fully described above and as given in Note 19(a)(iii) to the Consolidated Financial Statements and presentation.

III. Summary of Material Accounting Policies

a) Basis of Consolidation

Trust Group consolidates entities which it owns or controls. Control exists when the Trust has power over the entity, is exposed, or has rights, to variable returns from its involvement with the entity and has the ability to affect those returns by using its power over the entity. Power is demonstrated through existing rights that give the ability to direct relevant activities, those which significantly affect the entity's returns. Subsidiaries are Consolidated from the date on which control is transferred to the Trust Group until the date control ceases.

Consolidated Financial Statements are prepared using uniform accounting policies for like transactions and other events in similar circumstances. The Trust Group combines the financial statements of the Trust and its subsidiaries line by line adding together like items of assets, liabilities, equity, income and expenses. Intercompany transactions, balances and unrealized gains on transactions between group companies are eliminated.

b) Asset Acquisition

If the acquisition of the asset or a group of assets does not constitute a business, the Trust identifies and recognises the individual identifiable assets acquired (including those assets that meet the definition of, and recognition criteria for, intangible assets in Ind AS 38, Intangible Assets) and liabilities assumed. The cost of the group is allocated to the individual identifiable assets and liabilities on the basis of their relative fair values at the date of purchase and no goodwill is recognised.

When the consideration transferred by the Trust in the asset acquisition includes a contingent consideration arrangement, the contingent consideration is measured at its acquisition-date fair value and included as part of the consideration transferred. Contingent consideration is remeasured to fair value at subsequent reporting dates with changes in fair value recognised in profit or loss.

c) Current and non-current classification

Based on the time involved between the acquisition of assets for processing and their realisation in cash and cash equivalents, the Trust Group has identified twelve months as its operating cycle for determining current and non- current classification of assets and liabilities in the balance sheet.

d) Critical accounting judgements and key sources of estimation uncertainty

The preparation of these Consolidated Financial Statements requires management to make judgements, estimates and assumptions that affect the reported amounts of assets, liabilities, income and expenses, and the accompanying disclosures.

The Management believes that the estimates used in preparation of the Consolidated Financial Statements are prudent and reasonable. However, actual results could differ from these estimates. Any revision to accounting estimates is recognised prospectively in the current and future periods.

1. Classification of Unitholders' funds:

The Unit Capital has been presented as "Equity" in accordance with the SEBI InvIT Regulations instead of compound financial instrument. Refer note 19(a)(v) of Consolidated Financial Statements on presentation of "Unit capital" as "Equity" instead of compound financial instruments under Indian Accounting Standard (Ind AS) 32- Financial Instruments: Presentation.

2. Fair valuation and disclosures

SEBI Master Circular issued under the SEBI InvIT Regulations require disclosures relating to net assets at fair value and total returns at fair value. In estimating the fair value of investments in subsidiaries (which constitute a substantial portion of the net assets), the Trust engages independent qualified external valuers to perform the valuation. The Investment Manager of the Trust works closely with the valuers to establish the appropriate valuation techniques and inputs to the valuation model. The inputs to the valuation models are taken from observable markets where possible, but where this is not feasible, a degree of judgement is required in establishing fair values. Judgements include considerations of inputs such as determination of future cash flows, traffic estimates, assessment of the variation in concession period in certain subsidiaries considered on account of Target Traffic subject to approvals from the authorities, discount rates, revenue growth rate and inflation and other economic factors, tax rates, etc. Changes in assumptions about these factors could affect fair value (Refer note 57 & 58 of Consolidated Financial Statements).

3. Applicability of service concession arrangement (SCA) accounting to the concessionaire arrangements entered into by the SPVs

The Trust Group has determined that Appendix C to Ind AS 115 "Revenue from Contracts with Customers" relating to 'Service Concession Arrangements' is applicable to the SPVs which provides an accounting by the operators of public to private service concession arrangements. The SPVs have entered into concession arrangement with National Highway Authority of India (NHAI) or respective State Highway Authority (the "Authority") as per which the individual SPVs would participate in Design, Build, Finance, Operate and Transfer (DBFOT) or Toll Operate Transfer (TOT) or Hybrid Annuity Model (HAM) of the toll roads infrastructure. After the end of the Concession arrangement, the SPVs have to transfer the infrastructure i.e. toll roads constructed to the Authority.

Accordingly, the SPVs other than APEPL, AJUHPL, QEPL and HAM SPVs have recognized the intangible assets as per the accounting policy mentioned in Note (f) Intangible Assets.

The accounting for Receivables against SCA ("financial assets") requires APEPL, AJUHPL, QEPL and HAM SPVs to allocate the consideration over Construction and Operating & Maintenance (O&M) activities. Revenue is allocated over "Operating & Maintenance (O&M) activities" based on estimated future operating & maintenance cash flows. The estimates of operating & maintenance cash flows require management to make significant judgments and estimates, which include assumptions related to expected future expenses and inflation. The judgments and estimates including assumptions related to expected future expenses, inflation and reliability of forecast of future expenses through the review of actual expenses against previous forecasts are reviewed periodically by the management.

4. Assessment of concession period under Service Concession Arrangements (SCA)

The concession period is specified under the SCA agreement entered into by the respective SPVs with the Grantor (NHAI/ State authorities). However, it may vary based on the terms of the respective SPVs depending upon achievement of conditions relating to Target Traffic or Target revenue generated at Target date specified in the SCA. For the purposes of estimation of variation in the concession period at each reporting period, the Trust evaluates the contractual entitlement to variations in concession period on a case-to-case basis taking into account the provisions of the concession agreement of the respective SPVs, the facts and circumstances giving rise to such variations and the status of the approvals for such variation. Estimating the concession period under Appendix C of Ind AS 115 requires a careful analysis of the specific service concession arrangement. For estimation of the concession period, the Management considers future traffic estimates with the help of an independent expert, assessment of outcomes with respect to disputes/ arbitration with the Grantor for the SPVs claims for variation in concession period on account of Target Traffic, etc. based on the legal advice received, discount rates, revenue growth rate and inflation and other economic factors, as considered relevant. Based on the above, the Management has considered variation in concession period for certain SPVs (Refer Note 52) for the purpose of estimating amortization of Intangible Assets- Toll Road Carriageway, estimating fair value of net assets of SPVs and also for determination of recoverable amounts for Intangible Assets- Toll Road Carriageway of SPVs.

5. Amortisation of Rights under Service Concession Arrangements (SCA) i.e. Intangible Assets- Toll Road Carriageway

Certain SPVs (viz. MBEL, JMTPL, WUPTPL, GAEPL and NAMEL) which has toll collection rights in respect of SCA commenced before April 1, 2014, recognizes the amortization of intangible assets relating to SCA based on proportion of actual revenue earned for the period over the sum of actual revenue for the period and projected revenue from Toll Road Carriageway expected to be earned over the balance concession period as estimated by the management of respective SPVs. The future revenue projections are based on the assumptions made by the Trust Group's management regarding future traffic growth, concession period referred above and inflation factor for assessing user toll fee as supported by the studies from the third-party independent consultant for individual SPV done at reasonable intervals.
For other SPVs which has toll collection rights in respect of SCA commenced after April 1, 2014, the intangible assets relating to Service Concession Agreements is being amortised over the estimated useful life (being the concession period referred above).
The estimated useful life of Rights under Service Concession Arrangement – Intangible assets and the projected revenue is reviewed at the end of each reporting period, with the effect of any changes in estimate being accounted for on a prospective basis.

6. Provision for periodic maintenance (overlay expenses)

The Trust Group estimates and provides for contractual obligations as per SCA with NHAI to restore the infrastructure to a specified level of serviceability at periodic intervals during the concession period or before it is handed over to NHAI. These estimates are corroborated through purchase orders/ work orders placed or to be placed by the Trust Group as per the road survey reports issued by an independent field expert and major maintenance strategy/ methodology approved by the Independent Consultant appointed by NHAI. As the estimated cost is based on the various assumptions such as current infrastructure (road, pavements, etc.) condition, expected timings of costs, inflation in material cost, discount rate, government policies etc., hence the Trust Group's management is required to apply judgement over these factors for revalidating the provision for expenses which is reviewed on annual basis.

7. Provision for Improvement works

Certain SPVs estimates and provides for contract liability in respect of unavoidable obligations to improve/upgrade the infrastructure to be undertaken as per the Concession Agreement with NHAI. These estimates are corroborated through purchase orders/ work orders placed or to be placed by these SPVs as per the road survey reports issued by an independent field expert. As the estimated cost is based on the various assumptions such as current infrastructure (road, pavements, etc.) condition, inflation in material cost etc., hence the Trust Group's management is required to apply judgement over these factors.

8. Income taxes and deferred tax

Judgements are involved in determining the provision for income taxes including judgement on whether tax positions are probable of being sustained in tax assessments. A tax assessment can involve interpretation issues, which can only be resolved over extended time periods.

Significant management judgement is also required to determine the amount of deferred tax assets that can be recognised, based upon the likely timing and the level of future taxable profits together with future tax planning strategies.

The Trust Group reviews the carrying amount of deferred tax assets (net) at the end of each reporting period. The Trust Group has recognised the deferred tax assets relating to carried forward losses and minimum alternate tax (MAT) credit to the extent there are sufficient taxable temporary differences available against which the unused tax losses can be utilized. Further, deferred tax assets have been recognised to the extent of deferred tax liabilities, in the absence of reasonable certainty that future taxable amounts will be available to utilize temporary differences.

The Trust Group has not recognised the deferred tax assets and liabilities on deductible temporary differences and tax losses reversing or originating and reversing during tax holiday period under section 80IA of the Income-tax Act, 1961 which have been estimated basis the future projections.

Deferred tax assets and liabilities are classified as non- current assets and liabilities.

9. Accounting for acquisition of Subsidiaries

The Trust Group has applied the optional concentration test, under Ind AS 103 "Business Combination", and concluded that the acquired set of activities and assets is not a business because substantially all of the fair value of the gross assets acquired is concentrated in Intangible Assets-Rights under Service Concession Arrangements (other than APEPL, JUHPL, QEPL and HAM SPVs) and Receivable under Service Concession Arrangements (for APEPL, JUHPL, QEPL and HAM SPVs), with similar risk characteristics. Accordingly, this transaction has been accounted for as an asset acquisition (Refer Note 50).

10. Impairment of financial assets

The impairment provision for financial assets is based on assumptions about risk of default and expected loss rates. The Trust Group uses judgement in making these assumptions and selecting the inputs to the impairment calculation, based on the existing market conditions as well as forward looking estimates at the end of each reporting period.

11. Impairment of intangible assets - Rights under Service Concession Arrangements

The Trust Group uses the estimated future cash flows in assessing value in use for intangible assets. Future estimated cash flows are discounted to their present value using a pre-tax discount rate that reflects the current market assessments of the time value of money and the risks specific to the asset for which the estimated future cash flows have not been adjusted.

The inputs to the valuation models are taken from observable markets where possible, but where this is not feasible, a degree of judgment is required in establishing fair values. The recoverable amounts for the intangible assets are based on value in use of the underlying SPVs as determined by an independent valuer using discounted cash flow method which involves management judgement in respect of various key assumptions used as inputs such as determination of future cash flows, estimation of concession period considering the relevant terms of the SCA dealing with modification of the concession period, future traffic estimates with the help of an independent expert, assessment of outcomes with respect to disputes/ arbitration with the Grantor for the SPVs claims for variation in concession period on account of Target Traffic, etc. supported by the legal advice, discount rates, revenue growth rate and inflation and other economic factors. The cash flows are derived from forecasts over the remaining SCA period of the SPVs.

12. Accounting of Compound financial instruments

Certain SPVs included in the Trust Group have issued Unsecured, Optionally Convertible Debentures (OCDs) on private placement basis to various related parties (Subscribers) in previous years. During the current year, the OCD Subscribers sought premature redemption of the OCDs at face value with accrued but unpaid interest on the OCDs. The SPVs have allocated the consideration paid for redemption of OCDs to the liability and equity components of the instrument at the date of the redemption.

13. Useful lives of property, plant, and equipment

Management of the Trust Group reviews the useful lives of property, plant and equipment at each reporting date to ensure that the useful lives represent the expected utility of the assets to the Trust Group.

14. Obligations relating to employee benefits

The employee benefit obligation depends on several factors (including applicable laws) that are determined on an actuarial basis using several assumptions. The assumptions used in determining the net cost/ (income) include the discount rate, inflation and mortality assumptions. Any changes in these assumptions will impact upon the carrying amount of employee benefit obligations.

e) Property, plant, and equipment

Property, plant and equipment are stated at historical cost, as applicable, less accumulated depreciation and cumulative impairment losses, if any.

Historical cost includes purchase price, borrowing costs and any cost directly attributable to bringing the assets to its working condition for its intended use.

Subsequent costs are included in the asset's carrying amount or recognised as a separate asset, as appropriate, only when it is probable that the future economic benefits associated with the item will flow to the entity and the cost of the item can be measured reliably. Cost includes expenditure that is directly attributable to qualifying assets and includes borrowing costs capitalised in accordance with the Trust Group's accounting policy. Such properties are classified to the appropriate categories of property, plant, and equipment when completed and ready for intended use.

Depreciation on Plant and Equipment is provided using straight-line method based on estimated useful life. The estimated useful life of all the property, plant and equipment is ascertained by the management using the best estimate on the basis of technical evaluation, which is depreciated based on useful life as prescribed in Schedule II of the Companies Act, 2013. Depreciation on additions/ deductions is calculated pro-rata from/ to the month of additions/ deductions.

The residual values, useful lives and methods of depreciation of Property, plant and equipment are reviewed at each period end and adjusted prospectively, if appropriate.

Non-current assets classified as held for sale are measured at the lower of carrying amount and fair value less costs to sell.

Gains or losses arising from derecognition of a Property, plant and equipment are measured as the difference between the net disposal proceeds and the carrying amount of the asset and are recognised in the Consolidated Statement of Profit and Loss when the asset is derecognised.

f) Intangible assets

Intangible assets are recognised when it is probable that future economic benefits that are attributable to the asset will flow to the Trust Group and the cost of the asset can be measured reliably. Intangible assets are stated at original cost net of tax/duty credits availed, if any, or deemed cost less accumulated amortisation, and cumulative impairment, if any.

Intangible Assets are stated at historical cost/deemed cost in certain SPVs (elected in accordance with Ind AS 101), as applicable, less accumulated amortisation and cumulative impairment losses, if any.

(i) Rights under Service Concession Arrangements (SCA)

Rights under SCA obtained in consideration for concession fee for development of toll roads under Toll-Operate-Transfer (TOT) or Build-Operate-Transfer (BOT) basis respectively represent the right to collect toll revenue during the concession period. The cost also includes corresponding obligations of the SPVs under the Concession Agreement entered with the Authority related to construction /improvements of the Project Highway granted to the SPVs. Rights under SCA are capitalized as intangible assets upon obtaining the commencement of operation certificate from the authorities at cumulative development costs. The revenue from toll collection/other income during the construction period is reduced from cost of development of intangible assets. Till the completion of the construction, the development costs are recognised under intangible assets under development.

Obligation towards negative grants and the cost incurred for work beyond the original scope per SCA (normally referred as "Change of Scope") or upgrade services is capitalized as intangible assets under development as and when incurred. Reimbursement in respect of such amounts from the Authority is reduced from the carrying amount of intangible assets under development to the extent of actual receipts. Any grant from the Authority in connection with project development is reduced from the cost of the intangible assets.

Extension of concession period by the Authority in respect of compensation for claims made by the SPVs are capitalized as part of Toll Collection Rights on acceptance of the claim. Where the SPVs have a contractual right to an extension in the concession period as per the concession agreement, the same is capitalized when the right to extension in the concession period is established at the estimated amounts of eligible claims.

Pre-operative expenses including administrative and other general overhead expenses that are directly attributable to the development or acquisition of intangible assets are allocated and capitalized as part of cost of the intangible assets.

Amortisation of intangible assets (Rights under SCA)

The Rights under SCA in respect of road projects of certain SPVs (viz. MBEL, JMTL, WUPTL, GAEPL and NAMEPL) are amortized over the period of concession using the revenue-based amortization method prescribed under Schedule II to the Companies Act, 2013. Under the revenue-based method, amortization is based on proportion of actual revenue earned for the period over the sum of actual revenue for the current period and projected revenue from Toll Road Carriageway expected to be earned over the balance concession period as estimated by the management of respective SPVs. Total projected revenue is reviewed at the end of each period end and is adjusted to reflect the changes in earlier estimate vis-a-vis the actual revenue earned till the end of the period so that the whole of the cost of the intangible asset is amortized over the concession period.

For all the other SPVs, the Rights under SCA is amortised over the shorter of the estimated period of future economic benefits which the intangible assets are expected to generate or the concession period, from the date they are available for use. The estimated useful life is reviewed at the end of each reporting period, with the effect of any changes in estimate being accounted for on a prospective basis.

An asset carried under concession arrangements is derecognised on disposal or when no future economic benefits are expected from its future use or disposal.

(ii) Other intangible assets

Other intangible assets comprise of cost of software acquired for in-house use. These assets are stated at cost less accumulated amortization and accumulated impairment losses, if any. Intangible assets are derecognized when no future economic benefits are expected from use or disposal. Amortization is recognized on a straight-line basis over their useful life. The estimated useful life is reviewed at the end of each reporting period, with the effect of any changes in estimate being accounted for on a prospective basis.

Gains or losses arising from derecognition of an intangible asset are measured as the difference between the net disposal proceeds and the carrying amount of the asset and are recognised in the statement of profit or loss when the asset is derecognised. Intangible assets that are not ready for the intended use on the date of the Balance Sheet are disclosed as "Intangible assets under development".

g) Foreign currency transactions and translations

The Consolidated Financial Statements are presented in Indian Rupee (INR), which is the Trust Group's functional and presentational currency. Foreign currency transactions are recorded at the exchange rate prevailing on the date of the respective transactions between the functional currency and the foreign currency.

Monetary items

Monetary foreign currency assets and liabilities remaining unsettled at the Balance Sheet date are translated at the rates of exchange prevailing on that date. Gains / losses arising on account of realisation / settlement of foreign currency transactions and on translation of foreign currency assets and liabilities are recognized in the Consolidated Statement of Profit and Loss.

Exchange differences arising on the settlement of monetary items or on reporting date's monetary items at rates different from those at which they were initially recorded during the period, or reported in previous financial Statements, are recognized as income or as expenses in the period in which they arise.

h) Revenue recognition

Revenue from contracts with customers is recognised when control of the goods or services are transferred to the customer at an amount that reflects the consideration to which the Trust Group expects to be entitled in exchange for those goods or services. The Trust Group has concluded that it is the principal in its revenue arrangements because it typically controls the services before transferring them to the customer. Revenue is recognised to the extent that it is probable that the economic benefits will flow to the Trust Group and the revenue can be reliably measured, regardless of when the payment is being made. Revenue is measured at the transaction price of the consideration received or receivable, excluding the estimates of variable consideration that is allocated to that performance obligation, taking into account contractually defined terms of payment and excluding taxes or duties collected on behalf of the government. The specific recognition criteria described below must also be met before revenue is recognised.

Revenue is recognised either at a point in time or over time, when (or as) the Trust Group satisfies performance obligations by transferring the promised goods or services to its customers.

Service concession arrangements - Recognition and measurement

The Trust Group builds, operate and maintain roads and other infrastructure assets under public-to-private Service Concession Arrangements (SCAs), which is an arrangement between the "grantor" (a public sector entity/authority) and the "operator" (a private sector entity/ the Concessionaire) to provide services that give the public access to major economic and social facilities utilizing private-sector funds and expertise.

With respect to SCA, revenue and costs are allocated between those relating to construction services and those relating to operation and maintenance services and are accounted for separately.

Consideration received or receivable is allocated by reference to the relative fair value of services delivered when the amounts are separately identifiable. For operation & maintenance services, such costs are executory in nature and are expensed off as and when incurred.

The Trust Group's revenue is divided into following categories:

A. Toll collections from the users of the infrastructure facility operated or maintained by the Trust Group under the Service Concession Arrangements are accounted for based on actual collection (net of amount charged over and above the normal user fee payable to NHAI). Revenue from electronic toll collection is recognized on accrual basis.

B. Under financial asset model, finance income for SCA is recognized using effective interest method. Revenues from operations and maintenance services and overlay services are recognized in each period as and when services are rendered in accordance with Appendix C to Ind AS 115.

1. Revenue from construction contracts

Contract revenue for fixed price contracts is recognized only to the extent of cost incurred till such time the outcome of the contract cannot be ascertained reliably. When the outcome of the contract is ascertained reliably, contract revenue is recognized at cost of work performed on the contract plus proportionate margin, using the percentage of completion method.

Percentage of completion is determined based on the proportion of actual cost incurred to the total estimated cost of the project. The percentage of completion method is applied on a cumulative basis in each accounting period to the current estimates of contract revenue and contract costs. The effect of a change in the estimate of contract revenue or contract costs, or the effect of a change in the estimate of the outcome of a contract, is accounted for as a change in accounting estimate and the effect of which are recognized in the Consolidated Statement of Profit and Loss in the period in which the change is made and in subsequent periods.

For the purposes of recognising revenue, contract revenue comprises the initial amount of revenue agreed in the contract, the variations in contract work, claims and incentive payments to the extent that it is probable that they will result in revenue, and they are capable of being reliably measured.

When it is probable that total contract costs will exceed total contract revenue, the expected loss is recognized as an expense in the Consolidated Statement of Profit and Loss in the period in which such probability occurs.

2. Interest income

Interest income from a financial asset is recognized when it is probable that the economic benefits will flow to the Trust Group and the amount of income can be measured reliably. Interest is accrued on time proportion basis, by reference to the principle outstanding at the effective interest rate.

i) Government grants

Grants from governments are recognized at fair value where there is reasonable assurance that the Trust Group will comply with the conditions attaching to them and that the grants will be received.

Government grants related to income are deferred and recognized in profit or loss over the periods in which the Trust Group recognizes as expenses the related costs for which the grants are intended to compensate.

Government grants whose primary condition is that the Trust Group should purchase, construct, or otherwise acquire non-current assets are deducted from the carrying amount of such non-current assets.

j) Distribution to unit holders

The Trust recognises a liability to make distribution to Unit holders when the distribution is approved by the Board of Directors of the Investment Manager to the Trust Group and a legal obligation has been created as per the SEBI InvIT Regulations. A corresponding amount is recognised directly in other equity other than Repayment of Capital.

k) Operating segments

Operating segments are reported in a manner consistent with the internal reporting provided to the chief operating decision maker.

Identification of segments:

In accordance with Ind AS 108- Operating Segment, the operating segments used to present segment information are identified on the basis of information reviewed by the Chief Operating Decision Maker to allocate resources to the segments and assess their performance. An operating segment is a component of the Trust that engages in business activities from which it earns revenues and incurs expenses, including revenues and expenses that relate to transactions with any of the Trust's Group component.

Based on an analysis of Trust structure and powers conferred to the Investment Manager to Trust, the Board of Directors of the Investment Manager has been identified as the Chief Operating Decision Maker ('CODM'), since they are empowered for all major decisions w.r.t. the management, administration, investment, disinvestment, etc.

As the Trust Group is primarily engaged in the business of toll operations and maintenance in India, CODM reviews the entire business as a single operating in respect of reportable segments are not applicable.

l) Financial Instruments

Financial assets and financial liabilities are recognized when the Trust Group become a party to the contractual provisions of the instruments.

Financial assets and financial liabilities are initially measured at fair value. Transaction costs that are directly attributable to the acquisition or issue of financial assets and financial liabilities are added to or deducted from the fair value of the financial assets or financial liabilities, as appropriate, on initial recognition. However, transaction costs directly attributable to the acquisition of financial assets or financial liabilities at fair value through profit or loss ("FVTPL") are recognized immediately in the Consolidated Statement of Profit and Loss.

If the Trust Group determines that the fair value at initial recognition differs from the transaction price, the Trust Group accounts for that instrument at that date as follows:

- at the measurement basis mentioned above if that fair value is evidenced by a quoted price in an active market for an identical asset or liability (i.e. a Level 1 input) or based on a valuation technique that uses only data from observable markets. The Trust Group recognises the difference between the fair value at initial recognition and the transaction price as a gain or loss.

- in all other cases, at the measurement basis mentioned above, adjusted to defer the difference between the fair value at initial recognition and the transaction price. After initial recognition, the Trust Group recognises that deferred difference as a gain or loss only to the extent that it arises from a change in a factor (including time) that market participants would take into account when pricing the asset or liability.

Subsequent measurement of financial assets and financial liabilities is described below:

i. Financial assets

All recognized financial assets are subsequently measured in their entirety at either amortised cost or fair value, depending on the classification of the financial assets.

Classification of Financial Assets

Financial Assets that meet the following conditions are subsequently measured at amortised cost (unless the same are designated as fair value through profit or loss (FVTPL)):

- The asset is held within a business model whose objective is to hold assets in order to collect contractual cash flows; and
- The contractual terms of instrument give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding.

Financial assets at FVTPL is a residual category for debt instruments and all changes are recognized in profit or loss.

Amortized cost and effective interest method

Income is recognized on an effective interest method as per Ind AS 109 "Financial Instruments" for financial assets other than those financial assets classified as at FVTPL. Interest income is recognized in the Consolidated Statement of Profit and Loss and is included in the "Other income" line item.

Impairment of financial assets (Expected credit loss model)

An impairment loss on financial asset is established when there is objective evidence that the Trust Group will not be able to collect all amounts due according to the original terms of the receivables. Impairment loss if any are recognised in Consolidated Statement of Profit or Loss for the period.

De-recognition of financial assets

The Trust Group derecognize a financial asset when the contractual rights to the cash flows from the asset expire, or when it transfers the financial asset and substantially all the risks and rewards of ownership of the asset to another party.

On de-recognition of a financial asset in its entirety, the difference between the asset's carrying amount and the sum of the consideration received and receivable and the cumulative gain or loss that had been recognized in other comprehensive income and accumulated in equity is recognized in profit or loss if such gain or loss would have otherwise been recognized in the Consolidated Statement of Profit or Loss on disposal of that financial asset.

Modification of cash flows of financial assets and revision in estimates of cash flows

Modification of cash flows of financial assets and revision in estimates of cash flows when the contractual cash flows of a financial asset are renegotiated or otherwise modified and the renegotiation or modification does not result in the de-recognition of that financial asset in accordance with Ind AS 109, HAM SPV's recalculate the gross carrying amount of the financial asset and recognize a modification gain or loss in the Statement of Profit and loss. The gross carrying amount of the financial asset is recalculated as the present value of the renegotiated or modified contractual cash flows that are discounted at the financial asset's original effective interest rate. Any costs or fees incurred are adjusted to the carrying amount of the modified financial asset and are amortized over the remaining term of the modified financial asset. If HAM SPV's revise its estimates of payments or receipts (excluding modifications and changes in estimates of expected credit losses), it adjusts the gross carrying amount of the financial asset or amortized cost of a financial liability to reflect actual and revised estimated contractual cash flows. HAM SPV's re-calculates the gross carrying amount of the financial asset or amortized cost of the financial liability as the present value of the estimated future contractual cash flows that are discounted at the financial instrument's original effective interest rate. The adjustment is recognized in the Statement of Profit and Loss as an income or expense.

ii. Financial Liabilities

All financial liabilities are recognized initially at fair value and, in the case of loans and borrowings and payables, net of directly attributable transaction costs.

Loans and borrowings are subsequently measured at amortized costs using Effective Interest Rate method. Financial liabilities at fair value through profit or loss (FVTPL) are subsequently measured at fair value.

De-recognition of financial liabilities

Financial liability is derecognized when the obligation under the liability is discharged or cancelled or expires. When an existing financial liability is replaced by another from the same lender on substantially different terms, or the terms of an existing liability substantially modified, such an exchange or modification is treated as the de-recognition of the original liability and the recognition of the new liability. The difference in the respective carried amount is recognized in the Consolidated Statement of Profit and Loss.

iii. Classification as debt or equity

Debt and equity instruments issued by Trust Group are classified as either financial liabilities or as equity in accordance with the substance of the contractual arrangements and the definitions of a financial liability and an equity instrument.

iv. Fair value

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date, regardless of whether that price is directly observable or estimated using another valuation technique. In estimating the fair value of an asset or a liability, the Trust Group considers the characteristics of the asset or liability if market participants would take those characteristics into account when pricing the asset or liability at the measurement date. Fair value for measurement and/or disclosure purposes in these financial Statements is determined on such a basis and measurements that have some similarities to fair value but are not fair value, such as net realisable value in Ind AS 2 "Inventory" or value in use in Ind AS 36 "Impairment of Assets".

In addition, for financial reporting purposes, fair value measurements are categorized into Level 1, 2 or 3 based on the degree to which the inputs to the fair value measurements are observable and the significance of the inputs to the fair value measurement in its entirety, which are described as follows:

• Level 1 inputs are quoted prices (unadjusted) in active markets for identical assets or liabilities that entity can access at measurement date

- Level 2 inputs other than quoted prices included in Level 1, that are observable for the asset or liability, either directly (as prices) or indirectly (derived from prices); and

- Level 3 inputs for the asset or liability that are not based on observable market data (unobservable inputs).

m) Cash and cash equivalents

Cash and cash equivalents in the Consolidated Balance Sheet comprise of cash at banks and on hand and short-term deposits with an original maturity of three months or less and highly liquid instruments (overnight mutual funds) which are subject to an insignificant risk of changes in value.

n) Consolidated Statement of Cash Flows

Consolidated Statement of Cash flows is prepared segregating the cash flows from operating, investing and financing activities. Cash flows from operating activities is reported using indirect method. Under the indirect method, the net profit/(loss) is adjusted for the effects of:
a. transactions of a non-cash nature;
b. any deferrals or accruals of past or future operating cash receipts or payments and,
c. all other items of income or expense associated with investing or financing cash flows.

The cash flows from operating, investing and financing activities of the Trust Group are segregated based on the available Statements. Cash and cash equivalents are reflected as such in the Consolidated Statement of Cash Flow and excludes balances which are not available for general use as on the date of Consolidated Balance with a specific disclosure.

o) Investment property

Property that is held for long-term rental yields or for capital appreciation (including property under construction for such purposes) or both and that is not occupied by the Trust Group, is classified as investment property. Investment property is measured initially at cost, including related transaction costs and where applicable borrowing costs. Subsequent expenditure is capitalized to the assets carrying amount only when it is probable that future economic benefits associated with the expenditure will flow to the Trust Group and the cost of the item can be measured reliably.
An investment property is derecognized upon disposal or when the investment property is permanently withdrawn from use and no future economic benefits are expected from the disposal. Any gain or loss arising on derecognition of the property (calculated as the difference between the net disposal proceeds and the carrying amount of the asset) is included in profit or loss in the period in which the property is derecognized.

p) Borrowings

Borrowings are initially recognized at fair value, net of transaction costs incurred. Borrowings are subsequently measured at amortized cost. Any difference between the proceeds (net of transaction costs) and the redemption amount is recognized in profit or loss over the period of the borrowings using effective interest method.

The fair value of the liability portion of the optionally convertible debentures is determined by discounting the projected future cashflows of the principal and interest component at coupon rate. The amount is recorded as a liability on an amortized cost basis until extinguished on conversion or redemption of debentures. The reminder of the proceeds is attributable to the equity portion of the compound instrument. This is recognized and included in shareholders' equity, net of income tax effects, and not subsequently remeasured.

Borrowings are removed from the balance sheet when the obligation specified in the contract is discharged, cancelled or expired. The difference between the carrying amount of a financial liability that has been extinguished or transferred to another party and the consideration paid, including any non-cash assets transferred or liabilities assumed, is recognized in profit or loss as other gains/(losses).

Borrowings are classified as current liabilities unless the Trust Group has an unconditional right to defer settlement of the liability for at least 12 months after the reporting period. Where there is breach of a material provision of a long-term loan arrangement on or before the end of the reporting period with the effect that the liability becomes payable on demand on the reporting date, the entity does not classify the liability as current, if lender agreed, after the reporting period and before the approval of the financial Statements for issue, not to demand payment as a consequence of the breach.

q) Borrowing costs

Borrowing costs include interest calculated using the effective interest method, amortization of ancillary costs and other costs the Trust Group incurs in connection with the borrowing of funds. General and specific borrowing costs that are directly attributable to the acquisition, construction or production of a qualifying assets are capitalized during the period of time that is required to complete and prepare the qualifying asset for its intended use or sale. Capitalization of borrowing costs is suspended and charged to the Consolidated Statement of Profit and Loss during extended periods when active development activity on the qualifying assets is interrupted.

Income earned on the temporary investment of specific borrowings pending their expenditure on qualifying asset is deducted from the borrowing costs eligible for capitalization.

Other borrowing costs are expensed in the period in which they are incurred.

r) Employee benefits

Employee benefits includes provident fund, gratuity and compensated absences.

Short-term employee benefit

All employee benefits falling due wholly within twelve months of rendering the service are classified as short- term employee benefits. The benefits like salaries, wages, short-term compensated absences etc. and the expected cost of bonus, and ex-gratia are recognised in the period the related service is rendered at undiscounted amount of benefits expected to be paid in exchange for that service.

The cost of short-term compensated absences is accounted as under:
- in case of accumulated compensated absences, when employees render the services that increase their entitlement of future compensated absences; and
- in case of non-accumulating compensated absences, when the absences occur.

Post-employment benefits

(a) Defined contribution plans:

The Trust Group offers its employees State governed provident fund linked with employee pension scheme as defined contribution plans. The contribution paid/ payable under the scheme is recognised during the period in which the employee renders the related service.

(b) Defined benefit plans:

The SPVs operate an unfunded defined benefit gratuity plan other than two of the SPVs viz. DATRPL and WUPTPL, that make contributions to a separately administered fund through annual contributions to Life Insurance Corporation of India under its Employee Gratuity Scheme. Trust Group's liability towards gratuity is determined at each period end.

For defined benefit gratuity plans, the cost of providing benefits is determined using the projected unit credit method, with actuarial valuations being carried out at the end of each annual reporting period. Re- measurement, comprising actuarial gains and losses, the effect of the changes to the asset ceiling (if applicable) and the return on plan assets (excluding net interest), is reflected immediately in the balance sheet with a charge or credit recognized in other comprehensive income in the period in which they occur. Remeasurement recognised in other comprehensive income is reflected immediately in

retained earnings and will not be reclassified to profit or loss. Past service costs are recognised in profit or loss on the earlier of the date of the plan amendment or curtailment, and the date that the Trust Group recognises related restructuring costs.

Net interest is calculated by applying the discount rate at the beginning of the period to the net defined benefit liability or asset.

Defined benefit costs are categorized as follows:
- service cost (including current service cost, past service cost, as well as gains and losses on curtailments);
- net interest expense or income; and
- re-measurement

The Trust Group presents the first two components of defined benefit costs in Consolidated Statement of Profit and Loss in the line item 'Employee benefits expense'. Curtailment gains and losses are accounted for as past service costs.

The present value of the defined benefit liability is calculated using a discount rate which is determined by reference to market yields at the end of the reporting period on government bonds.

(c) Other long-term employee benefit
The obligation for other long-term employee benefits such as long-term compensated absences, are measured at the present value of the estimated future cash outflows expected to be made by the Trust Group in respect of services provided by employees up to the reporting date.

Liability with regard to compensated absences is accrued based on actuarial valuations determined using projected unit credit method, at the Balance Sheet date, carried out by an independent actuary. Gains or losses arising out of actuarial valuations are recognised immediately in the Statement of Profit and Loss as income or expense respectively. Long-term incentive plan (LTIP) is structured as a cash-settled scheme, wherein notional LTIP Cash Points ("LCPs") are awarded to participants based on a Board defined performance measure of Cube Highways Trust over future years. Liability with regard to LTIP is accrued based on actuarial valuations determined using projected unit credit method, at the Balance Sheet date, carried out by an independent actuary.

s) Inventories

Inventories include stores and spares used in operation and maintenance of the road highways. Inventories are stated at the lower of cost and net realisable value. Cost of inventories include all costs incurred in bringing the inventories to their present location and condition. Costs are assigned to individual items of inventory based on first-in-first-out basis. Cost of purchased inventory are determined after deducting rebates and discounts.

t) Insurance claims

Insurance claims are accounted for based on claims admitted / expected to be admitted and to the extent that the amount recoverable can be measured reliably and it is reasonable to expect ultimate collection.

u) Leases

The Trust Group assesses whether a contract contains a lease, at inception of a contract. A contract is, or contains, a lease if the contract conveys the right to control the use of an identified asset for a period of time in exchange for consideration. To assess whether a contract conveys the right to control the use of an sidentified asset, the Trust Group assesses whether: (i) the contract involves the use of an identified asset.

(ii) the Trust Group has substantially all of the economic benefits from use of the asset through the period of the lease and (iii) the Trust Group has the right to direct the use of the asset.

At the date of commencement of the lease, the Trust Group recognizes a right-of-use asset ("ROU") and a corresponding lease liability for all lease arrangements in which it is a lessee, except for leases with a term of twelve months or less (short-term leases) and low value leases, which are accounted for as under.

Short-term leases and leases of low-value assets

Short term leases are leases with a term of twelve months or less. For short-term and low value leases, the Trust Group recognises the lease payments as an operating expense on a straight-line basis over the term of the lease.

Currently, the Trust Group has lease contracts which are short-term leases or leases of low-value assets.

v) Provisions, contingencies and contingent assets

A provision is recognized when the Trust Group has a present obligation (legal or constructive) as a result of past event and it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation, in respect of which a reliable estimate can be made of the amount of the obligation.

Contingent liabilities are disclosed in notes in case of a possible obligation arising from past events whose existence will be confirmed by the occurrence or non-occurrence of one or more uncertain future events not wholly within the control of the entity or a present obligation arising from past events but is not recognized because it is not probable that an outflow of embodying economic benefits will be required to settle the obligation or the amount of the obligation cannot be measured with sufficient reliability.

A contingent asset is not recognised unless it becomes virtually certain that an inflow of economic benefits will arise. When an inflow of economic benefits is probable, contingent assets are disclosed in the financial statements. Contingent liabilities and contingent assets are reviewed at each balance sheet date.

w) Taxation

Income tax

Income tax expense or credit for the period is the tax payable on current period's taxable income based on the applicable income tax rate adjusted by changes in deferred tax assets and liabilities attributable to temporary differences and to unused tax losses. The current income tax charge is calculated based on tax laws enacted or substantively enacted at the end of the reporting period. Management periodically evaluates, positions taken in tax returns with respect to situations in which applicable tax regulation is subject to interpretation and provisions are established where appropriate based on amounts expected to be paid to the tax authorities.

Current tax items are recognized in correlation to the underlying transaction either in OCI or directly in equity. Management periodically evaluates positions taken in the tax returns with respect to situations in which applicable tax regulations are subject to interpretation and establishes provisions where appropriate.

Deferred Tax

Deferred tax is recognised on temporary differences, being the differences between the tax bases of assets and liabilities and their carrying amount in the financial Statements. Deferred tax is measured using the tax rates and the tax laws enacted or substantively enacted as at the reporting date. Deferred tax liabilities are recognised for all temporary differences. Deferred tax assets are recognised for temporary differences of items other than unabsorbed depreciation and carry forward losses only to the extent that reasonable certainty exists that sufficient future taxable income will be available against which these can be realized. However, if there are unabsorbed depreciation and carry forward of losses and items relating to capital losses, deferred tax assets are recognised only if there is reasonable certainty supported by convincing evidence that there will be sufficient future taxable income available to realize the deferred tax assets. Deferred tax assets and liabilities are offset if such items relate to taxes on income levied by the same governing tax laws and the entity has a legally enforceable right for such set off. Deferred tax assets are reviewed at each reporting date for their realisability.

Minimum Alternate Tax (MAT) paid in accordance with the tax laws, which gives future economic benefits in the form of adjustment to future income tax liability, is considered as an asset if there is convincing evidence that the entity will pay normal income tax. Accordingly, MAT is recognised as a deferred tax asset in the Consolidated Balance Sheet when it is highly probable that future economic benefit associated with it will flow to the Trust Group.

Current and deferred tax relating to items directly recognised in other comprehensive income and reserves are recognised in other comprehensive income and reserves respectively and not in the Consolidated Statement of Profit and Loss.

x) Impairment of non-financial assets

The carrying values of assets / cash generating units at each reporting date are reviewed for impairment if any indication of impairment exists. If any indication exists, the Trust Group estimates the asset's recoverable amount. use.

If the carrying amount of the assets exceed the estimated recoverable amount, an impairment is recognized for such excess amount. The impairment loss is recognized as an expense in the Consolidated Statement of Profit and Loss.

The recoverable amount is the value in use which is based on the estimated future cash flows discounted to their present value using a pre-tax discount rate that reflects the current market assessments of the time value of money and the risks specific to the asset for which the estimated future cash flows have not been adjusted.

When there is indication that an impairment loss recognized for an asset (other than a revalued asset) in earlier accounting periods no longer exists or may have decreased, such reversal of impairment loss is recognized in the Consolidated Statement of Profit and Loss.

y) Provision for periodic maintenance / resurfacing obligations

The Trust Group estimates and provides for contractual obligations as per Service Concession Arrangement (SCA) with the Authority to restore the infrastructure to a specified level of serviceability at periodic intervals or restore the infrastructure to a specified condition before it is handed over to the Authority. Provisions are measured based on management’s estimate required to settle the obligation at the balance sheet date and are discounted using a rate that reflects the time value of money. When discounting is used, the increase in the provision due to the passage of time is recognized as a finance cost. The same is reviewed at each balance sheet date and adjustments if any to the carrying amount is provided for accordingly.

z) Earnings per Unit

Basic earnings per unit are calculated by dividing the net profit / (loss) for the period attributable to unit holders of the Trust by the weighted average number of units outstanding during the period.

For the purpose of calculating diluted earnings per unit, the profit or loss for the period attributable to unit holders of the Trust and the weighted average number of units outstanding during the period are adjusted for the effects of all dilutive potential units.

Dilutive potential units are deemed converted as of the beginning of the reporting date, unless they have been issued at a later date. In computing diluted earnings per unit, only potential equity units that are dilutive and which either reduces earnings per unit or increase loss per units are included.

aa) **Recent Accounting Pronouncements**

Ministry of Corporate Affairs (“MCA”) notifies new standards or amendments to the existing standards under Companies (Indian Accounting Standards) Rules as issued from time to time. There is no such notification which would have been applicable from April 01, 2026.

Details of the latest fair value of SPV wise investment properties are as under:

Entity	**Valuer [i]**	**Dated**	**As at March 31, 2026**	**As at March 31, 2025**	**As at March 31, 2024**
APEPL	External valuer	August 06, 2023	0.72	0.72	0.72
DATRPL	External valuer	August 06, 2023	1.46	1.46	1.46
FRHPL	External valuer	August 06, 2023	0.41	0.41	0.41
JMTPL	External valuer	August 06, 2023	3.59	3.59	3.59
MBEL	External valuer	August 06, 2023	3.80	3.80	3.80
QEPL	External valuer	March 27, 2026	1.50	-	

(i) External valuer is registered valuer as defined under Rule 2 of Companies (Registered Valuers and Valuation) Rules, 2017.

(ii) The fair value was derived using the market comparable approach based on prevailing market prices without any significant adjustments being made to the market observable data. The Trust Group obtains independent valuation for its respective investment property once in a block of three years.

(iii) Investment properties of MBEL (March 31, 2025: MBEL, March 31, 2024: MBEL, APEPL) is hypothecated as security for borrowings, refer note 21.

(iv) The charges on Investment properties of DATRPL, FRHPL, MBEL, APEPL and JMTPL have been fully satisfied during the year ended March 31, 2024. However, the respective SPVs are in the process of getting the pledge/mortgage vacated with the concerned authorities.

(v) The Trust Group acquired an investment property amounting to Rs. 1.82 million (March 31, 2025: Nil, March 31, 2024: Rs. 6.12 million) as part of the acquisition transaction referred to in note 50.

Total	**47,58,92,685**	**43,41,94,255**	**91,00,86,940**	**15,75,00,000**

Note: The Trust has not allotted any fully paid-up units by way of bonus units nor has it bought back any class of units from the date of incorporation till the balance sheet date.

(ii) During the year ended March 31, 2024, the Trust allotted 380,259,172 Ordinary Units of Rs. 100 each as Fresh Issue aggregating to Rs. 38,025.92 million. The details of utilisation of fresh proceeds are as follows:-

Particulars	**Proposed Utilisation**	**Actual Utilisation upto March 31, 2024**	**Unutilised Amount as at March 31, 2024**
Providing loans to SPV's for repayment or pre-payment of debt, including any accrued interest, availed by them from certain banks and financial institutions and the	34,742.92	34,742.92	-
General Purposes including funding of expenses of the InvIT (including interest on InvIT Loan) and refinance fees	3,268.00	3,268.00	-
Offer Expense	15.00	15.00	-
Total	**38,025.92**	**38,025.92**	**-**

(iii) There is reclassification during the year ended March 31, 2026 of 9.62 million (March 31, 2025: 44.10 million, March 31, 2024: Nil) Subordinate Units to Ordinary Units and extinguishment of 27.87 million (March 31, 2025: 75.90 million, March 31, 2024: Nil) Subordinate Units (Refer note 64 and 65).

(iv) Issue expenses of Rs. 10.94 million incurred during year ended March 31, 2024 in connection with issue of units had been reduced from the Unit capital in accordance with Ind AS 32 Financial Instruments: Presentation.

(v) Under the provisions of the InvIT Regulations, the Trust is required to distribute to Unitholders not less than 90% of the Net Distributable Cash Flows of the Trust for each financial year. Accordingly, a portion of the Unit Capital contains a contractual obligation of the Trust to pay to its Unitholders as cash distributions. Hence, the Unit Capital is a compound financial instrument which contains both equity and liability components in accordance with Ind AS 32 - Financial Instruments: Presentation. However, in accordance with SEBI Circulars issued under the InvIT Regulations, the Unit Capital has been presented as "Equity" in order to comply with the requirements of Chapter 4 to the SEBI Master Circular No. SEBI/HO/DDHS-PoD-2/P/CIR/2025/102 dated July 11, 2025 (as amended) dealing with the minimum disclosures for key financial information/statements. Consistent with Unit Capital being classified as equity, the distributions to Unitholders is also presented in Consolidated Statement of Changes in Unitholders' Equity when the distributions are approved by the Board of Directors of Investment Manager other than repayment of capital. As per Clause 4.2.8(b) of the SEBI Master Circular SEBI/HO/DDHS-PoD-2/P/CIR/2025/102 dated July 11, 2025, distributions made by an InvIT to its unitholders that represent a repayment of capital should be disclosed as a negative item on the face of the Consolidated Balance Sheet. Accordingly, for reporting periods up to March 31, 2025, such distributions which was previously reflected as a reduction in Retained Earnings, has been regrouped from Retained Earnings to Distribution-Repayment of Capital.

(vi) **Sponsor lock in**

In terms of the InvIT Regulations, the Sponsor and Sponsor Group are required to, collectively, hold not less than 15% (fifteen percent) of the Ordinary Units on a post-Offer basis which it shall be locked-in for a period of three years from the date of listing of the Ordinary Units. Further, the unitholding of Ordinary Units of the Sponsor and Sponsor Group, exceeding 15% (fifteen percent) on a post-Offer basis, shall be locked-in for a period of not less than one year from the date of listing of the Ordinary Units. As on March 31, 2025, CH III holds as Sponsor 279,654,900 Ordinary Units (March 31, 2024: 246,578,212 Ordinary Units), aggregating to 20.96% (March 31, 2024: 19.11%) of the Ordinary Units on a post-Offer basis, out of which 200,167,255 Ordinary Units (March 31, 2024: 193,551,917 Ordinary Units) held by CH-III, aggregating to 15% of the Ordinary Units on a post-Offer basis, are locked-in for a period of three years from the date of listing of the Ordinary Units.

As at March 31, 2026, Cube Highways and Infrastructure III Pte. Ltd. ("CH III") holds 252,604,900 Units, aggregating to 18.79% of the Units on a post-Offer basis, out of which 201,610,464 Units held by CH-III as Sponsor group entity, aggregating to 15% of the Units on a post-Offer basis, are locked-in for a period of three years from the date of listing of the Units (i.e. from April 19, 2023), and were released from such lock in requirements subsequent to the year end i.e. April 21, 2026.

(b) Terms and rights attached to unit:

The Trust has two classes of units having a par value of Rs. 100 per unit namely Ordinary Unit and Subordinate Unit.

Terms in relation to Ordinary unit: Each unit represents an undivided beneficial interest in the Trust . Each holder of Ordinary unit is entitled to one vote per unit. The Ordinary Unitholders have the right to receive at least 90% of the Net Distributable Cash Flows of the Trust at least once in each financial year in accordance with the SEBI InvIT Regulations. The Board of Directors of the Investment Manager approves distributions. The distribution will be in proportion to the number of units held by the unitholders. The Trust declares and pays distributions in Indian rupees. The distributions will be as per the distribution policy of the Trust.

The Unitholder(s) shall not have any personal liability or obligation with respect to the Trust.

Terms in relation to Subordinate unit: The Subordinate Unitholders shall not be entitled to any distribution rights or other economic rights or any other rights available in relation to the Ordinary Units.

The Subordinate Unitholders shall not be entitled to any voting rights in relation to the Trust and/or its Project SPVs. Further, the Subordinate Unitholders shall not be entitled to receive notices of or participate in, any meeting of the Unitholders holding Ordinary Units, including the annual meeting of Unitholders, in their capacity as holders of the Subordinate Units, unless it is proposed to vary the terms of the Subordinate Units. Further, subject to applicable law and except as required for the purposes of Trust Deed, the Subordinate Unitholders shall not be considered, for the purposes of the rights of unitholders under Regulation 22 of the InvIT Regulations.

The Sponsors shall not transfer the Subordinate Units to any entity which is not a sponsor of the Trust or an Associate of the Sponsors. The Subordinate Units shall remain unlisted at all times unless mandated under applicable law or by any regulatory and statutory authority.

(1) Entitlement Event A (Refer note 64)

Date of Trigger	June 30, 2024 (Completed reclassification on July 19, 2024)
Underlying Reference Initial Portfolio Asset	DATRPL
Actual Performance Metric	Cumulative actual toll revenues (excluding Overloading Revenue and Penalty Revenue) for financial years ended March 31, 2023 and March 31, 2024, as provided under the audited financials of DATRPL, rounded off to the nearest multiple of one lakh.
Base Performance Metric	Rs. 9,900 million
Entitlement Terms	For every additional Rs. 0.10 million of Actual Performance Metric over and above the Base Performance Metric, number of Initial Tranche Subordinate Units as defined below will be entitled to carry the same rights as Ordinary Units, subject to limit defined under Maximum Entitlement Event A Number of Initial Tranche Subordinate Units = 425,000/ issue price per Ordinary Unit allotted in the Initial Offer
Maximum Entitlement Event A	Maximum number of initial Tranche Subordinate Units that can be entitled to carry the same rights as Ordinary Units based on occurrence of Entitlement Event A = 12,000 million/ issue price per Ordinary Unit allotted in the Initial Offer

(2) Entitlement Event B (Refer note 65)

Date of Trigger	June 30, 2025 (Completed reclassification on July 14, 2025)
Underlying Reference Portfolio Assets	JMTPL & MBEL

Capital Reserve
Capital reserve is created on account of extinguishment of Subordinate Units held by a sponsor(Refer note 64 and 65).

Retained earnings
Retained earnings are created from the profits earned by the Trust as adjusted for distribution to the unitholders .The distributions by the Trust to its unitholders are based on the Net Distributable Cash Flows of the Trust under the SEBI InvIT regulations.

20B	**Distribution-Repayment of Capital***

	Closing Balance	**(12,578.80)**	**(6,840.23)**	**-**

*The Trust had reduced the Retained Earnings (under Other Equity) for the amount of NDCF in the nature of repayment of capital in past periods. In terms of Clause 4.2.8(b) of the SEBI Master Circular SEBI/HO/DDHS-PoD-2/P/CIR/2025/102 dated July 11, 2025, the Trust is required to regroup the figures for Retained Earnings (under Other Equity) for prior periods presented in the Consolidated Financial Statements and to disclose the same as a separate line item on the face of Consolidated Balance Sheet. Accordingly the Trust has regrouped Rs. 6,840.23 million as at March 31, 2025 respectively from Retained earnings to Distribution-Repayment of Capital.

21(ii) Borrowing footnote term loans
For repayment terms and security details of the outstanding non-current borrowings (including current maturities) refer the table below:

Security Terms:

Below are the common security details for the Term loans and Non Convertible Debt Securities:

a)First ranking pari-passu charge, by way of hypothecation on the following (as more stipulated under the Deed of Hypothecation):-

(i) on all moveable assets and the receivables of the Issuer in relation to the Project SPVs, present and future including but not limited to:
(I) all receivables of the Issuer from the Project SPVs;
(II) loans and advances (and all rights, title, security and interest thereunder) made by the Issuer to Project SPVs except for the Excluded SPVs, including the rights under the Substitution Agreement – Project SPVs, Escrow Agreement – Project SPVs and all other Project Documents;
(III) the interest and principal repayment of loans advanced by the Issuer to Project SPVs;
(IV) dividends and any other amounts to be paid or payable by the Project SPVs to the Issuer;
(V) inventories, contractual rights, securities, patents, trademarks, other Intellectual Property and Intellectual Property Rights, equipment and/or insurances (in each instance, if any); and
(VI) all other current assets of the Issuer, including all the Issuer's tangible and intangible assets, including but not limited to its goodwill, undertaking and uncalled capital, both present and future.

(ii) all the Accounts and all other bank accounts of the Issuer in which the Free Cashflows from the Project SPVs owned by the Issuer will be deposited/ credited or any other account opened / maintained by the Issuer in relation to such Project SPVs. It is hereby clarified that bank accounts opened by the Issuer in pursuance to Regulation 9(1) of the Securities and Exchange Board of India (Investment Infrastructure) Regulations, 2014 shall not be included for the purposes of this Section.

(b) A first ranking exclusive Security Interest, by way of hypothecation on the DSR;
(c) An agreement to assign the loans advanced by the Issuer to the Project SPVs (except for the Excluded SPVs) and securities created in favour of the Issuer in respect of such loans (including the right of substitution and termination and invocation of the provisions of Escrow Agreement-Project SPVs in case of default by such Project SPVs except for the Excluded SPVs) in relation to such loans granted by the Issuer. Provided that such assignment shall be effective upon occurrence of an Event of Default;
(d) A pledge of all bonds, non-convertible debentures, or any other securities (except the equity shares) of Project SPVs (other than the Excluded SPVs) held by the Issuer.
(e) A pledge of 100% equity shares (including QEPL which was pledged on October 03, 2025) on a Fully Diluted Basis of all Project SPVs (except for the Excluded SPVs), other than the Nominees' Shares.
(f) A negative lien, other than on Permitted Disposals, on the immovable and movable assets (including current assets and cash flows) of the Project SPVs except for the Excluded SPVs, subject to the rights of the Authorities under the respective Concession Agreements.
(g) In respect of 7.49% Debt Securities, a corporate guarantee and a shortfall undertaking from the Project SPVs except by the Excluded SPVs, in relation to upstreaming of funds and/or direct payment to the Debt Security Holders towards dues owed and payable by the Issuer in relation to the Debt Securities in a form and manner instructed by the Debt Security Holders. The same was waived off w.e.f May 31, 2024.
(h) A pledge of bonds, non-convertible debentures, or any other security (except equity shares) of the Excluded SPVs held by the Issuer and pledge over 100% (one hundred percent) equity shares of APEL and pledge over 99.97% (ninety-nine-point nine seven percent) equity shares of MBEL and a pledge over 100% (one hundred percent) of the equity shares of the other Excluded SPVs, in each case other than the Nominees' Shares.

"Excluded SPVs" referred above shall mean, collectively:
1) Andhra Pradesh Expressways Limited till November 20, 2024*
2) Mahua Bharatpur Expressways Limited; and
3) such other Project SPVs (other than the Tranche I SPVs), in respect of which the Debt Security Holders do not have any Security Interest in accordance with the terms of this Deed.
*Pursuant to the Clause 31.2 (e) and 31.2 (c) of Debt Security Trust Deed dated June 19,2024, and June 14, 2023 respectively, post receipt of no objection certificate for satisfaction of charge for its borrowing from existing lenders by APEPL, Trust has pledged the securities held in APEL in favour of Security Trustee on November 21, 2024.

Amortisation of intangible assets	14,371.70	13,072.72	11,777.07
	14,444.75	**13,129.12**	**11,825.72**

38 Earnings per unit (EPU)

Basic EPU amounts are calculated by dividing the profit /(loss) for the year attributable to unitholders by the weighted average number of units outstanding during the year.

Diluted EPU amounts are calculated by dividing the profit/ (loss) attributable to unitholders by the weighted average number of units outstanding during the year plus the weighted average number of units that would be issued on conversion of all the dilutive potential units into unit capital.

The following table reflects the income and unit data used in the basic and diluted EPU computations:

Profit/(loss) attributable to unit holders:			
Profit/(loss) for the year attributable to owners of the Trust Group for calculating basic EPU (Rs. in million)	2,165.51	(357.33)	(7,059.22)
Adjustments for reclassification of subordinate units	-	-	-
Profit/(loss) for the year attributable to owners of the Trust Group for calculating diluted EPU (Rs. in million)	**2,165.51**	**(357.33)**	**(7,059.22)**
Calculation of weighted average number of units outstanding (units in Million):			
Weighted average number of Ordinary units outstanding (Units in million)	1,344.07	1,334.45	1,233.94
Add: Estimated Subordinate Units to be reclassified to ordinary Units[(i)]	-	0.03	0.12
Weighted average number of units outstanding for calculating basic EPU (units in million)	**1,344.07**	**1,334.48**	**1,234.06**
Add: Estimated Subordinate Units to be reclassified to ordinary Units[(iii)]	-	-	-
Weighted average number of units outstanding for calculating diluted EPU (units in million)	**1,344.07**	**1,334.48**	**1,234.06**
Basic earnings per unit (Rs. absolute amount)	1.61	(0.27)	(5.72)
Diluted earnings per unit (Rs. absolute amount)	1.61	(0.27)	(5.72)

Notes:
(i) Subordinate units considered for calculating Basic and Diluted EPU (Refer note 64 & 65)

Particulars	Date considered for Basic and Diluted EPU	Units to be reclassified	Date of reclassification	Units reclassified
DATRPL Subordinate Units (Units in million)	March 31, 2024	44.10	July 19, 2024	44.10
JMTPL & MBEL Subordinate Units (Units in million)	March 31, 2025	9.62	July 14, 2025	9.62

(ii) There are no other dilutive units to be considered for the purpose of calculating diluted EPU.
(iii) There have been no other transactions involving units or potential units between the reporting date and the date of authorisation of these Consolidated Financial Statements.

39 Tax expense

	For the year ended March 31, 2026	For the year ended March 31, 2025	For the year ended March 31, 2024
(i) Income tax expense recognised in Consolidated Statement of Profit and Loss			
Current tax	488.65	367.11	287.41
Tax for earlier years	4.58	18.54	5.40
Deferred tax	586.49	(531.58)	(102.11)
	1,079.72	**(145.93)**	**190.70**

The major components of income tax expense and the reconciliation of expense based on the respective effective tax rate and the reported tax expense in Consolidated Statement of Profit and Loss are as follows :

Particulars			
Profit/(loss) before tax	3,246.87	(503.13)	(6,868.45)
Blended Tax Rate [(ii)]	41.01%	38.29%	36.68%
Expected tax expense [A]	**1,331.60**	**(192.65)**	**(2,519.21)**
Tax effect of adjustment to reconcile expected income tax expense to reported income tax expense:			
(a) Effect of transactions that are not considered in determining taxable income	37.33	(0.27)	27.87
(b) Impact of income not allowable u/s 10(23FC) and related expenditure including consolidation adjustments not deductible as per Income-tax Act, 1961	(1,525.80)	(534.23)	1,589.28
(c) Effect due to change in tax rate	(62.14)	-	15.70
(d) Effect of income that is exempt from taxation u/s 80IA of the Income-tax Act, 1961	(631.54)	(586.11)	(557.89)
(e) Impact of tax adjustments related to earlier years	41.04	(330.04)	5.40
(f) Others	2.98	0.07	1.64
Effects of recognised deferred tax on temporary differences earlier unrecognised	(278.51)	110.13	(171.80)
Effects of unrecognised deferred tax on deductible temporary differences and tax losses including those reversing or originating and reversing during tax holiday period u/s 80IA of the Income tax Act, 1961			
- Difference between carrying value of property, plant and equipment, intangible assets and receivable under service concession arrangement as per books and tax	(516.76)	(130.32)	(4.43)
- Income taxable on receipt basis	2.97	2.85	0.16
- Expense allowed in tax on payment basis	287.71	213.29	(156.07)
- Unamortised processing fees on borrowings	12.75	(7.26)	3.61
- Unabsorbed depreciation and carry forward losses	1,923.14	1,292.37	2,054.79
- MAT credit entitlement	629.08	-	
- Interest disallowed u/s 94B of the Income-tax Act, 1961 carried forward	(174.13)	16.24	(98.35)
Total adjustments [B]	**(251.88)**	**46.72**	**2,709.91**
Actual tax expense [C=A+B]	**1,079.72**	**(145.93)**	**190.70**

Note:

(i) Trust is a business trust registered under SEBI InvIT Regulations. Hence, the interest and dividend received or receivable by Trust from SPV's is exempt from tax under section 10(23FC) of the Income-tax Act, 1961(Act). Further any expenditure incurred in relation to earning the exempt income is not tax deductible in view of the provisions of section 14A of the Act.

The income of Trust other than exempt income mentioned above, is chargeable to tax at the maximum marginal rates in force of 42.74% (for the year ended March 31, 2025: 42.74%, March 31, 2024: 42.74%) except for the income chargeable to tax on transfer of short term capital assets under section 111A of the Act and long term capital assets under section 112 of the Act.

(ii) Applicable rate to SPV and Cube Highways Trust Standalone wise tax rate ranges between 25.17% - 42.74%. Blended tax rate has been considered for effective tax rate reconciliation.

(iii) In JMTPL, MBEL, WUPTPL, WVEPL, GAEPL, NDEPL, NAMEPL, DATRPL and FRHPL - The Company has elected not to exercise the option permitted under section 115BAA of the Income Tax Act, 1961 as introduced by the Taxation Laws (Amendment) Ordinance, 2019.

(ii) Unrecognised deferred tax:

(A) Deferred tax assets/(liability) has not been recognised in respect of following items because the said temporary differences, business losses etc. will reverse during the holiday period u/s 80IA of the Income-tax Act, 1961 and deferred tax assets are not recognised in the absence of reasonable certainty that future taxable amounts will be available to utilize these temporary differences and business losses:

Particulars			
Business losses and unabsorbed depreciation	2,535.98	1,454.45	2,007.53
Interest disallowed under section 94B of the Income Tax Act, 1961	1,736.29	2,406.02	-
Minimum Alternate Tax (MAT) credits	-	2.95	-
Difference between tax written down value (WDV) and book WDV of intangible assets	(612.14)	(1,872.73)	(2,189.79)
Expense allowed in tax on payment basis	2,128.95	2,664.64	1,490.58
Income taxable on receipt basis	(1.89)	(5.37)	(7.28)
Total	**5,787.19**	**4,649.96**	**1,301.04**

	For the year ended March 31, 2026	For the year ended March 31, 2025	For the year ended March 31, 2024

(B) Deferred tax assets as at March 31, 2026, March 31, 2025 and March 31, 2024 in respect of following deductible temporary items have been restricted only to the extent of deferred tax liabilities in the absence of convincing evidence that future taxable amounts will be available to utilize the temporary differences.

Particulars			
Unabsorbed depreciation	18,275.43	16,112.60	21,232.16
Business losses	12,139.74	8,028.93	4,856.05
Interest disallowed under section 94B of the Income tax Act, 1961	-	370.10	1,156.79
Difference between tax written down value (WDV) and book WDV of intangible assets	779.97	(6,220.68)	(13,909.74)
Amount allowed in tax on actual basis	2,117.97	816.97	385.61
Total	**33,313.11**	**19,107.92**	**13,720.87**

(C) Deferred income tax liabilities are recognised for all taxable temporary differences except in respect of taxable temporary differences associated with investments in subsidiaries where the timing of the reversal of the temporary difference can be controlled and it is probable that the temporary difference will not reverse in the foreseeable future. Accordingly, deferred income tax liabilities on undistributed cumulative earnings of subsidiaries as at March 31, 2026, March 31, 2025 and March 31, 2024 has not been recognised. Further, it is not practicable to estimate the amount of the unrecognized deferred tax liabilities for these undistributed earnings.

(iii) Unused business loss and interest u/s 94B can be carried forward based on the year of origination as follows:

Financial year/period of originati	Financial year of expiry	As at March 31, 2026	As at March 31, 2025	As at March 31, 2024
March 31, 2021	March 31, 2029	255.83	-	-
March 31, 2022	March 31, 2030	488.29	-	208.23
March 31, 2023	March 31, 2031	363.28	370.10	948.57
March 31, 2024	March 31, 2032	5,496.23	4,898.00	4,429.13
March 31, 2025	March 31, 2033	3,396.46	3,472.45	-
March 31, 2026	March 31, 2034	5,724.11	-	-

(iv) Minimum alternate tax (MAT):

Tax credits have been recognised on the basis that recovery is probable in the foreseeable future. This recognised MAT credit expires, if unused, based on the year of origination as follows:

Financial year of origination	Financial year of expiry	As at March 31, 2026	As at March 31, 2025	As at March 31, 2024
March 31, 2018	March 31, 2032	-	5.25	5.25
March 31, 2019	March 31, 2032	54.56	54.56	54.56
March 31, 2020	March 31, 2032	62.37	62.37	62.37
March 31, 2021	March 31, 2032	72.62	72.62	72.62
March 31, 2022	March 31, 2032	88.10	88.10	88.10
March 31, 2023	March 31, 2032	153.86	153.86	153.86
March 31, 2024	March 31, 2032	233.84	233.84	234.02
March 31, 2025	March 31, 2032	308.03	309.64	-
March 31, 2026	March 31, 2032	293.49	-	-

As at March 31, 2025, the Trust Group had recognised a deferred tax asset of Rs. 980.22 million towards Minimum Alternate Tax ("MAT") credit of certain SPVs. The Finance Act, 2026, amended the provisions relating to MAT, including a reduction in the applicable MAT rate to 14% and restrictions on utilisation of accumulated MAT credit upon opting for the concessional tax regime under Section 200 of the Income-tax Act, 2025.

As at March 31, 2026, the Trust Group has reassessed MAT credit recoverability considering proposed transition of certain subsidiaries to the new tax regime, and remeasured deferred taxes. The resultant write-down led to a net deferred tax charge of Rs. 347.87 million, recognised for the year ended March 31, 2026 in the Consolidated Statement of Profit and Loss.

This space has been intentionally left blank

40 Disclosure relating to employee benefits pursuant to Ind AS 19 - Employee Benefits

(a) Defined contribution plan

The Trust Group contribution to Provident Fund amounting to Rs. 27.81 million (March 31, 2025: Rs. 23.09 million, March 31, 2024: Rs. 18.83 million) has been recognised in the Consolidated Statement of Profit and Loss under the head Employee benefits expense.

(b) Defined benefit plans

The Trust Group provides for gratuity benefits to its employees in India in accordance with the applicable laws. Employees who are in continuous service for 5 years are eligible for gratuity. The amount of gratuity payable on retirement/termination is the employees last drawn basic salary per month completed proportionately for 15 days salary multiplied for number of completed years of service. The gratuity plan is funded plan for 2 SPVs viz. DATRPL and WUPTPL, these 2 SPVs makes contribution to recognised funds with Life Insurance Corporation of India (pension and group schemes department). For other SPVs, the Trust Group operates the unfunded gratuity scheme.

The gratuity scheme covers substantially all regular employees. Commitments are actuarially determined at year-end. The actuarial valuation is done based on "Projected Unit Credit" method. Gains and losses of changed actuarial assumptions are charged to Consolidated Statement of Profit and Loss.

Gratuity

(i) **Amount recognised in the Consolidated Statement of Profit and Loss is as under:**

Description	For the year ended March 31, 2026	For the year ended March 31, 2025	For the year ended March 31, 2024
Current Service Cost	10.38	7.82	5.15
Interest cost on defined benefit obligations	3.12	2.56	1.49
Interest income on plan assets	(1.18)	(1.19)	(1.07)
Amount recognised in the Consolidated Statement of Profit and Loss	**12.32**	**9.19**	**5.57**

(ii) **Bifurcation of Actuarial (loss)/gain on obligations:**

Description			
Actuarial (loss)/gain on arising from change in demographic assumption	(0.06)	-	-
Actuarial (loss)/gain on arising from change in financial assumption	2.55	(0.34)	(0.72)
Actuarial (loss)/gain on arising from experience adjustment	(1.17)	1.04	1.07
Actuarial (loss)/gain for the year on obligations	**1.32**	**0.70**	**0.35**

(iii) **Actuarial (loss)/gain on plan asset**

Description			
Actual income on plan asset	1.23	1.15	1.00
Expected interest income	1.18	1.19	1.07
Actuarial (loss)/gain for the year on plan asset	**0.05**	**(0.04)**	**(0.07)**

(iv) **Other Comprehensive Income (OCI)**

Description			
Actuarial (loss)/gain for the year on DBO	1.32	0.70	0.35
Actuarial (loss)/gain for the year on plan asset	0.05	(0.04)	(0.07)
Unrecognized actuarial (loss)/gain for the year	**1.37**	**0.66**	**0.28**

(v) **Change in plan assets**

Description			
Fair value of plan assets at the beginning of the year	17.74	16.59	-
Additions on account of acquisition (refer note 50)	-	-	15.59
Actual return on plan assets	1.23	1.15	1.00
Fair value of plan assets at the end of the year	**18.97**	**17.74**	**16.59**

(vi) **Change in defined benefit obligations**

Description			
Defined benefit liability at the start of the year	46.13	30.05	-
Additions on account of acquisition (refer note 50)	1.06	7.17	23.96
Adjustments related to employees transferred to/from Cube group entities	-	0.11	0.41
Interest Cost	3.12	2.56	1.49
Current service cost	10.38	7.82	5.15
Re-measurements (gain)/loss for the year	(1.32)	(0.70)	(0.35)
Benefit paid directly by the Group	(3.90)	(0.88)	(0.61)
Defined benefit liability at the end of the year	**55.47**	**46.13**	**30.05**

(vii) **The amount included in the Consolidated Balance Sheet arising in respect of its defined benefit obligations/plans**

Description			
Present value of defined benefit obligations/ plans	55.47	46.13	30.05
Fair value of plan assets*	(18.97)	(17.74)	(16.59)
Net defined benefit obligations	**36.50**	**28.39**	**13.46**

Bifurcation of Present Benefit Obligations (PBO) and Plan Assets at the end of year in current and non current

Description			
Current provision (Amount due within one year)*	16.05	12.64	6.63
Non-Current provision (Amount due after one year)	39.42	33.49	23.42
Total PBO at the end of year	**55.47**	**46.13**	**30.05**
Net plan assets at the end of year*	18.97	17.74	16.59
Net PBO at the end of year	**36.50**	**28.39**	**13.46**

*Plan assets of Rs. 6.55 million (March 31, 2025 : Rs. 4.78 million, March 31, 2024: Nil) is adjusted from current provision.

(viii) **Sensitivity analysis for gratuity liability:**

Description	For the year ended March 31, 2026	For the year ended March 31, 2025	For the year ended March 31, 2024
Impact of change in discount rate			
Present value of obligations at the end of the period	**55.47**	**46.13**	**30.05**
- Impact due to decrease of 1.00%	4.70	3.71	2.50
- Impact due to increase of 1.00%	(4.09)	(3.19)	(2.17)
Impact of change in salary increase			
Present value of obligations at the end of the period	**55.47**	**46.13**	**30.05**
- Impact due to decrease of 1.00%	(4.10)	(3.27)	(2.21)
- Impact due to increase of 1.00%	4.57	3.63	2.48

The above sensitivity analysis is based on a change an assumption while holding all other assumptions constant. In practice, this is unlikely to occur and changes in some of the assumptions may be correlated. When calculating the sensitivity of the defined benefit obligations to significant actuarial assumptions the same method (present value of the defined benefit obligations calculated with the projected unit credit method at the end of the reporting period) has been applied which was applied while calculating the defined benefit obligations liability recognised in the Consolidated Balance Sheet.

Sensitivities due to mortality and withdrawals are not material and hence impact of change due to these not calculated.
Sensitivities as rate of increase of pensions in payment, rate of increase of pensions before retirement and life expectancy are not applicable.

The methods and types of assumptions used in preparing the sensitivity analysis did not change compared to previous periods.

(ix) **Actuarial assumptions:**

	For the year ended March 31, 2026	For the year ended March 31, 2025	For the year ended March 31, 2024
Description			
Discount rate range	7.05%	6.70%	7.15%
Rate of increase in compensation levels range	7.00% for first year, 5.60% thereafter	7.50% for first year, 6.30% thereafter	7.50% for first year, 6.30% thereafter
Retirement age	62 years	58 years	58 years
Mortality rate	100% of IALM (2012-14)	100% of IALM (2012-14)	100% of IALM (2012-14)
Attrition at age (Withdrawal rate %)			
Up to 30 Years	9% per annum	9% per annum	9% per annum
From 31 to 44 years	9% per annum	9% per annum	9% per annum
Above 44 years	9% per annum	9% per annum	9% per annum

Notes:
(i) The plan assets are maintained with LIC of India Gratuity scheme. The details of investment maintained by LIC are not available and therefore not been disclosed.

(c) Long Term Incentive Plan
Long Term Incentive Plan (CHT) 2024 of Cube Highways Trust ("Trust") through Cube Highways Fund Advisors Pvt. Ltd., the Investment Manager of the Trust ("IM"), ("LTIP" or the "Plan"), was approved by the Board of Directors of the IM to incentivise and retain key employees of the IM's affiliates [affiliates of the IM include SPVs under the Trust]. The Plan applies to eligible employees of IM and its affiliates as and when the Board of IM determines. The LTIP is structured as a cash-settled scheme, in which notional LTIP Cash Points ("LCPs") are awarded to participants based on a defined performance measure for Cube Highways Trust (Parent) over future year.

LCPs are granted annually on April 01, from FY 2024 to FY 2027, over four grant cycles. Each grant vests over three years at 20% after the first year, 30% after the second year, and 50% after the third year. The Board of IM may extend or modify the Plan beyond 2027 at its discretion with appropriate modifications. The LTIP does not involve the issuance of any shares or units and therefore does not result in equity dilution.

In terms of the said Plan, the SPVs' Board on July 28, 2025, July 29, 2025 and January 29, 2026, approved LCPs and LCP grants for the Company's eligible employees. Accordingly, the Trust Group has recognized a liability based on an actuarial valuation using a discount rate of 6.50%/6.25%. The LTIP expense recognized for the year ended March 31, 2026 is Rs. 69.52 million (March 31, 2025: Nil, March 31, 2024: Nil).

41 Capital and other commitments

Particulars	As at March 31, 2026	As at March 31, 2025	As at March 31, 2024
Estimated amount of contracts remaining to be executed on capital account not provided for (Net of Advance) towards:			
- Property, plant and equipment	12.61	-	21.82
- Intangible assets- Rights under Service Concession Arrangements	124.21	464.92	753.13
Total	**136.82**	**464.92**	**774.95**

The Trust Group has other commitments for purchase orders which are issued after considering requirements per operating cycle for purchase of goods and services in normal course of business. The Trust Group does not have any other long term commitments or material non-cancellable contractual commitments/contracts, which might have material impact on the Consolidated Financial Statements.

42 Contingent liabilities and claims

i) Particulars	As at March 31, 2026	As at March 31, 2025	As at March 31, 2024
Claims against the Trust Group not acknowledged as debt			
a) In respect of Income-tax matters, disputed by SPVs	1,427.49	686.83	225.18
b) In respect of Indirect tax matters (VAT/Entry tax/Service tax/GST) disputed by SPVs[(i)]	4,507.89	4,309.77	140.05
c) Damages/Penalties levied by NHAI/Independent engineer on account of default/deficiencies in terms of the concession agreement	56.06	20.61	61.10
d) Revenue Claim levied by State Authority (In terms of the SPA entered between the SPVs and erstwhile promoters, these matters are covered under specific indemnity from erstwhile promoters)	114.40	-	-
e) In respect of Stamp Duty matters, disputed by SPVs[(ii)]	1,931.80	932.70	932.70
f) Civil suits related to accident claim and land encroachment matter at one SPV	7.70	7.70	7.80

Notes:

(i) Includes GST demand of Rs. 3,719.97 million (inclusive of interest and penalty) (March 31, 2025: Rs. 3,571.72 million, March 31, 2024: Nil) received by certain HAM SPVs alleging liability to GST on entire Bid Project Cost amount upfront on receipt of completion certificate, in relation to which the SPVs have filed a writ before the High Court/appeal before the relevant appellate authority. In terms of the SPA entered between the SPVs and erstwhile promoters, these matters are covered under specific indemnity from erstwhile promoters.

(ii) In light of a Supreme Court decision in Rewa Tollway P. Limited v. The State of Madhya Pradesh & ORS., the Trust has reassessed stamp duty obligations (including for stamp duty matters disputed by certain SPVs referred above) for the concession agreements entered into by the SPVs with NHAI, considering inter-alia, types of concession agreement (DBFOT/BOT/TOT/HAM/Annuity), rights under terms and conditions of the concession agreements, indemnity under the Share Purchase Agreements entered by the Trust at the time of acquisition of the SPVs, jurisdiction of the relevant authority, and status of ongoing proceedings. Based on the assessment above supported by the legal advice, the Trust group does not expect the ultimate outflow of resources embodying economic benefits, which could materially affect the financial performance and position of the Trust Group.

(iii) The Management of the Group assesses all material claims in the nature of demands and the show cause notices ("SCNs"), including intimation prior to SCNs, relating to Income tax, Indirect taxes and other litigations against the Group and based on legal advice in certain cases, evaluates whether it is probable, possible or remote ("PPR"). The Group discloses matters as contingent liability that are assessed as possible and accordingly, the contingent liability includes the related interest and penalties only to the extent that demand notices have been received. The relevant SPVs are contesting the aforesaid notices/order before various authorities and are confident that the matters will be decided in Favor of the SPVs and ultimately no liability is likely to be devolved on the respective SPVs. Future ultimate outflow of resources embodying economic benefits in respect of the above matters are uncertain as it depends on the final outcome of the matter involved.

43 Financial instruments by fair value and category

i) Fair values hierarchy

Financial assets and financial liabilities measured at fair value in the Consolidated Balance Sheet are divided into three levels of fair value hierarchy. The three levels are defined based on the observability of significant inputs to the measurement, as follows:

Level 1: Quoted prices (unadjusted) in active markets for financial instruments.
Level 2: The fair value of financial instruments that are not traded in an active market is determined using valuation techniques which maximise the use of observable market data rely as little as possible on entity specific estimates.
Level 3: If one or more of the significant inputs is not based on observable market data, the instrument is included in level 3.

Financial assets/(liabilities) measured at fair value - recurring fair value measurements:

As at March 31, 2026	**Level 1**	**Level 2**	**Level 3**	**Total**
Assets at fair value through profit or loss				
Liquid Investments-mutual funds	-	2,654.95	**-**	**2,654.95**
Investments	-	5,000.98	**-**	**5,000.98**
Liabilities at fair value through profit or loss				
Unsecured term loan from KNR Constructions Limited	**-**	**-**	150.99	**150.99**

As at March 31, 2025	**Level 1**	**Level 2**	**Level 3**	**Total**
Assets at fair value through profit or loss				
Liquid Investments-mutual funds	-	6,439.75	**-**	**6,439.75**
Liabilities at fair value through profit or loss				
Unsecured term loan from KNR Constructions Limited	**-**	**-**	150.99	**150.99**

As at March 31, 2024	**Level 1**	**Level 2**	**Level 3**	**Total**
Assets at fair value through profit or loss				
Investments	-	13,527.76	**-**	**13,527.76**
Liabilities at fair value through profit or loss				
Unsecured term loan from KNR Constructions Limited	**-**	**-**	150.99	**150.99**

Valuation process and technique used to determine fair value

The fair value of investments in mutual fund units are based on the net asset value ('NAV') as stated by the issuers of these mutual fund units in the published statements as at each reported balance sheet dates. NAV represents the price at which the issuer will issue further units of mutual fund and the price at which issuers will redeem such units from the investors.

(ii) Fair value of instruments measured at amortised cost

Fair value of instruments measured at amortised cost for which fair value is disclosed as follows using Level 3 inputs:

Particulars	**As at March 31, 2026**		**As at March 31, 2025**		**As at March 31, 2024**	
	Carrying value	**Fair value**	**Carrying value**	**Fair value**	**Carrying value**	**Fair value**
Financial assets measured at amortised cost:						
Investments	0.01	0.01	0.01	0.01	0.01	0.01
Trade receivables	2,205.27	2,205.27	1,636.71	1,636.71	600.79	600.79
Cash and cash equivalents*	2,535.26	2,535.26	2,027.33	2,027.33	2,416.84	2,416.84
Bank balance other than cash and cash equivalents	2,948.86	2,948.86	6,091.68	6,091.68	3,593.98	3,593.98
Other financial assets	40,519.44	40,519.44	15,401.83	15,401.83	1,827.64	1,827.64
Total financial assets	**48,208.84**	**48,208.84**	**25,157.56**	**25,157.56**	**8,439.26**	**8,439.26**
Financial liabilities (excluding equity component)						
Borrowings	1,76,496.14	1,76,496.14	1,50,995.86	1,50,995.86	1,07,201.74	1,07,201.74
Trade payables	3,002.29	3,002.29	2,227.61	2,227.61	1,645.54	1,645.54
Other financial liabilities	1,671.19	1,671.19	1,650.71	1,650.71	1,592.40	1,592.40
Total financial liabilities	**1,81,169.62**	**1,81,169.62**	**1,54,874.18**	**1,54,874.18**	**1,10,439.68**	**1,10,439.68**

The management assessed that cash and cash equivalents, bank balances other than cash and cash equivalents, trade receivables, other financial assets, trade payables, borrowings and other financial liabilities are approximate to their carrying amounts largely due to the short-term maturities of these instruments. The fair value of the financial assets and liabilities is included at the amount at which the instrument could be exchanged in a current transaction between willing parties, other than in a forced or liquidation sale.

*Excludes liquid investments.

iii) Valuation process and technique used to determine fair value

The Trust is required to present the Consolidated Statement of Total Assets at Fair Value and Consolidated Statement of Total Returns at Fair Value as per SEBI Master Circular No.SEBI/HO/DDHS-PoD-2/P/CIR/2025/102 dated July 11, 2025 as a part of these consolidated financial statements (Refer Consolidated Statement of Net Assets at Fair Value and Consolidated Statement of Total Returns at Fair Value) and in terms of Ind AS 36 "Impairment of Assets" impairment assessment for Intangible assets Rights Under Service Concession Arrangements in individual subsidiary, the Trust has used the significant unobservable inputs in the fair value measurement required for these disclosures, categorised within Level 3 of the fair value hierarchy- level 3, together with a quantitative sensitivity analysis is given below:

Particulars	Input for March 31, 2026	Sensitivity of Input to Fair Value	Increase/ (decrease) in fair value as at March 31, 2026
a. WACC	7.46% to 10.97%	+ 0.50%	(12,635.00)
		-0.50%	13,419.00
b. Inflation rate (Wholesale Price Index)	2.40% to 5.10%	+ 1%	16,521.00
		-1%	(13,422.00)

Particulars	Input for March 31, 2025	Sensitivity of Input to Fair Value	Increase/ (decrease) in fair value as at March 31, 2025
a. WACC	8.30% to 11.57%	+ 0.50%	(11,950.00)
		-0.50%	12,724.00
b. Inflation rate (Wholesale Price Index)	4.10% to 5.10%	+ 1%	15,273.00
		-1%	(14,072.00)

Particulars	Input for March 31, 2024	Sensitivity of Input to Fair	Increase/ (decrease) in fair value
a. WACC	10.2% to 11.0%	+ 0.50%	(10,690.00)
		-0.50%	11,426.00
b. Inflation rate (Wholesale Price Index)	4.10% to 5.10%	+ 1%	14,550.30
		-1%	(12,516.20)

Further, the key assumptions used as inputs for fair valuation includes determination of future cash flows, traffic estimates, assessment of the variation in concession period in certain subsidiaries considering target traffic/ target revenue subject to approvals from the authorities, revenue growth rate, discount rates, inflation rates and other economic factors. [Also, refer Note 2(III)(d)(2), Note 57 and 58 to Consolidated Financial Statement].

iv) Financial instruments by category

	As at March 31, 2026			As at March 31, 2025			As at March 31, 2024		
Particulars	**FVTPL**	**FVOCI**	**Amortised cost**	**FVTPL**	**FVOCI**	**Amortised cost**	**FVTPL**	**FVOCI**	**Amortised cost**
Financial assets

Other financial liabilities	-	-	1,671.19	-	-	1,650.71	-	-	1,592.40
Total	**150.99**	**-**	**1,81,169.62**	**150.99**	**-**	**1,54,874.18**	**150.99**	**-**	**1,10,439.68**

44 Financial risk management

i) Risk Management

The Trust Group activities expose it to variety of financial risks : credit risk, liquidity risk and market risk. The Board of Directors of the Investment Manager("IM") has overall responsibility for the establishment and oversight of the Trust Group's risk management framework. The Trust Group's risk management framework is established to identify and analyse the key risks faced by the Trust Group, to set appropriate risk limits and controls, and to monitor risks and adherence to limits. Risk management framework systems are reviewed periodically to reflect changes in market conditions and Trust Group's activities.

The Board of Directors of the IM oversee compliance with Trust Group's risk management policies and procedures, and reviews the risk management framework in relation to the risk faced by the Trust. The Audit committee as assisted by the internal audit undertakes regular reviews of risk management controls and procedure, the results of which are taken on record by Audit committee.

A) Credit risk

Credit risk is the risk of financial loss to the Trust Group if a counterparty to a financial instrument fails to meet its contractual obligations, and arises principally from the Trust Group's Cash and cash equivalents, other bank balances, trade receivables, unbilled revenue and other financial assets. Trust Group maximum exposure to credit risk is limited to the carrying amount of financial assets.

Credit risk management

The Trust Group establishes an allowance account for impairment that represents its estimate of losses in respect of its financial assets. The main component of this allowance is estimated losses that relate to specific counterparties. The allowance account is used to provide for impairment losses. Subsequently when the Trust Group is satisfied that no recovery of such losses is possible, the financial asset is considered irrecoverable and the amount charged to the allowance account is then written off against the carrying amount of the impaired financial asset.

Credit risk related to cash and cash equivalents and bank deposits is managed by only accepting highly rated banks and diversifying bank deposits and accounts in different banks. Other financial assets measured at amortised cost includes security deposits, annuity receivable, receivable from related parties and other Credit risk related to these other financial assets is managed by monitoring the recoverability of such amounts continuously, while at the same time internal control system in place ensure the amounts are within defined limits.

As at the reporting date, there is no significant concentrations of credit risk. The maximum exposure to credit risk is represented by the carrying value of each financial asset on the Consolidated Balance Sheet.

Reconciliation of loss allowance for trade receivable, unbilled revenue and other assets from beginning to end of reporting period:

Particulars	As at March 31, 2026	As at March 31, 2025	As at March 31, 2024
Opening Balance	201.25	183.56	-
Additions on account of acquisition (refer note 50)	-	-	143.97
Movement in expected credit loss allowance on trade receivables calculated at lifetime expected credit losses	52.10	19.20	42.70
Reversal in expected credit loss allowance on trade receivables and advances	(27.49)	-	-
Adjustment against bad debts written off	-	(1.51)	(3.11)
Closing Balance	**225.86**	**201.25**	**183.56**

The Trust Group estimates the expected credit loss based on specific identified basis. In respect of disputed trade receivables as of March 31, 2026 aggregating Rs 523.28 million (March 31, 2025: Rs. 542.70 million, March 31, 2024: Rs. 131.34 million) relating to the pre acquisition period, the Trust Group has withheld amount of Rs 410.54 million (March 31, 2025: Rs. 410.54 million, March 31, 2024: Rs. 131.34 million) payable to erstwhile shareholders and for remaining amount of Rs 112.74 million (March 31, 2025: Rs 112.74 million, March 31, 2024: Nil) the Trust Group will be indemnified by the erstwhile shareholders. In case of majority of other Trade Receivables (including those outstanding for more than 1 year) as of March 31, 2026, the counter party being the Government Undertaking as such does not have significant credit risk.

Other financial assets measured at amortised cost includes security deposits, annuity receivable, receivable from related parties and other. Credit risk related to these other financial assets is managed by monitoring the recoverability of such amounts continuously, while at the same time internal control system in place ensure the amounts are within defined limits.

B) Liquidity risk

Liquidity risk is the risk that the Trust Group may encounter difficulty in meeting its present and future obligations associated with financial liabilities that are required to be settled by delivering cash or another financial asset. The Trust Group is exposed to liquidity risk due to borrowings, trade and other payables. Trust Group measures risk by forecasting cash flows. The Trust Group’s approach to managing liquidity is to ensure, as far as possible, that it will always have sufficient liquidity to meet its liabilities when due without incurring unacceptable losses or risking damage to the Trust Group’s reputation. The Trust Group ensures that it has sufficient fund to meet expected operational expenses and servicing of financial obligations.

The Trust Group's objective is to, at all times maintain optimum levels of liquidity to meet its cash and collateral obligations. The Trust Group requires funds both for short-term operational needs as well as long-term investment programs mainly in growth projects. The Trust Group closely monitors its liquidity position and deploys a robust cash management system. It aims to minimize these risks by generating sufficient cashflows from its current operations, which in addition to the available cash and cash equivalents, liquid investments and sufficient committed fund facilities, will provide liquidity.

Consequently, the Trust Group believes its revenue, along with proceeds from financing activities will continue to provide the necessary funds to cover its short term liquidity needs. In addition, the Trust Group projects cash flows and considering the level of liquid assets necessary to meet liquidity requirement.

The Trust Group has undrawn borrowing facilities shown as under:

Banks/Financial institution	Facility	As at March 31, 2026			As at March 31, 2025			As at March 31, 2024		
		Sanctioned amounts	Drawn amounts	Undrawn amounts	Sanctioned amounts	Drawn amounts	Undrawn amounts	Sanctioned amounts	Drawn amounts	Undrawn amounts
Sumitomo Mitsui Banking Corporation	Bank Guarantee and short term loan	2,500.00	1,000.00	1,500.00	-	-	-	-	-	-
IndusInd Bank Limited	Bank Guarantee	2,840.00	1,500.00	1,340.00	2,840.00	1,500.00	1,340.00	-	-	-
IndusInd Bank Limited	Overdraft facility	142.00	-	142.00	142.00	-	142.00	-	-	-

(a) Maturities of financial liabilities

The tables below analyse the Trust Group's financial liabilities into relevant maturity categories based on their contractual maturities for all non-derivative financial liabilities:
The amounts (undiscounted) disclosed in the table are the carrying value as at the balance sheet date.

As at March 31, 2026	**Less than 1 year**	**1-2 year**	**2-5 year**	**More than 5 years**	**Total**
Borrowings	5,293.39	5,538.28	29,209.51	1,37,341.73	**1,77,382.91**
Trade payables	3,002.29	-	-	-	**3,002.29**
Other financial liabilities	1,669.08	2.11	-	-	**1,671.19**
Total	**9,964.76**	**5,540.39**	**29,209.51**	**1,37,341.73**	**1,82,056.39**

As at March 31, 2025	**Less than 1 year**	**1-2 year**	**2-5 year**	**More than 5 years**	**Total**
Borrowings	4,850.58	4,609.58	13,848.45	1,28,573.38	**1,51,881.99**
Trade payables	2,227.61	-	-	-	**2,227.61**
Other financial liabilities	1,536.54	114.17	-	-	**1,650.71**
Total	**8,614.73**	**4,723.75**	**13,848.45**	**1,28,573.38**	**1,55,760.31**

As at March 31, 2024	**Less than 1 year**	**1-2 year**	**2-5 year**	**More than 5 years**	**Total**
Borrowings	4,722.49	4,275.70	12,051.20	86,647.69	**1,07,697.08**
Trade payables	1,645.54	-	-	-	**1,645.54**
Other financial liabilities	1,407.31	185.09	-	-	**1,592.40**
Total	**7,775.34**	**4,460.79**	**12,051.20**	**86,647.69**	**1,10,935.02**

C) Market risk
(a) Interest rate risk
i) Liabilities
The Trust Group's policy is to minimise interest rate cash flow risk exposures on long-term financing. At the reporting periods end, the Trust Group is exposed to changes in market interest rates through bank borrowings at variable interest rates.

Interest rate risk exposure
Below is the overall undiscounted exposure of the Trust Group to interest rate risk:

Particulars (Undiscounted Basis)	**As at March 31, 2026**	**As at March 31, 2025**	**As at March 31, 2024**
Variable rate borrowings	1,32,632.31	1,19,695.00	95,677.28
Fixed rate borrowings	44,750.60	32,186.99	12,019.80
Total borrowings	**1,77,382.91**	**1,51,881.99**	**1,07,697.08**

Sensitivity
Below is the sensitivity of profit or loss and equity changes in interest rates.

Particulars	**For the year ended March 31, 2026**	**For the year ended March 31, 2025**	**For the year ended March 31, 2024**
Interest sensitivity			
Interest rates – increase by 50 bps [(i)]	(663.16)	(598.47)	(478.39)
Interest rates – decrease by 50 bps [(i)]	663.16	598.47	478.39

(i) Holding all other variables constant

ii) Financial Assets
The Trust Group's fixed deposits are carried at amortised costs and are fixed rate deposits. They are therefore not subject to interest rate risk as defined in Ind AS 107 'Financial Instruments Disclosures', since neither the carrying amount nor the future cash flows will fluctuate because of a change in market interest rates.

(b) Price risk

i) Exposure

The Trust Group requires various commodities for the implementation, operation, and major maintenance of its road assets, including bitumen, cement, steel, and other construction materials, which are subject to market price fluctuations. The major maintenance projections used in the valuation and cash flow forecasts are based on technical studies and assumptions regarding future commodity prices, particularly bitumen prices.

Management has considered historical price trends, expected long-term stabilisation in crude oil and bitumen markets, domestic refining capacities and current geopolitical factors while making the provision for major maintenance . Regarding bitumen prices, the forecasts assume elevated prices in the near term, with a gradual moderation towards historical long-term averages over the forecast period.

The Trust Group manages its exposure to such commodity price risks through periodic review of maintenance plans, strategic procurement practices, contractual negotiations, and optimisation of maintenance schedules. Accordingly, management believes that the overall exposure is appropriately reflected and no separate commodity price sensitivity analysis has been presented.

The Trust Group's exposure to price risk also arises from investments classified at fair value through profit or loss. To manage such risks, the Trust Group maintains a diversified investment portfolio comprising fixed-rate bank deposits and mutual fund investments (growth schemes).

ii) Sensitivity

The table below summarises the impact of increase/decrease of the index on the Trust Group's profit for the year :

Impact on loss before tax

Particulars	**As at March 31, 2026**	**As at March 31, 2025**	**As at March 31, 2024**
Mutual Funds			
Net assets value – increase by 100 bps	76.56	64.40	135.28
Net assets value – decrease by 100 bps	(76.56)	(64.40)	(135.28)

(c) Foreign currency risk

Foreign currency risk is the risk that the fair value or future cash flows of an exposure will fluctuate because of changes in foreign exchange rates. The Trust Group has no significant exposure to the risk of changes in foreign exchange rates.

45 Capital management

For the purpose of the Trust Group's capital management, capital includes issued unit capital and all other reserves attributable to the unitholders of the Trust Group. The primary objective of the Trust Group's capital management is to ensure that it maintains a strong credit rating and healthy capital ratios in order to support its business and maximise unit holder value.

The Trust Group manages its capital structure and makes adjustments to it in light of changes in economic conditions and the requirements of the financial covenants. To maintain or adjust the capital structure, the Trust Group may adjust the distribution to unitholders (subject to the provisions of InvIT regulations which require distribution of at least 90% of the net distributable cash flows of the Trust Group to unitholders), return capital to unitholders or issue new units.

The Trust Group monitors capital using a gearing ratio, which is net debt divided by total equity. The Trust Group's policy is to keep the gearing ratio optimum. The Trust Group net debt includes non-current borrowings (including current maturity of non-current borrowings, interest accrued but due on borrowings & interest accrued but not due on debentures less cash and cash equivalent, other bank deposits and current investments).

Debt equity ratio

Particulars	**As at March 31, 2026**	**As at March 31, 2025**	**As at March 31, 2024**
Debts (including interest accrued)	1,76,821.92	1,51,328.51	1,07,947.73
Less : Cash & cash equivalents, other bank balances and current investments	(14,236.29)	(15,005.58)	(15,138.97)
Net Debt	**1,62,585.63**	**1,36,322.93**	**92,808.76**
Total equity	97,829.18	1,14,374.55	1,29,489.91
Net debt to equity ratio (in times)	**1.66**	**1.19**	**0.72**

(This space has been intentionally left blank)

46 Information on related party transactions

The name of the related parties and nature of relationship are as identified by the management of the Investment Manager with reference to the Trust and its subsidiaries which are considered for the Consolidated Financial Statements pursuant to the InvIT Regulations.

46.1 A) List of related parties as per the requirements of Ind-AS 24- Related Party Disclosures

Cube Group Entities* (with whom transactions have taken place)
Cube Highways and Infrastructure 1D Pte. Ltd.
Cube Highways and Infrastructure II Pte. Ltd.
Cube Mobility Investment Pte. Ltd.
Cube Highways Operations Management Private Limited
Cube Highways Technologies Private Limited
Baharampore Farakka Highways Limited (w.e.f. March 28, 2023)
Cube Highways Growth Advisory Private Limited (w.e.f. December 05, 2023)
Delhi Hapur Meerut Expressway Private Limited (w.e.f. January 02, 2024)
Kokhraj Handia Expressway Private Limited (w.e.f. November 10, 2023)
Malavagiri Highways Private Limited (w.e.f. January 02, 2024)
Western M P Infrastructure & Toll Roads Private Limited (w.e.f. Febraury 14, 2024)

B) List of related parties as per Regulation 2(1) (zv) of the InvIT Regulations
1) Parties to the Trust
Sponsor- Cube Highways and Infrastructure Pte. Ltd. (CHIPL) (upto February 18, 2026)
Sponsor- Cube Highways and Infrastructure III Pte. Ltd (CHIPL-III) (upto February 18, 2026)
Sponsor- Cube Highways and Infrastructure V Pte. Ltd. (CH-V) (w.e.f. February 19, 2026)
Project Manager of the Trust(for all SPVs)- Cube Highways and Transportation Assets Advisors Private Limited (CHATAAPL) (Refer note 46.6)
Subsidiary of CHATAAPL- Cube Highways Roots Foundation
Investment Manager of the Trust- Cube Highways Fund Advisors Private Limited (CHFAPL)
Trustee of the Trust- Axis Trustee Services Limited (ATSL)

2) Promoters of the parties to the Trust specified in (1) above
Promoter of CHIPL- ISQ Asia Aggregator Pte. Ltd. (upto February 18, 2026)
Promoter of CHIPL-III- ISQ Asia Infrastructure Holdings II Pte. Ltd. (upto February 18, 2026)
Promoter of CH-V - Cube Highways Holdings V Pte. Ltd. (w.e.f. February 19, 2026)
Promoter of CHATAAPL- Cube Highways and Infrastructure Pte. Ltd. (upto December 28, 2023) ,Cube Highways Advisory Pte. Ltd. (w.e.f December 29, 2023)
Promoter of CHFAPL- Cube Highways Advisory Pte. Ltd.
Promoter of ATSL- Axis Bank Limited

3) Directors of the parties to the Trust specified in (1) above
i) Directors of CHIPL (upto February 18, 2026)
Spyros John Mantzavinatos (upto June 22, 2023)
Kenichi Yoshihara (upto February 07, 2024)
George Currie Crawford (upto September 01, 2025)
Siew Hean Meng (upto August 31, 2023)
Harsh Agrawal
Marcus Christopher Hill (upto March 04, 2025)
Tsuneo Kawasaki (w.e.f February 07, 2024)
Ashutosh Goyal (w.e.f October 01, 2025)
Heng Hong Kiong (upto February 07, 2024)
Lin Le (w.e.f February 07, 2024)

ii) Directors of CHIPL-III (upto February 18, 2026)
Kunal Agarwal
Heng Hong Kiong (upto February 07, 2024)
George Currie Crawford (upto September 01, 2025)
Marcus Christopher Hill (upto March 04, 2025)
Harsh Agrawal
Ashutosh Goyal (w.e.f October 01, 2025)
Lin Le (w.e.f February 07, 2024)

iii) Directors of CH-V (w.e.f. February 19, 2026)
Ashutosh Goyal
Raviraj Vipul Acharya
Lin Le
Zaman Velji
Angela Mary Bouzanis
Kunal Agarwal

iv) Directors of CHATAAPL
Pooja Aggarwal (Upto June 18, 2024)
Bovin Kumar (Upto December 23, 2025)
Mukul Shastry (Upto December 26, 2025)
Ankit Jain ((w.e.f August 21, 2023 upto December 23, 2025)
Gaurav Malhotra (upto August 18, 2023)
Harikishan Reddy Koppula (w.e.f April 02, 2025)
Raviraj Vipul Acharya (w.e.f May 16, 2025)
Angela Mary Bouzanis (w.e.f June 06, 2025)
Varun Unnikrishnan (w.e.f May 16, 2025)

v) Directors of CHFAPL
Upendra Kumar Sinha
Surinder Chawla
Fereshte Dhunjishaw Sethna#
Jayesh Ramniklal Desai
Sandeep Lakhanpal
Harikishan Reddy Koppula (upto June 07, 2023)
Zaman Velji (w.e.f June 08, 2023 upto November 07, 2023)
Chirdeep Singh Bagga (w.e.f June 08, 2023 upto May 31, 2024)
Helly Bharat Ajmera (w.e.f November 07, 2023)
Raviraj Vipul Acharya (w.e.f July 31, 2024)

vi) Directors of ATSL
Rajesh Kumar Dahiya (upto January 15, 2024)
Deepa Rath (upto February 05, 2025)
Ganesh Sankaran (upto January 15, 2024)
Sumit Bali (w.e.f. January 16, 2024 upto August 16, 2024)
Arun Mehta (w.e.f. May 03, 2024)
Pramod Kumar Nagpal (w.e.f. May 03, 2024)
Rahul Ranjan Choudhary (w.e.f February 06, 2025)
Prashant Ramrao Joshi (w.e.f. January 16, 2024 upto April 15, 2026)
Bipin Saraf Kumar (w.e.f. April 11, 2025)

4) Entity in which director of the Investment Manager of the Trust is partner
#DMD Advocates

* Considered as Related Parties although not covered under the definition of Related Parties as per Ind AS 24, Related Party Disclosures. These have been included as voluntary disclosure, following the best corporate governance practices.

46.4 Pursuant to the resolution dated November 06, 2025, Board of Directors of the Investment Manager of Cube Highways Trust ("Trust") approved, inter alia, conversion of the Trust from a privately listed InvIT to a publicly listed InvIT through an Offer for Sale of its existing units, subject to necessary approvals (the "Offer"). The unitholders subsequently approved the Offer by postal ballot dated January 30, 2026. As set out in the draft offer document dated March 17, 2026 filed with the SEBI in relation to the Offer, the expenses incurred in connection with the Offer, including fee, commission, remuneration etc. payable to the lead managers, underwriters, escrow agents, legal advisors and other intermediaries, shall be borne by and recoverable from the selling unitholders persuant to the Offer Agreement dated March 17, 2026 entered between the Trust and the Selling Unitholders, in proportion to the units transferred and sold by each of the selling unitholder through the Offer for Sale or in any other manner as may be mutually agreed in writing among the relevant parties. Accordingly, expenses amounting to Rs. 207.93 million, incurred up to March 31, 2026, have been recognised as recoverable by the management as at March 31, 2026.

46.5 (i) Pursuant to the binding commitment letter dated March 17, 2026, the Trust intends to, inter alia, acquire up to 100% equity shareholding in Baharampore-Farakka Highways Limited, Devanahalli Tollway Private Limited, Western M P Infrastructure & Toll Roads Private Limited and Chenani Nashri Tunnelway Limited to the extent such equity is held by Cube Highways and Infrastructure V Pte Ltd and Cube Highways and Infrastructure II Pte Ltd (as applicable).

(ii) Cube Highways Trust has the right to acquire new projects (i) through Right of First Offer with the Sponsor in accordance with the Right of First Offer agreement dated March 17, 2026 and (ii) in terms of the Investment Policy.

46.6 Pursuant to a resolution dated February 27, 2026, the Board of directors of the Investment Manager has approved to appoint Cube Highways Asset & Project Advisory Private Limited ["CHAPA(P)L"] as the 'Project Manager' of Cube Highways Trust in place of Cube Highways and Transportation Assets Advisors Private Limited, upon receipt of necessary approvals.

Subsequent to year ended March 31, 2026, upon receipt of approvals, the Project Implementation and Management Agreement dated January 02, 2023 is terminated with effect from June 26, 2026 (the "Effective Date") and 'Cube Highways Asset & Project Advisory Private Limited' is appointed as the 'Project Manager' of Cube Highways Trust from the Effective Date. Accordingly, a new project implementation and management agreement ("Fresh PIMA") has been executed among Axis Trustee Services Limited (the "Trustee"), the Investment Manager, CHAPA(P)L, and the special purpose vehicles ("SPVs") of the Trust, dated June 26, 2026. The change in Project Manager shall be effective as of June 26, 2026.

46.7 Details in respect of related party transactions involving acquisition of SPV as required by paragraph 4 of the chapter 4 to the SEBI master circular no. SEBI/HO/DDHS-PoD-2/P/CIR/2025/102 dated July 11, 2025

For the year ended March 31, 2026: Nil

For the year ended March 31, 2025:

A) Summary of the valuation reports (issued by the independent valuer appointed under the InvIT Regulations):

Name of the SPVs	Date of acquisition	Discounting Rate (WACC)	Method of calculation	Enterprise value as at date of acquisition
SIPL	June 04, 2024	8.30%	Discounted Cash flow method	4,486.00
MHPL	June 04, 2024	8.30%		3,383.00
MSHPL	June 04, 2024	8.30%		4,720.00
THPL	June 04, 2024	8.30%		5,389.00
SPPL	June 04, 2024	8.30%		4,645.00
BWHPL	June 04, 2024	8.30%		4,032.00
NAMEPL	February 12, 2025	10.62%		25,267.72

B) Material conditions or obligations in relation to the transactions:
Share Purchase Agreement dated May 31, 2024 (for HAM SPVs) and June 04, 2024 (for NAMEPL) executed, inter alia, individually between the respective SPVs and the Trust, prescribing certain terms and conditions as agreed between the parties thereto, including without limitation, indemnification provisions for claims in relation to pre-acquisition period subject to limitations on liability, de-minimis values and claim basket values; representations and warranties; payment(s) to erstwhile sellers etc., governing law etc. (as more particularly stipulated under the Share Purchase Agreements) which govern the transfer of shareholding in the Project SPVs to Cube Highways Trust. Acquisition of shares of N.A.M. Expressway Private Limited ("NAMEPL") has been financed from senior, secured, rated, listed, redeemable, non-convertible debt securities bearing coupon interest rate of 7.67%.

46.7 Details in respect of related party transactions involving acquisition of SPV as required by paragraph 4 of the chapter 3 to the SEBI master circular SEBI/HO/DDHS-PoD-2/P/CIR/2025/102 dated July 11, 2025

For the year ended March 31, 2024:

A) Summary of the valuation reports (issued by the independent valuer appointed under the InvIT Regulations):

MBEL	April 17, 2023	10.00%		6,061.63

B) Material conditions or obligations in relation to the transactions:

Share Purchase Agreement dated March 30, 2023 executed, inter alia, individually between the respective SPVs and the Trust, prescribing certain terms and conditions as agreed between the parties thereto, including without limitation, indemnification provisions for claims in relation to pre-acquisition period subject to limitations on liability, de-minimis values and claim basket values; representations and warranties; payment(s) to erstwhile sellers etc., governing law etc. (as more particularly stipulated under the Share Purchase Agreements) which govern the transfer of shareholding in the Project SPVs to Cube Highways Trust.

47 Information on segment reporting pursuant to Ind AS 108 - Operating Segments

The Trust group is engaged in the business of setting up of infrastructure facility by way of development of infrastructure projects, operation and maintenance of Infrastructural facilities. As such, all activities undertaken by the SPVs are incidental to the main business. The directors of the SPV and Investment Manager, who have been identified as being the chief operating decision maker (CODM), evaluates the SPVs performance, allocates resources based on the analysis of the previous performance indicators of the SPVs as a single unit. Therefore, there are no separate reportable business segments as per IND AS 108-"Operating Segment".

48 Provisions

(a) Provision for periodic major maintenance work

The Trust Group is required to operate and maintain the project highway during the entire concession period and hand over the project back to the Authority as per the maintenance standards prescribed in Concession agreement.

For this purpose, a regular maintenance along with periodic maintenances is required to be performed. Normally periodic maintenance includes resurface of pavements, repairs of structures and other equipment's and maintenance of service roads.

The maintenance cost/ bituminous overlay may vary based on the actual usage during maintenance period. Accordingly on the grounds of matching cost concept and based on technical estimates, a provision for major maintenance expenses is reviewed and is provided for in the financial statements at each reporting period.

Movement in provisions for periodic major maintenance work

Particulars	For the year ended March 31, 2026	For the year ended March 31, 2025	For the year ended March 31, 2024
Opening balance	6,065.66	3,199.25	-
Add: Additions on account of acquisition (refer note 50)	-	1,070.47	3,067.69
Add : Provision charged to Consolidated Statement of Profit and Loss[iii]	3,549.38	2,410.28	1,663.92
Less : Utilised	(1,322.67)	(847.94)	(1,645.95)
Less : Unused amounts reversed	-	-	(10.73)
Add : Unwinding of discount and changes in discount rate	500.29	233.60	124.32
Closing balance	**8,792.66**	**6,065.66**	**3,199.25**
Non-current [i]	6,294.94	4,334.81	2,300.26
Current [ii]	2,497.72	1,730.85	898.99

Notes:

(i) The expected period of utilisation of non current provision is within 2-7 years.

(ii) The expected period of utilisation of current provision is within next 1 year.

(iii) Excludes periodic major maintenance at APEPL of Rs. Nil (March 31, 2025 : 888.26 million, March 31, 2024: Nil) being an annuity concession arrangement.

(b) Provisions for contractual obligation for infrastructure upgrade works

Certain SPVs estimates and provides for contract liability in respect of unavoidable obligations to improve/upgrade the infrastructure to be undertaken as per Concession Agreement with NHAI. These estimates are corroborated through purchase orders/ work orders placed or to be placed by these SPVs as per the road survey reports issued by an independent field expert. As the estimated cost is based on the various assumptions such as current infrastructure (road, pavements, etc.) condition, inflation in material cost etc., hence the Management is required to apply judgement over these factors.

Movement in Provisions for contractual obligation for infrastructure upgrade works

Particulars	For the year ended March 31, 2026	For the year ended March 31, 2025	For the year ended March 31, 2024
Opening balance	1,896.07	2,403.54	-
Add: Additions on account of acquisition (refer note 50)	-	-	2,803.91
Add : Additional provision capitalised under service concession arrangement	-	-	128.25
Less : Utilised	(698.34)	(507.47)	(418.42)
Add : Unwinding of discount and changes in discount rate	-	-	18.05
Less : Addition*/(Reversal) on account of change in estimation (Refer note 6)	485.24	-	(128.25)
Closing balance	**1,682.97**	**1,896.07**	**2,403.54**
Non-current	-	-	-
Current [i]	1,682.97	1,896.07	2,403.54

(i) The expected period of utilisation of current provision is within next 1 year.

*After the reporting date, HTPL received a letter dated April 25, 2026, from the National Highways Authority of India ("NHAI") regarding the Negative Change of Scope ("COS") in relation to the construction of the Vehicular Underpass ("VUP") at Km 110+056 under the Concession Agreement. The said communication, inter alia, indicates that discussions between the parties regarding the proposed revised scope/de-scoping and the related financial implications are ongoing, and HTPL has been advised to submit a detailed proposal for consideration by the competent authority.

Based on management's assessment and the information presently available as at the date of approval of these Consolidated Financial Statements, the additions during the year also include a provision recognised by HTPL towards the estimated liability arising from the aforesaid Negative COS.

49 Details of dues to Micro, Small and Medium Enterprises

The details of dues to MSMEs as defined under Micro, Small and Medium Enterprises Development Act, 2006 (MSMED Act), and disclosures pursuant to the MSMED Act are as follows:

Particulars	As at March 31, 2026	As at March 31, 2025	As at March 31, 2024
(i) Principal amount remaining unpaid to any supplier as at the end of the accounting year[ii]	997.05	676.58	204.94
(ii) Interest due thereon remaining unpaid to any supplier as at the end of the accounting year	0.10	4.88	0.31
(iii) The amount of interest paid along with the amounts of the payment made to the supplier beyond the appointed day	-		
- Principal	228.56	86.58	134.02
- Interest	-	0.42	38.95
(iv) The amount of interest due and payable for the year	1.82	1.75	6.91
(v) The amount of interest accrued and remaining unpaid at the end of the accounting year	30.63	27.65	26.66
(vi) The amount of further interest due and payable even in the succeeding year, until such date when the interest dues as above are actually paid	-	-	-

Notes:

(i) Dues to Micro Enterprises and Small Enterprises have been determined to the extent such parties have been identified on the basis of information collected by the Management. This has been relied upon by the auditors.

(ii) The above disclosure excludes Rs. 313.37 million (March 31, 2025 : Rs. 233.13 million, March 31, 2024: Rs. 41.92 million) towards amount accrued but not yet billed by MSME vendors.

50 Asset Acquisition

A) i) Acquisition of JUHPL SPV (FY 2025-26)

In terms of Share Purchase Agreement (SPA) dated February 07, 2025 entered amongst the Trust (acting through its Investment Manager), Athaang Infrastructure Private Limited, National Investment and Infrastructure Fund (through its Investment Manager) (Seller) and AJUHPL on June 12, 2025 the Trust has acquired the 100% equity holding of JUHPL for consideration of Rs. 4,145.13 million (including contingent consideration of Rs. 122.99 million) referred to in note 1(ii).

The management applied optional concentration test, under Ind AS 103 "Business Combination", and concluded that the acquired set of activities and assets is not a business because substantially all of the fair value of the gross assets acquired is concentrated under Receivable under Service Concession Arrangements , with similar risk characteristics. Accordingly, this transaction has been accounted for as an asset acquisition. The management identified and recognized the individual identifiable assets acquired and liabilities assumed; and allocated the purchase consideration to the individual identifiable assets and liabilities on the basis of their relative fair values at the date of acquisition.

The allocated value of the identifiable assets and liabilities as at the date of acquisition were:

Assets	**Amount Rs. Million**
Property, Plant and Equipment (net of accumulated depreciation)	26.34
Intangible assets	545.19
Receivable under service concession arrangements	12,051.38
Assets held for sale	3.66
Trade receivables	3.19
Cash and cash equivalents	5,425.07
Other assets	656.39
Total Assets (A)	**18,711.22**
Liabilities	
Borrowings (including current maturities of Non-current borrowings)	12,933.56
Trade Payables	84.67
Other liabilities	1,547.86
Total Liabilities (B)	**14,566.09**
Net Assets/Consideration (A-B)	**4,145.13**

ii) Acquisition of QEPL SPV (FY 2025-26)

In terms of Share Purchase Agreement (SPA) dated February 07, 2025 entered amongst the Trust (acting through its Investment Manager), Quazigund Expressway Private Limited (QEPL) and National Investment and Infrastructure Fund (through its Investment Manager) (Seller) on June 12, 2025 the Trust has acquired the 100% equity holding of QEPL for consideration of Rs. 6,055.10 million referred to in note 1(ii).

The management applied optional concentration test, under Ind AS 103 "Business Combination", and concluded that the acquired set of activities and assets is not a business because substantially all of the fair value of the gross assets acquired is concentrated under Receivable under Service Concession Arrangements , with similar risk characteristics. Accordingly, this transaction has been accounted for as an asset acquisition. The management identified and recognized the individual identifiable assets acquired and liabilities assumed; and allocated the purchase consideration to the individual identifiable assets and liabilities on the basis of their relative fair values at the date of acquisition.

The allocated value of the identifiable assets and liabilities as at the date of acquisition were:

Assets	**Amount Rs. Million**
Property, Plant and Equipment (net of accumulated depreciation)	16.45
Intangible assets	152.45
Receivable under service concession arrangements	19,032.91
Trade receivables	0.68
Cash and cash equivalents	1,904.97
Other assets	3,312.61
Total Assets (A)	**24,420.07**
Liabilities	
Borrowings (including current maturities of Non-current borrowings)	17,921.71
Trade Payables	58.95
Other liabilities	384.31
Total Liabilities (B)	**18,364.97**
Net Assets/Consideration (A-B)	**6,055.10**

This space has been intentionally left blank

50 Asset Acquisition

B) Acquisition of HAM SPVs (FY 2024-25)

In terms of Share Purchase Agreements (SPAs) dated May 31, 2024 entered amongst Trust (acting through its Investment Manager), Axis Trustee Services Limited (acting in its capacity as Trustee of the Trust), Cube Highways and Infrastructure III PTE. Ltd. ("Seller") and the Hybrid Annuity Model SPVs referred to in note 1(ii). (thereinafter referred to as "the parties"), on June 04, 2024 the Trust completed the acquisition of 51% equity holding of HAM SPVs for consideration of Rs. 5,973.80 million (including contingent consideration of Rs. 578.49 million) and the remaining 49% equity of HAM SPVs for consideration of Rs. 5,735.39 million (including contingent consideration of Rs. 555.80 million) on December 03, 2024. The contingent consideration is mainly towards various remedies and indemnities available to the Trust against money held back from annuities by NHAI, claims related to changes in law, claims for balance work, claims under Singapore International Arbitration Centre (SIAC). Further, one of HAM SPV viz. MHPL has initiated arbitration with NHAI with respect to damages amounting to Rs. 1,347.84 million imposed by NHAI mainly on account of default in performing repair and rectification works and NHAI has withheld Rs. 112.72 million from the annuity payments due to MHPL (included under trade receivables). The management, after reviewing the facts and circumstances of the case supported by the legal opinion, believes that the likelihood of any ultimate outflow is remote. Also, under the terms of the SPA, the Seller is responsible for indemnifying, defending, and holding the Trust and the SPV harmless against any losses related to this dispute with NHAI.

The management applied optional concentration test, under Ind AS 103 "Business Combination", and concluded that the acquired set of activities and assets is not a business because substantially all of the fair value of the gross assets acquired is concentrated under Receivable under Service Concession Arrangements , with similar risk characteristics. Accordingly, this transaction has been accounted for as an asset acquisition.

The management identified and recognized the individual identifiable assets acquired and liabilities assumed; and allocated the purchase consideration to the individual identifiable assets and liabilities on the basis of their relative fair values at the date of acquisition.

The allocated value of the identifiable assets and liabilities of the 6 HAM SPVs as at the date of acquisition were:

Assets	**Amount Rs. Million**
Property, Plant and Equipment (net of accumulated depreciation)	24.99
Intangible assets	8,599.81
Capital work-in-progress	80.80
Receivable under service concession arrangements	15,231.56
Investments in Mutual Funds	2,099.98
Trade receivables	1,585.60
Cash and cash equivalents	1,400.95
Bank balance other than cash and cash equivalents	710.37
Other assets	3,399.76
Total Assets (A)	**33,133.82**
Liabilities	
Borrowings (including current maturities of Non-current borrowings)	20,093.28
Trade Payables	241.43
Deferred Tax Liability (net)	660.09
Other liabilities	429.83
Total Liabilities (B)	**21,424.63**
Net Assets/Consideration (A-B)	**11,709.19**

Movement in Contingent Consideration Payable- For the year ended March 31, 2026

Particulars	**Amount Rs. Million**
Contingent Consideration on date of acquisition	1,134.29
Amount paid during FY 2024-25	(133.07)
Contingent Consideration payable as at March 31, 2025	**1,001.22**
Amount paid during FY 2025-26	(212.54)
Extinguishment of financial liability related contingent consideration	(24.14)
Loss on remeasurement of Contingent Consideration	23.76
Contingent Consideration payable as at March 31, 2026	**788.30**

50 Asset Acquisition

C) Acquisition of NAMEPL (FY 2024-25)

In terms of Share Purchase Agreements (SPAs) dated June 04, 2024 entered amongst the Trust (acting through its Investment Manager), Axis Trustee Services Limited (acting in its capacity as Trustee of the Trust), Cube Highways and Infrastructure PTE. Ltd. ("Seller") and N.A.M. Expressway Private Limited (NAMEPL) (thereinafter referred to as "the parties") referred to in note 1(ii), on February 12, 2025 the Trust completed the acquisition of 100% equity holding of NAMEL for consideration of Rs. 7,176.02 million. Accordingly the financial statements of the aforesaid subsidiary for the period February 12, 2025 to March 31, 2025 have been considered in the consolidated financial statements of the Trust Group.

The management applied optional concentration test, under Ind AS 103 "Business Combination", and concluded that the acquired set of activities and assets is not a business because substantially all of the fair value of the gross assets acquired is concentrated in Intangible Assets- Rights under Service Concession Arrangements with similar risk characteristics. Accordingly, this transaction has been accounted for as an asset acquisition.

The management identified and recognized the individual identifiable assets acquired and liabilities assumed; and allocated the purchase consideration to the individual identifiable assets and liabilities on the basis of their relative fair values at the date of acquisition.

The allocated value of the identifiable assets and liabilities of the SPV as at the date of acquisition were:

Assets	**Amount Rs. Million**
Property, Plant and Equipment (net of accumulated depreciation)	23.89
Intangible assets	26,248.85
Intangible assets under development	67.07
Current tax assets (net)	4.10
Investments	442.09
Cash and cash equivalents	68.54
Bank balance other than cash and cash equivalents	1,797.24
Other assets	477.64
Total Assets (A)	**29,129.42**
Liabilities	
Borrowings (including current maturities of Non-current borrowings)	19,144.85
Trade Payables	155.46
Provisions	1,079.14
Deferred Tax Liability (net)	1,448.12
Other liabilities	125.83
Total Liabilities (B)	**21,953.40**
Net Assets/Consideration (A-B)	**7,176.02**

This space has been intentionally left blank

50 Asset Acquisition

D) Acquisition of 18 Subsidiaries (FY 2023-24)

Pursuant to the Share Purchase Agreements dated March 30, 2023, the Trust (acting through its Investment Manager) acquired the entire equity share capital (except for 0.03% of the equity share capital of MBEL) of HTPL, JLTPL, JVTPL, KETPL, KMTPL, LRTPL, MKTPL, NKTPL, SMTPL, DATRPL, FRHPL, WVEPL, NDEPL, WUPTPL, JMTPL, APEPL, GAEPL, MBEL on April 17, 2023 for an equity consideration of Rs. 106,758.69 million (referred to in note 1(ii)). Accordingly the financial statements of the aforesaid subsidiaries for the period April 17, 2023 to March 31, 2024 have been considered in the consolidated financial statements of the Trust Group.

The management applied optional concentration test, under Ind AS 103 "Business Combination", and concluded that the acquired set of activities and assets is not a business because substantially all of the fair value of the gross assets acquired is concentrated in Intangible Assets- Rights under Service Concession Arrangements (other than APEL) and Receivable under Service Concession Arrangements (for APEL), with similar risk characteristics. Accordingly, this transaction has been accounted for as an asset acquisition.

The management identified and recognized the individual identifiable assets acquired and liabilities assumed; and allocated the purchase consideration to the individual identifiable assets and liabilities on the basis of their relative fair values at the date of acquisition.

The allocated value of the identifiable assets and liabilities of the 18 SPVs as at the date of acquisition were:

Assets	**Amount Rs. Million**
Property, Plant and Equipment (net of accumulated depreciation)	239.13
Capital work-in-progress	8.87
Investment properties	7.28
Intangible assets- Rights under Service Concession Arrangements (including other intangible assets)	2,33,472.67
Intangible assets under development	2,097.21
Deferred tax assets (net)	341.16
Current tax assets (net)	459.35
Investments	10,325.25
Trade receivables	809.89
Cash and cash equivalents	6,285.17
Bank balance other than cash and cash equivalents	307.80
Assets held for sale	4.67
Other assets	4,340.59
Total Assets (A)	**2,58,699.04**
Liabilities	
Borrowings (including current maturities of Non-current borrowings)	1,32,894.35
Trade Payables	2,035.57
Provisions	5,906.38
Deferred Tax Liability (net)	511.94
Other liabilities	10,591.65
Total Liabilities (B)	**1,51,939.89**
Non-controlling interest (C)	**0.46**
Net Assets (A-B-C)	**1,06,758.69**

51 Revenue from contracts with customers

1 Disaggregation of revenue

Revenue recognised mainly comprises of revenue from toll collection, claims with NHAI/State authorities, contract revenue. Set out below is the disaggregation of the Trust Group revenue from contracts with customers.

	Description	For the year ended March 31, 2026	For the year ended March 31, 2025	For the year ended March 31, 2024
	Operating revenue			
(a)	Revenue from toll fee collections	34,125.40	28,275.30	24,715.17
(b)	Construction income	172.65	634.14	4,025.77
(c)	Finance and Operation & Maintenance Income on annuity receivable from NHAI	7,357.09	2,969.58	400.32
(d)	Revenue from additional work (net of related cost)	25.65	26.30	8.78
(e)	Renewals and overlay income	-	1,166.12	-
(f)	Claims for compensation from NHAI/TNSTC	708.06	-	11.33
	Total revenue	**42,388.85**	**33,071.44**	**29,161.37**

The table below represents disaggregated revenues from contracts with customers based on nature, amount and timing for the year ended March 31, 2026, March 31, 2025 and March 31, 2024.

	Timing of revenue recognition	For the year ended March 31, 2026	For the year ended March 31, 2025	For the year ended March 31, 2024
	At point in time	34,833.46	28,275.30	24,726.50
	Over time	7,555.39	4,796.14	4,434.87
	Total revenue	**42,388.85**	**33,071.44**	**29,161.37**

2 Assets and liabilities related to contracts with customers

The following table provides information about receivables, contract assets and contract liabilities from contracts with customers:

Description	As at March 31, 2026	As at March 31, 2025	As at March 31, 2024
Contract Assets			
Trade Receivables	2,205.27	1,636.71	600.79
Receivables under service concession arrangements*	38,714.16	14,433.95	600.91
Unbilled Revenue	436.92	335.18	107.25
Total	**41,356.35**	**16,405.84**	**1,308.95**

*For movement of annuity receivables for HAM SPVs , APEPL, JUHPL and QEPL refer note 16(iii).

Contract Liability			
Advance from customers	3.10	5.14	-
Payable to National Highways Authority of India (NHAI)	4.04	6.86	14.90
	7.14	**12.00**	**14.90**

3 Performance Obligation

Income from toll collection
The performance obligation in service of toll collection is recorded as per rates notified by the NHAI/State authorities and payment is generally due at the time of providing service.

Contract revenue
The performance obligation under service concession arrangements (SCA) is due on completion of work as per terms of SCA.

4 Refer note 52 for disclosure in accordance with Appendix D: Service Concession Arrangements Disclosures of Ind AS 115: Revenue from Contracts with Customers.

52 Service Concession Arrangement

The details of service concession arrangements of all the SPVs are as follows:

HTPL

Description and right to use specified asset	Toll collection from the users and operation and maintenance of Hazaribagh – Ranchi Section (KM 41.500 – KM 115.290) Road Project on NH-33 in the state of Jharkhand as agreed between the SPV and National Highway Authority of India (NHAI) on Tolling, operation, maintenance and transfer (TOT) basis.
Project	National Highway-33 (NH-33) from KM-41.50 to KM 115.29
Nature of Asset	Intangible
Year when SCA granted	October 20, 2020
Concession Period	30 Years
End of Concession period	October 19, 2050
Stage of Completion	Completed with Commercial Operation Date (COD) as at September 04, 2013
Premature termination	On force majeure event or parties defaulting on their obligation
Operation & Maintenance ("O&M") Handover Date	March 31, 2028
Obligation to provide services:	Operation and routine maintenance of the highway
Major Overlays	In terms of the SCA , the SPV is obligated to carry out overlay of the roads at the end of specified periods from O&M handover date.
Remaining concession period of rights under SCA as at March 31, 2026	24 years, 06 months and 19 days

JLTPL

Description and right to use specified asset	Toll collection from the users and operation and maintenance of Jhansi-Lalitpur Section (KM 00.00 – KM 49.70) Road Project on NH-25 in the state of Uttar Pradesh as agreed between the Company and National Highway Authority of India (NHAI) on Tolling, operation, maintenance and transfer (TOT) basis.
Project	National Highway-25 (NH-25) from KM-00.00 to KM 49.70
Nature of Asset	Intangible
Year when SCA granted	October 20, 2020
Concession Period	30 Years
Estimated Reduction period	1827 Days
End of Concession period	October 19, 2045 (including estimated reduction period)[(i)]
Stage of Completion	Completed with Commercial Operation Date (COD) as at November 12, 2014
Premature termination	On force majeure event or parties defaulting on their obligation
Operation & Maintenance ("O&M") Handover Date	March 31, 2027
Obligation to provide services:	Operation and routine maintenance of the highway
Major Overlays	In terms of the SCA , the SPV is obligated to carry out overlay of the roads at the end of specified periods from O&M handover date.
Remaining concession period of rights under SCA as at March 31, 2026	19 years, 06 months and 19 days (including estimated reduction period)

JVTPL

Description and right to use specified asset	Toll collection from the users and operation and maintenance of Jhansi-Lalitpur Section (KM 49.70 – KM 99.00) Road Project on NH-26 in the state of Uttar Pradesh as agreed between the SPV and National Highway Authority of India (NHAI) on Tolling, operation, maintenance and transfer (TOT) basis.
Project	National Highway-26 (NH-26) from KM-49.70 to KM 99.00
Nature of Asset	Intangible
Year when SCA granted	October 20, 2020
Concession Period	30 Years
Estimated Reduction period	1827 Days
End of Concession period	October 19, 2045 (including estimated reduction period)[(i)]
Stage of Completion	Completed with Commercial Operation Date (COD) as at March 19, 2012
Premature termination	On force majeure event or parties defaulting on their obligation
Operation & Maintenance ("O&M") Handover Date	March 31, 2027
Obligation to provide services:	Operation and routine maintenance of the highway
Major Overlays	In terms of the SCA , the SPV is obligated to carry out overlay of the roads at the end of specified periods from O&M handover date.
Remaining concession period of rights under SCA as at March 31, 2026	19 years, 06 months and 19 days (including estimated reduction period)

KETPL

Description and right to use specified asset	Toll collection from the users and operation and maintenance of Madurai-Kanyakumari Section (KM 52.300 – KM 116.500) Road Project on NH-07 in the state of Tamil Nadu as agreed between the SPV and National Highway Authority of India (NHAI) on Tolling, operation, maintenance and transfer (TOT) basis.
Project	National Highway-07 (NH-07) from KM-52.30 to KM 116.50
Nature of Asset	Intangible
Year when SCA granted	October 20, 2020
Concession Period	30 Years
End of Concession period	October 19, 2050
Stage of Completion	Completed with Commercial Operation Date (COD) as at August 15, 2011
Premature termination	On force majeure event or parties defaulting on their obligation
Obligation to provide services:	Operation and routine maintenance of the highway
Major Overlays	In terms of the SCA , the SPV is obligated to carry out overlay of the roads at the end of specified periods.
Remaining concession period of rights under SCA as at March 31, 2026	24 years, 06 months and 19 days

52 Service Concession Arrangement

The details of service concession arrangements of all the SPVs are as follows:

KMTPL

Description and right to use specified asset	Toll collection from the users and operation and maintenance of Kotwa-Muzaffarpur Section (KM 440.00 – KM 520.00) Road Project on NH-28 in the state of Bihar as agreed between the SPV and National Highway Authority of India (NHAI) on Tolling, operation, maintenance and transfer (TOT) basis.
Project	National Highway-28 (NH-28) from KM-440.00 to KM 520.00
Nature of Asset	Intangible
Year when SCA granted	October 20, 2020
Concession Period	30 Years
Estimated Reduction period	1827 Days
End of Concession	October 19, 2045 (including estimated reduction period)[(i)]
Stage of Completion	Completed with Commercial Operation Date (COD) as at December 09, 2012
Premature termination	On force majeure event or parties defaulting on their obligation
Obligation to provide services:	Operation and routine maintenance of the highway
Major Overlays	In terms of the SCA , the SPV is obligated to carry out overlay of the roads at the end of specified periods.
Remaining concession period of rights under SCA as at March 31, 2026	19 years, 06 months and 19 days (including estimated reduction period)

LRTPL

Description and right to use specified asset	Toll collection from the users and operation and maintenance of Lucknow-Raibareli Section (KM 12+700 to KM 82+700) Road Project on NH 24B in the state of Uttar Pradesh as agreed between the SPV and National Highway Authority of India (NHAI) on Tolling, operation, maintenance and transfer (TOT) basis.
Project	National Highway-24B (NH-24B) from KM-12+700 to KM 82+700
Nature of Asset	Intangible
Year when SCA granted	October 20, 2020
Concession Period	30 years
End of Concession	October 19, 2050
Stage of Completion	Completed with Commercial Operation Date (COD) as at March 05, 2015
Premature termination	On force majeure event or parties defaulting on their obligation
Operation & Maintenance ("O&M") Handover Date	March 31, 2029
Obligation to provide services:	Operation and routine maintenance of the highway
Major Overlays	In terms of the SCA , the SPV is obligated to carry out overlay of the roads at the end of specified periods from O&M handover date.
Remaining concession period of rights under SCA as at March 31, 2026	24 years, 06 months and 19 days

MKTPL

Description and right to use specified asset	Toll collection from the users and operation and maintenance of Madurai-Kanyakumari Section (KM 00.00 – KM 52.30) Road Project on NH-07 in the state of Tamil Nadu as agreed between the SPV and National Highway Authority of India (NHAI) on Tolling, operation, maintenance and transfer (TOT) basis.
Project	National Highway-07 (NH-07) from KM-00.00 to KM 52.30
Nature of Asset	Intangible
Year when SCA granted	October 20, 2020
Concession Period	30 Years
Estimated Reduction period	1826 days
End of Concession period	October 19, 2045 (Including Estimated reduction period)(i)
Stage of Completion	Completed with Commercial Operation Date (COD) as at September 10, 2012
Premature termination	On force majeure event or parties defaulting on their obligation
Obligation to provide services:	Operation and routine maintenance of the highway
Major Overlays	In terms of the SCA , the SPV is obligated to carry out overlay of the roads at the end of specified periods.
Remaining concession period of rights under SCA as at March 31, 2026	19 years, 06 months and 19 days (including estimated reduction period)

NKTPL

Description and right to use specified asset	Toll collection from the users and operation and maintenance of Madurai-Kanyakumari Section (KM 180.00 – KM 243.47) Road Project on NH-07 in the state of Tamil Nadu as agreed between the Company and National Highway Authority of India (NHAI) on Tolling, operation, maintenance and transfer (TOT) basis.
Project	National Highway-07 (NH-07) from KM-180.00 to KM 243.47
Nature of Asset	Intangible
Year when SCA granted	October 20, 2020
Concession Period	30 Years
End of Concession period	October 19, 2050
Stage of Completion	Completed with Commercial Operation Date (COD) as at May 23, 2011
Premature termination	On force majeure event or parties defaulting on their obligation
Obligation to provide services:	Operation and routine maintenance of the highway
Major Overlays	In terms of the SCA , the SPV is obligated to carry out overlay of the roads at the end of specified periods.
Remaining concession period of rights under SCA as at March 31, 2026	24 years, 06 months and 19 days

52 Service Concession Arrangement

The details of service concession arrangements of all the SPVs are as follows:

SMTPL

Description and right to use specified asset	Toll collection from the users and operation and maintenance of Madurai-Kanyakumari Section (KM 116.50 – KM 180.00) Road Project on NH-07 in the state of Tamil Nadu as agreed between the SPV and National Highway Authority of India (NHAI) on Tolling, operation, maintenance and transfer (TOT) basis.
Project	National Highway-07 (NH-07) from KM-116.50 to KM 180.00
Nature of Asset	Intangible
Year when SCA granted	October 20, 2020
Concession Period	30 Years
End of Concession period	October 19, 2050
Stage of Completion	Completed with Commercial Operation Date (COD) as at May 23, 2011
Premature termination	On force majeure event or parties defaulting on their obligation
Obligation to provide services:	Operation and maintenance of the project
Major Overlays	In terms of the SCA , the SPV is obligated to carry out overlay of the roads at the end of specified periods.
Remaining concession period of rights under SCA as at March 31, 2026	24 years, 06 months and 19 days

DATRPL

Description and right to use specified asset	Toll collection from the users and operation and maintenance of six lanes Delhi - Agra Section (KM 20.500 – KM 200.000) Road Project on NH-2 in the state of Haryana/Uttar Pradesh as agreed between the Company and National Highway Authority of India (NHAI) on Design, Built, Finance, Operate and Transfer (DBFOT) basis under National Highway Development Program (NHDP) phase -V.
Project	Project Six lanes Delhi-Agra Section (KM 20.500 – KM 200.000) Road Project on NH-2
Nature of Asset	Intangible (Rights under Service Concession Arrangements (SCA) for Toll Road Carriageway)
Year when SCA granted	October 16, 2012
Concession period	26 Years
Estimated extension of concession period	1989 days
Stage of completion	Completed with Provisional Commercial Operation Date (COD) as May 20, 2022. The date of issue of this Provisional Completion date shall be the COD, as defined in the said concession agreement.
End of concession period	February 12, 2044 (Including estimated extension period)[(i)]
Premature termination	On force majeure event or parties defaulting on their obligation

JUHPL

Project	Rehabilitation, strengthening and four laning of Jammu- Udhampur Section from KMs 15 to Kms 67 of NH-1A (now NH-44) on BOT (annuity) basis on DBFOT pattern, in the Union Territory of J&K
Nature of Asset	BOT (Annuity) Basis
Appointed date	June 17, 2011
Concession period	20 Years
Commercial Operation Date ("COD")	May 31, 2018
End of Concession period	July 22, 2031
Remaining concession period of rights under SCA as at March 31, 2026	5 Years, 03 months and 22 days

QEPL

Project	16.268 (4 lane) Augmentation of the existing road from km 189.350 to km 204.700 including construction of two tunnels (2 lane) of 0.69 kms and 8.45 kms on the Quazigund-Banihal section of NH 1A on DBFOT (annuity) basis, in the Union Territory J&K
Nature of Asset	BOT (Annuity) Basis
Appointed date	June 05, 2011
Concession period	20 Years
Commercial Operation Date ("COD")	December 15, 2022
End of Concession period	June 05, 2031
Remaining concession period of rights under SCA as at March 31, 2026	5 Years, 02 months and 05 days

(i) Variation in concession period has been estimated by the management after considering contractual entitlement to variations in concession period on a case-to-case basis taking into account the provisions of the concession agreement of the respective SPVs, the facts and circumstances giving rise to such variations and the status of the approvals for each such variation. The Management has considered variation in concession period for the purpose of estimating amortization of Intangible Assets- Toll Road Carriageway, estimating fair value of net assets of SPVs and also for determination of recoverable amounts for Intangible Assets- Toll Road Carriageway of SPVs [Also, refer note 2(III)(d)(4)].

(ii) In respect of WVEPL, the SPV has invoked arbitration as per the terms of the SCA with respect to reduction of 1.5 years in the concession period by NHAI as against the claims lodged by the SPV with NHAI towards the extension of concession period on account of decrease in target traffic etc. Considering the terms of the Concession Agreement, traffic studies, workings and independent legal advice obtained, the Management is confident that the SPV will be able to succeed in arbitration and will get extension in concession period as claimed. Pending final outcome of the matter under arbitration, the Management has considered the extended concession period for purpose of preparation of these consolidated financial statements.

53 WVEPL has certain potential claims against various third parties inter alia including National Highway Authority of India, state transport authorities, insurance companies and also certain receivables for the period prior to March 31, 2019. The SPV has entered Claims Management Agreement dated January 9, 2020 as amended by the Amendment Agreement dated September 18, 2020 with KNR ("Agreement') wherein the SPV and KNR have commercially agreed that any monetary compensation received by the SPV pursuant to such claims shall be passed through to KNR, net of related costs and expenses, applicable taxes and adjustments as defined under the Agreement. No amounts have been received from third parties referred above and therefore, no adjustments have been made in these Consolidated Financial Statements for the same.

Disclosures pursuant to SEBI Master circular

Additional disclosures as required by paragraph 4 of chapter 3 to the SEBI Master Circular No. SEBI/HO/DDHS-PoD-2/P/CIR/2025/102 dated July 11, 2025

57 Consolidated Statement of Net Assets at Fair Value

As at March 31, 2026

Particulars	Book value	Fair value
A. Assets	2,93,984.70	3,78,024.37
B. Liabilities of Consolidated Trust Group[3]	1,96,155.52	1,82,093.67
C. Net assets (A-B)	**97,829.18**	**1,95,930.70**
D. Less: Non-controlling interests	2.30	0.94
E. Net Assets attributable to unitholders of the Trust (C-D)	**97,826.88**	**1,95,929.76**
F. Number of Ordinary units	1,344.07	1,344.07
G. Net Asset Value ("NAV") (E/F) (Rs.)	**72.78**	**145.77**

As at March 31, 2025

Particulars	Book value	Fair value
A. Assets	2,80,001.55	3,33,121.06
B. Liabilities of Consolidated Trust Group[3]	1,65,627.00	1,54,545.71
C. Net assets (A-B)	**1,14,374.55**	**1,78,575.35**
D. Less: Non-controlling interests	0.66	1.62
E. Net Assets attributable to unitholders of the Trust (C-D)	**1,14,373.89**	**1,78,573.73**
F. Number of Ordinary units	1,334.45	1,334.45
G. Net Asset Value ("NAV") (E/F) (Rs.)	**85.71**	**133.82**
H. Number of Ordinary units	1,334.45	1,334.45
Add: Estimated Subordinate units to be reclassified to Ordinary units [2(i)]	9.62	9.62
Total Number of Ordinary and estimated reclassified Subordinate units	1,344.07	1,344.07
I. NAV (including subordinate units) [E/H] (Rs.)	**85.10**	**132.86**

As at March 31, 2024

Particulars	Book value	Fair value
A. Assets	2,46,257.52	2,78,221.03
B. Liabilities of Consolidated Trust Group[3]	1,16,767.61	1,08,161.43
C. Net assets (A-B)	**1,29,489.91**	**1,70,059.60**
D. Less: Non-controlling interests	0.53	1.75
E. Net Assets attributable to unit holders of the Trust (C-D)	**1,29,489.38**	**1,70,057.85**
F. Number of Ordinary units	1,290.35	1,290.35
G. Net Asset Value ("NAV") (E/F) (Rs.)	**100.35**	**131.79**
H. Number of Ordinary units	1,290.35	1,290.35
Add: Estimated Subordinate units to be reclassified to Ordinary units [2(ii)]	52.50	52.50
Total Number of Ordinary and estimated reclassified Subordinate units	1,342.85	1,342.85
I. NAV (including subordinate units) [E/H] (Rs.)	**96.43**	**126.64**

Notes:

1 The above Consolidated Statement of Net Assets at Fair Value (NAV) is prepared and calculated in accordance with SEBI (Infrastructure Investment Trusts) Regulations, 2014 and the Circulars issued there under. The Trust's projected expenses have not been considered for calculating the fair value of assets at the Trust and NAV.

2 (i) Estimated reclassification of Subordinate Units to Ordinary units on achievement of actual performance matrix in respect of JMTPL and MBEL (as per entitlement Event B as defined in note 19).

(ii) Estimated reclassification of Subordinate Units to Ordinary Units on achievement of actual performance matrix in respect of DATRPL (Entitlement Event A as per terms defined in note 19) and projected achievable actual performance matrix in respect of JMTPL and MBEL (Entitlement Event B as per terms defined in note 19).

3 Fair values of assets of subsidiaries/SPVs are calculated based on their independent fair value done by the expert appointed by the Trust under SEBI (Infrastructure Investments Trust) Regulations, 2014, as amended and after making necessary adjustments to arrive at fair value of all assets. Fair value of liabilities is different from book value of liabilities on account of exclusion of liabilities which have already been considered by the valuer while computing the fair value of assets. Refer Annexure A for adjustments made to the valuation arrived by the independent valuer to compute the fair value of assets presented in the Consolidated Statement of Net Assets at Fair Value.

4 The key assumptions used as inputs for the calculation of Enterprise Value and fair value include determination of future cash flows, traffic estimates, assessment of the variation in concession period in certain subsidiaries, considering target traffic/ target revenue subject to approvals from the authorities, revenue growth rate, discount rates, inflation rates and other economic factors.

During the year ended March 31, 2026, NHAI, vide its Policy Circular dated September 13, 2025, revised the Wholesale Price Index (WPI) linking factor from 1.641 to 1.561, resulting in a reduction of around 3–5% in base toll rates. The said Circular was challenged before the High Court of Delhi by various parties (including the Highway Operators Association of India) by filing Writ petitions (Civil) and Civil Miscellaneous Applications.

The Hon'ble High Court of Delhi, vide order dated October 17, 2025, has directed that the aforesaid Policy/ Circular dated 13.09.2025 be kept in abeyance. The matter is to be re-examined by the NHAI within a fixed timeline, after considering the representations and submissions of stakeholders, and a reasoned order is to be passed thereafter, taking into account all relevant aspects of the matter.

As of the reporting date, the Enterprise Value, as determined by the independent valuer, has been computed using the WPI linking factor of 1.641.

Disclosures pursuant to SEBI Master circular
Disclosures as required by chapter 4 to the SEBI Master Circular No. SEBI/HO/DDHS-PoD-2/P/CIR/2025/102 dated July 11, 2025

		India Ratings	"IND A1+"	Assigned on June 09, 2025 and affirmed on August 14, 2025

62 At the end of each reporting period, in terms of Ind AS 36 "Impairment of Assets" the Management carries out impairment assessment for Intangible assets Rights Under Service Concession Arrangements in individual subsidiary (cash generating unit) and determine the recoverable amount of non-current investments in subsidiaries as at the reporting date.

An impairment loss is recognised if the carrying amount of the Intangible assets exceeds its recoverable amount. The recoverable amount is determined by the Management based on the value in use approach using an External Independent Valuer. The key judgements in determining the value in use approach included revenue and other cash flow projections for the remaining concession period, changes in interest rates, discount rates, risk premium for market conditions etc. The revenue projection is based on assumptions made by the Management regarding future traffic growth and inflation factor for assessing user toll fee as supported by the studies from the Third-party Independent Consultant.

Based on the aforesaid impairment assessment done by the management of Investment Manager, the Trust has recognized following impairment loss / (reversal) - net in respect of Intangible assets Rights Under Service Concession Arrangements in the Consolidated Statement of Profit and Loss:

For the year ended March 31, 2026 **(Amounts in Rs. Million)**

Particulars	Impairment Loss/(reversal)	Recoverable Value	Discounting rate (%)
GAEPL	(1,421.00)	38,839.00	9.86%

For the year ended March 31, 2025: Nil

For the year ended March 31, 2024 **(Amounts in Rs. Million)**

Particulars	Impairment Loss/(reversal)	Recoverable Value	Discounting rate (%)
WUPTPL	122.51	1,656.00	10.70
GAEPL	1,421.00	28,525.00	10.60
NDEPL	368.10	4,960.90	10.70
FRHPL	3,039.42	23,530.57	10.60
LRTPL	920.84	6,731.16	10.40
Total	**5,871.87**	**65,403.63**	

The aforesaid recoverable value of these Intangible assets – Rights under Service Concession Arrangements is based on Enterprise Value as determined by the External Independent valuer. For valuation process and technique used to determine fair value (refer note 57(4)) of Consolidated Financial Statements.

63 **Distribution**

A) Details of distribution made by the Trust to Unitholders is as under:

(Amounts in Rs. Million)

Particulars	For the year ended March 31, 2026	For the year ended March 31, 2025	For the year ended March 31, 2024
Interest (Return on capital)	10,747.19	7,313.90	6,849.16
Dividend	2,187.76	564.99	1,032.28
Other Income on surplus fund at Trust	40.20	39.59	54.19
Repayment of capital	5,738.57	6,840.23	-
	18,713.72	**14,758.71**	**7,935.63**

B) Subsequent to the year ended March 31, 2026, the Board of Directors of Investment Manager in its meeting dated May 22, 2026 approved a distribution of Rs. 3.57 per unit aggregating Rs. 4,798.33 million for the quarter ended March 31, 2026 to be paid within 5 days from the record date. This distribution is subsequently paid.

64 The Board of Directors of the Investment Manager in its meeting held on July 01, 2024 approved the reclassification of 44.10 million Subordinate Units out of the total 120 million Subordinate Units, issued as part of the initial offer to Cube Highways & Infrastructure III Pte. Ltd. (CH-III), Sponsor of the InvIT, into 44.10 million Ordinary Units, in terms of the performance metrics and the Entitlement Event as defined in the Trust Deed and disclosed in the Final Placement Memorandum dated April 17, 2023. The Board of Directors, accordingly, also approved the extinguishment of the balance 75.90 million Subordinate Units held by CH-III not reclassified into Ordinary Units. These 44.10 million Subordinate Units reclassified into Ordinary Units on July 19, 2024 and got listed on Bombay Stock Exchange (BSE) and National Stock Exchange (NSE) on July 29, 2024.

65 The Board of Directors of the Investment Manager in its meeting held on July 01, 2025 approved the reclassification of 9.62 million Subordinate Units out of the total 37.50 million Subordinate Units, issued as part of the initial offer to Cube Highways and Infrastructure Pte Ltd (CH-I), Sponsor of the InvIT, in terms of the performance metrics and the Entitlement Event as defined in the Trust Deed. The Board of Directors, accordingly, also approved the extinguishment of the balance 27.87 million Subordinate Units held by CH-I not reclassified into Ordinary Units. These 9.62 million Subordinate Units reclassified into Ordinary Units on July 14, 2025 and got listed on Bombay Stock Exchange (BSE) and National Stock Exchange (NSE) on July 17, 2025.

66 The Trust Group has assessed the implications of the four Labour Codes notified by the Government of India, namely the Code on Wages, 2019, the Industrial Relations Code, 2020, the Code on Social Security, 2020 and the Occupational Safety, Health and Working Conditions Code, 2020, which came into effect on November 21, 2025, on the employee benefits of the Trust Group. Based on the current understanding of the applicable provisions, the rules notified by the Government of India on 8 May 2026, FAQs issued by the Ministry of Labour and Employment, and legal opinions obtained, the Trust Group estimated that the provisions currently in force do not have a material impact on the consolidated financial statements of the Trust Group.

Further, considering the evolving regulatory framework, judicial developments, and the possibility of future obligations arising under the labour laws, the Trust Group will continue to monitor these developments and appropriately reassess the accounting impact, if any, in future periods.

67 The Trust Group has reclassified the accruals relating to employees' salaries and wages from "Trade payables" to "Other financial liabilities" for the year ended March 31, 2024, in view of the opinion of Expert Advisory Committee of the Institute of Chartered Accountants of India considering the said disclosure could be more relevant to the users of the financial statements. This change doesn't result in any impact on the total current liabilities.

68 The Trust Group has not traded or invested in Cryptocurrency or Virtual Currency during years ended March 31, 2026, March 31, 2025 and March 31, 2024.

69 The Trust Group has made transactions with the Companies which were struck off under section 248 of the Companies Act, 2013 or section 560 of Companies Act, 1956, The detail of the same is as follows:

Name of Struck Off companies	Nature of Transaction	For the year ended March 31, 2026	For the year ended March 31, 2025	For the year ended March 31, 2024	Relationship with the struck off company
Tollways Infra Projects Private Limited	COS Contractor	-	0.63	-	No Relation
Rousing Trading (INDIA)	Repair and maintenance	0.64	-	0.06	No Relation
Fairdeal Motor and Workshop Pvt Ltd	Vehicle repair	0.02	-	-	No Relation

70 The Trust Group does not have any transaction which is not recorded in the books of account that has been surrendered or disclosed as income during the year in the tax assessments under the Income Tax Act, 1961 (such as, search or survey or any other relevant provisions of the Income Tax Act, 1961).

71 During the year, WUPTPL has filed a first motion application/petition with the National Company Law Tribunal (NCLT) for reduction and reorganisation of capital under Section 230, read with Sections 66 and 52, and other applicable provisions of the Companies Act, 2013. The NCLT has passed an order on October 07, 2025, dispensing with the meetings of shareholders and creditors. The Company has filed the second motion petition before NCLT, which is pending. The Consolidated Financial Statement for the year ended March 31, 2026, has been prepared without giving effect to the proposed capital reduction and reorganisation, pending receipt of necessary approvals and completion of related compliances.

72 The Trust Group has not been declared as a wilful defaulter by any bank or financial institution or other lender.

73 The Trust Group does not have any Benami property, where any proceeding has been initiated or pending against the Trust Group for holding any Benami property.

74 The Consolidated Financial Statements have been approved by the Board of Directors of the Investment Manager to the Trust through resolution by circulation dated July 02, 2026.

For and on behalf of the Board of Directors of
Cube Highways Fund Advisors Private Limited
(in its capacity as the Investment Manager of Cube Highways Trust)
